According to Thucydides, Themistocles wrote a letter to King Artaxerxes, “who had just come to the throne” (I.137.3♦). Other authors (cf. Plutarch, *Them.* 27.1♦) “write that he came to Xerxes.” Perhaps Themistocles landed in Asia Minor shortly before the death of the king (August 465), before being received somewhat later by his successor. Whatever the case, the Athenian was welcomed with great acclaim by the king, who saw him as a heaven-sent adviser on Greek affairs (*Them.* 29.3, 9): “He awoke in the king the hope of seeing, thanks to him, the Greek world enslaved” (Thucydides I.138.2). Whether from Xerxes or Artaxerxes (the latter is more likely), gifts were bestowed on Themistocles: he received the revenues of several towns in Asia Minor, including Magnesia, Myus, and Lampsacus. This royal gift in itself implies that the Persians still held and always had held a good number of coastal towns, including the most important ones.

10. From Xerxes to Artaxerxes

The Assassination of Xerxes: The Literary Motifs

Xerxes died during these events, the victim of a bloody plot. Though the king's assassination is mentioned by many authors, it is sometimes solely as the post mortem condemnation of a king who was burdened by the weight of the defeat at Salamis. For example, Aelian (VH XIII.3) simply writes that the king ended life miserably, cut down in his bed by his own son. Our primary sources for these events are versions from Justin (III.1), Diodorus (XI.69), and Ctesias (§§29–30), who partly agree. The affair is all the more interesting because it concerns the first assassination of a king, except for the case

of Bardiya. We should pause at this point, not so much to reconstruct these events in minute detail (an impossible task), as to understand how the stories that came from the Achaemenid court might have been transmitted to the Greeks (and thus on to us).

In essence, the ancient authors agree on the broad picture:

—The initiator of the plot was called Artabanus, introduced as a Hyrcanian by Diodorus and Ctesias, and given the title of chief bodyguard by Diodorus (*praefectus* in Justin); according to Justin and Diodorus, he aspired to the kingship; Ctesias and Diodorus say he enjoyed royal favor.

—He included his (seven, in Justin) sons in the plot, as well as the eunuch Aspamithres (Ctesias); Diodorus calls him Mithradates, making him Xerxes' chamberman (*katakōimistēs*); Justin calls him Baccabasus and introduces him into the plot only after the murder of Darius.

—Xerxes is assassinated by the conspirators (Ctesias) in his bedroom (Diodorus, Justin, Aelian) with the help of Mithradates (Diodorus).

—Artabanus convinces the youngest son, Artaxerxes, that it was his oldest brother, Darius, who killed his father. Diodorus adds that the third son, Hystaspes, was then off in his satrapy in Bactra. Despite Darius's protestations of innocence (Ctesias), he is put to death by his brother, accompanied by guards (Diodorus), when he (Darius) comes looking for Artaxerxes (Ctesias) or when he is about to fall asleep (Justin).

—Artaxerxes becomes king (Ctesias). Artabanus continues his intrigue, attempting to seize the throne; he takes Megabyzus into the plot, and Megabyzus reveals all to the king (Ctesias); in Justin, it is Baccabasus who reveals the plot. Subsequently, there are several versions of the death of Artap(b)anus: (1) he is executed with Aspamithres (Ctesias); (2) Artaxerxes summons the army and kills Artabanus himself after Artabanus is stripped of his armor (Justin); then Artaxerxes arrests his sons; (3) wounded by the conspirator, Artaxerxes kills him with his bare hands (Diodorus).

—According to Diodorus and Justin, Artaxerxes then reigns without further ado. According to Ctesias, a quarrel arises between the accomplices—Artabanus's sons on the one hand, the other Persians on the other; Megabyzus is gravely wounded but survives, thanks to the Greek physician Apollonides; Bactria revolts, led by a different Artabanus; Artaxerxes wins and subdues Bactria (Ctesias §31).

Before going on, we should note that Aristotle also analyzes the elimination of Xerxes in a long passage on the reasons that might drive someone to assassinate a tyrant or a king:

Thus, Artapanes conspired against Xerxes and slew him, fearing that he would be accused of hanging Darius against his orders—he having been under the impression that Xerxes would forget what he had said in the middle of a meal, and that the offence would be forgiven. (*Pol.* V.10.1311b↔)

Obviously, except for the name Artabanus and a reference to Darius, Aristotle's version has nothing in common with the just-mentioned authors. It does show, however, that numerous versions of an event were circulating and had made a deep impression on the Greek imagination.

It is obvious at any rate that the tales of Justin, Diodorus, and Ctesias are built on common heroic-literary motifs: a high-ranking plotter secures an accomplice in the palace, then kills the king in bed (a motif used by Justin twice), is betrayed by his principal

ally (Justin, Ctesias), and is eliminated. Dynastic order has the last word. This structure is repeated many times. If the conspirators planning to assassinate Artaxerxes II manage to penetrate the bedroom, it is partly because the crown prince himself admitted them and partly because they were assisted by a eunuch close to the king (Plutarch, *Art.* 29). So also with the assassination of Xerxes II, killed as he lay drunk in his palace. Once again the plot is organized by intimates of the king (Ctesias §45). As Ctesias had told it—as fancifully as Herodotus—the Seven penetrated all the way to Smerdis/Bardiya's bedroom (where he lay with a Babylonian concubine) with the collaboration of one of the most highly placed eunuchs, Bagapates, "who held all the palace keys" (§13).

The repetition of the motif of murder in the bedroom is suspect. There is another common element in the murders of Smerdis (Ctesias, Herodotus) and Xerxes: the figure seven, Justin's number of the sons of Artabanus (three in Ctesias). The killing of the conspirator in Diodorus (single combat) is also scarcely credible; Justin also refers to it, but he states that Artaxerxes took the precaution of summoning the entire army. It must be stated, lastly, that in Ctesias the story is enfolded in a long exposition of the Megabyzus family saga. It was the infidelities of his wife Amytis, daughter of Xerxes (§28), that drove him to the plot, in which he played the role of denouncer before his heroic behavior in the face of the armed conspirators. Justin obviously got the framework of his tale from Ctesias. The surprising name Baccabasus is obviously just a transcription of Bagabuxša, in a form that is closer to the Persian (likewise Bagabazus in Dinon in Athenaeus XIII.609a) than Megabyzus, the name transmitted by Ctesias himself (or, Photius).

The repetition of literary motifs does not immediately disqualify all the information the narrators convey. Undoubtedly, the king was particularly vulnerable when he was in his private apartments. Xenophon refers several times to Cyrus's unease about his security: "He realized that men are nowhere an easier prey to violence than when at meals or at wine, in the bath, or in bed and asleep" (*Cyr.* VII.5.59♦; cf. VIII.4.3). At the same time, the narrative structure of the ancient texts calls for special vigilance on the part of the commentator.

The Assassination of Xerxes: The Dynastic Problems

There is no a priori reason to doubt Diodorus's information. Xerxes had three sons (assumed to be born of Amestris, since no other official wife is attested), besides his illegitimate offspring (cf. Herodotus VIII.103; Diodorus XI.60.5). According to Justin, Darius was still an adolescent (*adulescens*) and Artaxerxes but a child (*puer*). The third son, Hystaspes, must have been older than Artaxerxes, since he was then satrap in Bactra, although several examples seem to indicate that the second son normally would have received a satrapal post as compensation. This would more easily explain why, after the accession of Artaxerxes, Hystaspes (called Artabanus by Ctesias) would have rebelled, thinking he had more right to the throne than his younger brother.

Justin makes it clear that Darius was the designated heir (*quo maturius regno potiretur*). But, in fact, we have no direct confirmation of Darius's primacy—except perhaps implicitly in Aristotle's version (*Pol.* 1311b). The "rule" reported by Herodotus (VII.2: the king must designate his heir before entering a campaign) has no more foundation in this context than in the succession of Darius (cf. chap. 13/2 above). Not one ancient author mentions the naming of a crown prince before Xerxes left for Greece in 480. Herodotus states that Xerxes "bestowed his scepter" on his paternal uncle, with this mis-

sion: "Keep safe for me my house and dominions (*tyrannis*)" (VII.52♦). It is excessive to speak of regency in this case. As has already been said, royal power was not divisible or delegable. Whether in Europe or in Sardis, the king continued in unshared rule. It is likely instead that Artabanus was entrusted with both applying the orders he received from Xerxes (VIII.54) and keeping his house safe (which, on this occasion, is not strictly synonymous with the Empire). To go by Herodotus (VIII.103–4: *nothoi*), the legitimate children did not accompany Xerxes to Greece, perhaps because they were too young; they probably remained in the royal residences with their mother, Amestris, all of them entrusted to Artabanus. We may then imagine that the naming of Darius as crown prince happened after 479.

Furthermore, Justin and still more clearly Diodorus state that the conspirator Artabanus planned on taking the royal title (*in spem regni adductus/kai tēn basileian eis heauton metastēsai*). Africanus (in Pseudo-Manetho, Frag. 70 = Syncellus) goes even further, stating that Artabanus was the sixth king (of the XXVIIth Dynasty of Egypt) and reigned for seven months. If this were true, it would be the sole example in all of Achaemenid history of the accession of a king who was not a scion (one way or another) of the Achaemenid stock, and we would be led to inquire once more into the conflicted relationship between the aristocracy and the dynasty. It is difficult to be certain about a solution to this problem. In the Babylonian tablets, Artaxerxes succeeds his father, with no break in continuity. Xerxes died at the beginning of August 465; his son Arses (who took the throne name Artaxerxes) succeeded him, without a single tablet's recording any Artabanus. The same is true for the Egyptian documents. The absence of a usurper from the tablets does not imply that there was no trouble after Xerxes' death (at Artaxerxes I's death, neither Xerxes II nor Sogdianus appeared on a single tablet, either); it does seem to imply, however, that the possible usurper was never officially recognized. On the other hand, Justin, Diodorus, and Ctesias do not report such an event. Ctesias states to the contrary that, after the assassinations of Xerxes and Darius, "Artaxerxes became king (*kai basileuei Artoxerxēs*)," simply saying that he owed the throne to the "ardent zeal (*spoudē*)" of Artabanus (§30). To sum up, we are strongly tempted to believe that Africanus's information is not credible. It is difficult to know where he got this datum, which curiously recalls what Herodotus said of the *magus* who ruled for seven months (III.67; Eusebius in Pseudo-Manetho Frag. 71a–b)—except, obviously, that the reign of Barzia was recognized in Babylonia.

The actual circumstances under which Xerxes was put to death are quite difficult to determine. Ctesias makes Artabanus out to be the son of the Hyrcanian Artasyras, who was very influential during the reign of Cambyses (§9) and was associated with the conspiracy of the Seven (in 522) (§14), held an enviable position at the time of Darius, and died shortly after his master (§19). These recollections scarcely speak in Ctesias's favor, since he uses the same name to refer to Hystaspes, one of Xerxes' sons. The only possible comparison is the chiliarch Artabanus, who received Themistocles upon his arrival at the Court (Plutarch, *Them.* 27.2). In any case, the Artabanus of the conspiracy seems appropriate to have taken on this charge, since he was the chief bodyguard. If we exclude (for the sake of argument) the idea that he was acting on his own initiative, his behavior must be situated in conflicts between the king's sons regarding the succession. We will simply note that Artaxerxes comes out looking good in all the stories: he is cleared of any accusation (he was Artabanus's pawn); following a familiar motif, he justified his power

by winning in single combat (Justin); and in the sequel, his military prowess is spotlighted (Nepos, *Reges* 1.4). Can we infer that this presentation comes from the propaganda that was developed after his accession and that would have shifted all the responsibility onto Artabanus, whom the new king hastened to put to death (cf. also Diodorus XI.71.1)? This would not be the only such example. But to go further risks leading to the construction of a romance just as unworthy of belief as the one preserved by the ancient authors.

The episode confirms that the succession will always remain one of the most difficult problems in Achaemenid history—as is shown, for example, by the impressive number of royal assassinations. The recurrence of attempts on the reigning king demonstrates the fragility of power, despite all the respect surrounding the royal person (chaps. 6–8); at the same time, it testifies to the troubles that surrounded the dynastic succession. Even the methods of recognizing a crown prince introduce an element of uncertainty, which can be illustrated by this simple question: what would have happened if Xerxes had died during the European expedition? In fact, the answer is easy to give, and it confirms perfectly, as if there were any need, that Achaemenid royalty was not a constitutional monarchy. Dynastic wars, already frequent during anticipated successions, would have raged, despite the role Artabanus (Xerxes' uncle) might have been able to play. Perhaps it was to ward off just such a danger that the king would never expose himself in the front lines of battle; but no amount of precaution can avoid all risk!

11. An Assessment

Whatever the case may be, we cannot judge Xerxes' reign in terms of dynastic difficulties, nor, a fortiori, can we postulate with the Classical authors that his assassination was destiny's just punishment of a man guilty of immoderation. We must renounce, once and for all, the Greek vision of Xerxes' reign. At bottom, his policy does not appear fundamentally different from his father's, even if the defeats suffered on the western front betoken an incontestable shrinkage of Darius's imperial realm. Again we must stress that, seen from the center, these setbacks were only temporary and that Xerxes never gave up the idea of reconquest. Because the general concept of the palace at Persepolis (*A¹Pa*) built by Xerxes and completed by his son Artaxerxes I goes back to Xerxes, we realize that, as if to claim an extent never achieved by the Empire, even under Darius, the Great King installed a frieze of tributaries/gift-bearers, where the number of delegations (30) and delegates (300, versus 138 on the Apadana) was greater than ever before.

Although faced with constraints and contradictions, Xerxes was able to promote a robust policy of colonization with the goal of establishing Persian dominion more solidly, a policy that included appealing to Greek supporters, especially in Asia Minor. Difficult though it is to date the archaeological and iconographic evidence precisely ("Greco-Persian" stelae and impressions), it nevertheless seems that Xerxes' reign marked a quantitative and spatial increase of the Persian imperial diaspora in the provinces; this at least is the impression gained from the data coming from Asia Minor, and more specifically from the region of Dascylium, which at this date appears to have been more important than it had been previously.

The Great King's authority was further strengthened by ideological propaganda that tied religion (Ahura-Mazda) and throne closer and closer together by proclaiming the

Great King to be the regulator of Persian rituals. Although the accent on the “Persian” character of the Empire did not, properly speaking, constitute a novelty, it nonetheless appears to have been affirmed with a new force. This insistence, we have seen, does not imply that Xerxes sought to “persecute” local religions or to “convert” his peoples to Mazdaism. The message was perhaps primarily addressed to the Persians, those in Persia and those in the imperial diaspora, in such a way as to bind together still more closely the dominant socioethnic class around its king.

Chapter 14

From the Accession of Artaxerxes I to the Death of Darius II (465–405/404)

1. One King after Another (465)

Sources and Problems

With the accession of Artaxerxes I, the historian faces a continual dwindling of *narrative* evidence. Ctesias is much more interested in the history of Megabyzus's family than the history of the dynasty: the framework of §§30–43 is constructed around Megabyzus and his sons, from this fellow's contradictory participation in the plot against Xerxes to the death of his youngest son, Zopyrus II, after the death of Artaxerxes. So once again our best information is about Aegean affairs, thanks especially to Diodorus of Sicily and Thucydides, who follow the vicissitudes of the Athenian-Persian conflict from Asia Minor to Egypt. Because of the biblical books of Ezra and Nehemiah, we can also analyze the internal situation in Judah—with the reservation that many exegetical difficulties appear insurmountable today. Two regions are documented best. The first is Babylonia, thanks to the archives of a business, the Murašū; the records cover the reigns of Artaxerxes I and Darius II. The second is Egypt, thanks to the Aramaic evidence, which comes mainly but not exclusively from Elephantine; this evidence has survived on leather, and within this we can easily isolate the correspondence of the satrap Aršāma (DAE 62–74 [AD]). We may also add that for the first time since the beginning of the reign of Darius I, we have a fleeting reference to events in eastern Iran. At the same time, the number of documents from Persepolis diminishes: though the most recent excavations have led to a reevaluation of Artaxerxes I's role as builder, the historical interpretation of the excavation results remains problematic.

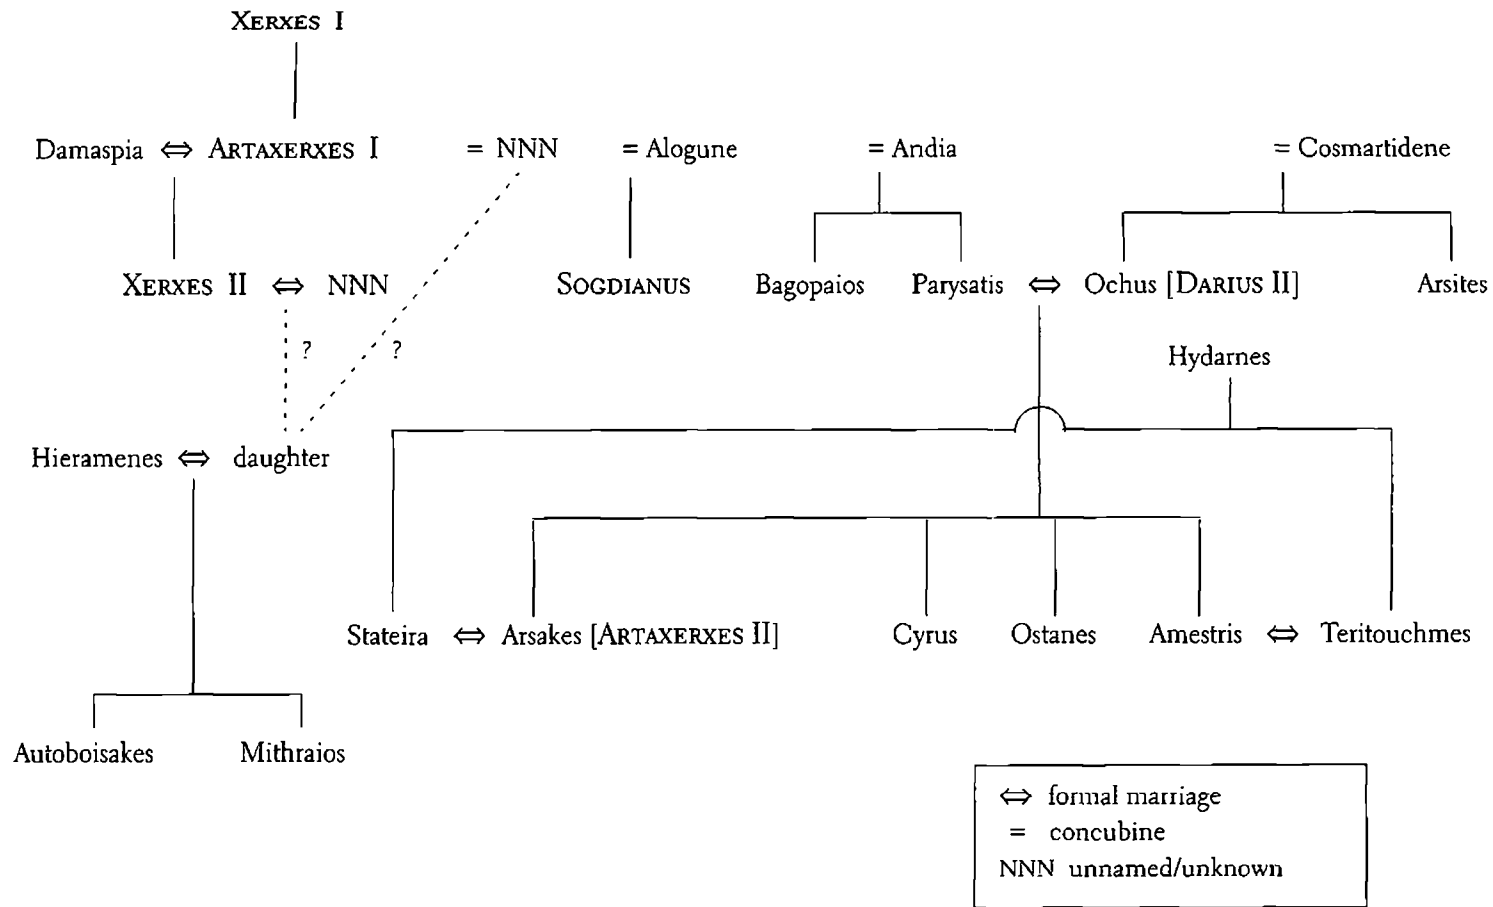

Quite apart from its fragmentary and random nature, the available evidence presents a major difficulty: dating it with precision. Many Babylonian and Aramaic documents are dated to the reign of an Artaxerxes. But since both Artaxerxes I and Artaxerxes II had very long reigns, it is often impossible to arrive at an absolute chronology; this observation holds for some Babylonian documents dated to a Darius as well. Sometimes there is scarcely anything other than personal names that might provide clarification, since most often neither the orthography nor the paleography provides adequate criteria. We encounter similar difficulties with Greek and Aramaic inscriptions in Asia Minor dated to an Artaxerxes, even when they are historical sources of critical importance. This is true, for instance, of the Greek inscription from Sardis that records the dedication of a statue by a high satrapal official, as well as an Aramaic inscription from Cilicia that attests to the existence of an Achaemenid power center in the mountains. We may add that the Greek authors themselves from time to time appear to have introduced confusion among the two or three Artaxerxes, and it is this very possibility that has served as partial

justification for the endless debate on the chronology of the missions of Ezra and Nehemiah to Jerusalem.

The Position of the New Great King

One of the new king's first acts was to give up his private name and take the throne name Artaxerxes, a custom that is first attested with his reign. The choice of a name meaning 'whose power [is established through] Arta' appears to indicate a desire to exalt the political-religious value of "truth" and dynastic loyalty, as his father and grandfather did—which was probably welcome after the difficulties in the succession. Similarly, the new king's inscriptions obviously do not breathe a word of the bloody struggles that cleared his path to the throne. Artaxerxes repeats the creation formulas of Ahura-Mazda known from Naqš-i Rostam and other previous installations and presents himself simply as follows: "I am Artaxerxes the Great King, king of kings, son of Xerxes the king, grandson of Darius, an Achaemenid"; at the same time he is careful to position his work as a builder in continuity with his father's (*A'Pa*; cf. *A'I*). The court propaganda also endowed the new king with all of the traditional royal virtues. We get an idea of the propaganda's impact in the description given by Nepos: "Macrochir is principally known for his imposing and handsome figure, which he enhanced by incredible valour in war; for no one of the Persians excelled him in deeds of arms" (*Reges* 1♦). Plutarch also was glad to stress that "the first Artaxerxes, among all the kings of Persia [was] the most remarkable for a gentle and noble spirit" (*Art.* 1.1♦; cf. 4.4). Diodorus also refers to the attribute of gentleness, stressing the great acclaim achieved by the new king among the Persians (XI.71.2). Like many other authors, Plutarch recalls that he was nicknamed "the Long-Handed" (*Machrokheir*), giving the explanation "his right hand being longer than his left."♦ Another writer, Pollux, comments as follows: "with a power that extends far," an expression that seems more in keeping with royal Persian thought, since the phrase is often found in the inscriptions of Darius and Xerxes (see chap. 5/3). The fact remains that Artaxerxes had to fight hard to reinforce his new authority. Plutarch mentions that, shortly after his accession, the king was unable to turn his full attention to the Aegean front, "being taken up with the affairs of" the High Country (*anō*; *Them.* 31.3♦). This High Country is what the Greek authors, especially in the Hellenistic period, called the Upper Satrapies. Fortunately, Ctesias provides several supplementary details: "Bactra with its satrap, another Artabanus, seceded from Artaxerxes; a great, indecisive battle ensued. But with the resumption of combat, the wind came up in the face of the Bactrians and victorious Artaxerxes accepted the surrender of all Bactria" (§31). This Artabanus was probably none other than Artaxerxes' brother Hystaspes, who was then satrap in Bactra, according to Diodorus (XI.69.2). This event, then, was not properly speaking the rebellion of a subject country but a dynastic struggle. The victory could only have reinforced the authority of Artaxerxes, who thus proved his mettle as a fine warrior and restorer of imperial and dynastic order.

Diodorus mentions other aspects of reorganization carried out by Artaxerxes at his accession: He "first of all punished those who had had a part in the murder of his father and then organized the affairs of the kingdom to suit his own personal advantage. Thus with respect to the satraps then in office, those who were hostile to him he dismissed and from his friends he chose such as were competent and gave the satrapies to them" (XI.71.1♦). Josephus states that the king appointed the commanders of 27 satrapies, from

Genealogy: From Artaxerxes I to Artaxerxes II

India to Ethiopia (*Ant.* XI.185). But was this act circumstantial or structural? The general impression we have is that whenever a new ruler came to the throne, he confirmed or disaffirmed the powers of the officials currently in office, and they thereafter served at his pleasure. No other document suggests that Artabanus the chiliarch's "revolt" or, subsequently, that the revolt of Hystaspes created a general occasion of insurrection or that these events resulted in a sudden shift in the holders of satrapal posts.

In the *Life of Themistocles* (29.5♦), Plutarch states that Artaxerxes made "great alterations at court and removals of the king's favourites." The sole objective of Plutarch's comment is to explain how Themistocles was able to obtain extraordinary favor at court, which gave rise to jealousy on the part of the nobility among the royal entourage (*Them.* 29.5–6). Whatever the case, we are tempted to compare this information with what Plutarch says elsewhere about Artaxerxes:

He was the first to issue an order that any of his companions in the hunt who could and would might throw their spears without waiting for him to throw first. He was the first to ordain this form of punishment for those of the ruling class (*hoi hēgemonikoi*) who offended: Instead of having their bodies scourged and the hair plucked from their heads, they took off their outer garments and these were scourged, and put off their head-dress and this was plucked, . . . as the tearful owners beg for mercy. (*Moralia* 173 d;♦ 565a♦)

The same information is found in nearly identical terms in Ammianus Marcellinus, in a passage dedicated to Artaxerxes "the Long-Handed"'s gentleness, which he contrasts with the cruelty of punishment imposed by the other Persian kings (XXX.8.4). It is also possible that some Babylonian tablets illustrate the "new" royal punishments.

The tradition is thus relatively consistent. It must, however, be noted that some measures attributed to Artaxerxes I must be credited to Artaxerxes II. Note in particular that it was precisely because he was the first to shoot an arrow at a wild animal that Megabyzus was condemned to death the first time by Artaxerxes I (Ctesias §40). Of course, the story of Megabyzus encompasses an entire series of clichés and monarchical motifs (the theme of the lion hunt in particular), all of which must be located outside History's time; but it is hard to see why the storyteller would attribute this punishment to a king who was also known for having relaxed the protocols of the royal hunt. It is not impossible that this modification simply dates to Artaxerxes II; Plutarch in particular stresses that he lightened certain court regulations (*Art.* 4.4–5; 5) and that he based this on an identical policy of Artaxerxes I (§4.1).

Though there does not seem to be any doubt that Artaxerxes I redefined the court hierarchy, it is more difficult to infer a political interpretation from this. At first sight, it is tempting to see the change in form of punishment as a sign that court protocols were being relaxed, as well as a hint of the weaving of new relationships between Artaxerxes and the Persian aristocracy, which could also be interpreted as a symptom of the weakening of the new king's position. But we do well to stress that the penalties pronounced against the aristocrats are quite serious, because they concern the very symbols of social distinction and royal favor: robes, hairstyles, and wigs (hair!). If we add that these punishments without any doubt were applied in public, it becomes clear that the aristocrats could not have considered such measures to be a real concession on the part of the king, who, in any event, remained the source of justice and law (cf. Plutarch, *Art.* 23.5).

Artaxerxes I at Persepolis

At the same time, tablets provide evidence of the pursuit of work at Persepolis, between summer 464 (PT 76–77) and 460–459 (PT 79), the date when the Elamite tablets stop. According to the accepted chronology, the last Aramaic inscriptions on stone vessels date to 432–431. An inscription on a fragment of a silver vessel confirms activity at the royal workshops of Persepolis (A¹I). The available tablets show the extent of construction, since, for example, in 460–459, 1149 craftsmen received rations on the site (PT 79). The recent excavations have also confirmed the king's statements claiming that he completed the works begun by his father Xerxes (A¹Pa); we now know that he finished Palace H. Furthermore, a foundation inscription in Babylonian also states that he was the builder of the Hall of a Hundred Columns.

The reliefs installed on his buildings basically reprise the form and message of those of his predecessors, with, however, several noteworthy modifications. The theme of the procession of tributaries/donors is found on the staircase of Palace H, but the number of delegations (30) is greater than it ever was in the structures erected by Darius or Xerxes. The Royal Hero victoriously confronting a composite animal (Schmidt, pls. 114–17), as well as the king on his throne supported by 28 representatives of conquered peoples (pls. 96–99), are both found on the doors of the Hall of a Hundred Columns. We also find four copies of an audience scene, but its composition is different from the scene that originally adorned the central panel of the Apadana of Darius: in particular, the king is no longer accompanied by the crown prince (usually behind him; only a parasol-bearer is depicted behind the throne; pls. 103–7; fig. 22, p. 219 above).

It is quite difficult to assign a political interpretation to these changes. It is also not absolutely proved that Artaxerxes was actually responsible for the relocation of the central relief from the north and west staircases of the Apadana to the Treasury, even if the theory is appealing for the political implications it suggests: namely, the new king would have relished the disappearance of the image of his brother Darius from alongside the throne of his father, Xerxes. But is it actually Xerxes, Darius I, or some royal person consigned to anonymity who is shown seated on his throne in the Treasury audience scene? There we are, faced with a narrow skein of iconographic interpretations, each of which has some elements of plausibility but none of which achieves total acceptance; and all of this gives rise to several doubts about the overall coherence of the argument. Given the breadth of uncertainties that remain, it seems quite injudicious to imagine that, beginning with Artaxerxes I, Persepolis lost the political role it had played before, only to be transformed into a sort of “provincial Versailles” and become “a sanctuary rather than a capital.” The role assigned to Susa in this theory is paradoxical, since the new king does not appear to have carried out greater building activities there than at Persepolis. From one of Darius II's inscriptions we learn simply that he began the construction of a palace at Susa (D²Sb); one of Artaxerxes II's inscriptions shows that Artaxerxes I did not bother to rebuild the Apadana of Darius, which was destroyed by fire during his reign (A²Sa).

2. The Egyptian Revolt (ca. 464–454)*The Revolt of Inarus and the Athenian Intervention*

After achieving victory in Bactria, it was in the west that Artaxerxes would see the greatest threat to his imperial authority, particularly in Egypt (cf. Plutarch, *Them.* 31.4).

The facts are known to us essentially through Diodorus and Thucydides; Ctesias's report is marked by a series of repetitive motifs and onomastic and chronological improbabilities (§§32–35). According to Diodorus, the news of the assassination of Xerxes and the subsequent turmoil incited the Egyptians to try to win back their freedom. Their first rebellious act was to expel the Persian tribute-collectors and to bestow royal authority on a Libyan, Inarus (463–462). He gathered an army conscripted from the Egyptians and Libyans, reinforced by mercenaries from everywhere. He was aware of the disproportion of forces and sent an ambassador to Athens empowered to negotiate an alliance (*symmachia*) and to promise the Athenians considerable future benefits and even a share in the control of Egypt (*koinē basileia*). The Athenians responded enthusiastically to Inarus's request and soon sent a fleet to the Nile (XI.71.3–6). Thucydides supplies the following details:

Meanwhile Inarus, son of Psammetichus, a Libyan king of the Libyans on the Egyptian border, having his headquarters at Marea, the town above Pharos, caused a revolt of almost the whole of Egypt from King Artaxerxes, and placing himself at its head, invited the Athenians to his assistance. Abandoning a Cyprian expedition upon which they happened to be engaged with two hundred ships of their own and their allies, they arrived in Egypt and sailed from the sea into the Nile, and making themselves masters of the river and two-thirds of Memphis, addressed themselves to the attack of the remaining third, which is called White Wall. Within it were Persians and Medes who had taken refuge there, and Egyptians who had not joined the rebellion. (I.104♦)

Diodorus reports that the Persians took refuge in the Memphis fortress after being defeated. To put down the revolt, Xerxes then sent an army under the command of Achaemenes, “son of Darius and his own uncle” (XI.74.1)—that is, the very person who had been made satrap of Egypt by Xerxes after the revolt of 486–484 (Herodotus VII.7). Reinforced by the Athenian contingents, Inarus's army achieved victory at Papremis in the Delta, and Achaemenes lost his life there (Herodotus III.12, VII.7; Diodorus XI.74.1–4; cf. Ctesias §32).

Thucydides' account has the advantage of placing the revolt within the wider framework of Athenian politics. Though in Greece itself the break with Sparta was final and the circle of belligerents continually increased, Athens continued to maintain its maritime operations. This is shown by a list of Athenian soldiers who died in the years 460–459 in areas as far-flung as Greece, Cyprus, Phoenicia, as well as Egypt (ML 33). Taking into account the new international situation, Artaxerxes, who was busy preparing a new army, reasonably sent Megabyzus to Sparta with money “to bribe the Peloponnesians to invade Attica and so draw off the Athenians from Egypt” (Thucydides I.109.2♦; cf. Diodorus XI.74.5). These efforts did not have the expected results. The Persian army and navy prepared and trained in Cilicia, Cyprus, and Phoenicia and set off in a convoy commanded by Megabyzus and Artabazus. Throughout this time, the garrison at Memphis continued to stand firm, while the Athenians and their allies continued exercises—and Thucydides is very unforthcoming about their nature and extent (I.109.1). The Persian navy reached Memphis by sea and river and broke the blockade. Soon discord dominated relations between the Egyptians and the Athenians: the former surrendered, and the latter were convinced to make a truce with Megabyzus, who allowed some of them to return to Greece by crossing the Libyan Desert. The Athenian disaster soon climaxed when another squadron was surprised at the entrance to the Mendesian Mouth

of the Nile and almost completely destroyed: "Such was the end of the great expedition of the Athenians and their allies to Egypt" (Thucydides I.110.4♦). It had lasted six years (460–454; I.110.1).

*Characteristics and Consequences of the Revolt:
Persian Egypt and Egyptian Egypt*

Thucydides states that the Athenian's initial success enabled them to become "masters of Egypt" (I.109.2♦). There is nothing to this claim. Inarus himself was only able to seize control of part of Egypt (I.109.1). There is no trace of rebellion anywhere but the Delta. In 461, for example, the Persian Ariyawrata had an inscription placed in Wadi Hammamāt, dated as follows: "Year 5 of the king of Upper and Lower Egypt, lord of the Double Country, Artaxerxes, may he live forever, beloved of the gods" (Posener no. 31). Identical inscriptions are known from the following years (nos. 32–34). Nor is any trace of trouble detectable in the Aramaic papyri from Elephantine dated to the reign of Artaxerxes.

In actuality, the revolt was limited to the Delta. Inarus was careful to present himself as the son of Psammetichus, who himself represented a program of restoration of Egyptian independence as it existed before the conquest by Cambyses. He ordered the expulsion of Persian tribute-collectors, who were visible signs and symbols of subjection. But first he established himself in Libyan bases before setting foot in the western Delta; his insurrection thus was the latest in a long history of Libyan dynasties in Egypt. Moreover, he obviously was aware that in the present circumstances the Athenians had as their highest objective "to humble the Persians as far as they could" (Diodorus XI.71.5♦). But he never succeeded in attracting the loyalty of all the Egyptians. We have seen that, despite the length of the siege and the Athenian successes, Egyptian auxiliaries remained faithful to the Persians in the White Wall at Memphis (I.104.2). Inarus went so far as to promise the Athenians a sort of power-sharing in Egypt (Diodorus XI.71.4). Because of these considerations, it seems impossible to consider this revolt a manifestation of what is customarily called "Egyptian nationalism." It is likely that the promises made to the Athenians did nothing other than to alienate a certain number of Egyptians. In the end, Inarus was betrayed to the Persians and crucified (I.110.3).

The events also reveal gaps in Persian territorial dominance. Thucydides writes that, after the Persian victory, "Egypt returned to its subjection to the king," but he adds this crucial reservation: "except Amyrtaeus, the king in the marshes, whom they were unable to capture from the extent of the marsh; the marshmen being also the most warlike of the Egyptians" (I.110.2♦). In fact, we know from Herodotus that the best Egyptian soldiers came from the Delta nomes (II.164–65). These "marsh kings" became part of the Egyptian *longue durée*: according to both Herodotus (II.152) and Diodorus (I.66), Psammetichus I himself had been exiled to the marshes, and he regained power with the aid of Ionian and Carian mercenaries. This was the same strategy taken by Inarus. Among the considerable advantages that it dangled before the Athenians (Diodorus XI.71.4) perhaps was the availability of plots of land in Egypt, comparable to what Psammetichus had distributed to the Ionian and Carian mercenaries after his victory (Herodotus II.154). It is clear that after the death of Inarus another marsh king, Amyrtaeus, retained power locally, and the Persians did not attempt to vanquish him because of the operational difficulties. This Amyrtaeus may be the other Egyptian who, Ctesias (§32) says,

rebelled at the same time as Inarus. The fact remains that Inarus's line did not die out, since in 445–444 another dynast, also named Psammeticus, sent shipments of wheat to Athens, indicating that at this date he controlled rich farmland in the Delta. The same situation existed in 412 (Thucydides VIII.35.2).

The events of Artaxerxes' reign thus show that the Persians worked out a highly uneven scheme for territorial occupation in Egypt. Their first concern was to keep open the riverways linking Memphis to the sea. This, anyway, was Herodotus's observation when he visited Egypt some time after the revolt (cf. III.12): "To this day the elbow which the Nile forms here, where it is forced into its new channel, is most carefully watched by the Persians, who strengthen the dam every year; for should the river burst it, Memphis might be completely overwhelmed" (II.99♦). Thus, by exercising control over the Egyptian river fleet, they prevented any rebel from turning it against them (cf. Diodorus XVI.47.6). Because they collaborated with Egyptian engineers, they were in a position to use dikes and canals against rebels (Thucydides I.110.4; Diodorus XI.77.1). Finally, garrisons allowed them to keep the road to Palestine open, as well as the mouths of the Nile, through which warships and transport vessels traveled freely.

The Persians were aware of their inability to impose direct dominion over the western Delta (or, perhaps they merely wanted to pursue their traditional policy) and therefore gave up the idea of military occupation. This is probably what underlies Herodotus's remark regarding Egyptian dynasts:

For the Persians are in the habit of treating the sons of kings with honour, and even of restoring to their sons the thrones of those who have rebelled against them. There are many instances from which one may infer that this sort of generosity is usual in Persia: one obvious one is the case of Thannyras, the son of Inarus the Libyan, who was allowed to succeed his father. Pausiris, the son of Amyrtaeus, is another example: to him, too, his father's kingdom was restored—and all this in spite of the fact that nobody ever caused the Persians more trouble and loss than Inarus and Amyrtaeus. (III.15♦)

In other words, after the execution of Inarus, the Persians did not attempt to dislodge his son. The requirement, obviously, was that he agreed not to rise up against the Persians and that he would not attempt to extend the territory allocated to him. He was to some extent a client king, as were Amyrtaeus and his son. In addition to other obligations, they were required to send the famous Egyptian marsh soldiers, whom Herodotus calls the Hermotybians and Calasirians (II.164–65), to the Great King. These soldiers had participated in the campaign of 480; they were even included among the *epibates* ('marines') in Mardonius's elite army (IX.32). It is practically certain that this system had been in place since the time of Cambyses' conquest. Let us emphasize in fact that Inarus is referred to as a Libyan dynast who was "king of the Libyans on the Egyptian border" (Thucydides I.104.1♦). Indeed, the adventures of the Persian army when it had retreated from Cyrenaica in 513 show that, even at that time, "most of them [the Libyans], at the time of which I write, cared nothing for the king of Persia, any more than they do to-day" (Herodotus IV.197♦).

The system managed to work to the Persians' advantage for several decades. For one thing, they kept in place several concurrent dynasts, following a method they had applied in other parts of their Empire (cf. Plutarch, *Art.* 24.5–9). For another, the Delta dynasts by themselves were unable to seize waterways or Memphis; until the arrival of the Athenians, the unrest fomented by Inarus does not seem to have been widespread. On

the other hand, the Persian strategy had enormous risks that were evident as soon as the marsh kings found support from a state such as Athens that could dispatch a fleet capable of sailing the Nile as far as the seat of Persian power (cf. Thucydides I.104.2). As it happens, a few years later, an Athenian squadron once again headed for the Delta in response to an appeal from Amyrtaeus, "the king in the marshes" (I.112.3♦). In other words, maintenance of dominion over Egypt very much depended on the abilities of the royal navy. To deal with these circumstances, the central power was able to mobilize men and materiel from its Levantine subjects (Cilicians, Cypriots, Phoenicians). It also benefited from the multiple fronts faced by the Athenians, who were more interested in weakening Artaxerxes (Diodorus XI.71.5) than in conquering Egypt. It was exactly the same motivations, in reverse, that led the Persian embassy headed by Artabazus to act as it did in the Peloponnesus; Artaxerxes and his successors thereafter always attempted to take advantage of the new situation created by the rupture between Sparta and Athens.

The fact remains that the Egyptian strategy was an important success for the Great King. According to Ctesias, before leaving Egypt, Megabyzus left Sarsamas there as satrap (§35). We are tempted to think that he is the same Aršāma who is mentioned in several Aramaic documents as the satrap of Egypt under Darius II. Apart from a new and fruitless attempt by Amyrtaeus (Thucydides I.112.3), Egypt remained calm throughout the reign of Artaxerxes I.

3. *Trans-Euphrates Matters*

Artaxerxes and Megabyzus

These events in Egypt form the chronological context of the obscure affair of Megabyzus, which is narrated at great length by Ctesias in a story with the following outline. Amestris (here confused by Ctesias with Amytis) was unhappy with the agreement between Megabyzus and Inarus and the Greeks in his service (§34). Her only goal was to get the king to punish the murderers of her son Achaemenes, and she achieved this aim five years later: Inarus and fifty Greeks were crucified (§36). Megabyzus was utterly distraught at this and received permission from the king to leave the court and settle in Syria, which is referred to as 'his territory' (*he heautou khōra*). With the aid of Inarus's Greek mercenaries, whom he had hired, he seceded, supported by his sons Zopyrus and Artyphius. Their forces routed two successive armies sent by Artaxerxes, the first commanded by Usiris, the second by Menostanes, a nephew of the king (§37–38). Negotiations took place: "The king granted him a pardon" (§39). Following this, Ctesias reports the episode of the lion hunt, the exile of Megabyzus to the Persian Gulf, his wild escape, his reunion with his wife Amytis, his return to favor, and then his death (§§40–42).

The story thus told is not without interest. It clarifies the relationships between the king and an aristocrat of distinguished lineage who was a descendant of one of the conspirators of 522, who had achieved a preeminent position close to Xerxes (he married one of Xerxes' daughters and successfully suppressed the Babylonian revolt), and who had played an important though unclear role after the accession of Artaxerxes. We also note that, before opening negotiations with the king, Megabyzus was careful to make sure that his wife and young son were present with him; otherwise, they might have been considered hostages held at court to guarantee loyalty. Furthermore, Ctesias's tale introduces people (Artarius, Menostanes) whose historical existence is confirmed by Babylonian

tablets. We know, for example, that the emissaries sent to Megabyzus, Petisas and his son Spitamenes, at that time had the concession on lands in the Nippur area (the names are Pātēšu and Ispitāma in the tablets). But taken as a whole, despite the veracity of some details, Ctesias's tale is far from believable. As has been mentioned several times already, it is clearly a family saga. Ctesias even follows the adventures of Megabyzus's sons Artyphius and Zopyrus II. Zopyrus left royal territory and sought refuge in Athens; he later died in an obscure attempt on Caunus (§43). The entire narrative is built on a series of literary motifs (cruel Persian princesses seeking vengeance for their child, royal favor/disfavor, wound in the thigh, lion hunt, theme of return).

Even if we conclude that there really was a revolt by Megabyzus, it is still not easy to analyze it with total equanimity. We do not even know Megabyzus's position during these events. We get the general idea from Ctesias that he was satrap of Syria (Trans-Euphrates), which we think had previously been separated from Babylonia—and this in fact seems likely (Artarios is called “satrap of Babylonia,” §38). But when Ctesias calls Syria “his territory,” he might just as well be thinking that estates had been granted to Megabyzus in the region. It is true that the two interpretations (satrap; estate-holder) are not mutually exclusive, given how difficult it is to distinguish personal estates from government lands (see chap. 11/9). If we agree that he really was a satrap, we should stress that he is the first example since the still mysterious case of Ariyandes in Egypt (Herodotus IV.166) of someone undertaking a rebellion. One of the most noteworthy aspects of the revolt is that Megabyzus recruited Greek mercenaries. This is the first attestation of a practice that was to be repeated some years later under Pissuthnes.

Troubles in Judah?

According to the Chronicler, at just about the same time, troubles continued to rock Judah (Ezra 4:7–24♦). The Jews, who he says (4:4–6) already had been denounced in Xerxes' time, were again criticized in the time of Artaxerxes. A letter was sent by Rehūm the governor and Shimshai the scribe, with the support of representatives of other peoples neighboring Judah. They let the king know that the Jews were continuing to rebuild the town and raise walls, and they foresaw that these activities risked a serious attenuation of Artaxerxes' power in the region, because Jerusalem was a “rebellious and wicked” town and, therefore, soon, if they were not careful, its inhabitants would refuse to “pay tribute, customs or tolls.” The governor asked Artaxerxes to look into the royal archives, which would prove that Jerusalem had always been seeking independence under the leadership of their own kings. This was done. Convinced, the king ordered the suspension of construction work and ordered Rehūm and his colleagues to carry out the decree.

But what should we make of this passage? The problem is that its chronological placement is anomalous, since immediately afterward comes the discussion of the acts of Darius I. It is possible that the Chronicler wanted to make a point here, to which he keeps returning during the missions of Ezra and Nehemiah—namely, that Judah was surrounded by neighbors ready to condemn them to the satrapal authorities, who were inclined to lend them a receptive ear. The story of Tattenai's inspection tour is built on the same motif—he too asked Darius to research something in the royal archives (5:3–17). If we concede (though not without reservations) the historicity of the episode, it is possible that the construction carried out at Jerusalem greatly exceeded the prior royal

authorization, which referred only to building a temple. On the other hand, the connection often suggested between this episode and the Egyptian insurrection and the possible revolt of Megabyzus must remain hypothetical, since no external evidence has yet been found to confirm it.

4. The Asia Minor – Eastern Aegean Front

Athenian-Persian Hostilities (the 450s)

After the Egyptian campaign, Athens' position was certainly weakened, both as a result of the losses suffered in the campaign (cf. Thucydides I.110.1) and as a result of the dangers encumbering its position in Greece itself. It is likely, too, that Artaxerxes profited from his success in Egypt. This is what Plutarch leads us to believe: he "despatch[ed] messengers to Themistocles at Magnesia, to put him in mind of his promise, and to summon him to act against the Greeks" (*Them.* 31.4; ♦ cf. 31.3). To read Plutarch, it appears as though Themistocles did not accede to the royal instructions (31.5; *Cimon* 18.6; but cf. Thucydides I.138.4). The conclusion of a five-year truce with Sparta (454 or 451?) allowed Athens to return to the offensive, at the goading of Cimon, who had returned from exile (451?):

Released from Hellenic war, the Athenians made an expedition to Cyprus with two hundred vessels of their own and their allies, under the command of Cimon. Sixty of these were detached to Egypt at the instance of Amyrtaeus, the king in the marshes; the rest laid siege to Kitium. (Thucydides I.112.2–3♦)

These events are also known from a passage in Plutarch (*Cimon* 18.5–9) and a report in Diodorus; Diodorus, unfortunately, seems to have partly confused this episode with the Eurymedon campaign (XII.3–4.1–3).

The Persian forces were commanded by Artabazus and Megabyzus. Artabazus was awarded the overall command and led the fleet anchored at Cyprus, while the latter led the army encamped in Cilicia (Diodorus XII.3.2). If Diodorus's information is correct, it implies that the two Persian commanders were ordered to maintain the troops in war-readiness at the end of the Egyptian campaign (cf. XI.74.6). The siege of Kition was fruitless. After the death of Cimon, the Athenians won two victories on land and sea: "Being victorious on both elements, they departed home, and with them the returned squadron from Egypt" (Thucydides I.112.4♦). For Thucydides, the Asia Minor front disappeared precisely at the time of the settlement of the Thirty Years' Peace with Sparta (446–445). After the death of Cimon, there was a change in strategy, under the aegis of Pericles: the Greeks turned away from mounting major expeditions against the Persians, such as those that Cimon had led, because this only reinforced the dependency of the subjects of the Empire.

Return to the "Peace of Callias"

In the course of his tale about the Cyprus expedition, Diodorus refers to Athenian-Persian negotiations (XII.4.4–5). When he heard the news of the Cyprus defeats, Artaxerxes gathered his Friends and decided that it would be to his advantage to open peace talks with the Greeks. He then sent the generals and satraps written instructions that allowed them to discuss the terms of a treaty. For their part, the Athenians dispatched ambassadors with full authority, the leader of whom was Callias, son of Hipponicus. Here, according to Diodorus, are the principal articles of the agreement that was reached:

All the Greek cities of Asia are to live under laws of their own making; the satraps of the Persians are not to come nearer to the sea than a three days' journey and no Persian warship is to sail inside of Phaselis or the Cyanean Rocks; and if these terms are observed by the king and his generals, the Athenians are not to send troops into the territory over which the king is ruler. After the treaty had been solemnly concluded, the Athenians withdrew their armaments from Cyprus. (XII.4.5–6♦)

Let us underscore it one more time: Thucydides does not breathe a word about this. Furthermore, Herodotus refers to the presence—at the same time, at Susa—of an Argive embassy (which had come to ask the king to confirm the traditional alliance), Callias son of Hipponicus, and other Athenian deputies, who had come “on some mission, which had nothing to do with the business we are now considering” (VII.151♦). But he does not date the episode precisely (“many years after” [Xerxes' expedition in Europe]). The Argive diplomatic mission possibly should be dated to 466–465. The ancient literature on this treaty dates primarily to the fourth century. But we may provisionally agree that there may well have been negotiations between Athens and Artaxerxes around 449. We will then observe that, setting aside the distortions introduced by later Athenian propaganda, this was apparently a limited accord: the Athenians evacuated Cyprus and Egypt in exchange for formal agreement by the satraps not to intervene directly in the Greek cities that at that time were parties to the Athenian Alliance. There is certainly no question that this was an Athenian triumph, especially at a moment when Pericles obviously thought the chapter of the Persian Wars was at an end. From the Persian perspective, then, we can imagine that continuing control of the eastern Aegean heavily outweighed any provisional concessions that were granted; the central power certainly thought, on the one hand, that these concessions were limited and temporary and, on the other, that none of them committed the Persians to abandoning the king's eminent rights to “the territory over which he was ruler.” The Great King never relinquished his tribute prerogatives, even when the Athenian occupation temporarily prevented the satraps from collecting the annual levies in the Alliance cities (Thucydides VIII.4.5; 6.1). All the same, the Great King himself did not participate directly in the agreement; the Athenians had to enforce it on the satraps. We may also suspect that at court it was also thought that the situation in Greece opened up numerous prospects for weakening the Athenian position.

The Persians had even fewer reasons to accept a diplomatic “Waterloo” because they were far from unaware of the difficulties Athens was experiencing with its allies, difficulties they themselves had nurtured. We know, in fact, from a decree (ML 40) dated (hypothetically) to 453–452 that the members of the council of the city of Erythrae had to agree “not to receive [into the city] any of the exiles who sought refuge from the Medes.” Some time later (451–450?), another decree guaranteed Athens' assistance to Sigeion against any enemy coming “from the mainland,” a phrase that generally refers to the Persians, or Greeks aided by the Persians (ATL III:255). Conflicts between the allied cities were thus used by the satraps of Sardis or Dascylium, who then tried to install factions favorable to secession from the Athenian Alliance; these factions would naturally seek support from the mainland Persian satraps.

Obviously, the signing of the supposed “Peace of Callias” did not interrupt the activities of the satraps. In 441, a border conflict broke out between Miletus and Samos. The Athenians did not intervene (in the spirit of actions taken by Artaphernes in 493—see

chap. 12/5 – the two cities would have had to appeal to the satrap, if they recognized his authority at the time). The defeated Milesians appealed to Athens, which installed a democratic regime in Samos. As usual, the Samian exiles sought refuge with Pissuthnes, the satrap of Sardis. An alliance (*symmakhia*) was formed; under the terms of the agreement, Pissuthnes furnished 700 auxiliaries, and they allowed the exiles to regain their footing in Samos, “after which they revolted [against Athens], gave up the Athenian garrison left with them and its commanders to Pissuthnes”; soon Byzantium joined the revolt (Thucydides I.115.2–5♦). It is clear that the Samians counted on massive Persian support. When Pericles set sail for Samos, he rerouted part of the squadron to Caria “upon the news that the Phoenician fleet was approaching,” and a Samian, Stesagoras, was sent to meet it (I.116). It is possible that this news came from a Persian attempt at disinformation; at the least it indicates that the Athenians had no illusions about one of the clauses of the “Peace” that in principle prohibited an Achaemenid navy from patrolling the coasts of Asia Minor. Further, there is nothing to indicate that Pissuthnes was required to return the Athenian garrison that had been taken off to Sardis.

In any case, the Samian and Erythraean examples prove that the Great King had instructed the Persian satraps to profit as much as possible from Athenian setbacks. It is quite clear that in each allied city there was a group of “Medizers” ready to work for the advantage of the Persians against the Athenians. In 430, exiled Ionians sought out the Lacedaemonian admiral Alcides and let him know that he could easily provoke the defection of Ionia from the Athenian side: “They would probably induce Pissuthnes to join them in the war” (Thucydides III.31.1♦). This is the context of Thucydides’ report that “Itamenes and the barbarians, who had been called in by certain individuals in a party quarrel” (34.1♦) moved into Colophon’s upper town; at Notium, exiles “called in Arcadian and barbarian mercenaries from Pissuthnes, and . . . formed a new community with the Median party of the Colophonians who joined them from the upper town. . . . Paches [an Athenian] then gave up Notium to the Colophonians not of the Median party (*hoi mēdisantes*)” (34.2–4♦).

The outbreak of the Peloponnesian War would soon enough offer the Great King new possibilities for intervention. Thucydides (II.7.1) presents the hopes of the Lacedaemonians and their allies as follows: “They resolved to send embassies to the king and to . . . others of the barbarian powers.” Some time later, they actually sent embassies to Artaxerxes “to persuade the king to supply funds and join in the war” (II.67.1♦). They planned to go to Pharnaces of Dascylium, “who was to send them up the country to the king.” A Thracian named Sadocus turned the Lacedaemonian ambassadors over to the Athenians, who were very anxious to block such contacts (67.2). In 424–423, the Athenians seized a Persian ambassador, Artaphernes, “on his way from the king to Lacedaemon” (IV.50.2♦). The tenor of the captured letter indicated that the king remained puzzled because of the conflicting information he was receiving from the ambassadors who had sought him out: “If however they were prepared to speak plainly they might send him some envoys with this Persian [i.e., Artaphernes]” (50.2♦). It thus seems that, at least after the time of the Egyptian campaign at the beginning of the 450s, diplomatic contacts between Spartans and Achaemenids had never ceased (I.109.2–3), even if the Spartans had thus far refused to take decisive action, because they were concerned above all not to have to fight far from their Peloponnesian bases (cf. III.31.2). The Athenians themselves were very careful to ensure the safe travel of Artaphernes to Ephesus

with all the honor due one of his rank; included in his escort were representatives who clearly had been instructed to make contact with Artaxerxes (IV.50.3). Strabo (I.3.1) mentions Diotimus's embassy to Susa; Aristophanes mocks the presence of Athenian ambassadors in Persia and Persian ambassadors in Athens in 425 and 424. Nevertheless, we cannot conclude that the Great King had already become the arbiter of Greek affairs, as he clearly would be in the fourth century; but the process had been set in motion.

In short, if there ever was a "Peace of Callias" in 449–448, it particularly functioned to the advantage of the Persians, who on the one hand could thereafter enjoy their Egyptian and Cypriot possessions in peace and on the other would no longer make the mistake of interfering in the internal affairs of the Athenian alliance. We may thus ask whether, from the Persian point of view, the agreement reached around 449–448 actually had a totally different meaning from the significance put forward by the Greek authors of the fourth century. We may recall that, according to Diodorus himself, Artaxerxes intended to initiate talks not with Athens alone but with all of the Greeks (XII.4.4). The context does not exclude the possibility that several Greek cities had already sent deputations to the Great King. Is it possible that this situation provided a precedent for the congress that was gathered by Artaxerxes II at Susa in 387 and before which he had his decree read (Xenophon, *Hell.* V.1.31)? Of course, the circumstances were different, not least with respect to power relationships. But from the Great King's perspective, the difference was insignificant. The clause granting autonomy to Asian cities—which Diodorus and others present as a striking Greek victory—could just as well be considered as targeting Athens, since, applied systematically by the Persians, its purpose was to achieve dominion over Athens; we are tempted to think that it was by branding it as a slogan that the Persian satraps of Asia Minor supported the intrigues of those among the allies who wished to escape the unbearable yoke of Athens (cf. Thucydides II.63.2: *tyrannis*). In other words, it is not impossible that the 449–448 agreement was interpreted in totally opposite senses in Athens and Susa: in Athens, it was lauded as an unprecedented victory; at Susa, it was seen as a royal correction. Anyway, it appears from the way that Plutarch reports it that the Athenians were fully aware of the limits imposed on them by the agreement (and/or the balance of power!), because Plutarch writes regarding Pericles: "he did not comply with the giddy impulses of the citizens . . . when . . . they were eager to interfere again in Egypt, and to disturb the King of Persia's maritime dominions" (*Per.* 20.3♦). In the final analysis, we are led to believe that if there really were diplomatic negotiations in 449, the result was not so much a Peace of Callias as a Peace of the King.

Artaxerxes in 449 was no more ready than his father in 466 to accept conditions that were unilaterally determined by Athens. Despite gaps in the evidence, we see nothing that might justify the notion that there had been an Achaemenid diplomatic/military disaster. From Artaxerxes' perspective, it appears that on the one hand his rights over Asia Minor were never abandoned, and on the other, he commanded the satraps of Sardis and Dascylium to attempt to regain the lost territory. We do not know why the Great King did not initiate a mass mobilization to lead a more energetic reconquest. Perhaps more than anything he had not forgotten recent defeats in pitched battle; no doubt he also believed that such efforts would be pointless and that he could in any case hope that divisions among the Greeks and the Athenians' military, political, and financial difficulties would lead to the same result in the long run. In fact, throughout Achaemenid history, the mobilization of a royal army proved to be the rarest of exceptions.

Return to Xanthus

It is difficult, even impossible, to plot exactly on a map the Persian gains and losses in Asia Minor at the end of Artaxerxes' reign. The Attic tribute lists show that from year to year the positions could change very rapidly, in either direction. Between 428 and 425, Athens clearly put great effort into firmly controlling the islands. We learn at the same time that the Athenians lost some very important positions, such as Caria and Lycia, the latter disappearing from the lists at the end of the 440s. The failures to reinstall Athenian dominion there were as frequent as the attempts. In 428, leading "collection ships" (*argyrologoi*), the strategos Lysicles suffered a reverse in Caria, in the plain of the Meander (Thucydides III.19.2). In 430–429, the Athenian strategos Melesander was given command of a squad of six ships with the mission of going to Caria and Lycia

to collect tribute in those parts, and also to prevent the Peloponnesian privateers from taking up their station in those waters and molesting the passage of the merchantmen from Phaselis and Phoenicia and the adjoining continent. However, Melesander, going up the country into Lycia with a force of Athenians from the ships and the allies, was defeated and killed in battle, with the loss of a number of his troops. (Thucydides II.69.1–2♦)

The first point of interest in Thucydides' text is that hostilities did not interrupt commerce with territories belonging to the king—an observation generally confirmed elsewhere. It also reveals the importance that the Athenians attached to Lycia in their strategic planning. Last, it shows that despite their efforts, the Athenians were never able to bring the region back to the heart of the alliance.

But the passage is interesting for another reason, and a very unusual one at that: we find an allusion to the episode in a famous text, the Xanthus Pillar inscription (TL 44). Even though the Lycian text is only partially deciphered, the name Melesander (Milasantra) can be read; he was defeated by an army commanded by a person named Trbbe-nimi, a Lycian name also known later (a descendant?) from coins and a tomb inscription (TL 128, 135). Another passage refers to a victory won (probably much later) by the Kheriga dynasty. Obviously, nothing proves that the dynasts of Xanthus and surrounding towns had acted at the instigation of the Persian satraps; that they consistently portrayed themselves as descendants of Harpagus is not sufficient proof. The proud exaltation of their victories over the Athenians certainly primarily expresses that they wished to appear as fully independent leaders; this of course also played into the hands of the Persian. Certainly, the Persian authorities must immediately have attempted to profit from the situation, only stopping short of claiming, as did Isocrates (*Paneg.* 161♦), that "Lycia no Persian has ever subdued"! Perhaps the Persian leaders intervened just as they had in Ionia, providing support for agitators who wished to break with Athens.

5. *Ezra and Nehemiah in Jerusalem*

Ezra's Mission

Meanwhile, life in the provinces went on, with no apparent connection to the events in Asia Minor. What we have to go by, primarily, are the biblical books of Ezra and Nehemiah. They report that, with the express permission of Artaxerxes, these two Jews carried out missions to Jerusalem: Ezra in the seventh year of Artaxerxes (458), Nehemiah in the twentieth (445). Ezra was "a scribe versed in the Law of Moses" (Ezra 7:6♦), "the priest-scribe, the scribe who was especially learned in the text of Yahweh's commandments and his laws relating to Israel" (7:11♦). Accompanied by a new caravan of

returnees (7:7, 8:1–12), Ezra went to Jerusalem bearing a royal letter (7:12–26). The king allocated materials in order to allow the temple and sacrifices to regain their former splendor: offerings from the king himself and the court, gifts sent by the Jews living in Babylonia, and vessels for the temple. Furthermore, the order was given to the Trans-Euphrates treasurers to provide Ezra with whatever he asked — up to 100 talents of silver, 400 liters of wine, 400 liters of oil, 400,000 liters of wheat, and “salt as requested.” Part of the sacrifices were intended to ensure divine protection for the king, his sons, and their Empire. In all respects, the steps taken by Artaxerxes conformed to those enacted previously by Cyrus and Darius. It is possible, even likely, that Ezra was also authorized to continue work on building the temple (cf. 6:14, 9:9). But Artaxerxes went further: the satrapal authorities were prohibited “to levy tribute, customs or tolls” on the temple personnel. As has already been pointed out (chap. 12/4), only one parallel is known: the exemption from tribute and *corvée* that Darius’s ancestors awarded to the “sacred gardeners” who worked the land of Apollo of Aulai (ML 12).

From the point of view of both the Jews and the royal power, the principal mission entrusted to Ezra was in the legal realm. He was in fact ordered to appoint judges and magistrates “to administer justice for the whole people of Transeuphrates”; exemplary punishment was promised to any who did not carry out “the Law of your God — which is the law of the king” (7:25♦). We must still ask about the content of this law, though doubtless it refers to the Torah. In order to “purify” the people of Judah, Ezra promulgated the law prohibiting mixed marriages and, during an official ceremony of renewal of the Covenant, the men repudiated their foreign wives and sent away the children they had borne (Ezra 10). But what is especially noteworthy is that thereafter the laws of the country were placed under the protection of the king and thus were included in the all-encompassing category of royal law (see chap. 12/7). As Artaxerxes’ review puts it (7:25), all who opposed the law (by rejecting the decisions made by the judges appointed by Ezra) would find themselves subject to royal punishment. As in many other examples, this case forcefully illustrates the connection between internal autonomy of a subject community and royal dominion. The king became the protector and guarantor of local customs, as long as they did not contradict Persian interests; even more, by returning harmony to Jerusalem, Ezra served the cause of imperial order.

Nehemiah’s Mission

Thirteen years later, at his own request, Nehemiah also was sent to Jerusalem by the Great King. He had been alerted by his brother Hanani to the deplorable state of the community and the town. Artaxerxes gave letters to Nehemiah as he had to Ezra. Some were addressed “to the governors of Transeuphrates” and instructed them to facilitate the trip for the Jew and his companions. Others were addressed to Asaph, “keeper of the king’s park,” who was ordered to furnish timber “for the gates of the citadel of the Temple, for the city walls,” as well as for the house in which Nehemiah planned to live (Neh. 2:1–10). The work soon began: “The wall was finished within fifty-two days, on the twenty-fifth of Elul” (October 445; 6:15♦). Nehemiah put his brother Hanani in charge of Jerusalem and Hananiah in command of the garrison (7:2). Then he proceeded to take a census of the population (7:6–68). Steps were taken, in the presence of Ezra(?), to restore the splendor of the rituals and daily life of the temple and its personnel. After twelve years, Nehemiah returned to the king (433).

He soon had to return to Jerusalem (ca. 430–425), having discovered that the rules he had instituted were not being enforced. In particular, the Jews no longer paid the tithe owed to the temple personnel. Nehemiah once more had to take action requiring respect for the Sabbath and forbidding mixed marriages (13:6–31). Such is the outline of Chronicles, which is apparently based on the memoirs of Nehemiah himself.

Above and beyond the many debates about a text filled with traps and pitfalls, one point seems certain. Like Ezra, Nehemiah had received orders from the Great King; unlike Ezra, he held an official position: ‘governor’ (*pehā*). He emphasizes the contrast between himself and the governors who preceded him in the position (5:14–17). His jurisdiction was “the country of Judah” (5:14), that is, the province (*medinah*) that on fourth-century coins is called Yehūd. Apparently the province, including Jerusalem itself, was divided into districts (*pelek*), which probably were tribal in origin but perhaps also corresponded to fiscal subdivisions. Like the governors of other provinces in the region, Nehemiah acted under the authority of the governor of Trans-Euphrates, who was undoubtedly based at Damascus. This governor, it seems, held an estate within the jurisdiction of the province that was something like a satrapal paradise, and the inhabitants of the province were required to perform corvée on his estate (3:7). Nehemiah, it seems, was accompanied by a “king’s commissioner for all such matters as concerned the people” (11:24♦)—as it happens, a Jew—but the breadth of his jurisdiction vis-à-vis the governor is not clearly established. Following the model of a “real” satrap, the governor of Judah received a special tax (“the governor’s bread”) that permitted him to supply his table every day and to entertain his guests (5:14–18). One of his main tasks was to levy the royal tribute (cf. 5:3). He also had a military function, since he put Jerusalem in a state of military readiness and entrusted the citadel to one of his close associates.

Nehemiah had instructions from the Great King specifically to reestablish political and social order. The description given by Nehemiah himself reveals extremely sharp social conflict. The common people complained of having to indenture their children to be able to eat; some had to mortgage their fields and vineyards to pay the royal tribute. In order to restore peace, Nehemiah took astonishing measures: he no longer collected the “governor’s bread” tax. But this act had primarily symbolic (and self-justification) value, even though it takes into account the combined effect of the royal levies and satrapal taxes. The basic problem lay at the level of relations between rich and poor: by lending money at interest, the former starved the latter. Like a Judahite Solon, Nehemiah was not a social revolutionary: though he proclaimed the abolition of debt and required the rich to return the mortgaged fields, vineyards, and olive groves to the small land-holders (5:10), there was no thought of actually dividing up the land. The impoverishment of the small land-holders was thus not simply an automatic result of the imposition of tribute: tribute only played a role of revealing and accelerating what already existed in the context of class relations specific to Jewish society. The various taxes also converged in that everyone had to pay for maintenance of the temple and its personnel: a one-third shekel head tax (10:33), as well as “first-fruits and tithes, . . . those portions . . . awarded . . . to . . . the cantors and gatekeepers too . . .” (12:44–47♦). The burden was so heavy that during Nehemiah’s absence the Jews had stopped bringing “the tithe of corn wine, and oil to the storehouses” (13:12♦).

It thus appears that from Cyrus to Artaxerxes there was considerable consistency in royal policy, though we are not able to say that the Great King took special interest in

this small region. The importance of Judah is only an “optical illusion” created by the uneven distribution of evidence. In particular, there is nothing to prove that Susa or Persepolis considered Judah a bulwark of Persian dominion against fickle and unruly Egypt. More likely, from the Persian point of view, Nehemiah’s mission was to establish a new basis for assessing tribute and guaranteeing regular payment: *mutatis mutandis*, and keeping in mind their purposes, his reforms can be compared with those carried out by Artaphernes in 493 in the cities of Ionia that had been ravaged by war and social tension (cf. chap. 12/5).

From Jerusalem to Elephantine

The principles on which Jewish autonomy and the limits of its effectiveness were established are clarified by Aramaic documents from Egypt during the reign of Darius II. In 410, during a murky affair (to which we return below in chap. 14/8) that found them in opposition to the governor of Syene, the Jews of the Elephantine garrison sent a petition addressed jointly to “Johanan the high priest and his colleagues the priests who are in Jerusalem, and to Ostana the brother of ‘Anani and the nobles of the Jews”—that is, to everyone who constituted the internal government of the community of Jerusalem, alongside the “governor of Judah” proper (DAE 102 [AP 30–31♦]). The people of Elephantine received no reply to their plea. The reason was probably because in their rituals they had violated the “Law of Moses,” as had recently been proclaimed so forcefully by Ezra and/or Nehemiah. Their petition in fact concerned the reconstruction of the temple of Yahweh that they had built on the island in the Nile, contrary to the principle of the uniqueness of the center of worship. One document, certainly from 419, shows that the Jews of Elephantine paid a head tax intended to sustain the expense of the temple service, conduct that was even more reprehensible because this money would serve to honor not only Yahweh but also Aramean gods (Bet’el and Anat; DAE 89 [AP 22]). In contrast, when Ezra was sent to Jerusalem, the Jewish settlers in Babylonia had given him offerings for the temple in Jerusalem (Ezra 7:16).

The Jews (or, rather, Judeo-Arameans) of Elephantine probably had appealed to the authorities in Jerusalem at an earlier time because the Great King had conferred on the rulers of Jerusalem the authority to intervene in purely religious affairs of the Jewish diaspora in the Empire. Anyway, the royal edict sent to Ezra said: “Appoint scribes and judges to administer justice for the whole people of Transeuphrates, that is, for all who know the Law of your God. You must teach those who do not know it” (Ezra 7:25♦). We find an illustration of this state of affairs in an Aramaic papyrus from Egypt. In 418, one Hanani (Nehemiah’s brother?) came to Elephantine bearing a very important document that regulated the celebration of Passover by the Jews (DAE 96 [AD 8]). It does seem that in this case the initiative came from the authorities in Jerusalem, who wanted to unify ritual throughout the diaspora. Hanani’s letter states that the order came from the king and was sent to Aršāma, the satrap of Egypt. But the central government was not in a position to intervene in a purely internal religious matter of the Jewish communities of the Empire. All it did was to grant official sanction (“royal law”) to a local ruling (“laws of the countries”).

The Enemies of Nehemiah and Judah

To read the Chronicler, the arrival of Nehemiah did not disarm the hostility of Judah’s neighbors; quite the reverse. As in the previous episode (cf. above, chap. 14/4),

Judah's neighbors intended to communicate to the Great King their condemnation of the royal ambitions they attributed to Nehemiah, in light of the fortifications he had just provided for Jerusalem (6:6–7). The danger was even greater because many neighbors of Judah had family members in the province because of the many intermarriages that all of Ezra's efforts (if he really did precede Nehemiah) had obviously failed to suppress. Even the high priest's son took a wife from outside Judah. On his second mission, Nehemiah had to renew the prohibition.

A coalition against Judah and Nehemiah developed: the Chronicler names "Sanballat the Horonite, Tobiah of Ammon, and Gašmū the Arab" (Neh 2:19, 6:1–7). The first was the leader of "troops from Samaria" (3:34 [Heb.; 4:2 Eng.]). We know that in 410 someone else called Sanballat was "governor of Samaria" (DAE 102), and he must have been a descendant. Papyri and inscribed bullas from Wadi ed-Daliyeh, north of Jericho, provide an additional reference point: dated between 375 and 335, they mention yet another Sanballat, who in all likelihood belonged to the same family. In the Elephantine document from 410, we see that Sanballat I had his sons Dalayah and Šelemyah beside him. There was thus a veritable dynasty that governed Samaria, at least between the reigns of Artaxerxes I and Darius III. The bullas and papyri of Wadi ed-Daliyeh and coins show that these men bore the title "governor (*pehā*) of Samaria"; Samaria was the name of the province (*medinah*) as well as the town (*qryt'*), which is sometimes called "Samaria the fortress" (*byrt'*), according to a formula frequently found in Achaemenid-period documents, at Sardis, Xanthus, and Meydançikkale as well as at Syene-Elephantine. Here, as elsewhere, the Persians recognized a local dynasty, but there is no question that its members received the title of governor directly from the central power. Like their colleagues at Jerusalem, the dynast-governors of Samaria depended on the higher authority of the governor of Trans-Euphrates.

The other two members of what the book of Nehemiah portrays as an anti-Judahite coalition are harder to identify. The name of Gašmū the Arab is usually related to the same name found in dedications inscribed on silver vessels found at Tell el-Maskhuta in Egypt. One is inscribed with the name "Qaynū, son of Gašmū, king of Qedar" (DAE 68 [AD 7]). But the extent of the Arab Qedarite kingdom and its relationship to the Achaemenid authorities remains problematic. As for Tobiah, he was probably part of a dynasty also known from later Aramaic inscriptions found in Transjordan (Iraq el-Emir); perhaps he was recognized by the Persians as governor of the region.

Sanballat's hostility does not seem to have been religious in origin. At this time, the word *Samaritan* had not yet acquired the sectarian significance it took on in the Hellenistic period when the sanctuary on Mount Gerizim, Jerusalem's rival, was founded; it refers exclusively to the inhabitants of the province (*medinah*) of Samaria. Furthermore, when the authorities in Jerusalem remained deaf to their plea in 410, the Jews of Elephantine did not hesitate to send a letter to the sons of Sanballat (DAE 102). Thus, it seems that the governor of Samaria and his neighbors (Gašmū, Tobiah) were uneasy about the strengthening of the governor of Judah's power, which is why they attempted to stir up the fears of the Persian government. Without being able to prove it, we may suggest that these local jurisdictional squabbles can be compared to the tensions seen in Asia Minor between the satraps of Sardis and Dascylium, who were continually disputing control over frontier territory (the Troad). If this is true, perhaps Nehemiah had received guarantees on this point from the central government.

6. One King after Another (425–424)

Ctesias and the Babylonian Tablets

According to Ctesias (§44), Artaxerxes and his wife Damaschia (unknown elsewhere) perished on the same day. They had only one legitimate son, who took the throne under the name Xerxes (II). But several of Artaxerxes' illegitimate sons who had strong ambitions challenged Xerxes II. The main challenger was Sogdianus, son of Alogune. He fomented a conspiracy against his half-brother with the help of Pharnacyas, Menostanes, and several others; 45 days after his accession, Xerxes was assassinated, "while he lay drunk in his palace," and Sogdianus took the royal title (§45), naming Menostanes chiliarch (*azabarites/hazarapatiš*; §46). One of his half-brothers, Ochus, also born to a Babylonian woman (Cosmartidene), had received the satrapy of Hyrcania from his father and married one of his half-sisters, Parysatis, daughter of a third Babylonian concubine, Andia. Ochus refused to attend the meetings called by Sogdianus and won several important people to his side, including Arbarius, the commander of Sogdianus's cavalry. He soon seized power and took the throne name Darius II (§§47–48). This is a sketch of the tale told by Ctesias.

The Babylonian tablets, moreover, allow us to conclude that the events between the death of Artaxerxes and the accession of Darius II unfolded between the end of December 424 and February 423 and also that the reigns of Xerxes II and Sogdianus were not officially recognized by the Babylonian scribes. Many details elude us. It is likely that Xerxes took the throne because of his parentage and perhaps also because his father had recognized him as crown prince. It seems that, presented with the accession of the new king, Sogdianus and Ochus announced their pretensions simultaneously. Ctesias's report shows that the aristocrats had to choose sides, and in the ensuing battle, Ochus managed to win over very important men, such as Arbarius, the commander of Sogdianus's cavalry; Arsames (Aršāma), the satrap of Egypt; and even Artoxares, who at the time of Artaxerxes I had been exiled to Armenia because he had spoken to the king on behalf of Megabyzus (§40).

It just so happens, by extraordinary coincidence, that many of the people just named are also known from Babylonian tablets belonging to the archives of the Murašū, a business establishment that during the reigns of Artaxerxes I and Darius II dealt specifically with the management of land around Nippur, including land granted by the king to members of his family and high crown officials. Alongside the "house of the woman of the palace" in the time of Artaxerxes I and the "house of Parysatis" (after the accession of Darius II), we also can identify Aršāma, who in addition to his estates in Egypt kept land and livestock in Babylonia under Artaxerxes I and Darius II. We can also identify Menostanes, son of Artarios; he was a brother of Artaxerxes I and satrap of Babylonia at the time of Megabyzus's rebellion. His son Menostanes had at that time been defeated by Megabyzus's troops (§38), then defected to Sogdianus, who made him his chiliarch (§§45–46). Menostanes, a nephew of Artaxerxes I who is known as Manušānu in the Babylonian tablets, is called *mār bit šarri* 'royal prince'; he died soon, shortly after the defeat of Sogdianus, and his estates then passed to one Artaḫšar, who is none other than Artoxares; according to Ctesias, he had declared himself a compatriot of Ochus (§47). (Arbareme in the tablets) was similarly rewarded for switching to Ochus's side lock, stock, and barrel (Ctesias §47).

Although Ctesias is not explicit on this point, it appears that Artarios and Menostanes did not succeed in winning over Babylonia to Sogdianus, who very likely lived at Susa after his accession. It seems clear at the same time that the Babylonian troops supported Ochus (cf. §§46–47). The Babylonian tablets lead us to believe that Ochus did muster the soldiers who in return for the use of land (within a *ḥaṭru*) were required to respond to any call-up. To go by Ctesias's story, there does not seem to have been a pitched battle. Just as Tanyoxarces had eventually done (§10), Sogdianus agreed to give himself up when ordered by the new king, and he was executed "after reigning 6 months 15 days" (§48). Darius then had to face two other rebels: his full-brother Arsites (like him, the son of Artaxerxes and Cosmartidene) and Artyphius, the son of Megabyzus, who some 30 years earlier had already participated in the revolt against Artaxerxes I alongside his father (§37). They were soon put to death, as well as Pharnacyas, one of Sogdianus's lieutenants. Menostanes chose suicide (§§50–51).

Families and Powers

The succession after Artaxerxes I both confirms the persistence of dynastic problems and constitutes a special case. It is surprising that Artaxerxes and Damaspia had only one legitimate son. Others may have died young, as did thirteen of the children of Darius II and Parysatis (§49). Whatever the case, after the disposal of Xerxes II, power was contested among the illegitimate sons of the dead king—Sogdianus and Ochus, and later Arsites. According to Herodotus (III.2), a 'rule' (*nomos*) disqualified illegitimate sons from the succession. But like many other Persian royal *nomos* he mentions (cf. VII.2), this regulation did not have the critical force that Herodotus imputes to it. There is no doubt, for one thing, that the *nothoi* (illegitimate children) enjoyed high status in the court (cf. Herodotus VIII.103; Diodorus XI.61.5), and for another, the important thing in every case was to ensure family continuity. It is also remarkable that no great family ever attempted to seize control: the Great Ones were content to side with one or another of the contestants, a sign that Ochus and Sogdianus were truly considered sons of Artaxerxes and as such endowed with a certain familial, and thus dynastic, legitimacy.

While most of the nobility was satisfied with the rewards granted by the new king (court titles, land grants), one family was singled out to receive considerably greater benefits. At an unknown date, in fact, Darius married his son Arsaces to Stateira, daughter of Hydarnes, and at the same time the king's daughter Amestris married Teritushmes, son of Hydarnes. In Ctesias a long passage follows on the adventures of the two couples, culminating in the death of Teritushmes (in battle) and the torture of his entire family (sister, mother, brothers, and two more sisters; §§54–55). Ctesias charges all these murders to Parysatis, archetype of the "cruel princess," who had been infuriated by Teritushmes' behavior. According to Ctesias, Teritushmes had fallen in love with his sister Roxanne and executed Amestris, the daughter of Darius and Parysatis (§54). Ctesias also says that Darius wanted to kill Stateira, the daughter of Hydarnes and wife of his son Arsaces, but Parysatis allowed herself to be moved by the appeals of her son: "Darius yielded to him as well, but warned Parysatis that she would regret it" (§56). We know that during the reign of Artaxerxes II, Parysatis finally did away with Stateira (§61; Plutarch, *Art.* 19), before approving a union between Artaxerxes II and her daughter Atossa (*Art.* 23.3–7). Nonetheless, the entire family was not exterminated, since in 400 a brother of Stateira was in the entourage of Tissaphernes (Xenophon, *Anab.* II.3.17).

The cross-marriages with the family of Hydarnes constituted a noteworthy novelty in Achaemenid family policy. At least from the time of Cambyses, marriages had been based on strict endogamy. The exchanges of wives with Hydarnes in themselves granted him exceptional personal power. Unfortunately, we know nothing about him. It cannot be said for sure that he was indeed a descendant of Vidarna, one of the conspirators of 522. Whatever the case, he must have provided a great deal of assistance to Ochus during the war of succession. At the same time, the bloody actions soon taken by Darius and Parysatis show that they were far from granting permanent arrangements. Their own marriage was destined to give meaning back to the policy of endogamy and prevent a great family from one day claiming royal power. In other words, the matrimonial concessions made to Hydarnes were purely based on the moment; as soon as he was sure of his power, Darius was quite willing to lop off potential rival branches. At the same time, the events demonstrate the Achaemenids' capacity for rebuilding the dynastic stock. In fact, Artaxerxes I married Ochus to his half-sister Parysatis, and from this union a new Achaemenid branch was intended to sprout. Before coming to power, Ochus and Parysatis had produced two children: a daughter, Amestris; and Arsaces, the future Artaxerxes II (§49).

Legitimacy and Propaganda

It is clear that Ochus's victory resulted from a combination of forces he had managed to gather on his side; but it also appears that each competitor was able to conduct a skillful propaganda campaign on the theme of his own legitimacy. Perhaps Pausanias's curious incidental citation (II.5) comes from this tradition, according to which "Darius, illegitimate son (*nothos*) of Artaxerxes, with the support of all of the Persian people (*ho Persōn dēmos*), dethroned Sogdianus, legitimate son (*gnēsios*) of Artaxerxes." Did Sogdianus attempt to deck himself out with a (highly debatable) genetic legitimacy? Possibly, but we know nothing of him before the death of Artaxerxes. Does his name ("the Sogdian") mean that he was born during his father's campaign in eastern Iran at the beginning of his reign? Did Artaxerxes make contingency arrangements, before he died, in case Xerxes died suddenly? According to this theory, did he recognize Sogdianus's rights as eldest son? And was naming Ochus to the satrapy of Hyrcania a sort of compensation to the younger son? All these questions (and others, too) remain unanswered.

The "Persian people" referred to by Pausanias are doubtless the army, which Ctesias states was hostile to Sogdianus (§45). Ctesias makes this observation during a passage that clearly comes directly out of propaganda spawned in Ochus's circle. Ctesias says that Sogdianus gave a certain Bagorazus the task of driving the funeral chariot on which the remains of Artaxerxes I and Xerxes II were placed: "In fact, the mules that drew the funeral chariot, as if they had been waiting for the remains of the son [Xerxes] as well, refused to move; but when Xerxes' body arrived, they moved on in high spirits" (§45). Then, Ctesias says, Sogdianus got rid of Bagorazus, "on the pretext that he had abandoned his father's body" (§46). Even though Photius's summary is somewhat less than clear, it seems that some controversy arose over what to do with the royal remains; in fact, organization of the funeral solemnities reverted to the heir. What Bagorazus had cast doubt on was neither more nor less than the legitimacy of Sogdianus. A passage in Polyaeus (VII.7.17) confirms that from Ochus's point of view, it had become his responsibility, after ten months, to "proclaim the royal mourning according to Persian custom." Polyaeus also says that during this time Ochus sealed documents with his father's seal. In fact, as we know, Ochus was recognized as king in February 424. What Ctesias and

Polyaenus transmit, in their own way, is probably a scrap of the official version that circulated after Ochus's accession. In the same vein, a Greek tradition passed on the image of Darius II as a king with little interest in ostentatious luxury, someone who said on his deathbed that he had "practised justice before all men and gods" (Athenaeus XII.548e◊).

Darius the Great King

The reuse of the throne name "Darius" conferred additional legitimacy on the new king. In his few inscriptions, Darius II, imitating his predecessors, uses almost word for word the titles of Darius I at Naqš-i Rostam and presents himself as son of and successor to Artaxerxes I (*D²Sb*). At Susa he claims to have built an *apadana* (*D²Sa*) and to have completed another palace (*hadiš*) begun by his father (*D²Sb*), and he had his tomb excavated near his father's, on the cliff at Naqš-i Rostam. On the other hand, he did not rebuild the palace erected by Darius I, which had been destroyed by fire during the reign of Artaxerxes I (cf. *A²Sa*). In the absence of written evidence, we know nothing of any possible building activity at Persepolis.

7. *Affairs on the Western Front*

The Situation in Asia Minor (424–413)

In the absence of evidence from the center, we are reduced to narratives that refer almost exclusively to Asia Minor and Egypt. We have seen that just before the death of Artaxerxes the Athenians had sent Artaphernes to Ephesus, obviously wishing to open talks with the Great King (Thucydides IV.50.3). Andocides, an Athenian orator of the fourth century, refers very generally to a treaty consummated between Athens and the Great King after Artaxerxes' accession: "We concluded a truce (*spondai*) with the Great King and we established friendship (*philia*) with him forever; the agreement was negotiated by Epilycus, son of Teisandrus, my mother's brother" (*Pace* 29). Whether this report refers to a renewal of the so-called Peace of Callias or a new treaty is not easy to determine in the absence of any external confirmation (aside from an Athenian decree commending Heraclides—but the date itself is debated). All the same, we may agree that at the presumed date, around 424–423, the Great King and Athens both had reasons to avoid overt conflict.

This may be the context of the revolt of Pissuthnes, which Ctesias alone mentions in his story of the difficulties encountered by the king shortly after his accession. With the aid of Athenian mercenaries commanded by Lycon, the satrap of Sardis revolted. Darius sent an army against him commanded by three generals, including Tissaphernes. Pissuthnes was betrayed by Lycon and executed, and the satrapy of Sardis was bestowed on Tissaphernes (§52). Perhaps Pissuthnes had tried to profit from Darius's setback (Ctesias had just described the revolt led by Arsites and Artyphius before mentioning an obscure intrigue planned by Artoxares; see §§50–51, 53).

Nonetheless, although cordial relations had been declared between the Athenians and Darius, the Athenians violated the agreement a few years later, as Andocides states: "After that, we hear of Amorges, slave of the king and exile. . . . Result: the angry king became the ally of the Lacedaemonians and provided them with 5,000 talents to underwrite the war until they were able to destroy our power" (*Pace* 29). We know in fact from Thucydides (VIII.54.3) that the Athenians had sent aid to Amorges (who is also named on the Xanthus Pillar inscription), and we learn from him as well that this Amorges was

the illegitimate son of Pissuthnes and that Tissaphernes had been ordered by the king to bring the rebel to him, dead or alive (VIII.5.5). It appears that the Athenian decision to aid Amorges was made before the expedition to Sicily—that is, in 414.

The Aftermath of the Athenian Debacle in Sicily

The defeats suffered by the Athenians in Sicily (September 413) soon provided the Great King with an opportunity to take revenge. In a magnificent account, Thucydides describes the shock that the disaster caused in Athens: the Athenians were fearful that “their adversaries at home, redoubling all their preparations, would vigorously attack them by sea and land at once, aided by their own revolted confederates” (VIII.1.2♦). Hopes were high, in fact, in Sparta and Greece (VIII.2). There soon were envoys in Lacedaemon from Chios and Erythrae, as well as ambassadors from Tissaphernes and Pharnabazus,

who [Tissaphernes] invited the Peleponnesians to come over, and promised to maintain their army. The king had lately called upon him for the tribute from his government, for which he was in arrears, being unable to raise it from the Hellenic towns by reason of the Athenians; and he therefore calculated that by weakening the Athenians he should get the tribute better paid, and should also draw the Lacedaemonians into alliance with the king; and by this means, as the king had commanded him, take alive or dead Amorges. . . . (VIII.4.5♦)

Thucydides describes similar hopes on the part of Pharnabazus, who hoped to “procure a fleet for the Hellespont” (VIII.6.1♦). With this goal in mind, his envoys brought a sum of 25 talents (VIII.8.1). At Sparta, a great battle for influence broke out between the two delegations. The Lacedaemonians “decidedly favored the Chians and Tissaphernes,” led in that direction by the influence of Alcibiades and even more by the hope of gaining access to powerful fleets at Chios and Erythrae (VIII.6.3–5♦). In the spring of 412, after many difficulties, Lacedaemonian ships arrived below the walls of Chios, commanded by Chalcideus and Alcibiades and soon aided at Teos by Stages, one of Tissaphernes’ lieutenants. Thus began the Ionian War.

If we accept Thucydides’ explanation, Pharnabazus and Tissaphernes had both “lately” received the order to levy tribute on the Greek cities. In theory, the king had never given up his rights, but the new situation offered him the possibility of putting them into practice. This mission involved launching overt operations against Athens so as to reaffirm Achaemenid dominion over the Asia Minor coast; in other words, all prior treaties, if any had ever really existed, were declared null and void by Athens’ own actions.

The Spartan–Achaemenid Treaties (412–411)

Soon (summer of 412), Tissaphernes reached an initial formal agreement of alliance (*symmakhia*) with Chalcideus between Lacedaemon and the king. The two allies agreed to wage war or be at peace jointly, and the rights of the king were reaffirmed in the following way: “Whatever country or cities the king has, or the king’s ancestors had, shall be the king’s; and whatever came in to the Athenians from these cities, either money or any other thing, the king and the Lacedaemonians and their allies shall jointly hinder the Athenians from receiving either money or any other thing” (VIII.18♦). In return, the Persians were to treat any who left the Lacedaemonian alliance as enemies. But it is clear that in general the treaty favored the Persians and Tissaphernes and that they were able to reestablish their dominion without major cost, other than the financial expenditures.

Even though the terms of the treaty were not restricted to Tissaphernes' domain, he as satrap of Sardis intended to be first to take advantage of it. Despite the Athenians and with the aid of the Peloponnesian armies, Tissaphernes soon captured Amorges on Iasus, allowing his allies to take plunder and impress the rebel's mercenaries, before establishing a garrison on Iasus (VIII.28.2-5; 29.1). Because Tissaphernes was reluctant to pay off their troops, the Peloponnesians requested a new treaty, which was drawn up in the winter of 412-411 (VIII.37). In reality, the differences between the two versions are scarcely noticeable, aside from the fact that this time the treaty is made in the name of the king and his sons. At the beginning of 411, one of the Spartan commissioners, Lichas, considered the second treaty outrageous and null and void (43.3-4). Alcibiades also advised Tissaphernes not to become too closely involved with the Lacedaemonians: He "generally betrayed a coolness in the war that was too plain to be mistaken" (46.5♦). But the Spartans scarcely had a choice of allies; Lichas also objected to the Milesians "that [they] ought to show a reasonable submission to Tissaphernes and to pay him court, until the war should be happily settled" (84.5♦)! At the same time, Alcibiades, always eager to return to Athens in triumph, urged Tissaphernes to settle with Athens. It did not happen. On the contrary, Tissaphernes concluded a third treaty in the summer of 411. The satrap of Hellespontine Phrygia was directly involved, and Tissaphernes promised the arrival of a Phoenician squadron; from that moment onward, the Peloponnesians had to support their own ships, because Tissaphernes had agreed to lend them funding only until the end of the war (VIII.58).

The Athenian Reconquest (411-407)

In truth, not the slightest trace of a Phoenician navy was seen in Asia Minor during these years; Thucydides thought that Tissaphernes had never intended to provide a fleet (VIII.87). Given the situation, the Lacedaemonians decided in the end to respond favorably to Pharnabazus's repeated demands, since he had promised to "provide for their support" (VIII.81.2). But the Athenians piled victory upon victory. At the same time, contention between the satraps was predominant. Tissaphernes made a special trip to the Hellespont: he apprehended Alcibiades and placed him under arrest at Sardis, "saying that the King ordered him to make war upon the Athenians" (Xenophon, *Hell.* I.1.9♦). But until the arrival of Cyrus in 407, the generals were in disarray, so much so that the Athenians were able to embark on a victorious counterattack under the command of Thrasybulus and Alcibiades. Flush with success, Alcibiades finally had his triumphal return to the city. Pharnabazus was unable to counter the situation and in 408 came to an agreement with the Athenian leadership: he would give them 20 talents, authorize them to levy tribute on the town of Chalcedon, and commit himself to take their ambassadors to the king (*Hell.* I.3.9). During this time, the Athenians captured Byzantium. The following spring (407), when they expected to depart to see the king, the Athenian ambassadors saw none other than Cyrus the Younger arrive at Gordion, accompanied by Lacedaemonian ambassadors led by Boeotius, who stated that they "had obtained from the King everything they wanted" (*Hell.* I.4.2♦).

Darius II and His Satraps

It must be recognized that, until Cyrus's arrival at Gordion, tentative and disorganized initiatives by Tissaphernes and Pharnabazus had not led to any great success, apart from the treaties with Sparta—and Tissaphernes did not seem very eager to apply them.

Darius had indeed secured recognition of his dominion over Asia Minor from the Lacedaemonians, but the Athenian reconquests in 407 appeared to render this accomplishment partly moot.

One of the reasons for this was the dogged competitiveness that motivated Tissaphernes and Pharnabazus. Though this trait first appeared in 413 at Sparta, it never flagged during these years. Thucydides highlights Tissaphernes' anxiety when the Spartans decided to send forces into the Hellespont, "being also vexed to think that Pharnabazus should receive them, and in less time and at less cost perhaps succeed better against Athens than he had done" (VIII.109.1♦). In fact, Tissaphernes' ambition did not exceed his rival's: "Pharnabazus was inviting [the Peloponnesians] to come, and making every effort to get the fleet and, like Tissaphernes, to cause the revolt of the cities in his government still subject to Athens, founding great hopes in his success" (VIII.99♦). For both of them, the important thing was to succeed in a way that would ensure the king's favor (VIII.6.1). This is why Pharnabazus's envoys refused "to take part in the Chios expedition" (VIII.8) in 413. At the same time, Tissaphernes' primary objective was to capture Amorges. And, of course, the Peloponnesian allies did not pass up the opportunity to take advantage of this rivalry from time to time (cf. *Hell.* I.1.31–32).

These inter-satrapal competitions are frequently attested, especially between Sardis and Dascylium, which had long-standing border disputes. For the Great King it was certainly a convenient way to keep a satrap from getting inordinately important (cf. Xenophon, *Anab.* I.1.8); but a corollary of this convenience was a degree of inefficiency. It seems particularly strange that Alcibiades managed to escape from his prison in Sardis with his Athenian companion Mantitheos shortly after his arrest by Tissaphernes: they "provided themselves with horses and made their escape from Sardis by night to Clazomenae" (*Hell.* I.1.10♦). Taking into account the strength of the garrison at Sardis and the difficulty of travel on the region's roads, we are tempted to think that Alcibiades had the benefit of help from inside accomplices. It is quite likely that the Persians of Sardis were hostile to Tissaphernes' strategy, like the Persians of the early 490s who seem to have conspired with Histiaeus of Miletus against Artaphernes' enterprises (Herodotus VI.4). It is also likely that Tissaphernes' hesitancy reflects more general dissension about the course of action to take with regard to Athens and Sparta.

Another reason for the inter-satrapal rivalry is the fact that neither Tissaphernes nor Pharnabazus had sufficient military forces to allow them to really win the day. This is why each of them attempted to invite the Peloponnesians into their own territory in 413. Furthermore, even on land, the Persian cavalry was not always the uncontested king of battle; in 409, for instance, the plentiful cavalry of Pharnabazus was defeated by Alcibiades' army of horsemen and hoplites (I.2.16). In the same year, the Athenian Thrasyllus was able to make a foray into Lydia, "when the grain was ripening"; Stages, Tissaphernes' subordinate, was able to take only a single prisoner, despite the strength of his cavalry (I.2.4–5♦).

But it was on the sea that Persian incompetence was most glaring and most crucial. Apart from the case of the mysterious Phoenician fleet promised by Tissaphernes—which no one ever managed to see!—the satraps had no navy at all. At most, they could hire crews (though not without frequent mutual recriminations) and let their Peloponnesian allies build ships using timber cut from the royal forests (*Hell.* I.1.24–25). Thus, because of their naval inferiority, they participated only marginally in a war that

unfolded between the Athenian and Peloponnesian navies. In 411, when there was an amphibious battle between Athenians and Lacedaemonians, we have a picture of Pharnabazus reduced to "riding his horse into the sea as far as possible, [where he] bore a share in the fighting and cheered on his followers, cavalry and infantry" (I.1.6◊). The Athenians took control of the Straits and were even able to impose customs duties (in the form of a tithe) on the grain-ships that passed by Chalcedon (I.1.22). The agreement between Pharnabazus and Alcibiades the following year expresses perfectly the satrap's inability to repel an attack on his territory (I.3.8–13).

Of course, the satraps had significant resources that enabled them to hire mercenaries (though fairly limited in number) and especially to pay the Peloponnesian soldiers fighting at their side. But it is not certain that their financial capacity was unlimited. It seems in fact that, from Tissaphernes' and Pharnabazus's viewpoint, the important thing was to carry on operations with the least possible expense (cf. Thucydides VIII.87.5; 109.1). The Peloponnesians and Tissaphernes himself also appear often to have relied on levies collected from the Greek cities of Asia Minor, which in turn exhibited some reluctance to cooperate (cf. VIII.36.1; 45.5). On at least one occasion, Tissaphernes refused to increase the mercenaries' pay while waiting, he claimed, for an answer from the king (VIII.29.1), letting it be understood that he would raise wages if any money arrived from Darius (45.5–6). On several occasions, the Peloponnesian allies complained that they did not receive enough regular income to live on (cf. VIII.78). Later on, Alcibiades addressed the representatives of the allies as follows:

He also pointed out that Tissaphernes was at present carrying out the war at his own charges (*ta idia khrēmata*), and had good cause for economy, but that as soon as he received remittances (*trophē*) from the king he would give them their pay in full, and do what was reasonable for the cities. (VIII.45.6◊)

These "own charges" were doubtless the funds available to the satrap in his personal account. Considerable sums are involved, since some years later Tithraustes was able to pay some troops by withdrawing 220 talents of silver from "the personal resources of Tissaphernes" (*ek tēs ousias tēs Tissaphernous*; *Hell. Oxyr.* 19.3). This must have been a fortune that existed somewhere on the borderline between state structure and personal property (as did the paradises, for example). Whatever the case, the king thought that the satraps ought to use these "own charges" to pay their soldiers. Perhaps the king also thought that the order he had given to Tissaphernes and Pharnabazus to collect tribute from the cities (VIII.5.5; 6.1) implied that he did not have to finance the war. The author of the *Hellenica Oxyrhynchia* (19.2) complains, moreover, about the Great King's great avarice, referring explicitly to the time of Darius II (and his successor):

The soldiers were paid by the *strategoī* in a deplorable fashion. Anyway, this was their habit, as in the War of Decelia when they [the Persians] were allied with the Peloponnesians; they provided money on a scale both mean and shabby, and their allies' triremes would often have been sent back had not Cyrus acted swiftly. Responsibility for this state of affairs lies with the Great King: every time he decided to make war, he sent a small sum of money at the beginning to those who were to carry it out, but he did not take into account subsequent events, so much so that if they were not able to use money of their own (*ek tōn idiōn*), the generals had to disband their armies.

In other words, the king made an initial investment that the satraps were required to manage as best they could. If they were not able to get the business taken care of in the

time allotted, they had to pay from their own funds (see also *Hell.* 1.5.3). In time of war, just as in time of peace, the Great King was quite *economical*—he kept a careful eye on his own fortune. We thus have the impression that we are seeing in this a specific illustration of a more general policy by which imperial revenue was managed. It might be compared, *mutatis mutandis*, with an instruction included in the travel voucher that Aršāma gave to his steward Neḫtiḥōr: “And if he is in a place more than one day, on the later days do not give them extra provisions” (*DAE* 67 [AD 6]). An Aramaic document from Egypt (*DAE* 54 [AP 2]) demonstrates the same principle. Thus, the personal financial responsibility of administrative functionaries seems to have extended all the way up to satraps, even when they made war! This was one of many ways of limiting satrapal ambition.

Darius II, Asia Minor, and the Other Fronts

It is difficult to understand the expectations and objectives of the strategy set in motion by the Great King. Too much remains unknown. A Babylonian tablet dated November 407 illustrates the extent of our ignorance: it refers to a “state of siege” at Uruk, and we have no idea what this refers to. Other tablets, dated to 422, refer to a gathering of soldiers at Uruk. The discrepancy in date prevents relating it to the 407 tablet; furthermore, it alludes to regular reviews, the existence of which does not imply that the region was then in turmoil (see below). Moreover, incidental passages in Xenophon’s *Hellenica* refer to a Median revolt that was put down at the end of 407 (I.2.19) and to a war that Darius II waged against the Cadusians in 405 (II.1.13). It is true that, generally speaking, we know practically nothing of military activities outside of the Asia Minor region. It is only because Plutarch wrote a life of Artaxerxes II that we learn, for example, that he too led an expedition against the Cadusians in the 380s (*Art.* 24). Then again, some recently published Babylonian astronomical tablets (*ADRTB* nos. –369, –367) also lead us to distrust the deafening noise created by the Classical sources on matters of the western front (cf. also chap. 15/1).

In Asia Minor itself, the satraps faced other dangers for which our only information is circumstantial. Xenophon mentions that, several years later, a subordinate of Pharnabazus named Mania, the wife and successor of Zenis of Dardanus, governed the region in Aeolis that was subject to Dascylium; in addition to other services she rendered to the satrap, “she also accompanied Pharnabazus in the field, even when he invaded the land of the Mysians or the Pisidians because of their continually ravaging the King’s territory” (*Hell.* III.1.13♦). The failure of the Mysians and Pisidians to be submissive, frequently highlighted by the fourth-century Greek authors, explains the frequency of the expeditions against them. When Cyrus the Younger wanted to conceal from his troops the fact that he was actually leading them against Artaxerxes II, he led them to believe that he was leading them against the Pisidians (Xenophon, *Anab.* 1.2.1). And, according to Diodorus, during the battle of the Eurymedon, the Persian troops believed for a while that they had been attacked by the Pisidians (XI.61.4). But the stereotypical nature of a number of Classical references to the irredentism of the “mountain peoples” alerts the critical caution of the historian (cf. chap. 16/11, 16/18).

Finally, according to Diodorus (XIII.46.6♦), the reason that the Phoenician navy never appeared in Asia Minor was because they had learned that “the king of the Arabians and the king of the Egyptians had designs upon Phoenicia.” Did the danger oblige

Tissaphernes—or rather, Darius—to reroute the squadron toward the Nile Valley? In truth, there is no formal proof of this interpretation. A passage in Thucydides (VIII.35.2) simply makes us think that merchant ships carrying wheat arrived in Asia Minor from Egypt in 412; but it is difficult to conclude from this that an Egyptian dynasty had already taken the Athenians' side against the Persians. We are also completely in the dark as to the identity of this mysterious "king of the Arabians." The travel voucher Aršāma provided to his steward implies that at this time (around 411–410) the road between Babylonia and Egypt was safe (DAE 67 [AD 6]). On the other hand, it is likely that in the Delta the Persians continued to pursue the policy that we have already discussed (see chap. 14/2 above), namely, to leave the local dynasts in place. But we have absolutely no information about the details. Aramaic papyri from Elephantine mention troubles in 410 and the quartering of troops (*handyz*) in the citadel as a result of the intrigues of someone named Anudarū (DAE 66 [AD 5]). Aršāma's estates suffered damage (DAE 68 [AD 7]); Pamūn, an Egyptian steward in the service of the satrap, was killed (DAE 69 [AD 8]). For their part, the Jews mention that "detachments of the Egyptians rebelled" in 410 (DAE 101 [AP 27♦]). But the actual troubles related here appear to be of limited extent, without a clear connection to the war that supposedly provoked sending a royal fleet to the Delta.

In the final analysis—without totally rejecting such an interpretation—we are led to think that the reasons for the apparent passivity of Darius II on the Asia Minor front are to be found neither in Egypt, nor among the Cadusians, Medes, or Pisidians. Two explanations can be offered, one political-diplomatic, the other military. We can imagine that, together with Tissaphernes' timidity, the fluctuating strategy of the Spartans sowed turmoil and uncertainty among the king's advisers. The Lacedaemonian strategy must have appeared foreign, opaque, and contradictory to Darius II, just as it had to his father, Artaxerxes (cf. Thucydides IV.50.2). As far as we can tell, the Great King seems not to have fully comprehended the situation; like Tissaphernes, he seems to have expected that the Greeks would wear each other out.

Darius II and His Armies

The second explanation puts the accent on the Great King's military weakness. This, we know, is a recurrent stereotype in the Greek view of Persia, especially in the fourth century, beginning with Xenophon in the last chapter of the *Cyropaedia*. A similar perspective is found in many other Greek authors, such as Plato (*Laws* 697d). But taking into account the deeply polemical character of these appraisals, historians must instead base their work on external evidence, which allows them to test the validity of such interpretations.

We generally turn to the Babylonian sources. It is frequently stressed, in fact, that within the framework of the development of the system of military land allotments (the *batru* system) the plot-holders, instead of providing the military service connected to the property they controlled, apparently preferred to pay the entire cost (*ilku*) in the form of money ("paid service"). This phenomenon can be detected from the time of Darius I on, but it tended to become more widespread in the time of Artaxerxes I and Darius II. This observation also can be connected to increasing reliance on Greek mercenaries. The totality of the reconstruction tends to validate Xenophon's critical remarks about the Persians' abandonment of the ancestral rules requiring landholders to "furnish cavalymen

from their possessions and that these, in case of war, should also take the field, while those who performed outpost duty in defence of the country received pay for their services," so much so that "enemies may range up and down their land with less hindrance than friends" (Cyr. VIII.8.20–21♦).

Even if we do not insist that Xenophon's comments are essentially a caricature, we still need to stress that the Babylonian evidence is more ambivalent than it appears. Insofar as it can be reconstructed from the tablets, the situation at the time of Darius II's accession shows that the *ḫaṭru* system was already fully operational. For one thing, we know that Ochus (the future Darius II) was ruler of Babylonia and that he could gather a huge army. The tablets also indicate that, in order to respond to mobilization orders, the tenant farmers had to borrow vast sums from the house of Murašū—and there are many examples of this process. We know in fact that most of the time the plot-holders did not work the land themselves but turned the management over to the Murašū or other business concerns of the same type. So while the documentation implies that the financial position of the grant-holders was not spectacular, it also indicates that they were nevertheless committed to the military obligations they had taken on.

Several documents from year 2 of Darius (422) show that at that time, by royal order, the tenants in the Nippur region were required to furnish the 'king's soldier' (*Šāb šarri*) to take part in a review that would be held at Uruk (UC 9/3; 10/61–62; PBS II/1:54, 162). Another tablet belonging to the same lot is even more explicit:

Gadal-lāma, son of Raḫūm-ili, declared of his own free will to Rimūt-Ninurta, descendant of Murašū, as follows: "Because Raḫūm-ili adopted your brother Elli-šum-iddin, you now possess the share of Barik-ili in the plow and fallow land held in tenure as 'horse land' (*bit sisi*) by Raḫūm-ili. Give me a horse with harness and reins, a *suḫattu* coat with neckpiece and hood, an iron armor with hood, a quiver, 120 arrows, some with heads, some without, a sword(?) with its scabbard, 2 iron spears, and I will perform the service attached to your share in the tenure land." Rimūt-Ninurta agreed and gave him a horse and the military equipment mentioned above, as well as 1 mina of silver for his travel provisions, in order to obey the royal order to go to Uruk in connection with this "horse land." Gadal-lāma bears responsibility for presenting the equipment given to him. He will show it for registration to Sabin, the man in charge of the secretaries of the army, and he will give the deed of registration to Rimūt-Ninurta. [Names of witnesses and scribe] Nippur, 18 Tebet, year 2 of Darius. ([422] UC 9/68; trans. F. Joannès/P. Beaulieu)

Through adoption, a member of the house of Murašū thus acquired part of a horse estate. Rimūt-Ninurta had no desire to fulfill the military service associated with the land granted by the king (in the *ḫaṭru* system) and entered into an agreement with the son of the holder of the other part: Gadal-lāma attended the assembly with a horse and the entire required weaponry (compare Xenophon, *Hell.* III.4.15!).

This document is transparent: it explains very clearly that at this time, at Nippur, estates were subject to active military service, though the identity of the person who performed it did not matter to the administration. The core of the administration's concern was that each estate recorded in the archives furnish the soldier(s) whose service justified the very rationale for the system. And, compared with other documents dated to the same months of the same year, it is not possible to argue that this text could be taken as illustrating a special or unusual case. Even if we cannot prove it, it seems highly unlikely that the order to assemble at Uruk was issued in preparation for a military expedition; it is more plausible that there actually were annual assemblies, which Xenophon

several times says took place regularly in each military region at "the place of assembly" (*syllogos*).

Finally, later tablets from the reign of Artaxerxes II imply the general continuity of the system. The archives of the barber Kuşur-Ea, son of Sin-aḥḥe-bullit, include (among others) seven texts referring to a practically identical procedure between the years 399 and 363. One of his relatives, Nidintu-Sin, made a contract with the barber, asking Kuşur-Ea to furnish him with all of the equipment that citizens of Ur were required to furnish for military service; in exchange, he would appear at the royal assembly held in the 8th year of Artaxerxes II (397; UET 4.109). Kuşur-Ea was in fact subject to service because he held one quarter of a 'bow estate' (*bit qašti*; UET 4.106 [363 B.C.]). Here, the word 'assembly' renders the Old Persian word **handaisa*, which is also found in the Elephantine archives (DAE 36, 66, 101 [AP 13, AD 5, AP 27]; Aram. *hndyz*). Whether the service was carried out directly by the plot-holder or by a substitute (who was armed by the former), the Babylonian document thus incontestably shows that the plots were perpetually tied to the original royal obligation.

Reliance on Greek mercenaries at this date remained fairly limited. Tissaphernes and Pharnabazus counted on the Lacedaemonian contingents primarily to fulfill the mission entrusted to them by Darius: to gather the tribute from cities still under Athenian control. They also were able to utilize levies of horsemen from Persians living in the imperial diaspora, following a well-known, long-lived system. Furthermore, there is no doubt that the colonization strategy actively pursued from the time of Darius and Xerxes had a major impact in the military realm; striking confirmation is found through the study of the composition of Cyrus the Younger's army (see chap. 15/2). Evidence no longer requires us to believe that there was a significant deterioration in the system of military plots in Egypt, either in Elephantine or in Memphis. The campaigns of Darius and his armies against Media and the Cadusians provide strong confirmation that the central authority could place as much military force on active duty as strategy required. In short, it does not appear that the undeniable Persian military shortcomings in Asia Minor have to be explained by recourse to the convenient but simplistic theory of the decadence of the Great King's army. Similarly, the observation that the Great King did not send funds to his satraps in Asia Minor is woefully insufficient evidence to support the conclusion that the royal coffers were empty!

All of this evidence seems much more to be a result of a policy decision made at the center, which for reasons that remain to be clarified did not wish to commit powerful armies on the Aegean front. We could offer an entire series of interpretations of a technical sort (burden and cost of levies, for example), but no single element was determinative. Given the rarity of general mobilizations throughout Achaemenid history, we perhaps should not be overly surprised that Darius II did not consider an Empire-wide conscription useful now. It seems especially clear that the Great King and his advisers thought that the Lacedaemonian alliance would have to provide sufficient support for the Asia Minor satraps to get the upper hand, and that the subsequent reconquests would have to finance military operations, since they would provide the basis for the re-introduction of tribute assessments in the Greek cities. The only exception to this presumed rule was the assembling of that famous Phoenician navy we have already mentioned in Cilicia, and it obviously functioned under direct orders from the central authority (Thucydides VIII.88.5).

Cyrus in Asia Minor

When the Great King decided to send Cyrus to Asia Minor in 407, it was perhaps to calm dissension that was brewing between his sons; he was certainly aware of the need to pursue a more energetic policy. It is possible that the Spartan Boeotius and his colleagues had apprised him of the situation, persuading him to act. Nevertheless, the powers entrusted to Cyrus and the amount of money offered to him to conduct the war leave no doubt regarding the royal intent: Cyrus in fact “brought with him a letter, addressed to all the dwellers upon the sea (Asia Minor; *katō*) and bearing the King’s seal, which contained among other things these words: ‘I send down Cyrus as *karanos*’ — the word ‘*karanos*’ means ‘lord’ (*kyrie*) — ‘of those whose mustering-place is Castolus’” (*Hell.* I.4.3; cf. *Anab.* I.1.2). In other words, Pharnabazus and Tissaphernes were thereafter his subordinates. His mission was clear: “In order to be ruler of all the peoples on the coast and to support the Lacedaemonians in the war” (*Hell.* I.4.3). The time for royal hesitation and inter-satrapal rivalry was over. Cyrus immediately ordered Pharnabazus to detain the Athenian ambassadors in such a way as not to alert Athens to the Great King’s new intentions; it was not until three years later that they were allowed to leave Asia Minor, at a time when the fate of the Athenian armies had already nearly been sealed.

The appointment of Cyrus coincided with the arrival of a particularly energetic and decisive Lacedaemonian admiral, Lysander. The two men soon came to trust each other, and with Persian support Lysander was able to reinforce his army and navy. When he was absent, during the summer of 406, the Athenians achieved a victory in the Arginusae islands. However, they were not able to benefit from the victory: the *strategoī* were doomed! Lysander’s return (summer of 405) marked the beginning of a new stage in Spartan–Achaemenid relations. Some time later, Cyrus the Younger was recalled to his father’s sickbed. Before leaving, he gave Lysander large sums of money and, according to Xenophon, “assigned all his authority to him” (*Hell.* II.1.14–15). In September of the same year, Lysander won a decisive sea battle over the Athenians at Aigos-Potamos. Some months later (April–May, 404), Athens fell to Lysander. Meanwhile, Darius died (between September 405 and April 404).

8. The Great King in His Countries*The Murašū, Babylonia, and the Royal Administration*

At this point, we would do well to pause for a moment and attempt to draw up a new imperial balance-sheet, which should not be reduced to territorial and military considerations alone but should be drawn from regional realities. One of the best-documented countries is Babylonia. In fact, we have several hundred tablets from the archives of a Babylonian business concern, the Murašū, whose activities are particularly well attested between year 25 of Artaxerxes I (440–439) and year 7 of Darius II (417–416). Some other tablets, dating between 413 and 404, provide evidence for the activity of an old subordinate of the house of Murašū, but it is difficult to establish in what capacity he functioned. The cessation of the archives probably reflects the dissolution of the business, although we should not necessarily infer that there was a major modification of the pattern, since the Murašū, whose activities were centered around Nippur, were no doubt only one of the firms that did business in Babylonia at this time.

The Murašū were not a bank in the modern sense. Their basic activity was managing land, and this is why their archives are a prime source as much for reconstructing land

management as for fiscal organization. The tenant-farmers, rather than devoting themselves directly to working their lands, entrusted the land's management to the Murašū, and in return the latter turned over the rent to the tenants. The Murašū themselves generally sublet the land to farmers, and this explains the large number of farming contracts found in the archives. Some of the parcels exploited in this system are identified as "royal lands," as well as 'royal gifts' (*nidintu šarri*)—which benefited highly placed persons (primarily members of the court and Iranians). Well-known people are found among them, including Parysatis and Prince Aršāma (satrap of Egypt), as well as many other important persons, some of them known from Ctesias. Also among the tenants were members of the *ḫatru* (military and nonmilitary), who also utilized the services of the Murašū, whether as land managers or moneylenders. The debts incurred were calculated not on the plot itself—which, though it could be transferred by inheritance, remained inalienable—but on future harvests. The Murašū thus played a very important role: both they and the tenants had a mutual interest in increasing the yield of the land. Furthermore, they sold the produce of the farms, which was perishable, on the open market, allowing the tenants to pay their interest in silver, without having to bother themselves with carrying out a difficult transaction.

Bēlšunu

One of the notables of the period is a Babylonian, Bēlšunu, who is known from a series of tablets gathered into an "archive" that was deposited under one of the citadels of Babylon (the Kasr); the archive dates from 438 to 400. He was a son of Bēl-ušuršu and was called "governor (*piḫatu*) of Babylon" between 421 and 414. The title is not the same as what we call satrap; in Babylon, the satrap was the Persian Gubāru/Gobryas, who is attested until 417. Bēlšunu was thus one of the satrap's subordinates (a Greek author, probably referring to him, calls him *hyparchos*). Then, between 407 and 401, his title was "governor of Ebir Nāri," which the Greek authors transcribe as "satrap of Syria." In all probability, then, we can identify him with the Belesys whom Xenophon calls "satrap of Syria" during Cyrus the Younger's offensive against his brother Artaxerxes II in 401 (*Anab.* I.4.10; cf. Diodorus XIV.20.5). Perhaps this Babylonian's new title was the reward that Darius II gave him for his aid.

The tablets provide very important information on the role and possible activities of Bēlšunu. One of them, dated around 416–415, is particularly interesting (TBER, AO 2569):

[*broken lines . . .*] we displayed(?) the stolen property (?) [. . .] [. . . Ea-iddin, Marduk-z]ēr-li-šir, and Bēl-lūmur, the accountant[s of the temple of Uraš and(?) . . . , son] of Šihā(?), discovered the stolen property that had been carried off by(?) Bēl-ittannu, [son of Bulluṭu, and] his son [Bēl]-ušuršu and Uraš-nāšir, son of Nidintu, in Dilbat [in their houses(?)], {seized(?)} it, and put it under seal in the treasury of (the god) Uraš, and [. . .]. They held Bēl-ittannu, son of Bulluṭu, and his son Bēl-ušuršu in detention(?) in Dilbat, and they put their houses under seal. [Uraš-nāšir and (?). . .(?)] their [. . .] escaped and {came} to Babylon, to Bēlšunu, the [governor of Babylon]. Then Marduk-zēr-lišir and Bēl-lūmur [. . .] displayed to the assembly of Ešagil [the stolen goods that] they had seized in their [. . .] and had [. . .] and [put under seal(?)] in the treasury of Uraš. Subsequently, the [assembly(?)] addressed {Bēlšunu, governor of Babylon, as follows: "Uraš-nāšir, who [. . .] the stolen goods [. . .] and then escaped from Dilbat and came to you [. . .]." Uraš-nāšir and [. . .] to the assembly of Ešagil [. . . Uraš]-nāšir, (and) along with him(?) the goods that(?) he carried off [. . .] year 8 of Dar[ius. . .] they interrogated [. . .] sw[ore(?)] an oath by the iron dag[ger(?)]

. . .] [Ea-iddin, Marduk-zēr-lišir, and] Bēl-lūmur, accountants and [overseers] [of the temple of Uraš] . . . to Dilbat, to Uraš-našir, [son of Nidintu(?).] [Bēl-ittan]nu, son of Bulluṭu and his son, Bēl-ušuršu [. . .] . . . investigate and in lieu of [. . .] that was given to the estate of Uraš [. . .] in year 2 of King Darius. Ea-iddin, Marduk-z[ēr-lišir (. . .)] [and Bēl]-lūmur, the accountants and overseers of the temple of Uraš [and?] the accountants and overseers, and the collegium of the temple [. . .], [. . .] with the concurrence of the assembly of Esagil . . . [. . .] . . . of Uraš-[našir . . .] Bēl-ušuršu, son [of . . .] [. . . remainder broken . . .]. (trans. M. Stolper)

In summary: a theft took place in the sanctuary of the god Uraš at Dilbat. The thieves were captured, and the recovered stolen goods were put under seal in the god's treasury. One of the thieves went to find Bēlšunu, the "governor of Babylon." At the same time, the sanctuary treasurers sent the case to the assembly of the Esagila in Babylon, which in turn applied to Bēlšunu to turn over the miscreant. The guilty parties were sentenced to repay the treasury of Uraš out of their own funds. The text throws some light on a city, Dilbat, that is relatively little known at this period, and on the continuity of administrative practices from the time of Cyrus and Cambyses on, particularly the role of the "civic" assembly of the Esagila and its relationship with the governor. It also illustrates the length of the process, since apparently four years elapsed between the event and the punishment of the criminals.

In parallel with his public activities, Bēlšunu actively pursued business in the private sector, which was reminiscent of what the Murašū had done previously. Not only was he actively involved with his land, which he possessed as a 'royal gift' (*nidintu šarri*), but he also worked other land of the same type, which generally belonged to people with Iranian names. Bēlšunu's integration into Babylonian society is also well illustrated by another tablet (that does not mention his title): a subordinate/servant of Bēlšunu is directed by his master to ensure regular offerings in honor of the gods Zababa and Ninurta throughout the twelve months of year 5 of Artaxerxes II (TCL 13.204).

Darius II in Egypt

Turning to Egypt, we note that the epigraphic evidence is not comparable in extent to that known from the reigns of Cambyses, Darius, and Xerxes. The latest inscriptions from the Wadi Hammamât and the latest inscribed vessels date to the reign of Artaxerxes I (Posener nos. 33, 78–82; A¹Orsk). But, paradoxically, numerous Aramaic documents date to the tenure of Aršāma in the time of Darius II, and they allow us to reconstruct as faithfully as possible the various levels of Persian officials in Egypt, the system of soldier-colonists, and the management of royal property (see chap. 11/7). A few isolated bits of evidence also attest to the "presence" of Darius II in the country. First, there is the cartouche of Darius II that appears in the temple of El-Khārga, as if he wished to take credit for the policy of his distinguished predecessor. It also seems that the sanctuary of Horus at Edfu benefited from major land grants. A seal found at Memphis appears to be carved with the name of Darius (II), showing a Royal Hero triumphing over two sphinxes (SD²a). We may stress, finally, that the Aramaic version of the Behistun inscription and part of the Naqš-i Rostam inscription were written on the back of a papyrus that can be dated with certainty to Darius II (before 418). We cannot be sure that this was an expression of the royal desire to disseminate anew the deeds of his ancestor to make a political connection; perhaps instead the papyrus was only a schoolboy exercise. If this is the case, the document shows even more eloquently the practical ways and means through which diffusion of Achaemenid monarchic ideology took place among the children of

the Judeo-Aramean colonists of Elephantine. It would be very risky to conclude, as sometimes happens, that the gaps in the evidence mechanically represent the central authority's lack of interest in a province whose intrinsic importance had not diminished. Putting it together, the existing evidence instead suggests that there were no noteworthy changes in royal policy during the fifth century, after the reconquest by Artaxerxes I.

The Persian Authorities Confront Jews and Egyptians in Elephantine

We learn a bit more about one particular point from an Aramaic dossier from Elephantine. In year 14 of King Darius (410), the Jews of Elephantine, during the satrap Aršāma's absence in Babylonia, sent a complaint to Memphis regarding both the Egyptians and the governor of Syene, Widranga (DAE 101 [AP 27♦]). They state that the administrators of the sanctuary of Khnūm had made an agreement with Widranga, to whom "they gave money and valuables." As a result, the Egyptians "will not allow [the Jews] to bring meal-offering and incense and sacrifice to offer there to Ya'u the God of heaven . . . but they made there a fire(?) and the rest of the fittings they took for themselves, all of it"; in short, "they destroyed the altar house." The Jews thus asked to have the sanctuary rebuilt in its prior location. To underline the illegality of the Egyptians and Widranga conniving together, the Jews also state that their enemies had raided royal property, since they destroyed "part of the king's stores which is in the fortress of Yeb, . . . and they built a wall in the midst of the fortress of Yeb." Finally, they stopped up a well that had supplied the garrison whenever the troops were assembled there (*hndy*).

Widranga's accountability was fully established: according to the Jews, it was he who ordered the destruction of Yahō's sanctuary at the request of the priests of Khnūm. In order to accomplish this, he sent a letter to his son Nafaina, who had succeeded him as head of the garrison (*rab ḥaylā*) at Syene-the-Fortress. Nafaina led a troop of Egyptians "with the other forces" and proceeded to destroy the temple totally and seized the sacred vessels (DAE 102 [AP 30]). As a result, the Jews requested the opening of an "inquiry . . . by the judges, police, and informers who are set over the guard of the southern District" (DAE 101 [AP 27]).

At the same time, the Jews sent a complaint to the Jerusalem authorities, namely, "to Johanan the high priest and his colleagues the priests who are in Jerusalem, and to Ostanes the brother of 'Anani, and the nobles of the Jews." The letter went unanswered (DAE 102 [AP 30] lines 17–18♦). Three years later, in 407, they turned to both Bagohi, "governor of Judah," and "Dalaiah and Šelemiah the sons of Sanballat governor of Samaria." They remind the governors that the Jewish community had been in mourning for three years and specify that they had made "neither offering, nor incense, nor holocaust" in the sanctuary. They implore Bagohi to intervene with "his friends in Egypt" to give them permission to rebuild their temple. The dual approach to Bagohi and Samaritan authorities associated with Aršāma (who had meanwhile returned to Egypt; DAE 103 [AP 32]) finally got results. The satrap made a decision that provided for terms under which the temple could be rebuilt "as it was built before." On the other hand, though the incense and the offering could be carried out normally, this was not the case for the "holocausts of rams, oxen, and goats." The Jews agreed to give some money and 1,000 ardabs of barley to the house of Aršāma (DAE 104 [AP 33]).

The matter presents formidable interpretive problems. We must first pay attention to the makeup of the available material. We have the details only from the Jews themselves—that is, from the arguments they presented to the authorities. The materials are

necessarily incomplete and undoubtedly biased. The Jews continually contrast their loyal behavior with the Egyptians' felonious behavior: "We are free from blame, and anything harmful of this kind has not been found in us" (DAE 101 [AP 27] lines 14–15♦). That is, the Jews state that they are not rebels, in contrast to various groups of the Egyptians (lines 1–2). But the modern historian cannot take an advocate's arguments as a court clerk's record. The Jews also accuse the Egyptians of buying off Widranga. Though it is true that the Classical texts refer to the king's condemnations of judges who embezzle, we must also remember that the payment of *baksheesh* was ubiquitous in Egypt and Babylonia. In this case, the Jews themselves made major gifts to the house of Aršāma to thank him for his services. Finally, the very nature of the documentation (letters and memoranda) does not clarify episodes for which we would like to have more information. In their 407 petition to Jerusalem and Samaria, the Jews say of Widranga: "The dogs tore off the anklet from his legs, and all the riches he had gained were destroyed, and all the men who had sought to do evil to that temple, all of them, were killed and we saw (our desire) upon them" (DAE 102 [AP 30] lines 15–16♦). Despite some uncertain points of reading and translation, it thus seems that Widranga and the temple's vandilizers received serious punishment. But we do not know who punished them or why, especially since Widranga seems to reappear, complete with the title "commander of the garrison," in one or possibly two documents dated 398.

What emerges clearly is that during these years a conflict broke out between the leaders of the Jewish community of Elephantine and the leaders of the temple of Khnūm. But why? Another document, unfortunately fragmentary, refers to a visit to Memphis. It alludes to troubles at Thebes: the Jews "fear robbery," and investigators are accused of taking bribes from the Egyptians (DAE 97 [AP 27]). In another text, a Jew complains that Widranga, now commander of the garrison at Syene, imprisoned him at Abydos "because of a precious(?) stone which they found stolen in the hand(s) of the dealers" (DAE 98 [AP 38♦]). But these isolated and fragmentary data are difficult to interpret and to connect to the events at Syene-Elephantine. Let us linger especially on this imprisoned Jew's complaint to his colleagues at Elephantine: "It is known by you that Khnūm is against us from the time that Hanani was in Egypt till now." Was this a religious conflict? Did the destruction of the temple and the Jews' houses (DAE 100 [AP 34]) mean that Widranga and the Egyptians shared anti-Jewish sentiments? Hypotheses such as these seem difficult to sustain. Although Widranga was able to demonstrate a certain amount of devotion to Egyptian gods, for reasons shared with high Persian officers of the satrapy from Darius on, there is nothing to indicate that he was so Egyptianized that he sided with the priests of Khnūm for purely religious reasons.

We would do well now to return to basics. As governor, Widranga had to adjudicate a dispute that had arisen between the representatives of the Jewish community and the administrators of the temple of Khnūm. There must have been a trial, after which Nafaina, acting in his official capacity, was required to carry out the sentence pronounced by his father, who also was acting in his official capacity. What was the purpose of the litigation? Several earlier documents show that judges often had to make decisions regarding property disputes, and a number of these disputes involved land adjacent to the sanctuaries of Yahō and Khnūm (DAE 32–36 [AP 5, 6, 8, 9, 13]). The Jewish sanctuary in fact abutted Khnūm's estate. It appears that the litigation between the two sanctuaries pertained purely to property, since the new buildings put up by the priests of Khnūm

were encroaching on some royal properties (granary and a well) as well as on Yahō's estate. When it proved impossible for the two sides to arrive at a compromise, they submitted the matter to the governor for arbitration.

As any other judge, Widranga would have referred to the corpus of local jurisprudence that Darius had ordered collected more than a century earlier. If we concede the relationship between this book of jurisprudence and Egyptian customary law of the Hellenistic period, we may stress that a very important part of the latter is devoted to conflicts relating to land ownership. One section is expressly dedicated to cases involving buildings erected on land that is later on claimed by someone else. Without being able to prove it completely, we can imagine that the Egyptians claimed to be the actual (because they were the first) owners of the parcel on which the temple of Yahō had been built.

This theory is partially confirmed by the Jews themselves. In one of their petitions, they in fact provide one component of a rebuttal. Looking back on the destruction of their sanctuaries, they state:

Already in the days of the kings of Egypt our fathers had built that temple in the fortress of Yeb, and when Cambyses came into Egypt he found that temple built, and the temples of the gods of Egypt all of them they overthrew, but no one did any harm to that temple. (DAE 102 [AP 30] lines 12–13♦)

Because it is included in a petition that was intended to plead their cause to recognized authorities (Judahite and Samaritan), the statement should be seen as an argument shaped by its administrative context. In this case, the Jews were trying to prove that the building of their temple had been authorized first of all by the Saite pharaohs and later confirmed by Cambyses. We recognize this as a well-known form of legal defense: to validate their rights, the managers of a temple (or a city) refer to prior privileges, of which the present authorities require them to furnish proof (cf. Tacitus, *Annals* III.61–63). We may recall the behavior of Tattenai at Jerusalem or even Darius's letter to Gadatas; in the first case, the Jews referred to Cyrus's edict; in the second, the authorities of the temple of Apollo recalled that their privileges went back to Darius's ancestors (cf. chap. 12/4). It is the same here: the Jewish leaders came before Widranga's tribunal because they faced adversaries who demanded the demolition of the temple of Yahō; they reminded the governor that the existence of the temple had been officially confirmed by Cambyses. If the Jews lost the trial, it was very likely because, unlike the people of Jerusalem who appealed to Tattenai, they were unable to produce a written document. If Widranga decided in favor of the Egyptians, it was perhaps quite simply because the documents they were able to produce were immeasurably superior to the Jews' purely oral statements. The decision and the rationale for it were as follows: the Jews were required to dismantle the temple, because the parcel was declared the property of Khnūm.

The episode is very instructive regarding the relationship between the administration and the various ethnocultural communities of the Empire and regarding the procedures that protected the rights of each of them. We do not know what grounds Aršāma had for nullifying Widranga's decision, because we do not have the text of the satrap's decision—only an indirect and fragmentary citation (DAE 104 [AP 33]). But we must stress that in this case the Persian authorities of Syene and then Memphis had to choose between two rationales: one giving priority to a royal decision (Cambyses' decree), the other resting on recognizing the "law of the countries" (Egyptian jurisprudence).

Fig. 50. Sidonian coins, Samarian coins, and related evidence; (h) satrap or dynast on a satrap's sarcophagus.

Widranga opted for the latter, for reasons that probably had less to do with personal preference for the Egyptians and their gods than with the need to maintain order, which in an Egyptian context could only be achieved by conforming to Egyptian law.

A Business Letter

We have an especially vivid illustration of everyday relations between Persians/Iranians and other peoples living in Egypt in an undated Aramaic papyrus that retranscribes a letter sent by Spendadāta, son of Fravartipāta, to Hōri and Petemehū:

To my brothers Hōri and Petemehū, your brother Spentadāta. May all the gods grant at all times the prosperity of my brothers! And now, I have a boat, common to me and to its owner, which is in your hands. Be advised that Armaidāta will tell you that I have given him charge of the boat, and let him do whatever he wants. Also, give him my share of the rent of [this] boat [which is ours]. There is [a total] of 8 shekels, I gave [it] to [. . .] to give it [in exchange] for grain to bring to me. And there is 1 karsh 8 shekels of silver that I gave you to buy wheat for Yatma. Total of money: 1 karsh, 8 shekels. If you bought grain with this amount and brought it into your houses, good! If not, give the money to Armaidāta. He will bring it to us. And if [this] grain remains available to you, tell Armaidāta and give it to him in such a way that he can sell it. (DAE 109)

The transaction seems fairly simple: two Iranians or Persians got together to buy and transport wheat, which they intended to sell; it seems that a third person, Yatma (an Aramaic name) also contributed money to the deal. The two sailors are Egyptians, as in every other known case. Many details escape us. Nonetheless, the text has the advantage of providing concrete information on the commercial activities of two Persians/Iranians, who no doubt held important posts at Elephantine, and on their relations with two Egyptians. The document allows us to see that the Persians of Egypt, following the pattern of the Persians of Babylonia, had no problem thoroughly integrating themselves in the commercial environment and profiting from it. Perhaps the wheat was partly intended to feed the garrison reserves?

The Great King in Sidon and Elephantine

Sometimes only the iconography makes it possible to identify the Persian presence in one region or another, especially in regions where other sources are silent during the time of Artaxerxes I and Darius II. This is the case for Sidon. On the city's earliest coins, which date to the third quarter of the fifth century, the Great King is depicted in various poses (fig. 50a–b). Some show a Sidonian ship on the obverse, sometimes moored at the foot of fortifications; the reverse shows the following scene: "The king of Persia standing in his chariot drawn by four horses galloping to the left; he is capped with the five-pointed *kidaris* and dressed in a *candys*; he raises and extends the right hand; the charioteer is in the chariot beside the king holding the reins in both hands. Beneath the horses, the carcass of an ibex" (Babelon II.2, no. 889; cf. nos. 890, 892–93, 895). On other coins, two lions, on the obverse, spring backward, and a ship is moored at the base of the fortress; on the reverse: "The king of Persia standing battling a lion; he is capped with the crenellated *kidaris* and dressed in the *kandys*; in his right hand he brandishes the short sword [*akinakēs*]; in his left hand he holds a lion by the mane, his arm straining; the lion is rearing in front of him on his two hind legs. Empty square" (nos. 891, 894, 896). On still others, he is shown standing, drawing a bow, opposite a head-and-neck view ibex (no. 897), or, half-kneeling, holding a spear in his right hand and a bow in his left (no. 898).

These scenes correspond quite closely to nearly identical depictions in court art (Royal Hero confronting a lion) or on seals (king in his chariot) and coins (king as archer and lancer; cf. chap. 6). The iconographic influence also shows up in reverse—if we may put it that way: a seal on some Treasury tablets (PTS no. 32) shows a ship very much like those found on Sidonian coins (fig. 50f). This specific example indicates that the iconography of Sidonian coins spread into other regions. To remain within the period we are considering here, we may note in particular that the Sidonian types were copied at Elephantine with, on the obverse, a Sidonian ship (and the name Syene in Aramaic: *swyn*), and on the reverse, the Royal Hero fighting the lion, with a cock poised between them. We also know of Elephantine imitations of Milesian coins with a Persian archer on the reverse. The Sidonian types are also found in Samaria (fig. 50d–e).

There is no doubt that the kings of Sidon deliberately copied motifs from the Achaemenid iconographic repertoire when they had coins struck. There is no room for uncertainty about the political significance. Sidonian coinage is in fact entirely unique; in the other Phoenician cities, the coins from this time show nothing but local symbols. The iconographic distinctiveness expresses the special place held by Sidon within the (very poorly known) organization of Phoenicia at this time. It certainly reflects an older heritage, since the inscription on Ešmunazar's sarcophagus shows that there were close connections between the Great King and the city (see chap. 12/3). The presence of the king of Sidon beside Conon before, during, and after the battle of Cnidus at the beginning of the fourth century further demonstrates that since the time of Cambyses the Sidonian navy had maintained a prime position in the Great King's strategic thinking (Diodorus XIV.79.8; *Hell. Oxyr.* 9.2). We may stress that seals with royal Achaemenid images have also been found in the territory of Dor, which had previously been given to Ešmunazar.

Meanwhile, it must be emphasized that the interpretation related above always raises doubts because of debates about the identification of the person standing in the chariot: some authors suggest that it is Baal of the city rather than the Great King. Even though this is the minority opinion (and probably unsupported), we must stress that the arguments brought up on this topic are very similar to the arguments put forward on the political significance of the scenes on a Sidonian sarcophagus known as the sarcophagus of the satrap, which dates to approximately the same period (late fifth, early fourth century). Is the person on the throne (fig. 50h) the satrap (or even the Great King himself) or the king of Sidon, portrayed in the image of the Great King? Or to put the problem another way: in the absence of any written evidence, does iconographic evidence permit us to establish the nature of political relationships that existed between the local dynasts and the Achaemenid authorities?

The Lycian Case

The same question underlies every discussion of the political significance of the Lycian texts from the end of the fifth century. Although they are only partially deciphered, the Lycian inscriptions of the Xanthus Pillar (which was created at the beginning of the fourth century) reveal familiar names like Amorges, Tissaphernes, Hieramenes, Iasus, Caunus, Darius II, and Artaxerxes II. Despite much obscurity regarding the details, there is hardly any doubt that the inscriptions refer to events that took place in Lycia and southwestern Asia Minor during the Ionian War; they also provide evidence of the in-

volvement of the dynast of Xanthus, who at the time was Gergis/Kheriga, son of Harpagus. The dynast probably aided Tissaphernes, specifically by supplying triremes for the battle in 412 in which the satrap opposed the Persian traitor Amorges, who had taken refuge in Iasus (Thucydides VIII.28.2–4). Furthermore, evidence of Tissaphernes' activity in the region is provided(?) by a coin that bears his name in Lycian (partly restored) and that also bears the name Xanthus (Arnna), though it is difficult to decide whether it dates to the period before or after Cyrus's arrival in Asia Minor, since this event restricted Tissaphernes' authority to Caria, under the supreme command of Darius's younger son. Unfortunately, this numismatic evidence does not permit us to describe the relationship between Tissaphernes and the Lycian dynasts—particularly the dynast of Xanthus—with complete certainty. The analysis of the relationship between the satrap and Xanthus depends fundamentally on the interpretation placed on the “portraits” on certain coins struck at Xanthus by the dynasts. The thesis of relatively strict Persian control is derived from another thesis that sees the coin-portraits as representing the satrap himself; but however appealing this interpretation may be, it has not been unanimously accepted.

The ambiguity of the Lycian evidence is constant. The available evidence reveals clear, growing Greek cultural influence at the Xanthus dynastic court. This holds for the dynastic coinage, and it holds also for a Greek epigram that exalts the military excellence of Gergis, son of Harpagus. It holds even more for the poem of Arbinas, which was written at the beginning of the next century by the Greek diviner Symmachus of Pellana. Symmachus may have arrived at Caunus with the Peloponnesian navy around 412, before entering the service of Gergis and, later, his son Arbinas. The subject of the poems is purely domestic, we might say, since they transmit for posterity the victories won by the dynasts of Xanthus over their relatives and neighbors and celebrate the rebuilding of a Xanthian principedom that extended through the valley of the Xanthus. There is no trace in all of this of specifically imperial interests. The composition suggests that the domestic life of Lycia went on under Persian dominion as if nothing had happened.

But it is a good idea to provide a more nuanced perspective. When Arbinas celebrated his own and his father's virtues, he had no reason to refer to the Persian political presence; this is in sharp contrast to the Lycian Chronicle (Pillar Inscription). But the two propositions should not be set sharply in opposition to one another: the Persians apparently did not interfere in purely domestic dynastic matters, as long as the victorious dynast did not challenge his submission to the Great King. Even in the cultural realm, increasing Greek influence need not be interpreted as marking the increasing autonomy of the Xanthian dynasts. On the contrary, their continued dependence on Persia is illustrated, for example, by one of the poems celebrating the victories of Arbinas: “Arbinas is distinguished over all in all human knowledge, archery, warriorhood, and expert horsemanship.” One is immediately reminded of the royal virtues as presented by Darius: the good warrior and the good horseman. Of course, Symmachus, the author of the elegy, certainly did not slavishly copy the Naqš-i Rostam inscription (or some copy that might have circulated in one form or another). Let us say rather that the vocabulary used *also* reveals, in Greek garb, the stamp of the aristocratic Persian ethic that had been present in Lycia since the beginning of the fifth century (chap. 12/5 end). In order to establish their legitimacy, the Xanthian dynasts borrowed their literary themes and iconographic repertoire from both Iran and Greece, in equal measure. In short, this sort of

evidence does not allow the historian either to assert or to exclude the influence of the Achaemenid authorities in Lycia in the last decades of the fifth century. The only texts that provide information about this are naturally those that belong to the narrative genre (Thucydides, Pillar inscription). They suggest that when external danger loomed, the Lycian dynasts were included in Persian planning, and, simultaneously, that the Lycians might have been able to profit from this, achieving their own goals.

The Cilician Case

In other regions, we have only very difficult fragmentary, heterogeneous, and poorly dated evidence. This remark is particularly true of Cilicia, a region that we have every reason to believe continued to play the military role it had always had throughout Achaemenid history. We have no specific example at this date, but an episode in the Cypriot War, a few decades later, removes any doubt about this point (Diodorus XV.3.1–3). After Xenagoras's appointment by Xerxes in 479 (Herodotus IX.107), the documentation is singularly lacking. Not until the campaign of Cyrus the Younger do we have access to any information. Cyrus was joined at Caystru-pedion by Epyaxa, "the wife of Syennesis, the king of the Cilicians" (Xenophon, *Anab.* I.2.12♦). The Cilician dynast himself refused to defend the Cilician Gates (I.2.21) and fell back to Tarsus, where his palace was located (I.2.23). According to Xenophon, he made an agreement with Cyrus in which he gave great sums of money to him in return for the promise that his territory (*khōra*) would not be ravaged by Cyrus's troops (I.2.27). Ctesias's and Diodorus's passing references are not particularly explicit on the nature of the *syennesis's* power and his relations with the Persians, other than that in principle he owed respect to the Great King.

We have long known of series of Cilician coins that traditionally have been viewed as dynastic coinage, even though they bear no name other than that of their place of issue, usually Tarsus (fig. 51). A person believed to be the dynast is depicted on his horse, often holding two spears and wearing a *bashlyk*. The reverse is most often decorated with the image of a Greek hoplite in combat (Babelon nos. 504–20). One series dated (hypothetically) to the last decades of the fifth century always has the mounted dynast on the obverse, but on the reverse we see royal images, described thus: "The king of Persia as archer on one knee facing right and drawing the bow; he is bearded, bare-headed, dressed in the pleated candies gathered at the waist; his quiver full of arrows is on his back; in the field at left the handled cross" (Babelon no. 521; cf. nos. 522–25; fig. 51 here). On several other coins, two royal figures are depicted: "Two kings of Persia, standing facing each other; both are bearded and dressed in the candies; each rests on his spear with both hands; they have the bow and quiver on their back . . ." (no. 526; cf. no. 527). On three other examples, the royal images occupy front and back; on the obverse, the Royal Hero battles the lion, seizing him by the mane with his right hand and plunging his short sword into the lion's flank with his left hand (no. 528; cf. nos. 529–30); on the reverse, the standing king leans on his spear. The Cilician mint is marked by the presence of the cross with handle, which the king holds in his left hand on the later coins, and by the inscription "Tarsus" in Aramaic (in Aramaic and Greek on some examples; nos. 528–30).

Because of ongoing chronological uncertainties, it is difficult to come to firm conclusions on the basis of this numismatic evidence. Nonetheless, two noteworthy observations may be made: on the one hand, royal images were diffused throughout various

Fig. 51. Dynastic(?) coinage from Cilicia.

parts of the Empire, from Sidon to Cilicia, and this diffusion was achieved in a privileged way by means of coins and seals; on the other, the frequent connection, on obverse and reverse, of the images of the dynast and the king (or Royal Hero) was an association that had obvious political significance but that informs us only imperfectly about the relationship between the two.

The Persians and the Kings of Cyprus

Located a stone's throw or two from the Cilician coast—from which the Persians kept an eye on it—Cyprus remained in the Achaemenid sphere of influence. We learn from Isocrates (*Evag.* 18–20) that a man of Tyrian origin (who was probably a Phoenician from Cyprus) deposed the king of Salamis and seized power shortly after 450. In his eagerness to promote the militant Hellenism of his hero Evagoras, Isocrates gives the impression that Salamis and the other cities previously had never been subject to the Persians. He writes, in fact, that the new master hastened to “deliver the town to the barbarians and to subject the island to the slavery of the Great King.” Actually, the Cypriot cities appear never to have left Persian dominion after the the Ionian Revolt was quashed (cf. Diodorus XII.3.2; 4.2). Around 415, another “Tyrian” named Abdemon came to power in the city, probably by renewing his allegiance to Darius II, since Diodorus considered him “a Friend of the King of the Persians” (XIV.98.1♦). He tried to kill Evagoras, whom Isocrates presents as the legitimate descendant of the Teucid dynasty. Evagoras sought refuge at Soloi in Cilicia. There he recruited a small force, left for Cyprus, and managed to drive out Abdemon (Diodorus XIV.98.1; Isocrates, *Evag.* 26–32). Contrary to what Isocrates says, the new king of Salamis did not immediately try to rebel; we even find Evagoras acting as mediator between Tissaphernes and Athens in 410, which implies that he had good relations with the satrap. During this period, his status is exactly what we can draw from Diodorus's subsequent discussion: he was the sole ruler of Salamis and had to pay tribute to the Great King, who granted him the royal office at Salamis (XV.8.2–3). This was clearly true for other petty kings of Cyprus as well, such as the case of that Agyris whom Diodorus some years later presents as an ally (*symmakhos*) of the Persians (XV.98.2). Obviously, viewed from the heartland, the convulsions that Cyprus was suffering were considered purely local affairs that did not affect the facts of Persian power over Cyprus. As in the previous period, the Persians unthinkingly continued to rely on the populations of Phoenician origin, pitting them against the Greek communities on the island.

Chapter 15

Artaxerxes II (405/404–359/358) and Artaxerxes III (359/358–338)

1. The Reign of Artaxerxes II: Sources and Problems

The Greek Authors' View

The accession of Artaxerxes at Darius II's death inaugurated the longest reign in Achaemenid history. Once again, it is up to the historian at the outset to stress the gaps and serious distortions in the evidence, which first and foremost bears the stamp of the dominant position held by the Classical sources, which quite naturally pay disproportionate attention to affairs on the western front. Fortunately, Cyrus the Younger's recruitment of Greek mercenaries provides us with many descriptions of his rebellion until his death in the battle of Cunaxa (404–401). We might speculate, however, that the young prince had been on the offensive since Bactra—the silence regarding matters on the Iranian Plateau (aside from fleeting allusions to raising troops) being especially significant. In this earlier case, of course, Cyrus would not have been able to recruit Greek mercenaries, with the result that all we have on these events are a few scattered sentences, similar to Plutarch's comments on Ariaramnes' "rebellion" against Xerxes (see chap. 13/2).

The Classical authors are much less loquacious on the next forty years—that is, on virtually the entire reign of Artaxerxes. We have a few narrative sources, but none of them really answers either the questions or the needs of the historian of the Achaemenid Empire. In the *Hellenica*, Xenophon continues his history of relationships among the Greek cities until 362–361. Because of Xenophon as well as the anonymous author of the *Hellenica of Oxyrhynchus*, we are informed about the Greco-Persian conflicts in western Asia Minor and the Great King's increasing role in Greek affairs. On the other hand, Xenophon is no more truly interested in the internal life of the Empire than his predecessors. Diodorus's very limited discussions of these same Greco-Persian matters probably come from Ephorus, all of them stamped with the theme of the political and military weakness of the Great Kings. Ctesias's work, again in the same vein, covers events down to 382. Dinon, another author of a *Persica*, is "a historian in whose account of Persian affairs we have the most confidence," according to C. Nepos, who wrote a *Life of Datames* (Conon 5.4♠); but Dinon is scarcely known and then only from fragments, which give the impression that he was particularly interested in court protocols. We know that Ctesias also inspired Aelian, many of whose stories take place in the Persia of Artaxerxes II.

Plutarch turned to Ctesias, Dinon, Xenophon, and a few others when he wrote his *Life of Artaxerxes*, the only biography of a Great King that has reached us. Twelve of its thirty chapters are devoted to relations between the king and Cyrus the Younger (§§2–13) and five to the succession of Artaxerxes II (§§26–30). Diplomatic and military matters do not receive much attention: he only writes about relations with the Spartans

(§§20–22) and an expedition against the Cadusians (§§24–25) and makes a very fleeting allusion to an Egyptian campaign (§§24.1). The composition is basically structured around court personalities and affairs and one person in particular, Parysatis. She gave Cyrus her unconditional support—hence the chapters devoted to the savage revenge carried out against those who opposed her favorite son, especially those who boasted of killing him on the battlefield (§§14–17). At the same time, she used her influence to ease the imprisonment of Clearchus (§18). Stateira soon became the target of Parysatis's vengeful wrath, and she died, poisoned by her mother-in-law (§19). Plutarch was also greatly interested in personal affairs, including Artaxerxes' marriage to his daughter Atossa (§23) and conflict with his oldest son, Darius, regarding Aspasia, Cyrus's former companion (§§26–27.1–5).

The Achaemenid court as seen by Plutarch (and Ctesias) was dominated by the personalities of two exceptional women, Stateira and Parysatis, whose hatred for each other continually smoldered. Parysatis "detested her [Stateira] more than any other person, and because she wished to have no one so powerful as herself" (§17.4♦). After the elimination of her daughter-in-law, her political influence, which had been far from negligible, grew considerably: "She obtained great power with him [Artaxerxes], and was gratified in all her requests," and she was quick to use her influence to grant prerogatives to those who loved the king and his daughter Atossa (§23.1–5♦). The king's anger after the murder of Stateira did not last; after he exiled Parysatis to Babylon (§19.10), he "was reconciled to her, and sent for her, being assured that she had wisdom and courage fit for royal power" (§23.2♦). Another woman, the king's daughter-wife Atossa, seems to have been motivated by a feverish lust for power: Plutarch reports that she supported Ochus more than her other brothers, and she had an affair with him (§26.2–3). Her ambition grew still higher after the execution of the oldest son, Darius, who had spun a plot against his father because he had stolen Aspasia away from him (§§26–27). Ochus was thereafter "high in his hopes, being confident in the influence of Atossa" (§30.1♦). Throughout the biography of Artaxerxes, the Persian court appears to be consumed by the hateful and cruel ambitions of the women, by the conspiracies of eunuchs and courtesans, by assassinations and executions that piled horror on horror, by general recriminations, and by wearisome amorous intrigues. It is thus easy to understand the narrative's disastrous end, coming after the tale of the suicide of one of Artaxerxes' sons and the murder of Arsames by his brother, Ochus: "When [Artaxerxes] heard of the fate of Arsames, he could not sustain it at all, but sinking at once under the weight of his grief and distress, expired" (§30.9♦).

The reign of Artaxerxes was also the heyday of an Athenian orator, Isocrates, another of those largely responsible for the idea of "Persian decadence." Isocrates was a champion of Pan-Hellenism and the war against Persia, and he never ceased urging the Greeks to mount an assault on the Empire he described as decaying. This is especially clear in the *Panegyricus*, which was written at the end of the 380s: if it is to be believed, the Persians no longer controlled a single western land, from the Straits to Egypt. Like many others—especially Xenophon in book VIII of the *Cyropedia*—the Athenian orator found reason for hope in the expedition of the Ten Thousand (a phrase only later applied to Cyrus's Greek mercenaries); the expedition is offered as absolute proof of the Persians' inability to defend even the heart of their Empire. What is customarily called "the great Satraps' Revolt" in the 360s has long seemed to confirm that Artaxerxes II

exercised nothing more than fictitious authority over provinces mangled by Greek assaults and the autonomous tendencies of the governors.

We must emphasize once more: ideological decryption of the Classical texts does not by itself license a simplistic reconstruction that would be the exact mirror image of the Greek perspective. It is again appropriate, if we are to make full use of the texts, to ask them questions that go beyond the problem of Greco-Persian relations. In other words, if the Persian situation did seem to worsen, additional sources are needed to prove it. The situation is even more paradoxical because gaps in documentation from the center at the same time require the historian to use the Classical record itself to correct the very vision to which it gave rise. But, when all is said and done, the contradiction is only an illusion, due principally to the Greek authors themselves. A few chapters apart, Plutarch stresses both the Great King's military weakness (20.1–2) and then his eminent prowess as a warrior (24.9–10). The second of these passages derives directly from the royal propaganda. It is thus the historian's duty to try to come to an understanding on the basis of highly ideologized texts that fluctuate between denigration and apologia. To put it another way, the best we can do is to bring to light a few scattered shreds of historical reality.

The View from Susa, Babylon, and Persepolis

The task is particularly delicate because, compared with the Classical sources, the sources from the center remain inadequate. They are not, however, totally absent. Once again, most of our information is on the king's activities as builder, due to inscriptions found at several sites. At the same time, though the royal inscriptions maintain their nonnarrative character, they also exhibit noteworthy innovations that deserve special examination; for example, for the first time a Great King explicitly invokes the protection of Anāhita and Mithra. Finally, it must be remembered that the Classical sources sometimes transmit (more or less precisely and adequately) documents and decrees that came from the royal bureaucracy. An example is the very important reference in Berossus to a royal order concerning the worship of Anāhita in the various regions of the Empire, from Bactra to Sardis. Finally, Plutarch and his sources got wind of regulations and court histories that have made it possible for us to trace the organization of the central court (see chap. 7). It is also Plutarch who provides our only information about the royal investiture ceremony at Pasargadae. The period of Artaxerxes II and his immediate successors is also clarified by the sometimes copious regional bodies of evidence, especially in Asia Minor and Judea–Samaria, but in Babylonia as well. There are even some tablets that offer the only echo, distant and faint though it is, of Cyrus's campaign against his brother, for Xenophon's Belesys can be none other than the Bēlšunu who is now well known from a group of Babylonian tablets.

At the same time, allusions in other Babylonian documents reveal our ignorance. A tablet dated to year 38 of Artaxerxes refers to a battle won by "the king's troops" (ADRTB no. –366); another (no. –369), from the seventh month of the 36th year of the same king, mentions that Artaxerxes assembled his troops and left to fight in the territory of Razanda, probably in Media. Together with some Classical texts that also mention, erratically and incidentally, expeditions of Darius II and his successor in Media (Xenophon, *Hell.* 1.2.19) and among the Cadusians (II.1.13; Plutarch, *Art.* 24), these tablets contribute (albeit modestly) to restoring a breadth and depth to the imperial presence that the Greek tradition generally tends to efface from the memory of the reader. Paradoxically, the astronomical tablet that is (albeit modestly) one of the most informative, at least in

narrative terms, deals with affairs taking place on the western front, on the island of Cyprus (ADRTB no. 440)!

2. The War of the Two Brothers (404–401)

From Darius II to Artaxerxes II

In addition to illegitimate children born to his concubines (cf. Xenophon, *Anab.* II.4.25), Darius II had several sons from his marriage to Parysatis. The marriage was quite prolific, since according to Ctesias (§49), Darius and Parysatis had thirteen children, most of whom died prematurely. A daughter (Amestris) and at least four sons survived: the oldest, Arses, who was born before 424; then Cyrus, Ostanes, and Oxathres (Plutarch, *Art.* 1.2; Ctesias §49). “Now when Darius lay sick and suspected that the end of his life was near, he wished to have both his sons with him. The elder, as it chanced, was with him already; but Cyrus he summoned from the province over which he had made him satrap” (Xenophon, *Anab.* I.1.1–2♠). Cyrus came, accompanied by Tissaphernes and a troop of Greek mercenaries (I.1.2).

Plutarch says that Cyrus was summoned by his mother, who favored him over his older brother (*Art.* 2.3–4). He also says that she tried to persuade her ill husband to choose Cyrus, using the same arguments that Herodotus attributes to Demaratus when Darius’s succession was in question (VII.3). The explicit repetition of the motif is highly suspicious. It is unlikely that Darius II waited until the end of his life to decree the succession. Even though we are not able to determine the exact date, we must assume that the appointment of Arses as crown prince took place several years earlier. The exact reasons for Darius’s choice are not available to us, but it is likely that Arses’ status as oldest weighed heavily in his favor. In any case, after his father’s death, the oldest son seated himself on the throne and took the name Artaxerxes. At this time, he was inaugurated at Pasargadae, in a ceremony described for us only by Plutarch (*Art.* 3.1–2; chap. 13/2).

One tradition states that Arses heard his father’s last words on his deathbed (Athenaeus XII.548e). Of course, this scenario very much reminds us of the scene Xenophon depicts (imagines!) at the end of the *Cyropaedia* (VIII.7.5–28♠): sensing his declining vigor, Cyrus summoned Cambyses, Tanaoxares [Bardiya], and the highest officials. Xenophon wrote a long speech for the king, and at the end of this utterance he breathed his last. In the speech, he divides his powers between his two sons: the older, Cambyses, received the kingship, and the younger, an immense satrapal territory. Cyrus, who was fully aware of the potential dangers surrounding his succession, adjures his sons to live in harmony, especially impressing on the second-born the requirement “to let no one more readily than yourself yield obedience to your brother or more zealously support him.” The tradition recorded by Athenaeus thus very likely represents a component of court propaganda that originally was intended to legitimate Artaxerxes II rather than Cyrus the Younger.

Another tradition states that the real motive for summoning Cyrus was quite different from the motive that Plutarch reports. Cyrus was accused of executing two members of the royal family (Autoboisaces and Mitraeus) at Sardis (Xenophon, *Hell.* II.1.8). According to this theory, he was summoned to answer for his actions. These data are both unverifiable and probable. There is in fact hardly any doubt that, while remaining completely loyal to his father, Cyrus garnered all the profit he possibly could from the very high position that Darius had awarded him at Sardis. A series of coins apparently

issued during this period is quite remarkable: they are Athenian "owls" (tetradrachms) overstruck with a portrait of a king, who surely must be Darius II. More interestingly, some individual examples bear a second portrait. This much smaller portrait has two characteristics: it does not wear the royal *kidaris*, and it is beardless. It is thus highly likely that it represents Cyrus. This definitely is not coinage of revolution—that is, these imitations of Athenian owls were without doubt struck at Sardis by the *karanos* to pay the wages of Peloponnesian military units. Nonetheless, they also demonstrate the very high opinion that Cyrus had of himself and of his own authority.

According to Plutarch, it was shortly before Artaxerxes' investiture ceremony that Cyrus first overtly displayed his ambition. Tissaphernes relied on the testimony of the *magus* who had overseen the education of Cyrus and thus brought charges against him: "as though he had been about to lie in wait for the king in the temple, and to assault and assassinate him as he was putting off his garment [in order to don the robe of Cyrus the Elder]. Some affirm that he was apprehended upon this impeachment, others that he had entered the temple and was pointed out there, as he lay lurking by the priest." He was rescued from execution only by the immediate pleas of Parysatis: "Artaxerxes . . . sent him away again to the sea" (*Art.* 3.3–6♦). The *magus's* accusations appear particularly legitimate because he "was likely to be as much disappointed as any man that his pupil did not succeed to the throne" (*Art.* 3.3♦). Even though this story gives the impression that Cyrus had other support at court besides his mother's (which can hardly be doubted), it remains hard to believe. It is hard to imagine a pretender to the throne defiling the sanctuary of Anāhita. The story was doubtless invented later as a part of the royal propaganda that was designed to smear the memory of the rebellious brother. However, the existence of conflict at this time cannot be denied. Though Xenophon does not repeat the story presented by Plutarch, he reports that, after Artaxerxes' accession, Cyrus was (falsely) denounced by Tissaphernes and that he owed his survival to the intervention of his mother (*Anab.* I.1.3).

Cyrus's Preparations and Artaxerxes' Response: From Memphis to Sardis

After his brother was inaugurated, Cyrus returned to Sardis, which, "however, could no longer content him; . . . his resentment . . . made him more eagerly desirous of the kingdom than before" (*Art.* 3.6;♦ cf. Xenophon, *Anab.* I.1.4). Tissaphernes, whom he (formerly) "considered a friend" (*Anab.* I.1.2), was always at his side. Recent events had just proved to him that Tissaphernes in fact wanted only to get rid of him. At first, then, Cyrus considered it wise to act in great secrecy, "so that he might take the King as completely unprepared as possible" (*Anab.* I.1.6♦). He continued to correspond regularly with his brother (*Anab.* I.1.8; Plutarch, *Art.* 4.3), and he entertained his envoys lavishly, hoping to entice them to his side (I.1.5). Additionally, he remitted the tribute to the court regularly (I.1.8).

In order to amass troops, he entered into secret agreements with mercenary commanders who were his guests; he asked each one to keep his contingent ready and to respond immediately to any summons that might be sent (I.1.6–11). At the same time, he parleyed with the Spartan authorities, reminding them of the services he had rendered them earlier during their fight against the Athenian districts in Asia Minor. Lacedaemon responded positively to his contact: it officially authorized Clearchus to place himself at the service of Persia (*Art.* 6.5) and ordered the head of the navy "to hold himself under

Cyrus' orders, in case he had any request to make" (*Hell.* III.1.1♦). It appears that the Lacedaemonian authorities were careful not to declare themselves too openly, preferring to await the outcome of the pending confrontation between the two brothers (Diodorus XIV.21.1; cf. 11.2). Finally, both Diodorus (XIV.35.2) and Xenophon indicate that a large number of Greek cities defected to Cyrus, abandoning Tissaphernes, to whom they "had originally belonged . . . , by gift of the King" (*Anab.* I.1.6♦). Cyrus immediately besieged Miletus when it refused to accept his authority (I.1.7).

Cyrus came up with all sorts of excuses to justify his military preparations. First of all, he said that he was preparing to make war on Tissaphernes, who had exiled the opposition in order to hold onto Miletus (*Anab.* I.1.7). This was the explanation that he gave two of the Greek mercenary commanders, "saying that he intended to make war upon Tissaphernes with the aid of the Milesian exiles" (I.1.11♦). Next, when he gathered his troops at Sardis in the spring of 401, "the pretext he offered was that he wished to drive the Pisidians out of his land entirely" (I.2.1♦). This ruse was intended for the Greek mercenaries, who had no interest in marching against the Great King personally. It was also meant to allay the suspicion of the king's men, since expeditions against the Pisidians were becoming quite a routine affair. Tissaphernes was not taken in, since he "had taken note of these proceedings and come to the conclusion that Cyrus' preparations were too extensive to be against the Pisidians; he accordingly made his way to the King as quickly as he could, with about five hundred horsemen. And when the King heard from Tissaphernes about Cyrus' array, he set about making counterpreparations" (I.2.4–5♦). This at any rate is Xenophon's summary version of Persian affairs in Asia Minor between 404 and 401.

In Xenophon's reading, Artaxerxes possessed a strange blindness: "The King failed to perceive the plot against himself, but believed that Cyrus was spending money on his troops because he was at war with Tissaphernes. Consequently he was not at all displeased at their being at war" (I.1.8♦). It is hard to believe, despite Plutarch (*Art.* 4.3), that the influence of Parysatis was sufficient to deceive Artaxerxes regarding Cyrus's true intentions. The comings and goings between Sardis and the central court imply that numerous reports reached the Great King. It is true that Xenophon's remark could be explained by a royal policy that was intended to counterbalance one satrap's power with another's. But it is difficult to understand why Artaxerxes chose to support his brother, whose ambition had long been known to him—even though Cyrus was careful to send to the court "the tribute which came in from the cities he chanced to have that belonged to Tissaphernes" (I.1.8♦). Nothing suggests that Artaxerxes ever replied favorably to Cyrus, who "urged . . . that these Ionian cities should be given to him instead of remaining under the rule of Tissaphernes."♦ Instead, one gets the impression that these interpretations are integrated a little too successfully into the tendentious portrait of the king found especially in the opening chapters of Plutarch, who delights in contrasting the irresolute and dithering (*mellēsis*) character of Artaxerxes (§4.4) with his brother's energetic ambition (§6.1).

The case of Orontas brings very different thoughts to mind. Here is how Cyrus himself later portrays this person, whom he is judging on grounds of treason in summer 401: "This man was given me at first by my father, to be my subject; then, at the bidding, as he himself said, of my brother, this man levied war upon me, holding the citadel of Sardis" (I.6.6♦). Orontas, the phourarch of Sardis, had at some point received royal orders

to engage in armed combat against the followers of Cyrus, who even accused him of deserting to the Mysians and ravaging territory subject to Cyrus's control (I.6.7). The example strongly suggests that the war between Artaxerxes and Cyrus began—albeit in embryonic form—long before the departure from Sardis in March 401 and that Tissaphernes and Orontas had been ordered by the king to thwart the ambitions of his younger brother.

Ephorus provides a version of the dating and source of the accusations against Cyrus that is completely different from Xenophon's; it is transmitted by Diodorus (XIV.11.1–4), Nepos (*Alc.* 9.3–4), and Plutarch (*Alc.* 37.8–39). According to Ephorus, Alcibiades was exiled from Athens and driven completely away; he took refuge at the court of Pharnabazus at Dascylium, who (in accordance with a longstanding Achaemenid policy) gave him the town of Grynium so that he could provide for his needs. At this point, Alcibiades sought an alliance with the Great King in order to reopen the war against Sparta. When he learned of Cyrus's preparations, he saw a way of garnering the favor of Artaxerxes, and he pestered Pharnabazus for an official safe-conduct (*halmi* in the PF, *adeia* in Demosthenes XXIII.159), and Pharnabazus authorized it. However, according to Diodorus, Pharnabazus “usurped the function of reporter and sent trusted men to disclose the matter to the King.” He also assassinated Alcibiades while he was en route, with the assistance of a mysterious “satrap of Paphlagonia” (Diodorus XIV.11.3⇨). According to this version, Artaxerxes was already informed of his brother's military preparations by 404–403.

So we are faced with two contradictory accounts. It is likely that, as on a previous occasion (Themistocles' arrival in Asia Minor: chap. 13/9), one comes from the court of Sardis, the other from the court of Dascylium. How can we choose one? We might eliminate the second account by suggesting that in this passage, as in at least one other case (XIV.35.1), Diodorus (Ephorus) simply confused Pharnabazus and Tissaphernes. But an analysis of Alcibiades' route confirms that he did indeed leave from Dascylium. We might nonetheless conclude that the Dascylium version was invented later in order to reinforce Pharnabazus's status vis-à-vis Tissaphernes, who received wide authority in Asia Minor after the battle of Cunaxa. This is a perfectly reasonable hypothesis—apart from the fact that the competition between the two satraps is attested beginning at least as early as 412. We may add that the actions taken by Darius II in 407 could only have aroused Pharnabazus's hostility against Cyrus, who, as general commander of the maritime regions, had taken control of “Aeolis, and the neighbouring territories” (cf. Diodorus XIV.19.6⇨); these regions had always been disputed by Dascylium and Sardis. It is logical to prefer Pharnabazus's version, to the extent that it offers a picture of the central authority that is consistent with the policy it was then following at Sardis against Cyrus. The only counterargument comes from Diodorus himself—probably still following Ephorus: after describing Cyrus's march to Babylonia, he presents Artaxerxes' situation as follows: he “had learned some time before (*palai*) from Pharnabazus that Cyrus was secretly collecting an army to lead against him, and when he now (*tote*) learned that he was on the march [toward the High Country (*anabasis*)], he summoned his armaments from every place to Ecbatana in Media” (XIV.22.1⇨). By stating once more that Pharnabazus had warned the king much earlier, Diodorus also implies that he had done nothing in the interim—although the expression used could also be understood to mean that the order quoted by Diodorus consisted simply of ordering already-mobilized troops to move to their mustering stations.

At the same time, it is clear that the tales of the Greek authors are devoted exclusively to Cyrus's campaign. This leads to another theory: the Classical sources pass over important events in other regions of the Empire in silence, which would explain Artaxerxes' apparent lack of activity better than does a secret undertaking by Cyrus. This interpretation is easy to test, if not to establish with complete certainty. In fact, at this time, another front required the full, vigilant attention of Artaxerxes—Egypt. We know for a fact that, after Cyrus's arrival in Cilicia (summer of 401), the *strategos* Abrocomas turned toward the Euphrates and then toward Babylonia, having "turned about in his journey from Phoenicia" (*Anab.* I.4.5♦). The meaning is clear: as in many later episodes, the concentration of an army in Phoenicia signified an offensive against the Nile Valley. The Elephantine documents confirm that there was an Egyptian revolt. The last document dated to Artaxerxes II at Elephantine is from the end of 401 (*DAE* 53 [*BMAP* 12]). Another, from September 400, refers to year 5 of King Amyrtaeus (*DAE* 7 [*AP* 35]), who therefore must have been proclaimed pharaoh during 404. He must have been a descendant of the rebels that we know were in the Delta during the fifth century—specifically, a grandson of Amyrtaeus I (cf. Herodotus III.15). The Elephantine documents show that between 404 and 400 (or even 398) Upper Egypt remained under Persian control but that, conversely, Amyrtaeus dominated all or part of the Delta. It was obviously in order to subdue him, probably shortly after his accession, that Artaxerxes assembled an army in Phoenicia under the command of Abrocomas (cf. Isocrates, *Phil.* 101). This was not the first time that the Egyptian dynasts of the Delta tried to profit from a disputed succession (cf. Diodorus XI.71.3). But as it happens, circumstances were particularly favorable to them. It is, moreover, not impossible that Cyrus had consciously taken advantage of the situation then prevailing in the Nile Valley; he was certainly not unaware of events in Egypt. We know in fact that one of his closest lieutenants was Tamos, probably an Egyptian-born Carian from Memphis. Indeed, we learn that, after Cyrus's death, Tamos feared Tissaphernes' vengeance and fled to Egypt with his family and his wealth. He expected to take refuge with Psammetichus, "king of the Egyptians, who was a descendant of the famous Psammetichus." There is no reason to challenge this testimony from Diodorus (XIV.35.4♦) on the grounds that he confused Amyrtaeus and Psammetichus; as in previous periods, the Delta was divided among several rival dynasts. Indeed, it is quite interesting to observe that, according to Diodorus, Tamos expected the protection of Psammetichus, "because of a good turn he had done the king in the past." Diodorus offers no relevant details, but we might ask whether Tamos had previously been instructed by Cyrus to initiate a relationship with the Egyptian dynast on the chance that he might thus strike a fatal blow to Achaemenid interests in Egypt. In any case, Cyrus could not have been unaware that, whatever Abrocomas would decide (whether to submit to him or to remain faithful to the Great King), the offensive he was leading against his brother would interrupt the reconquest of Egypt already in progress.

It is thus easy to understand why the Great King did not immediately in 404–401 use the information provided by Pharnabazus. He first ordered a mobilization to reconquer Egypt. We thus also understand why Xenophon and Ephorus agree on one point: Artaxerxes was not able to proceed with his preparations until later, because he was otherwise occupied (*Anab.* I.2.4–5; Diodorus XIV.22.1). In order to do battle with his brother between 404 and 401, then, Artaxerxes was only able to count on the loyalty of his people in Asia Minor, such as Tissaphernes, Orontas, and certainly Pharnabazus as well, in the hope that open warfare at Sardis and in Ionia would deter Cyrus from marching against

him. This explains the king's satisfaction at seeing Cyrus and Tissaphernes at each other's throats (I.1.8), an observation that Xenophon expanded into an incomplete and probably erroneous interpretation. When Tissaphernes left Asia Minor in the spring of 401, it was not really that he intended to inform the king of Cyrus's already well-known preparations; more simply, once Cyrus's revolt had officially begun, he decided immediately to place himself under the authority of the Great King, who awarded him a very high command in the army he had assembled (*Anab.* I.7.12, 8.9).

Cyrus the Younger's Army

The contingents summoned by Cyrus assembled at Sardis. Each mercenary commander brought his men; they came from Asian cities but mainly from the Peloponnese—8,100 troops all together (*Anab.* I.2.3–4). At Colossae, Menon of Thessaly joined up, leading 1,500 more soldiers (I.2.6); at Celaenae in Greater Phrygia, the army was filled out with the men of the exiled Lacedaemonian Clearchus (2,000), Sosis the Syracusan (300), and Agias the Arcadian (1,000). The Greek army reviewed by Cyrus in the capital of Greater Phrygia thus amounted to 12,900 men, and at Issus the 700 hoplites of the Spartan Cleirisophus joined them, arriving by sea (I.4.2). It is this assemblage that a later tradition marked by apologetic tendencies refers to collectively as the Ten Thousand. They are the main topic of Xenophon's narrative, along with the contentious relations among its leaders (especially Clearchus and Menon) and their persistent reluctance to follow Cyrus beyond Tarsus and the Euphrates. At first sight, the attraction of using Greek infantrymen (hoplites and peltasts) is easily explained: they had especially good reputations as a result of their long combat experience (cf. Diodorus XIV.23.4), and Cyrus himself adopted some of the Greek equipment (breastplates and swords) to equip the elite of his cavalry (XIV.22.6; cf. *Anab.* I.8.7). In comparison with everything known before, this is the first time a Persian leader made such massive use of mercenaries.

Xenophon's (and other Greeks') view needs several major corrections. As he himself notes, Cyrus's army included Greeks and barbarians (I.2.16). There were two armies side by side, Greek and barbarian (Ctesias §58), just as there were two navies, with the barbarian navy under the command of Tamos (Diodorus XIV.19.5). There were two distinct commands, though Cyrus himself remained commander-in-chief (XIV.19.9). At Cunaxa, the two armies took up separate positions (Xenophon, *Anab.* I.8.14); only 1,000 of the barbarian army, men from the Paphlagonian contingent, were arrayed alongside Clearchus, commander of the Greeks (I.8.5; Diodorus XIV.22.5). On the left flank were the Paphlagonians—whose cavalry was particularly famous (*Anab.* V.6.8)—as well as the troops drafted from Phrygia and Lydia, as well as 1,000 horsemen under the command of Ariaeus. Cyrus placed himself at the center of the formation, surrounded by the bravest of the Persians and the other barbarians (*Anab.* I.8.5; Diodorus XIV.22.5–6). Also in the center were contingents led by faithful subjects such as Procles, "the ruler of Teuthrania" and a descendant of the Demaratus to whom Xerxes had granted territory in Aeolis (*Anab.* II.1.34). In sum, Cyrus had assembled all the territorial forces of Asia Minor: contingents of subject peoples (Paphlagonians), horsemen levied from the Persians of the imperial diaspora, and soldiers provided by families who had settled in Asia Minor after the time of Xerxes (see chap. 13/9). Cyrus was thus not content with gathering Greek mercenaries; he also ordered a general mobilization throughout Asia Minor (Diodorus XIV.19.7), and this enabled him to recruit a cavalry, without which he would never have been able to commence such an enterprise (cf. *Anab.* II.4.6).

Propaganda and Legitimation

For his project to succeed, the young prince, while assembling a cohesive fighting force, had to generate personal loyalty strong enough to break the links that bound the Persians to the Great King. Without being fully aware of the fact, all the ancient authors report that the armed conflict was accompanied by a vigorous propaganda war:

Yet busy, factious men, that delighted in change (*hoi neōteriskoi kai polypragmones*), professed it to be their opinion that the times needed Cyrus, a man of great spirit, an excellent warrior, and a lover of his friends, and that the largeness of their empire required a bold and enterprising prince. (Plutarch, *Art.* 6.1♦)

Though Plutarch's words confirm that he unflinchingly favors stability and order, the themes he conveys are the very ones that Cyrus's camp undertook to propagate. The passage is even more significant because it is embedded within a comparison of Cyrus and his brother, who appears to be known for his "natural dilatoriness . . . which was taken by many for clemency" (4.4♦). To illustrate his thesis, Plutarch cites the king's *polydōria* and gifts offered him by the simple peasants, albeit without understanding their significance, at least in this passage (cf. *Mor.* 172b and Aelian, *VH* I.31–33). He also notes that Artaxerxes allowed his younger brothers to partake of his table, and his wife to travel in an open carriage (§4.4–5; 5; cf. *Mor.* 173f). Cyrus is contrasted to the king, who was criticized as weak in character:

among many other high praises of himself, . . . said he had the stronger soul; was more a philosopher and a better Magian; and could drink and bear more wine than his brother, who, as he averred, was such a coward and so little like a man, that he could neither sit his horse in hunting nor his throne in time of danger. (§6.5♦; cf. *Mor.* 173e–f)

This quotation does not call for much comment, because it is obvious that by proclamations of this sort Cyrus intended to legitimate his claim to supreme authority by disqualifying his brother with respect to traditional Achaemenid royal ideological attributes.

The thesis is consciously and systematically laid out by Xenophon in his eulogy for Cyrus: Cyrus from his youth was regarded as "the best of them," courageous in both the hunt and war; he was loyal in his commitments, merciless toward delinquents of any stripe, bringing order and security throughout his territory. Xenophon and others particularly stress that he was diligent in rewarding excellence, that "he never let . . . zeal go unrewarded," that he displayed unparalleled *polydōria*, sending his Friends food from his table (*Anab.* I.9.1–28♦). Moreover, Cyrus was also a "good gardener" (Xenophon, *Oec.* IV.20–25)—a virtue later exalted by the propaganda that came from Parysatis's entourage (chap. 6/5). In short, "no man, Greek or barbarian, has ever been loved by a greater number of people" (*Anab.* I.9.28♦), and, "if Cyrus had only lived, . . . he would have proved an excellent ruler" (*Oec.* IV.18). Though the clear similarities with the *Cyropaedia* indicate that Xenophon is here painting a portrait of the ideal king, what we know about the monarchic ideology also shows that the materials used to paint this portrait were the virtues that all genuine Achaemenid documents ascribe to the Great King (cf. chap. 6).

The gods themselves legitimated the pretender's royal ambitions, and this can be gleaned from a story told by Xenophon. In July 401, Cyrus's army arrived at Thapsacus on the Euphrates, "the width of which was four stadia [ca. 700 m]" (*Anab.* I.4.11♦). In the course of his retreat, Abrocomas had burned the bridges (4.18♦): "Cyrus proceeded

to cross the river, and the rest of the army followed him, to the last man. And in the crossing no one was wetted above the breast by the water." There is nothing remarkable about this, since at that time the river was at a low flow, and the soldiers waded across. What is more interesting is the ensuing interpretation of this "stunt":

The people of Thapsacus said that this river had never been passable on foot except at this time. . . . It seemed, accordingly, that here was a divine (*theios*) intervention, and that the river had plainly retired before Cyrus because he was destined to be king. (I.4.18♦)

We have a parallel episode in Plutarch's *Life of Lucullus*. During his Armenian campaign, the Roman Lucullus too found himself at odds with unenthusiastic soldiers (§24.1). The army reached the Euphrates at flood, "finding the waters high and rough from the winter." During the night, inexplicably, the level of the waters fell, and at dawn the river had returned to its bed:

The inhabitants, discovering the little islands in the river, and the water stagnating among them, a thing which had rarely happened before, made obeisance to Lucullus, before whom the very river was humble and submissive, and yielded an easy and swift passage. (§24.2♦)

The tradition is particularly interesting in that the Lucullus episode is set in Iranian territory (Acilisene) at the very location of a famous sanctuary of Anāhita, who would soon issue an additional favorable omen to the Roman—a heifer branded with the mark of the goddess, a torch, offered herself up. Lucullus sacrificed her; "besides which, he offered also a bull to Euphrates, for his safe passage" (§24.4–5♦). We can end with another parallel, taken from Tacitus (*Ann.* VI.37): Vitellius and Tiridates reached the banks of the Euphrates with their troops; the Roman Vitellius offered a *suovetaurile* to the gods, according to Roman custom, while Tiridates "sacrificed a horse in honor of the river":

The inhabitants proclaimed that without any rain the Euphrates had just risen all by itself beyond measure, and that the cleansing foam formed circles that looked like nothing so much as diadems, portent of a favorable omen.

All of these stories reflect *topoi* that are well grounded in royal Near Eastern literature. How often, for example, do the Assyrian kings claim to have crossed torrents or precipices without hindrance! Furthermore, privileged relationships between the king, the waters, and the rivers are found in these stories, and these relationships also appear in a story regarding Cyrus the Elder that Herodotus transmits (I.188).

Personal and Dynastic Loyalty

It is clear, at least to hear Xenophon tell it, that Cyrus's vaunted *polydōria* toward "the barbarians of his own province" was designed to ensure that they "should be capable soldiers and should feel kindly (*eunoia*) toward him" (I.1.5♦). There is no doubt that Cyrus surrounded himself with men in whose loyalty he was completely confident (cf. Diodorus XIV.19.9). His purpose was to generate loyalty toward himself that would rival the loyalty any Persian might show to their king (*Anab.* I.6.6–8). But does Cyrus's propaganda imply that he was successful, or does it show that he needed to persuade those who were reluctant to embrace his cause? This question is somewhat artificial, since the two possible answers are not mutually exclusive. Nevertheless, the question has decisive importance, which can be stated a bit more precisely: Were all of the Persians of Asia Minor unreservedly committed to the cause of the one who already considered himself the equal of a king?

There is no doubt regarding the ones who joined him. His closest confidants were those whom Xenophon calls his 'Faithful' (*pistoi*; cf. I.5.15)—his *bandaka*, those bound to him by personal ties, symbolized by a handclasp before the gods (I.6.6–7). The small group that remained faithful to the end were his Tablemates (*homotrapezoi*) (I.8.25), a title that by itself indicates that Cyrus had re-created a court hierarchy based on the royal court. Among his "Faithful," Xenophon singles out Artapates, "the most faithful of Cyrus' chamberlains" (6.11, ♦ 8.28); the rebel Orontas was executed in Artapates' tent (6.11). One tradition claims that Artapates killed himself on his master's corpse: "he had a dagger (*akinakēs*) of gold, and he also wore a necklace and bracelets and all the other ornaments that the noblest Persians (*hoi aristoi Persōn*) wear; for he had been honored (*timē*) by Cyrus because of his affection (*eunoia*) and fidelity (*pistotēs*)" (8.29♦). The gold *akinakēs* was clearly a "royal" gift (cf. I.3.27), which distinguished him from other Persian aristocrats, who all wore glittering robes decorated with sumptuous jewels (I.5.8).

The Persians of Asia Minor who sided with Cyrus generally are referred to by Diodorus as "satraps" (XIV.35.2). Alongside unnamed Persians who held subordinate commands (XIV.19.9: in the army), Diodorus refers to relatives (*syggeneis*) of Cyrus who were governors of Lydia and Phrygia (XIV.19.6). On rare occasions, a few Persians are explicitly named by the ancient authors: Artaozus and Mithradates, for example, "who had been most faithful friends of Cyrus" (II.5.35♦); also Satiphernes, "a noble man and a faithful friend to Cyrus" (Plutarch, *Art.* 11.2♦); Ariaeus, "Cyrus's satrap," who was one of his Friends (II.1.1♦) and commanded the cavalry on the left flank in the battle of Cunaxa (Diodorus XIV.24.1; cf. *Anab.* I.8.5: *Kyrou hyparkhos*). He was "most highly honoured by Cyrus" (III.2.5♦), and he was certainly of noble origin (cf. II.1.1–4). Xenophon also mentions Pategyas, "a trusty Persian of Cyrus' staff" (I.8.1♦).

But the problem remains unresolved: Do these examples indicate a general eagerness to march against Artaxerxes? For Xenophon, the question answers itself. The best proof of Cyrus's kingly merit, he says, is the following observation: "Although Cyrus was a slave, no one deserted him to join the King . . . ; on the other hand, many went over from the King to Cyrus after the two had become enemies" (*Anab.* I.9.29; ♦ cf. *Oec.* IV.18). Ctesias provides confirmation: "Many turncoats changed from Artaxerxes to Cyrus, but not one changed from Cyrus to Artaxerxes" (§58). Here we find one of the justifications that Alexander later offered to contest the legitimacy of Darius III's authority (Arrian II.14.7): the true leader must know how to inspire the loyalty and devotion of his followers.

What was the truth? In fact, though "tens of thousands" of turncoats are mentioned (*Oec.* IV.18), none but the 400 Greek mercenaries of Abrocomas can be pinpointed, and they no doubt were attracted by hope for high wages (*Anab.* I.4.3). Though hardly representative politically, this shift in allegiance compensated to some extent for the defection of two mercenary leaders, Xennias and Pasion, who, as soon as Cyrus's real destination became known, chose to board ship and return to Greece (I.4.7). Cyrus was so unsure of his Greeks that he had taken the precaution of holding the wives and children of the *strategoi* hostage, at Tralles (I.4.8). It is perhaps for the same sort of reason that the Lydian market, where the soldiers could provision themselves, was located "in the barbarian army" (I.3.14, 5.6). To stimulate the Greeks to follow where he wanted to lead them, Cyrus constantly resorted to ruse and deception. The Pisidian goal (see p. 617) proved to have been a decoy as soon as the army arrived at Tarsus. The soldiers refused to return

to the road for 20 days, "for they suspected by this time that they were going against the King" (I.3.1♦). A real riot erupted against Clearchus, because many of the mercenaries wanted to return on their own (I.3.1–14). At this point, Cyrus claimed that he was marching only against Abrocomas on the Euphrates and that, once they got there, they would see what the appropriate course of action would be (I.3.20); according to Diodorus, he announced that he was leading them "against a certain satrap of Syria" (XIV.20.5♦). Not until they arrived at Thapsacus did he openly unveil his plans; there he calmed the reawakening uneasiness with promises of increased pay (I.4.11–13). Apparently Cyrus's promises failed to persuade all of the Greeks (4.13). In other cases, their loyalty remained conditional, as is seen by the assurances Cyrus proceeded to give: "he promised that he would give every man five minas in silver when they reached Babylon and their pay in full until he brought the Greeks back to Ionia again" (*Anab.* I.4.13♦).

Now let us return to the perspective of the Persian aristocracy. The reality is that Ctesias gives but a single example of defectors to Cyrus: Arbarius apparently defected shortly before the decisive battle. But we do not know whether this is the same person as the Arbarius who twenty years later betrayed Secundianus to join Ochus/Darius II (§47). And even this example is scarcely convincing, since Ctesias states that this Arbarius "was denounced" (§58), an indication that he was an isolated case, even if some of his compatriots then joined Cyrus's side (*Anab.* I.7.2). Xenophon, as an exception to the rule he had just illustrated, gives the example of Orontas, who was convicted of treason against Cyrus. The author places the episode in Babylonia (I.6). Orontas was a member of the highest nobility and enjoyed immense prestige: "a Persian, who was related to the King by birth and was reckoned among the best of the Persians in matters of war" (§6.1♦). Under the pretext of hindering the activities of marauders from the royal army, he had asked Cyrus to entrust a corps of horsemen to him. At the same time, he sent a letter to Artaxerxes, announcing his change of allegiance. But he was betrayed by the messenger and arrested, convicted, and executed.

Cyrus convened a tribunal to try him, comprising the seven most distinguished Persians among his attendants; he included Clearchus, the most faithful of the Greek *stratēgoi* (§6.4–5). The verdict was signaled in the traditional way: "Every man of them arose . . . and took him by the girdle, as a sign that he was condemned to death" (§6.10;♦ cf. Diodorus XVII.30.4). Xenophon interjects that even the relatives (*syggeneis*) of the accused had to perform the fatal gesture. Some additional details indicate that Orontas had a large network of associates. Xenophon notes, for instance, that even after his sentencing, "when the men who in former days were wont to do him homage saw him, they made their obeisance even then, although they knew that he was being led forth to death" (§6.10♦). The end of the episode is equally revealing: "Now after he had been conducted into the tent of Artapates, the most faithful of Cyrus' chamberlains, from that moment no man ever saw Orontas living or dead, nor could anyone say from actual knowledge how he was put to death, —it was all conjectures, of one sort and another; and no grave of his was ever seen" (§6.11♦). The confidentiality imposed by Cyrus was probably intended to forestall any official mourning in honor of the condemned man. It is also quite noteworthy that Cyrus did not call on Persian troops, but on Greek detachments that were not susceptible to being torn between conflicting loyalties, to guard the tent where the trial was being conducted (§6.4). The inclusion of the Greek Clearchus among the judges was certainly also due to the same considerations. Convening the

seven most distinguished Persians was probably intended to assure the support of fully faithful Persians; by including kinsmen of the accused, Cyrus was also attempting to compel them to restate publicly their personal loyalty to him.

Furthermore, it can be deduced from Xenophon's tale itself that Orontas was not the only one to exhibit misgivings regarding Cyrus. Without stressing it, Xenophon in fact notes that a few weeks earlier, in Lycaonia, "Cyrus put to death a Persian named Megaphernes, who was a wearer of the royal purple" (*phoinikistēs basileios*; I.2.20◊). We know nothing further about this person; his job may have allowed him to set up a relationship with Artaxerxes' camp. Xenophon adds that someone else was put to death at the same time. He describes him with a less than clear phrase: "another dignitary among his subordinates" (*heis tōn hyparkhōn dynastēs*; 2.20◊). Could this have been one of the officers in charge of a district (cf. *Hell.* III.1.12)? Cyrus did in fact need their support in order to have access to the treasuries and well-stocked storehouses along the route. So far, he had not encountered any major obstacles. The authorities at Celaenae (cf. Plutarch, *Them.* 30.1), for example, clearly did not oppose his requests (*Anab.* I.2.7–9). This interpretation is supported by an action that Cyrus took in Lycaonia: "This country he gave over to the Greeks to plunder, on the ground that it was hostile territory" (*polemia khōra*; 2.19◊). This phrase very plainly refers to a land that could be ravaged because it had not submitted. This was also the case in Cilicia prior to the submission of the *syennesis*; as soon as he had submitted, Cyrus promised "that his land should not be plundered any more and that they might take back the slaves that had been seized in case they should chance upon them anywhere" (I.2.27◊).

Earlier on, in fact, the *syennesis* had refused to ally himself with Cyrus. He was soon forced to do so by the simultaneous arrival of Cyrus's army and navy (I.2.21–26). According to Xenophon, the *syennesis* agreed to give Cyrus large sums of money for his army, and Cyrus in return presented such gifts of honor as the Great Kings usually bestowed (2.27). Clearly, the *syennesis*'s alliance was purely tactical. Ctesias stresses it: "He fought (*symmakhei*) both at the side of Cyrus and for the side of Artaxerxes" (§58). Photius's summary, fortunately, is filled in by the information given by Diodorus (XIV.20.3◊):

On learning the truth about the war [Syennesis] agreed to join him as an ally against Artaxerxes; and he sent one of his two sons along with Cyrus, giving him also a strong contingent of Cilicians for his army. For Syennesis, being by nature unscrupulous and having adjusted himself to the uncertainty of Fortune, had dispatched his other son secretly to the King to reveal to him the armaments that had been gathered against him and to assure him that he took the part of (*symmakhia*) Cyrus out of necessity, but that he was still faithful (*eunoia*) to the King and, when the opportunity arose, would desert Cyrus and join the army of the King.

The *syennesis* was certainly not the only one to adopt an attitude guided by an eye on the future. Diodorus notes, for instance, that "the Lacedaemonians had not yet openly entered upon the war, but were concealing their purpose, awaiting the turn of the war" (XIV.21.2◊).

The ancient authors were merely sharing in the anxiety of the Greeks, who, it must be noted, were especially intimidated by the Empire's vastness: "The word had got about that it was a four months' march for an army to Bactria" (Diodorus XIV.20.4◊)! We know nothing of the reactions of the "barbarian army." According to Diodorus, the Persian high command had been informed of the true objective ever since Cyrus's departure from Sardis (XIV.19.9). Diodorus's phrasing implies that the ordinary troops (*to plēthos*)

had been left out of this confidence, just like the Greeks. Of course, it was legitimate to answer the call of the *karanos* to march against the Pisidians (or "some rebellious Cilician tyrants": Diodorus XIV.19.3), but it was dangerous to take arms against the Great King. It is true that no proof can be offered, but it is possible that stirrings of discontent or reluctance saw the light of day among the "barbarian" contingents as well.

Xenophon states that "no man, Greek or barbarian, has ever been loved by a greater number of people" (I.9.28♦). It is possible that he is here referring, in an apologetic fashion, to the support Cyrus received from the Greek cities of Asia Minor (I.1.7; Diodorus XIV.35.2). In any case, Cyrus's entourage included non-Persians as well (cf. I.9.28). The processes by which mercenaries were enlisted show that Cyrus entered into personal hospitality pacts with several Greeks: Aristippus the Thessalian, Proxenus the Boeotian, Sophraenetus the Stymphalian, and Socrates the Achaean (I.1.10–11). Before the revolt started, Xenias the Arcadian "commanded for him the mercenary force in the cities" of Ionia (I.2.1♦). Cyrus attempted to gather around him the Greek exiles, such as the Milesians (I.2.2), and Clearchus as well, who had been exiled from Lacedaemon and who gathered a troop of mercenaries for his own purposes (I.1.9). Cyrus considered him "the man who was honored above the rest of the Greeks" (I.6.6♦) and certainly the most faithful of the mercenary leaders—which is why he later enjoyed the special protection of Parysatis. We also know of a certain Gaulites, "a Samian exile who was there and was in the confidence of Cyrus" (I.7.5♦); during the Ionian War, he had worked closely with Tissaphernes; Thucydides represents him as "a Carian, who spoke the two languages" (VIII.85.2♦). We can also mention the Carian-Memphite Tamos, "trusted friend" of Cyrus, who appointed him governor "of Ionia, Aeolis, and the neighboring territories" before he departed (Diodorus XIV.19.6♦) and also "commander of the barbarian fleet" (XIV.19.5♦; *Anab.* I.2.21). His son, Glos, participated in the expedition against Artaxerxes (*Anab.* II.1.3).

Does the presence of a significant number of non-Persians around Cyrus indicate a growing intimacy of relationships between the Persians of Asia Minor and their neighbors, and/or does it reflect a specific policy of Cyrus, who was anxious to fend off the hostility of some Persians of the western region? It is difficult to answer these questions with complete certainty. A man such as Tamos, for example, began his career well before Cyrus's arrival at Sardis. One can hardly fail to be fascinated, though, by the division of powers Cyrus decided on before beginning his campaign. Though Persians were put in charge of Lydia and Phrygia, Tamos, as we have just seen, received the command "of Ionia, Aeolis, and the neighboring territories" (XIV.19.6♦). In particular, it is remarkable that he governed Aeolis and its neighbors, but there is no doubt that this arrangement goes back to 407. On the other hand, the version of Ephorus (analyzed above) implies that Pharnabazus was inducted into the "Faithful" of the Great King after Cyrus's return to Asia Minor. Furthermore, if, as Diodorus maintains (XIV.19.6), Cyrus gave Lydia and Phrygia to some of his kinsmen (*syggeneis*), this disposition implies that Pharnabazus must also have lost his satrapy or that he was demoted to a subordinate position—and for this and other reasons he sided with the king.

When he arrived in Cilicia, Cyrus suffered another huge reverse. Abrocomas (having been entrusted with the expedition to Egypt), rather than joining Cyrus—who certainly must have made contact with him—retreated instead toward the Euphrates with his army, burning the bridges at Thapsacus to slow the rebel's advance (*Anab.* I.4.18). Abro-

comas was not the only one to side with the king. So did Belesys (Bēlšunu), the governor of Syria (Ebir Nāri), as is unambiguously implicit in Cyrus's order to lay waste the satrapal residence and paradise that were idyllically sited at the springs of the Dardas (I.4.10). We may also note that according to Diodorus (XIV.20.5), in order to mislead them one more time (*Anab.* I.2.1), Cyrus revealed his goal in the following words at Tarsus: "He was leading the army, not against Artaxerxes, but against a certain satrap of Syria" (Diodorus XIV.20.5♦). He certainly made the same claim with regard to the satrap of Babylonia, who perhaps is the Gobryas who was one of the commanders of the royal army during the battle of Cunaxa (I.7.12). Tiribazus also sided with the Great King (Plutarch, *Art.* 7.3, 10.1); Xenophon represents him as "governor of Western Armenia" (*Anab.* IV.4.4). Artasyras, "the king's eye," was also with the king (Plutarch, *Art.* 12.1–3♦). In fact, this Artasyras was the father of Orontes (OGIS 264, 390–92), who seems to have been a governor in eastern Armenia (cf. Xenophon, *Anab.* III.5.17; cf. IV.3.4); this Orontes had brought a contingent to the king (II.4.9).

Even though the evidence is partial in both senses of the word, one conclusion it tempts us to draw is that Cyrus did not succeed in gaining the support of officers stationed beyond his official jurisdiction. A second conclusion is that an unknown number of his peers and subordinates refused to cut their ties of allegiance to the one they considered the sole Great King, Artaxerxes II. Finally, some of his other allies committed themselves only with much caution or many second thoughts. The record does not confirm the hopes that Plutarch claims Cyrus nourished in 404: that he would be able to win to his side not only "those of his own province near the sea, but . . . many of those in the upper countries" (*Art.* 6.2♦).

Artaxerxes and Cyrus Face Off

The arrival of Cyrus and his army in Babylonia created a political and strategic situation unprecedented in Achaemenid history. The Great King was threatened at the very heart of his Empire by a single enemy at the head of a major force intent on seizing supreme power. The danger was thus even more pressing than that faced by Darius in 522–521, when disorganized rebels never tried (or never succeeded) to unify for a march on the center of the Empire (see chap. 3/2). Cyrus's expedition thus represents a sort of prefiguring of Alexander's conquest. Just like Darius III in 331, Artaxerxes lost control of Asia Minor and regions beyond the Euphrates, including Egypt. His response to this challenge evokes the measures taken by the Great King seventy years later.

Artaxerxes had less time for preparation than Darius III, who was able to gather and train an army while Alexander pursued his conquest of Syria–Phoenicia and Egypt, before returning to the road to the Euphrates (late 333 – autumn 331). Just like the Persians in 331, the Great King ordered Abrocomas to destroy the bridges over the Euphrates to slow down Cyrus's march (I.4.18). And, just like Mazaeus when faced with the Macedonian, Artaxerxes decided to apply a scorched-earth policy in advance of Cyrus (I.6.2). At the same time, he proceeded to prepare the defenses of Babylonia. According to Xenophon, during the third day's march in the country, they came upon "a deep trench, five fathoms in width and three fathoms in depth. . . . This trench extended up through the plain . . . reaching to the wall of Media. . . . The trench had been constructed by the Great King as a means of defence when he learned that Cyrus was marching against him" (I.7.14–16;♦ cf. Plutarch, *Art.* 7.2). Further on, Xenophon

explains that “the so-called wall of Media . . . was built of baked bricks, laid in asphalt, and was twenty feet wide and a hundred feet high; its length was said to be twenty parasangs, and it is not far distant from Babylon” (II.4.12♦). Cyrus’s propaganda spread the news that, having built the wall, Artaxerxes turned tail and refused combat (I.8.19). While certain obscurities concerning the course of this wall do exist, it actually appears that the Great King reused prior construction to good effect and that he adopted a well-known strategy—using the waterways to cut off access to Babylon (see chap. 9/2)—however, apparently with no great success.

Xenophon stresses the speed of Cyrus’s march. The prince stopped only to secure provisions (I.5.9) in the villages along the route (I.4.19; 5.4, 10): “Cyrus sometimes made these stages through the desert very long, whenever he wanted to reach water or fresh fodder” (I.5.7♦). Choosing a route for its swiftness forced the army to cross inhospitable territory, called “Arabia” by Xenophon (I.5.1–3), and brought them to the edge of famine, which particularly upset the Greeks: “It was not possible to buy any [grain] except in the Lydian market attached to the barbarian army of Cyrus, at the price of four *sigli* for a *capithē* of wheat flour or barley meal” (I.5.6♦). There is no doubt that the price went up sharply in such contexts (cf. Plutarch, *Art.* 24.3). The soldiers were unable to indulge in such luxury and “therefore managed to subsist by eating meat” (*Anab.* I.5.7♦), probably from hunting (I.5.2–3). Cyrus’s haste is explained above all, according to Xenophon, by his need to prevent the Great King from assembling his forces: “His thought was that the faster he went, the more unprepared the King would be to fight with him, while, on the other hand, the slower he went, the greater would be the army that was gathering for the King.” Like so many ancient authors, Xenophon thought that “while the King’s empire was strong in its extent of territory and number of inhabitants, it was weak by reason of the greatness of the distances and the scattered condition of its forces, in case one should be swift in making his attack upon it” (I.5.9♦). Cyrus’s haste contrasts dramatically with the relative leisure of his march until he reached the Euphrates: he stayed 7 days at Colossae (2.6), 30 days at Celaenae (2.9), 3 days at Peltae (2.10), 5 days at Caystru-pedion (2.11), 20 days at Tarsus, 3 days at Issus (4.2), and 5 days at Thapsacus (4.11)—73 days in all. It is unlikely that the length of the stopovers can simply be explained, with Xenophon (I.3.21), by the alleged ill will of the Greek mercenaries, who were often left waiting for their pay. Beginning with the crossing of the Euphrates, the army proceeded at a forced-march pace, even though Cyrus must have already been growing uneasy at the preparations of Artaxerxes, which unsubstantiated rumors at Tarsus indicated were considerable (Diodorus XIV.20.4). When Cyrus chose to follow a swift route that did not have many resupply points, it was because a decisive strategic factor had arisen in the meantime. According to Xenophon (I.4.5♦), Cyrus expected Abrocomas to bar his passage through the Syrian Gates: “Abrocomas, however, did not do so, but as soon as he heard that Cyrus was in Cilicia, he turned about in his journey from Phoenicia and marched off to join the King, with an army, so the report ran, of three hundred thousand men.” Continuing with Xenophon’s account, Abrocomas arrived five days after the battle of Cunaxa (I.7.12). His delay was not due to dawdling: quite simply, he had chosen to take the Royal Road, which, though much longer, allowed him to resupply his troops (cf. Arrian III.7.3). After he left the Euphrates behind, Cyrus had taken a speedy route that was intended to prevent Abrocomas’s army from joining up with the royal army.

According to Diodorus (XIV.22.1♠), Artaxerxes “summoned his armaments from every place to Ecbatana in Media” as soon as he got wind of Cyrus’s departure. This detail does not imply that the king was then at his summer residence (it was early spring). More likely, he was at Babylon. The mention of Ecbatana as the assembly point is easy to explain: just as Darius III was to do later on, Artaxerxes II ordered the mobilization of troops from the Iranian Plateau as far as the Indus. Diodorus states that the troops from those distant places did not arrive in time “because of the remoteness of those regions” (XIV.22.2♠). This is confirmed by Xenophon: as the Greek mercenaries who had survived the battle passed Opis on the Tigris, they “met the bastard brother (*nothos adelphos*) of Cyrus and Artaxerxes, who was leading a large army from Susa and Ecbatana to the support, as he said, of the King” (*Anab.* II.4.25♠). The rapidity of Cyrus’s march had also prevented Artaxerxes from carrying out his initial plans, which had apparently included Abrocomas’s forces, since Abrocomas is named by Xenophon as one of the four commanders (along with Tissaphernes, Gobryas, and Arbaces; I.7.12).

The royal army drawn up at Cunaxa thus did not include the forces from western Asia Minor (preempted by Cyrus), Abrocomas’s army (still on the road), or the eastern Iranian contingents (who would also arrive too late). It had been mustered exclusively from the closest regions: Babylonia, Susiana, Media, Persia; the Cadusians also sent a cavalry contingent commanded by Artageres (Plutarch, *Art.* 9). For reasons already discussed in connection with Xerxes’ army, it is impossible to provide reliable estimates of the size of the king’s forces (cf. Plutarch, *Art.* 13.3–4). We may simply surmise, with Xenophon (I.8.13), that they were superior in number to Cyrus’s. Contrary to one of the favorite claims of the Greek authors (and contrary to the mercenaries’ expectations: they were “full of confidence and scorn”), Xenophon (I.8.14) and Plutarch (*Art.* 7.5♠) both stress the discipline and training of Artaxerxes’ soldiers: “The very manner in which [Artaxerxes] led on his men, silently and slowly, made the Grecians stand amazed at his good discipline; who had expected irregular shouting and leaping, much confusion and separation between one body of men and another, in so vast a multitude of troops!” Plutarch’s sources instead attribute the defeat to Cyrus’s overweening pride and Clearchus’s lack of discipline (*Art.* 8.2–6).

Just as Darius III and his advisers were to do later on, Artaxerxes placed great confidence in his scythe-equipped chariots: “and the scythes they carried reached out sideways from the axles and were also set under the chariot bodies, pointing towards the ground, so as to cut to pieces whatever they met; the intention, then, was that they should drive into the ranks of the Greeks and cut the troops to pieces” (I.8.10♠). The success rate was not as high as expected: just as Alexander’s soldiers were to do, “whenever the Greeks saw them coming, they would open a gap for their passage” (I.8.20♠). The Greeks were ranged on the right flank with a detachment of 1000 Paphlagonian horsemen and gave chase to the enemy; as a result, they escaped the deluge of shafts fired by the king’s archers and spearmen (I.8.19; cf. I.8.9 and II.1.6; Diodorus XIV.23.1–2). The hand-to-hand fighting favored Clearchus’s Greeks, who too confidently threw themselves into pursuit of their opponents. Xenophon tells us (I.8.24) that this is when Cyrus, fearing that the Greek contingent would be surrounded, attacked in the middle; he was killed in circumstances that the conflicting traditions do not permit us to reconstruct (I.8.24–29). On the left flank, Ariaeus, after initial successful engagements, was stunned into retreat by the news of the death of Cyrus and was afraid that he would be

encircled by the king's contingents (Diodorus XIV.24.1). The death of Cyrus sealed the fate of the battle and the expedition.

3. Artaxerxes the Victor

The Process of Relegitimation

After the death of Cyrus on the battlefield at Cunaxa, Artaxerxes immediately took actions designed to extirpate the memory of him who, after his initial victories, "was already being saluted with homage as King by his attendants" (I.8.21♦). "And when he had come near the dead body, and, according to a certain law of the Persians, the right hand and head had been lopped off from the trunk, he gave orders that the latter should be brought to him, and, grasping the hair of it, which was long and bushy, he showed it to those who were still uncertain and disposed to fly. They were amazed at it, and did him homage; so that there were presently seventy thousand of them got about him, and entered the camp again with him" (Plutarch, *Art.* 13.2♦). Artaxerxes showed clearly that he was the one who had won the loyalty of thousands and the one whose legitimacy was proved by the victory.

A court tradition transmitted by Dinon even claims that Cyrus was killed by the hand of the king himself (Plutarch, *Art.* 10.3). "For it was his desire that every one, whether Greek or barbarian, should believe that in the mutual assaults and conflicts between him and his brother, he, giving and receiving a blow, was himself indeed wounded, but the other lost his life" (§16.2♦). This is why, as Plutarch reports it, Artaxerxes was very irritated to hear that a simple Caunian soldier and a young Persian, Mithradates, each made the claim or let it be understood that it was he who had done the deed. Artaxerxes "was greatly enraged at it, as having the lie given him, and being in danger to forfeit the most glorious and most pleasant circumstance of his victory" (§16.1♦). Throughout his reign, no opportunity to portray the king as a proven general and an accomplished leader of men was missed (§24.9–11).

At the same time, the royal inscriptions show that Artaxerxes followed the model of not only his father Darius II (A²Sb, A²Sd) but, like his predecessors, also the model of Darius I. He insisted on dynastic continuity, particularly in this sort of inscription from Susa (A²Sa♦): "Saith Artaxerxes the Great King, King of Kings, King of Countries, King in this earth, son of Darius the King, of Darius (who was) son of Artaxerxes the King, of Artaxerxes (who was) son of Xerxes the King, of Xerxes (who was) son of Darius the King, of Darius (who was) son of Hystaspes, an Achaemenian: This palace Darius my great-great-grandfather built; later under Artaxerxes my grandfather it was burned; . . . this palace I (re)built . . ." (cf. also A²Hc).

Reward and Punishment

After the first treaty with the Greeks, "the King led his army off to Babylon. In that city he accorded fitting honours to everyone who had performed deeds of courage in the battle" (Diodorus XIV.26.4♦). First among the persons honored was Tissaphernes, because he had joined the king as early as spring 401 and played a decisive role at Cunaxa: at least in one version, he was head of one of the four divisions (I.7.12) and was said to have taken over the army when Artaxerxes was wounded: "He slew great numbers of the enemy, so that his presence was conspicuous from afar. . . . [The King] judged Tissaphernes to have been the bravest of all. Consequently he honoured him with rich gifts,

gave him his own daughter in marriage, and henceforth continued to hold him as his most trusted friend" (XIV.23.6; ♦ 26.4♦). He certainly was one of the king's favorites, since he was permitted shortly afterward to let the Greeks pillage "the villages of Parysatis" at Tikrit, not far from Opis (cf. II.4.27). Another noble, Orontes, the satrap of Armenia, married Rhodogune, a daughter of the king (*Anab.* III.4.13; Plutarch §27.7; OGIS 391-92). Perhaps it was at the same time that the king promised two other daughters to Pharnabazus and Tiribazus (27.7). The latter was one of the Friends of the king and had played a major role at Cunaxa (Plutarch, *Art.* 7.3), where he saved the king's life (according to one of the versions; §10.1). It was not until fifteen years later that Pharnabazus gained the noteworthy dignity of becoming the king's son-in-law (Xenophon, *Hell.* V.1.28).

Tissaphernes received an even greater promotion: "Now . . . Tissaphernes, who was thought to have proved himself very valuable to the King in the war against his brother, was sent down as satrap both of the provinces which he himself had previously ruled and of those which Cyrus had ruled" (Xenophon, *Hell.* III.1.3♦). He then set about regaining control of the cities and dignitaries who had taken the rebel's side as rapidly as possible. Tissaphernes abandoned the Greek survivors at the Gates of Armenia and returned to Sardis by the Royal Road (Diodorus XIV.27.4). All the leaders except Tamos, who chose to flee to Egypt (35.4), came to pay homage to the new *karanos*; Tamos's son Glus, who had received a royal pardon, was even put in charge of the armed forces (35.3). Ariaeus, another old companion of Cyrus, received a command: in any case, some years later he was the satrap of Phrygia (cf. Diodorus XIV.80.8; Polyaeus VII.11.6); later still (around 394), he held a post at Sardis (*Hell. Oxyr.* 14.3). His status as a former enemy of the king even worked to his advantage to some extent, since rebels would seek refuge with him at Sardis, obviously hoping that he would mediate for them with the king to obtain a royal pardon (Xenophon, *Hell.* IV.1.27).

We note with interest that the Great King did not hesitate to pardon a number of rebels. Do these decisions speak to the uncertainty of his power after the victory at Cunaxa? It is difficult to answer this question. It is true that all of the ancient texts insist on the "gentility" of Artaxerxes II and on his practice of royal gifts. But the distribution of the evidence may be deceptive. It is possible that the king, at an unknown date, promulgated a relaxation of certain court regulations, particularly regarding royal hunts; but even on this point chronological uncertainties remain. We may simply note that after Cunaxa the Great King hardly had any choice regarding ways of winning over to himself nobles who had followed Cyrus (by choice or by force). Under other circumstances, however, Artaxerxes did not shrink from using drastic measures even against those close to him (cf. Plutarch, *Art.* 25.3). Even Tissaphernes did not escape royal punishment some years later after losing the battle outside Sardis against Agesilaus (§5 below), though Artaxerxes "continued to hold him as his most trusted friend" (Diodorus XIV.26.4♦).

The Great King and His Armies

Arguing that the return of the survivors of Cyrus's mercenaries to the sea demonstrated quality of character, Plutarch offers this thought to his readers:

Making it plain to all men that the Persian king and his empire were mighty indeed in gold and luxury and women, but otherwise were a mere show and vain display, upon this all Greece took courage and despised the barbarians. (*Art.* 20.1-2♦)

This comment conveys an idea that was equally dear to Xenophon, whether in the last chapter of the *Cyropaedia* or in the *Agésilas*, a small work dedicated to singing the praises of a Greek hero whose human qualities contrasted in every way with the Great King, who was viewed as mired in luxury and sloth. Magnifying the deeds of the Ten Thousand is a common topos of fourth-century authors, who brought them forward as proof that “any one who is engaged in war with [the Persians] can, if he desire, range up and down their country without having to strike a blow” (*Cyr.* VIII.8.7♦)—and that because the Persians had been rendered effeminate by a dissolute life, they “can conduct their wars only with the assistance of Greeks” (8.26♦). This point of view is particularly stressed by Isocrates (*Paneg.* 138–49), who ends his discussion of the softness of the Persians thus: “They made themselves objects of derision under the very walls of their King’s palace” (§149♦).

Even if we invoke the ritual reminder that the state of the evidence leaves everything in doubt, the status of the Greek mercenaries during the battle of Cunaxa and in the following weeks poses real problems. In Xenophon’s version, they prolonged the battle until evening, winning several engagements with detachments of the royal army (I.10.4–19). They were sure of having won and even raised a monument (Diodorus XIV.24.4) before returning to their camp, where they discovered that the enemy’s light infantry had pillaged the food reserves (*Anab.* I.10.18–19). It was not until daybreak that Procles and Glus informed them of the death of Cyrus (II.1.2–3). The battle lines were so strained that there had evidently been two different battles: on the left flank, Ariaeus had retreated; from there, he had sent Procles and Glus to request that Clearchus and the Greeks join him, proposing that they organize a joint return to Ionia (II.1.3). Clearchus refused, even offering to put Ariaeus on the Persian throne, and he sent messengers to inform him (II.1.4–5). Ariaeus replied that this was out of the question (II.2.1). An agreement was finally reached, with both swearing to an alliance, and Ariaeus agreed to guide the Greeks to the coast (II.2.8–9). At the same time, emissaries from Tissaphernes and the king parleyed with the Greeks, demanding that they lay down their arms. Clearchus arrogantly refused, emphasizing that his forces were intact (II.1.7–13); it was even said that not a “single man among the Greeks [got] any hurt whatever in this battle” (I.8.20♦). Nonetheless, the mercenaries were not in full agreement; a few groups agreed to surrender (II.1.14; 2.17). Xenophon’s account continues: he says that the king himself was afraid of the army of Clearchus and Ariaeus (II.2.18; 3.1). This is why Tissaphernes and a brother-in-law of Artaxerxes showed up on his behalf with orders to come to an agreement: if the Greeks agreed not to fight, the Persians would supply them (II.3.17–29). The Greeks were fully aware that without guides they would never manage to overcome the obstacles or resupply themselves in the country. So it was that they set out for the west bank of the Tigris Valley under the watchful eye of Tissaphernes (II.4.8–28).

Why, then, had the Great King failed to order his generals to begin the battle? Should this be seen as proof of his weakness? This is clearly Clearchus’s perspective, which was accepted by Xenophon. Mercenaries quoted by Xenophon thought that the king was waiting until all of his troops were reunited (II.4.3). Not until some time later was the recombination of the various royal contingents completed: “the troops of Orontas . . . , the barbarians whom Cyrus had brought with him on his upward march, and those with whom the King’s brother had come to the aid of the King [II.4.25–26], besides these contingents Tissaphernes had all the troops that the King had given him; the result was, that

his army appeared exceedingly large" (III.4.13♦). Nevertheless, Tissaphernes did not organize his army into battle order; he was content to mount occasional attacks on the Greeks, shadowing them as far as the Upper Tigris.

Meanwhile, basic strategic changes had taken place. According to Diodorus, Tissaphernes submitted the following plan to Artaxerxes: He "promised him that he would destroy them one and all, if the King would supply him with armaments and come to terms with Aridaeus, for he believed that Aridaeus would betray the Greeks to him in the course of the march. The King readily accepted this suggestion and allowed him to select from his entire army as many of the best troops as he chose" (XIV.26.5♦). The first order of business was the recovery of Ariaeus and the large body of troops under him that Cyrus had levied in Asia Minor. "Ariaeus' brothers and other relatives came to him and certain Persians came to his followers, and they kept encouraging them and bringing pledges to some of them from the King that the King would bear them no ill-will because of their campaign with Cyrus against him or because of anything else in the past" (*Anab.* II.4.1♦). The negotiations between the two camps soon succeeded. Ariaeus and his companions, Artaozus and Mithradates, "who had been most faithful friends of Cyrus,"♦ laid a trap for the Greeks: several *strategoï* and *lokhagos* summoned to Tissaphernes' tent were seized and put to death (II.5.31–6.1). By winning Ariaeus's troops over to him, eliminating the main Greek *strategoï*, and gathering a large army, Tissaphernes was in a position of power from that time forward. He left the Greeks at the frontier of the land of the Carduchi to return to his territory at Sardis (Diodorus XIV.27.4). At this point, it was impossible for the Greeks to return directly to Ionia; they could only march north. There is no doubt that the Persians were certain that the survivors would not overcome the natural barriers (rivers, mountains), the attacks of the mountain peoples, or the attacks of the troops of the Armenian satrapy.

Events suggest contrasting conclusions regarding Artaxerxes II's military situation after Cunaxa. The very make-up of the armies of Cyrus and Artaxerxes indicates that the system of conscription continued to operate perfectly from Asia Minor to India, even though the delay of the eastern Iranian contingents demonstrates that it was not possible to organize a general muster in a few months. Given the relatively limited geographic distribution of the conscripts who did fight at Issus, there is hardly any doubt that the Great King, for his part, was able to count on the soldiers provided by the Babylonian *hatrus*, among others. The reliance on thousands of Greek mercenaries in Cyrus's army constituted a decided novelty, quite apart from the important role Cyrus assigned them in the battle, in combination with his cavalry. It is no less true, however, that the confrontation at Cunaxa was not a duel between Cyrus's Greek mercenaries and Artaxerxes' regulars; it was the clash of two royal armies.

As in the battles in Greece and Asia Minor in 490 and 480–79, the Greek foot soldiers seemed to exhibit clear superiority over the infantrymen they faced. This observation, however, needs to be tempered: for one thing, let us recall that Plutarch (*Art.* 7.5) and Xenophon (I.8.14) stress the maneuverability of the royal army; for another, Tissaphernes' actions after the battle can be accounted for by his fear of the army commanded by Ariaeus, or, to put it another way, he feared joint maneuvers involving the inter-satrapal army and the Greek army. The Persian leaders thus adroitly chose to separate them and then forced the Greeks onto an itinerary that they could assume would prove fatal. After Megabyzus's victory over Amyrtaeus, he had acted no differently. He

reached an agreement with the Egyptian rebel's Greek mercenaries: "No ill shall be done them by the king's men, and the Greeks shall return home whenever they wish" (Ctesias §34); they took the road to Cyrene and, according to Thucydides (I.110.1♦), "most of them perished" (there is a different version in Diodorus XI.77.5).

But there is a difference in scale: in 401, the Greeks were in Babylonia. The Persians were anxious to see them out of the heart of the Empire. At the same time, we may observe that the Persians never pretended to accept the offers of services that the heads of the mercenaries had made to them several times, emphasizing that they would be very useful in a fight against the unsubdued peoples (*Anab.* II.1.14, 5.13–14). At this time, it appears that the Persian leaders did not even consider including the Greek mercenaries in the royal army. Did the Great King fear that mercenaries could be used by an ambitious man, as Cyrus had done? This is the burden of Tissaphernes' convoluted speech to Clearchus: "The King alone may wear upright the tiara that is upon the head, but another, too, with your help, might easily so wear the one that is upon the heart" (II.5.23♦). The mercenaries themselves seem to have been persuaded that they could make and unmake kings, as shown by the offers they made along these lines to Ariaeus (II.1.4); they were convinced, Clearchus says, that "to those who are victorious in battle belongs also the right to rule" (II.1.4♦). But the proposals they sent to Ariaeus were rather naive, and the Persian let them know, in ironic understatement, that "there were many Persians of higher rank than himself and they would not tolerate his being king" (II.2.1♦). It is clear that not a single Persian had the slightest notion of abandoning Artaxerxes; on the contrary, all hoped to obtain from him favor or pardon from him.

4. Conditions in Asia Minor and Artaxerxes II's Strategy (400–396)

From Sardis to Memphis

As we have seen, after Cunaxa and the "expulsion" of the Greek mercenaries, Tissaphernes returned to his governorship in Sardis (Diodorus XIV.27.4). It was his job, in fact, to restore order to Asia Minor. Diodorus stresses that the Greek cities that had supported Cyrus were scared to death (XIV.35.6). And with good reason: one of Tissaphernes' first acts was that he "demanded that all the Ionian cities should be subject to him." They refused and appealed to Sparta for help (Xenophon, *Hell.* III.1.3♦). Without delay, Tissaphernes devastated the territory of Cyme and laid siege to the town; at the beginning of winter (400–399), the Persian accepted heavy ransoms for the prisoners and lifted the siege (Diodorus XIV.35.7). The following spring (399), the first Spartan expeditionary force landed on the Asia Minor coast. Greco-Persian hostilities thus broke out once again on the coast of Asia Minor.

For reasons we have already discussed, the Great King had to deal with the Egyptian front at the same time. When the Greek mercenaries offered their services to Tissaphernes, they had not neglected to bring up the matter of the Egyptians, with whom the Persians were "especially angry" (*Anab.* II.5.13;♦ cf. II.1.14). If the king wished to march against Egypt—said Clearchus—"I do not see what force you could better employ to aid you in chastising them than the force which I now have" (*Anab.* II.5.13♦). A contract attests that Pharaoh Amyrtaeus was recognized at Elephantine in 400 (DAE 7 [AP 35]). In 398, Nepherites founded the XXIXth dynasty (DAE 105 [BMAP 13]) and reigned until 393. It is surprising that no source mentions an attempted Persian reconquest. Not until the reign of Hakoris (392–380), around 385(?), is there evidence for the assembling of an

army to march against Egypt (cf. Isocrates, *Paneg.* 140). Meanwhile, Egypt had entered into the coalition put together by Sparta against Artaxerxes as an equal partner. As in the 460s (see chap. 14/2), from that point forward Egypt was included in a much wider front, with the important difference that this time the Persians no longer had a base in the country. The Elephantine garrison, for example, had gone over with both weapons and supplies to the side of the independent pharaohs (*DAE* 7, 105). Artaxerxes' task was even more difficult because Tamos, Cyrus's lieutenant, fled Asia Minor in 400 and took refuge with the pharaoh, along with his fortune and the fleet he commanded (*Diodorus* XIV.35.4–5) — “fifty triremes which had been fitted out at great expense . . . [but Psammetichus took] for his own both Tamōs' possessions and his fleet” (XIV.19.5♦).

Artaxerxes, His Satraps, and the Asia Minor Front

At the very moment when Amyrtaeus was extending his power into Upper Egypt, Thibron, the Lacedaemonian commander-in-chief, landed in Asia Minor (spring, 399). He was leading a smaller force but recruited troops in the Greek cities, and then soon joined up with the Greek refugees of the *Anabasis* (*Hell.* III. 1.4–6). He could then “draw up his troops against Tissaphernes even on the plains” and took many towns and strongholds in Mysia, Aeolis, and the Troad (III.1.8♦). Complaints from Greek cities that he fleeced soon resulted in his replacement by Dercyllidas, who resurrected a traditional tactic: he played Tissaphernes off against Pharnabazus. He then headed for “the Aeolis, in the territory of Pharnabazus, without doing any harm whatever to his allies” (III.1.10♦). Pharnabazus was very unhappy at being stripped of this region and “secretly envied Tissaphernes his position as general” (III.2.13♦); he agreed to a truce with Dercyllidas, “thinking that Aeolis had been made a strong base of attack upon his own dwelling-place (*oikēsis*), Phrygia” (III.2.1, ♦ 9). In short, they were back to a situation very like what prevailed in 412–407, with the two satraps in perpetual competition. Obviously, Tissaphernes had not succeeded in gaining the upper hand, as had Cyrus the Younger at Sardis.

The dissension surfaced once again some time later, during preparation for a pitched battle near Magnesia. The two satraps had combined their forces: “The entire Persian force which chanced to be at hand, all the Greek troops which each of the two satraps had, and horsemen in great numbers, those of Tissaphernes upon the right wing and those of Pharnabazus upon the left” (III.2.15♦). According to Xenophon, Tissaphernes (in contrast to Pharnabazus) was not particularly eager for combat and offered to negotiate with Dercyllidas (III.2.18). One of the reasons undoubtedly was that war threatened to ravage Caria, where Tissaphernes' estates were (*oikos*; III.2.12). The talks between the Persians and Dercyllidas led to a truce: the Persians demanded that the Lacedaemonian troops and the governors (*harmostes*) who had been stationed in the Greek towns since Lysander's victories depart; Dercyllidas demanded autonomy for the Greek cities. Both sides decided on consultations—with the Great King and the Spartan leadership, respectively (III.2.20). In effect, the Persians were asking that the treaties with the king and his representatives agreed to by Sparta during the Ionian War fifteen years earlier be put into effect.

Pharnabazus was instructed to sound out the king regarding his intentions (*Diodorus* XIV.39.6). The satrap of Dascylium, *Diodorus* tells us, favored a vigorous sea offensive. Just after the first truce with Dercyllidas, he had sought out the king and persuaded him to fund him (in the amount of 500 talents of silver) and to appeal to the Athenian Conon

(XIV.39.1). Ever since the Athenian defeats of 405, he had taken refuge with Evagoras of Salamis, on Cyprus, at the very time when Evagoras had been doing everything he could to increase the city's prosperity and had inaugurated vast arms programs. There is no indication that the Cypriot king was trying to escape from the Persian yoke. His original objective was to extend his power throughout the island at the expense of the other petty kinglets. It is nonetheless possible that he took advantage of the war between the brothers to take certain liberties with his obligations as a subject. In 398, contacts were established between Evagoras and Artaxerxes, perhaps with Ctesias as go-between. Evagoras agreed to resume payment of tribute (*Persica* §63), since under the present circumstances he shared the Persians' hostility to Sparta, whose power was a check on his ambitions. These were the conditions under which Pharnabazus arrived in Cyprus, bearing a letter from the king ordering all the kings of the island to prepare about one hundred triremes. Conon accepted an appointment as admiral of the fleet. He then set sail for Cilicia, where he began his preparations for the war that was about to commence against the Peloponnesian navy (Diodorus XIV.39.2–4).

This was an important event. As far as we can determine, this was the first royal navy that seems to have been assembled since the famous Phoenician navy of 412 (not considering Cyrus the Younger's fleet in 401). This royal navy (*basilikos stolos*) did not comprise Cypriot ships alone; somewhat later, Conon was joined by a Cilician contingent, as well as a Phoenician squadron commanded by the king of the Sidonians (Diodorus XIV.79.8; *Hell. Oxyr.* 4.2). Sparta soon got wind of these massive naval preparations through a Syracusan merchant who was in Phoenicia on business at the time:

Seeing Phoenician war-ships—some of them sailing in from other places, others lying there fully manned, and yet others still making ready for sea—and hearing, besides, that there were to be three hundred of them, . . . [he] reported to the Lacedaemonians that the King and Tissaphernes were preparing this expedition; but whither it was bound he said he did not know. (*Hell.* III.4.1♠)

The methods used to assemble the royal fleet indicate that Persian authority, however shaken by Cyrus's revolt, was fully operational among its Levantine subjects. We see that, as in earlier times, the king of Sidon played a very important role for the Persians. On the other hand, the theory that the *syennesis* in Cilicia was in political decline at this date must be viewed with some hesitancy, since no independent evidence supports it.

At the same time, the king continued to raise the troops needed to fight in Asia Minor (Nepos, *Ages.* 2.1; Xenophon, *Ages.* 6.1). He also decreed that the command be unified in such a way as to avoid repeating previous errors: Tissaphernes was named commander-in-chief (*stratēgos tōn pantōn*). Despite the hatred that Pharnabazus, now back in Asia Minor, nursed toward Tissaphernes, he did not shrink from "assuring him that he was ready to make war together with him, to be his ally, and to aid him in driving the Greeks out of the territory of the King" (*Hell.* III.2.13♠). But the competition between Pharnabazus and Tissaphernes was more complicated than this, since (according to several ancient authors, e.g., Nepos, *Conon* 2.2), Pharnabazus received command of maritime operations, thus doubling up on the Athenian Conon. It seems clear that the command assigned to Tissaphernes was reduced to the ground troops.

To carry out his objective, the king also released considerable resources. Some time later, to be sure, we learn that a riot broke out in Conon's army when the soldiers complained about not receiving their pay (*Hell. Oxyr.* 15; cf. Isocrates, *Paneg.* 142). Justin

was probably not wrong to see this as the result of machinations by the “king’s lieutenants, who were in the habit of defrauding the soldiers of their pay” (VI.2.11). To deal with the problem, Conon appealed directly to Artaxerxes, promising to destroy Lacedaemonian sea power if Artaxerxes would grant him sufficient money and equipment: “Artaxerxes approved Conon, honoured him with rich gifts, and appointed a paymaster who should supply funds in abundance as Conon might assign them” (Diodorus XIV.81.6; cf. Nepos *Conon* 4.2 and *Hell. Oxyr.* 19). So it appears that, quite atypically, Conon received permission to draw on royal supplies without checking each time with the central court (cf. Nepos, *Conon* 4.1). Access to such resources could hardly avoid arousing great hope among the enemies of Sparta, who were numerous in both Greece and the Aegean. This is why Sparta had to wage war against Elis during the expedition led by Dercyllidas (400–398; *Hell.* III.2.21–31), and then later had to deal with an attempted *helot* revolt (397; III.3.4–11). And despite being at peace with its former enemy, Athens sent an embassy to the Great King and provided secret reinforcements (sailors) to Conon, who was then at Caunus (*Hell. Oxyr.* 7.1).

We are unable to discern, then, the strange passivity in Artaxerxes that the ancient sources attribute to Darius II (see chap. 14/7). Obviously, Artaxerxes made the firm and irrevocable decision to fight energetically to regain control of the Aegean coast. There is no doubt that the king’s objective embraced the entire Aegean as well. Confronted by this threat, Sparta sent King Agesilaus to Asia Minor in 396. At the same time, it dispatched ambassadors to Pharaoh Nepherites, who provided the equipment for 100 triremes and 500,000 measures of wheat—which soon fell into the hands of Conon, who had just taken Rhodes (Diodorus XIV.79.4–7; cf. Justin VI.2.1–2). The pharaoh realized that his survival depended on a Spartan victory. Conversely, Artaxerxes knew that retaking Egypt presupposed the reestablishment of hegemony over the Aegean Sea, which his predecessors had gradually lost during the course of the previous century. From this point of view, the Great King’s actions after Cunaxa represent a sort of strategic turn-about: the hour of reconquest was at hand.

5. *Agesilaus in Asia Minor (396–394)*

The Defeat of Tissaphernes

Sparta was confronted with imminent danger and decided to prosecute the war on a grander scale (cf. Diodorus XIV.79.1). King Agesilaus was sent at the head of a 12,000-man expeditionary force, and he soon reached Ephesus (*Hell.* III.4.1–5; spring, 396). His mission was clear: to ensure the autonomy of the cities of Asia Minor (III.4.5). At first, Tissaphernes agreed to a truce, with the excuse that he had to get the king’s permission. In reality, he was completely aware of Artaxerxes’ intention: he was stalling for time until the king’s troops could reach him (III.4.6; cf. Nepos, *Ages.* 2.4). He also needed to gain enough time for the Phoenician shipyards to complete the craft promised to Conon, as well as to free the fleet that the Lacedaemonian admiral Pharax had blockaded at Caunus; this he accomplished (Diodorus XIV.79.4–8; *Hell. Oxyr.* 9.2–3). When the truce expired, then, Tissaphernes was able to demand that Agesilaus pull back from the Asia Minor territories; the Spartan responded immediately that this was out of the question (*Hell.* III.4.11).

Agesilaus assembled the Carian, Aeolian, Ionian, and Hellespontine contingents at Ephesus (III.4.11). Tissaphernes thought that the Spartan intended to ravage his estates

in Caria, so he sent his infantry to Caria and concentrated his cavalry on the plain of the Meander, expecting to cut off the Greek troops there. Contrary to expectations, Agesilaus took the Phrygian route. A battle took place near Dascylium: Pharnabazus's lieutenants, Rhathines and Bagaesus, won a cavalry engagement but had to retreat when the hoplites charged. Agesilaus then returned to Ephesus (III.4.11–15). The purpose of this offensive was not to conquer towns and territory; all of the ancient authors instead stress the amount of booty seized by the Spartan (Xenophon, *Hell.* III.4.12; Nepos, *Ages.* 3.2; Plutarch, *Ages.* 9.4). Diodorus (XIV.79.2) also states that the army was accompanied by a large number of merchants (*agoraios* . . . *okhlos*), who clearly had been instructed to find ways to market the booty (cf. Plutarch, *Ages.* 9.8; Xenophon, *Hell.* IV.1.26). It is clear that first and foremost Agesilaus had decided that money was to be the ultimate means of achieving his real objectives. With this reinforcement, he then decided to send out an army capable of successfully opposing the Persian forces:

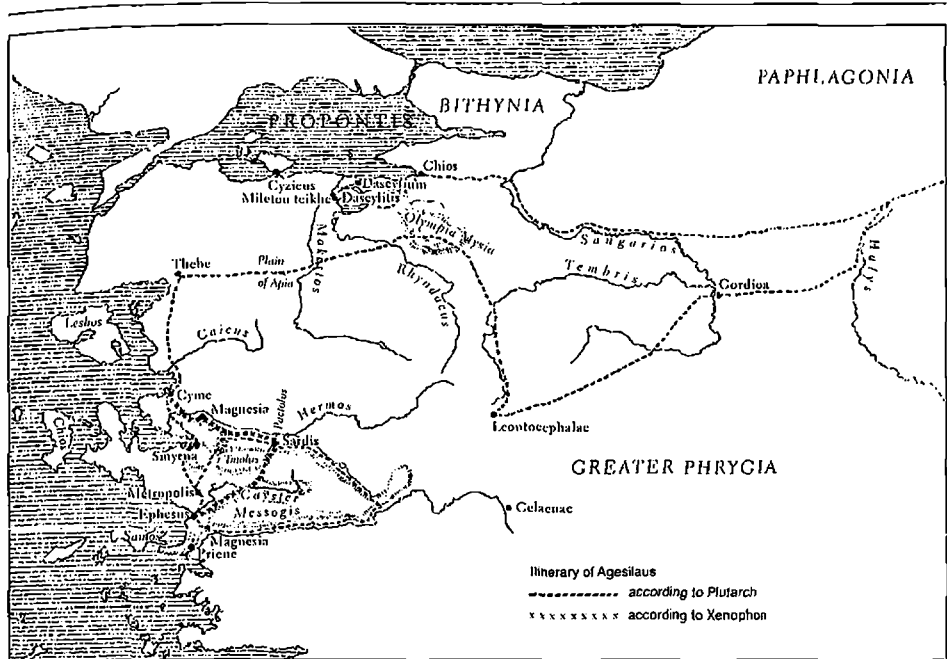

Perceiving that, unless he obtained an adequate cavalry force, he would not be able to campaign in the plains, he resolved that this must be provided, so that he might not have to carry on a skulking warfare. Accordingly he assigned the richest men of all the cities in that region to the duty of raising horses; and by proclaiming that whoever supplied a horse and arms and a competent man would not have to serve himself, he caused these arrangements to be carried out with all the expedition that was to be expected when men were eagerly looking for substitutes to die in their stead. (*Hell.* III.4.15♦)

At the same time, the Ephesus workshops were operating at full capacity: “The market was full of all sorts of horses and weapons, offered for sale, and the copper-workers, carpenters, smiths, leather-cutters, and painters were all engaged in making martial weapons, so that one might have thought that the city was really a workshop of war” (III.4.17♦). The soldiers themselves were given daily drills.

Agesilaus announced that he was prepared to march on Sardis (spring, 395). Curiously enough, Tissaphernes did not believe a word of it and one more time sent his troops to defend Caria. A battle on the banks of the Pactolus ended with an advantage to the Greeks. From this point on, Xenophon's story is very sketchy. According to him, after the battle, Tissaphernes was indicted by the Persians of Sardis and was soon condemned to death by Artaxerxes. Tithraustes was sent to Sardis, and Tissaphernes was beheaded (*Hell.* III.4.21–25; Diodorus XIV.80.1–8; *Hell. Oxyr.* 11.2–12.4) and his possessions (*ousia*) confiscated to provide funds with which to pay the soldiers (*Hell. Oxyr.* 19.3). The new commander once again informed Agesilaus of the king's demands: “That the cities in Asia, retaining their independence, should render him the ancient tribute” (III.4.25♦). A six-month truce was then agreed to. Agesilaus received supplies from Tithraustes that made it possible for him to march to Hellespontine Phrygia. At this moment, the order from Sparta to take complete command of the navy reached him; he then issued orders to the coastal cities to provide ships and entrusted their command to his brother-in-law Peisander (III.4.25–28).

The “Anabasis” of Agesilaus

Diodorus provides further details about Agesilaus's plans after the battle of the Pactolus: he “was about to attack the satrapies farther inland (*anō*), but led his army back to the sea when he could not obtain favourable omens from the sacrifices” (XIV.80.5♦). The much more detailed report in the *Hellenica Oxyrhynchia* shows us that these sacrifices took place when, fresh from the plain of Sardis (accompanied for part of the journey

Map 4. The expedition of Agesilaus.

by Tissaphernes), Agesilaus went up the valley of the Cogamus before arriving on the banks of the Meander (12.1). Sacrifices were then offered to discover whether it was auspicious to move against Celaenae, the fortified capital of Greater Phrygia (12.4). When the gods provided a negative indication, Agesilaus went back down the Meander Valley to Ephesus (cf. also Diodorus XIV.80.5). In reality, the omens simply confirmed a prior decision: to march against Celaenae would be terribly risky. Agesilaus had had a twofold goal: to make an impression on the inland populations and to collect sizable booty.

He seems to have had some success in meeting these goals. Artaxerxes suffered some anxiety at the initial results of the land engagements (Diodorus XIV.80.6) because he had received information concerning the Greek predations on the plain of Sardis and beyond, including Tissaphernes' paradise (80.2). No doubt the Persians of Sardis were even more displeased with Tissaphernes because this was the first time since the Ionian raid in 499 that such unheard-of events had taken place. Moreover, according to the anonymous author (§21.1), Tithraustes agreed to the truce on the condition that Agesilaus would not pillage the Lydian countryside. It appears that more than anything else the Persians wished to keep Sardis and Lydia safe from war. As in earlier episodes, the leaders of Sardis were happy to see the theater of operations shift to the coast of Hellepontine Phrygia!

Nonetheless, Agesilaus did not give up his plan to advance on the interior. While Peisander was readying the navy, "Agesilaus continued the march to Phrygia" (*Hell.* III.4.29♦). He hoped to be able to count on the Mysians, who were said to be unsubmissive to the Great King. For this reason he ravaged their territory, but this action did not have the anticipated result: only a portion of the Mysians placed themselves under his

command; another portion did severe damage to his troops (*Hell. Oxyr.* 21.1–3). Agesilaus did not let up on ravaging Pharnabazus's lands. He was soon joined by the Persian Spithridates, who had broken with the satrap of Dascylium some time earlier (*Xenophon, Hell.* III.4.10; *Ages.* 3.3; *Hell. Oxyr.* 21.3–4):

And when Spithridates said that if he would come to Paphlagonia with him, he would bring the king of the Paphlagonians to a conference and make him an ally (*symmakhos*), Agesilaus eagerly undertook the journey, since this was a thing he had long desired—to win some nation (*ethnos*) away from the Persian King. (*Hell.* IV.1.2♦)

Accompanied by his new allies, Agesilaus took the interior road to Greater Phrygia and rejoined the royal way at Leontocephalae. Though he was able to extort some booty, he failed to take the town (*Hell. Oxyr.* 22.5), one of the most secure in Phrygia (*Appian, Mith.* 10: *khōrion okhyrotaton*). He then advanced against Gordion, “a fortress (*khōrion*) built on a hill and well supplied,” but there too he had to fall back in the face of resistance put up by Rhathines (21.6), a subordinate of Pharnabazus (cf. *Xenophon, Anab.* VI.5.7 and *Hell.* III.4.13).

The Spartan next returned to Cius in Mysia and then Hellespontine Phrygia (*Hell. Oxyr.* 22.1–3). At this point Xenophon (and many other authors follow in his wake) devotes a long digression to relations between Pharnabazus and Agesilaus. At first, Pharnabazus's cavalry and scythe-equipped chariots won total victory, but then the Greeks managed to plunder the satrap's camp (IV.1.15–26). The author of the *Oxyrhynchus Hellenica* indicates that, meanwhile, Agesilaus had tried to take Dascylium, “a very strong place (*khōrion okhyron*), fortified by the king, where they said Pharnabazus kept the silver and gold he had” (22.3). Agesilaus brought the boats of the Peloponnesian navy from the Hellespont and ordered the commander to load all of the booty and take it to Cyzicus; then he sent his soldiers to their winter quarters, ordering them to regather the following spring (394; 22.4). The Spartan was unable to capture the citadel and so proceeded with controlled pillaging of the surroundings, particularly the prosperous, game-rich satrapal paradise (*Hell.* IV.1.15–16). We are then told that Pharnabazus complained to Agesilaus in these words: “I have not so much as a meal in my own land unless, like the beasts, I pick up a bit of what you may leave” (IV.1.33♦)! These words were spoken, Xenophon would have us believe, during a conversation between the leaders that was arranged by a Greek who had invited them both. After the meeting, Agesilaus left the country and encamped in the plain of Thebe near the Gulf of Adramyttium (spring, 394), and this is where he was when he received the order from the Spartan authorities to return immediately to Greece.

According to *Hell. Oxyr.* (22.4), his goal then was to march on Cappadocia: despite the obvious geographical mistake about the layout of Asia Minor, the datum indicates clearly that Agesilaus had decided to resume the march to the interior. Xenophon says no different: “He was preparing to march as far as he could into the interior (*anōtatō*), thinking that he would detach from the King all the nations (*ethnē*) which he could put in his rear” (*Xenophon, Hell.* IV.1.41♦). A similar appraisal is found in Plutarch: He “now resolved to carry away the war from the seaside, and to march further up into the country, and to attack the King of Persia himself in his own home in Susa and Ecbatana; not willing to let the monarch sit idle in his chair, playing umpire in the conflicts of the Greeks, and bribing their popular leaders” (*Ages.* 15.1;♦ cf. *Pel.* 30.3). The words used by Nepos are no less grandiose: “He was already planning to march against the Persians

and attack the King himself" (Ages. 4.1–2♦). Finally, Isocrates, going on about the remarkable military weakness of the Persians, as was his wont, stated "that Agesilaus, with the help of the army of Cyrus, conquered almost all the territory this side of the Halys river" (Paneg. 145♦). Note that he took the opportunity of this comment to connect Agesilaus with Cyrus the Younger. We know in fact that the escapades of these two leaders—Cyrus (that is, the Greek mercenaries!) and Agesilaus—were constantly cited in Greece as especially eloquent precedents: both "brought the King to extremities" (Xenophon, *Hell.* VI.1.12♦)! Similarly, in the *Agesilaus*, the Spartan hero is systematically contrasted with a decadent Great King. If we follow Xenophon in this panegyric, Agesilaus was a Greek (Spartan) hero whose adventures explicitly matched those of the Homeric heroes: Agesilaus embarks on nothing less than a new Trojan War; emulating Agamemnon, he set sail from Aulis (cf. Plutarch, *Ages.* 6.6–8; Xenophon, *Hell.* III.4.3; Diodorus XIV.79.1).

In all of these Greek accounts we can recognize the traditional stereotypes of the Persians and the Great King (cf. *Hell.* III.4.19). But, above and beyond the Greek polemic and the private fantasies of the Lacedaemonian king, there is no doubt that from the moment of his arrival in Asia Minor he intended to pursue a very different war from the war that had been fought by his predecessors in the fifth century. With the exception of a brief appearance by Lacedaemonian troops in the Meander Valley and an Athenian raid on the fields of Lydia (*Hell.* I.2.4–5), the fifth-century Greek generals had always confined their operations to the coast and to pillaging in the areas of royal territory closest to the sea. It is possible that the very recent example of the Ten Thousand was actually interpreted in Greece and Asia Minor as proof of the relative permeability of the Empire's land defenses (cf. Xenophon, *Hell.* III.4.2). But it is important to distinguish the Achaemenid reality from the impression gathered from the Greek portrayals (which, moreover, are badly informed about facts of geography, as has just been seen and as is well confirmed by passages in the *Anabasis*). And this is why the historian of the Achaemenid Empire is interested in Agesilaus's operations: they provide an opportunity to take stock of Persian control of territory in western Asia Minor.

Persian Defenses Confronting Agesilaus's Offense: Satraps and ethnē

Xenophon's account is partial (in both senses of the word); according to him, the campaigns of his hero unfolded without major opposition (e.g., *Hell.* IV.1.17). Quite another picture emerges from the *Oxyrhynchus Hellenica*, which fortunately is closer to an arid campaign journal than an expansive and often misleading literary reconstruction. If Agesilaus really did have a momentary notion of retracing Cyrus's progress (whose trail he would follow between Sardis and the frontier of Greater Phrygia), he must have been a cockeyed optimist. The Persian leaders clearly adopted a traditional tactic to confront him: avoiding giving battle (cf. Xenophon, *Hell.* IV.1.17), allowing him to wander the countryside until necessity forced him to return to the coast. Agesilaus's main goal seems never to have been anything more than amassing booty in order to feed and pay his soldiers (*Hell. Oxyr.* 22.4). His greatest fear was lack of supplies (22.4). To be a threat to Persian dominion, he would have had to attack major towns. As it happened, every time he set up his battle line in front of a fortification held by the king's men, he was unable to conquer it, whether at Leontocephalae, Gordion, or Miletu teikhe (21.5–6; 22.3)—not to mention Sardis, Celaenae, or Dascylium. This series of failures illustrates the disconnect between the ambitions attributed to him and military reality. Agesilaus obviously

had no siege engines, and, furthermore, no citadel commander was of a mind to desert the king.

Agesilaus clearly was counting on winning the allegiance of the peoples of the interior, whose independence from the central authority is smugly stressed by all the fourth-century authors. But we may inquire whether in this regard, too, the Spartan was the victim of his informers and/or his own fantasies. We have seen that the Mysians did not flock to him en masse, and that several communities even opposed him openly (*Hell. Oxyr.* 21.1–3; 22.3). The reaction of the Mysian people could perhaps be explained by their desire to preserve their lands and villages from the ravages of war; it could just as well be explained by fear of Persian reprisals—the satrap of Dascylium regularly led expeditions against Mysians who rebelled overtly (Xenophon, *Hell.* III.1.13). Moreover, many Mysians were serving in Pharnabazus's army (IV.1.24). Agesilaus scored greater success with the dynast-king of Paphlagonia, who provided a thousand horsemen and a thousand peltasts (soldiers armed with light shields). This dynast seems already to have broken with the central authority, since Xenophon states that “he had been summoned by the Persian King and had refused to go up to him” (IV.1.3♣); an invitation of this sort, of course, could bode no good! To refuse the king's invitation was tantamount to crossing the line one more time into rebellion, since in normal times Paphlagonia was also required to furnish a troop contingent whenever a satrapal requisition was issued (cf. Diodorus XIV.22.5). At any rate, Agesilaus wanted to cement the Paphlagonian alliance still more solidly, so he negotiated a marriage between the dynast and Spithridates' daughter (Xenophon, *Hell.* IV.1.2–15). It must again be remarked that, according to *Hell. Oxyr.* (22.1), Agesilaus concluded a truce (*spondai*) with the Paphlagonians, which implies that not all of the groups considered the dynast their leader. Like Mysia, Paphlagonia must have been split among several rival chieftains. This reality—that some regions had multiple local chieftains—certainly applied to various locales in Asia Minor and is well illustrated by Artaxerxes' war several years later against the Cadusians; in this case, there were two local kings, and each was anxious to obtain for himself “the friendship and alliance of the king” (Plutarch, *Art.* 24.6♣; cf. chap. 16/18).

Furthermore, the Persians may have kept an eye on Mysia and Paphlagonia more directly than the ancient texts suggest. In the context of preparations for Cyrus the Younger's expedition, Diodorus mentions a “satrap of Paphlagonia” who furnished Alcibiades with a safe-conduct that Pharnabazus had refused to him (XIV.11.3). Diodorus also, discussing the beginning of the Satraps' Revolt (which he places at the end of the 360s), refers to Orontes, the leader of the rebels, as the “satrap of Mysia” (XV.90.3♣3). These comments clearly could be simple mistakes by Diodorus, who is quite free with the word “satrap.” But the term might also designate officials subordinate to a satrap (of Dascylium and/or Sardis). Let us recall the parallel case of Zenis of Dardanus, the “satrap” who was appointed by Pharnabazus in the part of the Aeolis that fell under his jurisdiction and who was responsible for overseeing the country, levying tribute (transferred to Pharnabazus), leading contingents of the satrapal army, and scheduling ostentatious receptions for the satrap of Dascylium during his inspection tours (Xenophon, *Hell.* III.1.10–15). In short, Zenis acted like a satrap (*satrapeuein*: III.1.10) accountable to Pharnabazus; Zenis (who was succeeded by his widow Mania) was one of the governors dependent on the authority of Pharnabazus (III.1.12: *pantōn tōn hyparkhōn*). If we follow this theory, we might ask whether Ariobarzanes fulfilled the same

function in Paphlagonia in 407; Ariobarzanes, a relative(?) of Pharnabazus, was ordered in 407 to bring the Athenian ambassadors, whom the satrap of Dascylium had detained for three years, to Cius in Mysia (*Hell.* I.4.7).

Ambiguity also results from the confusion between geographic regions and ethnic groups. We have already pointed out that neither Mysia nor Paphlagonia was unified. Several episodes reveal that certain parties in Mysia were firmly under the thumb of the Persians. Many military establishments had been set up there beginning in the time of Darius and Xerxes (chap. 13/9). The survivors of the Ten Thousand had had rough times there as soon as they reached Pergamum, which Xenophon places in Mysia, in the plain of the Caicus (*Anab.* VII.8.8), the same place where the work of Orontes (“satrap of Mysia”) is attested (OGIS 264, lines 6–9). The Persian Asidates had a very large rural estate, peopled with slaves and dependents, on this plain. The estate was fortified (*tyrsis, pyrgion, teikhos*; *Anab.* VII.8.12–14). Moreover, the defenders were able to communicate with other positions in the surroundings, using signals beacons:

There came to their assistance Itamenes with his own force, and from Comania Assyrian hoplites and Hyrcanian horsemen—these also being mercenaries in the service of the King—to the number of eighty, as well as about eight hundred peltasts, and more from Parthenium, and more from Apollonia and from the nearby places (*khōria*), including horsemen. . . . And Procles also came to the rescue, from Halisarna and Teuthrania, the descendant of Damaratus. (VII.8.15, 17♦)

The men of Gongylus of Eretria soon joined in; he had been established in the region during the time of Xerxes (VII.8.17; cf. *Hell.* III.1.6). This example is a perfect illustration of the density of Achaemenid territorial occupation in this Mysian region: it was populated with military colonists and garrisons, and bristled with small forts. Confirmation is found in a passage in Polyaeus (VI.10) in the context of Thibron’s expedition in Aeolis; it too appears to have been covered with a dense network of small forts commanded by a “phourarch of the strongholds (*khōria*) of the Aeolid.”

Of course, these observations do not answer the subsidiary question of whether there were governments of Mysia or Paphlagonia. But though we note that the satraps could at any moment count on contingents of horsemen led by the Persians of the diaspora, we can easily agree that the imperial territories were not as empty of defenses as the Greek authors would have us believe or as Agesilaus himself perhaps imagined. Despite the victory near Sardis, he was unable to appropriate for himself any Achaemenid strategic space (roads, storehouses, citadels; see chap. 11/2). If he really did cherish the dream of marching once more on the interior in 394, his chances of success were practically nil.

The Persians and Agesilaus Face Off

Agesilaus was unable to seize the strong towns in the interior, but the theoretical possibility of creating enough unrest that some Persians would desert the king remained. But even the hopes of this possibility that he might have harbored were dashed. When he returned from his expedition, as we have seen, he conversed at length with Pharnabazus. According to Xenophon, he emphasized to the satrap, “It is within your power by joining with us to live in the enjoyment of your possessions without doing homage to anyone or having any master” (*despotēs*; *Hell.* IV.1.35♦). And he adds:

We urge upon you . . . to increase, not the King’s empire, but your own, subduing those who are now your fellow-slaves (*homodouloi*) so that they shall be your subjects (*hypēkooi*). (IV.1.36♦)

In context, this speech was intended to convince Pharnabazus to make himself into an independent prince by transforming the other Persians in his satrapy into *bandaka*. Pharnabazus replied simply that, if the king named another general, he would agree to be Agesilaus's friend and ally; if not, his connection to the Great King could not be severed (IV.1.37). The satrap's dilatory response in fact left Agesilaus with no hope, even more so because Pharnabazus had much earlier been promised one of Artaxerxes' daughters (Plutarch, *Art.* 27.7)—a promise that was kept some years later (Xenophon, *Hell.* V.1.28).

The only attested defector was Spithridates. He was a high-born Persian who broke with Pharnabazus when the latter proposed to take his daughter as concubine (Xenophon, *Ages.* 3.3); when Lysander approached, he fled to Cyzicus, where he left his whole family, his treasure, and his following of 200 horsemen and, along with his son Megabates, joined Agesilaus (Xenophon, *Hell.* III.4.10; IV.1.6–7; *Hell. Oxyr.* 21.4). His duties under Pharnabazus are not precisely known: *Hell. Oxyr.* notes simply "that he lived with Pharnabazus and served him" (21.4). He thus belonged to the circle of landed aristocrats used by the satrap of Dascylium for occasional missions. We know that in 410 he shared command with Rhathines of the contingents who, with the Bithynians, were mustered by Pharnabazus to prevent the survivors of the Ten Thousand from entering Phrygia (*Anab.* VI.4.24, 5.7). But the missions accomplished by one or another satrapal official say nothing at all about their permanent job; during Agesilaus's expedition, this same Rhathines was in command of Gordion (*Hell. Oxyr.* 21.6). Most notable is the fact that Spithridates agreed to marry his daughter to the Paphlagonian dynast (*Hell.* IV.1.4–15). We are tempted to conclude from this that he had had a long and close relationship with Paphlagonia.

The alliance between Agesilaus and Spithridates did not last. After the successful attack on Pharnabazus's baggage and caravan (394), Spithridates and his Paphlagonian allies took booty. They were soon relieved of it by Agesilaus's lieutenant, on the excuse that it had to be placed in the hands of the "officers in charge of sale of booty." According to Xenophon, this practice is what drove Agesilaus's allies to abandon him (IV.1.26–27). In reality, this complaint was probably just a pretext. Contrary to Xenophon, Spithridates and the Paphlagonians had certainly drawn their own conclusions from recent events, which held out little hope of victory to the Lacedaemonian. Their concern from that moment onward was to obtain the king's pardon. So they left immediately for Sardis to meet with Ariaeus, the former companion of Cyrus the Younger; when Ariaeus had left Lydia, Tithraustes had given him a command alongside another Persian, Pasiphernes (*Hell. Oxyr.* 19.3), and he had recently displayed his loyalty by actively participating in the execution of Tissaphernes (Diodorus XIV.80.8). They had decided to put "their trust in Ariaeus because he also had revolted from the King and made war on him." Xenophon lets it be known that this desertion sounded the death knell for Agesilaus's hopes: "Nothing happened during the campaign which was more distressing to Agesilaus than the desertion of Spithridates, Megabates, and the Paphlagonians" (*Hell.* IV.1.28♦).

Agesilaus: A Summary

Agesilaus was recalled in haste to Sparta, which was threatened by a coalition of Greek cities (including Athens) that wanted to escape its dominion; he left Asia Minor with a less than impressive resumé. Aside from a contingent commanded by Dercyllidas that he sent to the Hellespont shortly after his departure (*Hell.* IV.3.3) and the gari-

sons still found here and there, he had had to abandon to their fate the cities he had come to liberate from the Persian yoke. The only positive point in the record is the existence of the navy that the Spartan chief had ordered built the year before and had entrusted to his brother-in-law Peisander (III.4.28–29). It is true that he had also demonstrated that the Persians controlled the roads to Sardis only imperfectly. Thibron had already shown the way by campaigning against Magnesia and Tralles (Diodorus XIV.36.2–3). Agesilaus went further, since he had understood that he needed a cavalry to confront the Persians. Some time later, the Spartan Diphridas even succeeded in capturing Struthas's son-in-law "as they were journeying to Sardis" (*Hell.* IV.8.21♦). Meanwhile, all in all, even if the Spartan had exhibited boldness by developing an "anabasis" strategy [driving for the interior], he does not seem ever to have believed that he could drive the Persians from the satrapies of Sardis and Dascylium. In any case, this goal was unrealizable both because the imperial defenses were solid and because the very idea of an expedition of this kind had certainly never entered the mind of the Spartan leaders. In short, despite the Trojan setting, neither geographically nor politically was Agesilaus a prototype of Alexander.

6. Achaemenid Successes and Failures:

From Asia Minor to Egypt (ca. 396 – ca. 370)

The Defeat of Sparta

During the same period, after being named admiral of the royal navy (§4 above), Conon completed his preparations and began his offensive. His first success (396), after obtaining funds from Tithraustes and the Great King, was to incite a Rhodian party to rise up against the Spartans and welcome his fleet (Diodorus XIV.79.5–6). This was a major victory because of the commercial and strategic importance of the island. In concert with Pharnabazus, Conon piloted the navy to the Cnidian Chersonese to confront the Lacedaemonian navy that was moored at Cnidos. The ensuing battle proved a striking victory for his squadrons (Diodorus XIV.83.4–7; Xenophon, *Hell.* IV.3.11–12). The conquerors gained immediate profit from driving the Lacedaemonian garrisons from both the islands (Cos, Nisyros, Teos, Mytilene, Chios) and the coast (Ephesus, Erythrae; Diodorus XIV.84.3):

Pharnabazus and Conon . . . made a tour of the islands and the cities on the sea coast, drove out the Laconian governors, and encouraged the cities by saying that they would not establish fortified citadels within their walls and would leave them independent. And the people of the cities received this announcement with joy and approval, and enthusiastically sent gifts of friendship to Pharnabazus. (*Hell.* IV.8.1–2♦)

Only Dercyllidas was in a position to resist the offensive of Pharnabazus when he returned to his territory (IV.8.5). The following spring (393), Conon and Pharnabazus's navy returned to sea. Pharnabazus's goal was to wreak vengeance on Sparta: his navy took Cythera, liberating the Cyclades in the process (Diodorus 84.5), then "sailing to the Isthmus of Corinth and there exhorting the allies to carry on the war zealously and show themselves men faithful to the King, he left them all the money that he had" (IV.8.8♦). The Persian may even have been hailed at Athens with an honorary decree (cf. Tod no. 199). This was the first time since 480 that an Achaemenid navy had come to support the "Medizers"! The Persian triumph seemed resplendent.

The Persians Caught between Athenians and Lacedaemonians

In truth, however, the Persian victory was fragile and uncertain. The Persians, willy-nilly, were once again squeezed between Sparta's desire to maintain its dominion and Athens's wish to reestablish its own. The victory at Cnidus and those that followed were also the work of Conon, who since 405 had dreamed of nothing but restoring the glory of his homeland. On his insistence, Pharnabazus agreed to leave a part of his fleet and money with him, and Conon was soon to use it to rebuild the walls of Athens and Piraeus that had been destroyed by the Spartans in 404 (*Hell.* IV.8.9–10). The Lacedaemonians used this new opportunity to break their alliances and to try to arrange a new treaty with Artaxerxes against Athens. Playing on dissension among the Persian leaders, something they were very good at, they sent Antalcidas to Tiribazus at Sardis; meanwhile, the king had made Tiribazus head of the royal troops in Asia Minor (Diodorus XIV.85.4).

Antalcidas arrived, and right behind him arrived ambassadors from Athens and from the cities that fought alongside it against Sparta as well. Each delegation addressed Tiribazus in turn, making him their arbitrator. Antalcidas offered peace, "just such a peace as the King had wished for. For the Lacedaemonians, he said, urged no claim against the King to the Greek cities in Asia and they were content that all the islands and the Greek cities in general should be independent" (*Hell.* IV.8.14♦). As the speeches of the other delegates show, the Spartan offer encompassed the problems of the cities of Europe. The Athenians opposed it strongly, quite rightly thinking that such a peace would prevent them from achieving their ambitious goals.

The Persian leaders were not all in agreement about strategy at this time. Tiribazus brought Conon to Sardis and threw him in prison (Diodorus XIV.85.4). He provided money to the Lacedaemonians secretly because he could not make a decision to do this without consulting with the king (*Hell.* IV.8.16♦). Obviously, Tiribazus would not have been able to persuade Artaxerxes, who sent Struthas to Sardis, who "devoted himself assiduously to the Athenians"; his hostility toward the Spartans surely grew when, shortly afterward, the Lacedaemonian Diphridas seized his son-in-law Tigranes and held him for ransom (IV.8.21)! The following years brought an escalation of hostilities between Athenians and Lacedaemonians in Asia Minor, and the Persians scarcely appear to have been in a position to arbitrate. The Lacedaemonians reinstalled governors (*harmostai*; IV.8.29).

But the truth is doubtless more complicated than Xenophon indicates, for his account is devoted entirely to Athens-Sparta hostilities. In fact, we learn from an inscription that we have already discussed (see chap. 12/5) that during these years Struthas (Struses) arbitrated a territorial disagreement between Miletus and Myus, which he submitted to judges from twelve Ionian towns (Tod no. 113), a sign that at that date Sardis could impose its own arbitration on the cities of the Ionian coast, along the lines of the decrees made a century earlier by Artaphernes. It is very likely that an important administrative change took place during these years (between 395 and 391) as well: Caria, hitherto a dependency of Sardis, was made into an autonomous satrapy and entrusted to Hecatomnus, heir to a dynastic power centered on Mylasa, capital of the *koinon* ('federation') of the Carians. It is possible that Artaxerxes did this to render war on Sparta more efficient.

From Cyprus to Egypt

Seen from Susa or Babylon, matters cannot be reduced to the contradictory ambitions of Athens and Sparta on the coast of Asia Minor. The Great King was primarily pre-

occupied with the events then unfolding in Egypt and Cyprus. In fact, it is in the context of 391–390 that Diodorus discusses the fears of the Great King, who was alerted by some Cypriot kings (Amathus, Soloi, and Kition). They were desperately fighting off the assaults of Evagoras's forces and sought Persian aid:

They accused Evagoras of having slain King Agryis, an ally of the Persians, and promised to join the King in acquiring the island for him. The King, not only because he did not wish Evagoras to grow any stronger, but also because he appreciated the strategic position of Cyprus and its great naval strength whereby it would be able to protect Asia in front, decided to accept the alliance (*symmakheia*). He dismissed the ambassadors and for himself sent letters to the cities situated on the sea and to their commanding satraps to construct triremes and with all speed to make ready everything the fleet might need. (XIV.98.3♦)

Ever since he had come to power (see chap. 14/8), Evagoras of Salamis had methodically pursued his goal—to extend his power over the other cities on the island. Moreover, since 398 he had collaborated with Artaxerxes II in the war against Lacedaemonian forces. But the effective disappearance of the Spartan threat to the Aegean coasts after the battle of Cnidus changed the situation drastically. Diodorus's text is very clear: the break did not come from Evagoras (who no longer had any interest there); it was a cold decision of Artaxerxes. Isocrates agrees (*Evag.* 67–68). At the moment he regained control of Asia Minor, the Great King at all costs wanted to avoid seeing an economic and military power arise on his flank that threatened to reduce to nothing the maritime strategy he had pursued consistently since Cunaxa; thus, control of the island presupposed that power there would be fragmented among a number of simultaneous kinglets who, as we have just seen, would inform on each other to the central authority.

A recently published Phoenician inscription provides several clarifications regarding the initial battles on Cyprus. The inscription, dated to year 1 of Milkyatōn (son of Baalrōm), the king of Kition, commemorates the erection of a monument after a victory won by the king “and all the people of Kition” over “our enemies and their Paphian auxiliaries.” There can hardly be any doubt that the term “enemies” designates Evagoras and his allies—among whom only the Paphians are named. We thus have a direct echo of the open warfare between Kition and its allies (Amathontes, Soloi) on the one side and Salamis and its allies on the other. It is quite noteworthy that it was after this victory that Milkyatōn took the title of king (392?), founding a royal dynasty that can be followed down to 312. Unlike an older inscription from Idalion, which dates to somewhere between 470 and 440, the “Medes” are not named. But we cannot doubt that the new ruler of Kition received aid and support from Artaxerxes, as Diodorus reports (XIV.98.3). It is nonetheless likely that this success came in a period before the direct intervention of Persian forces; it was not until several years later that the Persians won a naval battle near Kition (cf. XV.3.4–5). At any rate, this sort of dynastic monument clearly highlights the close cooperation between the new king and “all the people of Kition.” Moreover, seen in the context of Persian–Cypriot relations, the battles against Evagoras of Salamis also (primarily?) belong to the history of Cyprus in the *longue durée*—a history that cannot be reduced to the vagaries of dominion by the Great King.

One essential element certainly played a part in Persian policy: if Cyprus were not retaken, any expedition against the Nile Valley was doomed to failure. And, in fact, the reconquest of Egypt was the topmost priority for Artaxerxes. Just as negotiations between the Greeks and Tithraustes were beginning, power was changing hands in Egypt. In 394–393 (or 392–391), Nephertites perished in dynastic turmoil. Two dynasts proclaimed

themselves pharaoh simultaneously: Muthis, son of Nepherites, and Psammuthis. The debate was soon settled by a third person, Hakoris (perhaps a relative of Nepherites), who took power at the beginning of 392 (or 392–391). His titles and the breadth of his building program show his desire to connect himself with the glorious tradition of the Saite period and to pursue the war against the Persians doggedly; he knew that they had never abandoned the idea of reconquest. The reign of this sovereign (whom he calls Pakorios) is the topic of the lost twelfth book of Theopompus's *History*, in which "the story of the deeds and acts of the Greeks and Barbarians down to his time is found" (*FGrH* 115 F103).

The Initial Operations (391–387/386)

It is quite noteworthy that in 391–390 the Great King wanted to act rapidly (Diodorus XIV.98.3: *kata spoudēn*). He probably hoped to prevent Evagoras from receiving external aid. Theopompus notes the alliance between Hakoris and Evagoras. It is possible that Evagoras had sent ambassadors to Hakoris, as he had to Athens (*Lysias* XIX.21–23), but it seems quite unlikely that the pharaoh was in any position to send him reinforcements at that time. On the other hand, the unleashing of the Cypriot operation could only help Hakoris, since it gave him time to consolidate his power and prepare his country for the inevitable Persian offense.

It is possible, as Isocrates suggests (*Paneg.* 161), that Tyre took the side of Evagoras, because a few years later Tyrian ships fought alongside his (Diodorus XV.2.4); but Tyre's defection from Persia may have come several years after the onset of hostilities. At one point, Evagoras also received aid from Athens: in 390–389, Athens sent ten ships that were hailed for inspection by a Lacedaemonian admiral (Xenophon, *Hell.* IV.8.24; *Lysias* XIX.21ff., 43). Some time later (388–387), Athens sent new reinforcements to Evagoras—10 triremes and 800 peltasts commanded by Chabrias (V.1.10)—but we know nothing of the outcome (probably nothing happened). At almost the same time (388), the Athenian Thrasybulus advanced with a squadron along the southern coast of Asia Minor as far as Aspendus on the mouth of the Eurymedon, where he tried to levy taxes on the inhabitants. They, however, became fed up with the soldiers' predations and slew the Athenian general in his tent (IV.8.30; Diodorus XIV.99.4). These occasional military operations clearly belong more to the history of the Athens-Sparta conflict than to the affairs of Cyprus. In any case, the strange behavior of the Spartans and Athenians, with respect to the ships sent by Athens to Cyprus in 390–389, was stressed by Xenophon: "Both parties were acting in this affair in a manner absolutely opposed to their own interests; for the Athenians, although they had the King for a friend, were sending aid to Euagoras who was making war upon the King, and Teleutias, although the Lacedaemonians were at war with the King, was destroying people who were sailing to make war upon him" (*Hell.* IV.8.24♦) In short, in 391–390, Evagoras could not count on any external allies.

The Persian troops had two commanders: the Persian Autophradates (land army) and Hecatomnus, the "Carian dynast" (as admiral; Diodorus XIV.98.4; Theopompus *FGrH* 115, F103). We know practically nothing about this first campaign. According to Isocrates, the results were not commensurate with the enormous financial sacrifices to which the Great King consented, since during the war Evagoras "took Tyre by storm, caused Cilicia to revolt from the Great King" (*Evag.* 60–62♦). Of what value, then, are the words of the Athenian polemicist? Perhaps they simply convey that one of the results was that Tyre was captured by the king of Salamis. Let us simply recall that all the ancient authors, especially Diodorus, imply that between about 390 and 387–386 the Great

King and his generals primarily used the time to complete their preparations. A navy was assembled in Asia Minor, at Phocaea and Cyme, and troops were gathered in Cilicia, where the entire army was concentrated before crossing to Cyprus (XV.2.1–2). The sequence and rationale of Diodorus's presentation imply that during this time Evagoras also gathered reinforcements with the aid he found among his neighbors (2.3–4).

The King's Peace (386)

Meanwhile, Antalcidas, who had accompanied Tiribazus all the way to the King, obtained from him "an agreement that the King should be an ally of the Lacedaemonians if the Athenians and their allies refused to accept the peace which he himself directed them to accept" (V.1.25♦). Most of the Greek cities were worn out by the continual wars and yearned for peace: "So that when Tiribazus ordered those to be present who desired to give ear to the peace which the King had sent down, all speedily presented themselves. And when they had come together, Tiribazus showed them the king's seal" and read the following document:

"King Artaxerxes thinks it just that the cities in Asia should belong to him (*heautou einai*), as well as Clazomenae and Cyprus among the islands, and that the other Greek cities, both small and great, should be left independent, except Lemnos, Imbros, and Scyros; and these should belong, as of old, to the Athenians. But whichever of the two parties does not accept this peace, upon them I will make war, in company with those who desire this arrangement, both by land and by sea, with ships and with money." (V.1.30–31♦)

With the exception of the Thebans, all the participants "[swore] that they would abide by the treaty which the King had proposed; thereupon the armies were disbanded and the naval armaments were likewise disbanded" (V.1.35♦).

From a Greek point of view, the peace (also known as the Peace of Antalcidas) certainly meant a victory for Sparta, which lost no time in proclaiming the leagues created around Athens and Thebes obsolete, because they were contrary to the clause guaranteeing the autonomy of the cities. From the Persian point of view, the victory was no less complete. The peace brought an end to the era that began with the creation of the Delian League in 478–477: the cities in Asia returned wholly to the Achaemenid fold, and the cities in Europe agreed that they would no longer attempt to get them to leave. The king's territories, so often pillaged and threatened since 478–477, remained safe and protected thereafter. In a way, Artaxerxes II succeeded in bringing to completion the program Alcibiades had suggested to Tissaphernes nearly forty years earlier: to play the Greeks off against each other (Thucydides VIII.46.1–4). The Great King owed this victory not just to the internal weakening of the Greek cities or the distribution of "royal-archer" coins (silver siculi and gold darics); he owed it first and foremost to the resoluteness and constancy of his policy and deeds.

A Universal Conflagration?

It is easy enough to understand how the open hostilities at the end of the 390s could resume stronger than ever after 387. According to Justin (VI.6.2), Artaxerxes was so eager to impose peace around 387 because, "preoccupied with the war against Egypt, he feared that if he sent aid to the Lacedaemonians against his satraps, his armies would be tied up in Greece." Even if Justin is especially interested in illustrating the king's cynicism, the thought he ascribes to him should not be surprising: it reminds us of a comparable decision made by Artaxerxes I in the 460s (Thucydides I.109.2; Diodorus XI.74.5). Diodorus

in turn says that the peace that the king imposed on the Greeks left him able to operate with a free rein, and he "made ready his armaments for the war against Cyprus. For Evagoras had got possession of almost the whole of Cyprus and gathered strong armaments, because Artaxerxes was distracted by the war against the Greeks" (XIV.110.5♣). In addition, Theopompus says the fighting on Cyprus continued even more vigorously after the peace of 386 (FGrH 115 F103). The text read to the Greek delegations also explicitly stated that Cyprus was part of the king's territory (*Hell.* V.1.31).

The ancient authors are unanimous in emphasizing that Artaxerxes then found himself facing multiple rebellions, which they characterize as not merely simultaneous but coordinated. Diodorus says Evagoras had a very wide network of alliances: the king of Egypt, Hakoris, sent significant forces, and Hecatomnus of Caria secretly provided him with large amounts of money for hiring mercenaries. Evagoras also possessed Tyre and "several other towns," which furnished ships. As Diodorus tells it, the entire Levant was seceding, since Evagoras also received aid from "such others . . . as were at odds with the Persians, either secretly or openly," and "not a few soldiers were sent him by the king of the Arabs and by certain others of whom the King of the Persians was suspicious" (XV.2.3–4♣). A similar narrative is found in Theopompus: he reports "how Hakoris the Egyptian made alliance with the Pisidians" (FGrH 115 F103). In the *Panegyric* (380), Isocrates lays out a catastrophic review of Persia's status in the Levant:

Are not Egypt and Cyprus in revolt against him? Have not Phoenicia and Syria been devastated because of the war? Has not Tyre, on which he set great store, been seized by his foes? Of the cities in Cilicia, the greater number are held by those who side with us and the rest are not difficult to acquire. Lycia no Persian has ever subdued. Hecatomnus, the viceroy of Caria, has in reality been disaffected for a long time now, and will openly declare himself whenever we wish. From Cnidos to Sinope the coast of Asia is settled by Hellenes, and these we need not to persuade to go to war—all we have to do is not to restrain them. (§§161–62♣)

Isocrates' chronologically rather imprecise presentation certainly need not be taken absolutely literally; his purpose was to persuade the Greeks to launch an offensive in Asia Minor. To that end, he was attempting to prove the Persians' extreme military weakness, which was illustrated particularly by their defeats in Egypt, as well as by the exploits of Cyrus's mercenaries and Agesilaus's troops (§§138–59).

The existence of unrest in this period is well illustrated by the biography of Datames presented to us by Cornelius Nepos. Datames, son of Camisares, "governed that part of Cilicia which adjoins Cappadocia and is inhabited by the Leucosyri, or 'White Syrians'" (§1.1♣); he was a member of the royal palace guard and displayed his valor as a soldier for the first time "in the war which the king waged against the Cadusii," during which his father died (§1.2♣). This Cadusian war is also mentioned by Diodorus, in the context of the Cyprus war, so it took place about 385–384 (Diodorus XV.8.5; 10.1). Plutarch (*Art.* 24) seems to refer to a second Cadusian war, which he places at the time of the second Egyptian expedition, in 374 (*Art.* 24.1; cf. Trogus Pompeius, *Prol.* X). Nepos goes on to say that his hero once again demonstrated his bravery "when Autophradates, at the king's command, was making war on the peoples that had revolted" (§2.1♣). Nepos says nothing about the identity of these peoples. On the other hand, we know that Datames led another expedition after 387, this time against Thuys, dynast of Paphlagonia, who "did not own obedience to the king" (§2.2♣).

While the existence of unrest is established, there is nothing to suggest that it constituted a vast common front formed at the instigation of Hakoris and/or Evagoras. We

must in fact stress that the Greek authors were fond of this sort of catalogue, as is illustrated particularly well by the systematic review that Diodorus lays out (XV.90.2–4) of the rebellions fomented against Artaxerxes about twenty years later (see chap. 15/7 below). The evidence implies that Artaxerxes' campaigns in the Zagros were a local affair injected into the *longue durée* of Cadusian affairs (see chap. 16/18). And, while the alliance between Hakoris and the Greeks and Evagoras is undeniable, it nonetheless appears strange that the pharaoh would be so interested in acting in concert with the Pisidians, as Theopompus states; this allusion indicates no more than that at this point the Pisidians (or some of them at least) were opposed to royal forces—which is a given throughout Achaemenid history. Similarly, the example of Thuys is not isolated; the Paphlagonian dynasts were frequently opposed to Persian authority, as shown by the very recent example of Agesilaus and Spithridates. Other information given by the ancient authors must be taken with a grain of salt. For instance, there is nothing to indicate that Cilicia was ever totally endangered, aside from the unfortunate raid by Thrasylbulus in the region of Aspendus in Pamphylia (*Hell.* IV.8.30; Diodorus XIV.99.4). It is clear that at this date, as before, Cilicia was utilized by the Persians virtually as a military base (Diodorus XV.3.3), and this is also indicated by the coins struck by Tiribazus in several Cilician cities (Tarsus, Issus, Soloi, Mallus). Furthermore, the peace of 386 prohibited the Greeks from interfering. It must also be recalled that Cilicia itself included distinct subregions (see chap. 16/6). We may recall, for example, that Datames was ordered by Artaxerxes to defeat Aspis, “the ruler of Cataonia; . . . [who] far from acknowledging allegiance to Artaxerxes, even overran the regions neighbouring to Persia and carried off what was being brought to the king” (*Nepos, Dat.* 4.1–2♠). This again refers to a minor, local problem, which one is tempted to compare with the false goal that Cyrus announced to his expedition in 401 to deceive his mercenaries: they were “leading the army to Cilicia against the despots who were in rebellion against the King” (Diodorus XIV.19.3♠). Moreover, it is quite noteworthy that Datames landed in Cilicia on the way from Syria, before marching against Aspis (*Dat.* 4.4). Finally, the matter of the Carian satrap Hecatomnus also remains uncertain. During the first offensive in 393–392, he was entrusted with military operations (Diodorus XIV.98.4), in cooperation with Autophradates, according to Theopompus (*FGrH* 112, F103). Diodorus places him among Evagoras's secret allies in 387, the one to whom Evagoras sent great sums of money to hire mercenaries (XV.2.3); and Isocrates, in the *Panegyric* (§162♠), believes he had “been disaffected for a long time now.” But formal proof of his rebellion is singularly lacking.

However difficult the task, it is still necessary to distinguish these purely local troubles from genuine networks of alliances (Hakoris/Evagoras, Evagoras/Tyre). Among those involved in alliances we should include the person Diodorus calls the “king of the Arabs” (XV.2.4), who is also mentioned in a similar context earlier, in 411–410 (XIII.46.6); he may have been the head of the tribe whose territories adjoined the road between Gaza and Egypt. But nothing allows us to state with certainty that the disturbance embraced all of Syria–Palestine or all of Phoenicia. Mounting an expedition to Egypt around 385–384 (below) presupposes, on the contrary, that the Persians were able to requisition ships in Phoenicia and that they controlled traditional logistical bases (Sidon, Acre, Gaza). It is nonetheless true that Artaxerxes II's situation at that date was difficult and filled with potential dangers, since he needed simultaneously both to carry out local expeditions and to gather considerable forces to overcome Evagoras and Hakoris.

The Offensive against Evagoras (387/386–383/381)

After lengthy preparations, land and sea forces were entrusted to Orontes and Tiribazus, who were ordered to subdue Evagoras. The breadth of preparations carried out in both camps (Diodorus XV.2) indicates that the confrontation was expected to be decisive. On Cyprus, the Persian navy scored a victory at Kition, and then the army laid siege to Salamis (Diodorus XV.3.4–6; 4.1). At this point, Evagoras sought out Hakoris in Egypt “and urged him to continue the war energetically and to consider the war against the Persians a common undertaking” (XV.4.3♦). He brought back nothing from this contact except pretty words and a piddling amount of money (XV.8.1). Fresh from his victory over the Persian forces (or perhaps still in the middle of the fight), the pharaoh obviously considered the Cypriot front a secondary matter.

After lengthy negotiations, peace was imposed by the Great King under the following conditions: “Evagoras . . . should be king of Salamis, pay the fixed tribute annually, and obey as a king the orders of the King” (XV.9.2♦; around 383–381). Diodorus presents as one of Evagoras’s achievements that he was recognized as king of Salamis (XV.8.2–3; 9.2). Actually, on the political and strategic level, down the line Evagoras had to retreat, since the terms of his surrender forbade him to undertake any future offensive against the other Cypriot kings, all of whom from then on would be the Great King’s preferred allies on the island. Like them, Evagoras thereafter had to bend to the Achaemenid authorities in all things and provide tribute and naval contingents. In sum, matters in Cyprus were back to the place they had been some twenty years earlier, before Evagoras had begun to extend his dominion over other kingdoms on the island. Combined with the outcome of the peace of 386, the Cyprus victory was crucial to Achaemenid authority because of the central strategic importance of the island of Cyprus to the Persian position in the eastern Aegean. Undoubtedly, it also allowed them to retake the Phoenician cities that had joined Evagoras, particularly Tyre.

The Egyptian Defeats

At the same time, however, the Great King suffered a defeat in his principal objective, the reconquest of Egypt. In his *Panegyric*, Isocrates (our only source, unfortunately) in fact alludes to an operation against Egypt in the 380s:

Take, first, the case of Egypt: since its revolt from the King, what progress has he made against its inhabitants? Did he not dispatch to this war the most renowned of the Persians, Abrocomas and Tithraustes and Pharnabazus, and did not they, after remaining there three years and suffering more disasters than they inflicted, finally withdraw in such disgrace that the rebels are no longer content with their freedom, but are already trying to extend their dominion over the neighbouring peoples as well? (*Paneg.* 140♦)

The date of this fruitless expedition is uncertain; it appears, however, that it was carried out at the same time that the Persian troops were in action against Cyprus. The fact remains that it was a considerable setback. An independent Egypt would be a perpetual threat to Persian dominion over the lands of Ebir Nāri. It would also be a natural ally to anyone who wanted to take on the Persians, including subordinates of the Great King. So it was when Glus, Tiribazus’s son-in-law, chose to rebel against the king at the end of the 380s, because he was afraid of being swept up in the accusations against his father-in-law. As commander of the Cyprus fleet (Diodorus XV.3.2), he had played a decisive

role in the battle of Kition against Evagoras (XV.3.6). Endowed with an abundance of money and soldiers, he entered into alliance with Hakoris and the Spartans (XV.9.3–5) but fell to an assassin's hand (XV.18.1). To be sure, his case is special, because he was the son of the Carian-Memphite Tamos, Cyrus's old admiral, who had sought refuge with Psammetichus in 400. But it is also worth observing that, according to Diodorus (XV.18.1), Glus's plans were taken up by a certain Tachos, whose name indicates that he had an Egyptian background; he had founded a city in land located on the borders of Cyme and Clazomenae (18.2–4). It thus appears that Glus and, later, Tachos attempted to set up with the aid of the pharaohs a sort of "dynasty" in Asia Minor, situated not coincidentally very close to Cymae, Persia's very important naval base in Asia Minor.

The danger was even more serious in that Hakoris apparently continued his preparations, gathering a large number of Greek mercenaries and even recruiting the Athenian Chabrias, who was engaged privately, because at this time Athens was far from anxious to engage in hostilities with Artaxerxes. According to Diodorus, the pharaoh gathered his troops "for the campaign (*pros tēn strateian*) . . . and with great dispatch made preparations to fight the Persians" (XV.29.1–2♦). Does the phrase indicate that Hakoris had decided to go on the offensive? We cannot say with certainty. What is certain, however, is that Artaxerxes did not abandon his plan to reconquer the Nile Valley, especially in view of the fact that, from this point on, Egypt could no longer count on external allies.

Pharnabazus, who was ordered to advance against Egypt, set up his logistical base at Acre in Palestine and gathered a massive navy, since it was said that no expedition against Egypt could succeed without the support of a navy, both for resupplying the troops and for negating the defenses of the Delta. The ships must have been built in Phoenicia (cf. Polyaeus III.9.63) as well as Cyprus and Cilicia, where Pharnabazus's coinage also attests to the enlistment of troops. During his preparations, Pharnabazus sent an embassy to Athens, demanding that Chabrias be recalled from Egypt and Iphicrates be sent to Acre; his demands were met (XV.29.4). These are the reasons why (still following Diodorus; XV.38.1♦) Artaxerxes intervened directly in 375 to stop the hostilities that were ripping the Greek cities apart, "intending to make war on the Egyptians and being busily engaged in organizing a considerable mercenary army."

In 373 the full force of Persian intervention was set in motion. In Egypt, after a confused period of infighting after the death of Hakoris (380), Nectanebo was recognized as pharaoh, thus founding what is conventionally called the XXXth Dynasty, and he soon adopted Hakoris's strategy toward the Persian threat. The Egyptians, expecting Pharnabazus's attack, had fortified the Delta: "Nectanebōs . . . was emboldened, chiefly by the strength of the country, for Egypt is extremely difficult of approach, and secondly by the fact that all points of invasion from land or sea had been carefully blocked" (XV.42.1♦). The Egyptian leaders had erected fortifications on each of the mouths of the Nile; near the Pelusiac mouth, the principal point of entry, walls interrupted the navigable channels, and land routes were flooded in order to prevent their use: "Accordingly it was not easy either for the ships to sail in, or for the cavalry to draw near, or for the infantry to approach." Pharnabazus therefore decided to attack by the Mendesian mouth, where his troops leveled the fortification (42.3–5♦). Shortly afterward, the Egyptians regained their footing on the site; the annual flood had forced Pharnabazus to evacuate Egypt (43.1–4).

According to Diodorus (XV.41.2), one of the reasons for the defeat lay in the length of the Persian preparations (several years). "For Pharnabazus marched slowly and had given plenty of time for the enemy to prepare"; and he explains the attitude of the Persian leader as follows: "Indeed it is the usual custom for the Persian commanders, not being independent in the general conduct of war, to refer all matters to the King and await his replies concerning every detail" (41.5♦). This is a remark made by many Greek authors, and it certainly reflects part of the truth: for one thing, the assembly of so large an army, the construction of a navy, and the training of soldiers is a long-term affair; for another, the Persian generals traditionally had to apply to the court for every expense that exceeded the budget that had been allocated (see, e.g., Diodorus XV.4.2). But this explanation is also polemical in nature: it fits comfortably into the predominant Greek presentation of Persian military incompetence. It is doubtful that Pharnabazus was idle throughout this period. If the Egyptian revolt spread toward Palestine, it is likely that the Persian general took advantage of his presence in the region to restore Achaemenid order in such a way as to secure his rear. Anyway, the construction of fortifications in Egypt goes back to an earlier period; we know, for example, that Chabrias (who left Egypt at the latest in 379) had directed the construction of earthworks near Pelusia and Lake Mareotis (Strabo XVI.2.33; XVII.1.22). In fact, the Egyptian pharaohs had been preparing for many years already, which doubtless also explains Pharnabazus's aforementioned failure. Because of the inferiority of their forces, the Egyptians needed first and foremost to prevent the Persian army and navy from entering the Delta. This is exactly the same strategy they adopted toward Artaxerxes III in 343, also profiting at that time from the long duration of Persian preparations (cf. Diodorus XVI.46.7).

Diodorus also presents what he describes as the incompetence of the Persian high command. According to him, Iphicrates, head of the Greek mercenaries in the army, had proposed a different strategy. After they took the fort at the Mendesian mouth, he suggested going up the Nile to take Memphis, which at that point was undefended, taking advantage of the situation to seize the town with his troops. Pharnabazus's refusal was, for Diodorus, the reason that the expedition failed (XV.43). But it is risky to accord too much credibility to a story so fully devoted to singing the praises of the Greek *strategos*. We get the primary impression that Diodorus, under the influence of his sources, wants to express the idea so often found in the fourth-century authors that the Persians were incapable of winning a battle without the advice and counsel of Greek leaders. He even repeats the same explanation to account for the defeat of Nectanebo II by Artaxerxes III in 343 (XVI.48.1–2); the theme of the rivalry between Persian and Greek leaders is also found in this story (XVI.49.1–4; cf. 50.4–6 and XVII.18.2–4).

Contrary to what Diodorus would have us believe, Iphicrates was certainly not Pharnabazus's equal. Iphicrates was entrusted with training recruits (Nepos, *Iph.* 2.4) and, under the authority of Pharnabazus and other Persian leaders (Diodorus XV.43.2; Nepos, *Dat.* 3.5: Tithraustes and Datames himself), he oversaw preparation of the Greek troops and their maneuvers, seconded by other mercenary leaders (*Dat.* 5.6: Mandrocles of Magnesia). In sum, the structure of Pharnabazus's army was similar to the organization of Cyrus the Younger's army in 401, except that Iphicrates probably did not enjoy the prestigious status under Pharnabazus that Cyrus had accorded Clearchus. Diodorus's text seems to indicate simply that Iphicrates was asked for his opinion during a war council held after the capture of the Mendesian fortification; his opinion appar-

ently differed from the views held by Pharnabazus and his Persian lieutenants. Diodorus's version continues, explaining the attitude of Pharnabazus and the other Persian leaders as jealousy: they were afraid Iphicrates would seize Egypt for himself (§43.2). This presentation scarcely convinces. Pharnabazus might have had excellent strategic reasons for turning down this plan, first among them the need to justify himself later to the king—which accounts for the thought ascribed to him: he responded to Iphicrates “that it was because he was master of his words but the King was master of his actions” (§41.2⇨). In other words, he preferred not to risk losing everything in a raid that would cut him off from his rear bases, since the essential thing, in his eyes, was to return to the king totally crowned with victory. Setting aside the personal antagonism portrayed so dramatically by Diodorus, the simplest explanation is to suppose that the Persian command had underestimated the capacity for prolonged resistance by the Egyptian defenses in the Delta, as well as the logistical difficulties connected with the deployment of such extensive forces in a land where first the enemy and second the force of nature (flood) would render unusable the preferred access approach via the Nile.

It seems strange that Pharnabazus's army would leave Egypt so quickly, in contrast to what the Persians had done around 460, when several years of fighting had been needed to put down the rebellion (see chap. 14/2). It seems clear that this was not a decision born out of a moment of panic. Despite what Diodorus would have us believe (XV.43.4), no one need fear that Pharnabazus was ignorant of the timing of the Nile flood! We can imagine that the central authority feared that its army would get bogged down in an interminable war of inches in Egypt. Nor, in fact, was it a withdrawal pure and simple. On the contrary, the Persian army retreated to their Palestinian bases, where they prepared a new offensive. But it is not until the last year of Artaxerxes II that we hear fleeting references to a new attempt, in an entirely different strategic context. Meanwhile, Persians and Egyptians were encamped face to face, on the brink of war, and we cannot exclude the possibility of confrontations suppressed by the Classical sources. Whatever the case, the fact remains that the Achaemenid armies proved unable to regain their footing in the Nile Valley. This was a painful failure for Artaxerxes, who had cherished the project ever since his victory over his brother, Cyrus.

Artaxerxes and the Greeks

A basic, tangible result was achieved nonetheless—the victory on Cyprus. The military activity of the Persian armies in Syria–Palestine and the disarray of the Greek cities in Europe left the pharaohs to face Persian power alone. Neither Sparta nor Athens (despite the presence of Chabrias alongside Hakoris) sought to carry out military operations in the royal territories after 386. After the unfortunate Egyptian campaign, Pharnabazus even sent a message to the Athenians, setting forth Iphicrates' accountability and urging them to judge him. The Athenians refused the satrap's request but sent a courteous and respectful reply nonetheless (Diodorus XV.43.6). Since they were thoroughly occupied with settling the problem of hegemony, Sparta, Athens, and Thebes held scrupulously to the terms of the King's Peace, even after Athens (in 378–377) formalized the new naval alliance that it had begun to create in the 380s. The peace of 386 was reaffirmed twice on the initiative of Artaxerxes: first in 375 and then in 371. In the first year, a congress was held at Sparta at the insistence of the Great King's envoys; one of the Athenian ambassadors took the opportunity to refer to the autonomy clause of the peace of 386

solely to denounce the behavior of the Lacedaemonians (Xenophon, *Hell.* VI.4.9). The general peace of 371 encompassed all of the Greek cities except Thebes (Diodorus XV.50.4), which a few weeks later was to inflict a memorable defeat on Sparta at Leuctra (371). Artaxerxes II had become the the Greeks' arbitrator.

7. Artaxerxes II, His Satraps, and His Peoples (ca. 366–359/358)

Diodorus and the "Great Revolt" of the Satraps: The Empire in Flames?

This general peace in Greece is the context in which Diodorus presents what is conventionally called the "great revolt of the satraps" (XV.93.1). He dates the beginnings of the uprisings to 361. As he puts it, the Empire was on the brink of implosion and disaster:

During their term of office the inhabitants of the Asiatic coast revolted from Persia, and some of the satraps and generals rising in insurrection made war on Artaxerxes. At the same time Tachôs the Egyptian king decided to fight the Persians and prepared ships and gathered infantry forces. Having procured many mercenaries from the Greek cities, he persuaded the Lacedaemonians likewise to fight with him, for the Spartans were estranged from Artaxerxes because the Messenians had been included by the King on the same terms as the other Greeks in the general peace. When the general uprising against the Persians reached such large proportions, the King also began making preparations for the war. For at one and the same time he must needs fight the Egyptian king, the Greek cities of Asia, the Lacedaemonians and the allies of these, —satraps and generals who ruled the coastal districts and had agreed upon making common cause with them (*koinopragia*). Of these the most distinguished were Ariobarzanes, satrap of Phrygia, who at the death of Mithridates had taken possession of his kingdom (*basileia*), and Mausolus, overlord of Caria, who was master of many strongholds and important cities of which the hearth and mother city was Halicarnassus, which possessed a famous acropolis and the royal palace of Caria; and, in addition to the two already mentioned, Orontes, satrap of Mysia, and Autophradates, satrap of Lydia. Apart from the Ionians were Lycians, Pisidians, Pamphylians, and Cilicians, likewise Syrians, Phoenicians, and practically all the coastal peoples (*ethnè*). With the revolt so extensive, half the revenues of the King were cut off and what remained were insufficient for the expenses of the war. (XV.90♦)

It is immediately plain to see that, with respect to evidence, we are in a situation similar to the one we are placed in by Isocrates with regard to the 380s (*Paneg.* 161–62; cf. p. 650 above). The historian is thus faced with the same problem as in the earlier context. Diodorus's presentation arouses the greatest reservations *a priori*. The last sentence of the catalogue of woes in particular eloquently illustrates the distortions brought about by a Hellenocentric viewpoint, and it reminds us of a remark of Polyclitus that is mentioned incidentally by Strabo (XV.3.21). But no one can believe that the revolt (whatever magnitude is ascribed to it) exhausted the Great King's monetary reserves and prevented him from making war on the rebels.

Apart from this grandiose fresco painted by Diodorus, we have neither continuous nor complete documentation of any kind, except for a summary of the work of Trogus Pompeius. The summary covers an expedition of Artaxerxes II against the Cadusians and then explains how the Great King "pursued his dignitaries (*purpurati*) who had defected (*defectores*) in Asia: first of all Datames, satrap of [Paphlagonia], a land whose origin is presented; then the satrap of the Hellespont, Ariobarzanes; and next in Syria the governor of Armenia, Orontes; how he conquered them all and died, leaving the throne to his son Oechus" (*Prol.* X). This information is not found in Justin, who unfortunately

was engrossed in Greek (VI.6–9), Macedonian (VII), and Greco-Macedonian (VIII–IX) affairs, and did not consider it necessary to explain; he did not take up the course of Artaxerxes II's reign except to cover the royal succession (X.3.1–2), before arriving very quickly at the accession of Darius III (X.3.3–7). Justin's method does not diminish the value of the summary of Trogus Pompeius, but it is unfortunately too fleeting to constitute a basis for historical reconstruction.

Trogus Pompeius places Datames first among the rebels, but Diodorus omits his role entirely, at least in the catalogue of rebels. Diodorus does name Datames, but apparently assigns him a personal role only in repelling the counterattack mounted by Artabazus (XV.91). We learn more about this person from C. Nepos's biography of him, which dates his revolt (wrongly) to the return of the expedition against Aspis of Cataonia (§5.1–6). The life and works of Datames are also cited by Polyaeus (VII.21.1–7; VII.29.1–2; cf. VII.28) and Pseudo-Aristotle (*Oecon.* II.24a–b = Polyaeus VII.21.1) to illustrate the theme of military deception and fiscal stratagem as practiced by the satraps and generals. Again in Polyaeus we find several short stories introducing Orontes (VII.14.2–4), Ariobarzanes (VII.26), and Autophradates (VII.27.1–3). Each is an anecdotal tale with a major defect: none is situated in the chronology precisely. The biography by Nepos belongs to the genre of *saga*: it is entirely devoted to singing the praises of a hero who is haunted by the king's ingratitude and his associates' betrayals.

References to the satraps and countries in revolt also decorate several discourses delivered by Athenian orators and politicians, which at least have the advantage of being situated more precisely in the chronology. In 354, Demosthenes beseeches his fellow citizens to shoulder a financial burden and makes it clear that the Athenians had nothing to fear from the Great King:

Nor is there, as it appears to me, any ground for what some persons fear, that, having money, he will collect a large body of mercenaries. I do indeed believe, that against Egypt and Orontes, and any other barbarians, many of the Greeks would be willing to serve in his pay. . . . Against Greece, however, I do not believe that any Grecian would march. For whither could he betake himself afterwards? Go to Phrygia and be a slave? (*Sym.* 31–32♦)

In an oration delivered in 352, this same orator strongly opposed a decree issued by Aristocrates, who had proposed protective measures that would be to the advantage of Charidemus, the head of the mercenaries. On this occasion, Demosthenes recalled several recent deeds of Charidemus, who, he writes, had hired his services to Mentor and Memnon, brother-in-law of Artabazus, who himself had just been captured by Autophradates. Later, the mercenary leader received a safe-conduct pass from the satrap, permitting him to cross into Chersonesus in Thrace (*C. Arist.* 154–59). The following year (351–350), Demosthenes made a resounding plea for Athens' intervention on behalf of Rhodian democrats who had been banished from their city on Mausolus's initiative. By doing so, the orator claimed, he opposed those who, nevertheless, "counseled the republic to turn to the Egyptians for aid against the king of Persia" (*Lib. Rhod.* §5); he recalls that "Once, O Athenians, you sent Timotheus out to assist Ariobarzanes" (cf. also Isocrates, *Ech.* 111):

Timotheus, seeing that Ariobarzanes had openly revolted from the king, and that Samos was garrisoned by Cyprothemis, under the appointment of Tigranes, the king's deputy (*hyparkhos*), renounced the intention of assisting Ariobarzanes, but invested the island with his forces and delivered it. And to this day there has been no war against you on that account. (*Lib. Rhod.* §§9–10♦)

What can we make of these brief allusions? First of all, we note that they extend the time of troubles considerably. In turn, this chronology (correlated in Demosthenes and Isocrates with the ongoing Egyptian secession) again accentuates the impression, implicit in Diodorus, that the central authority in the western provinces was deeply and permanently disorganized. The impression is also reinforced by the use of the word *basileia* 'kingdom' to describe Ariobarzanes' power in Phrygia (Diodorus XV.90.3) and by a comparison between two of Isocrates' discourses—one from 380 (*Paneg.* 161), the other from 347 (*Phil.* 100–101; cf. p. 683). As in Diodorus in 361, the entire Mediterranean region seems to have been united in rebellion for nearly the entire fourth century. But the orators' insistence seems suspicious, since the goal of their argument was precisely to demonstrate to their hearers (*ekklēsia*) and correspondents (Philip II) that the Great King was merely a paper tiger. To accomplish this, they did not even hesitate to contradict themselves within a few paragraphs (Demosthenes, *Sym.* 3–9 and 29–32) or within a few years: in 347, Isocrates praised Artaxerxes II's reign to the skies, at least in comparison with the reign of his successor (*Phil.* 99–100); in 380, he had ridiculed it (*Paneg.* 138–66). Even if we separate these discourses from the ideological current that bears them along, they provide very few precise details—very few details, at any rate, that can easily be integrated into a framework that could be constructed independently. The fact is that the references (in Demosthenes in particular) are merely incidental and accidental, offering nothing more than a few names and a few hints as to how the Greek politicians envisaged the possible consequences of the occasional interventions of some of their *strategoī* and/or mercenary chiefs in the internal affairs of the Achaemenid Empire.

There are also two Greek inscriptions that very indirectly allude to satraps. One (found at Argos and now lost) comprises the statement of several Greek states that had just agreed to a common peace (*koinē eirēnē*). The parties affirm that a state of war did not exist between them and the Great King and that, if he meant them no ill, they would remain at peace with him; on the other hand, if the king or anyone coming from his territories (*ek tēs ekeinou khōras*) were to march against the Hellenes, they would organize a common defense. The broken beginning of the text includes (perhaps) a reference to an envoy who came from the satraps' side ([*para t]ōn satrapōn*; Tod no. 145). Additionally, an Athenian inscription, unfortunately perennially burdened by arguments about establishing the text itself and its chronology, refers to the granting of honors (including citizenship) to Orontes because he had sold wheat to Athenian *strategoī* following an exchange of ambassadors and negotiations (IG II² 207). This decree provides fodder for the debate on the satrapal duties of Orontes in Mysia, but the connection with the story of his revolt is tenuous: there is nothing to indicate either that by issuing the decree Athens was exhibiting any sort of military alliance with Persia, or that the sale of wheat to the city clearly illustrates secessionist tendencies on the part of the satrap. The first decree cited here (whose authenticity has sometimes been doubted) first of all shows that the Greek cities were very anxious to prove their eagerness for the common peace renewed under the aegis of the Great King; the beginning of the text especially seems to confirm that there was a *koinopraxia* ('joint enterprise') between satraps at this date, as Diodorus mentions in his catalogue (XV.90.3). But because the stone was broken at the top, the date of the decree, the restoration of the text (*para* or *peri*?), and the subsequent interpretations are themselves largely based on Diodorus's text—which removes considerable weight from the pile of evidence thus constructed!

The outcome of the foregoing investigation, we can see, is not very encouraging: the Classical sources are sparse and allusive and are not interested in the internal history of the Achaemenid Empire. There is one apparently more informative text (Diodorus), but its structure and typology make the historian highly suspicious. There are two allusive Greek inscriptions, but their readings are very uncertain and so is their date. Finally, there are no Achaemenid sources at all, apart from a large number of coins minted by *strategoï* and satraps, and whether these individuals were revolutionary most often remains to be demonstrated. Moreover, the chronology of the activities can never be reconstructed with complete certainty. Indeed, what good are proposals regarding chains of causality if the actual order of events cannot be established? It is thus quite understandable that major disagreements among historians remain regarding the development, breadth, and purposes of the revolt (or better: the revolts).

Schematically, we can consider this in terms of two opposing views—one maximalist, one minimalist. The former tends to present the rebellions as a vast unified movement that had an ultimate goal of raising a frontal assault on the power of Artaxerxes and perhaps even marching on Babylonia to destroy him. In addition to Diodorus, the proponents of this theory appeal to Trogus Pompeius (*Prol. X*) and Polyaeus (VII.21.3). Trogus Pompeius states that Artaxerxes II defeated Orontes in Syria; Polyaeus says that Datames marched beyond the Euphrates during his war against the Great King. If we postulate that all of these offensives (and the Egyptian rebellion) are organically connected, we get the impression that Artaxerxes' authority was threatened in its very own strongholds. A few years ago, however, dissenting views were expressed, and these tend to reduce (sometimes drastically) the various revolts and rebellions to localized affairs that never really threatened the Great King. Both views run into difficult chronological problems, not to mention the fragility of arguments based on evidence that is not only heterogeneous and anecdotal but also puts far too much stock in the Greek portrayals (the quasi-structural weakness of Achaemenid evidence) and in the self-interest of the Greek states (which were peripherally involved in the quarrels in Asia Minor). All this is as good as to say that the following discussion traffics more in the wealth of our ignorance than in the poverty of our certainty.

The Initial Revolts: Datames

The career of Datames marvelously illustrates the breadth and complexity of the historical and chronological arguments. Let us recall first of all that Diodorus does not list him among the satraps and *strategoï* who reached agreement on a treaty of cooperation (XV.90.3). He discusses Datames in a separate chapter, implying quite clearly that his rebellion occurred while the traitorous satraps were busy polishing their weapons (91.2)—that is, during the 360s. Diodorus's purpose is not to offer a connected narrative of events, but simply to give other examples of treason that embellished the revolts (91.1–2). Thus he reports that a royal *strategos*, Artabazus, penetrated into Cappadocia, where Datames was satrap; despite being betrayed by his father-in-law, Mithrobarzanes, Datames was victorious (91.2–6). On the rest of Datames' career, Diodorus is laconic to a fault: "As for Datames, though even before this he was admired for his generalship, at that time he won far greater acclaim for both his courage and his sagacity in the art of war; but King Artaxerxes, when he learned about Datames' exploit as a general, because he was impatient to be rid of him, instigated his assassination" (91.7♦).

Mithrobarzanes' betrayal and Datames' end are also found in the biography by Nepos, who offers a more detailed story of the background of the satrap and the first part of his dazzling career (§1–3.4). After his victory over Thuys of Paphlagonia (in the 380s), Datames was sent to Acre in company with Pharnabazus and Tithraustes, who were then readying the Egyptian expeditionary force; then, after the recall of Pharnabazus (certainly after the defeat in 374), Datames was placed at the head of the army (§3.5). At this point, the king ordered him to bring an end to the disorders caused by Aspis of Cataonia. After he was successful, he returned to Acre (§4–5.1). This, Nepos says, is when the rupture with the Great King took place: Datames was warned by his friend Pandantes, the “keeper of the royal treasury,” of a plot by courtiers, so he “determined to leave the king’s service” (*descicere a rege*) without letting anything betray his intentions. He left with his entire household for Cappadocia, and “then he secretly (*clam*) came to an understanding (*amicitia*) with Ariobarzanes” (5.6♦). Then comes the tale of his father-in-law Mithrobarzanes’ betrayal—not during a war against Artabazus but in a battle against some Pisidians (§6). His oldest son Sysinas soon abandoned him and switched to Artaxerxes’ side, and Datames found himself under attack by Autophradates, who had received orders from the king to deal with Datames but, finding himself unable to win, made a truce with Datames (§§7–8). A story of new betrayals follows (§9), the last of them planned by Mithradates, son of Ariobarzanes, who at the king’s command enticed Datames into a trap and killed him (§§10–11).

As we have already stressed several times, the biography by Nepos must not be taken at face value. Nepos (just like Diodorus) was eager to extol the worth and the virtues of his hero and built his tale on a series of repetitive motifs: Datames’ strategic brilliance, the king’s ingratitude, and a series of betrayals (his father-in-law; his oldest son). Veracity and historic coherence count for little. From author to author, the chronology and the characters vary, and this is why serious doubts have been raised about the conditions and chronology of the revolt. According to Nepos, the revolt took place (but secretly) at the end of the 370s—that is, at a date much earlier than that fixed by Diodorus for the general conflagration and the royal armies’ campaigns against Datames. Nepos’s only explanation for Datames’ defection is quite surprising: when he was at the zenith of royal favor, the announcement of a courtiers’ conspiracy was all it took for him to decide to make the break, because he was afraid that a setback in Egypt would alienate Artaxerxes’ favor.

That Datames was considered a rebel by the court can scarcely be doubted. But when, and under what conditions? According to Nepos, a secret treaty was first concluded with Ariobarzanes, satrap of Hellepontine Phrygia. However, nothing indicates that Ariobarzanes had declared his independence from the Great King as early as the 370s. It seems instead that it was the subsequent accusations of his son Sysinas that persuaded the Great King (§7.1), who then ordered Autophradates, the satrap of Sardis, to move against the rebel (§§7.1–8.5). If we date the campaign to approximately 367, it is rather difficult to elucidate the nature of the relationships that had previously maintained Datames’ loyalty to the central authority. The paucity and contradictory nature of the information make perfectly contradictory interpretations possible. We could suppose, for example, that his campaign against the Pisidians (*Dat.* 6)—or, more precisely, against unidentified groups of Pisidians (cf. §6.1)—related to periodic Achaemenid army sallies against a traditionally unstable people; but it *might* also clearly reflect a

rebel's desire to enlist Pisidians in his service (cf. §4.4). Furthermore, several anecdotes and coins imply that there were campaigns in northern Asia Minor (Sinope, Amisus) at a date that is very hard to pin down. Polyaeus records an interesting anecdote: while he was besieging Sinope, Datames received a letter from Artaxerxes ordering him to call off the operation. He immediately "made obeisance before the letter and offered the sacrifice usually offered for good news" (VII.21.5). One is tempted to see this as proof of the satrap's loyalty, as a perspective exactly opposite the one that Nepos presents—as long as Artaxerxes' letter does not point to Datames' rebellion-in-progress and the satrap's obeisance before the royal letter is not simply mockery! We also know that Datames was not afraid to seize even the wealth of Cappadocian sanctuaries in order to finance his campaign (Polyaeus VII.21.1; Ps.-Arist., *Oecon.* II.24a). Once again, this is an episode that can support two readings. It might illustrate a banal fact—namely, a lack of cash that forced the satraps and generals to stopgap measures in order to pay their troops. But it might also be seen as proof of rebellion.

This is a good point at which to bring up an important question: what exactly is a rebel? One of the best definitions—the most forthright, in any case—is found in Nepos's text and also appears in nearly identical words in an anecdote in Polyaeus (VII.29.1). Nepos says that finally, greatly frustrated, the Great King gave Mithradates *carte blanche* to get rid of Datames. Mithradates tried to act like a rebel, because he knew that Datames was extremely wary. So Mithradates adopted attitudes and made decisions that would advertise his open break with the king:

Mithridates prepared his forces and made friends (*amicitia*) with Datames without meeting him. He then began to raid the king's provinces (*regis provincias vexat*), and storm his fortresses (*castella expugnat*), gaining a great amount of booty (*magnus praedas capit*), of which he divided a part among his soldiers and sent a part to Datames; he likewise handed over several fortresses (*castella*) to the Carian. By continuing this conduct for a long time he convinced Datames that he was engaged in implacable war against the king (*se infinitum adversus regem sucepisse bellum*). (§10.2–3♦)

Polyaeus similarly uses the words *phrouria basileōs/kōmai/phoroilleia*: the attacks on the royal garrisons, the villages, and the tribute proved that he was an enemy of the king (*polemios einai basilei*). Many texts, Xenophon's in particular, in fact show that a satrap's fundamental duty was to use the garrisons (*castella/phrouria*) to maintain order, and this in turn allowed the peasants (cf. *kōmai*) to work and to maintain production without being subjected to raids (cf. *praedae/leia*), so that they would be able to pay tribute (*phoroi*). The robbing of tribute is also why Aspis of Cataonia had been pursued by the royal armies: he "even overran the regions neighbouring to Persia and carried off what was being brought to the king" (*Dat.* 4.2♦). This behavior was the opposite of the conduct of a good satrap, who would protect his country from the ravages of war (cf. Quintus Curtius III.4.5: *terra quam a populationibus vindicare debebat*). This was one of the justifications given (it appears) by Arsites in 334 to oppose the scorched-earth strategy proposed by Memnon: "He would not suffer one house to be burned belonging to his subjects" (Arrian I.12.10♦).

Clearly, this definition of "rebel" is no less partial. More generally, one was considered guilty or unworthy if one did not defer to royal orders or if one carried out a mission badly. The line between loyalty and rebellion was thus both fine and porous: it was the judgment of the king that counted, as is so clearly shown by Tiribazus's appearance

when he was criticized by Orontes, who was “envious of Tiribazus’ high position” (Diodorus XV.8.3; cf. 10–11). This example also demonstrates the role of formal accusations, which could come from local populations who were unhappy with an administrator’s demands, or from royal inspectors and delegates, or from a jealous colleague. This was how the king stayed informed regarding the progress of the provinces. In short, while Datames’ rebellion must undoubtedly be dated a few years before 361, its exact chronology and concrete circumstances remain indecipherably hazy.

The Troubles in Western Asia Minor (366–361)

Conflict also broke out in western Asia Minor before 361. According to Nepos (*Dat.* 5.6), Datames’ first ally was Ariobarzanes; Diodorus’s catalogue for 361 (p. 656 above) designates Ariobarzanes as satrap of Phrygia (XV.90.3). In truth, by then Ariobarzanes had lost the siege of Dascylium. According to Demosthenes (*Lib. Rhod.* §§9–10), he had overtly declared himself in rebellion when the Athenian Timotheus was sent to lend him a hand in 366; he also received aid from the Spartan Agesilaus. This may be the context in which Ariobarzanes, his son, and two of his Greek subordinates received Athenian citizenship. The king had sent a fleet and an army to confront the rebel; the fleet was commanded by Mausolus, the satrap-dynast of Caria, and the army was led by Autophradates, the satrap of Sardis, after his return from the fruitless expedition against Datames. Some time later, the king ordered the rebel captured, and he was crucified (364?). He seems to have been betrayed by his own son, Mithradates. We also learn that the satrapy of Dascylium passed to Artabazus, son of Pharnabazus and Apame—that is, Artaxerxes’ grandson (363–362?). One of the new satrap’s first campaigns (during his voyage to Dascylium?) was to fight Datames, without success. Meanwhile, we lose track of Ariobarzanes until he is named by Diodorus in the catalogue of rebellious satraps in 361.

Perhaps it was also in these years that Orontes began to assert his power in Mysia, in the region of Pergamum. But the sources for this are also poor. We know for sure that Orontes was satrap of Armenia in 401 and that around 384 he took part in the Cyprus campaign, and this is when he accused his colleague Tiribazus of carrying out private operations. The judgment favored Tiribazus: “The King . . . bestowed upon Tiribazus the highest honours, such as were customary. Orontes, however, he condemned as one who had fabricated a false accusation, expelled him from his list of friends, and subjected him to the utmost marks of degradation” (Diodorus XV.11.2♦). Orontes then vanishes from sight (from our sources!) until the moment when, in 361, Diodorus calls him “satrap of Mysia” (XV.90.3). Whatever authority had been conferred on him (satrap in his own right, lieutenant governor), Orontes must have been transferred from Armenia to western Asia Minor at a date unknown to us, perhaps as a repercussion of the disfavor that had befallen him after the Cyprus affair. His private activity in Mysia near Pergamum is attested in a Greek inscription (OGIS 264): the date is not given, but the person is unambiguously described as a rebel against the Great King (*apostas*). His coinage at Adramyttium and Cisthenes shows that he was enlisting mercenaries, who made it possible for him to take Cyme, despite the cavalry dispatched by Autophradates to oppose him (Polyaenus VII.14.3). Another anecdote reports him leading harassing operations near Sardis (VII.14.2). It appears that these skirmishes and offensives must be dated before 362–361; furthermore, they indicate that, despite the opposition of Autophradates and other “generals of the king” (VII.14.2), Orontes was trying to enlarge the bases of his territorial authority.

As meager and uncertain as it is, the information we can glean already gives us reason to increase our doubts about Diodorus's version. The satrapal turmoil did not burst out suddenly in 361; instead, it reflects unrest that was both endemic and localized. Furthermore, the participation of some of the rebel leaders whom Diodorus catalogues could have been temporary. We know hardly anything about Autophradates except for a badly dated passage (362–361?) in which Demosthenes (*C. Arist.* 154) mentions that, when Charidemus arrived in Asia Minor, Artabazus was taken prisoner by Autophradates and shortly afterward released—which constitutes a very feeble hint. Finally, still according to Diodorus, Orontes' revolt ended as quickly as it had begun. After collecting money to hire mercenaries (XV.91.1) and sending Rheomithres to Egypt to request money from Pharaoh Tachos (92.1), Orontes suddenly changed his plans:

He . . . proceeded to betray his trust. For suspecting that he would obtain from the King not only great rewards (*dōreai megalai*) but would also succeed to the satrapy of all the coastal region if he should deliver the rebels into the hands of the Persians, he first arrested those who brought the money and dispatched them to Artaxerxes; then afterward he delivered many of the cities and the soldiers who had been hired to the commanding officers who had been sent by the King. (91.1♦)

His example was soon followed by Rheomithres, who, when he returned from Egypt, made landfall at Leucæ with his navy:

To this city he summoned many leaders of the insurgents. These he arrested and sent in irons to Artaxerxes, and, though he himself had been an insurgent, by the favours that he conferred through his betrayal, he made his peace with the King. (92.1♦)

This behavior appears strange, to say the least. It is likely that here, as elsewhere, Diodorus has shortened the chronology to the point of caricature. Nonetheless, Orontes' surrender seems to be completely confirmed by the Pergamum Chronicle, which also mentions the death of the ex-rebel (OGIS 264). But how is this mindset to be accounted for? Could contemporary events on other fronts put us on the right track? Of course, we immediately think of Egypt, since Orontes and his group had made contact with Tachos.

The Egyptian Front

In 359, Tachos, ruler of Egypt since 361, decided to go on the offensive against the Persians (cf. Diodorus XV.90.2; Xenophon, *Ages.* 2.28). He began immense preparations (and/or completed those of his predecessors), which, according to Diodorus (XV.92.2♦), included assembling “two hundred triremes expensively adorned, ten thousand chosen mercenaries from Greece, and besides these eighty thousand Egyptian infantry.” He had sent emissaries to Athens and Sparta in order to recruit these mercenaries. Athens had little interest in breaking with the Great King and made no agreement with the pharaoh; nonetheless, it authorized Chabrias to enter into Tachos's service privately (XV.92.3; Plutarch, *Ages.* 37.5). Sparta, on the other hand, made an alliance with the pharaoh; Agesilaus hired mercenaries with the Egyptian funds and met with Tachos, accompanied by 30 advisers and 1000 Spartan hoplites (*Ages.* 36.5; Diodorus 92.2). Chabrias was placed in charge of the navy, and Agesilaus received command of the mercenaries. Tachos retained for himself general oversight of military operations (92.3), a choice that appears to have generated some friction between the two Greek *stratego*i.

Against the advice of Agesilaus (at least according to the version that puts the Spartan in a very favorable light), the pharaoh decided to launch the offensive “far afield and was

encamped near Phoenicia," while his lieutenant Nectanebo (his nephew) was ordered "to besiege the cities in Syria" (92.3-4♦). At this point, a conspiracy began to unfold back home. Tachos had left Egypt in the charge of his brother Cha-hap-imu, the father of Nectanebo. Cha-hap-imu won over to himself the soldiers that Tachos had put under his command in order "to besiege the cities in Syria" and asked Chabrias and Agesilaus to support him; Agesilaus did so, since Sparta had given him free rein. Nectanebo soon had himself named pharaoh. As a result, Tachos sought refuge with Artaxerxes II, who "not only cleared him of the charges against him but even appointed him general in the war against Egypt" (92.5♦). Diodorus places the death of Artaxerxes II (between November 359 and August 358) and the accession of his son, Ochus, under the throne name Artaxerxes III, in this time period (XV.92.3-5; 93; cf. Plutarch, *Ages.* 37.3-11); at the same time, fighting in Egypt continued, because another leader whose origin was in Mendes rose up to oppose Nectanebo. After these events, Diodorus (XV.93.2-6: note the confusion of the names Tachos and Nectanebo) and Plutarch (*Ages.* 38-40) shine the spotlight on the leading role played by their Spartan hero, Agesilaus, in Nectanebo II's victory over his rival.

Orontes and the Egyptian Front

Let us return to the problem of a possible collaboration between the Asia Minor rebels and Tachos. We may simply remark that the pharaoh agreed to supply money and ships to Rheomithres, "who had [previously] been sent by the insurgents to King Tachos in Egypt" for that purpose (XV.92.1♦) and that Rheomithres left his wife and children hostage at the pharaoh's court (Xenophon, *Cyr.* VIII.8.4). Just like his predecessors, Tachos, because he was at war with Persia, sought alliance with the Greek cities of Europe and supported those that were in revolt against the Great King with his own money (cf., e.g., Diodorus XV.9.4-5). But did he really put plans for joint action against Artaxerxes into operation? The only reference comes from a very confused passage (a resumé, actually) in the *Summaries* of the work of Trogus Pompeius (book X), indicating that "Orontes, satrap of Armenia" was among the enemies Artaxerxes II subdued, "on whom he had inflicted a defeat in Syria, after a victory over Ariobarzanes (*deinde in Syria*)."¹ The conclusion sometimes drawn from this is that Orontes actually did march south in order to join up with the pharaoh's army. The importance of the problem posed is clearly evident, since a whole series of historical inferences of the utmost importance cascades from the response one chooses: if any such plan in fact existed, the implication is that Orontes, together with other rebels, was considering nothing less than advancing against Babylon.

However, restraint seems the best policy in considering whether or not Tachos's revolt extended to Syria. We cannot state with certainty that the Egyptian offensive incited all of the Phoenician cities to revolt. We know that Athens issued a decree in honor of King Straton of Sidon during these years, thanking him for facilitating the passage of ambassadors who were traveling to the Great King (Tod no. 139). We also know that Tachos, before joining the Great King's court, had taken refuge in Sidon (cf. Xenophon, *Ages.* 2.30). None of these data permits us to state that Straton was included among the declared enemies of the Great King at this time; in contrast, a later text (Hieron. *Adv. Iovinian.* I.45) seems to state that the king of Sidon broke his treaty of alliance (*foedus*) with the Great King—thereby implying that in the era under consideration amicable relations obtained with Egypt. However, there still is Diodorus's allusion to Nectanebo's

“besieg[ing] the cities of Syria” (XV.92.4♦), by order of Tachos. It is possible that Tachos, then on the coast (*hē Phoinikē*), ordered Nectanebo to turn toward the interior (*tas poleis en tēi Syriai*), the “cities” perhaps designating Achaemenid fortresses such as Arad or Beer-sheba; but archaeological excavations have not revealed any destructions at this date. The real problem is that it is very difficult to understand what Diodorus means by the term “Syria.” Elsewhere, he speaks of “Phoenician Syria” (in which he includes Acre), which he distinguishes from “Syria” (within which he lists Joppa, Samaria, and Gaza; XIX.93.6). If we take this distinction seriously, Nectanebo’s mission would have been to subdue fortresses located on the coast in “Phoenician Syria”; but this is just a guess. All in all, however, it is clear that the little information available is flimsy and incomplete, but there is nothing to prove that the campaign by Tachos and Nectanebo put Syro-Phoenicia to fire and the sword, Diodorus notwithstanding (XV.90.3: Syrians and Phoenicians).

More than anything, the Greek tales, partial in both senses, leave us completely in the dark about a possible response from the Great King (aside from the subsequent agreement between Artaxerxes and Tachos). Diodorus does not return to the Egyptian theater until much later (during 351–350) and then only with a very vague and very suspect flashback on the perpetual inaction of Artaxerxes Ochus [III] (XVI.40.2–5). A late source (but one which there is no reason to doubt), however, briefly mentions that Ochus “made a campaign against Egypt while his father was still alive” (Syncellus, p. 486.20)—and this no doubt is the source of the error of Trogius Pompeius (*Prol. X*) or his epitomizer, who attributes the victory to Artaxerxes II. This campaign can be dated to 360 or 359, and it was obviously mounted to counter the offensive by Tachos. These are clearly the facts that Lyceas is referring to in his *Egyptian History* as well, when he writes: “The Egyptians undertook a campaign against Ochus, king of Persia, but were defeated. Their king was taken prisoner, but Ochus treated him kindly and even summoned him to dinner” (Athenaeus IV.150b–c♦). This Egyptian king is obviously Tachos, as comparison with an anecdote told by Aelian shows (VH V.1). This is probably also the context of Artaxerxes II’s demand that Athens recall Chabrias (Nepos, *Chab.* 3.1; cf. Plutarch, *Ages.* 37.4–6). Artaxerxes II thus repeated a traditional policy when confronting internal disorder in Egypt: he supported one of the competing pretenders (Tachos) against the other (Nectanebo). We may note in fact that, according to the ancient authors, the failure of Tachos’s expedition was due to internal problems in Egypt. The breadth of these problems truly must not be underestimated. The overbearing fiscal requirements imposed by Tachos in order to build up his war chest had alienated the Egyptian administrative classes and no doubt awakened the hostility of the ordinary peasants. But we could just as well ask whether the rebellion of Cha-hap-imu and his son Nectanebo was not in fact triggered by the military losses inflicted by the Persian forces of Prince Ochus.

In short, the historian is faced with an unfortunately common dilemma: having to interpret the information offered by Trogius Pompeius or to reject it pure and simple. Two answers remain theoretically possible:

(1) The mention by Trogius Pompeius is a mistake; the summarizer in haste conflated two events that Trogius Pompeius treated as successive—the demise of Orontes (in Asia Minor) and the campaign of Ochus in Syria. To justify this position, we might say that Orontes’ march appears inexplicable on the strategic level, because it would require the assumption that all the Persian leaders of Asia Minor would have come to his aid—but

there is no evidence for this. It is much simpler to imagine that the news of Tachos's difficulties convinced Orontes that the revolt had no chance of success, and that his best opportunity was to try to win the king's pardon. It is likely in any case that Orontes got his information from Rheomithres, since the "betrayals" of the two leaders were obviously coordinated.

(2) Orontes and his troops did advance toward Syria, where they arrived after the defeat and surrender of Tachos to Ochus. Orontes would then have agreed to side with Ochus. This solution has two points in its favor: first, it does not dismiss an "awkward" text; and second, it provides an explanation for Diodorus's incomprehensible passage about the treason of Orontes and Rheomithres (XV.91.1; 92.1). It is clear that Diodorus has excessively condensed the chronology. We might reconstruct the events as follows: (a) the sending of an embassy to Egypt and return of Rheomithres; (b) the defeat of Tachos becomes known; (c) Orontes and Rheomithres gather some conspirators and decide to march to the king, not to fight him but to exhibit their new-found fidelity (which would explain how they were able to pass through the breadth of Asia Minor unchallenged); (d) when they arrive in Syria, they come upon Ochus, with Tachos in his train, and pay homage to Ochus. Because Artaxerxes died between November 359 and November 358, it is possible under this theory that the encounter took place at the moment of a difficult dynastic transition and that Orontes offered his aid to Ochus (or at least that the news of the death of Artaxerxes II was precisely what led Orontes suddenly to shift his allegiance to Ochus—hence his betrayal and march to Syria to meet the prince).

While this hypothesis (which we will follow here) offers the advantage of taking Trogu Pompeius into account (by interpreting him) and "reconciling" him with Diodorus, we can see that it does not at all imply that Orontes ever considered marching on Babylonia to depose Artaxerxes II; still less does it imply that this initiative was coordinated with the plans sometimes imputed to Datames. Orontes' behavior fits well enough into the dynastic difficulties known to have surrounded the accession of Artaxerxes III Ochus (chap. 15/8 below); Orontes was among those who sided with Ochus (cf. also chap. 17/1–2).

Back to Datames

In an unknown chronological context, Polyaeus (VII.21.3) describes an offensive led by Datames across the Euphrates to pursue the war against the Great King (*epolemei megalōi basilei*). He was pursued by "a great army" and recrossed the river with difficulty before the king arrived on the east bank, quickly taking his enemies. Does this mean that Datames, at a given moment, decided to end his defensive strategy in his Cappadocian provinces and launch a vast offensive against Babylonia, which some historians think was coordinated with the grandiose plans imputed to Orontes? All the ancient authors, to be sure, stress the king's desire to be done with an adversary whom they present as superior because of his merit and strategic brilliance. But their apologetic mission dissuades us from placing blind confidence in tales that are completely devoted to hailing the virtues of the rebel and denouncing the ingratitude of the prince. There is no choice but to agree that, by itself, Polyaeus's anecdote does not license us to answer the question in the positive. Let us say that at the very least many other interpretations are possible, any of which could reduce the operations to a minor slap on the wrist with no lasting consequence.

What about the numismatic sources? In addition to the coins minted by Datames at Sinope and Amisus, a Cilician coinage usually attributed to him has been discovered—

struck with the Luvian name Tarkumawa. Some of this “karanic” coinage has no distinctive features when compared with coins of the same type struck by other Persian generals during the military preparations carried out in Cilicia between 390 and 380. Some coins, however, bear more original scenes. They show a person dressed in Iranian style, seated on a throne, his feet resting on a sort of cushion, examining an arrow and holding a bow in his hand; at the top is the disk of Ahura-Mazda (fig. 52). Another coin shows a temple and two people: one is naked and bearded and gestures toward the other, who is dressed in Greek fashion and makes a deferential gesture toward the former; the coin has an Aramaic legend that reads “Ana” or “Anu.”

Fig. 52. Coin with Aramaic inscription of the name of Tarkumuwa.

One scholar has recently proposed the following explanation: both coins illustrate Datames’ status as rebel. While the first dates to the early part of the revolt, when Datames had not yet defined his plans (hence the retention of the Persian symbols), the other hints at propaganda invoking the Babylonian god Anu, and it could be explained by the Polyaeus passage in which Datames crosses the Euphrates. The implication would be that Datames thus claimed that he would “liberate” Babylonia in the name of the god Anu.

However, this interpretation gives rise to some reservations. For one thing, the idea that the arguments derived from the Datames coin and the Polyaeus text are mutually supporting is artificial, because neither piece of evidence is unequivocal (to say the least). For another, the fact that a person in Persian clothing was represented with his own name can in no way be considered indisputable evidence of a desire for secession; the exact opposite argument could be offered with the same potential for veracity. As for the other coin: if the reading of the Aramaic epigraph is correct, the legend “Anu” is very worrisome. In fact, we know that there was a notable enhancement of the position of the god Anu in the fourth-century pantheon at Uruk, and this is particularly noticeable in personal names. But the reasons for this change remain obscure, so a logical connection with the Datames coin would be a matter for deliberation. In any case, it would be hard to explain why the satrap would have chosen a Babylonian divine symbol over that of Ahura-Mazda in a fight against Artaxerxes, given that, according to this theory, his purpose would have been to win over the Persian aristocracy. Could we say that the hypothetical modesty of his origin and his hypothetical “Luvian” underpinning (Tarkumawa) prohibited him from hoping for the assistance of the Persian nobility? But then, in the name of what common interests and on what ideological bases could he have hoped to mobilize the Babylonian population around him? It is thus better not to accord too much importance to the Polyaeus passage that “justifies” an interpretation of the numismatic evidence, which in turn is based on premises that we have just contested.

Mausolus and the Revolts

We must now say a few words about Mausolus of Caria, “who was master of many strongholds and important cities,” and whom Diodorus includes among the conspirators (XV.90.3♠). This gentleman inherited the title of satrap from his father, Hecatomnus, in

377. Mausolus's place in the Achaemenid Empire was relatively original, since he was both dynast and satrap, so that the position of satrap was transmitted within the family. However, the example is not unique; for example, the governors of Samaria also inherited their positions. Quite a few decrees issued by Carian cities (including Mylasa, the Hecatomnids' original center of power) or by the Carian *koïnon* are silent about the very existence of the Achaemenid State, while others bear a heading of the form "In year *n* of King Artaxerxes, Mausolus being satrap." These formulas express the dual nature of the prerogatives of Mausolus. This is without doubt why Mausolus, in a statement placed in his mouth, declares that he is sending gifts to the Great King in order to preserve "the ancestral power" (*patrōa arkhē*; Polyaeus VII.23.1). Could this incident refer to gifts to the Great King on the occasion of Artaxerxes III's accession, after which the king confirmed (or dismissed) the satraps and officials in their positions (cf. Diodorus XI.71.1 and Josephus, *Ant.* XI.185)?

Mausolus was also probably striving to enhance his own power and prestige, while maintaining Achaemenid order. This is demonstrated particularly well by the transfer of his capital to Halicarnassus, where he created a genuine court that followed the model of satrapal courts and adorned it with sumptuous monuments on which Greek, Anatolian, and Achaemenid traditions mingle. It is also evidenced by external initiatives that brought him up against nearby islands and cities, at dates that are poorly known. But the information we possess on the external activities of the satraps of Sardis and Dascylium does not allow us to say that Mausolus's behavior was essentially idiosyncratic, much less that the satrap of Halicarnassus exhibited separatist tendencies by carrying on these activities, because his ambitions could (at least in certain cases) mesh perfectly with Achaemenid interests. After all, was not the traditional mission of the satraps to enlarge the royal territories (cf. Herodotus III.120; V.31)? Despite the way that the fourth-century Greek authors frequently present their information, Mausolus was certainly not an independent dynast. We have only sparse information on his activities as satrap, but it at least shows that he was trusted by the central authority to maintain order in Caria; he furnished ships and military units and collected and transmitted tribute and other taxes (cf. *Ps.-Arist., Oec.* II.14d) and even maintained royal roads (II.14b). He also levied taxes within the satrapal jurisdiction, comparable to satrapal imposts, such as the required gifts that the inhabitants of countries crossed by the caravan of the satrap or of one of his subordinates had to provide (II.14a; cf. Polyaeus VII.23.2). Many of the anecdotes found in the *Economics* illustrate Mausolus's legendary fiscal rigor (*Oec.* II.14; cf. Polyaeus VII.23.1). This is the context of several anecdotes that attest (though poorly) to his relations with the central administration. For example, he received an order from the king to send a tax (gift) in kind (II.14d); he tapped the richest of his friends and ordered that all of these collections be sent to the Great King (Polyaeus VII.23.1). More precise details are found in an epigraphic text dated to his successor, Pixodarus. The inhabitants of Platasa (in Caria) granted a tax exemption to one Dion and his descendants; the decree states that this exemption pertained only to civic taxes—Dion and his descendants still had to pay the royal taxes (*basilika telē*; *BE* 1973, no. 408); this datum is confirmed by other decrees. Like any satrapy, Caria was thus obligated to pay tribute, gifts, and a string of other taxes, piled on top of the city taxes, and it was obviously Mausolus and his successors who were required to pass on the sum to the royal administration.

We can single out from the epigraphic record a most interesting decree from Mylasa, dated to year 39 of Artaxerxes (367–366). It says:

Whereas, Arlissis, son of Thyssolos, having been sent to the king by the Carians, was convicted of breach of trust (*parapresbeuse*) during his embassy; and whereas he conspired (*ephebouleuse*) against Mausolus, who is himself a benefactor of the city of the Mylasians just like his father Hecatomnus and his ancestors; and whereas the king adjudged Arlissis guilty (*adikein*) and condemned him to death; whereas the city looks after his possessions, according to the traditional laws (*kata tous nomous tous patrious*); having allocated them to Mausolus, they called down curses on their subject: that nothing be suggested and said aloud running to the contrary; if anyone violates this, he shall be put to death, he and his. (Tod 138.1)

We do not know the substance of the charges brought against Mausolus; there is nothing to prove that the satrap could have been accused of rebellion at this date, even if Arlissis felt that he could bring accusations of this sort in so sensitive a sphere. It must have been an internal affair, perhaps related to Mausolus's fiscal concerns. There are other texts (Tod no. 138.2–3) that refer to such conspiracies, in which the guilty are regularly condemned and their property confiscated. What is more interesting about the Arlissis affair is the illustration of relationships among several spheres of power: the satrap-dynast, the *koinon* of the Carians (who sent the embassy to Artaxerxes), the city of Mylasa (which made the decision), and the Great King. It is especially noteworthy that it was Artaxerxes who condemned Arlissis, probably reversing an earlier judgment in which the accusations brought by the informer had been judged legitimate. The role of the Mylasa assembly, which no doubt was closely controlled by Mausolus, was simply to record the king's sentence and to issue a further penalty (confiscation of goods), which was purely local in nature. This latter penalty did not fall under the purview of the central authority, which had no particular acquaintance with specifically Carian institutional behavior. The new trial entered into at Mylasa includes an accusation of *parapresbeia*, an accusation that was quite common in the Greek cities: they frequently condemned ambassadors sent to the court of the Great King, who agreed to accept gifts, following Achaemenid custom (Aelian, *VH* I.22)—which upon their return were considered bribes. For all these reasons, the text fits perfectly into the ample record of relations involving judicial jurisdictions between the central authority and the subject communities.

However, there is no choice but to recognize that no evidence explicitly confirms Diodorus's statements about Mausolus's active participation in the revolts. Altogether, we have just a few sentences in the *Agesilaus* of Xenophon (2.26–27). There we learn (1) that, during the campaign against Ariobarzanes in 366, Autophradates was assisted by Mausolus's navy—a matter of cooperation between land and sea forces—as previously was the case in 391 during operations against Cyprus (Hecatomnus and Autophradates); and (2) that the sieges of Assos and Sestos were carried out jointly by their troops. It is thus clear that in this situation Mausolus was acting alongside loyalist forces in the context of a mission that was maintaining imperial order. The sequel to the passage is more obscure, in regard to both the text itself and its interpretation. Mausolus abandoned the siege of Assos and Sestos, at the urging of Agesilaus (an ally of Ariobarzanes) and after taking money from both parties; then he gave funds to the Spartans; last, Tachos and Mausolus organized the return of Agesilaus with great pomp. Without going into this point in detail, we may simply note that any triangular relationship among Mausolus, Tachos, and Agesilaus that might be posited raises virtually insoluble chronological problems.

Let us try to collect the points that are more or less reliable: (1) no indisputable evidence can be detected of a supposed secessionist mindset in Mausolus's acts and

initiatives; (2) on the contrary, we observe that the only action in which we see him take part was directed against the rebel Ariobarzanes, in close cooperation with the royal forces (into which the Carian contingents are integrated); (3) the Arlissis affair shows that, even in Caria itself, there were many enemies who were ready to criticize Mausolus to the Great King; it also eloquently shows that adroit, unscrupulous accusers could hurl accusations at satraps for debatable motives, and the king had to make a decision based on his inner convictions.

From Caria to Lycia

Diodorus also counts the Lycians among the coastal peoples in rebellion, a fact that to some extent recalls a categorical declaration made by Isocrates in 380, in one of his many digressions on the weakness of the Achaemenid Empire: "Lycia no Persian has ever subdued" (*ekratēsen*; *Paneg.* 161♦). However, the fact that Diodorus and Isocrates concur grants no authority to their common interpretation. To be able to make a judgment, we need to go back several decades, in order to situate this brief period in the *longue durée* of Lycian history and in the context of its relations with Persian might after the end of Darius II's reign (see chap. 14/8).

At that time, Lycia was fragmented among a large number of dynasts. But as in previous periods, one can glimpse attempts at hegemony on the part of some of them. The beginnings of a dynast called Pericles (we do not know his Lycian name) date to around 380; he sought to enlarge his territory after setting out from his base at Limyra in eastern Lycia. He was well enough known that Theopompus thought it worthwhile to devote a passage to him in the twelfth book of his *History*, of which we have the following summary: "The Lycians, under the leadership of their king (*basileus*) Pericles, made war on Telmessos and did not cease fighting until they had surrounded its inhabitants within their walls and forced them to negotiate" (*homologia*; *FGrH* 115 F103). Pericles quickly succeeded in building himself a well-organized little principality, as is confirmed by the rock-cut necropolises and the ruins of his residence at Limyra, which magnificently dominated the sea (fig. 54). Moreover, the royal titles accorded him by Theopompus are confirmed by a Greek inscription recently found at the site: it states that "Pericles, who reigns over Lycia (*Lykias b[asileuōn]*), raised an altar in honor of Zeus Hypatos, son of Chronos and Rhea."

It seems quite likely that the urbanization program and the boastful declarations of Pericles were meant to respond to the accomplishments of the Xanthus dynasts who had always held a privileged place in Lycian politics after the Persian conquest. The particularly rich Xanthus documentation reflects both internal troubles and the radiance of the Xanthian principality between 400 and 360. The Pillar Inscription is traditionally dated to ca. 400, and its authorship is attributed to Kheriga. Although the Lycian text has still not been fully deciphered, parallel Greek texts provide a wealth of information. One of the pillar's inscriptions celebrates the valor in combat and exploits in war of Gergis/Kheriga, son of Harpagus, of the lineage of Karikas: "He conquered many acropolises and gave his relatives (*syggeneis*) a share in his royal domain." This last formula and the inscriptions of his successor, Arbinas, actually show that instability was the norm, encouraged by the practice of distributing the domain of a decedent among the members of the family. Arbinas/Erbina, who presents himself as the son of Kheriga, claims that he had to conquer Xanthus itself in his youth, as well as Pinara and Telmessus. Another

53b

monument “recalls [how] he established his power over [Lycia] . . . spreading fear among the Lycian masses and imposing himself as master over them (*etyraunēi*)”; the rest of the inscription celebrates his intellectual, moral, and physical virtues.

Kheriga was almost certainly responsible for the erection of the monument to the Nereids [daughters of the sea god]. Without once more describing in detail the iconographic composition of this remarkable structure, we will stress its obvious thematic unity, which illustrates dynastic ideology very well. While the Greek imprint is obvious in the iconography, as in the inscriptions on the same edifice, we may also note the significance of themes dependent on Persepolis specifically and on Achaemenid court art generally, including audience scenes, hunting scenes, banquets, gift-bearing, and war and siege (fig. 53a–d). These last-mentioned images seem to depict visually the dynast’s

53c

53d

written assertions. In order to exalt his power, the Xanthian dynast simultaneously summoned the Greek gods, memories of the Persian Wars (repetition of an epigram in honor of the victory at the Eurymedon), and the pageantry of the scenes shown in Persian reliefs and seals. The monument can be dated to approximately 390–380—that is, a period shortly before Pericles began to consolidate his power at Limyra and started to publicize his own glory, using themes and methods parallel to those used by Arbinas at Xanthus. Furthermore, the two men were certain to clash: according to Theopompus, Pericles conquered Telmessus, the very town Arbinas had taken at the beginning of his reign. Both wanted to be proclaimed king of the Lycians. In a way, their rivalry can be compared to the hectic competition that, at almost the same time and not far from Lycia, made rivals of Straton of Sidon and Nicocles of Paphos, each desperate to outdo the other in the splendor and brilliance of life at their court. Contrary to Theopompus's claim (apud Athenaeus XII.531a–e; Aelian, *VH* VII.2), this *tryphē* was not simply luxury and pleasure; it was first and foremost the image of power that these kinglets could outwardly show by exhibiting a symbolism of power that was strongly inspired by the ideological and iconographic codes that regulated the court of the Great King. However, from another perspective, as we have already said, the many thoughtful borrowings from Achaemenid court art do not necessarily imply that the dynasts were thus acknowledging their submission to satrapal authority. It is in fact tricky to establish a sound political connection on the basis of an iconographic program; the dynasts of Xanthus and Limyra primarily were anxious to exalt their dominant position in Lycia. We will simply note that the dynast of Xanthus was far from attempting to flatter the Persians by implicitly referring to the victory at the Eurymedon (to his own benefit). It is true that the poem was written by a Greek, Symmachus of Pellana, but he certainly must have submitted the text to his patron in advance! Anyway, as with the coins, one of the problems is the identification of the people who appear, for example, in the audience scenes (fig. 53a): the satrap or the dynast?

Fortunately, another Xanthian monument, the sarcophagus of Payava (so-called by the name of its Lycian occupant), relieves part of the difficulty. The Persian borrowings are significant once again, and they are particularly obvious in an audience scene: several people dressed in Greek style appear before a dignitary, who wears Persian clothing and appurtenances (kandys, *akinakēs*, tiara, beard); and two other people stand behind him. On the lid's ridge, a Lycian inscription names "Autophradates, Persian satrap," and describes the delivery of an object(?) to a person whose name is missing but who could not be anyone other than Payava; either he or the other person appears to have "captured a Lycian general" (?) (TL 40). The presence of Autophradates at Xanthus is not surprising on an institutional level, because Lycia was a dependency of the satrap of Sardis at that time, and another funerary inscription (of Phellos) is dated by the phrase "under the command(?) of Autophradates" (TL 61). It is nonetheless highly noteworthy to see Autophradates represented on a Lycian monument, which implies that Payava was his dependent (he probably was the dynast of Xanthus at the time). We get the impression that the sarcophagus scene depicts one of the ceremonies surrounding the arrival of a satrap in his province. But what is the date of the scene: before, during, or after the revolts? Study of the sarcophagus itself does not allow us to date it more precisely than from about 370 to about 350. Does the evidence lead us to make a distinction (ensured many times over by other evidence through the years) between western

Fig. 54. Parade on Pericles' monument at Limyra.

Lycia (loyal to or reconquered by the Persians) and a central and eastern Lycia (ruled by a dynast in open revolt, who would be Pericles)?

A number of commentators have answered this question in the affirmative, even suggesting that there was cooperation between Pericles and Datames. But the fragmentary and poorly-dated record authorizes no such inference. We may note first (but without provable connections with the events we are trying to analyze here) that texts from the time of Alexander suggest that the Persians campaigned in Lycia at about this time and took prisoners, some of whom were deported to Persepolis (Diodorus XVII.68.5; Plutarch, *Alex.* 37.1; Polyaeus IV.3.26; chap. 16/12). We will next recall that Theopompus mentions an attack on Telmessus by Pericles, which assumes that there was a war against the Xanthus dynasty, seeing that Arbinas considered Telmessus within his domain. In addition, Pericles' territorial expansion is confirmed by inscriptions found at several sites in central and eastern Lycia. An inscription from Limyra refers to Pericles' victory over one Artumpara, whose coins have been found at several Lycian sites; but we cannot establish with certainty his (possible) relationship with Autophradates. The handful of solid evidence instead gives an impression only of alluding to squabbles between Lycian dynasts, with no dependable connection with the Satraps' Revolt, even if we might make the suggestion that the Revolt could have provided some advantage to the dynasts. The chronological doubts, in any case, do not allow us to deduce that Autophradates directly intervened (even though they do not exclude this possibility, either). A recently published inscription has even brought into question the role usually attributed to Pericles. It shows that, after his death, his family and descendants continued to occupy a position of great prestige in Limyra, an obvious sign that his power had not been destroyed. All by itself, this text wipes out any theories that might have been constructed regarding the fate reserved by the Great King for a dynast guilty of rebellion.

A Summary of the Discussion

While we cannot forget the persistent uncertainties that have been pointed out all along the way, we can at least state with certainty that Diodorus's thesis is not confirmed by the rest of the evidence. We are not dealing with a general, coordinated conflagration on the western front in 361 but rather with a series of limited local revolts over the course of a decade. Despite the motives attributed to Orontes and Datames, there is no evidence that the satraps ever planned to unite their forces with the Egyptians' in an attempt to dethrone Artaxerxes II. In any case, if any plans for united action ever existed over the long term and distance, they were never put into practice. If Orontes ever really was acknowledged as *strategos* of a coalition, we never see him at the head of a united army confronting the king's army. It is nonetheless quite striking to observe that the only military operations mentioned are in Aeolis and the Troad, on the one hand, and in the regions bordering Datames, on the other. In northwestern Asia Minor, the unrest may belong in the context of the long history of conflict between Sardis and Dascylium. We often see the Persian leaders of Asia Minor at each other's throats—hardly ever cooperating, except during the loyalist campaign of Autophradates and Mausohus. Datames himself also engaged in individual operations, apart from an agreement with Ariobarzanes—but we can only guess at its duration and practical effectiveness. The only royal army seen operating in the west is the force that Prince Oechus led to victory over Tachos in the last months of his father's reign. Given the information that reached Artaxerxes from Asia Minor, he, as best we can judge, believed that the forces of his loyal satraps were sufficient to calm any unrest.

The end of the earlier revolt of Pissuthnes, as reported by Ctesias (§52), is quite significant. He was betrayed by the head of the mercenaries who fought by his side, an Athenian named Lycon: "He also received towns and lands as the reward for his betrayal." In fact, this example is not unique. We again must emphasize the frequency of the theme of betrayal in the ancient sources. The case of Datames is particularly noteworthy because he suffered successive betrayals by his father-in-law, his oldest son, many of his companions, and finally by Mithradates, who pretended to join the rebellion, the better to betray him. But his case was not isolated, because Ariobarzanes himself was betrayed by his son, and Orontes and Rheomithres themselves surrendered and turned over many conspirators to the royal officials. Mistrust of other Persian leaders certainly appears to have been common to all of the protagonists. It would be a mistake to consider the theme nothing but a moralizing *topos*, whatever the intentions of the Classical authors may have been. The motives imputed to Orontes and Rheomithres are very clear: the former desired "great rewards" from the king (in particular, an extensive jurisdiction); the latter wanted "to ma[k]e his peace with the King" (Diodorus XV.91.1; ⚡ 92.1⚡). In other words, the Persians continued to frame their activities within the ideological structure of the system of royal loyalty/favor that so many texts evidence throughout Achaemenid history (see chaps. 8, 17/2).

Is it necessary to state that these remarks are not intended to deny the existence of rebellions? The problem is to interpret rebellions in relation to the Great King's territorial dominion. From this point of view, the situation is twofold. On one side, we stress once more that the Persians, despite the King's determination and great preparations, proved incapable of retaking the Nile Valley; moreover, at one point, the pharaoh even took the offensive. This inability is difficult to understand: though the theory of Persian military

decadence is hardly tenable (see chap. 17/3), we can emphasize the insufficiency of Persian territorial control. Already in the previous century the Persians did not seem to have genuine control of the Delta in its entirety (see chap. 14/2); in addition, Hakoris's power, which was based both in Egypt and in a network of alliances, forced the satrapal armies to fight on various fronts at the same time. On the other side, it seems difficult to assert that the satrapal revolts attested in Asia Minor illustrate a deep and irreversible degradation of the control that the central authority exercised over the governors. This was not the first time, after all, that discontented satraps took up arms: let us recall, for example, the (hypothetical) revolt of Megabyzus (see chap. 14/3), or the revolts of Arsites (Ctesias §50), Pissuthnes (Ctesias §52), and then his son Amorges. None of these occasional revolts constituted any great threat to Artaxerxes I or Darius II, despite the external assistance they sometimes received (for example, the Athenians' support of Amorges). Contrary to an interpretation that would see Orontes as the image of a new Cyrus the Younger, he did not, properly speaking, endanger either Artaxerxes or the Achaemenid dynasty; there was in fact no alternative to Achaemenid dynastic continuity. Nor do we see one or another Persian rebel ever endangering the imperial structures by attempting, for example, to found a private principality, let alone an independent kingdom—contrary to the impression that the vocabulary (*basileia*) used by Diodorus might create (speaking of Hellenistic Phrygia; XV.90.3); he was obviously anticipating the situation in the Hellenistic period (cf. XVI.90.2; XX.111.4; XXXI.19.1–5). In short, as well as they can be reconstructed, the events of the 360s provide evidence of the symptoms of imperial instability (the satrapal revolts and the offensive of Tachos of Egypt), their limited and contradictory nature (the internal collapse of the revolts; dynastic squabbling in Egypt), and the intact capacity of the center to overcome these changes through offensives that were military (victories of Ochus in Syria) or political (defections to Ochus and Artaxerxes II).

8. At the Heart of Power

In the Royal Residences

As we have stressed several times, the focus of attention on affairs on the western front in the preceding pages (as in the previous chapter) is not the author's choice: it derives from the nature of the evidence. Furthermore, dealing with revolts, insurrections, and reconquests constitutes one of several touchstones that exposed the functional capabilities of imperial structures. We would like, nonetheless, to be able to carry out an equally detailed inquiry into the heart of the Empire.

Once again, it is royal building projects on which we are best informed. We know that Artaxerxes II had an apadana built at Ecbatana (*A²Ha–b–c*). He was probably also the builder of a new Achaemenid palace in Babylon. But it was at Susa that his activity is most certain. We know that he rebuilt Darius I's apadana, which had perished in flames during the reign of Artaxerxes I (*A²Sa*). Even more important, excavations and inscriptions prove that he built a new palace, below the terrace, on the banks of the Shaur (*A²Sd*). Neither the building nor the decoration of any palace can be attributed to him at Persepolis. On the other hand, he was the first to build his tomb above the terrace, and he was followed in this by his successor. These are the tombs to which Diodorus Siculus refers (XVII.71.7). Unfortunately, we do not know all of the reasons that led Artaxerxes II to abandon the site near Naqš-i Rostam. The king's decision at least illustrates the fact

that, alongside Pasargadae, Persepolis endured as a dynamic capital of the Empire. At any rate, we may note, by way of anticipation, that Artaxerxes III continued to carry out the work of his predecessors there (A³Pa, Pb): he added a western stairway to Darius's palace, selectively reusing the reliefs of gift-bearers.

Artaxerxes II, Mithra, and Anāhita: Sources and Problems

Like his predecessors, Artaxerxes II consistently invoked Ahura-Mazda—for example, by repeating the formulas of Darius I (A²Hc, 15–20). But more noteworthy is the fact that he invokes the great god of the dynasty jointly with Anāhita and Mithra in several of his statements (A²Sa, Sb, Sd, A²Ha). For the first time, the “other gods” invoked anonymously by Darius I and his successors are explicitly named. The historical significance of this innovation has been continuously investigated. Traditionally—and not unreasonably—one of Artaxerxes II's edicts is cited; Berossus mentions this edict and its gist has been transmitted by a late author (Clement of Alexandria; *FGrH* 680 F11). After recalling that the Persians and Medes did not pay homage to statues of wood or stone, Berossus says:

Later, however, after many years they began to worship statues (*agalмата sehein*) in human form. . . . Artaxerxes, the son of Darius, the son of Oclus, introduced this practice. He was the first to set up (*anastēsas*) an image of Aphrodite Anaitis in Babylon and to require such worship (*sehein*) from the Susians, Ecbatanians, Persians [Persepolis] and Bactrians [Balkh] and from Damascus and Sardis. (§5.2⇨)

This text—which certainly derives from an official source—without doubt pertains to a role that traditionally belonged to the Great King: regulator of Persian worship. This said, serious problems of interpretation remain. The royal inscriptions themselves are not unambiguous: the formulas can differ from one inscription to the next. Ahura-Mazda continues to occupy first place, especially in the inscription that refers to building the new palace at Susa (A²Sd⇨): “By the favor of Ahuramazda this is the palace which I built. . . . May Ahuramazda, Anaitis, and Mithras protect me from all evil . . .”; it is said rather differently in the inscription describing the reconstruction of the apadana of Darius I at Susa: “By the favor of Ahuramazda, Anaitis, and Mithras, this palace I (re)built” (A²Sa⇨; cf. A²Ha).

However, why does the sole inscription of his successor at Persepolis read simply: “Me may Ahuramazda and the god Mithras (*Mithra бага*) protect, and this country, and what was built by me” (A³Pa⇨)? Why is Anāhita no longer mentioned? And why does Berossus say not a word about Mithra? The “omission” of Mithra seems even more odd because it is solely in regard to the public worship of Mithra that we have any corroborative information. We know from Strabo (XI.14.9) that, during the Achaemenid era, the satrap of Armenia had to send 20,000 colts each year to the Great King at the time of the *Mithriaka*, that is, the official celebrations in honor of Mithra. Some passages in Xenophon show that this practice was in effect at least beginning with the time of Artaxerxes II, because each village in Armenia yearly had to send colts as royal *dasmos* (*Anab.* IV.5.24) and that (some of?) these colts were dedicated to the Sun (IV.5.35). We also learn of these official festivals in honor of Mithra from Duris, who stresses the central role played by the king (Athenaeus X.434e). Most Classical references to Mithra date approximately to the reign of Artaxerxes II (e.g., Xenophon, *Oec.* IV.24; Plutarch, *Art.* 4.5; Aelian, *VH* I.33). But does this necessarily imply that there was a close chronological

connection to the change in royal formulae that appears at the time of Artaxerxes II? Nothing could be less certain.

Behind these questions lurks a basic problem, already posed by Plutarch's well-known text on the enthronement of Artaxerxes II at Pasargadae in a temple dedicated to Anāhita, here called "warlike goddess" (*Art.* 3.2♦): precisely how new was the novelty introduced by Artaxerxes II? What, for example, is the meaning of Berossus's distinction between towns (Babylon, Susa, Ecbatana) that received the order to erect (*anastēsas*) statues versus other towns (Persepolis, Bactra, Damascus, and Sardis), in which apparently the accent is placed solely on worship (*sebein*), as if statues already existed (or as if one could worship without a statue)? And, if such statues did exist here and there, how are we to appraise the novelty of the edict? Or again: if Berossus does not mention Mithra, is it because we have only a partial quotation of the royal edict, or because the worship of Mithra was not concerned with holy statues—even though statues seem to have represented the most noteworthy novelty to Berossus himself?

This observation in turn poses another problem. *A priori*, Berossus's text does not harmonize perfectly with what Herodotus, for example, says (1.131♦): "The erection of statues (*agalmata*), temples, and altars is not an accepted practice among them [the Persians]. . . . [T]hey sacrifice . . . from the tops of mountains" (cf. likewise Strabo XV.3.13). But are these peremptory statements legitimate? We can overlook Strabo's assertion (XV.3.15) that statues (*xoana*) of Anāhita and Omanus were transported with great pomp during festivals in the Persian sanctuaries in Cappadocia; his comment refers to a later period. More important is a passage by Dinon (also cited by Clement of Alexandria), written in the fourth century, with information at variance with Herodotus: according to Dinon, though Persians, Medes, and *magi* did indeed sacrifice on the heights, they worshiped two gods in the form of statues (*agalmata*)—namely, Fire and Water (*FGrH* 690 F28). Dinon's chronology does not allow us to determine that he is describing a change initiated by Artaxerxes II. Nevertheless, he does not mention Mithra or Anāhita, except to suggest that Fire designated the former and Water the latter, which seems very unlikely: Water and Fire are two clearly individualized gods whose central place in Persian sacrificial practice is stressed by Strabo (XV.3.14, 16). So we are back to the basic question regarding the innovation introduced in the time of Artaxerxes II.

Droaphernes and the Sardis Statue

It is easy to see the problem's stumbling block: we are utterly unable to find confirmation or illustration anywhere else of the change suggested by the royal inscriptions and made explicit in the Berossus quotation. To confirm the change, in fact, we would need to have some precisely dated evidence that would allow us to demonstrate that official sanctuaries of Anāhita, complete with cultic statues, were erected in the towns listed by Berossus beginning in the time of Artaxerxes II. However, this is not the case; though the spread of sanctuaries of Persian Anaitis/Anāhita in western Asia Minor certainly goes back a long time (cf. Tacitus, *Ann.* III.62), we have no direct evidence of the existence of a sanctuary of Anāhita at Sardis itself before 322 (Pausanias VII.6.6: Persian Artemis). A recently published text from Sardis has been claimed as a parallel (*SEG* XXIX.1205); it is a Greek inscription, in which three parts can be identified—a dedication and two prohibitions:

(1–5) In the 39th year of Artaxerxes, Droaphernes, son of Baraces, *hyparkhos* of Lydia, [dedicated] the statue (*andrias*) to Zeus of Baradates.

(5–11) He(?) orders the *nēocores therapeutes* [temple administrators] [of Zeus] who have the right to enter the adyton and who crown the god not to participate in the mysteries of Sabazios of those who bring the victims to be immolated and of Anglistis and of Mā.

(11–13) They(?) order the *nēocore* Dorates to abstain from these mysteries.

The Greek text was (re)carved during the Roman Empire period for reasons that remain unclear. This peculiarity probably explains several puzzles that remain. Basically, the text records a decision made by Droaphernes, who is unknown elsewhere but bears a typically Iranian name; he must have been an important person in the satrapal administration of Sardis (though the word *hyparkhos* alone does not allow us to determine his exact position). As the formula “Zeus of Baradates” implies, the decision involves a family cult comparable to the “Men of Pharnaces” known to have been in Pontus from Strabo (XII.3.31). Baradates, according to this hypothesis, must be considered the ancestor of Droaphernes, son of Baraces.

It is especially noteworthy to observe that Droaphernes dedicated a statue. But must it necessarily be seen as a concrete expression of a general policy that had the goal of multiplying cult statues throughout the Empire? To imagine that the statue was even the statue of a god—a conclusion hardly permitted by the word used (*andrias*: statue of a human)—is not supportable in any respect. In the first place, the date of the inscription is problematic: apart from the suggested comparison with Berossus, not a single feature allows the text to be assigned to Artaxerxes II (ca. 366–365) rather than Artaxerxes I (ca. 427), since the copy we have comes from several centuries after Droaphernes’ decree. As for the Zeus who is honored, there is nothing to allow an *interpretatio graeca* claiming that Ahura-Mazda appeared in the original version. It is much more likely that Zeus here refers to a local god, who could quite simply be the Lydian Zeus, who is well attested at Sardis from the beginning of the sixth century on. Given all of these factors, there is no reason to submit the inscription to a close comparison with the decision Berossus ascribes to Artaxerxes II.

Anāhita and Ištar

Moreover, it is quite paradoxical that not one text refers to any official celebration in honor of Anāhita—and this festival was supposedly established precisely in the time of Artaxerxes II. Or to be more precise, we have one piece of evidence, which is not without its own interpretive problems. Plutarch states that Artaxerxes II took the following action against Aspasia, the former companion of Cyrus the Younger: “He consecrated her priestess to Diana of Ecbatana, whom they name Anaitis, that she might spend the remainder of her days in strict chastity” (*Art.* 27.4↔). First, the passage formally implies that the sanctuary of Anāhita of Ecbatana, known from other later texts, already existed at least in the time of Artaxerxes, and it even gives the impression that it had been founded earlier. It is tempting to compare Plutarch’s evidence with a much earlier text from the time of the Assyrian, Esarhaddon: it names a woman who bears the title ‘royal oblate’ (*šēlūtu ša šarri*) in the sanctuary of Ištar of Arbela. To be sure, we do not know whether a sanctuary of Ištar still existed in Achaemenid Arbela, but the significance of the town makes the supposition likely.

A priori, the comparison appears to go hand in hand with the representations of Anāhita on several iconographic objects (seals, sealings, rings) already presented (fig. 37a–b,

p. 253); these objects exhibit syncretisms between Anāhita and Istar, the great Mesopotamian goddess, that had doubtless been operative for a very long time. Must we, however, infer that the goddess whose statues and worship Artaxerxes II intended to spread throughout the Empire was none other than a Babylonized Anāhita? This theory is hard to believe, in the same way that the related theory postulating a "Babylonization" of the Achaemenid dynasty during the fourth century, usually connected with the half-Babylonian origin of Darius II and Parysatis, is hard to believe. We may also note that Istar is not the only goddess to whom a woman was consecrated; on the contrary, it was a very widespread custom. Strabo mentions that it was practiced in the temples of Anāhita in Cappadocia (XI.14.16), and he reports similar practices at Zeleia, in the sanctuary of Anaitis founded by the Persians (cf. XI.8.4); furthermore, hierodules are also found in other sanctuaries dedicated to Persian gods (XII.3.37): a Greek inscription from Cappadocia attests the consecration of hierodules to "the great goddess Anaitis Barzochara."

What would be the significance of this decree for peoples from eastern Iran to western Asia Minor who were not affected in the slightest by the syncretism between Anāhita and Istar? In Lydia, for example, the assimilations and syncretisms in progress involved the goddesses Anāhita and Artemis. Could it have been precisely because of her mutable character that Anāhita was the goddess of choice for a king who wanted to diffuse among his peoples the worship of a goddess that each of them could recognize as their own?

Back to Berossus

While the political nature of the royal decree scarcely seems to offer any room for doubt, the fundamental problem in fact remains: to whom was Artaxerxes' decree addressed? It seems rather improbable that Artaxerxes II departed from the policy of his predecessors and tried to impose the worship of Iranian gods on the regions named by Berossus. Moreover, though Anāhita was certainly the object of syncretisms with local gods, as we have seen, it was not the intention of the Great King to confuse the official worship of the goddess with local gods. While such syncretisms already existed, the Great King's purpose clearly was to transplant the worship and images of a *fully Iranian* goddess. Berossus's list provides a key: we immediately recognize it as a list of the main centers of Achaemenid dominion: Babylon, Susa, Ecbatana, Persepolis, Bactra, Damascus, and Sardis. Given these facts, the most likely explanation—at least, the one we accept here—is that Artaxerxes was addressing his decree to the Persians who had settled in the various provinces of the Empire. By exalting the goddess who dispensed royal legitimacy, Artaxerxes was seeking to bind the imperial Persian diaspora still more closely to himself. His pronouncement served to reinforce the function that Xenophon quite rightly attributes to the satrapal courts: they were to be the guardians of Persian mores and the locus of ideological perpetuation of the dominant socioethnic class—that is, "Persia in Asia Minor for the king," to repeat the poet Bianor's colorful phrase characterizing Sardis (*Anth. Pal.* IX.423).

One more question remains: when and why? Does the existence of an edict allow us to suggest that Artaxerxes was responding to an internal crisis in the Empire by promulgating the edict? What historical circumstances would lie behind it, according to this hypothesis? The edict might have been an outcome of the ideological contest with his brother Cyrus the Younger or might have been connected with the satrapal unrest. However, recalling the precedent of Xerxes and the *daivā* (see chap. 13/6–7), we must point out that another interpretation is possible: Artaxerxes II was reaffirming the sacral nature

of royal power that was indissolubly linked to the protection of the gods, outside of all concrete historical time. Let us end with this acknowledgment: the interpretation that we have just presented leaves many questions hanging, and we ourselves are incapable of providing well-founded answers.

The Imperial Realm

Berosus's text is interesting in another way, which we will consider briefly—the world of administration. His list of sites also comprises a sort of inventory of the imperial realm, organized around traditional residences (Persepolis, Susa, Babylon, Ecbatana) and capitals of vast regions: Bactra (Iranian Plateau), Damascus (Trans-Euphrates), and Sardis (Asia Minor and Anatolia). The omission of Memphis confirms *a contrario* the accuracy of Berosus's information.

Though the importance of Damascus or Sardis could already have been known through other sources, we will stress specifically that this is the first explicit mention of Bactra since Artaxerxes I's campaign there at the beginning of his reign (Ctesias §31). Berosus's reference confirms what we could learn (or guess), beginning, on the one hand, with the role attributed to Dādarši in 522–521 and, on the other, with the situation that seems to have prevailed in the time of Darius III—namely, that the responsibilities of the satrap of Bactra extended far beyond the horizon of Bactria proper. This mention in turn can be connected with other information (also very unspecific) dating to the reigns of Artaxerxes II and his successor. Let us recall in particular that, when he had to face the advance of Cyrus the Younger, Artaxerxes mustered troops at Ecbatana (Diodorus XIV.22.1–2), though these troops arrived too late. They were led by an illegitimate brother of the king (Xenophon, *Anab.* II.4.25), which at least proves that the Iranian Plateau and Central Asia continued to furnish soldiers whenever a general mobilization was decreed; further confirmation will be found in the disposition of troops by Darius III in 333–331.

Of course, the texts are far from eloquent, and the interpretation of some of them is uncertain, but they opportunely remind us that, seen from the center, the Empire extended as far as Central Asia. India itself is not completely absent from the evidence that dates to the reign of Artaxerxes II. The work Ctesias devoted to this region is filled with fantastic stories that must have captivated his listeners. Nonetheless, we will stress that, whether directly or through Aelian, we learn that the kings of the Indus were required to send gifts to the Great King regularly; this may be how Darius III obtained Indian elephants (cf. Quintus Curtius V.2.10). Let us add, finally, that in Ctesias's lost work dedicated to the royal roads and stages, he followed an itinerary from Ephesus to Bactra and India (FGH 688 F33: *apou Ephesou mekhri Baktrōn kai Indikēs*). By itself, this information remains vague; nonetheless, the implication is that at this date the connections between Susa and the Indus Valley had not been broken, and the Indian kings continued to show their subjection to the Great King.

From Artaxerxes II to Artaxerxes III

According to Plutarch, the old king's last years were strewn with pitfalls and conspiracies. Plutarch first of all relates that Artaxerxes had three legitimate sons from his marriage to Stateira: Darius (the oldest), Ariaspes (called Ariarathes by Justin X.1.1), and Ochus (the youngest; *Art.* 26.1–2; cf. 30.2). His concubines bore him a great number of illegitimate children as well (115 sons according to Justin X.1.1, 5), among them Ar-

sames (Plutarch §30.1, 8). “Being willing to put down in good time his son Ochus’s hopes, lest . . . wars and contentions might again inflict his kingdom,” the king named Darius crown prince (Plutarch §26.4–5♦). Soon, an intense resentment impelled Darius, egged on by Tiribazus, to weave a plot against his father (§27–28). The prince expected that many courtiers would be ready to follow him (§29.1), including, according to Justin (X.1.5), fifty of his illegitimate brothers. The conspiracy was uncovered through information provided by a eunuch; Darius was brought to trial before the royal judges and put to death (Plutarch §29), “along with the wives and children of all the conspirators” (Justin X.2.6). Following this, in Plutarch, is an account of the contemptible schemes of Ochus, who was bolstered by his lover Atossa; she was both his sister and his stepmother (§23.3–7; 30.1; cf. Val. Max. IX.2.7). Through his stratagems and accusations, Ochus managed to drive his legitimate brother Ariaspes mad, and he chose to take his own life (§30.1–5; different version in Aelian, *VH* IX.42). Soon he had his illegitimate brother, Arsames, who was the king’s favorite, killed (§30.7–8). These were the circumstances at the time of Artaxerxes’ death of old age, after a long reign (between November 359 and April 358, according to Babylonian tablets).

Behind the frantic romanticism of Plutarch’s tale, we can observe several realities. First of all, following the model of his predecessors, Artaxerxes II was careful to designate a crown prince during his lifetime—his oldest son, as it happens. Second, the selection of a crown prince did not result in sharing power (despite Justin X.1.2). Finally, and as a corollary to our second point, the status of crown prince was itself unstable. Plutarch, in contrast, breathes not a word about the designation of a new heir after the deaths of Darius and then Ariaspes. He is content to note that the king showed a preference for one of his illegitimate sons, Arsames. In reality, everything leads us to believe that, when Artaxerxes II died, everything was ready for the transition. If, as we may reasonably suppose, Ochus had been placed by his father at the head of the army sent to fight Tachos (Syncellus, p. 486, 20: “while his father was still alive”), this designation all by itself removes our doubts. Without dwelling on it, Diodorus (XV.93.1) simply notes that, when Artaxerxes II died, Ochus succeeded his father. This is not to say that the succession was welcomed by everyone. One late author, for example, mentions that on his accession the new Artaxerxes “buried Atossa alive, who was both his sister and his stepmother. He locked his uncle and more than 100 sons and grandsons in an empty courtyard and had them killed in a hail of arrows” (Val. Max. IV.2.7; cf. Justin X.3.1). This presentation fits perfectly with the despicable image of Artaxerxes III in the ancient literature (e.g., Plutarch §30.9). However, even if we suppose that the tradition transmitted by Valerius Maximus is accurate, all that can be concluded from it is that Ochus had made enemies at court before his accession. Furthermore, Plutarch himself also notes that, as at the time of the succession of Darius II (§6.1–2), the court was disrupted by the activities of opposing factions favoring Darius or Ochus (§26.1).

9. The Wars of Artaxerxes III (351–338)

Artaxerxes III and Artabazus

It appears that the new Great King found himself beset with troubles in Asia Minor shortly after his accession—or perhaps the troubles had always been there in latent form. In the course of Diodorus’s discussion of Athens’ war against its rebellious allies between

ca. 357 and 355 (XVI.7.3–4; 21–22.1–2), he states that the Athenian *strategos* Chares, who hoped to alleviate the financial burden of the military operations, had entered into an agreement with the satrap of Hellespontine Phrygia, Artabazus, who was then in revolt (*apostas*) against the king. With Chares' help, the satrap won a victory over the royal army (§22.1). Soon thereafter, facing threats from Artaxerxes, Athens ceased its intervention. Traces of these events can also be found in anecdotal fragments that provide a few additional details: the royal forces were led by Tithraustes, whose status is not clarified; he had a *khōra* ('position') in Phrygia, and he had just overpowered Chares (FGrH 105 F4). After the Athenian's departure, Artabazus received aid from the Thebans, who sent him a force commanded by Pammenes, and with Pammenes' help he achieved victory over "the satraps who had been dispatched by the king" (Diodorus §34.1–2).

Though it seems certain that Artabazus received no assistance from the other satraps in Asia Minor, the reasons for and origins of his rebellion remain thickly cloaked in mystery. According to the Scholia on Demosthenes (4.14), the king ordered the satraps to disband their mercenaries. However, aside from some problems posed by this information (see chap. 17/3), it explains nothing about Artabazus's behavior. Instead, we must imagine, as in the previous period, that Artabazus was accused by one of his colleagues, for reasons that totally escape us but that apparently persuaded the king (cf. Diodorus XVI.52.3: *egklēmata*). Under unspecified conditions, Artabazus, with his entire family, chose exile at the court of Philip II of Macedon (*ibid.*).

Failure in Egypt, Revolt in Phoenicia and Cyprus (351–345)

While these minor flareups were being extinguished in Asia Minor, the new king was primarily engrossed with the situation in Trans-Euphrates and Egypt. Even though at the time of his accession he might have guessed that he had a free hand in dealing with Egypt, he in fact knew nothing about the destructive effects of Nectanebo II's rebellion or about the difficulties that the pretender faced when his attempt to assert his authority was challenged. We do not know much about the intentions of Artaxerxes III. In a highly suspect passage that was intended to illustrate the cowardice of the Great King, who was reluctant to assume leadership of operations himself, Diodorus simply notes that Persian generals were once again defeated when they tried to regain a foothold in Egypt during the period from 361 to 351 (XVI.40.3–5). But we have not a shred of corroborative evidence of their attacks on Egypt prior to the moment when Artaxerxes himself summoned his army and suffered a defeat in 351 (Isocrates, *Phil.* 101; Demosthenes, *Lib. Rhod.* §§11–12); he avenged the insult a few years later.

In 347, Isocrates addressed a stirring tribute to Philip II of Macedon. He promised that the king would win victory after victory, for the Persian Empire was moribund following the failure that the Great King had just experienced in Egypt (351):

Furthermore, Cyprus and Phoenicia and Cilicia, and that region from which the barbarians used to recruit their fleet, belonged at that time to the King [Artaxerxes II], but now they have either revolted from him or are so involved in war and its attendant ills that none of these peoples is of any use to him; while to you, if you desire to make war upon him, they will be serviceable. And mark also that Idrieus [of Caria], who is the most prosperous of the present rulers of the mainland, must in the nature of things be more hostile to the interests of the King than are those who are making open war against him; . . . but if you should cross over to the mainland . . . you will also induce many of the other satraps [besides Idrieus] to throw off the King's power if you promise them "freedom" and scatter broadcast over Asia

that word which, when sown among the Hellenes, has broken up both our [Athens'] empire and that of the Lacedaemonians. (*Phil.* 102–4♦)

In this speech we find one of those catalogues of countries that were unsubmitive to the Great King of which the Athenian orator was so fond; on this occasion, however, he did not hesitate to provide a contrast by elevating the reign of Artaxerxes II, which he had ridiculed in a discourse in 380 (*Paneg.* 161; see p. 650 above; cf. p. 658). Nonetheless, behind the outrageousness of the thinking, Isocrates is alluding to undeniable facts that Diodorus, in particular, treats in book XVI.

According to Diodorus, in fact, the stimulus for the Egyptian conflict came from the Sidonians, who persuaded the other Phoenicians to take up arms against the Persians and to make a treaty (*symmakhia*) with the pharaoh, Nectanebo, before engaging in an immense war effort. The war officially commenced when the Sidonians devastated the Persian paradise located near their town and destroyed the stocks of fodder stored by the satraps with the Egyptian war in mind; they also executed several leading Persians (XVI.41). At the same time, a revolt connected to the earlier rebellion on the island broke out on Cyprus, with the nine kings declaring independence (42.3–4). While Artaxerxes was gathering an army at Babylon (§42.1), he ordered Idrieus of Caria to lead an army and a navy to Cyprus (§42.6–9), just as Mazaeus, “governor of Cilicia,” and Belesys, “satrap of Syria,” were conducting the first operations against Phoenicia. Tennes, “king of Sidon,” had meanwhile acquired considerable reinforcements through levies on the Sidonian population and the arrival of a contingent of mercenaries sent by the pharaoh and commanded by Mentor; Mazaeus and Belesys were forced back (42.1–2). They later combined their forces with the royal army that arrived from Babylonia. According to Diodorus, the Great King did not really have to fight, since the king of Sidon, Tennes, who soon joined up with Mentor, preferred to betray his fellow citizens. He delivered one hundred Phoenicians to Artaxerxes and then opened the gates of the city; he was soon put to death. The Sidonians chose to kill themselves, their women and children, and to put their houses to the torch; appalled by the king’s savagery, the other Phoenicians surrendered (§43–45.6). Shortly after(?), the Cypriot cities were recaptured or surrendered; Pnytagoras of Salamis alone held out, but he too soon submitted (§46.1–3).

Interesting and detailed though it is, Diodorus’s tale poses many problems. First of all, the chronology is often fluid, as it is throughout book XVI. The only external chronological evidence is a fragment of the Babylonian Chronicle (ABC no. 9, p. 114), dated to year 14 of Artaxerxes III, that refers to the sending of Sidonian prisoners to the royal palace in Babylon in October 345. We deduce from this that Sidon was taken some weeks or months earlier, perhaps even in 346, at the same time acknowledging that Isocrates refers to a revolt still in progress in 347 (*Phil.* 102). The revolt certainly lasted quite a while, since Mazaeus and Belesys were ordered to suppress it at first; but it is hardly possible to fix a precise chronology or to state with certainty that the Phoenician revolt broke out immediately after the defeat by the Egyptians in 351, because Diodorus’s phrasing leads us to believe otherwise—that several years elapsed between the two events. It is clear in fact that, after the failure on the Nile, the Persians immediately began to prepare an immense force, for the Great King had determined to put an end once and for all to secessions by the pharaoh (Diodorus XVI.40.5–6). Artaxerxes’ real purpose in leaving Babylonia was to advance against Egypt (cf. §§43.2; 44.1–5). Sidon was clearly one of the bases for Persian logistical preparations; it was there that the navy and troops were assembled and the

cavalry's fodder stored (§41.5). Diodorus's story clearly indicates that Persia's preparations were already well under way when the revolt broke out. In short, it does not seem that the revolt lasted as long as from 351 to 346, as is sometimes stated.

The preparations of the army partly explain some of the causes of the beginning of hostilities. Diodorus indicates that Tennes of Sidon was counting on the militias levied in the city and on Greek mercenaries, some of whom had been sent by Nectanebo under Mentor's command (§§41.4; 42.2; 44.6). He also says that, because of its unparalleled wealth, Sidon was in a position to gather triremes, mercenaries, all sorts of arms, and quantities of provisions (§§ 41.4; 44.5)—indicating that Tennes had been able to take advantage of the slowness of the Great King's preparations. Without denying Sidon's own strengths, we must nonetheless stress that its leaders had been able to profit from the fact that the Persians had chosen their city as the place for their preparations for the Egyptian expedition. It is clear that the Sidonians seized some strategic imperial supplies (§41.5). Given this background, we are tempted to think that its 100 triremes and pentaremes (§44.6) constituted the contingent it had been required to prepare for the war in Egypt. The inhabitants burned their ships after Tennes' betrayal, and the goal of this action must have been more to weaken the royal navy than to prevent some of them from fleeing (§45.4). In other words, like Aristagoras in 499 (see p. 153 above), the Sidonian leaders had deprived the Persians of the means that were intended to sustain the offensive that the Great King was preparing to launch against Egypt.

We are less well informed regarding the origins of and reasons for the revolt, inasmuch as we know little of the history of Sidon and Phoenicia in the preceding decades; we know only of the participation of the Sidonian navy in Conon's war and the equivocal behavior of Straton during Tachos's offensive, some ten years earlier. Diodorus highlights the hatred that the Persian leaders who lived in the city had aroused. The arrogant orders and requisitions, he says, had created or strengthened a strong mood of discontent regarding the imperial war taxes (§41.2, 5), which were severely depleting the profits that the city drew from its commercial activities (*diatas emporias*; §41.4). Nor was this the first time Sidon had been forced to contribute; they had suffered fiscally ever since Cambyses' first Egyptian expedition in 525. Does the huge extent of Persian preparations, stressed by Diodorus (§40.6), suffice to explain the decision of the Sidonian leaders to burn their bridges when they devastated the royal paradise and to execute high Persian officials? They must have known even at that moment that the war the Great King would wage against them would be merciless (cf. §41.6).

This and several other questions remain unanswered. In fact, it is hard to explain why Tennes chose to betray the city when he received the news of the arrival of Artaxerxes' army. According to Diodorus (§43.1↔), as soon as he was informed of the size of the royal army, the king of Sidon "thought that the insurgents were incapable of fighting against it." We cannot explain this sudden change of direction by assuming that Tennes had previously been unaware of the king's preparations; this is an obviously unsupported hypothesis. Does his attitude reveal that there was internal conflict in the city? Furthermore, we never see the other Phoenician cities joining the rebellion, even though Diodorus, without explicitly saying so, *seems* to suggest that the Sidonians were united with Aradus and Tyre (§41.1; cf. §45.1). In fact, only Sidon seems to have opposed the Persians; it was the only one of the three cities to be severely punished. In short, the blindness of the Sidonian leaders is hard to explain. Perhaps the hoped-for support of

Nectanebo must be considered. Had he promised them that he would intervene directly? It is possible, given that the pharaohs were generally not parsimonious with such promises; the Sidonians must also have recalled Tachos's recent offensive. For Diodorus, at any rate, it certainly was the Egyptian example that impelled the Phoenicians and, later, the Cypriots to revolt (§§40.5; 42.5). Last, it is very likely that, during the period when the Great King was preparing his army at Babylon, the Persian forces in Phoenicia itself were not very numerous; this would explain how the Sidonian forces and their mercenaries managed to repel the initial counterattack led by Mazaesus and Belesys.

From Sidon to Jerusalem and Jericho

It would also be quite interesting to discover whether the Sidonian and Cypriot rebellions extended to neighboring countries—a theory that might help to explain the Sidonians' apparent optimism. However, it must also be recognized that we have only meager and contradictory evidence about this point. Several late authors refer to the deportation of Jews to Hyrcania, carrying out orders issued by the Great King. Another author (Solinus) speaks of the destruction of Jericho in the time of Artaxerxes III (during his return from Egypt). But aside from the fact that these texts are suspect or contradictory (on the chronological level), there is no external evidence to confirm the existence of a revolt that would have excited Judah and Samaria.

The Reconquest of Egypt (343–342)

As a part of the Great King's strategy, calming Phoenicia and Cyprus was definitely an important matter. Nonetheless, he remained obsessed with the Egyptian problem, and he had begun enormous preparations to deal with it some years earlier (XVI.40.6). Accompanied by a war flotilla and considerable transport (§40.6: stereotypical numbers), the Great King set out on the road to Egypt at the end of 343. Some months later (summer 342), he entered Memphis, whereupon Nectanebo fled to Upper Egypt and then Nubia (§51.1–2). From the point of view of Achaemenid history, one of the most important questions is why Artaxerxes succeeded at what had eluded so many Achaemenid armies since the beginning of the fourth century. In answering this question, we have nothing to rely on but Diodorus Siculus's detailed report (XVI.46.4–9, 47–51), which can easily be compared on many points with his own accounts of the expeditions led by Pharnabazus (XV.41–43), by Perdiccas against Ptolemy (XVIII.33–36), and even by Antigonos against the same Ptolemy in 306 (XX.73–76). It is also a good idea to mention—before returning to it at greater length (chap. 18/3)—that the entire passage in Diodorus is vitiated by the decisive importance he attributes to the Greek mercenaries throughout the course of the campaign.

Diodorus states that the Achaemenid army suffered from the same handicaps that he had already stressed in the descriptions of previous expeditions. Before even arriving in the Nile Valley, the enemy troops had to overcome many obstacles. First, they had to cross the terrifying "region without water" that stretched south of Gaza. We know that Cambyses had recourse to the services of the "king of the Arabs" when he crossed this region (Herodotus III.5–9), just as Esarhaddon had, in his time (ANET³ 292), and Antigonos in 306 (Diodorus XX.73.3); we do not know what happened in 343. Next came the region of quicksand, the Barathra (Diodorus I.30.4–7; XX.73.3; cf. Polybius V.80.1), in which Artaxerxes III lost a number of soldiers (XVI.46.5) because, Diodorus says, the

Persians had no idea of the topography of the area. He states elsewhere that, when Tennes of Sidon entered into negotiations with Artaxerxes III, he emphasized that he could guide the royal army (XVI.43.3). We are further amazed that the Persians did not seek out local guides (cf. XVI.48.3). In this case, we have the impression that Diodorus was reusing a motif illustrated earlier by the role that Herodotus assigned to Phanes, the head of the mercenaries who accompanied Cambyses in 525 (III.4).

The only advantage Diodorus grants to Artaxerxes—and this is a deeply rooted *topos*—is the crushing numerical superiority of his army: Nectanebo had 20,000 Greek mercenaries, 20,000 Libyans, and 60,000 Egyptian *makhimoi* ('soldiers') (XVI.47.5–7), facing an "uncountable" royal army, as implied by the conventionalized numbers cited (300,000 infantrymen, 30,000 cavalry, 300 triremes, and 500 other transport vessels: XVI.40.6). He recalls the most memorable episodes, at least in his eyes: early on, it seems, an army corps, aided by Egyptian guides, managed to cross the river and establish a bridgehead on the opposite bank (XVI.48.3–5); this was what Nectanebo had feared, and he hastened to Memphis in order to ready its defenses (§48.6). This fallback in turn aroused uncertainty in the Egyptian camp and led some Greek mercenaries to negotiate terms of surrender. This resulted in the fall of Pelusium, which was soon followed by the taking of Bubastis and other fortified cities (§49.7–8; 51.1). Thereafter, the way to the Nile was free, and the royal fleet was able to sail up the river as far as Memphis (cf. Thucydides I.104.2).

Moreover, Diodorus stresses that the royal army set off very late because of the length of the preparations, which allowed the ruler of Egypt to continue building up the country's defenses (XVI.46.7; 49.7; cf. XV.41.2, 5). Behind this cliché there certainly lies a truth, for the offensive against Egypt did not take place until the winter of 343–342. For one thing, after the conquest of Sidon the king probably waited for the surrender of the Cypriot cities (46.1–3); for another, further preparations doubtless were completed in the midst of some confusion because of the Sidonian revolt (cf. 45.4: destruction of the ships). Diodorus also states that, before his departure from Babylon (or when he arrived in Phoenicia), Artaxerxes sent messengers to Greece to recruit mercenaries; Athens and Sparta declined nonconfrontationally, but Thebes and Argos sent contingents (44.1–3). This was also the period when the contingents from the subject cities of Asia Minor were joining the royal army (44.4; cf. 46.4). After the fall of Sidon, the Great King also welcomed Mentor and his 4,000 men (42.2; 47.4).

These delays encouraged Nectanebo to use traditional tactics: like all of the pharaohs, he sought to take advantage of the topography. Thus, to render the river uncrossable and to prevent landings on the beaches of the Delta, fortifications were placed on all the mouths of the Nile, especially the Pelusian branch, which had the most beaches (XVI.46.6–7, XV.47.2–4; XX.76.3). A large quantity of boats that were well suited for river combat had been gathered from along the Nile (XVI.47.6); these boats also transported troops from one point to another to prevent enemy troops from landing on the beaches (XX.75.1; 76.3–4). The banks of the river itself were fortified in such a way as to prevent passage (XVI.47.7; cf. XV.47.3; XVIII.33.6, 34.1–4). It looks as though, in order to cover all bets, the Great King chose a favorable season, just as Antigonos had in 306, when he left Palestine at the rising of the Pleiades—that is, at the beginning of November (XX.73.3), a time when the army would not be endangered by the Nile flood (cf. XV.48.4). But in itself this auspicious choice was not a token of success: Antigonos still

faced failure and even suggested retreating and returning “with more complete preparation and at the time at which the Nile was supposed to be lowest” (XX.76.5◊). Pharnabazus’s failure had also shown that sustained resistance by Egyptian defenses could force an attacker to defer the assault too long, resulting in the collapse of the attack (XV.48.1–4).

Does Diodorus’s very unfavorable portrayal of Nectanebo reflect, to a greater or lesser extent, the feelings of the Egyptians? It is impossible to answer such questions: that Artaxerxes used Egyptian guides does not tell us anything specific about their attitude toward the pharaoh; and, even Nicostratus, after all, took hostages as a part of his strategy (XVI.48.3). We may simply note, with Diodorus (§§48.6; 49.2–3), that Nectanebo’s withdrawal to Memphis demoralized his soldiers. Finally, Nectanebo very quickly lost hope and gave up on defending Memphis to the death, preferring to flee to Nubia in the belief that many cities were ready to betray him (§51.1). We may wonder whether the internal weakening of pharaonic authority (the subject of military edicts throughout the fourth century) was not in fact one of the most important reasons for the Egyptian failure; but this is simply a guess, and the existing evidence does not permit us to arrive at a more certain conclusion. Diodorus states that Nectanebo was scarcely inclined to take the risks necessary to maintain hegemony (*hyper tēs hēgemonias*; 51.1). This attitude seems entirely opposite to the thoughts that Diodorus imputes to Artaxerxes, who resolved to head the army himself in order to personally lead the fight to preserve his kingdom/kingship (*agōnas hyper tēs basileias*; §40.6). Even though Diodorus’s presentation and aggressive vocabulary express royal propaganda, there is little doubt that Artaxerxes III had made it his personal goal not only to reestablish order in Phoenicia but also to reconquer Egypt. He had reached power in troubled circumstances, and now he was determined to prove his military prowess, which in turn would provide justification of his power. A passage in Theopompus illustrates the importance attached to the march on Egypt. It was an occasion when the Great King summoned representatives of the subject peoples as he passed by, and they came to bring him gifts and ritual presents (FCrH 115 F263a–b). This meant that Diodorus was able to write, correctly, that when he returned from Egypt, laden with booty, the Great King acquired great renown for his victories (§51.3). In other words, he had reinforced his authority and prestige among his family and his peoples. On this occasion, a royal seal exalting the king’s personal victory over the Egyptians was engraved (SA³a; fig. 18b, p. 215).

Artaxerxes III in Egypt

And so Egypt returned to the Achaemenid fold, nearly sixty years after Amyrtaeus’s secession. A Persian administration under the direction of Pharendates was reinstalled in the country (XVI.51.3); however, we cannot say with certainty that Pharendates was a descendant of the satrap with the same name from the time of Darius I (chap. 12/1). Traditionally, Artaxerxes III had an appalling reputation in both the Egyptian and the Classical traditions; in this respect, he is like Cambyses, with whom he is frequently compared in the ancient texts. The origin of this negative reputation is surely to be found in the actions he took, reported by Diodorus as follows:

After . . . demolishing the walls of the most important cities, by plundering the shrines [he] gathered a vast quantity of silver and gold, and he carried off the inscribed records from the ancient temples (*tas ek tōn archaiōn hierōn anagraphas*), which later on Bagoas returned to the Egyptian priests on the payment of huge sums by way of ransom. (XVI.51.2◊)

Artaxerxes was even accused, just as Cambyses was, of killing the sacred bull Apis; according to Aelian (VH VI.8), Bagoas assassinated Artaxerxes in order to punish the king for his disgraceful Egyptian deeds! Coins show that the new conqueror bore the title of pharaoh.

Mentor in Asia Minor

When he had returned, Artaxerxes sent Mentor to Asia Minor. After Mentor had interceded with the King, asking that Artabazus and his family be allowed to return (XVI.52.3–4), his prime objective was to march against Hermias, “the tyrant of Atarneus, who had revolted from the King and was master of many fortresses and cities” (§52.5♦). Then, without going into detail, Diodorus writes that Mentor brought other leaders (*hēgemōnes*) who had broken with the Persians back to their senses and that, by force or by stratagem, he soon subdued them all (§52.8♦). This statement obviously refers to localized disturbances of no great importance. Mentor fulfilled the customary mission of maintaining order in the face of local “dynasts,” who were recognized by the Achaemenid authority but also had to exhibit steadfast loyalty on every occasion. Although Diodorus’s text does not allow us to arrive at a sure conclusion, it does in fact seem that, after the submission of Hermias, Mentor’s activities were located on the periphery of the old domain of this “tyrant”—that is, in Aeolis and the Troad, regions traditionally governed from Dascylium.

Artaxerxes III and Philip II

The initial diplomatic and military interactions between Artaxerxes III and Philip II apparently date to the years after the reconquest of Egypt. But did the court have a Macedonian policy, and if so, at what date did it take shape and achieve consistency? Let us stress from the start that the answer to this question risks being only a reflection, as in a distorted mirror, of an image that comes out of a prophetic or eschatological history—that is, a history that presumes that Alexander’s conquest was a matter of necessity. At the same time, let us stress that we have no direct evidence that would allow us to reconstruct in detail the picture of Philip’s progress in Greece and Thrace as it was seen by the Achaemenid authorities.

The first indication of direct relations between the Persian Empire and the Macedonian kingdom is that Artabazus and his family took up exile status with Philip II (Diodorus XVI.52.3). There is no reason to infer from this that Philip II intended to show animosity toward Artaxerxes at that date, especially since Artaxerxes had recently come to power under highly irregular circumstances. That Philip II accepted a Persian exile does not necessarily imply a rupture with the Great King. A Persian refugee from Dascylium could scarcely find refuge anywhere other than in Europe. We can name at least two Persians of distinction who had sought refuge in Athens during the fifth century in order to escape royal punishment (Plutarch, *Cimon* 10.9: Rhoisaces; Ctesias §43: Zopyrus). Artabazus’s choice of Macedon as a place to settle was due in part to its proximity to a region nearly on the border of his satrapy; despite the defeats of 479, relations among Dascylium, Thrace, and Macedon were undoubtedly not simply cut off. Furthermore, a Persian noble could find a structure and way of life among the local aristocracy in Macedon rather like that to which he was accustomed. Furthermore, we are aware of at least one other Persian, Amminapes, who found asylum at the court of Philip II, for reasons unknown to us (Quintus Curtius VI.4.25).

The context of Artabazus's return to the Great King has sometimes been taken as an indication of Philip's activities in the Empire. In a harangue delivered in 341, Demosthenes offered his listeners an argument for the policy of alliance with the Great King that he favored:

Secondly, the agent and confidant of all Philip's preparations against the king has been snatched off (*anaspastos*), and the king will hear all the proceedings, not from Athenian accusers, whom he might consider to be speaking for their own interests, but from the acting minister himself. (*Phil.* IV 32♦)

This "agent," we know, was Hermias, who is presented by Diodorus in the context of the mission entrusted to Mentor by Artaxerxes III after his victory in Egypt. There has been a tendency to take Demosthenes literally and infer that Philip, through his intermediary Hermias, planned to disrupt the Achaemenid position in western Asia Minor. This theory deserves little credit. It is in fact remarkable that in his version Diodorus does not breathe a word of possible Macedonian collusion with Hermias, the tyrant of Atarneus, and reduces Mentor's mission simply to restoring the imperial order that was disturbed in some locales (XVI.52.5–8); and this comes from the very same Diodorus who elsewhere did not hesitate to state that, when the king of Macedon had triumphed at Delphi in 346–345, he dreamed that he would be recognized as *stratēgos autokrator* of the Greeks and then would march against the Persians (XVI.60.5). Although Philip's "Persian policy" is as opaque to us as Artaxerxes' "Macedonian policy," nothing in Philip's behavior at this date confirms that he was immediately ready to take action on the goal that Isocrates vigorously advocated in 347—to mount an expedition to Asia Minor.

In the same harangue, Demosthenes stressed for his audience another circumstance unfavorable to Philip: "Those whom the king trusts and regards as his benefactors are at enmity and war with Philip" (*Phil.* IV 31♦). This clearly alludes to the hostilities then going on at Perinthus, as is even more clearly set forth in an (apocryphal) response to an (apocryphal) letter from Philip: "The satraps of Asia have just thrown in mercenary troops for the relief of Perinthus . . ." (*Reply* 5♦). Diodorus confirms the existence of these hostilities:

Philip's growth in power had been reported in Asia, and the Persian king, viewing this power with alarm, wrote to his satraps on the coast to give all possible assistance to the Perinthians. They consequently took counsel and sent off to Perinthus a force of mercenaries, ample funds, and sufficient stocks of food, missiles, and other materials required for operations. (XVI.75.1–2♦)

Pausanias (I.29.10) adds a significant detail: it was Arsites, satrap of Hellespontine Phrygia, who coordinated operations; this seems logical, given the strategic location of the territories of Dascylium. Moreover, in 334 we find this same Arsites directing the operations against Alexander, again in consultation with his colleagues (Arrian I.12.8–10).

The aid provided to Perinthus was among the charges leveled by Alexander against Darius in a letter he sent after the battle of Issus. According to the text preserved by Arrian (II.14.5), Ochus was also accused of sending an army into Thrace. The Macedonian king even went so far as to put the responsibility for the murder of his father on the Persian court. Darius recalled that previously there had been a treaty of friendship and alliance (*philia kai symmakhia*) between Artaxerxes III and Philip II (II.14.2). The absence of any corroborative evidence for any such treaty has opened the way to speculation, and

the overarching characteristic of these speculations is that they contradict each other; it would be useless to add one more item to this house of cards—it is a miracle that it has not already collapsed! We must remain content to note only that embassies were certainly exchanged between the two courts, though we are not able to identify their missions, which perhaps were limited to good- or bad-neighborliness (cf. Plutarch, *Alex.* 5.1–3; Quintus Curtius III.7.1). Certainly, the two capitals, Pella and Susa, were not unfamiliar with each other. The record contains just one certainty—the Persian-Macedonian hostilities at Perinthus, which was besieged about 341 by Philip. But even here we must be careful: Demosthenes attempted to make an argument from the situation at Perinthus that would persuade his fellow citizens that the Great King was ready to enter into an alliance with them and send them money for the war; but by no means does this make the orator an objective observer of the “Macedonian policy” of Artaxerxes! For, when all is said and done, at least according to Aeschines (III.238), Artaxerxes was quick to let the Athenians know that he would not be sending them any money!

Let us summarize. There is no doubt that Artaxerxes III, like his predecessors, followed a policy toward the Greek cities that involved sending fairly frequent royal embassies. It is also beyond doubt that Macedon’s opponents, such as Demosthenes, thought that the support of the Great King represented the only credible alternative with which to oppose Philip II’s progress. Last, it is certain that the arrival of Macedonian armies at the Straits aroused the anxiety of the satrap of Dascylium, who certainly shared his concern with the Great King. The king took limited defensive steps, restricting himself to sending relief to Perinthus. Did he perhaps also send a body of mercenaries into Thrace, as in Alexander’s accusation? We cannot say, but is this not simply one more stylistic redundancy? In short, the court was kept informed about Philip’s operations. It seems difficult to go beyond these observations, since, after all, it is not obvious that Philip’s intentions were any clearer to the Great King and his advisers than they are to us today. Persia’s expert consultants on Balkan policy must have often been bewildered by the incomprehensible contradictions of the European powers (cf. Thucydides IV.50.2). We must await Philip’s victory at Chaeronea (338) and then the founding of the Corinthian League (337) before things become entirely clear. Meanwhile, Artaxerxes III had died by an assassin’s hand, and one of his sons, Arses (Artaxerxes IV), had succeeded him (August–September 338).

PART FIVE

The Fourth Century
and the
Empire of Darius III
in the
Achaemenid *longue durée*:
A Prospective Assessment

Chapter 16

Lands, Peoples, and Satrapies: Taking Stock of the Achaemenid World

Introduction: In the Steps of Alexander and on the Trail of Darius

Another "Achaemenid" Source: The Alexandrian Historians

Before beginning the final chapter, which is my account of the confrontation between Darius III and Alexander, I would like to synthesize and integrate the facts, interpretations, and theories that have been presented in the preceding chapters. The inquiry can also move forward because of the contributions of a "new" corpus—the ancient historians of Alexander. Thus far, we have deliberately limited use of them, except in the chapters in part 2 that are devoted to relatively stable aspects of the Persian tradition. We consider "stable" those things that constitute the very principles of royal Achaemenid ideology, whether it be royal virtue, representations of the imperial realm, or even the people and life of the court—all those aspects that the texts from the time of Darius III imply go back to "ancestral custom" (e.g., Diodorus XVII.34.6; 35.3; Quintus Curtius III.3.8; III.8.12; IV.13.26, etc.). Two examples may quickly clarify this point. (1) Quintus Curtius's famous description (III.3.8–25) of the royal procession before the battle of Issus is amazingly like the somewhat parallel descriptions provided by Xenophon (of "Cyrus") and Herodotus (of Xerxes; see chap. 5/4 above). (2) Similarly, the description, again by Quintus Curtius (V.1.17–23), of Alexander's entry into Babylon could be integrated, at a stage before careful analysis, into a discussion of "royal entries," which we have every reason to believe did not change significantly in either principle or organization. There is even one place where Quintus Curtius himself compares Darius III with Xerxes—in regard to the methods that the Great Kings used for counting and enumerating the contingents of the royal army (III.2.2). This example must not, however, lead us to imagine that royal customs were completely static. For one thing, Quintus Curtius's comparison does not necessarily commit the modern historian to the same conclusion; for another, it does not imply a general paralysis of royal protocol, which, as we have seen, underwent several modifications over time, any more than the apparently repetitive character of the royal inscriptions should lead us to conclude that nothing changed between Cyrus and Darius III; we have observed, for example, that innovations were introduced in the times of Artaxerxes I and Artaxerxes II (chaps. 14/1, 15/8).

On the other hand, the sources going back to the time of Alexander, situated within the *longue durée* of the fourth century, are of decisive importance in our attempt to determine the state of the Empire at the time of the accession of Darius III. Of course, just like the Greek authors of the fourth century, the courtier-historians often transmitted a biased view of the conquest and the conquered. We will come back to this point several times. We will see that in some cases the information offered by the Hellenistic writers must be taken with as much caution as is required for the writers of the fourth century.

For example, caution is called for when they introduce us to the little-known peoples of the Zagros, whom they identify using the undifferentiated and reductive label of "savage brigands," or more generally when they try to contrast, one final time, Achaemenid stasis with the innovations spurred by Alexander (work on the Babylonian canals and rivers). The primary reason for this is that the ideology promoted by Alexander's Companions is homologous with that which runs through the writings of the fourth-century authors. But the responsibility also belongs to the historian who reads and makes use of them. In fact, many of the details reported by the ancients can only be understood when they are located in the *longue durée* of Persian history. Here is how the Alexander histories constitute an "Achaemenid" source: they illuminate Achaemenid history, which in turn helps the historian to understand the sense and significance of the information they provide. To take but a single example, it is obvious that Arrian's and Quintus Curtius's descriptions of Alexander's entries into Sardis and, later, Babylon take on their full historical meaning only when they are placed in the context of the "royal entries" well known from the Achaemenid period (primarily), and earlier periods as well. This Achaemenid perspective has the effect of ruining the traditional interpretation of this information about the relationships that Alexander developed with the elites of the conquered countries.

Beyond these distortions (which the Achaemenid context allows us to examine and thus to correct), Alexander's historians (used, each in their own fashion, by Plutarch, Arrian, Quintus Curtius, Diodorus, Justin, and several others) considerably modify the way we look at the Empire—for very simple reasons. First, following Alexander step by step, they carry us along the trail of Darius and lead us to discover the Upper Country, about which the Classical authors are all but silent, except for Cyrus's march from Sardis to Babylon and the return of the Greek mercenaries from the Tigris Valley and the Black Sea by way of the Armenian mountains, Bithynia, and Paphlagonia. This time, (nearly) every satrapy is traversed. As a result, the Achaemenid world takes on a breadth and depth that we have been unable to examine since the time of Darius I, because of an abundance and variety of evidence unequaled throughout the fifth and fourth centuries. It suffices to recall, for instance, that the Companions of Alexander were the first to provide written descriptions of Persepolis and Pasargadae. Furthermore, the Iranian Plateau and Central Asia are no longer *terra incognita*. Of course, the modern historian would prefer to have more detailed sources; it is nonetheless true that the information drawn from the fourth-century writers makes it possible for us to attempt a tour of the Great King's entire domain from the geographical, ecological, and ethnographic points of view concurrently (even if, on this last point, Asia Minor once again takes pride of place). For the first time since Herodotus (VII–IX), because of these sources we can, for example, compile a *Who's Who* of the imperial elite.

There is obviously a flip side to this coin. By definition, the military historians follow the conqueror and exalt his memory. At best, Darius's territorial dominion appears only as a chimera, in a context that often suggests it never represented more than a feeble bulwark against the victorious progress of the Macedonian armies. The descriptions are thus very uneven from one region to the next, in direct relationship to the obstacles encountered by Alexander. We glean only meager information on Cappadocia and Armenia, for example, which in large measure remained satrapies *in partibus [barbarorum]*, whereas the resistance encountered in the course of several weeks between Susa and Persepolis

yields valuable notes on Uxiana, the Uxians, and the Persian Gates. This is especially true for the Iranian Plateau, Central Asia, and the Indus Valley. When Alexander traversed Aria, Arachosia, Bactria, and Sogdiana, Darius III was dead, and the royal proclamation of Bessus had not aroused the Achaemenid loyalist sentiments that he had expected. And so the impression prevails that Persian dominion in these regions was light, and this in turn reinforces certain conclusions that have sometimes been drawn from the silence of the Classical sources. But was the sense of emergency felt in Bactria and Sogdiana when Alexander invaded a reflection of the situation that prevailed earlier? This example illustrates one of the major difficulties in using the Alexandrian sources: bringing Achaemenid conditions to light is a sometimes delicate problem, insofar as in each case we cannot assume complete continuity with the past.

In sum, the Hellenistic sources (Babylonian, Egyptian, Greek, etc.), in comparison with the Greek sources of the fourth century, are exceptionally rich in Achaemenid data. To be sure, we have not one royal inscription, nor can we identify a single structure that can be attributed with certainty to Darius (not even the incomplete tomb at Persepolis: fig. 64, p. 735). But many texts and depictions—from Asia Minor, Egypt, and Samaria, in addition to Babylonia—enlarge and enrich the corpus, anchoring it to a regional foundation. Without being paradoxical, we might even say that the reign of Darius III is particularly well documented. The devaluation (nearly a *damnatio memoriae*) to which the last representative of the Achaemenid dynasty was subjected is thus not simply a mechanical reflection of the poverty of our evidence; it is primarily due to the unbridled Alexandrocentrism that modern historiography has long fed on. This fixation arises not from imitation of the Macedonian conqueror's courtiers but from an excessive focus on just one of the protagonists—who thus appeared to travel through an empire that had no prior existence.

Methods and Aims

The problem is well known: Darius III is often presented as a weak king who controlled (badly) a decaying Empire, unable to rely on the faithfulness of his satraps or on an army worthy of the name or on the support of the subject populations, who endured an unbearable financial burden, which was then simply hoarded (hence the economic stagnation)—the totality of the interpretation tending to create the all-too-well-known “colossus with feet of clay.” We know that the image comes directly from the polemical Greek authors of the fourth century and that it was taken up and even magnified by the historiography of colonial Europe. We have already had several occasions to bring up the specific problem posed by the use of these documents, as well as their success in modern historiography. Though we must conclude that the Greek interpretation generally falsifies the landscape, the problem of tracing internal changes that the Achaemenid imperial structure must have undergone from the time of Darius I on remains. This assessment is the burden of two chapters here (16–17), which parallel the chapters above that assess the Empire during the times of Darius and Xerxes (chaps. 5, 13). In between, partial assessments have been furnished, especially in the area of territorial dominion of the Great Kings. It is now appropriate to broaden them and extend them in different directions: the lands and populations (chap. 16) and the instruments of authority (chap. 17). This is a prospective assessment, for these varying approaches will be taken up again and discussed, in context, in the last chapter (18), which will attempt to understand

more precisely why the Great King was conquered by Alexander. This intermediate assessment is absolutely indispensable if we wish to avoid the well-known vicious circle: the Empire was conquered because it was in a state of profound structural crisis ("Achaemenid decadence"), and this state of crisis is "confirmed" by the defeat.

1. Sources and Problems

It is for the reign of Darius III and the subsequent Macedonian dominion that we have the most information on the administrative organization of the Empire. The first complete list of satrapies, as they existed at the time of Alexander's death, dates to the age of the Diadochi. In a famous passage that is part of a geographical discussion, Diodorus differentiates the satrapies "sloping to the north" from the satrapies sloping "to the south" (XVIII.5♦). Even more useful are the lists of satrapies as they were divided among the Companions of Alexander in 323 and 320 (e.g., XVIII.3.1–2). All of these documents are very interesting (we will use them), but they are not enough. In fact, they do not necessarily reflect the exact state of affairs in 334; Alexander had already made some changes, and so did Perdikkas, who, for example, in 323 conferred on Eumenes all of the Anatolian territories that had not submitted to Alexander (XVIII.3.1♦).

Other texts and contexts provide further essential information that permits us to get back to the situation prevailing at the accession of Darius III. First, of course, there are the tales that follow Alexander step by step, always naming the satraps in office and the region or regions over which they held sway. Next, we have the mobilizations ordered by Darius III. At the battle of the Granicus, we find contingents led by the satraps of Asia Minor; at Issus, the contingents were drafted from the central and western portions of the Empire; at Gaugamela, we find troops that were enrolled from as far away as India (Arrian III.8.3–6♦):

Name	Position	Contingents
Bessus	satrap of Bactria	Bactrians, Sogdians, Sakians
Barsaentes	satrap of the Arachotians	Arachotians and Indian hillmen
Satibarzanes	satrap of the Areians	Areians
Phratapharnes		Parthians, Hyrcanians, Tapyrians
Atropates		Medes, Cadusians, Albanians, Sacasinians
Orondobates, Ariobarzanes, Orxines		peoples bordering the Persian Gulf
Oxathres	son of Abulites the satrap	Susianians and Uxians
Buparcas		Babylonians, deported Carians, and Sittacenians
Orontes and Mithraustes		Armenians
Ariaces	satrap?	Cappadocians
Mazaeus		Syrians

These lists pose several interpretive problems. There are obvious discrepancies from one list to another, and it is not always easy to come to a decision; for instance, when Arrian describes the Persian order of battle at Gaugamela (III.11.3♦), he reports that

"Aristobulus tells us that a document giving the order as Darius drew it up was afterwards captured." Furthermore (again in the context of the military units brought to Darius prior to the battle of Gaugamela), it is not certain that the person named as the leader of the contingent must automatically be considered the satrap of the regions from which the troops were drawn: in some cases, Arrian actually calls them satrap (Bessus, Barsaentes, and Satibarzanes); in the other (more numerous) cases, he uses a phrase that refers primarily to their position as head of the contingents (*agein, arkhein*; III.8.3–6); in at least one case, it is not the satrap (Abulites of Susa) but his son Oxathres who is ordered to lead the satrapal contingent. Parallel passages sometimes permit resolution of the ambiguity (e.g., III.23.7).

In any case, an inventory of the Empire cannot be restricted to a simple enumeration of districts. It is necessary to gather concurrent data on the human and material resources available to the Great King. For this purpose, Strabo provides essential information on both the extent and the human geography of the lands of the Near East. His report of course represents a late state of affairs, but Strabo quite often positions his data diachronically and usually also provides some material specifically dated to the period of Achaemenid dominion. Many other sources (literary, archaeological, epigraphic, and iconographic) dating from various times (from the fourth century to the Greco-Roman period) allow us to fill in the picture, particularly of the peoples who lived in the Empire and of the contacts they wove among themselves — thus permitting us to place all of this information in the *longue durée*. Following the steps of Alexander, we proceed from west to east — that is, from the least poorly understood to the most poorly investigated; because of the uneven spread of the data, the accounts are of highly variable importance. In any case, our intention here is not to draw up an exhaustive regional and micro-regional assessment (which would require a book in itself) but to isolate and integrate the data that will permit us to apprehend the reality of Achaemenid territorial dominion between Artaxerxes II and Darius III.

2. The Satrapy of Dascylium

As in previous periods, the residence of the satrap of Hellespontine Phrygia was in Dascylium, on the edge of Lake Manyas (Dascylitis), which was accessible to warships by way of the Rhyndacus (*Hell. Oxyr.* 22.3–4). It was defended by a stronghold (22.3: *khōrion okhyron*), furnished with a garrison (Arrian I.17.2), and famous for the immense paradise, teeming with fish and game, in which Pharnabazus took great delight (Xenophon, *Hell.* IV.1.15–16). In 334, its satrap was Arsites, who may have been in place beginning with the exile of Artabazus (who had taken refuge at the court of Macedon after his abortive revolt against Artaxerxes III around the middle of the 350s: chap. 15/9). If we carefully follow the argument of Diodorus's text on Mentor's operations in Asia Minor after the reconquest of Egypt (XVI.52), it appears that his mission was limited to setting the affairs of the satrapy of Dascylium back in order. This is the context of his fights with Hermias of Atarnaeus and other petty local chieftains in the Troad and Aeolis (chap. 15/9), as well as the recall from exile of Artabazus, Memnon, and all of their abundant progeny. Artabazus did not regain his post at Dascylium, but he became an influential adviser to the Great King and enjoyed an exalted position alongside him in the court hierarchy (cf. Arrian III.23.7). Meanwhile, the family remained solidly settled in the region. For one thing, Arsites himself may have been a relative. For another, we know that

Memnon had land and estates in the Troad in 334 (cf. Polyaeus IV.3.15 and Arrian I.17.8: *kḥōra* tou *Memnōnos*); it is possible that he received them from his brother Mentor (as a reward from Artaxerxes), who disappears from the scene after his victories. In this connection, it is not uninteresting to note that when one of the Companions of Alexander arrived at the sanctuary of Athena Ilias, before the battle of Granicus, he "noticed in front of the temple a statue of Ariobarzanes, a former satrap of Phrygia, lying fallen on the ground" (Diodorus XVII.17.6♦). Just like Xerxes (Herodotus VII.43), Ariobarzanes sacrificed to the goddess; but he had gone further by placing a statue there, thus placing a Greek sanctuary under the goddess's protection and in the process causing prestige to redound to himself. His statue also served to mark a territory, the Troad, to which his ancestors in Dascylium had always laid claim in opposition to the ambitions of the satraps of Sardis.

In addition to being charge of the Troad, the satrap of Dascylium had responsibility for part of Mysia (which may have been placed under the authority of a lieutenant governor or even, for a time, a satrap of its own [Orontes]: chap. 15/5). The Paphlagonians also were a dependency of Dascylium; they were famous for their cavalry (Xenophon, *Anab.* V.6.8) and had provided a contingent to Cyrus the Younger (I.8.5; Diodorus XIV.22.5); in 334, they placed themselves under the orders of the satrap Arsites (Diodorus XVII.19.4). According to Quintus Curtius and Arrian, the Paphlagonians rushed an embassy to Alexander while he was staying at Ancyra, a town near Gangra, which is believed to be the capital of the lieutenant governor of Paphlagonia. They offered their people's submission and requested that Alexander not invade the country; the king ordered them to place themselves under the authority of Calas, whom he had named satrap of Hellespontine Phrygia in place of Arsites some months earlier (Arrian II.4.1–2; cf. I.17.1 and Quintus Curtius III.1.24). Quintus Curtius adds that the Paphlagonians sent hostages to Alexander and "obtained freedom from the obligation of paying tribute, which they had not rendered even to the Persians" (I.23♦), while the king "order[ed] the inhabitants of the territory Arsites ruled to pay the same taxes as they used to pay to Darius," apparently including "natives who came down from the hills" (Arrian I.17.1♦). This interpretation is difficult to confirm, because we have no information on the region after the events relating to the passage of Agesilaus and Datames' campaign against Thuys. Nonetheless, it is doubtful that the Paphlagonians, who sent a contingent to Calas, no longer paid tribute in 334. It seems more likely that Quintus Curtius's source was referring to the well-known fact that Paphlagonia, which had not been invaded by Alexander, was included among the unsubmitive countries in 323 (cf. Diodorus XVIII.3.1). In the eyes of the fourth-century Greek authors, the region had always been considered independent of the Persians—a generalization that is obviously inappropriate. During the Persian counterattack after Issus, Paphlagonia was one of the recruiting bases used by Darius's generals (Quintus Curtius IV.1.34; 5.13). The discovery of a Greco-Persian relief in the region (fig. 55) even seems to imply the presence of an imperial diaspora. The Paphlagonian marriage of Camisares, the father of Datames (Nepos, *Dat.* 1–3), and the matrimonial designs of Spithridates (Xenophon, *Hell.* IV.1.4–5) in themselves suggest that connections were common and fairly close between the representatives of the imperial diaspora and the Paphlagonian aristocracy.

On the coast, the main town was Sinope, which had several dependent tributary cities: Trapezus, Cerasus, and Cotyora (Xenophon, *Anab.* IV.8.22; V.3.2; V.5.3). Sinope

had a rich and famous port and thus was broadly open to the sea; the town was also closely linked to the back country and exported its timber resources (Strabo XII.3.12). Cappadocian ocher was exported by way of Sinope as well (XII.2.10). Isocrates' phrase (*Phil.* 120: "Asia from Cilicia to Sinope") illustrates the extent of its commercial relations—as far as southern Asia Minor—and this is also attested by discoveries of coins. It was also at Sinope that the rebellious Datames had coins struck in his name; around 332, some Persian

Fig. 55. Persian relief from Paphlagonia.

generals also issued coins there, with Aramaic legends. Between 334 and 330, the Sinopians continued to consider themselves subjects of Darius (Arrian III.24.4; ♦ Quintus Curtius VI.5.6); they were not considered to be "part of the Greek league" (*to koinon tōn Hellēnōn*) by Alexander. Let us note finally that Iranian personal names frequently appear on the seals marking ownership of amphorae from the city.

Bithynia, another country on the Black Sea coast, was in principle a dependency of Dascylium; it was west of Paphlagonia and its best-known town was Heraclea, in the territory of the Mariandynians (cf. Strabo XII.3.4, 9; Xenophon, *Anab.* VI.2.1). We know little about relations between the Bithynian leaders and the satrap of Dascylium. In 400, Pharnabazus sent a cavalry troop to aid the Bithynians against the Greek mercenaries (*Anab.* VI.4.24). In other circumstances, however, we find the same Pharnabazus at war with the Bithynians (*Hell.* III.2.2). Their relations with the satrap of Dascylium must have been as irregular and contradictory as the relations between Dascylium and the various Paphlagonian chieftains (chap. 15/5). In 334, the region seems to have been ruled by the local prince Bas; and Calas, the Macedonian satrap of Dascylium, led an unsuccessful expedition against Bas, in the course of which Calas met his end. Bas was succeeded by his son Zipoithes. Heraclea always exhibited great loyalty to the Achaemenid authority. In the course of the fifth century, the Heracleans at first refused to pay tribute to Athens, "because of their friendship toward the Persian kings" (*ob amicitiam regum persicorum*; Justin XVI.3.9), and then yielded to Athenian threats. Around 364, Clearchus took power with the help of a force led by Mithradates, son of Ariobarzanes, the satrap of Hellespontine Phrygia, and he renewed a traditional policy of alliance with the Achaemenid authorities, as is illustrated in particular by the sending of several embassies to Artaxerxes II and III. His "Persianization" is demonstrated by the discovery of a portrait carved in Persian style that probably represents the tyrant himself. Clearchus's successors did not modify the substance of his policy, not even after the victory at the Granicus. According to the local historian Memnon, Dionysius of Heraclea actually profited from the battle at the Granicus (*FGrH* 434 F4); the requests presented to Alexander by the Heracleian exiles obviously fell on deaf ears.

The satrapal court at Dascylium had certainly been wide open to Greek influences for several generations. This is eloquently evidenced by many "Greco-Persian" stelas,

Fig. 56a-c. "Greco-Persian" objects from Dascylium.

bullas, and seals (fig. 56a-c). At this point, we cannot help recalling that around 360 the satrap Artabazus married a sister of the two Rhodians, Mentor and Memnon. The marriage was fruitful, producing eleven sons and ten daughters, including Pharnabazus, who fought alongside his uncle Memnon on the Asia Minor front in 334-333 before succeeding him as commander of naval operations. One of the daughters was Barsine, who successively married her uncles Mentor and Memnon before becoming a Companion of Alexander, to whom she may have given the famous Heracles. According to Plutarch (*Alex.* 21.9♦), "she had been instructed in the Grecian learning" (*paideia hellēnikē*). The societal promotion of the two Rhodians is all the more remarkable in that through his mother, Apame, Artabazus was grandson of Artaxerxes I.

3. From Sardis to Ephesus

The satrapy of Lydia, bordering on Hellespontine Phrygia, had its capital at Sardis. The administrative organization of the satrapy continues to pose problems that are difficult to resolve, particularly regarding the name attributed to Spithridates' territory: "satrap of Lydia and Ionia" (Arrian I.12.8♦). From the beginning of the fourth century, whenever an inscription refers to a "satrap of Ionia" (Tod no. 113), the exact relationships that link the two components are far from clear: in 334, the Macedonian Asandrus received "Lydia and the rest of Spithridates' district" (*arkhē*; Arrian I.17.7;♦ chap. 18/2). The satrap in place in 334, Spithridates (Spithrobates in Diodorus XVII.19.4), had suc-

ceeded his father Rhosaces (I) at an unknown date; the latter was “a descendant of one of the seven,” who had taken part in the Egyptian campaign in 343 (XVI.47.2:♦ “satrap of Ionia and Lydia”). Another son, Rhosaces (II), aided Spithridates in his territory (XVII.20.6). The garrison was commanded by Mithrenes, who handed over the citadel and treasury to Alexander a few weeks after the battle of the Granicus; this was a veritable godsend for the Macedonian, for everyone knew of the virtual impregnability of the position (Arrian I.17.3–8). The Persians had also erected a lookout on Mount Timolus (Strabo XIII.4.5), and several military colonies of diverse origins had been stationed there, as is attested by (among other things) the existence of a Hyrcanian plain (named for the people who settled there).

The available evidence provides a particularly large amount of information on the depth and breadth of intercultural contact in Lydia and Ionia. That is what, in its way, Plutarch’s description of Ephesus around 407–405 points toward; the description occurs within a discussion that is very critical for Lysander the Spartan, who was accused of imitating the behavior of the satraps:

Being at Ephesus, and finding the city well affected towards him, and favourable to the Lacedaemonian party, but in ill condition, and in danger to become barbarised by adopting the manners of the Persians, who were much mingled among them, the country of Lydia bordering upon them, and the king’s generals being quartered (*diatribein*) there for a long time. (*Lys.* 3.3♦)

The passage is uncommonly interesting in that it deals with daily life. It is easy to imagine that the essentially permanent presence of the Persians led to close intercultural encounters of the sort that Plutarch deplored, because in his eyes they threatened the Hellenism of the city (compare *Agis* 3.9). In a rather derogatory discussion, Democritus also condemned the “effeminate” character of his fellow citizens, which was manifest particularly in the richness and delicacy of their clothing, highlighted with colors and bordered with pictures of animals; among these clothes, Democritus specifically names typically Persian garments, such as the long robes called *kalasireis*, as well as the *sarapeis* and the *aktiai*, which he considers “the most costly among Persian wraps” (Athenaeus XII.525c–e♦).

Illustrations of Persian-Ephesian contacts are found in several passages touching on Tissaphernes. In 411–410, before reaching the Hellespont, the satrap “went first to Ephesus and offered sacrifice to Artemis” (Thucydides VIII.109.1♦). About two years later, he decided to go once more to Ephesus, which was then threatened by the Athenian Thrasyllus: “When Tissaphernes learned of this plan, he gathered together a large army and sent out horsemen to carry word to everybody to rally at Ephesus for the protection of Artemis” (Xenophon, *Hell.* I.2.6♦6). Meanwhile, he returned to the Troad. This was probably the occasion when he struck bronze coins in his name at Astyra, a small city on the Gulf of Adramyttium: he is shown on the obverse (one time mounted); the reverse of two of the coins bears a sacred image of Artemis.

Ephesus was connected to Sardis by the royal road (Ctesias §64; cf. Herodotus V.54) and enjoyed long and continuous relations with the satrapal capital. We may recall first of all that the administrator (*neocore*) of the sanctuary there bore a name-title of Iranian origin, the Megabyzus—that is, Bagabuxša ‘who serves the god’. He is the one to whom Xenophon paid the tithe that he had withheld from the booty and dedicated to Apollo and Artemis of Ephesus in 400–399 (*Anab.* V.3.5–7). It also appears that the Great Kings

themselves held the sanctuary in great honor: according to Strabo (XIV.1.5), Xerxes spared it when he destroyed the sanctuary at Didyma. Furthermore, we know from Tacitus (III.61) that in Tiberius's time the Ephesians mentioned an immunity granted to the sanctuary of Artemis by the Persians. The respect that Tissaphernes showed toward the great Ephesian goddess is comparable to the respect demonstrated in Egypt by high Persian leaders of the satrapy (chap. 12/1).

In an opposite sense, if we may put it that way, a Lydian-Aramaic funerary inscription from Sardis dated to the tenth year of an Artaxerxes (III? 348?) invokes the protection of Artemis Coloc and Ephesian Artemis on the funerary vault and the adjoining *temenos*. The existence at Sardis of a sanctuary of Artemis of Ephesus is confirmed by Lydian inscriptions and by a now-famous inscription from Ephesus called the "Inscription of Sacrileges" (I. Ephesos 2). It reports that a number of Ephesian sacred envoys had been sent to Sardis to perform ceremonies according to ancestral custom (*kata ton nomon ton patrion*) in a sanctuary of Artemis at Sardis, described as "that which was founded by the Ephesians," obviously to distinguish it from the sanctuary of Sardian Artemis. It appears that on this occasion the Ephesian sacred envoys were attacked by some Sardians, who subsequently were sentenced by the Sardian tribunals in the presence of witnesses to the crime who had come from Ephesus. A list of about fifty condemned men follows. Another Ephesian inscription adds confirmation and some detail. It records a decree granting citizenship to an inhabitant of the town who had provided assistance to the sacred envoys sent to the sanctuary of Ephesian Artemis at Sardis. The texts, unfortunately, are not dated; we are inclined to place them at the beginning of the last quarter of the fourth century, either just before or just after the Macedonian conquest. A more precise date would of course be important, but we must note that in any case the sanctuary had long existed. Furthermore, relations between Sardis and Ephesus were nothing new; they were clearly frequent and encouraged throughout the Achaemenid dominion.

The record gives rise to several historical reflections—first of all, on the status of Sardis at the end of the Achaemenid period and the very beginning of the Hellenistic period. Insofar as we can reconstruct, the procedure followed by the Ephesians mentioned in the inscriptions cited above necessarily implies that there were tribunals—deliberative institutions—at Sardis, and this in turn demonstrates that Sardis constituted a political community (albeit not a Greek city). Another decree, also dated to this period, verifies this. This inscription is from Miletus and records an agreement between that city and Sardis: Sardis guaranteed access and security to the Milesians. A commission was named in each city to guarantee the enforcement of the agreement, and the text includes the formula "Here are those of the Sardians who have been named in accordance with the decree (*kata to psephisma*)" (Syll.³ 273). The way in which Alexander arrived in 334 confirms that Sardis had local authorities, not to be confused with the Persian authorities, since the town was handed over to Alexander by the chief citizens (*dynōtatoi tōn Sardianōn*), while the Persian *phrourarch* Mithrenes handed over the citadel and treasury to the conquerer (Arrian I.17.3♦). Whatever uncertainties about details may remain in the texts, we must conclude that Sardis under Achaemenid dominion enjoyed some degree of autonomy, comparable in some respects to the autonomy that the texts imply was enjoyed by Babylon. Just like Babylon, Sardis also had a district where peasants and workmen labored, and they lived in villages (Hieracome, Village of the Hibis, Tamasis), as shown by the "inscription of sacrileges"; these villages obviously were de-

pendent on the city, since the guilty parties were tried at Sardis. Other villages on the plain of Sardis are listed in the Mnesimachus inscription (*Sardis* VII.1.1); they regularly have Lydian names (Tobalmura, Kombdilipia, Periasasostra), some of them partially Hellenized (Ilucome, Tanducome); the peasants also had Lydian names. All of this evidence gives the impression that there was extensive Lydian continuity; in this connection, we may also cite the participation of the Lydian Adrastus in the struggles of the Diadochi in 322 (Pausanias VII.6.6).

Actually, the population of Sardis and environs was ethnically mixed. Among the names in the Mnesimachus inscription is a Babylonian name (Beletras/Bēl-ētir). The list at the end of the "inscription of sacrileges" includes Greek, Lydian, "Asiatic," and five Iranian names. One of the guilty persons is a Carian; the presence of Carians at Sardis is attested by many other documents. They were basically common people and craftsmen: bath boys, sellers of soles (of shoes), a sandal merchant, a butcher, as well as a goldsmith and an oil merchant; people with religious titles are found there as well: the son of a priest (*hierēus*) and even a sacred herald (*hierokēryx*). Not everyone with an Iranian name was necessarily an aristocrat: one, Mithradates, was the slave of a man with a Lydian name, Tyios; another, Ratopates, was the son of a man named Papes, a name that marks him as Lydian. From this we must conclude that personal names are not enough to identify anyone's ethnicity. Marriage and the borrowing of foreign names probably contributed to this mélange. Consider a fourth-century Greek-Lydian bilingual inscription where someone named Nannas, son of Dionysopolis, makes a dedication to Artemis/Artimus.

This does not seem to be the case for Sisines, whose father also had an Iranian name, Eumanes/Vohumāna, and who the "inscription of sacrileges" says lived in Hieracome. This is the name of the village known later as Hierocaesarea. Much evidence from the Roman period attests to the existence of a sanctuary dedicated to Persian Artemis, otherwise known as Anāhita, at Hieracome. According to Tacitus (III.62), the original privilege of immunity was granted by Cyrus the Great, which probably was the time when the sanctuary was founded as an accompaniment to the settling of an originally Iranian populace. The privileges were confirmed by the Hellenistic kings, as suggested by a letter of Attalus III that refers both to his ancestors and also to earlier kings (RC 68). The same is true of Hypaipa, a site very close to Sardis and Timolus. Pausanias reports that even in the Roman period the *magi* (who are also found in the inscriptions of this period, including an *archimagus*) continued to preside over sacrifices, invoking the god "in a foreign language" (V.27.5). Many other inscriptions report the spread of sanctuaries of Anāhita/Anaitis in the Lydian and Meonian countryside. Behind apparent stability, the available evidence shows elaborate processes of syncretism between Anāhita and local gods, including Artemis. Though the coins at Hierocaesarea show an almost completely Hellenized Anaitis, at Hypaipa the goddess is represented with authentically Iranian characteristics.

We know that Sardis also had a sanctuary devoted to the worship of Sardian Artemis, who was distinct from Ephesian Artemis, as we have seen. The fifth/fourth-century sanctuary has not yet been discovered. We find evidence for it in several fourth-century Lydian inscriptions and a well-known passage in Xenophon: Cyrus the Younger recalls that, after Orontas's second reconciliation with him, he "[went] to the altar of Artemis and [said he was] sorry" (*Anabasis* I.6.7♦). The sanctuary was very wealthy, as a well-known inscription from the beginning of the Hellenistic period shows: it says that a

certain Mnesimachus had inherited as a royal gift a vast *dōrea* near Sardis, and it is clear that the antecedents of this property must be sought in the Achaemenid period (*Sardis* VII.1.1). Mnesimachus borrowed large amounts of money from Artemis of Sardis; she clearly held sacred land (*hiera khōra*) to which the Persians had perhaps granted a privilege of immunity, like that of Anaitis of Hieracome (Hierocaesarea); the sanctuary's holdings were administered by *naopes* ("temple overseers"). Although it remains mysterious, a Lydian inscription from the Achaemenid period also seems to refer to a loan by sanctuary administrators to someone with an Iranian name, Mitrastas, son(?) of Mitratas.

Does this mean that the Persians identified Artemis of Sardis with Anāhita? This is not at all certain. There is no doubt that there was a sanctuary dedicated specifically to Artemis Persica, even though the earliest literary attestation dates to 322 (Pausanias VII.6.6). Perhaps it was distinct from Artemis Coloe, who is named in the "inscription of sacrileges," the Lydian-Aramaic funerary inscription mentioned above, and a Greek inscription dated to Caesar. The sanctuary is located 200 stadia north of Sardis by Strabo, who mentions the very well-known festivals celebrated in honor of the goddess (XIII.4.5). It was situated on the shores of a lake rich in fish. A dedication to Artemis Persica has been found there, along with proof of the existence of an Iranian community, the Maibozenoi (who perhaps originally were from Cappadocia), at an early period. It is thus not impossible that Artemis Coloe was more or less assimilated to Iranian Anāhita, who was also a water goddess.

Whatever the case may be, we can see that the totality of the evidence attests first of all to a dense settlement of Persians and Iranians not only in the great satrapal residences but also in the west Asia Minor countryside. The evidence also demonstrates the intimacy of daily relations between the Persians and the local peoples. Although much of the evidence is late in date (from the Roman period), there is hardly any doubt that contact between peoples of different cultures was regular and permanent from the Achaemenid period onward. This was already implied by Doroaphernes, who dedicated a statue to a Zeus who could well be a local god, perhaps Lydian Zeus. The Lydian-Aramaic inscription from Sardis dated to either Artaxerxes II or Artaxerxes III is also worth considering. The dedicator, Manes, son of Kumli, grandson of Siluka, is quite certainly a Lydian; while the heading of the inscription includes a formula close to the Aramaic version of the Xanthus trilingual, we also see that the month name (Marshewan) is cited in Lydian: Baki (assimilated by the Greeks to Dionysius). We also note the borrowing of several Persian words for both the stela and the sacred enclosure. Another Manes

is found on a seal showing a typically Achaemenid scene of a Royal Hero with lions (fig. 57). Another Lydian seal is carved with the Iranian name Mitrastas. The Lydian seals amply testify to the association of Lydian and Persian elements, as well as the participation of Greek artists—or artists working in the Greek style.

The intimacy of these relations must have had political repercussions. Thus, in Asia Minor, many Greeks were among

Fig. 57. Seal bearing the name Manes.

the advisers or diplomatic intermediaries at the courts of Sardis and Dascylium (cf. Thucydides VIII.6.1; 85.2; Xenophon, *Hell.* IV.1.29). We also know of a number of (private) agreements of hospitality between Persian aristocrats and prominent Greek citizens that were formalized by the exchange of gifts and oaths (cf. *Hell.* I.1.9; IV.1.39–40). It was because they had ancient bonds of hospitality that Antalcidas received military reinforcements from Ariobarzanes of Lesser Phrygia (V.1.28); furthermore, all of the mercenary captains from Cyrus were hosts (*xenoi*; *Anab.* I.1.10–11). But were the Persians themselves merely residents (Plutarch, *Lysander* 3.3: *diatribein*) at Ephesus and elsewhere, or had they by this time established institutional relationships with the city? We do not have sufficient evidence from Asia Minor to clarify the question, aside from the Ephesus decree granting citizenship to a Sardian for the role he had played in the affair of the sacrileges. On the other hand, several Athenian texts and decrees deserve to be mentioned. We know that Orontes received Athenian citizenship for himself and his descendants because he sold wheat to the city at a difficult moment (*IG* II², 207a). The same was true for the satrap of Dascylium, Ariobarzanes, his three sons, and two of his Greek advisers, Philiscus and Agavus. An Athenian inscription dated 327 attests that Pharnabazus and Artabazus, though they did not necessarily bear the title, were considered benefactors (*euergetoentes*) because of their actions on behalf of Athens in wartime (Tod, no. 199). We may also remark that, according to Ctesias (§43), Zopyrus, son of Megabyzus, sought refuge at Athens “because his mother had dispensed her benefactions toward the Athenians” (*eis autous euergesia*). In any case, it was not the first time that a Persian aristocrat broke with the Great King and found asylum at Athens (cf. Plutarch, *Cimon* 10.9). Thus, we cannot exclude the possibility that similar decisions were made in Asia Minor from time to time to the advantage of high dignitaries from Sardis and Dascylium, even though we have no indisputable evidence.

4. From Celaenae to Halicarnassus

In the winter of 333, Alexander arrived outside Celaenae, the capital of Greater Phrygia. The satrap Atizyes was no longer there; he had taken part in the battle at the Granicus, then joined Darius, probably at the head of what remained of his contingent; he then fought at Issus and died during the battle. Arrian (I.29.2) and Quintus Curtius (III.1.6–7) tell of the strength of Celaenae’s location. We know that the construction of a residence (*basileion*) and the restoration of the acropolis go back to the time of Xerxes (Xenophon, *Anab.* I.2.9). Celaenae had a major Iranian settlement and was also well known for its enormous paradise, watered by the sources of the Marsyas (I.2.7–9), as well as for the great fortified estates (*tetrapyrgia*) immediately around the town (Plutarch *Eum.* 8.5). These estates, comparable to Asidates’ estate in Mysia, evince the richness of the agriculture and husbandry of a country “abounding in villages rather than in cities” (Quintus Curtius III.1.11♦). To the west, the town of Cydrara permanently marked the border between Phrygia and Lydia (Herodotus VII.30). When Cyrus the Younger crossed it, Lycaonia belonged to Celaenae, because Iconium was called “the last city of Phrygia” (*Anab.* I.2.19♦).

To the north and northeast, the royal road ran toward Gordion, where it reached the Halys, which marked the Phrygian-Cappadocian border (cf. Herodotus V.52). The old capital of the kingdom of Phrygia, located on the Sangarius, certainly took on major importance in the Achaemenid period. It was a “stronghold (*khōrion*), built on a hill and

well fortified," that was defended by the energetic commander Rhatanes, who was able to successfully resist the timid attempts of Agesilaus to take it (*Hell. Oxyr.* 21.6). Because of its strategic location, Gordion had certainly been well supplied with an abundance of granaries and storehouses—which is enough to explain why Alexander chose to winter there in 334–333. This was the occasion when the king ascended the acropolis, "where the palace of Gordion and his son Midas was situated" (Arrian II.3.10), before taking the road to Ancyra (modern Ankara; II.4.1; cf. Quintus Curtius III.1.14–15). Archaeological, numismatic, and iconographic evidence points to the Persian presence at Gordion and the area surrounding it that was crossed by the royal road.

We do not know the exact date of the creation of the satrapy of Greater Phrygia; perhaps it was during the fourth century. On this point, a valuable note in Arrian (I.24.50) must be quoted. In his description of Alexander's march through southern Asia Minor, Arrian says this about the Milyan district: "It belongs to Greater Phrygia, but was then reckoned part of (*syntelei*) Lycia by the Persian king's orders." Milyas had close cultural links to Lycia (cf. Herodotus I.173) and seems to have had dual status, since even though it was an administrative dependency of Celaenae, it nonetheless remained fiscally connected to Lycia: the word *syntelei* indicates that it paid its tribute together with the Lycians. In other words, Darius I's tribute organization, as presented by Herodotus (III.90), had been partially retained, since Lycians and Milyans were at that time part of the First Nome (along with the Ionians, Magnesians of Asia, Aeolians, Carians, and Pamphylians); but successive reorganizations created satrapal territories that no longer necessarily corresponded in detail to the original tributary territories. An *ethnos* could be transferred to a newly created satrapy even though its original tribute accounting might be preserved. Even though the Great King goes unnamed by Arrian, it is tempting to think that the reorganization goes back a few decades at most. The decision might have been made in connection with the creation of the satrapy of Greater Phrygia, which also must have resulted in a change of status for Lycia.

In fact, a now-famous document, the Xanthus trilingual, shows that Lycia was the object of a major administrative reorganization under Artaxerxes III. At the time of the decree that it records (337), Lycia was included in a satrapy along with Caria, because the official (Aramaic) version bears the following ascription: "In the month of Sivan in year 1 of King Artaxerxes, in the citadel of Orna [Xanthus], Pixoda[ro], son of Katomno, the satrap who [governs] in Karkā [Caria] and Termila [Lycia], said. . . ." Here we recognize Pixodarus, well known from many Greek and Lycian texts as the satrap of Caria beginning in 341–340. Thus, at some time, certainly within the reign of Artaxerxes III, Lycia was joined to the satrapy of Caria, and the satrap of Caria was thereafter also satrap of Lycia. The reasons for the reform are obviously not presented in any part of the inscription. We must simply stress that the rulers of Halicarnassus had harbored ambitions toward Lycia from ancient times and that the region of Caunus in particular was claimed by both the satraps of Caria and the dynasts of Xanthus. As a result, the Great King had to resolve these territorial disputes between neighboring peoples (e.g., Arrian I.27.4 and Diodorus XVI.113.3) in a way that would stabilize the situation to the advantage of the central authority. We can imagine that these were the conditions under which the administrative status of Milyas was redefined, perhaps to settle an overt problem between Halicarnassus and Celaenae. A new and important decision was made in the time of Darius III. When Alexander arrived at the borders of Caria, he was greeted in the tradi-

tional way by Ada (Diodorus XVII.24.2), the daughter of Hecatomnus and wife of Idrieus; "Pixodarus, however, turned her out of the government. . . . On his death Orontobates, his brother-in-law, was sent down by the king and assumed the government" of Caria (Arrian I.23.7–8♦). Without naming him, Strabo also refers to Orontobates in the course of a passage on Hecatomnid dynastic history: he states that, "having espoused the side of the Persians" (*persisas*), Pixodarus had asked the Great King to send a satrap to share power cooperatively (*koinōnia*). "And when he [Pixodarus] departed from life, the satrap [that is, Orontobates] took possession of Halicarnassus. And when Alexander came over, the satrap sustained a siege" (XIV.2.17♦). The historical circumstances of the episode continue to pose several interpretive problems in the context of relations among Pixodarus, Philip II, and Darius III. But the texts appear relatively clear on one point at least: by "Persianizing" himself, Pixodarus displayed his submission to the Great King. The Great King (as he had certainly done during the accession of Pixodarus) intervened directly in the succession, with the result that a satrap of Persian origin was named at Halicarnassus: Pixodarus and later Orontobates were the delegates of the central authority in Caria (Arrian I.23.8).

5. *Pixodarus at Xanthus*

Let us return to the Xanthus trilingual (fig. 58). The document's importance warrants presenting it in detail, since it provides very important information on the satrapal administration, the satrap's relations with the political community of the Xanthians, and the ongoing process of acculturation in Lycia. We know that the stela (which can be seen today in the museum in Fethiye) includes three versions: the official Aramaic version (inscribed on the front) and two translations, Greek and Lycian, on the sides. We also know that the topic of the decree is a matter internal (in principle) to Xanthus: the founding of service for and a sanctuary dedicated to Basileus Caunius and to Arcesimas. To this end, the Xanthians and their neighbors chose to appoint a priest, assign land to the new sanctuary, and specify the sacrifices to be rendered to the god.

The texts pose many interpretive problems, which we will not go into in detail here. We will pay particular attention to the light the documents may throw on relations between a satrap and a Lycian town. The reasons for and nature of the satrap's intervention continue to be problematic. We will especially stress that the civic version of the text (the Lycian and Greek versions) is rather different from the satrapal chancellery's version. The civic version presents the event in the context of decisions relating to the political community (*polis* in the Greek version), though it acknowledges the authority of Pixodarus at the end of the text: "May Pixodarus have the high hand in these decisions." In contrast, the Aramaic version presents the Xanthian decision as a simple proposition, and it states: "This law (*datab*), he (Pixodaro) has inscribe[d], who is master [of the decision]." The authority of the satrap in Lycia is highlighted by details given in the Greek and Lycian versions. We learn in fact that Pixodarus named two commissioners/archons in Lycia: Hieron and Natrbbyemi (Apollodotos); he also named a chargé d'affaires/governor (*epimelētēs*) at Xanthus, Erttimeli (Artemelis) by name, obviously a Lycian. The heading of the Aramaic version is unambiguous: "In the month of Sivan in year 1 of King Artaxerxes, in the citadel of Orna, Pixoda[ro], son of Katomno, the satrap who (governs) in Caria and Lycia, sa[id]. . ." where the formula "said" obviously introduces a satrapal decree. The text illustrates very well the relations between a civic community

(1) In the month of Sivan in year 1 (2) of King Artaxerxes, (3) in the citadel of Orna, Pixoda[ro], (4) son of Katomno, the satrap (5) who (governs) in Caria and Lycia, sa[īd]:

(6) "The citizens of Orna planned (7) to make a sanctuary(?) for the King (8) the God of Caunos and his Companion.

(9) "And they made priest Simias, (10) son of Koddorasi.

"And there is an est[ate] (11) that the citizens of Orna gave (12) to the King the God.

"And year by year, (13) on the part of the town (are) given in silver (14) a mina and a half.

"The said priest (15) sacrifices at the beginning of the month a sheep (16) to the King the god, and he immolates(?) (17) year by year one ox.

"And the said estate (18) is emancipated, (the estate which is) his."

(19) This law, he (Pixodarus) has inscribed, who is master (of the decision). Moreover, (20) if ever anyone steals (something) (21) from the King the God or from the (22) priest (then) in office, (may he), by the King (23) the God and his Companion, (be) stolen!

(24) And, by the god, Lato, Artemis, (25) *Hšatrapati* and other (gods), (may) someone (26) (be) stolen! And may these gods (27) require of him (expiation)!

(1-2) When Pigesere, son of Katamia, became satrap of Lycia and when he had (3) for the Lycians established (as) commissioners (4) Iyeru and Natrapiyēmi and (5) for Arna (as) governor Ertimeli, (6-7) the citizens and the dependents of Arna decreed(?) to found this(?) sanctuary for the King (8) of Caunos and for Arkazuma the (9) King.

And they made priest for (10) these gods Simias, son of Kondorahi, (11) and him who would be close to Simias.

And (12) they gave him free what is his.

And (13) the town and the dependents added to it (14-15) fields of the town. Lo, Khesentedi and Pigres irrigated them. (16) And all that is added—and that which is built—(17) (will be) property of the King of (18) Caunos and of Arkazuma.

And Arna (19) gives him annually 18(?) *adas* for salary.

(20) And he requires (that) the slaves(?)—(21) all those who will thereafter be freed—(22) give him (two?) *sigloi*.

And one has consecrated (23) everything written on this stela (24) to the King of Caunos and to Arkazuma.

(25) And he who receives this benefit, (26) one will sacrifice month by month (27) ritually with a sheep and yearly (28) with an ox to the King of Caunos and Arka(28)zuma. And it is Simias who sacrifices, and he (30) who will be close to Simias.

(30-32) And the town of Arna and the dependents of Arna have made him their oath for this law; thus, one (33) establishes this law (that) all that (34) is inscribed on this stela, no one (35) will abrogate it, neither this with respect to these gods (36) nor that with respect to that priest. May, if (37) someone abrogates it, one require the penalty from those gods (38) and from the Mother of the enclosure of here, (39) the *Pentrenni*, and from her children and (40) from the Eliyana.

To Pigesere, if one, (41) then.

(1-2) When Pixodarus, son of Hecatommnos, became satrap of Lycia, he established (3) (as) archons of Lycia Hieron and (4) Apollodotos and (as) governor of Xanthus (5-6) Artemelis. The Xanthians and their dependents decreed to found (7) an altar for the King of Caunos and for Ar(8)kesimas.

And they chose (as) priest Simis, (9) son of Kondorasis, and him who (10) will be the closest to Simias always.

(11) And they gave him, on all his property, (12) exemption from taxes.

And the town gave the land (13) that Kesindelis and Pigres wo(14)rked and all that adjoins the field (15) and the buildings, for that which belongs to the King (16) of Caunos and to Arkesimas.

And are given (17) each year three half-(18)minas on the part of the town.

And all those who (19) will be freed will pay (20) to the God two drachmas.

And all things that (21) have been inscribed on the stela (22) have been consecrated to belong in totality to the King (23) of Caunos and to Arkesimas.

And on all the profits (24) that accrue from it, one sacrifices (25) each new moon a sheep (26) and annually an ox.

And (27) the Xanthians and their dependents have made oaths (28-30) to do exactly all that is inscribed on the stela for those gods and for their priest, and to remove nothing (31) from it nor to permit another to do so. (32) And if anyone changes [the rule], (33) may he be guilty with respect to those gods (34) and to Leto and to (his) descendants and to Nym(35)phs!

And may Pixodarus be master (of the decision)!

and the Achaemenid authority. The participation of Pixodarus in this matter does not appear to be any different from other known satrapal or royal initiatives or involvement in internal matters of local religious practices throughout the Achaemenid period. The Xanthians' proposal was probably brought to the attention of the satrap because the permanence of the regulation was placed under the protection both of the gods and of the satrap, who also was considered the guarantor.

Despite uncertainties on the administrative level, the political organization reflected in the Xanthus trilingual attests to a major transformation of the situation in Lycia, even if the existence of two archons may be attributed to the traditional division between western and eastern Lycia. The disappearance of dynastic coinage illustrates the fact that Lycia had been thoroughly "satrapized." Other evidence clarifies the satrap's administrative practices. A Greek-Lycian bilingual from Xanthus (probably originally a trilingual; TL 45) also refers to a regulation (Lycian *marā*) engraved on a stela and invokes curses on those who would contravene the regulatory provisions. It appears that at some date (probably close to that of the trilingual), Pixodarus granted a considerable favor to the towns of the valley (Xanthus, Tlos, Pinara, Kandaynda)—to be refunded, "in whatever manner they choose," a commercial tax (*dekatē emporias*) that in normal times would obviously have belonged to the category of royal and/or satrapal taxes. A decree of the Carian community of Plarasa, also dated to the rule of Pixodarus (*Pixadaro[u] xaitrapeontos*), grants a fiscal exemption to a person named Dion, from Cos, except for "royal taxes (*basilika telē*)." Other texts make it clear that the cities, which were in charge of civic taxes (in the best of circumstances), were not in charge of royal taxes that had to be paid one way or another. Arrangements of this sort certainly held for all of the cities and communities subject to the "tribute of Darius"; only special situations allowed for variation—for example, a decree from Alexander allowed the Ephesians to dedicate to Artemis the tribute they traditionally paid to the Great King (Arrian I.17.10).

6. From Tarsus to Mazaca

Other administrative reorganization can be detected, beginning with Tarsus. We know that around 350 Mazaeus was put in charge of Cilicia, while Belesys was governing Trans-Euphrates (Diodorus XVI.42.1). To the extent that we can date them with certainty, the coins of Mazaeus indicate that, after the fall of Sidon, he saw his power spread, since the Aramaic legend on his coins struck in Cilicia bear the formula "Maz-dai [governor] of Trans-Euphrates and Cilicia," the title he still bore when Alexander arrived. The combination of the two provinces is certainly logical, because Cilicia had always looked more toward Syria than toward Asia Minor. The satrap governed from Tarsus, where he had a residence (cf. Xenophon, *Anab.* I.2.23). He undoubtedly had a subordinate at Damascus (cf. Quintus Curtius V.13.11), a fortified town that had a governor in 333 (III.13.2) and that after 323 continued to retain the importance it had held in the Achaemenid period on the road between Babylonia and Egypt (DAE 67 [AD 6]; cf. Arrian, *FGrH* 156 F9.28).

The breadth and depth of Persian territorial control in Cilicia are generally underestimated. To evaluate it, we must begin by emphasizing that the use of the term "Cilicia" artificially confers political unity on a region within which, beyond any doubt, many different statuses overlapped (cf. Diodorus XIV.19.3: *tyrannoi*). The Classical and Hellenistic authors loved to emphasize a contrast between the Cilician coast and the Cilician

Fig. 59. Cilician civic coins.

Persians had military bases and royal arsenals. It seems quite clear that the creation of a full-fledged satrapy at Tarsus signified a weakening—nay, the disappearance pure and simple—of the power of the old *synnesis*; though the date cannot be fixed precisely, it must have been no later than the time of the installation of Mazaeus. Mazaeus's authority over the coastal cities is illustrated by the coins he struck at Tarsus, Soloi, Mallus, and Issus. These cities also had to pay taxes and tribute, following the pattern of Aspendus of Pamphylia, who each year furnished a certain number of horses as royal *dasmos* ('tribute'), according to a statute well attested in Cilicia itself (Herodotus III.90) and also in Armenia (Xenophon, *Anab.* IV.5.34; cf. 5.24 and Strabo XI.14.9). The existence of a royal tribute imposed on Mallus is confirmed by Arrian (II.5.9); it seems quite likely that the fine imposed on Soloi by Alexander (II.5.5) was in addition to the normal tribute. It also appears that kings and satraps recruited mercenaries from this area, particularly at Aspendus in Cilicia, a town that was famed for the valor of its archers (cf. Nepos, *Dat.* 8.2; Xenophon, *Anab.* I.2.12). The towns of the Cilician coast were also integrated into the imperial military organization, with each of them required to send a specific contingent to the royal navy (cf. Arrian II.20.2: Soloi and Mallus). The coinage of the Cilician cities simultaneously demonstrates the significance of local tradition (cf. Quintus Curtius III.8.22), the introduction of Persian themes, and the adoption of Greek models (fig. 59).

Turning to Cilicia Trachaea, Alexander's campaign there can be read in two different ways. The fact that he campaigned in this region does not imply that there had been an expansion of imperial dominion into a region previously left to itself by the Persians. It is nonetheless likely that the satrap of Cilicia periodically led expeditions against peoples who were taking advantage of the strength of their mountain positions to remove themselves from the control of the central authority. This in fact was one of the missions entrusted by Alexander to Balacrus, his satrap of Cilicia, who led an unsuccessful campaign against Isaura and Laranda (Diodorus XVIII.22.1). Persian presence is in any case attested in the high country, at the site of Meydançikkale, where the only provincial example of Persepolis-type reliefs has been discovered. Two Aramaic inscriptions have been found there as well; one of them, badly damaged, is dated to the reign of an

highland in their descriptions of the Empire. This is what Strabo does (XIV.5.1) when he distinguishes Cilicia Pedias from Cilicia Tracheia, the former running from Soloi to Tarsus and Issus. This interpretation is also found in Arrian, who speaks of an expedition led by Alexander in 333 that set out from Soloi: at the head of light detachments, Alexander led a campaign against "the Cilicians holding the heights. In no more than seven days he drove some of them out, induced others to enter into agreements (*homologia*), and returned to Soli" (II.5.6♦).

Persian dominance on the coast is abundantly attested from the end of the sixth century onward. On the coast, in particular, the

Artaxerxes and includes the word *datah*; it is likely that the site was occupied at a very early date, because it is attested from the time of the Neo-Babylonian period under the name Kiršu (found in the Aramaic text). This is also the case for the royal treasury at Cyinda, on the Cilician coast.

Among the political subunits we must also consider the great sanctuaries, which are known especially (later) from Strabo—particularly the sanctuary of Artemis Perasia at Castabala, which was later called Hierapolis and was located in the valley of the Pyramus. An Aramaic inscription dating to the Achaemenid period has been found there, and it describes the limits of the sanctuary's territory. This is where, at the height of the Roman period, the local authority of the dynasty of the Tarchondimontos was recognized. The dynastic name recalls their distant Luvian origins, similar to the name (Tarkumawa) that, according to the most widely accepted theory, appears in Aramaic on Cilician coins attributed to Datames. Strabo locates Hierapolis-Castabala in Cataonia (XII.2.2–7♦), an area whose geographic and administrative outlines are poorly specified in the Achaemenid period. "A broad hollow plain, and produces everything," Cataonia is watered by the Pyramus, a navigable river that reaches the sea in Cilicia, and also by the Carmalus. The region is surrounded by mountains and had few cities, but "they have strongholds (*phrouria*) on the mountains." This is confirmed by Nepos: the country was thickly wooded and covered by a dense network of *castella* (Dat. 4.2). Among its strongholds, Strabo names Nora, "where Eumenes held out against a siege for a long time" (XII.2.6♦). Nora was known for the strength of its position at the very beginning of the Hellenistic period and certainly must have been occupied since the Achaemenid period, just like many other neighboring citadels that, similar to the garrisons of Mysia (Xenophon, *Anab.* VII.8.15), could easily lend assistance (cf. Diodorus XIX.16.3).

At a much later time, the region of Castabala constituted an administrative subdivision, the Castabalitis, and we know of the existence of a "*strategos* and high priest of Cataonia"—an organizational structure that may be compared with the organization described several times by Strabo in the "temple states" of Greco-Roman Anatolia (XII.2.3). For the Achaemenid period proper, the most evocative text is a passage in Nepos, who describes the territory of Aspis, against whom Artaxerxes II sent Datames: "ordering him to attack Aspis, the ruler of Cataonia (*Cataoniam tenebat*); that country lies beyond Cilicia, next to Cappadocia" (*jacet supra Ciliciam, confinis Cappadociae*; Dat. 4.1♦). The outcome of the tale shows that the country was crossed by major roads, since Aspis took advantage of its location to seize tribute that was being sent to the Great King (§4.2). We should stress the importance of one of these roads, the road that led from Cataonia to the Cilician Gates via Tyana (Strabo XII.2.7–9; cf. Xenophon, *Anab.* I.2.20–21 [Dana]). Datames was probably chosen as Artaxerxes' agent because his father, Camisares, had himself held an official position: Camisares had in fact "governed (*habeat provinciam*) that part of Cilicia which adjoins Cappadocia (*partem Ciliciae iuxta Cappadociam*) and is inhabited by the Leucosyri, or 'White Syrians'" (§1.1♦). This region obviously is Cataonia, which was located in a frontier area between Cappadocia and Cilicia and apparently was at that time a dependent of the satrapy of Cilicia—although, according to Quintus Curtius (IV.12.11–12), the Cataonians were among the contingents placed under the authority of Darius III at Gaugamela. This is where the main town, Mazaca (later called Eusebeia-near-the-Argaeus after the volcano that towers 3900 meters over it) was located (Strabo XII.2.7). Some 35 km northeast of the future

Fig. 60. Persian relief found near Kayseri.

Caesarea (Kayseri), Mazaca in the Achaemenid period may have been the seat of the lieutenant governor of Cataonia—namely, Camisares and, later, Aspis.

Not far from Mazaca, an altar base has been found; on its four faces typically Persian scenes are carved: sacrificing magi, very similar to the scene on one of the stelae from Dascylium (fig. 60). It is possible that the Persians established Fire worship on the volcanic Argaeus, thus assimilating a worship of heights to their advantage—a theory that calls to mind the sanctuary of Anaitis Barzochara, the Iranian divine name designating a high mountain known in nearby Cappadocia. Nearby, in the town of Hanisa—which was built on the site of ancient Kanesh—a late inscription provides evidence for the density of Iranian population very like that of neighboring Cappadocia. The “governor and high priest” of Cataonia, also known from a late

inscription, had an Iranian name, Arsames, and a local patronymic, Iazemis. It is also within the confines of Cappadocia and Cataonia (Farasa) that late Greek inscriptions attest to a “Luvian/Castabalian” personal name, Tarkondaios; and it was here that a Greek-Aramaic inscription in honor of “Sagarios, son of Maiphernes, commander/garrison chief (*stratēgos / rab haylā*) of Ariaramneia, who became *magus* of Mithra” was recopied (first century A.D.?). This material shows the retention of Iranian names (Maiphernes, which is also found at Hanisa and Celaenae) and their mixture with local names (Sagarios, also known at Sardis), as well as the continuity of Aramaic language and Iranian religion—each component obviously going back to the Achaemenid period.

All of this evidence shows that Achaemenid territorial occupation was much more dense than is generally postulated on the basis of a convenient but partly illusory dichotomy between plain and mountain (or coast and interior). In the interior of Cilicia, there were political subunits, ruled by lieutenant governors, such as Camisares and Aspis of Cataonia, who can be compared with a person named in an Aramaic inscription of the Achaemenid period found at Hemite, which was close to Hierapolis-Castabala: “[X so]n of Sarmapiya the satrap.” The title *satrap* may indicate that the person (who has a Luvian name) held some sort of official position in the region; and even if the title was only a status identifier, it is remarkable that the person improved his social status by using a Persian word. Other evidence—though the date is always difficult to pin down—shows

that there was a Persian diaspora in various subregions of Cilicia (and/or borrowing of the Persian lifestyle): "Greco-Persian" reliefs; an Aramaic inscription (at Saraidin: Gibson II no. 35), where someone boasts of his hunting prowess (in a paradise? cf. Nepos, *Dat.* 5.4); and a late Greek inscription that mentions an Iranian religious title (*satabara*) not previously attested. We may emphasize, finally, an interesting, isolated, and undated Cilician coin depicting a gardener-king.

7. From Tarsus to Samaria via Sidon and Jerusalem

Artaxerxes III's reconquest of Egypt led to other administrative reorganizations in Trans-Euphrates. Thereafter, Mazaeus's authority also extended south, from his original base in Cilicia as far as the Egyptian border. After Cyprus was retaken, the island's kings, including Pnytagoras of Salamis, were permitted to retain their positions (Diodorus XVI.46.1–3), but they certainly were required to renew their oaths of allegiance (cf. XV.9.2). This then brings up the question of the Sidonian problem. Contrary to what Diodorus would have us understand (XVI.45.4–6—there taking up well-known narrative motifs; cf. Herodotus I.176; Diodorus XVIII.22.4–8), Sidon was not obliterated from the map nor was its population entirely eliminated. The deportation of Sidonian women "to the royal palace at Babylon," which is referred to in a Babylonian chronicle (*ABC*, *Chronicle* 9, p. 114) simply confirms the reality of the kind of retaliatory measure that was customary in such circumstances. After all, there is hardly any doubt that the city was required to provide a naval contingent for the armada accompanying Artaxerxes to the Delta. The scarcity of direct evidence prevents us from reaching a decisive conclusion regarding the status granted to or imposed on Sidon. The question is, after the reconquest by Artaxerxes III, was the town administered directly by the Persians, or did it retain the relative independence it enjoyed before the revolt? It is frequently thought that the Great King rescinded the grant one of his predecessors had conferred on King Ešmunazar (chap. 12/3), but the documentation remains very elliptical. On the other hand, there is no doubt that a few years later (342–341) Sidon was once more led by a king whose name was Straton (II), because his coins have been found. We also know that Mazaeus struck coins at Sidon and that his coins continue without interruption between 343 and 333. But there is nothing to prove that we must interpret this as evidence of a drastic limitation on Sidonian privileges. The reports of Alexander's authors make it clear that Straton, the king of Sidon installed by the Great King, was perfectly loyal to the Persian cause (cf. Quintus Curtius IV.1.16 and Diodorus XVII.47.1). In Achaemenid strategic planning, the Phoenician coast, in combination with Cyprus and Cilicia, always constituted an important naval recruiting base, as is demonstrated by the composition of the Persian navy in 334–332 (cf. Arrian I.19.7; II.16.7; II.20.1). Shipyards (*neōria*) are attested at Tripolis (II.13.3–4), and the timber of Lebanon was close by (cf. Quintus Curtius IV.2.18). The importance of this area for naval operations carried over to Alexander, whose Indus fleet was made up of Phoenician, Cypriot, Carian, and Egyptian equipment (Arrian VI.1.6). When Alexander was planning for the expedition against the Arabs, he once more called on the Phoenician shipyards (e.g., VII.19.3), and these shipyards, supplied by the forests of Lebanon, remained active during the age of the Diadochi (cf. Diodorus XIX.58.2–5).

Achaemenid authority was also well established in Samaria, though we have no official information after the Jews' appeal to Sanballat and his sons Dalayah and Šelemyah

in November 407 (DAE 102–3 [AP 30/31–32]). Aramaic papyri, seals, sealings, and coins add important details. Papyri and some seals were found in 1962 in one of the caves in the Wadi ed-Daliyeh, near Jericho. Coins have been discovered in two hoards, one from Nablus (now dispersed) and one at Samaria. Several of these coins mention Mazaeus: none from the Samaria hoard (apparently predating 345), but four in the Nablus hoard (CS nos. 14, 16, 21, and 48), dated between 345 and 333–332. Sidonian coins (or imitations) struck in the name of Mazaeus were also found in the Nablus hoard. Among the items from Wadi ed-Daliyeh is a coin from Tarsus depicting Baal of the city and stamped with the name of Mazaeus. The papyri from Wadi ed-Daliyeh record private business and are dated to the reigns of several Great Kings and also name the governor (*pehā*) of Samaria. One of the most interesting and best preserved has the following heading: “The twentieth day of the month of Adar, second year, accession year of Darius the king, in Samaria the citadel (*byrt*), which is in Samaria the province (*medinah*)”; and then, along with clauses of warranty and authentication, a formula appears: “Before Yeshu’a, son of Sanballat, governor (*pehā*) of Samaria, and Hananyah, the prefect (*šangu*)” (SP 1). To start with, the document has the unique advantage of being dated to the very moment of the transition between Arsēs/Artaxerxes IV (year 2) and Darius III (year 0)—that is, March 19, 335. It is the latest of the documents; most of them date to Artaxerxes III, some to Artaxerxes II, and the oldest goes back to 375. Furthermore, we observe that Samaria (the term refers equally to the town [*qryt*?], the citadel [*byrt*?], and the province [*medinah*]) was still administered by a governor assisted by a prefect. Finally, it is clear that the line of Sanballat I had remained in place at least since Darius II: Yeshua is in all probability Sanballat I’s grandson through his son Sanballat II (CS 41–45), or through Delayah (CS 49?); Hananyah the prefect was Sanballat II’s brother, whom he succeeded as *pehā* of Samaria (cf. SP 7, 9 and CS 29–30). According to Josephus (*Ant.* XI.302), yet another Sanballat was made satrap of Samaria by Darius III; if he ever existed, he would have to be considered Sanballat III, the son of Hananyah. Thus we see here a succession of several generations that is somewhat reminiscent of the Hecatomnids of Caria; in that case, members of the same family passed on the title of governor, though there is no doubt that at each succession the new title was bestowed directly by the royal authority, who always retained the sovereign right to confer power on whomever he wished. If the same family maintained this preeminence, it was obviously because it had proved its unbroken loyalty to the Great Kings from Darius II (at least) to Darius III. Information on Judah as well comes from coins: coins were struck in the name of “Yehizqiyyah the governor (*pehā*),” and others in the name of “Johanan the high priest.” The relative dates of the coins and the relational hierarchy between the governor and the high priest (who both used the same types of coins) unfortunately continue to be problematic. However, it is worth recalling that this joint administration was quite venerable, because in 410 and 407 the Jews of Elephantine sent two successive petitions, one to the leading citizens of Judah and (a different) “Johanan the high priest,” and a second to Bagohi the governor (DAE 102 [AP 30/31]).

What must be stressed is the broad diffusion of Persian motifs on the coins and seals (fig. 61a–g), sometimes by way of imitation of Sidonian coins (the Sidonian ship is found several times: CS 16–17, 44–45, 49, 54). One of the most common scenes is the Royal Hero, who is so well known from Persepolis and elsewhere: he confronts lions (CS 16, 44–45, 48–51, 59–60), sometimes winged lions (cf. WD 4, 17), or a bull (CS 19, 31–33).

Fig. 61. (a-e) Coins from Samaria and (f-g) sealings from the Wadi ed-Daliyeh.

We also find, as on royal coinage, the archer- and/or lancer-king (CS 17, 22, 21, 56-57, related images on front and back of CS 52), as well as the king on his throne (CS 18, 21), before a footed censer (CS 33), in his chariot (CS 35, 48), or standing with his scepter (CS 37). The Persian motifs (lion-hunting and others) are sometimes united on a single coin (CS 18, 21, 31-33, 36-38, 48, 52, 57). In one case (CS 50), a royal scene (king killing a lion) is combined with a head of Athena (fig. 61b). This serves to recall the diffusion of Athenian models in the coinage and the Greek influence evident in particular in the "Greco-Persian" seals from Wadi ed-Daliyeh (fig. 61f-g). The Jerusalem coins of Yehizqiyah and Johanan themselves include motifs that are scarcely Jewish: an owl and

a female mask. Some motifs are harder to define “ethnically,” such as a man killing a horse rearing in front of him (CS 58); we might be tempted to see this as a reference to horse sacrifice in Mithra-worship—if the man were wearing Persian garb, which is not the case (fig. 61e).

8. From Gaza to Petra

After the fall of Tyre, Palestine fell into Alexander’s hands, except for Gaza, which put up a lengthy resistance (September to November 332) that is described by all the ancient historians, including Polybius, who praises the locals’ fidelity to the imperial power, going all the way back to Cambyses’ conquest (XVI.22a). The reports show that Gaza was heavily fortified and that its governor, Batis, had a sizeable garrison, including both Persians and Arab auxiliaries (cf. Arrian II.25.4–26.1; Quintus Curtius IV.6.7). After taking the city, Alexander—they say—sent 500 talents of incense and 100 talents of myrrh to his tutor, Leonidas (Plutarch, *Alex.* 24.6). The presence of Arab mercenaries, the existence of inventories of incense and myrrh, and the finds of coins lead us to recall that Herodotus had compared Gaza’s prosperity to the wealth of Sardis (III.5); the city was at that time the main center of all the emporia that, again according to Herodotus (III.5♦), “belong to the king of Arabia.” This king of the Arabs was certainly none other than the one who in Cambyses’ time controlled the desert road leading from Gaza to Egypt (III.7). Other evidence shows that the merchandise of the Minaeans (of South Arabia) found an outlet in Gaza; we have long known about a Minaean inscription (RÉS 3022) that refers to a merchant caravan that had returned from trading in Egypt, Assyria, and Trans-Euphrates (*br Nhr*); the inscription reports that the Minaean merchants “rescued their goods from the heart of Egypt during the conflict that broke out between the Medes (*Mdy*) and Egypt (*Msr*).” If the text is to be dated to the Achaemenid period—which seems probable—it most likely refers to one of the campaigns against Egypt, which unfortunately cannot be dated more precisely than to the time between Cambyses and Artaxerxes III.

We also know, again from Herodotus, that Cambyses had entered into an agreement with the king of the Arabs (III.7, 9). We then might suppose that it was because of this agreement that Herodotus included the Arabs among the donor peoples: “The Arabians brought a thousand talents of frankincense every year” (III.97♦); even though they were officially included in Trans-Euphrates, their territory was exempt from tribute (III.91). It is likely that the “king of the Arabs” retained his privileged status throughout the Achaemenid period. But between Herodotus and Alexander we have hardly any direct information; twice Diodorus simply mentions that the “king of the Arabs” was aligned with the pharaoh and his allies against the Persians; around 410, he allied himself with Amyrtaeus (XIII.46.6); and around 382, he sent reinforcements to Evagoras of Cyprus (XV.2.4). It would be going too far to conclude from this that the Persians had deliberately chosen to abandon the region. Gaza’s resistance permits us to think that, at least after the reconquest of Egypt (343), the town had again become a fortified place of great importance that was directly controlled by the Great King. Furthermore, Quintus Curtius states that Batis was exceptionally loyal to Darius III (IV.6.7♦). Two collections of Aramaic ostraca from Beer-sheba and Tell Arad, two sites in Idumea, date to the fourth century, perhaps even to the reign of Artaxerxes III, and reflect Achaemenid settlement in the region. The second collection includes partial summaries of the distribution of

food rations to men and animals (horses, donkeys); workers were organized into *dgālīn* (companies), something well attested at Elephantine; similar to the Persepolis tablets (PF, Category Q), these ostraca clearly show that the territory was organized logistically around major centers that commanded smaller centers that had storehouses and garrisons (Tell Arad). The case of Beer-sheba is no doubt different, since the presence of a garrison is not, properly speaking, attested; the foodstuffs mentioned in the ostraca could be deliveries from farmsteads in the surrounding areas to a collection center. The recent (and still unpublished) discovery of hundreds more ostraca of the same type, also from the fourth century, may confirm that Achaemenid settlements (military or not) in the province (*medīnah*) of Idumea were quite dense—the area that Diodorus, at the very beginning of the Hellenistic period, calls “the district (*eparchias*) of Idumea” (XIX.95.2♠). It is also immediately striking that the personal names betray very thorough mingling of the peoples clustered at these sites (Arabs, Edomites, Hebrews, Phoenicians, and some Persians).

The political geography of North Arabia at this time poses a number of other problems that continue to be hotly debated, and we cannot enter into the details of the debate here. One of the most interesting texts is the long passage that Diodorus of Sicily (XIX.94–97) devotes to the Nabateans in the context of his description of the campaign that Demetrius, a lieutenant of Antigonos the One-eyed, launched against them from Idumea (§95.2). They were nomadic herders (camels, sheep): “while there are many Arabian tribes who use the desert as pasture, the Nabataeans far surpass the others in wealth . . . ; for not a few of them are accustomed to bring down to the sea frankincense and myrrh and the most valuable kinds of spices, which they procure from those who convey them from what is called Arabia the Fortunate” (§94.4–5♠). So they profited from their role as intermediaries between southern Arabia and the Mediterranean ports, principally Gaza. Demetrius had launched an attack against a natural stronghold (*petra*/*Petra*), where the trading posts were set up (§95.1). After sending Antigonos a letter (in Aramaic: §96.1), the Nabateans offered Demetrius the following deal: Demetrius was to withdraw his army, and the Nabateans would give him gifts (*dōreai*; §97.4). This was done, and hostilities ceased (§97.6). We can imagine that the situation prevailing at this time was no different from the situation prevailing at the end of the Achaemenid period: the Nabateans were not tributaries (*phorologoumenoi*; §94.10), but they presented gifts to the Persian administration, just as the “king of the Arabs” did in the time of Herodotus. It may be this king of the Nabateans that Heraclides of Cumae was referring to when he recalled that he was “independent and subject to nobody” (Athenaeus XII.517b–c♠). However, if this theory is valid, by referring to him as ruling “the country where frankincense is produced” (*libanophoros khōra*), Athenaeus would be guilty of confusing the production and the distribution of this commodity.

9. Egypt from Artaxerxes III to Darius III

We are little and poorly informed about the history of the Egyptian satrapy after Artaxerxes III's reconquest. Not a single Classical text refers to the region in this period: all we know is that the satrap of Egypt in 333 was named Sabaces, but we do not know when or how he replaced the satrap who had been appointed ten years earlier by Artaxerxes III. At this point, we cannot avoid turning to a well-known document—namely, the

Satrap Stela, which dates to the seventh year of Alexander IV (312–311)—though its reading and interpretation continue to exercise modern scholars. This hieroglyphic stela describes the good deeds of the satrap Ptolemy, particularly his benefactions that honored the temple of Ejo, near Buto, in the Delta. Not only did he “bring back from Asia the images of the gods and the books that belonged to the temples of Egypt,” but he also renewed a land grant that had been made (renewed?) previously by someone named Khabbabash. This person in fact had come to inspect the Delta, “to become familiar with all the branches of the Nile that flow into the sea, in order that the *kbnt*-boats of the Asians might be cordoned off from Egypt.” Given this information, the editors of the inscription recall that “the age-old enemy, Xerxes,” had nullified a previous grant.

Some of the details indicate that the inspection of the Delta took place at the exact moment when it was threatened by the invasion of a navy from Syria–Palestine; the terminology and date of the stela show that Khabbabash feared an expedition headed by an Achaemenid fleet—hence his concern to inspect and improve the defenses of the Delta, which was the entryway to the Nile and Memphis, following the example of his predecessors when they had faced similar situations in the past (see chap. 15/9). But what is the date of this enigmatic Khabbabash? The few documents that name him do not allow us to answer the question; all we can say is that he was a pharaoh in the full sense, though we are not able to say that he controlled all of Egypt. It seems highly unlikely that he can be placed in the time of Xerxes. The context of the text leads us instead to suggest that the time of Khabbabash was not long before the time of Ptolemy. As a result, there have been several attempts to place him around 342–338, or between 338 and 336, and to suggest that “Xerxes” in the inscription actually refers either to Artaxerxes III or to his successor, Arsēs/Artaxerxes IV. Whatever the (disputed) identity of Xerxes, we have to conclude that, at some date that we cannot establish (Artaxerxes III, Artaxerxes IV, or Darius III), the Achaemenid armies must have once again mounted an expedition of reconquest. Nevertheless, we can say nothing about the magnitude of the revolt, because after his fleeting appearance, Khabbabash completely disappears from the historical record. Furthermore, we cannot be certain that Pharandates, the satrap appointed by Artaxerxes III, died as a result of this uprising.

We have very little information on the organization of Egypt when Alexander arrived, apart from the account of administrative measures taken in 332–331, which included the appointment of two nomarchs, Doloaspis and Petisis (the latter declined the offer), and a phourarch at Memphis. Cleomenes of Naucratis “was instructed to permit the nomarchs to govern their own districts in accordance with the ancient practices (*ek palaïou*), but to exact the tribute (*phoroi*) from them himself, while they were ordered to pay it over to him” (Arrian III.5.4♦). One of the nomarchs, Doloaspis, actually appears to have had an Iranian name. Was he a Persian, or a Persianized Egyptian? Though two people are named “nomarch,” confusion arises over the sense of the title when it appears in the second half of the text, where it designates the heads of the 42 basic administrative regions of Egypt; it seems clear that these jurisdictions had not been altered by the Persians, nor were they modified by Alexander. It was these district rulers who turned over the proceeds of the tribute to Cleomenes (cf. Ps.-Arist., *Oecon.* II.33a [1352a]). We may note finally that, when Alexander arrived, Elephantine was still “open for business,” because the king deported some of his political adversaries there (Arrian III.2.7).

10. From Arbela to Susa

After being defeated at Gaugamela, Darius returned to Media, leaving open the road that led from Arbela to Babylon and Susa (Arrian III.16.1–2); the conqueror's progress was aided by the fact that the road was well provided with resupply stations. We know that Mazaeus and the Babylonian authorities surrendered the town to Alexander (Arrian III.16.3; Quintus Curtius V.1.17–23). The same fate soon befell Susa, a twenty-days' march from Babylon; it was surrendered to Alexander by Darius's satrap, the Persian Abulites, who retained his post (III.16.6, 9; Quintus Curtius V.2.8, 17), just as Mazaeus had been made satrap at Babylon (Arrian III.16.4; Quintus Curtius V.1.44). It was at Babylon that Darius had twice assembled his forces—before entering Cilicia in 333 and Upper Mesopotamia in 331. In 331, Oxathres, the son of Abulites, led the Susianan and Uxian troops, while Bupares (then satrap of Babylonia?) was in charge of the Babylonian contingents (Arrian III.8.5). We know that Babylon and Susa were two of the most important centers of Achaemenid presence at this date; the projects carried out there by Artaxerxes II demonstrate this fact (chap. 15/8). An "Achaemenid residence" recently uncovered north of Sippar belongs to the end of the Achaemenid period.

We have very little detail about the satrapal administration of Babylonia and Susiana. As in the time of Darius I (chap. 12/2), there was a treasury managed by a treasurer at Babylon (Quintus Curtius V.1.20: Bagophanes, *arcis et regiae pecuniae custos* = **ganza-bara*); the same was certainly the case at Susa (cf. Diodorus XIX.18.1: Xenophilus *thē-saurophylax* [**ganzabara*]; cf. §48.6). It is likely that the satrapy of Babylonia was divided into several subdistricts, as in earlier times; we know very little about these districts, aside from the explicit mention of detachments from Sittacene and "transplanted Carians" among the troops in the unit commanded by Bupares (Arrian III.8.5♦). These transplanted Carians were settled in "villages called Carae" that Diodorus (XVII.110.3♦) locates on the great road leading from Susa to Ecbatana along the east bank of the Tigris, close to Sittacene, which was probably a subdistrict (in Steven of Byzantium, Sittacus is called *persikē polis* 'a Persian city'). While following his itinerary, Alexander came into contact with the transplanted Eretrians (not Boeotians, as Diodorus has it) who had been settled by Darius in the community of Ardericca in Kurdistan, which was near naphtha wells (cf. Herodotus VI.119–20). These are probably the people that Quintus Curtius calls Gordyans and that also sent a contingent to Darius at Gaugamela (IV.12.11; cf. Strabo XVI.1.25). We may also note that, after the division of 323, Mesopotamia and Babylonia were two separate satrapies (Diodorus XVIII.3.3); and after the division of 320, Mesopotamia was united with Arbelitis (XVIII.39.6). It is likely that this arrangement went back to the Achaemenid period and that the region around Arbela at that time constituted a specific administrative subdivision; Strabo includes it in what he (in confusion) calls Assyria (XVI.1.3). The travel voucher given by Aršāma to his steward when he sent him back to Egypt from Babylon makes it clear that the Arbela region was among the 'provinces' (*medinah*) crossed by the royal road (DAE 67 [AD 6]). The strategic importance of the region—where the ruins of ancient Assyrian towns remained (Xenophon, *Anab.* III.4.6–9)—is illustrated by its easy communication with Babylonia (Quintus Curtius IV.9.8) and by the presence of Achaemenid colonies that were integrated into the imperial military organizations. It is likely, finally, that the marshy southern portion of the lower Tigris and Euphrates valleys also constituted a province, named Māt Tāmtim ("Sealand"), within the Babylonian satrapy.

The sources from Alexander's time provide considerable information regarding navigation and water management. Some of them deserve careful examination if only because they are sometimes used as evidence for the claim that Persian territorial control of Babylonia was weak. We may begin with a well-known passage from Arrian. Alexander sailed up the Tigris with his navy as far as Opis:

In the voyage upstream he removed the weirs in the river and made the stream level throughout; these weirs (*katarrhaktai*) had been made by the Persians to prevent anyone sailing up to their country from the sea and mastering it with a naval force. The Persians had constructed them because they had no naval power (*nautikoi*), and the weirs, built up at such regular intervals, made the voyage up the Tigris impracticable. Alexander, however, said that contrivances of this kind were the work of men lacking military supremacy; he therefore regarded this precaution as of no advantage to himself, and showed by his action in destroying with ease works on which the Persians had spent their energy that it was of no value. (VII.7.7♦)

The same information, similarly told, is found in Strabo (XVI.1.9; cf. XV.3.4). If it is correct, we would have to conclude that the Persians did not control southern Babylonia, which would have been continually at risk from any foreign enemy that was able to assemble a navy powerful enough to sail up the Babylonian rivers and challenge the Achaemenid forces at the heart of the Empire. But Arrian's and Strabo's presentation is highly suspect. Two facets must be distinguished: the facts provided (the construction of artificial weirs) and the historical commentary. It is clear that Arrian's passage contains all of the traditional literary stereotypes about the weakness of the Persians: like the fourth-century Egyptian pharaohs (see chap. 15/9), they primarily trusted defensive emplacements to repulse invasions, since the Great Kings were incapable of demonstrating any sort of military supremacy. Furthermore, the claim that the fourth-century Persians were not sailors is an evaluation that does not make much sense; we suspect that Arrian has taken over nearly word for word the phraseology used by Herodotus when he describes the Persians at the beginning of the reign of Cambyses (I.143). Finally, it is hard to imagine which enemies from the Persian Gulf region were strong enough to threaten the rich lands of Babylonia and endanger the royal residences at Susa and Babylon at this time. In reality, there is every indication that the observers relied on by Arrian and Strabo took as permanent defensive works what were nothing more than light structures set out by the satrapal administration each year to regulate the river at the time of high water. In fact, it seems likely that in this era the structures only temporarily hindered river traffic between the Gulf and Susa (cf. Strabo XV.3.4)—but did not prevent it (XV.3.5; Quintus Curtius IV.9.8; Diodorus XVII.67.3).

Arrian and Strabo describe other hydraulic projects carried out at Alexander's initiative at this time. Strabo (quoting Aristobulus) states that the king went down the Euphrates, sometimes closing, sometimes opening the canal diversion dams (XVI.1.11). Arrian gives details of a canal well known from the Babylonian evidence, the Pallacopas, and he says that the king set projects in motion to create a new outlet (VII.21). Once more, Greek ingenuity is implicitly but clearly contrasted with Achaemenid practice:

The satrap of Babylonia used to dam the outlets of the Euphrates into the Pallacopas with considerable effort, even though they were easily opened, since the earth there is muddy and mostly soft clay, such as lets through the river water and makes it none too easy to turn the river back; for over 2 months more than ten thousand Assyrians (*Assyriōn andres*) used to be engaged on this task. (VII.21.5♦)

According to Strabo (XVI.1.10♦), Alexander's actions were characteristic of "good rulers" (*hēgemōnes agathoi*), who harnessed the water to irrigate the arable land. Arrian says the same thing: "When this was reported to Alexander, it incited him to improve the land of Assyria" (VII.21.6♦). Both take up one of the most powerful tenets of Mesopotamian royal ideology. They make Alexander the heir to this tradition, and they distance the Persians from it—with regard to both the Tigris and the Euphrates. Once again, the presentation is highly suspect. For one thing, Arrian's text very clearly indicates that in the early Achaemenid period, as throughout history, the satrapal authorities undertook major construction and maintenance projects related to water management, and this necessitated the use of local labor, which was requisitioned by way of *corvée* (cf. also Pliny VI.30.120). There was indeed a changeover between the Achaemenids and Alexander, but it was not what Arrian and Strabo claim. Alexander undertook such projects, not really to improve irrigation, but quite simply because at this time his principal concern was to prepare for the Arabian expedition. Thus, he had a new port built at Babylon to serve as a place where the boats could be gathered, including those that had been transported in pieces from Phoenicia to Thapsacus on the Euphrates. This, at any rate, is quite clearly the goal Strabo assigns to Alexander (XVI.1.11), and Arrian as well: he went down the Pallacopas canal in the direction of Arabia as far as the lakes and founded a city there (VII.21.7). The change between the Achaemenids and Alexander is that the latter used the Babylonian rivers and canals for military purposes, and the traditional (irrigation-oriented) waterworks either were inadequate for his navy to sail from Babylon to the Gulf (via the Pallacopas canal) or else impeded the movements of his warships (*katarrhaktai* on the Tigris). In the short term, the conqueror only had to provide the barest of necessities for irrigation. All we can conclude from this is that the Great Kings did not sail their navy up the Tigris to Opis or up the Pallacopas to Babylon. But why should they have? In the long run, their dominion and the enormous tribute assessments laid on Babylonia (cf. Herodotus I.192) made it imperative that the satrap pay attention first of all to irrigation projects. Placed in their military and ideological context, these remarks by Arrian and Strabo precisely prove that it was this way throughout the time of Darius III and also—note well!—during the first years of Macedonian dominion (cf., among others, *ADRTB* nos. -332B, -328, -324A)!

Apart from these discussions, the sources from Alexander's time dealing with Babylonia are far from explicit—quite apart from the problem of relations between the Macedonian conqueror and the Babylonian authorities during his two sojourns, in 331 and 325–323 (chap. 18/3). This is why we need to glean as much information as we can from sources related to the Babylonian temples, as well as the incidental mention of an (unnamed) sanctuary in Susa (Arrian VI.27.5). A corrupt passage in Pseudo-Aristotle (*Oecon.* II.34a [1352b]) mentions a tithe on goods imported into Babylonia, which appears to have fallen into obsolescence; but the text is too allusive and fragmentary to provide an overall picture of the situation. Thus, it is necessary to give primary attention to the cuneiform tablets. The insufficiency of the evidence and the chronological uncertainty relating to the various Artaxerxes make it difficult to take stock of the situation in Babylonia and Susiana in the time of Darius III; nonetheless, recent publications of astronomical texts provide some important additional information. Taken as a whole, the Babylonian record of the fourth century provides a picture of unwavering continuity. This is especially apparent in the religious, economic, and administrative organization

Fig. 62. Some Murašū seals
(here and on facing page).

of the great sanctuaries, which appear to have continued to operate as in the past. It can also be observed in the continued high prestige of the Sages, who observed the planets, and the haruspices and diviners—those whom the Classical authors call Chaldeans and who, they say, had academies at Uruk, Borsippa, Babylon, and Sippar (e.g., Strabo XVI.1.6; Pliny, *NH* VI.123). But this picture—however accurate it may be—risks missing elements of development and change. It has been observed, for example, that in Seleucid Uruk the god Anu seems to have taken on a new importance, and this probably goes back to the Achaemenid period; but the historical interpretation of this observation poses problems that have not yet been resolved.

Classical sources and Babylonian tablets indicate both the existence of many foreign communities in the region and also the depth of intercultural relations. The initial picture comes from Alexander's historians' descriptions of Greek populations settled in Babylonia/Mesopotamia from the time of Darius I. While Herodotus could write about the Eretrians of Ardericca around 450 that they "still speak their original language" (VI.119 \diamond), this was no longer the case in the time of Darius III; by then they had put down roots and "were now degenerate" (Quintus Curtius IV.12.11 \diamond): "They are bilingual and speak like the natives in the one language, while in the other they preserve most of the Greek vocabulary, and they maintain some Greek prac-

tices" (Diodorus XVII.110.5♦). This refers to the easily understandable development of a population that had long been cut off from its roots (cf. also Quintus Curtius V.5.13, 19; VII.5.29; Strabo XI.11.4). Persians themselves had settled in Babylonia in large numbers. In addition to the evidence from the tablets, there is Berossus's passage on the erection of sacred statues of Anāhita at Babylon in the time of Artaxerxes II; despite remaining uncertainties (chap. 15/8), it seems clear that all of this evidence attests to the importance of the Persian diaspora in Babylonia. What does this evidence say about the relations between the Persian diaspora and the Babylonians?

Contacts between the Babylonians and Persians are attested to by seals and sealings; the most important corpus is the group collected from the Murašū tablets (second half of the fifth century). They include themes that are specifically Persian (Royal Hero, Persian soldiers), as well as Babylonian themes (fig. 62). We may note in passing that two seals on Persepolis tablets show boats (Phoenician ships) in a Babylonian setting, indicated by palm trees (fig. 50f, p. 606). This typically Babylonian plant seems to have been injected into Persian tradition; according to Strabo (XVI.1.14), a Persian song (a counting rhyme?) listed the 360 uscs of the palm tree. Furthermore, it is quite remarkable that many seals also testify to the activity of Greek artists in Babylon, just as is the case at Dascylium, Sardis, Sidon, and Samaria. Paradoxically enough, we get the impression that, at least on this level, Greek artists (or better: artists working in the Greek style) created a sort of meeting-point between Persians and Babylonians. On this point, the Susa sealings are explicitly different from the Babylonian, since "the impressions found at Susa show hardly any Greek influence. . . . There is only one that might be considered 'Greco-Persian'" (P. Amiet).

The study of personal names also results in several interesting observations—even when the ancient authors take a rather casual approach toward the names or encounter various difficulties in transcribing into Greek the Babylonian names they only knew by hearing them pronounced. For example, Plutarch (*Art.* 19.2) says one of Artaxerxes II's eunuchs was called Belitaras according to Ctesias (Bēl-ēṣir? cf. *Sardis* VII.1.1) but Melantas according to Dinon (Greek adaptation of

a nickname?). As a result, sometimes we find personal names in curiously mixed forms, such as Belephantas, who according to Diodorus (XVII.112.3) was the head of the school of Chaldeans that tried to dissuade Alexander from entering Babylon. This said, it is quite noteworthy that Abulites, the satrap of Susa in 331, although he is called a Persian by Arrian (III.16.9), has a Babylonian name, while his son's name, Oxathres, is indisputably Persian (III.8.5). The situation regarding one of the sons of Mazaeus, who was a Persian, is identical, in reverse: this son, the second-in-command in Syria, was named Brochubelus (Quintus Curtius V.13.11); two more of his sons had Babylonian names, Antibelus (Arrian III.21.1) and Artibelos (VII.6.4), while another had the inarguably Persian name Hydarnes (VII.6.4). However, Bagistanes, who was called "a Babylonian and a noble" (Arrian III.21.1♦), had a typically Persian name (cf. also Quintus Curtius V.13.3). It is not certain that these apparent contradictions should automatically be attributed to errors or guesses by the Greek and Roman authors. The Babylonian evidence in fact shows that people who belonged to the foreign communities who settled in the country frequently gave Babylonian or Semitic names to their children. Between 482 and 331, we find four people with Babylonian names and Iranian patronymics, eleven people with Semitic names and Iranian patronymics, and eight people with Iranian names and Babylonian patronymics. The Murašū archives also demonstrate that personal names are not an absolute guide to ethnic origin. In the archives, 71% (463) of the seals are held by men with Babylonian names, of whom 80% also have a Babylonian patronymic; 14% are men of West Semitic origin; 3% are of Egyptian origin; 7% (48) of the seals belonged to a person with an Iranian name, but only 1/3 of these have both an Iranian name and Iranian patronymic. This obviously reflects both mixed marriages and the desire to identify with the dominant ethnic group. At the same time, the distribution of images on the seals shows a specific preference on the part of each ethno-cultural group: the Iranians preferred hunting scenes and narrative representations of the sort introduced into Babylonia at the time of the Achaemenid conquest.

If we accept Arrian's judgment about the "Persian" ethnicity of Abulites, the satrap of Susa (III.16.9), and if we take into consideration the name of his son (Oxathres: III.8.5), he might actually have been a Persian who, like Ariyawrata/Jebo in Egypt (Posener no. 34), adopted a double name, Persian and Babylonian. If this theory could be verified, it would add to our understanding of the breadth of Persian-Babylonian intercultural encounters. But, since the theory cannot be proved, the most likely interpretation is different: it seems more likely that a certain number of "Persian" dignitaries in Babylonia and Susiana at the end of the Achaemenid period were of Persian stock but, given the frequency of polygamy in this context, married both Persian and Babylonian wives, whose children had sometimes Persian, sometimes Babylonian names. Contrariwise, the dignitaries with Babylonian names probably were genuine Babylonians (perhaps the offspring of mixed marriages), who, as a result of marriage to a Persian woman, or for political reasons, may have given a Persian name to some of their sons. The example of Bēšunu, son of Bēl-ušuršu (chap. 14/8), reminds us that Babylonians were able to reach high positions in the imperial hierarchy; the case is even more striking if we recognize that the Belesys who was satrap of Syria around the middle of the fourth century (Diodorus XVI.42.1) was actually the son (or some other descendant) of Bēšunu. In each case, we can imagine that there were intimate contacts between the Persian aristocracy of the imperial diaspora in Babylonia and the elite leaders of the satrapy; this perhaps explains, in *part* at least, Mazaeus's attitude in 331 (chap. 18/3, 18/5).

It is clear that examples such as these attest to active exchanges between the Persian diaspora of Babylonia and the Babylonian elite, which must have involved marriage as well, going back at least to the fifth century. May we go so far as to speak of the “Babylonization” of the Persians of Babylonia, pure and simple? Even if indicators that point in this direction can in fact be found, it must be stressed, on the one hand, that cultural borrowings took place in both directions (cf. Strabo XVI.1.20) and, on the other, that unlike the deported Greeks, the Persians of Babylonia clearly continued to maintain close relations with their nearby homeland—where they could always return to their roots. However, the “Babylonization” of the dynasty, which is sometimes suggested on the basis of Darius II’s Babylonian heritage through his mother, raises thornier problems, particularly on the political level. We may stress first of all that the theory is implicitly connected to another theory—that the Great Kings were losing interest in Persepolis and Persia already in the fifth century and instead were orienting themselves more and more to Babylonia. But there is nothing to confirm a perspective so schematic (cf. chaps. 14/1 above and 16/12 below). Moreover, a passage in Plutarch (*Art.* 19.10) even seems to portray Babylon as a backwater used for banishment, far from the court of Artaxerxes II! In the case of Darius III, the only text that might possibly support recent Babylonian borrowings is an extract from Quintus Curtius’s long description of the royal procession prior to the battle of Issus: he states that “both sides of the chariot were adorned with images of the gods . . . ; the yoke was ornamented with sparkling gems, and on it rose two golden images a cubit high of the king’s ancestors, one of Ninus, the other of Belus” (III.3.16♦). The (incoherent) reference to Ninus is surprising enough, but this item is completely out of place in a description that is marked indelibly and thoroughly by a typically Achaemenid symbolism. [According to the editor of the Loeb Classical edition, the dual reading Ninus and Belus, *alterum Nini, alterum Beli*, is a suggested emendation of the unintelligible *alterinalterutrum* by the 16th-century scholar Joseph Scaliger.—TRANS.] In the prayers that Darius III regularly offered during his campaigns, there is nothing that might suggest the introduction of a Babylonian god (Bél) into the royal pantheon; exactly the opposite is true (e.g., Quintus Curtius IV.13.12–14; 14.24; Plutarch, *Alex.* 30.12).

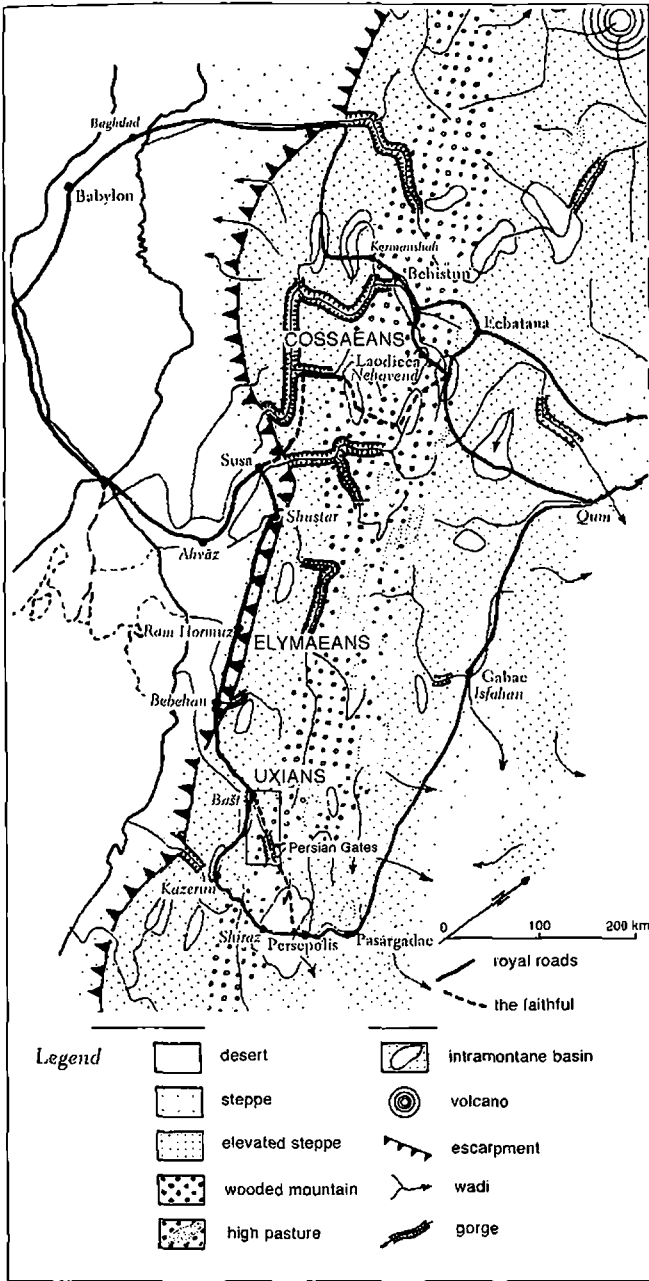

Quintus Curtius (V.1.22♦) offers another example of this kind of meeting between Persian and Babylonian components. In the procession that greeted Alexander at Babylon, Quintus Curtius (unlike, for example, Justin XII.13.3–5, who confuses them) very clearly distinguishes the Chaldeans from the *magi* (“accustomed to sing the praises of the kings”; not found in Arrian III.16.3). But the parallel with Quintus Curtius’s first example (the procession prior to Issus) is lame, since in the second case it is Persian features that are introduced, at Babylon, into a Babylonian context—which obviously has a political significance utterly different from that which can be inferred from the earlier example. In this case, the participation of *magi* and Chaldeans is in the context of the organization of a procession in which Achaemenid and Babylonian authorities appear side by side (hence the absence of *magi* in Arrian, who refers only to the Babylonian procession). The entire account simply serves to remind us that, at the end of the Achaemenid period, those whom the ancient authors refer to as Chaldeans always occupied a prominent place in the sanctuaries and towns of Babylonia. The Chaldeans were “scholars . . . who have gained a great reputation in astrology and are accustomed to predict future events by a method based on age-long observations [of] the configuration of the stars” (Diodorus XVII.112.2♦). In contrast, only the *magi* appear in Darius III’s royal

procession: they are near the chariot consecrated to the Fire and “chanting their traditional hymn (*patrium carmen*)” (Quintus Curtius III.3.10♦). The reference to Ninus and Belus thus has every chance of being a late interpretation; we may wonder whether here as elsewhere (the description of Babylon) Quintus Curtius might have been depending, via Clitarchus, on Berossus’s Babylonocentric perspective in which Belus is the founder of Babylon and urban civilization in general.

It is also possible, even though there is no textual evidence, that until the end of the Achaemenid dynasty its representatives bore the title “king of the countries”: in a tablet dated to 331, Darius III is called “king of the world” (ADRTB no. 330). At the same time, as shown by the royal inscriptions, the ideological attributes of Achaemenid kingship could not be limited to their Babylonian component. This poses a real problem. What was the “status” of the Great King when he officiated at Babylon in accord with Babylonian tradition? Let us specifically consider the rite of the substitute king, which certainly was practiced in the time of Xerxes, according to Herodotus (VII.15–18), and which is also very clearly alluded to, much later, by well-known texts that are clearly from the context of Alexander’s last year at Babylon. We may remark on this point that, when a “substitute” took the throne, the eunuchs of Alexander’s entourage did not evict him, because, according to Arrian (VII.24.3♦), they were respecting “some Persian custom” (*kata de tina nomon persikon*). This is a surprising phrase (we expect mention of a “Babylonian custom” instead), but its ambiguity is significant, exactly like the apparent discontinuity between the (Babylonian) names and (Persian) ethnicity sometimes attributed to one and the same person. Furthermore, we observe the same imprecision in some authors who speak of the (mysterious) feast of the Sacaea, which Strabo, through a dubious etymological operation, attributes to Cyrus, who supposedly instituted a celebration in the sanctuaries of Anāhita to commemorate a victory over the Saka (XI.8.4–5). Ctesias also mentioned the Sacaea (Athenaeus XIV.639c); but the more credible information provided by Berossus is unambiguous: it was a Babylonian feast celebrated every year at the end of August/beginning of September (Athenaeus XIV.639c). Whatever the (very uncertain) connection of this feast with the New Year, it seems clear that, for many Greek authors, any custom encountered in the Achaemenid Empire was automatically described as “Persian.” Perhaps there was also a “feast of fools” in Persian tradition like that described by Berossus and by Dio Chrysostom (IV.66–68). Whatever the case, there is no choice but to observe that we do not have a single piece of evidence for the participation of the Great King in the Babylonian New Year festival.

11. The Great King, Alexander, and the Peoples of the Zagros Mountains

At the end of 331, Alexander left Susa and led his army toward Persia, using the road that is well known especially from the Persepolis tablets but also from many Hellenistic texts. Diodorus, for example, states that it took 24 days to march from Susa to Persepolis (XIX.21.2), but that a system of voice relays permitted messages to travel rapidly between the two (XIX.17.7). This is the region where Alexander first encountered military opposition: Madates, a relative of Darius III, commanded a stronghold that was eventually taken. Then Alexander himself stormed the mountain and clashed with the “Uxians of the mountain.” This is a good point to pause and analyze the policy that Alexander adopted toward this population and to comment on the historical interpretations often

Map 5. Peoples and roads of the Zagros.

drawn from it concerning the weakness of the Great Kings' authority at the very gates of Persepolis.

Of all the accounts, Arrian's (III.17) is the most detailed—although the parallel versions by Diodorus (XVII.67) and Quintus Curtius (V.3.1–16) permit clarification of some points left in shadow by Arrian. Arrian starts by clearly distinguishing two groups of Uxians. The first group lived on the plain: the gorges of Uxiana controlled the first pass that would permit the traveler to enter Persia from Susiana (Strabo XV.3.4; cf. Arrian, *Indica* 40.1). Quintus Curtius says of the territory of the Uxians that “this adjoins Susa, and extends into the first part of Persia” (V.3.3♦). Persia begins on the far side (Diodorus XVII.68.1)—that is, the region dominated by the fortress commanded by Madates: they “had obeyed the Persian satrap, and now surrendered to Alexander” (§17.1♦). Quintus Curtius states that Alexander “left the city intact, and allowed it to cultivate its fields without tribute” (*sine tributo*); then the king “incorporated the subdued race of the Uxii in the satrapy of the Susiani” (V.3.15–16♦). It is likely that, prior to Alexander's action, Uxiana constituted a special subdistrict entrusted to Madates (cf. Quintus Curtius V.3.4: *praefectus regionis*; Arrian III.17.1: satrap). Alexander's connection of the area with Susiana can be accounted for even more easily because of the fact that in the Persepolis tablets the region appears to be strongly marked by Elamite influence. This also explains the name “Susian Gates” that Diodorus (XVII.68.1) uses for what are usually called the “Persian Gates.” The old connections between Uxiana and Susa are also demonstrated by the common command that the satrap of Susa exercised over both the Susian and Uxian contingents (Arrian III.8.5).

The second group of Uxians lived in the mountains; Alexander had to lead an expedition against them, and it ended in their submission. Here is Arrian's version (III.17.1–2, 6♦):

But the Uxian hillmen, as they are called, were not subject to Persia, and now sent a message to Alexander that they would only permit him to take the route towards Persia with his army if they received what they used to receive from the Persian king on his passage (*hosa kai para ton Person basileos epi tei parodoi*). Alexander sent them away, with orders to go to the pass, their control of which made them think that the way through to Persia was in their hands, in order to receive from him too what was prescribed. . . . [defeat and massacre of the Uxians] . . . These were the gifts of honour (*ta gera*) they received from Alexander, and it was only with difficulty that they obtained from him their request to retain their own territory, paying annual tribute to Alexander. . . . The tribute assessed was a hundred horses every year with five hundred transport animals and thirty thousand from their flocks and herds. For the Uxians had no money or arable land, but were mostly herdsmen (*nomais*).

Strabo confirms that, when the Great King went from Susa to Persepolis, the Uxians extracted payments from him (XV.3.4: *misthoi*). But, for Nearchus (cf. *Indica* 40.1), who is quoted by Strabo (XI.13.6♦), the Uxians were just one in a series of peoples who had made equally strange arrangements with the Great King. Nearchus lists four predatory tribes: “The Mardi were situated next to the Persians; the Uxii and Elymaei next to the Mardi and the Susians; and the Cossaei next to the Medians”;

and that whereas all four extracted tribute (*phorous prattesthai*) from the kings, the Cossaei also received gifts (*dōra*) at the times when the king, after spending the summer in Ecbatana, went down into Babylonia; but that Alexander put an end to their great audacity when he attacked them in the winter time.

We know nothing in detail of the Elymaeans (a name known especially from a much later period) and very little of the Mardians, aside from Quintus Curtius's mention of Alexander's campaign against them in winter 331–330, which he carried out from Pasargadae (V.6.17–19). They were obviously the people whom Herodotus describes as one of the “tribes of nomads” among the Persian tribes (I.125). A founder's legend claimed that Cyrus the Great's parents were miserable Mardians whose lives were devoted to raising a few goats and to living as brigands (FGrH 90 F66.3). The Mardians clearly had the same reputation in 330, since Quintus Curtius describes them as “a warlike people, differing greatly from the rest of the Persians in their manner of life” (V.6.17♦). Actually, the Mardians also practiced agriculture and even horticulture on small family farms (Aelian, VH I.34), and they regularly provided fighting units to the army (Herodotus I.84), including Darius III's army (Arrian III.11.5). At Gaugamela, they were placed at the center of the battle formation, alongside the Cosseans (Diodorus XVII.59.3). The Cosseans are better known, since they are twice referred to in context by Diodorus. At Ecbatana after the death of Haephestion, Alexander led a campaign against the Cosseans, who were a warlike and courageous people who had remained independent throughout the Persian monarchy. Alexander seized the routes of access into their country and subdued them, requiring them to submit to his authority (XVII.111.4–6♦). Then, in 317, when Antigonos intended to travel from Susiana to Media, he chose not to use the royal road (which was blazing hot) but to take a more direct mountain road; this cooler route crossed the land of the Cosseans—an enemy (that is, unsubjected) country (*polemia* [*khōra*]):

It is not easy for an army to follow this route without having gained the consent (*aneu tou peisai*) of the tribesmen who inhabited the mountain ranges. These men, who have been independent from ancient times (*autonomoi gar ontes ek tōn palaiōn khronōn*), live in caves, eating acorns and mushrooms, and also the smoked flesh of wild beasts. Since Antigonos regarded it as beneath his dignity to use persuasion on these people or to make them presents (*dōrodokein*) when he had so great an army following him, . . . [difficulties encountered by the army] . . . Antigonos regretted that he had not heeded Python when he advised him to purchase the right of passage with money (*khrematōn priasthai tēn parodon*). (XIX.19.3–4, 8♦)

The historian is thus faced with a homogeneous tradition. The mountains of Persia and Media were inhabited by peoples defined by a specific way of life that was based on animal husbandry and highway-robbery, to the exclusion of agriculture. This may explain the curious diet of the Cosseans, who seem to have lived solely on the results of hunting and gathering. Furthermore, these peoples never acknowledged the dominion of the Great Kings; when the royal caravan crossed their territories, the Great Kings had to pay a “travel fee” that was designated by various terms (*misthoi*, *phoroi*). Moreover, the Cosseans were accustomed to accepting gifts (*dōra*). But they were not alone in this regard, because the Uxians expected to receive gifts of honor (*ta gera*) from Alexander. The Great Kings had to pay fees to these peoples because they controlled impregnable defiles. The example of the Uxians is even more noteworthy because it implies that the Great Kings did not even control the road between Susa and Persepolis. We could not ask for a better illustration of the weakness of the Great Kings, which is certainly the message of the Hellenistic war correspondents.

The problem is all the more important because the four peoples named by Nearchus could easily be included in a much longer list. We know the offer that Clearchus—apparently!—made to Tissaphernes after the battle of Cunaxa, in these words:

I know that the Mysians are troublesome to you, and I believe that with the force I have I could make them your submissive servants; I know that the Pisidians also trouble you, and I hear that there are likewise many other tribes (*ethnē polla*) of the same sort; I could put a stop, I think, to their being a continual annoyance to your prosperity. (Xenophon, *Anab.* II.5.13♦)

Xenophon returns to the topic elsewhere:

The Mysians and Pisidians, occupying very rugged country in the Great King's territory and lightly armed, contrive to overrun and damage the King's territory and to preserve their own freedom. (*Memorabilia* III.5.26♦)

As for the Lycaonians, "they had seized the strongholds in the plains and were reaping for themselves the lands of these Persians" (*Anab.* III.2.23♦). The mountain peoples are always characterized as independent from royal authority; this is true for the Mysians (*Hell. Oxyr.* 16.22), and also for the Carduchi, Taochians, and Chaldeans (of Armenia; Xenophon, *Anab.* V.5.17). The Carduchi "were not subjects of the King" (III.5.17♦); "they were enemies of the King and a free people" (Diodorus XIV.27.4♦). The Mardian territory on the Caspian Sea had never been invaded (Arrian III.24.2); and the same was true of the Iberians, "never subject to the Medes or Persians, and they happened likewise to escape the dominion of the Macedonians" (Plutarch, *Pompey* 34.7♦). The permanent nonsubmission of the Pisidians is made clear, for example, by the (false) goal announced by Cyrus the Younger to his mercenaries (*Anab.* I.2.1); this incident recalls the fear of the Pisidians that Diodorus (XI.61.4) attributes to the Persian leaders at the Eurymedon sixty years earlier. Alexander's campaign does seem to confirm that the Pisidians continued their incursions, using their strongholds as bases from which to launch attacks (Arrian I.24.6; 27–28). The Persians' inability to subdue these peoples is also illustrated by failures in battle: according to Xenophon (*Anab.* III.5.16), an immense army (thirty myriads!) was annihilated during a campaign against the Carduchi; the many Cadusian wars were apparently just as inglorious (see immediately below and chap. 16/18).

These examples at first appear to illustrate the limits of military occupation of the imperial realm; control of some areas could not be guaranteed by the establishment of numerous royal garrisons alone, at least not without multiplying them exponentially. But at the same time, the presentation by the ancient authors—all of whom were impressed by the notion of Persian military impotence—must be qualified, at the very least. For one thing, as has already been stressed in connection with Mysia and Paphlagonia (chap. 15/5), not all of the territories of these peoples lay beyond the reach of satrapal oversight, and the existence of a district of Mysia is nearly certain, even apart from references to the mysterious "satrap of Paphlagonia." Furthermore, all of these peoples were included, says Herodotus, within tributary districts (III.90, 92), including the Moschians, Tiberians, Macrones, Mossynoeci, and Mares (III.94♦). Of course, we have no direct information on payments of tribute coming from these districts; let us simply note that in his work *On the Tributes of Asia* (which is actually about the taxes levied for the king's table), Ctesias refers to the wine of the Tapyrians (FCrH 688 F54). Finally, as "autono-

mous" as these peoples may have been, they regularly provided military units to the Great King, usually as mercenaries (chap. 17/3). Cadusian contingents participated at Cunaxa, led by Artageres, who used the opportunity to demonstrate his loyalty to Artaxerxes II (Plutarch, *Art.* 9–10). They were also present at Gaugamela, alongside Albanians and Sacasinians, all led by Phratapharnes of Media (e.g., Arrian III.8.4; 11.3–4).

At the same time, the ancient authors were obviously guilty of simplification. First of all, the ethnographic descriptions of these peoples are located within a dominant stream of ancient historiography that tends to reduce the social dynamic to the "law of need": on poor soil, a group of people is necessarily poor; to survive, the group therefore draws on the wretched results of hunting and gathering and, toughened by the very causes of its poverty (soil and climate), it is "naturally" aggressive and profits or survives from raiding. But this is an extraordinarily reductionist perspective. In reality, the Zagros peoples whom we have just been discussing had fields and villages as well; subsistence agriculture was practiced in combination with extensive animal husbandry (cf. the tribute imposed on the Uxians by Alexander). The lifestyle attributed to them by the ancient authors can be explained by the circumstances: when they were attacked by a mighty army, the mountain dwellers fled their villages, surviving in an exceptional and atypical way, and waited out the end of the offensive.

The problem of "royal tribute" remains. The texts indicate that encounters between the Uxians, the Cosseans, and the Great King took place regularly, since the presentation of gifts/tribute was related to the periodic relocations of the court from residence to residence. But it is especially noteworthy that neither the Uxians nor the Cosseans actually controlled the royal roads from Susa to Persepolis or Susa to Ecbatana. Their territories were remote. It must therefore be recognized that every year the Great King (or his personal representative) intentionally detoured to meet the representatives of the Uxians and Cosseans. Obviously, the Uxians were taken in by Alexander's promises, and they waited for the Macedonians at the defile where they expected to receive the promised amount (as in the time of Darius). Alexander violated the custom. From this time on he imposed tribute on the mountain Uxians and required the Cosseans to acknowledge their submission. But his action did not have lasting results, because both the Cosseans and the Uxians were fully "autonomous" by 317 (Diodorus XIX.17.2). Despite Python's wise advice, Antigonus demonstrated the same blindness as Alexander: he too was unable to understand any language other than that of military might and considered the tradition an unbearable stain on his military pride—wrongly considering the gift to be extortion for the right of passage. In fact, the customary, regular relations between these peoples and the Great King were not based on war; they were based on "controlled hostility," which itself was based on gift and counter-gift (*dōra*, *dōrodokein*, *geras*), which guaranteed that it would go on indefinitely. Arrian's tale enables the process to be reconstructed: every year, the king or his representative would meet with the Uxian leaders at the entrance to the defile; there was a ceremony in which each party made a commitment to the other. The bestowal of royal "gifts," here as elsewhere, implied no recognition of royal "weakness"; on the contrary, it created a link between the receiver and the giver. Through this ceremony, the Uxians (in a way) committed their loyalty to the king. The arrangement was advantageous to the King because he received the submission of the Uxians and Cosseans without investment of military resources; furthermore, both groups probably sent soldiers to the king whenever conscription was ordered.

The Uxians were thus definitely not isolated from the Achaemenid world. The size of their animal production (horses, sheep, cattle), which presupposes that they were able to market the surplus, implies that they were connected. Arrian provides two relevant pieces of information that require interpretation: the Uxians had no money (*khremata*), and the tribute imposed by Alexander was 100 horses, 500 pack animals (humped cattle?), and 30,000 sheep. The size of the tribute leads us to conclude that, on the one hand, it was related to the ability of the Uxians to pay, and on the other, the amount was not worked out by Alexander in a few hours but goes back to the Achaemenid period. At that time, the tax in head of cattle was not regarded as tribute but as if it were a contractual matter—the money paid by the Great King (aside from the gifts) corresponded to a “purchase price” (cf. Diodorus XIX.19.8: *priasthai*). This may be the sort of exchange Xenophon had in mind when he wrote of the Carduchi: “Whenever they made a treaty with the satrap in the plain, some of the people of the plain did have dealings with the Carduchi and some of the Carduchi with them” (*Anab.* III.5.16♦).

It would nonetheless be risky to state that relations between the king and the “mountain people” were governed by similar customs in every case, because only the relationship between the Great King and the Cosseans and Uxians is actually documented. Recourse to force is well attested elsewhere, without, unfortunately, our being able to analyze the reasons (broken contract?) or methods. Only the case of the Cadusians permits us a basis for reflection and theorizing. The recurrence of Cadusian wars is particularly noteworthy because the theme appears in one of the Cyrus legends (Nicolaus of Damascus, *FGrH* 90 F66.11–16). We have no details about Darius II’s mission (Xenophon, *Hell.* II.1.13). Artaxerxes II’s expedition is mentioned by several authors, but their accounts are difficult to harmonize. Diodorus’s allusions (XV.8.5; 10.1) seem to imply that the expedition lasted some time, and Trogus Pompeius specifically says that Artaxerxes II lost (*Prol.* X). It was probably during this war that Camisares perished and his son Datames was rewarded by the king for his great deeds (*Nepos, Dat.* 1.2). Plutarch, on the other hand, does not mention any fighting: the royal expedition was concluded with a treaty, based on “friendship and alliance,” that was agreed to by Tiribazus and two Cadusian kings (Plutarch, *Art.* 24.6♦). As a result, Artaxerxes left the country, obviously satisfied with the outcome (§24.9). The treaty clearly implies that the king’s goal was not to challenge the existence of local chieftains. For instance, after the death of Artageres at Cunaxa, Artaxerxes “sent goodly and magnificent gifts to his son” (14.1♦), and this clearly was another way of legitimizing the succession of the Cadusian king (see chap. 16/18 below).

We also know that Artaxerxes III led a campaign against the Cadusians. The account is included by Justin (X.3.2–5) and Diodorus (XVII.6.1–2) in the official version of the accession of Darius III. Without mentioning battles, both seem to reduce the confrontation to single combat (*monomakhia*) undertaken by Darius III (Codoman) in response to a challenge from a Cadusian giant. Single combats of this kind are well attested, particularly in stories by Diodorus (XVII.88.4–6) and Quintus Curtius (VII.4.33–38) about Satibarzanes’ conflict with the Macedonians in Aria. Facing the prospect of continued uncertainty over the outcome of the battle, Satibarzanes proposed settling the struggle by single combat; Erigyius accepted and won, and Satibarzanes’ soldiers surrendered without further fight. These monomachies recall what M. Mauss wrote: “The people present at the contract are moral people: clan, tribe, and families who confront and op-

pose each other either as a group facing each other on the land itself, or in the person of their leaders, or in both ways at once." We could ask whether Codoman's single combat with the Cadusians reflects the practice of "organized hostility," whether it consists of the confrontation of two armies pure and simple, or (more likely) whether the duel follows a battle (according to this theory, a battle adhering to custom). Following the confrontation, the Cadusians renewed their allegiance to the Great King in a treaty that was formally egalitarian. But we must be cautious: the theory must take into account the fact that Diodorus's and Justin's tales are basically constructed on monarchical motifs (cf. chap. 17/1). They are found in part in Diodorus's Median *logos* (II.33): a Persian named Parsondas, who was close to the Median King Artaeus, sought refuge with the Cadusians, "to one of whom, the most influential man in those parts, he had given his sister in marriage." Heading a force of 200,000 men(!), Parsondas vanquished king Artaius, whose army numbered 800,000 men(!): "And for this exploit he was so admired by the people of the land that he was chosen king" (§33.4♦). Diodorus concludes as follows: "The Cadusii were always inveterate enemies of the Medes, and had never been subjected to the Median kings up to the time when Cyrus transferred the Empire of the Medes to the Persians" (§33.6♦). Obviously, Diodorus was dependent on the version found in Nicolas of Damascus—and both no doubt go back to Ctesias. It is hard to understand why so many stories about the relationship between the Persians and the Cadusians were in circulation in the time of Artaxerxes II.

12. Persepolis, Pasargadae, and Persia

After the stronghold defended by Madates was taken, Alexander sent Parmenion and the supply caravan by the wagon road through the plain (*hamaxitos; iter campestre*) that led to Persepolis (Arrian III.18.1; Quintus Curtius V.3.1). He himself took the high road. After defeating the Uxians in the mountains and throwing the forces massed at the Persian Gates into disorder, he joined up with Parmenion at Persepolis. Alexander's long stay in Persia (end of 331 to spring 330) gave rise to a plethora of ancient accounts that provide a great deal of information of great interest. We return to the itinerary followed by Alexander from Susa and note first of all that Diodorus's descriptions emphasize the contrast between the sweltering plain and the refreshing climate of the plateau, a difference immediately evident to any visitor. His descriptions particularly feature the splendor and verdure of the Fahliyun region, which abounded in rivers, springs, paradises, and all sorts of plantations (XVII.67.3; XIX.21.2–3). These were the natural features that also impressed Nearchus (*Indica* 40.4; Strabo XV.3.1). The affluence of the countryside and the fertility of the fields—stressed as well by Quintus Curtius for the surroundings of Persepolis (V.4.20; 5.4)—are complemented by the vigor of the people. Based on eyewitness testimony (from Hieronymus of Cardia) and speaking of the area between Fahliyun and Persepolis, Diodorus in fact remarks: "Those who inhabited this country were the most warlike of the Persians, every man being a bowman and a slinger, and in density of population, too, this country far surpassed the other satrapies" (XIX.21.3♦). This note accounts for the vigor of demographic growth and the maintenance of the country's military resources. We can well imagine that the Great Kings' "birth rate incentive policy" (cf. Herodotus I.136 and Strabo XV.3.17) was highly effective. Plutarch also states that Alexander maintained the custom, first established by the Great Kings, of awarding a

Fig. 63. Tomb of Artaxerxes II (reconstruction).

Cyrus's tomb at Pasargadae (VI.29.7). The replication of iconographic patterns (including those on seals), from the earliest in the time of Darius I to the latest in the time of Artaxerxes III, displays the stability of Achaemenid monarchic ideology at the heart of the Empire. At the same time, the reliefs on Artaxerxes III's tomb show that the borrowings were also selective: while some "peripheral" peoples (Nubians, Libyans) are found on all of the tombs, Artaxerxes III's tomb reliefs do not include Armenians, Lydians, Egyptians, or Indians—for reasons that obviously have nothing to do with facts concerning territorial dominion. The lists and depictions do not claim to represent a statistical abstract of the Empire, any more at the end of the Empire than in earlier eras (chap. 5/3); basically, the peoples shown are a representative group, just like those who took part in the banquet of Opis: "Next to [the] Persians, . . . any persons from the other peoples who took precedence for rank (*kat'axiōsin*) or any other high quality" (Arrian VII.11.8♣).

Moreover, the ongoing construction and rebuilding pose a specific problem. During the reigns of Darius I, Xerxes, and Artaxerxes I, the basic resource for this construction activity was the forced labor provided by *kurtas* and the organization of workshop and farm production—even if the latter did much more than feed the workers in the construction yards. The "sudden disappearance" of the tablets that record these processes

gold piece to pregnant women on the occasion of each visit to Persia (Alex. 69.1–2; Mor. 246a–b).

Whatever debates persist regarding their breadth and significance, Alexander's policies and activities show that both Pasargadae and Persepolis remained major ideological centers of Persian power and the might of the Great King—a position they had never truly lost (despite Plutarch's quaint but simplistic remark: Alex. 69.2). This was again recognized by Alexander when he ordered that Darius III be buried in the royal tombs of Persepolis (fig. 63), as were his predecessors (Arrian III.22.1). That they were still major centers is also eloquently evidenced by the work that continued at Persepolis throughout the fourth century (including during Darius III's time, if, as is possible, the incomplete tomb is to be attributed to him; fig. 64) and by the maintenance of regular sacrifices around

Fig. 64. Unfinished tomb at Persepolis.

obviously cannot be ascribed to elimination of the royal economy in Persia (an absurd conjecture in itself). However, it appears that other texts from Alexander's time provide information that might enrich the debate. When Alexander was stymied at the Persian Gates, he appealed to prisoners that his troops had just captured. One of them was introduced as bilingual, a speaker of Greek and Persian and probably Lycian as well. His father had in fact originally come from Lycia, where he had previously been taken prisoner by the Persians; since his youth he had known the mountains like the back of his hand, because he was a shepherd (Quintus Curtius V.4.3–4, 10–12; Diodorus XVII.68.4–6; Plutarch, *Alex.* 37.1; Polyaeus IV.3.27). Some time later, as Alexander neared Persepolis, he was approached by Greeks who "had been carried away from their homes by previous kings of Persia," about 800 of them according to Diodorus (XVII.69.3♦) and Justin (XI.14.11), 4,000 according to Quintus Curtius (V.5.5). They had been mutilated (to enhance their ability to carry out their manual labor, according to Diodorus; XVII.69.4), and they were also "branded with the characters of barbarian letters" (Quintus Curtius V.5.6♦). They worked in "ergastula" (V.5.13)—that is, (slave) workhouses. Some came from Cyme, others from Athens (V.5.9, 17). Their settlement in Persia went back some time, since they had taken wives there and raised children (V.5.13, 20) and refused repatriation. The shepherd seems to have been in the same situation, because Plutarch says that his "father was a Lycian, and his mother a Persian" (*Alex.* 37.1♦).

Once they have been stripped of their emotive language, these Classical texts do not deserve to be rejected in principle. It is far more likely that, one way or another, these Greeks and Lycians in these stories should be compared with the *kurtas* known from the tablets. According to this theory, the Hellenocentric orientation of the ancient sources leads us to think that these Greek and Lycian expatriates were nothing more than a sample of the population who, once freed from captivity, chose not to abandon the settlements in Persia that had resulted from mass deportations; they were used by the royal administration in the fields and pastures and in the workshops and construction yards. We do not claim that nothing had changed since the time of Darius I, but we are confident in the (reasonable) idea that the administration put in place by the first kings did not miraculously disappear. This is confirmed by the passage in which Arrian very

precisely gives the quantity of rations allocated to the *magi* who were responsible for the sacrifices around the tomb of Cyrus, as well as the number of horses they had to sacrifice (VI.29.7)—information that clearly had been received directly from the royal administrators (cf. Diodorus XVII.69.8), as in the time of the Fortification tablets.

At the same time, the information we have on the administration of the region and on the high officials who were in place there in the time of Darius III provokes us to inquire into possible changes in the status of Persia over the course of Achaemenid history. At Gaugamela, three generals—Orontobates, Ariobarzanes, and Orxines—commanded the contingents raised from “the tribes bordering on the Red Sea [Persian Gulf]” (Arrian III.8.5; cf. Quintus Curtius IV.12.7). The Persians are not listed as such in this line of battle, even though they participated en masse, separate from the Persian Gulf natives (Arrian III.11.3–7). Once more we find Ariobarzanes entrusted with the defense of the Persian Gates; on this occasion, Arrian entitles him “satrap of Persia” (III.18.2). Among the other notables, we can point out Tiridates, head of the Treasury (**ganza*) at Persepolis, who sent a letter to Alexander offering him the town (Quintus Curtius V.5.2; 6.11; Diodorus makes him “governor of the city,” XVII.69.1♦); and also Gobares, whom Quintus Curtius calls ‘governor’ (*praefectus*) of Pasargadae (V.6.10). If Arrian’s information is correct, we must conclude that at some unknown date, under some unknown circumstances, Persia was turned into a satrapy—which was not the case at the time of Darius I.

But many uncertainties remain on this point, because only Arrian (alone among Alexander’s historians; cf. Quintus Curtius V.3.17 and Diodorus XVII.68.1) grants Ariobarzanes this title, which is not attested with certainty, however, until after the conquest, when the king named the Persian Phrasaortes, son of Rheomithres, “satrap of Persia” (Arrian III.18.11♦). According to Polyaeus, who makes him the leader of the Persian troops at the Persian Gates, this Phrasaortes was “a close relative of Darius” (IV.3.27). We may also note that there was an eminent person alongside Ariobarzanes—Orxines, who was “in charge of the whole . . . , a descendant of the ‘seven Persians’ and tracing his genealogy also to Cyrus, that most renowned king,” according to Quintus Curtius (IV.12.8♦). For this reason, during Alexander’s Indian expedition, after the death of Phrasaortes, Orxines proclaimed himself satrap of Persia “because he felt that he was the right person, in the absence of any other governor, to keep the Persians in order for Alexander” (Arrian VI.29.2♦). This is the point in Quintus Curtius’s narrative where he grants him the title “satrap” (X.1.22♦)—which simply means that we must understand that Orxines was the chief of the Pasargadae tribe (*Persica gens, cuius satrapes Orsines erat*). This example at least demonstrates that ancient social and tribal stratification survived in Persia. It is clear that the heads of the great families continued to hold first rank (e.g., Plutarch, *Alex.* 37.1; Diodorus XIX.22.2). Moreover, according to Quintus Curtius, Orxines was the one who led the Persian contingents; but if this is true, what exactly did Ariobarzanes do? Does the word “satrap” relate to nothing more than the command he received at the Persian Gates?

The problem is all the more difficult because, aside from the appointment of a satrap of Persia, the presentation of administrative actions taken by Alexander at Persepolis is very brief—whether Quintus Curtius’s or Arrian’s. Quintus Curtius simply notes that Tiridates kept his job of treasurer (*gazophylax*) even when the fortress was handed over to the Macedonian Nicarchides (V.6.11). On the other hand, not one author says any-

thing about any tribute from the satrapy, although this information is regularly provided elsewhere. At this point, all we can do is to mention three pieces of information that are hard to relate to each other: the plains Uxians were exempt from tribute (Quintus Curtius V.3.15); but the mountain Uxians had to pay tribute (Arrian III.17.6); and once they were freed, the Greek *kurtas* of Persepolis were exempt from royal tribute (*ateleis . . . basilikou phorou*), according to Diodorus (XVII.69.8). But what can we conclude from this about the situation prior to Alexander? The only obvious fact we have (see above) is that the mountain Uxians had not paid tribute to the Great King but now had to pay Alexander; furthermore, the context leads us to believe that the exemption granted to the plains Uxians was confirmation of a preexisting status (it was very unusual that Alexander agreed not to impose tribute). The case of the Greeks of Persepolis remains: does Diodorus's note imply the existence of tribute before Alexander, or does it imply that after the conquest Alexander imposed tribute on a country that, Herodotus (III.97) says, was exempt at the time of Darius I? This is a rather difficult question. Let us recall that the Greeks received seed and livestock from Alexander "in order that the land assigned to them (*ager attributus*) might be cultivated and sown" (Quintus Curtius V.5.24↔). This provides the context for the exemption from royal tribute (Diodorus XVII.69.8), which clearly relates only to a very specific case: Alexander as conquerer took lands (from the royal estate or from the estates of noble Persians) and allotted them to a community. This constituted the foundation of a colony, a process that was frequently associated in the Hellenistic period with the distribution of seed and the granting of temporary fiscal exemption. So it seems difficult to draw general conclusions about the tributary status of Persia either before or after Alexander from these data. If, as has been suggested, the Greeks were only a small part of a large population of *kurtas*, Alexander certainly did not intend to free them all because, if the royal economy was still vital in 331–330, there would have been no reason to take action that was likely to weaken it. The few texts dating from Alexander's second residence in Persia generally illustrate the continuity of Achaemenid practices (Arrian VI.29.7; Plutarch, *Alex.* 69.1–2 and *Mor.* 246a–b; Strabo XV.3.7–8).

13. From Persepolis to Ecbatana

In the spring of 330, Alexander hurried along the major plateau road leading to Media, which he reached in twelve days (Arrian III.19.3)—a journey that an army traveling at a normal pace could accomplish in twenty days (Diodorus XIX.46.6). He crossed and subjected the land of the Paratacae, which was made into a separate satrapy (Arrian III.19.2). He also crossed the Gabiene, which Strabo places in the northern reaches of Persia, where we know of a royal residence (*basileion*) at Gabae/Tabae (Strabo XV.3.3; cf. Quintus Curtius V.13.2: *oppidum in Parataecene ultima*; Polybius XXXI.9.3). It was a rich region, where the armies could resupply (Diodorus XIX.26.2). Then he arrived at Ecbatana. At Gaugamela, the Median contingent (along with peoples coming from Ecbatana: Cadusians, Albanians, Sacasinians) was led by the Mede Atropates (Arrian III.8.4), the future founder of Atropatian Media (Strabo XI.13.1). Was he at this time the satrap of Media? We cannot say with certainty. We simply know that Alexander named the Persian Oxydates to the position some time later (Arrian III.20.3), before replacing him with Atropates himself (IV.18.3). At any rate, this is the first attestation we have of a satrap of Media since the reign of Darius I (at that time, it was Miturna/Hydarnes:

PFa 18). The last mention of the operation of the city is the reference to the royal archives located in Ecbatana the Fortress in Ezra 6:1–2 in the time of Darius I (DB II §32; *Hagmatāna didā*). This is because Media, located far from the Greco-Persian theaters of operations, scarcely attracted the attention of the Greek writers of the Classical period, though they did know about the fabled splendor of Ecbatana, and they also knew that it was one of the intermittent residences of the Great King and his court. The gap is only partly filled by the Alexandrian historians, since the Macedonian paid only brief visits to Ecbatana.

Polybius, on the other hand, left enthusiastic descriptions of Media and Ecbatana in several of his discussions of Seleucid history. He stresses the unusual strategic situation of the region and its resources: it “might rank as a kingdom” (V.44–45♦). It was, he says, “the most notable principality in Asia, both in the extent of its territory and the number and excellence of the men and also of the horses it produces. It supplies nearly the whole of Asia” (X.27♦). The lushness of the Median pastures stressed by Polybius was well known to the Companions of Alexander. The famous Nisaeen stud farms were located six days’ march from Ecbatana (Nisāya district; DB I §13); in the times of the Great Kings, they supported more than 150,000 animals grazing freely (Diodorus XVII.110.6; Arrian VII.13.1; Strabo XI.13.7). Despite the raw climate, Media included quite rich districts, the plains and fields of which were farmed by peasants who lived in hundreds of villages (Diodorus XIX.32.1–2; 37.2; 39.1; 44.4; cf. Strabo XI.9.1). As Strabo tells it (XI.13.8), Atropatian Media alone (in his time it was distinct from Greater Media) delivered to the Great King, in addition to money tribute, an impressive amount of livestock, every year: 4,000 mules, 3,000 horses, and 100,000 sheep. Strabo again stresses the size of the military resources of the region, which could easily raise 10,000 horsemen and 50,000 infantrymen (XI.13.2). Strabo’s note seems to imply that the territory that was to become Atropatian Media already constituted a (tribute) administrative subdistrict in the Achaemenid period. We may also note Diodorus’s use (XIX.44.4) of the term *eparchy*: Rhagae is called one of the eparchies of Media (*dahyu* in DB II §32). Because of the date of the events Diodorus is describing (beginning of the age of the Diadochi), it is tempting to think that the term goes back to some Achaemenid administrative arrangement—perhaps a unit identifiable with *medinah*, which in the Aramaic documents from Egypt refers to the internal subdivisions of a satrapy (see Diodorus XIX.95.2, referring to Idumea).

Polybius is responsible for the best description of Ecbatana. Quintus Curtius (V.8.1) simply presents it as the capital of Media (*caput Mediae*), and Diodorus (XVII.110.7) presents it as a very large town (circumference of 160 stadia = ca. 30 km) and the seat of a royal residence (*basileion*) and a very well stocked treasury (Alexander had brought some of the treasuries of Susa and Persepolis to Ecbatana). Polybius (X.27♦) says that the town, though unfortified, included a citadel (*akra*) defended by strong walls. From the walls of this citadel (OPers. *didā*; Akk. *hirtu*), Darius hung the mutilated bodies of the rebel Fravartiš and his accomplices in 521 (DB II §32; Bab. §25). Polybius also describes the untold wealth of the palace: its ceilings, beams, and columns, made of cedar or cypress, “were with plated with either silver or gold.” Even after being pillaged by the Macedonian soldiers, the columns of the Anais temple’s peristyles “were still gilded and a number of silver tiles were piled up in it.” Anais must have been none other than Anāhita; Artaxerxes II had ordered a cult statue of her erected in Ecbatana (FGrH 680 F11)

and had consigned Aspasia to her sanctuary as “priestess to Diana of Ecbatana, whom they name Anaitis, that she might spend the remainder of her days in strict chastity” (Plutarch, *Art.* 27.4♦). The sanctuary is also mentioned later by Isidore of Charax (*Parthian Stations* §6), and perhaps it is this goddess who is called Median Artemis in a Hellenistic inscription (chap. 16/3 above). There is no doubt that there were many temples and sanctuaries in Ecbatana and the rest of Media (cf. Arrian, *Anab.* VI.27.4). On the other hand, we wonder about the Iranian identity of an “Asclepius” who supposedly had a temple in the capital of Media (Arrian VII.14.5). As Polybius implies, many of the buildings undoubtedly were built by the Great Kings; furthermore, their building activity at Ecbatana is attested in several inscriptions, three of which come from Artaxerxes II (A²Ha-b-c). However, the lack of organized excavations prevents us from providing any detail. Finally, following the pattern of all their colleagues, the satraps and the representatives of the imperial elite had located enchanting paradises close to the town, “charming . . . with groves artificially planted” (Quintus Curtius VII.2.22–23♦). Additional paradises served royal stations (*stathmoi basilikoi*) along the major roads (Plutarch, *Art.* 25.1). Without question, the most famous of these was the one at Behistun; its fame caused Alexander to turn aside from the road from Babylonia to Ecbatana (Diodorus XVII.90.5). Behistun was located in the Kampana district (DB II §25), a place-name easily recognizable behind Isidore of Charax’s Gambadene (*Parthian Stations* §5) and perhaps Diodorus’s Gadamala (XIX.37.1).

In Polybius’s eyes (V.44), Ecbatana owed its reputation and riches to its position as a crossroad. To the east lay what Quintus Curtius (V.8.5) calls a *via militaris*, the Khorasan road that led to Bactra and Central Asia via the rich region of Rhagae, the Caspian Gates, and Hecatompylus (cf. Arrian III.19.1–2, 20.2, etc.). From Ecbatana, Armenia and Cappadocia could easily be reached (Plutarch, *Eum.* 16.1–2), as well as Persepolis, via the Gabiene. One could also get to Upper Mesopotamia by a mountain road that had only poor opportunities for resupply (Arrian III.16.1); it crossed the land that an astronomical tablet dated 331 refers to with the archaizing term “land of Guti” (ADRTB no. –330). One could also take the road, described by Herodotus (V.52), that originated at Sardis and the Halys, crossed part of Cappadocia, had fifteen stations (*stathmoi*) in Armenia, and after Arbela went down the east bank of the Tigris (cf. *DAE* 67 [AD 6]) crossing many of its tributaries on pontoon bridges (V.52). Quite naturally, it was at Ecbatana that Darius stopped after his defeat at Gaugamela, because he hoped that he could assemble additional forces coming from the satrapies of the Iranian Plateau there (chap. 18/4). Ecbatana also was the place where, in 401, Artaxerxes II gathered troops from the eastern regions and then ordered them to advance against Babylon (Diodorus XIV.22.1; Xenophon, *Anab.* II.4.25). Throughout Achaemenid history, the strategic role of Ecbatana (and of Rhagae) recurs, particularly clearly in the wars of Darius in 522–521, because the king stayed there for several months to organize counterattacks from Ecbatana against Rhagae and Parthia (DB II §§31–32, §35; III §36). Alexander also considered the town to be crucial; we know this because he left Parmenion and several *stratēgoi* at Ecbatana and had part of the royal treasuries of Susa and Persepolis brought there. There is every reason to believe that the Median capital did not simply serve as the summer residence of the Great Kings but always functioned as a place for the Empire’s east and west to meet. Merchandise from Central Asia, such as lapis lazuli from distant Badakhshan (Bactria), was conveyed through Ecbatana. Tablets from the time of Cyrus and

Cambyses reveal the activities of Babylonian businessmen in the Median capital. Similar documents date to the time of Darius II (including an inscription supposedly from Hamadan: *D²Ha*); it is likely that the Babylonian business establishments followed the annual relocations of the court.

Like many peoples of the Empire, the Medes provided military contingents that were permanently settled in garrison-colonies in Asia Minor (Diodorus XVII.19.4) or Egypt (DAE no. 46 [BMAP 5]). Several Medes also appear in fifth-century Babylonian tablets. Conversely, the presence of a Persian diaspora in Ecbatana can perhaps be deduced from the Berossus text discussed above (chap. 15/8). On the other hand, we know practically nothing of the place that the Median aristocracy held in the Empire or of their relations with the Persians. Of course, we can imagine that, one way or another, the wealthy, great families of the Median aristocracy were obliged to cooperate (*principes*: Quintus Curtius X.1.3). But for what reason and with what duties? The problem is even more difficult to deal with because, from the time of the earliest kings, it is impossible to find men who are described as Medes among the high-ranking imperial personnel. Exactly three are identified in the Alexandrian historians: Atropates (Arrian IV.18.3), Baryaxes (VI.29.3), and one named either Cobares (Quintus Curtius VII.4.8) or Bago-daros (Diodorus XVII.83.7; alongside Bessus); in contrast, references to *anēr Persēs* are fairly common. On first analysis, this seems to be in striking contrast to the position of the Medes in the time of Cyrus and Cambyses, and even in the reigns of Darius and Xerxes—both of whom liked to include the Medes and Media in the “first circle” (chap. 5). Furthermore, we cannot say whether the title “king of the Persians and Medes,” which is known from the time of Xerxes, was maintained throughout Achaemenid history—or not, even though, according to Arrian (VI.29.3♦), this was the title that the Mede Baryaxes awarded to himself during Alexander’s absence in India. Finally, the place of Medes in Darius III’s army seems much less prominent than it was in the time of Darius I and Xerxes. But what can be concluded from such poorly documented observations? Should we infer a relative depreciation of Media and the Medes in the imperial whole? It is hard to say, since Media continued to retain its prime position in the country lists—though we should remember that they were copied by rote (A?P). Moreover, the absence of Medes in the fourth-century imperial *Who’s Who* is perhaps nothing more than a misleading reflection of the gaps in the evidence and our uncertainties about personal names.

The record is weakly fed by a handful of isolated and elliptical texts located in the period between Darius II and Alexander. We may start with the information offered by an interpolation in Xenophon’s *Hellenica* (1.2.19), which says that, at the end of 409–408, the rebellious Medes were brought back under control by Darius II. But we know nothing about the causes or the extent of any such revolt, so that it is nearly impossible to situate the episode in the *longue durée*; nothing leads us to suppose (or deny) that, from 521–520 on, Media was periodically wracked by separatist tendencies. We might nonetheless recall that an astronomical tablet from the reign of Artaxerxes II (ADRTB no. 369) mentions an expedition in the land of Razaunda, which is in Media, and that Baryaxes wore the “upright tiara” and proclaimed himself “king of the Persians and Medes” (Arrian VI.29.3♦). But what significance does this claim have in view of the long history of relations between Persians and Medes, especially at a moment when one or more Persians attempted to swing the course of Persian history back to Persia (VI.27.3;

Quintus Curtius IX.10.19; X.1.9)? We may recall, finally, that Bessus was sent to Ecbatana for execution after he was sentenced by Alexander (Quintus Curtius VII.10.10), "to be put to death there in the assembly (*sylogos*) of Medes and Persians" (Arrian IV.7.3♦). It is obviously tempting to deduce the existence of a sort of Persian-Mede joint sovereignty in the earlier Achaemenid period from this statement—supposing that Alexander's practice was modeled on Achaemenid practice. But as it happens, it is more likely that what we have here is a typical example of "false continuity," because we do not have evidence that there ever was a regularly convened assembly of the Median and Persian nobility in the Achaemenid period. It is also highly unlikely that Alexander intended to symbolize the obliteration of Persia and Persepolis by choosing Ecbatana and by doing this to restore Media's previous luster. In fact, on the one hand, he only unwittingly agreed to torch some palaces (cf. Arrian VI.30.1; Quintus Curtius V.7.11; Plutarch, *Alex.* 38.8); on the other, he had sent the remains of Darius III to Persepolis to be buried "in the royal tomb," like his ancestors (Arrian III.22.1♦). Assuming that Arrian's version of the death of Bessus is accurate, the choice of Ecbatana (which was then acting as rear base) can be explained primarily by the ease of communication between Ecbatana and Bactria, where the Macedonian was at the time. In the final analysis, we are tempted instead to offer a totally different interpretation: at the moment when Alexander wished to present himself as Darius's avenger, he symbolically handed over the regicide to those he would call on to cooperate in the new empire, in this way cobbling together an "institution" as new as it was transitory.

14. From Ecbatana to the Halys

Adjacent to Media on the west was Armenia, which in turn was bordered by Cappadocia; the Euphrates marked the boundary between the two countries, and the Halys marked the traditional line between Cappadocia and the Phrygias. According to Strabo (XII.1.1♦), "Cappadocia, also, is a country of many parts (*merē*) and has undergone numerous changes"; it was the Persians who divided it into two satrapies, Greater Cappadocia (or Tauric Cappadocia) and Pontic Cappadocia (XII.1.4). But Strabo's statement has to be taken with a grain of salt, because it is possible that he chose this expression to locate in the distant past the birth of the two Cappadocian kingdoms known to him. It is difficult to reach a conclusion, because we know virtually nothing of the country after Ctesias's comment (§16) that Ariaramnes, satrap of Cappadocia, was ordered by Darius I to campaign on the northern shores of the Black Sea shortly before 513 (cf. chap. 4/2). Even Datames' adventures are not very forthcoming about the Cappadocian regions. In 332–331, the Cappadocian contingents were led by a single leader named Ariaces (Arrian III.8.5). In contrast, the Armenian forces were led by Orontes and Mithraustes (*ibid.*). It is possible that this arrangement reflects an internal division within Armenia: around 400, Xenophon says, Orontes (an ancestor of Darius III's satrap) held the reins in Armenia (*Anab.* III.5.17), where he had an official residence (*basileion*) and a paradise (IV.4.2), while Tiribazus (still following Xenophon) was hyparch in western Armenia (IV.4.4). Codoman (Darius III) also received command of the two Armenias after his adventure in the Cadusian war fought by Artaxerxes III (Justin X.3.4). But Xenophon's phraseology leaves open the possibility that there was a single satrapy within which there were several subdistricts (*hyparchies*).

It must be said that we know little about these Cappadocian and Armenian districts in the time of the Great Kings. The sparse information that we do have can support contradictory readings. The presence of the imperial and satrapal administration is inferred from scraps of evidence, and, until some recent discoveries, we must admit that the evidence was fairly unhelpful. The two countries are regularly included in the lists of subject lands, where they are listed as Katpatuka and Armina, though the latter is called Urartu in the Babylonian versions. Actually, the original Urartu, near Lake Van, yields the only official evidence of royal presence—the inscription carved by Xerxes on a rock face (XV); in the inscription, the king recalls that he had completed the work of his father Darius. Perhaps this inscription expresses the specific importance of the (capital?) district within the satrapy. The strategic value of Cappadocia and Armenia is also attested by the route (the details are disputed) of the royal road described by Herodotus (V.52) and by Xerxes' order to assemble the military contingents at Critalla in Cappadocia (VII.26). Like other countries, Cappadocia and Armenia were included in the imperial tribute scheme, though population groups were combined for this purpose in a way that does not correspond (Herodotus, III.93–94) to satrapy boundaries that we can reconstruct (badly) for later periods. According to Strabo (XI.13.8⇨), “Cappadocia paid the Persians yearly, in addition to the silver tax, fifteen hundred horses, two thousand mules, and fifty thousand sheep.” The existence of a royal *dasmos* in Armenia (in horses) is attested in Xenophon (*Anab.* IV.5.24, 35). The Persian presence in Armenia and Cappadocia is deduced primarily from late texts and late evidence, which in itself illustrates the extent and vigor of the imperial diaspora. This is most especially indicated by the density of Iranian personal names in Cappadocia, by the use of Aramaic in official correspondence (cf. Diodorus XIX.23.3: satrap of Armenia) and private memos, and above all by the spread of Persian gods and religion, especially the worship of Anāhita, both in Zeleia (Strabo XI.8.4; XII.3.37) and in the Armenian district of Acilisene (Strabo XI.14.16; Plutarch, *Lucullus* 24.2–5). We may add that, in a story repeated by Ctesias (§§40–41), the central authority considered Armenia to be a place of exile and deportation, in addition to being a place to colonize.

In contrast, other evidence, at least at first sight, would lead us to stress the weakness of Achaemenid territorial dominion in these regions. First, we have Xenophon's tale of the adventures of the Greek mercenaries in Armenia. Though Xenophon does not entirely forget to mention that satrapal officers (Orontes, Tiribazus) were present, accompanied by significant forces, he does focus his tale on the opposition mounted by a whole series of peoples that he usually identifies via ethnographic characteristics that flaunt their exotic barbarity. This is the case for the Carduchi and Colchians and for the Macrones and Mossynoeci as well. But, here as elsewhere (chap. 16/11 above), the author's presentation must be qualified: these peoples also furnished contingents to the satrapal and royal armies—for example, in the Gaugamela campaign (Arrian III.8.4: peoples subsidiary to Media). Furthermore, a large number of Achaemenid luxury goods have been found in Colchis; their presence in the tombs probably is a result of gift exchanges between the Colchian aristocracy and the Great King's court. After all, these exchanges are made explicit in Herodotus's discussion of the donor peoples (III.97). The second argument in favor of the ongoing independence of these regions is derived from the presumed autonomy of all or part(s) of Cappadocia and Armenia when Alexander arrived, as well as their relations with the central authority during the Macedonian cam-

paign and throughout the age of the Diadochi. But care is required in this case, too, and the material needs to be placed in context. For both Cappadocia and Armenia, we primarily have foundation legends that were situated in the Hellenistic period and were intended to justify the establishment of independent dynasties, each of them fictively connected to one of the Seven. Thus, it is clear that this literary genre must be handled with a great deal of caution (chap. 3/4). Moreover, we observe that the old satrap Orontes continued in his position in Armenia in 323 (Diodorus XIX.23.3; Polyaeus IV.8.3), and Cappadocia was (along with Paphlagonia and adjacent territories) among the still-unconquered regions that were granted to Eumenes at Cardia. But there is no reason to conclude from this that the situation was the same in the time of Darius III, who, as we have seen, drew many contingents from these regions. Armenia and Cappadocia remained beyond the control of Macedon quite simply because "Alexander did not invade, having been prevented from doing so by the urgency of his affairs when he was finishing the war with Darius. . . . Ariarathes, the ruler of Cappadocia . . . , had been overlooked by Alexander, owing to the struggle with Darius and its distractions, and he had enjoyed a very long respite as king of Cappadocia" (Diodorus XVIII.3.1; 16.1◊). The Macedonian thought it was enough to name Persian satraps: Sabictas/Abistamenes in Cappadocia (Arrian II.4.2; Quintus Curtius III.4.1) and Mithrenes in Armenia (Arrian III.16.5; Diodorus XVII.64.6; Quintus Curtius V.1.44). It seems clear that these satraps' power was largely fictitious or else limited to a subdistrict. Cappadocia, at any rate, was one of the recruiting bases used by the Persian generals who had escaped after the battle of Issus and attempted to launch a counterattack on the Macedonian rear (cf. Quintus Curtius IV.1.34). This was also the time when some of them struck coins at Sinope.

We heartily welcome the truly remarkable surge of new evidence, both inscriptional and archaeological, that has emerged, especially from ancient Armenia. The latest archaeological and ceramic investigations appear to confirm the presence of highly developed Achaemenid settlements, especially at sites near Lake Van. At Altintepe, the only example of an apadana in a satrapal capital has been found, and at Arin-Berd very rare wall paintings have been discovered in an Achaemenid building. An even more remarkable discovery is the find of fragments of three Elamite tablets at Armavir-blur; according to the most recent (but already disputed!) interpretation, they are very similar to the Persepolis tablets and deal with levying taxes (tithes?) in kind (head of cattle; grain) and depositing them in the quartermaster's storehouses. These documents testify to the existence of imperial archives at the excavated site and also to the presence of a developed provincial administration (perhaps a **frataraka*). If we add that the site of Armavir-blur (Uartian Argištihinili) was continuously occupied from the Uartian period to the Hellenistic period, that the Hellenistic seal impressions from Artasāt attest to both the Achaemenid legacy and so-called "Greco-Persian" influence, and that even more recently Achaemenid column bases have been discovered at another site, we must at some point realize that the perception of Achaemenid Armenia that we have hitherto held is in the process of total reorganization.

15. From Ecbatana to Cyropolis

The eastern Iranian contingents used the *via militaris* to join Darius at Babylon in preparation for the battle that was about to take place at Gaugamela. As we have already emphasized, apart from a few scattered notes dating to the reigns of Artaxerxes I (Ctesias

Map 6. Lands and peoples of the Iranian Plateau and Central Asia under Achaemenid rule.

§31; Plutarch, *Them.* 31.3) and Artaxerxes II (chap. 15/8 on the imperial realm), the Hellenistic reports break a lengthy silence regarding the lands of the Iranian Plateau. We must again emphasize that, before Alexander's arrival at Bactra (modern Balkh), data on the plateau satrapies are limited to mere summaries because Alexander's march was so rapid. Other than the name of the ruling satrap, we receive meager information on the boundaries of the satrapies and the names of the official residences (*basileia*), which were often fortified (Zadracarta in Hyrcania; Artacoana in Aria). The excavations at Old Kandahār, where an Elamite tablet of Persepolis type has been found, and Dahan-i Ghulaman (Seistan) nonetheless attest to Achaemenid presence on the Plateau. The descriptions of the countries are unfortunately very incomplete: not a single author, for ex-

ample, makes the slightest reference to the network of Bactrian canals discovered by the archaeologists. The reason is quite simple: first, Alexander's march to Bactra was fairly rapid, and furthermore, the military historians were interested only in features of the countryside to the extent that they figured in Alexander's campaigns or, possibly, if they exhibited "exotic" characteristics that might stimulate the imagination of their readers. Because they were following Alexander step by step, the ancient authors aim their spotlights on certain peoples that they differentiate on the basis of their country's ecology and/or the resistance that they put up to the Macedonians. This, for example, explains the long discussions of the Mardians of the Caspian and, conversely, of the Ariaspi/Benefactors of the Helmand Delta; the latter were rewarded by Alexander to commemorate their "good deeds" in honor of Cyrus and because of the aid that they had provided to Alexander himself. Not even the reports on Bactria and Sogdiana are particularly detailed. The Oxus (Amu Darya) seems to have been the boundary between the two regions (Arrian III.28.9; IV.15.7; 16.1), and the Iaxartes (Syr Darya) was 'the boundary of the Persian Empire' (*horion tēs Persōn archēs*); the border was also marked in the countryside by the town of Cyropolis, "the last city founded by Cyrus" (Strabo XI.1.4♦). The strongly fortified Cyropolis was actually just the largest (Arrian IV.2.2) of a series of seven fortified towns located on the Iaxartes, and Alexander and his generals had to subdue these towns arduously, one by one (Arrian IV.1–3). A large number of unnamed fortified towns or fortresses are also reported by the ancient authors and by archaeologists in both Sogdiana and Bactria.

First of all, the texts from the times of Alexander and the Diadochi allow us to draw up a list of what the Hellenistic authors (especially Diodorus) call (though not without confusion) the Upper Satrapies. In 323, Diodorus names Paropamisadae, Arachosia and Gedrosia, Aria and Drangiana, Bactria and Sogdiana, Parthia and Hyrcania, Carmania (XVIII.3.3: most of them in pairs). The enumeration of 320 scarcely differs (XVIII.39.6): Carmania, Parthia, Aria and Drangiana, Bactria and Sogdiana, Paropamisadae; and the list is similar around 317–316 (XIX.14.6): Carmania, Arachosia, Paropamisadae, Aria and Drangiana, Bactria. These data correspond by and large to the situation at the time of Darius III, so far as we can reconstruct it on the basis of the ancient reports: Parthia-Hyrcania (including the Tapyrians), Aria, Drangiana, Arachosia, Bactria, Sogdiana, Carmania, Gedrosia. At the battle of Gaugamela, Arrian (III.8.3–4♦) lists the Bactrians and Saka (led by the satrap of Bactria, Bessus), the Arachotians and "Indian hillmen" (led by Barsaentes, satrap of Arachosia), the Aryans (led by Satibarzanes, satrap of Aria), the Parthians, Hyrcanians, and Tapyrians (commanded by Phratapharnes; we find out later [III.23.4; 28.2] that he was satrap).

Such a catalog in itself can inform us only very imperfectly about the Persian administrative organization of these regions. The main interpretive problem comes from the context of the Macedonian campaigns in Bactria-Sogdiana. Let us briefly review them. Bessus, a relative of the Great King and satrap of Bactria, was the driving force behind the conspiracy that led to the murder of Darius in July 330, along with Nabarzanes, chiliarch of the royal cavalry, and Barsaentes, satrap of Arachosia and Drangiana (III.21.1). Bessus backtracked to Bactria to lead the resistance to the Macedonian offensive, where he had himself proclaimed "King of Asia" (III.25.3♦)—that is, Great King—under the name Artaxerxes (Diodorus XVII.74.1–2; 78.7; Quintus Curtius VI.6.13). He enlisted Satibarzanes, whom Alexander had retained as satrap of Aria (III.25.1), in his cause:

Satibarzanes soon perished in the Macedonian counterattack, and the same fate befell Barsaentes, who was executed after the Indian hill peoples turned him over to Alexander. Meanwhile, at first at least, disturbances continued in Alexander's rear: the new satrap of Aria, Arsamenes, showed no loyalty to the Macedonians (III.29.4); he probably stayed in communication with Bessus. Moreover, Bessus, who had assumed supreme authority (albeit falsely), had named a satrap in Parthia (IV.7.1).

Should we conclude from this that the authority of the satrap in Bactra extended throughout the Upper Satrapies and thus that his command extended eastward from Ec-batana? We know for certain that this was true in the Seleucid period, but was it also the case earlier, under the later Achaemenids? It is hard to offer a defensible response to this question, since the texts are open to conflicting interpretations. The only evidence along these lines is a passage in Diodorus (XVI.50.8), where the information (that Bagoas was entrusted with the Upper Satrapies under Artaxerxes III) seems dubious—which is not to say that it should be thrown out. We must note that aside from this text we see nothing that would establish a bridge between the Achaemenid period and the Hellenistic era with any certainty. Until more evidence appears, we can stress only that the Seleucid innovation itself goes back to the age of the Diadochi, because the earliest attestation comes from 316, when Pithon took on the duties of both satrap of Media and “*strategos* of the Upper Satrapies” (Diodorus XIX.14.1). The satraps of these regions combined their contingents and held common council (XIX.14–15). But the political context (their joint opposition to Eumenes) is very specific, and the fact that they joined forces does not necessarily imply that by doing so the satraps were following an Achaemenid precedent. For one thing, in 331 the eastern Iranian contingents were led by several satraps (Bessus, Barsaentes, Satibarzanes; Arrian III.8.3); for another, the motivations of the satraps allied with Bessus do not seem to have derived from the fact that the satrap in Bactra was regularly granted authority over the entire area but basically from personal motives—not least the desire to preserve their own position (cf. Arrian III.21.5). In any case, the death of Darius III created an entirely new situation, and Bessus's proclamation of kingship obviously did not make the situation any better. Finally, after Darius's death, Bessus's personal authority held priority with his Bactrian horsemen (III.21.4; cf. Diodorus XVII.74.1) and over the alliance with some of the Saka chiefs (III.8.3).

The only thing that seems clear is that the military responsibilities of the satrap in Bactra went beyond the usual boundaries of Bactria, since at Gaugamela he led all of the Bactrians, the Sogdians, a Sakian contingent, and a unit provided by the Indians who were adjacent to Bactria (III.8.3). The differing accounts allow us to think that in the time of Darius III, the authority of the satrap in Bactra extended to Sogdiana, where no separate satrap is ever named, either before or after Alexander. The satrap in Bactra appears to have undertaken active relations with some of the Saka in this official role: thus, he was their supreme commander when the Bactrian contingent and a Sakian troop led by their chief Mauaces joined Darius III in 332–331, on the basis of a *symnakhia* entered into with Darius (Arrian III.8.3). Throughout Alexander's war in Sogdiana-Bactria, Bessus and later Spitamenes would find aid among some of the Sakian peoples. Cooperation between the Sakians and the Persians, which is known from even before Alexander's offensive beyond the Iaxartes (Syr Darya), obviously belonged to the long-standing relationship between the Achaemenid authorities and the Saka, who were usually divided into many groups but who put up a united front in the face of attacks by their ene-

mies. If, as Strabo writes (XI.11.4), and according to Darius I (*DPh*), the Syr Darya represented the boundary of direct Persian dominion, no general state of permanent hostility between the Persians and Saka can be inferred. In fact, the information provided by Alexander's old historians must be placed in context. Arrian, recalling what he took to be Alexander's intentions when he planned to found a town on the Syr Darya, wrote: "The site was suitable for the city to rise to greatness, and it would be well placed for any eventual invasion of Scythia and as a defence bastion (*prophylakēs*) of the country against the raids of the barbarians dwelling on the other side of the river." (IV.1.4♦). That hostilities frequently broke out between the Persian forces and some Sakian peoples does not seem open to doubt. Darius I's campaign is irrefutable testimony to this fact, and the action taken in that case (replacement of one Sakian king with another: *DB V* §74) illustrates a general practice. But to deduce that there were permanent hostilities is to attribute to the word "boundary" a modern sense and to postulate that there was a break pure and simple between the sedentary world and the nomadic world—which was certainly not the case. Some Sakian peoples (who had in part become sedentary) lived in close contact with the populations of Sogdiana (e.g., Arrian III.28.8). Furthermore, the mobilization of the Saka against Alexander was a response to a brand-new situation created by both the "Achaemenid void" and the Macedonian offensive—two phenomena that happened to coincide. The fortified towns founded by Cyrus on the Iaxartes did not merely function to defend against Saka "aggression," contrary to what Arrian and many others would have us think. These citadels also served as refuges for the "barbarians near the river" (IV.1.4;♦ 2.6; 3.1). It seems quite likely that there were also many Sakian/Scythian refugees. Note, too, that in Cyropolis alone 15,000 fighters were massed (IV.3.4: *makhimoi*); in this case, again, the theory of Sakian participation in the defense of the town seems reasonable—perhaps something like the Arab mercenaries (*misthōtoi*) who contributed to the defense of Gaza alongside Batis the governor and Persian soldiers (Arrian II.25.4). This is the context of the *symmakhia* between Darius and Mauaces.

The Syr Darya, "boundary of Persian power" (because the satrapy ended on the western bank), was certainly not an impregnable boundary; the towns founded by Cyrus were also trading posts between the world of the steppes and Bactria-Sogdiana—which accounts (very specifically, even) for the carpets with Achaemenid motifs discovered in a Uralic tomb in Pazyryk; these carpets could have come from weavers in Sogdiana-Bactria. From this perspective, Alexander's policy represents a break from, rather than a continuation of, the policy that can be attributed to the Great Kings. Whatever his long-term goals may have been, Alexander was driven by an immediate concern—not to leave a single pocket of resistance behind him (Arrian IV.3.5). The Great Kings, on the other hand, had learned during the long course of their administration that they were well advised to maintain order on the "boundary" and that it was best to establish cooperative relations with the Saka chiefs, some of whom had been granted an autonomous status that went hand in hand with imperial military obligations (to furnish military contingents during satrapal and royal mobilizations). The tales of Herodotus show that the Saka were among the elite of the royal army, alongside other Iranian contingents, such as the Bactrians themselves, the Persians, the Medes, and even the Indians (e.g., VIII.113). At Gaugamela, Sakian horsemen fought alongside the Bactrian horsemen (Arrian III.13.3). We also know that after the establishment of Achaemenid dominion, many Saka had been settled in Babylonia as a part of the *hatru* system.

But what authority did the satrap have over the territories placed directly under his authority because of the position conferred on him by the Great King? On this point, we have relatively coherent, though indirect, indications. Generalized attempts at resisting Alexander's advances developed, led successively by Bessus and Spitamenes; but other resistance was organized locally by senior individuals whom Arrian often identifies as hyparchs. According to Arrian, the number of hyparchs was quite large; this is implied in his report, for example, that "many other hyparchs had taken refuge" on the Rock of Chorienes (IV.21.1♦). The phrase also seems to imply that there was an internal hierarchy within this category. But we know that the word hyparch is highly polysemous. Referring to the same people, Quintus Curtius uses the word "satrap" several times: in the Sogdian district of Nautaca, "the satrap was Sisimithres" (VIII.2.19♦); Oxyartes the Bactrian was "an illustrious satrap" (VIII.4.21♦); elsewhere, Quintus Curtius himself uses the word "satrap" to describe Orxines, though in this case it is clear from the context that he is using the term for the chief of the Pasargadae tribe (X.1.22). Thus, the vocabulary by itself will not help advance the discussion of the relationship between hyparchs and satraps any more, for example, than the use of the words "satrap" (in a verb form) and "satrapy" in Xenophon (*Hell.* III.1.10, 12) by itself allows us to determine the nature of the connections created, in Aeolis, between Pharnabazus, Zenis, and Mania.

In each case, the terms refer to authority exercised over a territory. This is very clearly confirmed by all of the texts dealing with hyparchs: each hyparch had a more or less extensive territory organized around a princely residence that was located on a fortified acropolis. The hyparch's authority was expressed in two ways: first, the huge amounts of food reserves that he built up show that he imposed duties on farm produce (cf. especially Quintus Curtius VII.11.1 and Arrian IV.21.1); second, he enrolled the people who worked his lands into militias. His territorial authority is also attested by the steps taken, after their surrender, against those whom Arrian calls hyparchs and Quintus Curtius satraps: the territory of Ariamazes and its inhabitants were handed over to the new towns (Quintus Curtius VII.11.29). The examples of Sisimithres and Oxyartes confirm this point: in both cases, their power is called *imperium* [= *arkhē*] and the context makes it clear that their power was territorial (Quintus Curtius VIII.2.32; VIII.4.21), and the same was true for the hyparchs listed by Arrian (cf. Arrian IV.21.9). It is obvious that the local chiefs had all the lands at their disposal (cf. Quintus Curtius VIII.1.1).

A crucial question remains: were these hyparchs fully independent of the satrap? We may begin our answer with a famous passage in Arrian (IV.1.5♦): after Spitamenes handed Bessus over to the Macedonians, he stirred up the Sogdians and attempted to incite a Bactrian revolt in Alexander's rear. He met with some success, since "it was a pretext they gave for the revolt that Alexander had instructed the hyparchs of that country (*hoi hyparkhoi tēs khōras ekeinēs*) to come to a joint conference (*syllogos*) at Zariaspa, the greatest city, and that this conference (*syllogos*) was not for their benefit." The word *syllogos* poses an obvious problem: does it refer to an institution borrowed by Alexander from the Achaemenid period, or does it simply refer to an ad hoc meeting? We may remark that Arrian uses similar words to describe an incident in India: through a herald, Alexander ordered Taxilas and the other Indians to come to a meeting, "each at their earliest convenience; Taxilas and the other hyparchs (*kai hoi alloi hyparkhoi*) complied, bringing the gifts the Indians prize most" (IV.22.6♦). However, the word *syllogos* does not appear here; furthermore, the context is not exactly the same: in the incident in

India, Alexander let it be known that, according to custom, the Indian leaders had to come submit to him, bringing ritual gifts; in the situation in Bactria, the hyparchs had already surrendered to Alexander, and Bactria was already essentially calm (e.g., Arrian III.28.1). While we could imagine that Alexander might have wanted to require new proofs of loyalty from the Bactrian hyparchs, we also have the strong impression that the gathering in the *syllogos* reveals additional motives.

We know that the word *syllogos* is used several times for the meeting that was periodically organized in several gathering places (*syllogos*) in the Empire. It was at the *syllogos* that territorial troops were reviewed. This is quite clearly explained by Xenophon: "The king annually reviews the mercenaries and all the other troops ordered to be under arms, assembling all but the men in the citadels at the place of muster (*syllogos*), as it is called" (*Oec.* IV.6♦). It is clear that the word takes on a technical and institutional sense in this reference. Other passages in Xenophon confirm that these reviews were held regularly (*Cyr.* VIII.6.15), and he mentions some of the locations: Castolus (*Hell.* I.4.3) or Castolou Pedion in Lydia (I.9.7) and Thymbara in Syria/Ebir Nāri (*Cyr.* VI.2.11). There is hardly any doubt that such assembly points existed in every satrapy or military region (which could include several satrapies). This is almost certainly the context of the Babylonian texts regarding military levies (at Ur and Uruk). The word used, *andēsu*, which appears in its Aramaic form (*hndz'*) in the documents from Egypt, was borrowed from Old Persian **handaisa* 'convocation' (in a place fixed by the administration).

Does this information provide the background for the *syllogos* of Zariaspa? To answer the question, we must turn to the texts dealing with relations between Bessus and the Bactrian horsemen—who, we know, played an important role alongside Bessus in the plot against Darius; according to Arrian (III.21.4), it was the Bactrians who recognized Bessus's unrivaled authority, and as a result he had seven or eight thousand Bactrian horsemen on his side (III.28.8; Quintus Curtius VII.4.20). When he made the decision to cross the Oxus (Amu Darya), Bessus was abandoned by most of his horsemen. The parallel passages in Quintus Curtius and Arrian are entirely typical. The former writes: the Bactrians "slipped away each to his own village" (*in suos quisque vicos dilapsi*; VII.4.20♦); and the latter: the Bactrian horsemen "dispersed in different directions to their homes" (*allos allēi epi ta sphōn*; III.28.10♦). It is clear that the phrases used are connected with the conscription procedure: Bessus's (satrapal) contingent was composed of subgroups, each of which was levied in a particular territory (compare Arrian III.19.2 and VII.15.2). This implies that some of a satrapy's territory was divided into "modules" that formed the basis of the administrative organization. The simplest explanation is that conscription was organized locally in each of these "modules" by those whom Arrian calls hyparchs. This is confirmed by Quintus Curtius's parallel passage on the Zariaspa meeting. He also took notice of the rumors spread around Bactria by Spitamenes and his allies, writing in fact that they "had spread abroad the report that all the Bactrian cavalry (*bactrianos equites . . . omnes*) were being sent for by the king, in order that they might be slain" (VII.6.15♦). It thus seems clear that the Bactrian *syllogos* was one example of an Achaemenid institution known elsewhere: each hyparch brought the contingent he had mustered in his territory (cf. also Arrian III.28.10). When Quintus Curtius used the phrase "all the Bactrian cavalry," he might have had in mind a fact about the wealth of the territory that he cites elsewhere: "The cavalry of the Bactriani had amounted to 30,000" (VII.4.30♦). Whatever value is accorded (or not) to the number given, we have

the impression that the information presupposes the existence of an archive on which, in Bactria as elsewhere, the administration was able to base its orders for meeting at the "place of muster." Furthermore, from this viewpoint, Sogdiana constituted a special sub-district, even though it was included in the same district: in Arrian (III.28.10♦), 'the horsemen from Sogdiana' (*hoi ek tēs Sogdianēs hippeis*) are distinguished from the Bactrian horsemen. Whatever the circumstances, the conclusion seems inevitable: on the one hand, by convening a *syllagos* of the Bactrian hyparchs at Zariaspa, Alexander intended to reinforce his army just as he was preparing to launch a trans-Oxus campaign; on the other hand, because he had just named a satrap in Bactria (III.29.1), all he had to do in order to achieve this goal was to take advantage of an Achaemenid institution that Bessus himself must certainly have used when he received the order from Darius III to assemble all of the contingents of his district (cf. Arrian III.8.3).

If this interpretation holds up, it suggests a number of reflections, and they in turn stimulate further investigations. First of all, Bactria did not escape the central authority's organizational energy, which can be observed in other satrapies. The conscription system resembles, in form at least, the method described by Xenophon in a passage that has already been quoted many times (*Cyr.* VIII.8.20♦): "In times past it was their national custom that those who held lands should furnish cavalrymen from their possessions and that these, in case of war, should also take the field." Thus, when the satrap issued an order to assemble, the Persians of the imperial diaspora who had received lands from the king each had to supply his contingent of horsemen (e.g., Xenophon, *Hell.* III.4.10). Generally, anyone who held a *dōrea* was subject to this obligation (e.g., Diodorus XVII.19.4); this was true of Persians and even of Greek beneficiaries in Asia Minor (this explains the presence of Gongylids in Cyrus the Younger's army: Xenophon, *Anab.* II.1.3). The Bactrian *syllagos* thus was just one instance of a general practice. It was apparently unique in one respect: as far as we are able to determine, the role of the hyparchs was anchored in Bactria's long history. They came from a local aristocracy that undoubtedly possessed broader territorial authority than that enjoyed by the recipients of donations. But, at the same time, as would be true for any subordinate, the hyparchs themselves were certainly bound by duty to be absolutely loyal. For this reason, some of Alexander's directives may reflect practices that were not specific to the Macedonian conquest.

In particular, let us recall how Ariamazes and his people were punished. He and those close to him were put to death; then "a multitude of those who had surrendered, together with the booty in money, was given to the settlers in the new cities. Artabazus was left to govern the rock and the region adjacent to it" (Quintus Curtius VII.11.29♦). The only unique item in this account involves the beneficiaries of the allotments: the settlers in the newly founded cities. The remainder of the story accords well with many examples taken from Achaemenid history, which show that at any time, particularly in case of a rebellion, a beneficiary of lands might find himself dispossessed by the Great King. No allocation of land was guaranteed to be permanent, whether it was a gift or a territorial right that might reach back before the conquest. Even the fiscal assessment imposed by the hyparchs in their territory was not really anything new; obligations imposed on holders of *dōrea* were also the same as they had been in the past. If this were not true, who would have paid the Bactrian tribute? To be able to attach certainty to our conclusion, we would have to know why the local elites were motivated to ally with the

conquering kings, Cyrus and Darius. But there does not seem to be any reason why, *a priori*, the process had to be utterly unique in Bactria. Instead, we are led to think that after the conquest the Great Kings had acted no differently than Alexander did in his time; after Chorienes' submission, he "entrusted (*edōke*) this very stronghold (*to khōrion*) to him and made him hyparch of the people he had previously administered" (Arrian IV.21.9; cf. Quintus Curtius VIII.4.21 [Oxyarthes]). In Alexander's thinking and practice, this action derived not from any desire to perpetuate an independent local power but instead was simply a confirmation of a position Chorienes had already held in the Achaemenid period. In another case, the Macedonian confiscated a hyparch's land and allocated it to the inhabitants of the new towns (Quintus Curtius VII.11.29) as an expression of the rights of the conqueror over land and peasantry. For Alexander, in fact, the conquests were considered "land conquered at spearpoint" (Arrian VII.6.1). The Great Kings certainly had not acted any differently. Or are we supposed to think that Bactria was the only one of all the conquered territories that was not part of the *tagē* system (cf. chaps. 10/7, 11/10)?

The available evidence refers, albeit allusively, to other ways in which the central authority intervened in the life of the satrapy. First of all, it is clear that there was a Persian diaspora in the country. This is implied by Berossus's mention of the erection of statues of Anāhita in Bactra (chap. 15/8). All of the satraps were Persian, sometimes relatives of the Great King's family. However, it is difficult to go any further on this point because of the relative similarity of Iranian personal names. Aside from the case of the hyparchs who opposed Alexander, it is difficult to distinguish men who are identified as Bactrians. Scarcely any can be named other than the Orontes who, according to the Pergamum Chronicle (OGIS 265), was of Bactrian background (*to genos baktrios*); and even this example raises more questions than it answers. Let us simply say that it is certain that Bactrians had settled in other satrapies, either on their own or as garrison-colonists. In addition, Bactria itself did not escape the colonization system set up elsewhere in the Empire. After 479, Milesians (the Branchidae) had been resettled by Xerxes in Sogdiana. They at that time lived in a fortified town, held territory, and were incorporated into the local population (Quintus Curtius VII.5.28–35; Strabo XI.11.4). Herodotus (IV.202, 204), in his passage on the Persian expedition in Cyrenaica in 513, recalls that the Barcaeans, who had been brought to Susa as prisoners of war, received from Darius a village (*kōmē*) in Bactria as a gift (*edōke*), and they still lived there in the time of Herodotus. Like other 'border regions' (*eskhatai*; cf. Aelian, VH VI.14; Diodorus XVII, Contents), Bactria was perceived by the Greeks as a place to which people were banished (cf. Herodotus VI.9)—which is to say, from the Achaemenid point of view, a land for colonization.

To be sure, this handful of evidence looks pathetic; but it is quite clear that the ancient sources offer nothing more than a highly partial sample of the state of affairs, because of their orientation. The information in them only makes sense when it is placed in a general imperial perspective. Although it cannot be proved, it is likely that, following the pattern of the deportees who were settled in Babylonia (cf. Quintus Curtius V.1.2; Arrian III.11.5) and the Persian Gulf (Herodotus III.93; VII.80), the deportee-colonists of Achaemenid Sogdiana and Bactria were included in the military and tribute organization of the satrapy. There is no longer any doubt that the fortified town of the Branchidae was part of a network of fort-towns and citadels that the ancient accounts unanimously agree was extremely dense. Work at the site of ancient Samarkand (Afrasiab) in

particular confirms the strength of the citadel's position during the Achaemenid period. It is likely that, as in Mysia (Xenophon, *Anab.* VII.8.15), Cataonia-Cappadocia (Diodorus XIX.16.3), and Margiana (Quintus Curtius VII.10.15), these fortresses maintained easy communication with each other.

We must now address a major interpretive problem posed by the archaeological discovery of a very dense network of canals in eastern Bactria—a problem that has already been briefly mentioned (chap. 2/5). From the archaeological point of view, the Achaemenid imperial administration had nothing to do with either the conception or the development of the irrigation canals. This conclusion is based on a series of observations and inferences that we may review briefly. First, the works that can be dated to the first half of the first millennium belong to the *longue durée* of Bactrian history, because the first irrigation canals go back to the Bronze Age. Second, the pottery is specifically Bactrian and does not show the slightest imperial influence. At this point we bring other evidence to bear and refer to Diodorus; in a story on the deeds of Semiramis, he states that the queen's expedition against Bactria met with resistance from Bactrians led by a certain Oxyarthes, who is called king (II.6.2). Without saying in so many words that royal institutions were perpetuated after the conquest, archaeologists nonetheless think that both before and after the Achaemenid conquest there was what they call a "Bactrian entity"; the only evidence of a Bactrian central state, however, appears as military and tribute assessments. In the opinion of the archaeologists, it was the representatives of this "entity" who were in charge of the canalization and irrigation projects that were carried out throughout the Achaemenid period—what they call the "Achaemenid" period, the quotation marks indicating that the term serves only to define a chronological point of reference rather than making any claim about a political fact. In this interpretation, the real break took place after the Greek conquest (apparently even later than Alexander's conquest); archaeological data of every kind (including pottery) show that at the point of discontinuity a genuine colonization policy was established, and there is no evidence that it went back to the previous period. Finally, in response to objections, the archaeologists sometimes state that Bactria's status was not really different from that of other regions of the Empire, because the real and active presence of the central authority in the provinces is very poorly documented and, in any case, does not imply an actual takeover of land and people other than in the form of military and tribute assessments, establishment of garrisons, and installation of a small number of administrators—the basics of real power continued to be exercised by the local "entities."

We see immediately that these theories support and orient the general discussion of Achaemenid imperial development that has been carried on, especially in the last few years. However, we can respond that to draw parallels with other satrapies in the Empire, without undertaking regional analysis beforehand, seems singularly unwise. There is a passage in Polybius that implies that the Great Kings took an interest in transporting water and irrigation in Hyrcania (X.28); and furthermore, the Babyonian tablets inarguably show that management of the canals belonged to a branch of the royal administration. All by themselves, these reminders rule out the generalizations that in reality are derived from a very "Bactrocentric" vision—as will be confirmed by a careful cataloguing of archaeological discoveries in the various lands of the Empire over the last twenty years or so (chap. 16/18 below). We may add, without needing to put too much emphasis on the

point, that it is utterly indefensible, methodologically speaking, to resort to Diodorus for support. But these criticisms do not exhaust the subject; far from it! The real problem is that it is extremely difficult to build bridges between the literary evidence and the archaeological evidence, each of which supports a picture that contradicts the other—or, more precisely, pictures that the historian and the archaeologist have not done well at reconciling. If a “Bactrian entity” really was active around 330, there is no trace of it in the texts. Nevertheless, a recent presentation of archaeological discoveries in the region refers to it as “a still poorly known and badly defined entity that existed well before the Persians” (B. Lyonnet). However, as we have seen, the ancient evidence portrays Bactria as a country basically divided among “hyparchs” who derived their authority from the satrap. As soon as the Wittfogel model is invoked (as archaeologists are regularly wont to do), we cannot see how the minor and major hyparchs of Bactria could have taken responsibility for operations of this sort, which necessitated interregional cooperation and the drafting of thousands of workers.

Furthermore, the contrast between the Achaemenid and Hellenistic periods, which is archaologically clearly marked and absolutely undeniable, must not be pushed too far. We should first of all recall that the physical presence of the Achaemenid administration in the provinces (aside from the *strategoï* and the garrison commanders) is often known only from incidental and accidental discoveries such as, for example, the discovery of an Elamite tablet in the fortifications of Old Kandahār. If we take the example of Persia itself, the discovery of the Persepolis archives completely altered the prior view of the strength of bureaucratic tradition at the heart of the Empire. As has already been explained at length (chap. 11/6–7), the extension of administrative practices to the provinces is proved in some cases and extremely likely in others (even if attested only in tablets that mention official travel between the imperial capitals and the eastern Iranian satrapies, including Bactra). Could Bactria have escaped the trend toward integration of the satrapies into the Empire? Only the discovery (which is statistically rather unlikely) of the satrapal archives of Bactra would allow us to answer the question with certainty; the theory proposed here is that the administration would have included (as in Babylonia) a special department of water and canals. It is true that in Babylonia we know of this department only from indirect references that show up in private files (the Murašū archives)! In the absence of such evidence from Bactra, we must be content with an observation: the Achaemenid tablet and the Greek-Aramaic bilingual from Kandahār demonstrate that there were archives in the capital of Arachosia and that the language of the Achaemenid chancelleries spread throughout the Iranian Plateau: “Two centuries after the Great Kings, we find [at Kandahār] the same sort of documentation [that we find in Achaemenid Egypt], the same language similarly suffused with Iranian words. . . . The use of Aramaic shows that we are actually in an Iranian province where the traditions of the Achaemenid chancelleries were maintained” (É. Benveniste). At Ai-Khanūm itself, an Aramaic ostrakon appears to be residual evidence of this. Furthermore, the inscriptions (in Greek and Aramaic) of the treasury give expression to an elaborate financial administration that must have owed much to Achaemenid precedents. Thus, we would simply like to emphasize one more time that the silence of Achaemenid evidence from this area must be interpreted with great caution and care. These observations obviously do not allow us to suggest that there was a satrapal department of water and canals in Achaemenid Bactria; they merely allow us to not exclude the possibility.

Let us then return to the argument from pottery, which appears to rule out imperial involvement. If we imagine that this argument is decisive *in itself*, there is no reason to continue the discussion. Conversely, the undeniable break (in the long run) that accompanied the Macedonian conquest must be explained. The multiplicity of archaeological traces of the Greek presence reflects a colonization policy that contrasts with the Achaemenid practice (we can make the same observation for Egypt). But this very notable difference does not necessarily imply that from the Achaemenid era to the Hellenistic period they passed from a lax and superficial dominion to micromanagement of land and water. In the Achaemenid period, in fact, imperial power was molded into the local traditions (particularly on the technical level); it thus cannot be immediately “read” in the layout of the canals or the shape of the pottery—so much so that the Achaemenids appear strangely absent. If we grant these premises, we must also grant that the uses of Bactrian pottery and satrapal intervention are not mutually exclusive. This interpretation offers the advantage, at least in the historian’s eyes, of spotlighting the single authority presented by the texts (the satrap) and relegating to the wings a “Bactrian entity” of which not the slightest trace has been found—even though the time when the Great King disappeared provided circumstances that were particularly favorable to political affirmation of and resurrection of evidence for the “entity.” It is safe to say that the discussion is not over. . . .

16. From the Punjab to the Indus Delta

As difficult as the state of the evidence is in Bactria-Sogdiana, it becomes even more desperate in the Indus Valley. After the royal catalogs (lists and depictions of peoples of the Empire) and the many references in the Persepolis tablets and Herodotus, the lands of the Indus are hardly ever mentioned in the extant documentation. Let us recall, however, that some texts from the time of Artaxerxes II imply that the Indian kings at that time continued to demonstrate their submission by sending gifts and tribute (chap. 15/8) and that these countries also sent contingents to Darius III (cf. Arrian III.8.4, 6; Quintus Curtius IV.9.2). When Alexander arrived in the Punjab, the ancient texts make hardly any allusion to the presence of authorities installed by the former central authority. We are tempted to infer from this that the Achaemenids had lost control of these lands. But is this certain? We do well to be cautious. On the one hand, as we have already emphasized, there no longer was an Achaemenid State; on the other, it is difficult to claim that authorities about whom we know nothing after Darius I had simply disappeared. Without going into detail (which often escapes us anyway), it is clear that the regions and peoples of the Indus Valley and between the Indus and Hydaspes Rivers enjoyed a wide variety of internal organization and external relationships. This is evident in the diversity of vocabulary: alongside kings and kinglets (*reguli*: Quintus Curtius X.1.1), we find *ethnē*, cities, etc., though we are not always able clearly to distinguish the articulation of their powers. Arrian often mentions hyparchs, who could head a more or less extensive *khōra* (IV.22.8; 24.1; 25.5; 25.7; 30.5). The problem, here as elsewhere, consists in understanding what part of Alexander’s decrees represent continuities with Achaemenid administration; that sorting this out is not easy is an understatement. All we can do is to offer a few incidental remarks.

Even before crossing the Khyber Pass, Alexander sent a herald to Omphis of the Taxila tribe, ordering him to come to him. Omphis “and the other hyparchs” did not fail

Map 7. Alexander in India and eastern Iran.

to do this, bringing what were considered very valuable gifts to Alexander (Arrian IV.22.6; ♦ V.3.5–6). This ceremony was repeated all along Alexander's march: the presentation of *dōra* at a country's border was the very mark of submission to a king (e.g., V.8.3; 20.5; 29.4; 15.6). This clearly reflects an Achaemenid heritage: traditionally, when the king relocated among his peoples (chap. 5/4), the local authorities and the satrap were required to greet the royal caravan at the border with gifts (cf. VI.29.2). These gifts also bring to mind Ctesias's materials on the valuable gifts regularly sent to the Great King by the Indian kings in the time of Artaxerxes II. Elephants are mentioned frequently as one of the gifts offered to Alexander. No doubt this is how Darius obtained the twelve elephants (*a Dareo ex India acciti*) that were included among the gifts offered to Alexander by the satrap of Susa (Quintus Curtius V.2.10); the context leads us to believe that they were ceremonial beasts, perhaps retirees from a paradise at Susa. Moreover, Achaemenid submission was not limited only to offerings of this sort. The ambassador that Alexander sent to Abisares was instructed to summon the Indian king to "pay tribute (*stipendium pendere*) and meet Alexander at the frontier of his territories" (Quintus Curtius VIII.13.2♦). Later, Alexander set the amount of tribute that Abisares was required to pay him (Arrian V.29.5). It probably was the same in the Achaemenid period: the gifts regularly sent to the court were added to the tribute itself, in accord with general practice (chap. 10/3).

The reality of Achaemenid power in the countries on the west bank of the Indus can hardly be doubted. In a passage on the countries of the Iranian Plateau (Ariana), Strabo gives a list of peoples that he says runs from north to south, west of the Indus: the Paropamisadae, the Arachosians, the Gedrosians, "with the other tribes that occupy the seaboard"; and he adds the following detail: "The Indus lies, latitudinally, alongside all these places; and of these places, in part, some that lie along the Indus are held by Indians, although they formerly belonged to the Persians" (XV.2.9♦). The Babylonian versions of the royal lists lead us to conclude that the Paropamisadae occupied the country known as Gandhara in the Persian text. These Paropamisadae inhabited the entire Kabul Valley as far as the Cophen River. In 327, Alexander appointed the Persian Proxes as satrap there, and he was soon succeeded by Tyriaspes (Arrian III.28.4; VI.15.3).

Then we reach the border of the country of those whom Arrian rather vaguely calls "the Indians on this side of the river Indus" (IV.22.6♦), among whom he counts "Taxilas and the other hyparchs" (22.6♦), including the hyparchs of the city of Peucetis (22.8) and of the Aspasians (24.1). At the end of his "mountain campaign," the king made Nicanor "satrap of the region this side of the river Indus" (28.6♦). At the town of Taxila, finally, he named Philip, son of Machatas, "satrap of the Indians of this region" (V.8.3♦)—that is, "the country west of the Indus towards Bactria" (VI.2.3♦). It seems clear that the kings and local dynasts—to whom Alexander "restored" their kingdoms—submitted to him (VI.27.2; Taxila and Eudamus). It is quite likely that in whole or in part this was also the situation during the Achaemenid period. The composition of the military contingents brought to Gaugamela by Bessus of Bactria and Barsaentes of Arachosia is quite typical; Bessus was at the head of "those Indians who bordered on the Bactrians," and Barsaentes led "the Indian hillmen, as they were called" (III.8.3–4♦)—both of whom belonged to what in the Parthian period would be called White India.

The relationship between these countries is reflected in other details. We know that Taxilas was in contact with Alexander while the latter was in Sogdiana, promising the

Macedonian "to join him in a campaign against his enemies among the Indians" (Diodorus XVII.86.4; ♦ cf. Quintus Curtius VIII.12.5–6). Sisicottus, who apparently came from the region of the Assaceniens, was one of the Indians who had provided soldiers to Bessus; in Bactria, he joined Alexander (IV.30.4; V.20.7). Relations between the satrap of Kandahār and the "Indian hillmen" are also well attested. We know in fact that when Alexander arrived in Drangiana, Barzaentes fled to India (Quintus Curtius VI.6.36). Later, during his stay in Taxila, Alexander handed over "Barzaentes, the instigator of the revolt of the Arachosii . . . , as well as thirty elephants which had been captured at the same time with him. . . . Samaxus also, the king of a small part of India" (VIII.13.3–4♦). This king seems to have been pardoned by Alexander, if he is in fact the same person as the Sambus whom the king made "satrap of the Indian hillmen" (Arrian VI.16.3♦). He would have controlled the major passages between the southern Indus Valley and Arachosia, including the Bolan Pass, which must have been the one used by Craterus (VI.15.5). Arrian includes these two groups of people among those he calls the "self-governing Indians" (V.22.1–2; ♦ 24.8). This phrase seems to refer to fully constituted states that had cities and leaders (*hēgemōnes*), nomarchs, and a ruling elite (V.22.1). We know that Alexander appointed a satrap over the Mallians and Oxydracae (Arrian VI.14.3). However, the Oxydracian delegates considered themselves self-governing, since they had not been governed by a satrap and had not paid tribute (VI.14.2). But, this does not mean that the Achaemenid state was completely absent (especially because self-government is defined in this context more with respect to the Indian kings than with respect to the Great King). Let us recall in particular that the Persians regularly hired mercenaries (in the Achaemenid sense; see chap. 17/3) from the (Ox)hydracae (Strabo XV.1.6) and that both peoples paid tribute to the Arachosians (Quintus Curtius X.7.14), which seems to imply that the Mallians and Oxydracae were subject to the authority of the satrap of Kandahār, a dependent relationship that may have been mediated by Samaxus/Sambus. According to this theory, Sambus would have been the Persians' agent in the lower Indus Valley, hiring mercenaries and collecting tribute and military payments such as the various elephants brought to Gaugamela by "the Indians on this side of the Indus" (Arrian III.8.6; ♦ FGrH 151 F12–13), as well as the celebrated dogs of war (e.g., Diodorus XVII.92)—which the Great Kings raised on a large scale in Babylonia (Herodotus I.192).

Overall, then, though the literary sources lead us to believe that Achaemenid tutelage was not gone from the Indus Valley under Darius III, it is far more difficult to determine the breadth and depth of its influence in the absence of epigraphic and archaeological evidence. Let us simply mention, at the end of this section, a recently published late Indian coin. It has a legend in the Kharoṣṭhi script and the image of a person who has several Persian/Iranian characteristics: "Perhaps the satrap of the region, depicted in Achaemenid style with some Greek influence. . . . A hundred fifty years after the downfall of the Achaemenid Empire, among the Indians living between the Indus and the Jhelam, the official image of the person exercising supreme authority in the province was still that of a Persian-style satrap" (P. Bernard). There is almost no doubt that there was an imperial Persian diaspora in Taxila; an echo of this diaspora may possibly be found in the "Greco-Persian"-style sealings that are found in this country, similar to those found elsewhere.

17. From Pattala to Susa and Babylon: The Persians and the Persian Gulf

The tales of Nearchus provide some information, albeit fleeting and uncertain, regarding the Persian coast of the Persian Gulf. After the (Persian?) governor of Patala fled, Alexander took possession of the town and citadel (Arrian VI.17.5; 18). From Patala he set out for Baluchistan, shortly before the departure of the squadron led by Nearchus. The purpose of Nearchus's Memoirs was "to record . . . the way in which Alexander's navy reached Persia from India" (Arrian, *Indica* 17.7♦). With this goal in mind, he gives information on the fleet that the king had built, which was manned by sailors of Phoenician, Cypriot, and Egyptian origin (*Indica* 18.1; cf. Arrian, *Anab.* VI.1.6). Nearchus several times very clearly states the mission entrusted to him: "To reconnoitre the coasts that lay on the line of the voyage and the roadsteads and islets, to explore thoroughly every bay which they found, to learn about all the cities on the sea-coast, and to discover which land was fruitful and which desert" (*Indica* 32.11;♦ *Anab.* VII.20.10). To do so, the army and navy proceeded in convoy. Alexander had to provide food and water supplies for the sailors on a coast that had none (cf. *Anab.* VI.18.1; 20.4–5; 21.3; 22.3; 23.1; 23.3–8). On the first part of the voyage, Alexander and Nearchus came upon barbarian—i.e., "savage"—peoples. Although the local tradition in Gedrosia was that the region had already been traversed by Cyrus and Semiramis (*Anab.* VI.24.2–3; Strabo XV.2.5), there does not seem to have been any trace of the central state before they reached Pura, the official residence (*basileia*) of Gedrosia (VI.24.1). When Alexander reached Gedrosia, he appointed satraps for Gedrosia and Carmania (VI.27.1–2). Nearchus in his account describes the parallel progression of civilization (marked by the appearance of regions under cultivation) and the conditions for navigation. In Gedrosia—where for the first time he notes "cultivated trees, and inhabitants not quite like animals" (*Indica* 27.2♦)—Nearchus was able to employ a pilot, Hydraces, who promised to guide the navy as far as Carmania (§27.1). It was only when they arrived in Carmania that Nearchus's sailors, like Alexander's soldiers, could be certain they had returned to a civilized nation, not far from Cape Maceta (§32.4–7). At Harmozia (Hormuz), which had "an abundance of products of all kinds" (§33.2), Nearchus contacted 'the hyparch of this district' (*hyparkhos tēs khōrēs tautēs*; §§33.8;♦ 36.1); this is the first reference to an official who must have reported to the satrap of Carmania. Shortly afterward, we become aware of another governor (*hyparkhos*), Mazenes, who undoubtedly was a Persian who was in charge of the island of Oaracta; here the locals showed Nearchus the tomb of Erythras, whom local tradition took as the eponym of the Sea (§37.2–3). Mazenes served as pilot for the navy at this point (§37.2). Leaving Carmania, Nearchus noted that "the people live like the Persians, as they are their neighbours, and have the same military equipment" (§38.1♦). Arrian stresses that the Persian shore proper, even in the middle of winter, was especially "sunny and well supplied with all necessities" (*Anab.* VI.28.7♦). Then, after a difficult sail along a coast littered with hazards, the navy "anchored at Taoce on the river Granis. Inland from here there was a Persian royal residence (*Perseōn basileion*), about 200 stades from the mouth of the river" (*Indica* §39.3♦). Nearchus and Alexander joined up not far from Susa, at a place called Pontoon Bridge (*Indica* 42.7–10).

But what can we conclude about Persian dominion in the Gulf, starting with the Iranian coast, from this meager information? It appears that, during the first part of the voy-

age, until the first contact between Nearchus and Alexander in Carmania, the coast was inhospitable: there were neither anchorages nor ports, at least as far as Cape Maceta (Ras Musandam). Notes on trade are also quite scarce. Those who lived near Cape Maceta assured Nearchus that "it was from there that cinnamon and other such commodities were imported into Assyria" (§32.7♦), but the Persian port of Apostana is the first place where Nearchus notes the presence of many transport/trading ships (§38.5: *ploia*). Furthermore, Nearchus's mission seems to imply that Alexander did not yet have any information about this region. These observations tempt us to conclude that the Persians controlled only part of the Iranian shore of the Gulf—that is, the Carmanian and Persian coasts. But silence must be interpreted cautiously. It is not very likely that Alexander would have thrown himself into this operation without any prior knowledge. We may note, for example, that a Persian—Bagoas, son of Pharmuches—was among the commanders of triremes (*Indica* 18.8) and that only from Gedrosia onward did the navy employ a pilot—whose name (Hydraces) sounds quite Iranian (§27.1). Furthermore, Nearchus was clearly picking and choosing in his descriptions of lands and peoples in accordance with the interests of his readers (he compares areas with Greek regions) and in terms of cultural stereotypes about the varying degrees of barbarism. Furthermore, Nearchus's own *Journal* was surely more detailed than the simple summary provided by Arrian and other authors. Pliny, for example, says that the river Anamis (*Indica* 33.2) was navigable and roiled with gold (VI.107). Strabo, also quoting Nearchus, states that the traditions about the founder Erythras on the island of Ogyris (Oaracta, where the hyparch Mazenes was in charge; *Indica* 37.2–3) were provided to Alexander's admiral by "Mithropastes, the son of Aristes, which latter was satrap of Phrygia; and that the former was banished by Darius [III], took up residence in the island." (XVI.3.5♦). Together with the presence of the hyparch Mazenes, this reference serves to remind us that part of the Persian Gulf was still in Persian hands: the deportation of Mithropastes was just one in a long series of such actions that go back to the deportation of the Milesians to the head of the Gulf at Ampe (Herodotus VI.19–20)—which is surely to be identified with the village of Aginis at the mouth of the Tigris (*Indica* 42.4). We also know about the exile of Megabyzus to Kyrtā, which Ctesias locates in the Persian Gulf (*Persica* §40). These deportations must have been numerous, because Herodotus names "the inhabitants of the islands in the Persian gulf where the king sends prisoners and others displaced from their homes in war (*anapastoi*)" (III.93♦) among the tribute subdistricts of the Fourteenth Nome. The same phrase reappears in the catalog of Xerxes' army (VII.80). Herodotus's phrase implies actual imperial colonization activity, which never stopped throughout the duration of the Achaemenid Empire.

These observations in themselves certainly do not allow us to claim that Persian dominion over the eastern shore of the Gulf was uniformly effective. Instead, we should rank in order the degrees and methods of territorial dominion. It seems clear that influence over Carmania was especially strong. Arrian notes that "the people live like the Persians, as they are their neighbours, and have the same military equipment" (*Indica* 38.1♦). This note recalls what Strabo (XV.2.14♦) writes about the same people: he quotes Nearchus as saying that "the language and most of the customs of the Carmanians are like those of the Medes and Persians" and, though he notes the existence of very different social mores, adds (following Onesicritus?) that their farming practices (*geōrgia*) are identical with the Persians'—including viticulture (Carmanian wine was

particularly renowned). This "Persianization" of the Carmanians is explained all the more readily because Herodotus (I.125♦), referring to them as the Germanii, includes them with the Persian tribes "attached to the soil." Finally, Strabo stresses the richness of the Carmanian mines (silver, copper, vermilion, salt, arsenic), which no doubt had been worked since ages past—certainly throughout the Achaemenid period (cf. Pliny IV.36, 98). The Persian coast proper was definitely under firm control. The coast had easy communication with the interior; for example, Alexander took the road to Pasargadae, which was close to the border between Persia and Carmania (*Anab.* VI.29.1; cf. Quintus Curtius X.1.22–24 and Strabo XV.3.6). Strabo (following Nearchus, *Indica* 39.9) also comments on one of the noteworthy geographical features of the Persian coast—the size of the Oroatis River, "the largest of the rivers in that part of the world" (XV.3.1♦). It is entirely typical that Cyrus established a residence at Taoce, right next to Bushire, where the Seleucids later planted a colony (Antioch of Persis). It is not impossible that the canal that archaeologists have found there goes back to the Achaemenid period. In short, the Carmanian and Persian coasts were certainly linked intimately to the nearby Persian countryside. These coastal areas were certainly the regions from which the soldiers came who were mustered from the inhabitants of the Persian Gulf and who were brought to Gaugamela by high Persian officials (*Anab.* III.8.5; 11.5). Persian dominion in Gedrosia was certainly less evident, but it is still important to remember once more that the pilot (Hydraces) hired by Nearchus had an Iranian name.

Cyrus's founding of Taoce proves that Achaemenid interest in the Persian Gulf and its coasts was long-standing, and the Persepolis tablets frequently refer to missions to and from these regions in the time of Darius I. Though we can observe continuity throughout Achaemenid history (which itself probably owed much to its predecessors) on this point, it is more difficult to draw up an account of the places that drew Achaemenid interest on the basis of such meager information. The only literary testimony, which dates to the period close to Darius III, is not terribly eloquent: in his quest for *tryphē* (here: opulence to the point of absurdity), Alexander's treasurer Harpalus "fetched all the long way from the Red Sea [i.e., Persian Gulf] a great quantity of fish" (Diodorus XVII.108.4♦). It is likely that maritime trade with India was quite extensive under the Achaemenids, but it must be noted that direct evidence is very weak, aside from a few nuggets gleaned from the Susa Foundation Charter. The land routes (like the route taken by Craterus) must also have represented a significant connection. It is also true that transport may have been provided by Indian sailors as far as Cape Maceta (cf. *Indica* 32.7–8). At the head of the Persian Gulf, near the mouth of the Euphrates, Nearchus mentions "a village of Babylonia, called Diridotis; here the merchants (*emporoi*) gather together frankincense from the land of Gerrha and all the other sweet-smelling spices Arabia produces" (41.6–7;♦ Strabo XV.3.5). Despite these notices, it is not impossible that some of these spices in fact were imported from India.

What about the Arabian shore? Do descriptions of the expeditions that Alexander sent out from Babylon provide any clarification of the question?

Alexander was planning to colonize the coast along the Persian Gulf and the islands there. . . . The prosperity of the country was also an incitement, since he heard that cassia grew in their marshes, that the trees produced myrrh and frankincense, that cinnamon was cut from the bushes, and that spikenard grew self-sown in their meadows. . . . He was informed . . . that there were many islands off-shore and harbours everywhere in the country, enough to

give anchorages for his fleet, and to permit cities to be built on them, which were likely to prosper. . . . He thought that it would become just as prosperous a country as Phoenicia. (Arrian VII.19.5; 20.2♦)

This information was provided by the leaders of missions he had previously sent: Archias, who had gotten no farther than Tylus (Bahrein); Androsthenes (who “sailed around part of the Arabian Peninsula”); and especially Hieron of Soloi, whose “sailing orders were to coast round the whole Arabian Peninsula . . . to reconnoitre the coast lying on the Ocean, the inhabitants of the coast, its anchorages, water supplies.” He did not pass the promontory toward which Nearchus had refused to set sail (VII.19.7–10; ♦ *Indica* 43.8) — that is, Ras Musandam. Similarly, ships had on occasion cast off from the head of the Red Sea (Gulf of Aqaba), but they were forced to turn back, and we cannot say how far they sailed (Arrian, *Indica* 43.7). The voyages along the Arabian coast of the Persian Gulf a priori look like explorations of unknown territory. But this perspective will certainly need to be modified. As Arrian (VII.19.6) and Strabo (XVI.1.12) noted, Alexander’s objective was basically military—to subject the Arabs who had not voluntarily submitted. Thus, the navigators’ mission was to catalog the ports and water supply points for the navy that was to make the run from Babylon. There certainly never was an actual plan to circle Arabia and reach Egypt.

Unfortunately, the archaeological evidence is not very eloquent. Achaemenid strata have indeed been found at Failaka (Kuwait), in Bahrein, and in Oman, but the results do not really allow us to identify a significant Achaemenid influence. It is also true that, here as elsewhere, excavating for Achaemenid archaeological evidence proper is a rather pointless exercise—Achaemenid dominion over a region does not necessarily imply that Persian artifacts were borrowed. We know that when the Macedonians approached Failaka they found a sanctuary there (“a shrine of Artemis”; Arrian VII.20.3–4♦). The discovery of Babylonian and Achaemenid pottery proves that the sanctuary had existed there for quite some time, at least since the Neo-Babylonian period. An Aramaic inscription from the site of Tell Khazneh seems to offer a fifth–fourth-century benchmark. So it is tempting to conclude that, like the Neo-Babylonian kings (Nabonidus had a governor at Dilmun and Nebuchadnezzar II a residence and temple at Failaka), the Great Kings ruled Dilmun, or, more precisely, that they maintained frequent, active relations with this region. Babylonian–Achaemenid continuity is also evident at the head of the Persian Gulf. The town of Ampe, to which Darius deported the Milesians (Herodotus VI.20), was probably none other than the village of Aginis, which Arrian (*Indica* 42.4) and Strabo (XV.3.5) locate 500 stadia from Susa. Ampe itself must have been located not far from Durine; its name and description (*urbs regia*) indicate that it went back to the Assyrian period (Dur-Yakin). It is likely that this site not only served as the Great King’s naval base but also functioned as a trading post with the Arabs of the east coast of the peninsula. At the end of the Achaemenid period, the Gerrhaeans came by sea and then by river to trade directly in Babylonia (Aristobulus, quoted by Strabo XVI.3.3). Unfortunately, we do not know much about these Arabs during the Achaemenid period, since Strabo’s other comments refer to a much later epoch. When Antiochus III came into contact with the Gerrhaeans, we know that a treaty was entered into by the two parties: the king recognized their “autonomy” and the Gerrhaeans gave him a “gift” of 500 talents of silver, 1,000 talents of incense, and 200 talents of myrrh (Polybius XII.9). If these relations go back to the Achaemenid period—of which we cannot be sure—they could

easily be compared with the connections between the Great Kings and the "king of the Arabs" in Palestine (chap. 16/8 above).

18. *An Appraisal and Some Questions*

At the conclusion of this Achaemenid "grand tour," several highly contrasting images emerge that can and do feed a variety of historical interpretations, which we have been presenting concisely ever since the opening pages of this book. The images of Persepolis are not the only ones that have established an impression of permanence. Once they have been cleansed of their polemical distortions, quite a few of the Classical and Hellenistic texts also lead us to trace many continuities from Darius I to Darius III: monarchic ideology, military and tribute administration, and satrapal organization. The roll call of Darius III's military contingents at Issus and later at Gaugamela very clearly implies that in 334 the Great King still held sway from the Indus to the Aegean. But what was the depth of territorial dominion? Was it, as is often claimed, limited to the appointment of satrapal administrators and the maintenance of a network of outposts and garrisons that enabled the Achaemenids to control the roads and a few territories? This question in turn provokes consideration of the methods inherent in our analytical tools. It may seem paradoxical to raise the problem after the regional inventory and not before. This choice was born of simple necessity: the debate cannot really be presented as a whole without evidence that has already been analyzed in its temporal and spatial contexts. Thus, the following reflections have no other purpose than to take stock of the uncertainties and various possibilities.

The discussion of Bactria (chap. 16/15) has shown that the picture of a lax imperial organization has given pride of place to the archaeological evidence. This line of argument appears frequently: the small amount of archaeological evidence regarding the Persians is thought to illustrate just how thin the territorial coverage achieved by the central power was. More than twenty years ago, this interpretation was elucidated by P. R. S. Moorey as follows:

Material traces of the two hundred years of Persian rule in the Near East are still generally elusive. In many regions of their far flung empire this period is among the least known archaeologically. This might be explained most easily by the subsequent profound and everywhere evident impact of Hellenic art and culture in areas previously ruled by the Persians; but the available evidence only partially sustains such an interpretation. Persian influence was geographically restricted and socially superficial in all but a very few areas over which they at one time or another had authority. In government and administration they adopted and modified rather than radically changed what they had gained by conquest or annexation. Existing administrative hierarchies were crowned and reinforced with imperial civil servants and military officers, not transformed to a standard pattern. In religious matters the Persian administration was usually tolerant and accommodating, sympathetic to traditional custom and practice, nowhere seeking to force their own cults by edict. . . . The Persian contribution was generally confined to the reconstruction of existing administrative buildings or to the creation of parks and palaces in the Iranian manner, particularly in satrapal capitals. . . . In some regions, notably Egypt, Persian cultural influence was very slight, confined to decorative features which need sharp investigation to detect them. . . . (1980: 128)

This kind of argument seems to reflect the facts that we find on the ground exactly. One need merely to walk the site of Sardis to ask, "But where were the Persians?" Nonethe-

less, the truth is more complex than it appears, because it is precisely at and around Sardis that the Persian/Achaemenid presence is particularly well attested by literary texts and late inscriptions. Thus, there is a contradiction between the archaeological picture and the text, and it is up to the historian to take into account and resolve this issue, without simply having recourse to a simplistic either-or perspective. It is also necessary to pay attention to vocabulary. Because, generally speaking, the Persians anchored themselves in local tradition, it is sometimes difficult to distinguish evidence of centrifugal tendencies in an iconographic representation from what might demonstrate the presence of the central state apparatus (cf. the case of the Lycian and Phoenician monuments). Furthermore, for decades, excavations at major sites (such as Babylon) have never really had the goal of uncovering Achaemenid remains—or the remains discovered have often been underestimated because of dubious assumptions. Imagine, for instance, that it took until 1993 for the initial results of scientific examination of the pottery collected in 1955 at two Armenian sites (Altintepe; Cemin Tepe) to be published. The reexamination of the evidence now proves that Achaemenid ware (long called “Urartian”) existed at the site—and recent investigation has uncovered Achaemenid buildings, sometimes constructed on top of older Urartian structures. Fragments of Elamite tablets have also been found at one of the sites (chap. 16/14 above). This is not an isolated example. Consider, for example, that the discovery—first pointed out in 1967—of stone balls from the siege of the town of Paphos by the Persians in 497 has been practically “forgotten”—even though these artifacts lead us to wonder whether the catapult might have been invented by the Persians (and not by Dionysius of Syracuse at the beginning of the fourth century). It required the recent discovery of the same sort of ball at Phocaea—a relic from the Persian siege of 546—for this remarkable material to become fully integrated into the technical debate. Other “forgotten” publications of Achaemenid objects found at sites in ancient Assyria, etc., might be mentioned. All of the new discoveries point in the same direction—that is, toward the theory that Achaemenid imperial occupation was much more dense than has been imagined in the past on the basis of spotty, varied, and disparate evidence.

Because of restoration of the Hellenistic and especially Roman remains of older sites (especially in Asia Minor: cf. Sardis), the Achaemenid stratum has often disappeared, leading to great hope (already partly realized) in the results from “virgin” sites, such as Dascylium. Another example is highly instructive: the condition and context of the Persepolis reliefs from Meydançikkale in Cilicia (the only materials of this type recovered within imperial territory). Even though the initial reports are not terribly detailed, it appears that the blocks were reused in the Hellenistic period, probably in Building A (which was built on the foundations of previous construction). It is thus only by the merest chance that the reliefs have been preserved to this day, perhaps because some peasants tried unsuccessfully to move them from the acropolis; the block engraved with an Aramaic inscription (from which we learn the ancient name of the site: Kiršu) has probably been recarved. This is a perfect illustration of the random nature of the most remarkable discoveries of recent years. Consider another example, an Elamite-Persepolitan-type tablet from the Achaemenid fortifications at Old Kandahār, which *all by itself* manages to destroy the argument *a silentio* that is sometimes carried *ad absurdum*. Furthermore, Elamite tablets of the Persepolis type have also been found quite recently at the Armenian site of Armavir-blur!

Statistical evaluation—which in principle is not entirely reliable—of imperial presence thus runs up against the proof of new discoveries and publications. The examples we have just briefly run through (excavations at Dascylium; Armenian sites; reliefs and inscriptions from Meydançikkale; Elamite tablets from Kandahār and Armavir-blur) in fact illustrate a basic reality of the life of scholarship: over the last twenty years, the number of objects, monuments, and written materials—in short, the quantity of evidence—has continued to grow in the lands that belonged to the Achaemenid Empire. Even if we consider only the new evidence (including new publications about previously known evidence), the list (pp. 1029–1031) is quite impressive. The publications concern all sorts of evidence: inscriptions, tablets, papyri, excavations, surveys, iconography, and coins. They concern every region of the Empire, although Fārs, Elam, Babylonia, Egypt, and western Asia Minor are especially favored, while Central Asia remains the poor cousin (though we await the final publication of the French explorations in eastern Bactria, and the new excavations in Samarkand are promising). Syria is emerging from semioblivion; the evidence for Palestine, especially Judea and Samaria, has increased considerably.

However, the discoveries just mentioned must not be evaluated only in quantitative terms. What is most striking is that many of the new materials have exceptional historical significance: the Elamite tablets from Kandahār and Armavir-blur, the Darius statue from Susa, the Xanthus trilingual, and the Aramaic memorandum on Egyptian customs duties—to single out just five examples, to which may be added the publications of new Babylonian tablets that sometimes shatter accepted perspectives. Even if they do not provide all of the answers (the most interesting items, naturally, raise new questions), some of them do change our view of Achaemenid territorial coverage. For example, who would have thought that the remote site of Meydançikkale in the Cilician mountains would yield reliefs of the same type that we find in Persepolis? Since this only second-rate site had them, can we not assume that similar reliefs also existed at the great regional centers (Sardis, Dascylium, Damascus, Bactra, etc.)? Even more decisive are the discoveries of Persepolis-style administrative tablets in Arachosia and Armenia (for reasons already presented; see chaps. 11/6 and 16/15). Furthermore, considering the state of affairs since the beginning of the 1970s (over about 25 years), it is easy to see that the tempo of discovery and publication increased significantly during the 1980s, and the harvest of the 1990s also looks excellent. Bearing this in mind and knowing that the research programs and the vision of archaeologists and museum conservators are in part determined (and sometimes overdetermined) by general research trends, we may reasonably hope that there will be a meaningful cumulative effect from the progress of Achaemenid studies in both the short and middle term. In all of this, one observation that amplifies the reservations already expressed above stands out: precisely because of rapid change in the body of evidence, the (pseudo)-statistical hypothesis of a scanty Persian presence and an inconsequential imperial occupation, based on bodies of evidence that are obsolete or reduced to a regional perspective, demands to be questioned more and more pointedly and fundamentally by historians of the Achaemenid Empire.

This resolutely optimistic appraisal should not conceal the methodological and interpretive difficulties, however. What are the “signs” of imperial presence in the provinces and countries? What paths should a qualitative evaluation take? One possible path is to investigate the density of Persian and Iranian personal names and attestations of sanctu-

aries dedicated to Persian gods. Both of these types of data obviously illustrate the settlement of colonists (of different types), whose presence in turn implies control of territories and populations. For historical reasons, it would be preferable if this investigation were carried out in Greek-speaking lands—that is, basically, Asia Minor; but the Babylonian tablets also shed interesting light on this question. (To carry this a little further, it would be useful to inaugurate exhaustive research into the distribution of Iranian personal names and vocabulary, including, of course, their presence in Hellenistic-period tablets.) Another element must be taken into account: in addition to the spread of Achaemenid iconographic motifs (which could be attributed to Persians settling in the provinces), we also need to consider the borrowing of these motifs by local elites. Of course, it is not easy to link cultural borrowing to political control. The case of Lycia, which has been mentioned several times, shows both the fascination and the limitation of this argument—particularly because in some cases (e.g., the tomb of Petosiris), the local taste for Achaemenid-type items lasted beyond the political fall of the Empire of Darius III. In other cases, there is no doubt about the political nature of the evidence. For example, when the kings of Sidon adopted royal motifs for their coinage, we cannot escape the conclusion that it was their way of demonstrating their particular integration into the Empire. And can we really deny that the spread of such images (into Samaria, for example) during the fourth century is an Achaemenid “marker”? Of course, all by itself this marker is insufficient, but when we can refer to the spread of artistic motifs, the construction of administrative residences, the exploitation of land, etc.—all in the same region—it is only reasonable to situate these features in their imperial context. Indeed, this statement may easily be applied to several regions of the Empire of Darius III.

Analysis of texts, as we have said again and again, poses just as many methodological problems. By way of example, let us return to the claim that some areas were poorly controlled, such as the territories of the Zagros peoples. There is no doubt that, beyond the apparently universal use of the satrapal unit and the natural integration of regions into the Empire that resulted, Darius III's administration—like Darius I's—continued to recognize the existence of peoples (*ethnē*). This was true during the military review at Doriscus in 480 (Herodotus VII.60) and later at Cunaxa (Xenophon, *Anab.* I.8.9); the various contingents at Gaugamela were arranged *kata ethnē* (Diodorus XVII.58.1); and Darius was concerned about communication among groups speaking such diverse languages (53.4). This heterogeneity also explains the formula “kings, cities, dynasts, and peoples,” which is represented frequently in the diplomatic correspondence of the Seleucid kings but also was a reality of the Achaemenid period (cf. Nepos, *Ages.* 7.3). The Achaemenid conquest did not result in the downfall of all these kings and dynasts, whoever they were—Cadusians, Saka, Indians, or even the rulers of the western Delta.

But even this reflection cannot be reduced to these remarks. Darius III's army was no more a “countless and undisciplined horde” than the armies of Xerxes (chap. 5/5) or Artaxerxes II (Plutarch, *Art.* 7.5; Xenophon, *Anab.* I.8.11)—no matter what Alexander's earlier historians say. Once the army was assembled and counted, the ethnic contingents partly gave up their individuality and were reorganized into regiments (cf. Quintus Curtius IV.12.7). It is enough to compare two passages in Arrian to explain this: the enumeration of Darius's army (III.8.3–6) and his order of battle (III.11.3–7). It is also clear that some contingents organized *kata ethnē* were considered less than useful (cf. II.8.8). The Great King counted first of all on the elite contingents—the Persians, Saka, and

Bactrians—and within the Persians, certain particularly reliable regiments, such as the Kinsmen of the king and the *mēlophoroi* (III.16.1; cf. Diodorus XVII.20.2). In addition to the Persians, some ethnic contingents enjoyed privileged positions. The drafting of other contingents, who were of little military use (e.g., Quintus Curtius IV.12.9), reflected political considerations—the Great Kings wanted to give a picture of the immensity of the Empire (see chap. 5/5)—rather than strategic necessity. Alexander provided a vivid illustration of this hierarchy of peoples at the banquet at Opis: first, the Macedonians, “next to them Persians, and then any persons from the other peoples who took precedence for rank or any other high quality” (Arrian VII.11.8⇨). It seems clear, on the one hand, that Alexander was following an Achaemenid protocol (like Peucestes, later on; Diodorus XIX.22.2–3) and that, on the other, the order was determined on the basis of the rank and loyalty of each the Empire’s peoples (compare Tacitus, *Ann.* XIII.54.2). Thus, the composition and operation of the royal army illustrate the two components of the Empire: unity and diversity—the latter not necessarily in contradiction to the former.

The example of the Zagros peoples and some others (chap. 16/11 above) must therefore be considered with some caution. Because relations between the Great King and the Uxians and Cosseans were unusual, they clearly demonstrate that the configurations of imperial dominion were very supple and flexible. Far from constituting an obstacle to the Great King’s dominion, though, the diversity served to enhance the unity of the Empire—which in fact proves the folly of the attacks by Alexander and Antigonos. Because of the Achaemenids’ keen understanding of the differing situations, it was out of the question to attempt to impose centralization of the sort found in modern states, which are based on the “national” ideal—a notion that was utterly foreign to a multiethnic, multicultural Empire. Furthermore, even though the “ethnic unit” retained nearly all of its significance (cf. Arrian I.24.5), changes during the fourth century did not lead in the direction of disintegration of the central power; on the contrary, some countries, such as Caria, Cilicia, and Lycia, were “satrapized.” In fact, at the dawn of the Macedonian expedition, Caria was governed by a Persian satrap (Orontobates) for the first time. Berossus’s famous passage on the introduction of ritual statues of Anāhita into the great capitals of Artaxerxes II’s Empire (chap. 15/8) suggests that there were large administrative regions. Additionally, the existence of military-tribute districts (chiliarchies) in the Sardis Plain shows the progress of territorialization at the end of the Achaemenid period (*Sardis* VII.1.1). This is also suggested by Diodorus’s (XIX.44.4; 95.2) use of the word *eparchy* (within Media and of Idumea), which may reflect the administrative entity known in Aramaic as the province (*medinah*).

What about the kings/dynasts whom the Achaemenids left in place? We ought to inquire into the dependency relations that linked them to the central authority. To focus on their revolts is not enough to settle the interpretive problem. The wars that the Great Kings waged against them simply demonstrate that the alliance could be rocky at times; they do not prove that these petty kingdoms remained either fully independent or hostile throughout the Achaemenid period. These peoples were more like the client-kingdoms of the Assyrian period or the “friendly” kingdoms that propped up Roman imperialism in one of the phases of its history. At any rate, ‘friendship and alliance’ (*philia kai symmakhia*) was the very basis on which Artaxerxes reestablished his authority after the Cadusian campaign (Plutarch, *Art.* 24.5–9⇨). A relationship based on *philia kai symmakhia* is also attested for Ephesus (Arrian I.19.1: *philoī kai symmakhoi*) and Sidon (Diodorus

XVII.47.1: *philia*), both in the time of Darius III. Darius III also entered into relations of *symmakhia* with the Cadusians and Saka, and on the strength of these he demanded that military contingents be furnished (Arrian III.19.3). We could ask whether a treaty of *philia kai symmakhia* is the Greek form that corresponds more or less to the loyalty oaths (*ādūlē*) by which the Neo-Assyrian and Neo-Babylonian kings imposed dominion and hegemony—flexibly and in considerable variety but nonetheless with significant weight. This theory in fact fits some of our data—the annual meeting (as we have reconstructed it in chap. 16/11 above) between the Great King (or his representative) and the leaders of the Uxian and Cossean communities. In any case, there is no doubt that, within the framework of an imperial policy that Herodotus transmitted without fully understanding it (III.15), the Great Kings would intervene in the dynastic successions of these kinglets; they did not hesitate to legitimate successors (cf. Plutarch, *Art.* 14.1) or even, in cases of rebellion, to install a new dynast who was completely devoted to Achaemenid interests (e.g., DB V §74; Herodotus V.104). These are all techniques that we have already seen being systematically applied in the Neo-Assyrian period (e.g., *ANET*³: 291–92). As a result, the kinglet-friend was one of the cogs in the imperial machinery—sometimes integrated even more closely by means of matrimonial alliances with representatives of the dominant socioethnic class (cf. Nepos, *Dat.* 1.1.3; Xenophon, *Hell.* IV.1.1–15).

In order to understand the bivalent nature of these local powers better—and by way of comparison—we may point out that in a ninth-century bilingual inscription (Tell Fekheriye) inscribed on the statue of a Syrian dynast, he presents himself (in Aramaic) as a ‘king’ (*mlk*) but is called ‘governor’ (*šaknu*) in the Assyrian text. *Mutatis mutandis*, this example is reminiscent of the principle we have just analyzed and, more specifically, of a familiar text—the Xanthus trilingual. There are two points of comparison. The first has to do with the relationship between the satrap and Xanthus and the picture that the Xanthians had of themselves: while they overtly presented themselves as a civic community (*polis*), the satrap’s version of the inscription makes the town into a mere fortress (*byrt*) in which the satrap Pixodarus had installed a governor (*epimeletēs*); this governor represented Pixodarus alongside the two archons/commissioners, who had also been appointed by the satrap and had responsibilities in the Lycian district. The second point of comparison is concerned with the dual status of the satrap: the satraps of Caria had been appointed from the same dynastic family from the beginning of the fourth century until Darius III installed a Persian, Orontobates, who had previously married one of Pixodarus’s daughters (Arrian I.23.8; Strabo XIV.2.17). We can then understand why later authors asked questions about and argued over the political status of a man like Mausolus: “According to M. Tullius [Cicero], Mausolus was king of the Carian country (*rex terrae Cariae*), or else, as authors of Greek histories say, the prefect of the province [of Caria], what the Greeks call a satrap (*provinciae praefectus satrapēn Graeci vocant*)” (Gellius Aulus, *N.A.* 10.18.2). If we compare this text with the Tell Fekheriye inscription, *rex* corresponds precisely to *mlk*, and *praefectus/satrapes* to *šaknu*, with respect both to vocabulary and to history. In reality, Mausolus was both (cf. Strabo XIV.2.17), just as the representatives of the Sanballat family were Samaritan dynasts and Achaemenid governors—except that, within the imperial framework, both were *first and foremost* the authorized representatives of the central authority (hence the titles they bear in the official documents: “satrap”; “governor”). In other regions, the maintenance of kinglets and “autonomous” dynasts need not necessarily lead to the conclusion that the central

power's territorial control was limited; nor is it true that Artaxerxes II's treaty with the Causian kings illustrates "Achaemenid decline" — the contraction of the imperial territories like crepe during the fourth century (contrary to an interpretation that resurfaces from time to time in historiography, against the increasing weight of the evidence). Pericles of Limyra's assumption of the title "king of the Lycians" can no longer be interpreted as a sign of his rebellion against the central power. As we have already noted (chap. 15/7), his proclamation was aimed at his Lycian competitor in Xanthus — not at Artaxerxes II. We can also interpret in this way the traditions about the kings of Lydia (Arrian I.17.6), Caria (Diodorus XV.90.3; XVII.24.2), and Phrygia (Arrian II.3) that were transmitted down to Darius III.

In sum, the central authority may have been perfectly happy to permit these kinglets and dynasts to continue to function and may even have taken advantage of them in establishing its territorial control. This is perfectly illustrated by the case of the dynasty-tyrant of Pontic Heraclea who succeeded his brother in 338–337: "Dionysius increased his territorial dominion (*arkhē*) because of the defeat inflicted on the Persians by Alexander in the battle of the Granicus, a defeat that allowed anyone who wished to expand by profiting from the diminution of the Persian might that until then had impeded them" (Memnon, *FGrH* 434 F4). This text, presenting an interpretation offered by a local historian, supports a perspective totally antithetical to the stereotype of "Achaemenid decadence," because Memnon of Heraclea explicitly attributes the process by which the territories gained their autonomy to the shock of the Macedonian conquest, which seriously destabilized Achaemenid dominion — a dominion that the author had considered as a durable guarantee of territorial continuity and imperial solidity.

Chapter 17

The Great King, His Armies, and His Treasures

1. The Accession of Darius III

From Artaxerxes III to Darius III: Diodorus and Bagoas

One of the reasons often advanced for the weakening of the central authority is the multiplication of dynastic crises and assassinations, and the accession of Darius III would be a striking example. Is this claim reasonable? In order to come to a decision, we need to go back several years. The Classical authors are rather subdued about most of Artaxerxes III's reign, but they are less so about the brutal circumstances of his death. The character Bagoas, in fact, reemerges into the light of day—this character who, as we have seen, already has had a preliminary introduction from Diodorus in book XVI:

He rose to such power because of his partnership with Mentor that he was master (*kyrios*) of the kingdom (*basileia*), and Artaxerxes did nothing without his advice (*gnōmē*). And after Artaxerxes' death he designated (*apedeiknyto*) in every case the successor (*diadokhoi*) to the throne and enjoyed all the functions of kingship save the title. (XVI.50.8♦)

Diodorus keeps his promise (§50.8) by returning to Bagoas in book XVII in an account dedicated to the recent history of the Achaemenid dynasty. He stresses that Artaxerxes III's implacable character had rendered him loathsome to the Persians and then re-introduces the chiliarch Bagoas as "a eunuch in physical fact but a militant rogue in disposition" (§5.3♦); he poisoned the king with a physician's assistance and had the assassinated king's sons murdered, except for Arses, who very likely took the name Artaxerxes [IV] (§5.4; cf. XV.93.1). According to Diodorus, the cruel Bagoas assumed that the sovereign's youth would make him easily manipulated, but he most certainly was not! But at the very moment when the king was planning to eliminate Bagoas, he resorted once more to murder:

[He] killed Arses and his children also while he was still in the third year of his reign. . . .

[He] selected a certain Dareius, a member of the court circle, and secured the throne for him. . . . Pursuing his habitual savagery he attempted to remove Dareius by poison. The plan leaked out, however, and the king, calling upon Bagoas, as it were, to drink to him a toast and handing him his own cup compelled him to take his own medicine. (XVII.5.4–6♦)

This account is found, often in less precise wording but still in complete harmony, in practically every ancient report. The murder of Arses after two years of rule is also mentioned (without citing his name) in a well-known Babylonian text, the *Dynastic Prophecy*, which states that the murder was committed by a *ša rēši* (obviously Bagoas), after which a prince seized power and ruled for five years (Darius III) (BHLT 35, III.4–8). Because the reality of these conspiracies and royal assassinations cannot be doubted, what conclusions on the political plane is the historian able to draw?

Darius III's Illegitimacy: The Macedonian Version

An initial interpretation is found in one of the accusations against Darius III that is included in the letter that Alexander sent to the Great King after the initial Persian diplomatic overtures following the battle of Issus. At this point in the discussion, it is not particularly important to highlight the extremely dubious nature of the document. It is clear that we have a magnificent piece of Macedonian propaganda, in which Alexander and his "communications directors" attempted to legitimate the Macedonian king's imperial pretensions. As a matter of fact, it is precisely the fabricated nature of the letter that lends the present text so much interest. In Arrian's version, we find the following charge against Darius:

You assassinated Arses with the help of Bagoas (*meta Bagōou*), and seized the throne unjustly (*ou dikaiōs*), and in actual contravention of Persian law (*para tōn Persōn nomon*), doing wrong to Persians (*adikountos Persas*). (II.14.5♦)

As portrayed in Macedonian propaganda, Darius III was delegitimated on the basis of three criteria: (1) he had seized power "in contravention of Persian law," (2) against the will of the Persians, (3) and the Persians' opposition was proved by their later behavior, when they defected to Alexander and fought by his side "of their own free will"; thus, the defeats Darius suffered disqualified him, proving that he had lost the help of the gods (§14.7–8). The Macedonian discourse thus took on a rare Achaemenid coherence: Darius III had no right to the throne because he was unable to claim the traditional justifications for royal authority as they are expressed at Behistun and Naqš-e Rostam: (1) he could not prove blood ties to his predecessors; (2) he had not exhibited the virtues of a good soldier; and (3) his Faithful and the gods had abandoned him. In short, Darius III was delegitimated in the same way that Gaumata had been by Darius I.

The same accusation is found in a speech that Quintus Curtius places in Alexander's mouth in 330: "Not even Darius received the rule of the Persians by right of succession (*hereditarium . . . imperium*), but he was admitted to the throne of Cyrus by the favour of Bagoas, a eunuch . . . vacant [is thus] the kingdom (*vacuum regnum*)" (VI.3.12♦). Even though this speech is placed after the death of Darius, the rationale of the text makes it clear that the last words also apply to the previous period (cf. Justin XI.5.7: *matura imperia*). Moreover, this is also the meaning of the symbolic actions performed by Alexander when he landed (Diodorus XVII.17.2; Arrian I.11.7; Justin X.11.5). Strabo also refers directly to the "illegal" character of Darius III's accession: after recalling that the Persians "are governed by hereditary kings (*hypo tōn apo genous*)" (XVI.3.17♦), he goes on to say that "the successors of Dareius [I] came to an end with Arses. Arses was slain by Bagoüs the eunuch, who set up as king (*katestēse*) another Dareius, who was not of the royal family (*ouk onta tou genous tōn basileōn*)" (XV.3.24♦). The same account is in Diodorus: after Arses' murder, the royal house was vacant/extinct (*erēmou . . . tou basileōs oikou*); there was no one who could inherit power by virtue of family ties (*kata genos*); and this created the context for Bagoas's resolve to bring one of his friends, Darius, to power (XVII.5.5). Finally, in some of the other authors, the accusation emphasizes the modesty of Darius's background: he "was a slave (*doulos*)" (Aelian, VH XII.43♦); he was "a slave and courier (*astandēs*) of the king" (Plutarch, *Mor.* 326e♦, 337e, 340b), or simply *astandēs* (Plutarch, *Alex.* 18.7); he was thus nothing more than the creation of Bagoas, who "took up the kingship of Persia": Arses and Darius were merely "puppet kings" (337e♦).

The Accession of Darius: The Persian Version

We also have the unusual opportunity of consulting an opposing perspective that clearly derives from the Persian camp. Justin (X.3.4) and Diodorus (XVII.6.1–3♠)—the latter is quick to present the two versions side by side—both state in similar words that, entirely on the contrary, Darius came to power because he had previously displayed striking personal courage: during one of Artaxerxes III's wars against the Cadusians, Darius (called Codoman by Justin) was the only one of the Persians around the king who dared to answer the challenge thrown down by a Cadusian of Herculean strength. He won this single combat (*monomakhia*) “and restored to his people, with the victory, their glory that had nearly perished” (Justin). Because of his personal deed, he was “honoured in consequence by the king with rich gifts (*megalai dōreai*), while among the Persians he was conceded the first place in prowess (*andreia*)” (Diodorus). According to Justin, Codoman was then awarded “the command of the two Armenias” (X.3.4). Again in nearly identical words, Justin and Diodorus say that when Ochus died and Darius was placed on the throne, it was because his striking courage was remembered. Justin goes on to say that “the people honored him with the name Darius” because of his courage.

It is easy to see that the Persian propaganda responds precisely to the Macedonian propaganda—or at least that the latter was not a counterattack against propaganda spread by Darius after his accession (see below). But this does not alter the facts of the situation. What we find here is in fact one of the most common Achaemenid justifications for kingship: personal bravery in combat. At the same time, we can note how frequent the repetition of the theme of *monomakhia* is—well attested among the Iranians and particularly among the Persians in the context of dynastic contests. It is thus understandable why neither Justin nor Diodorus, at this point at least, makes the slightest allusion to Bagoas's machinations or the broken line of succession: when Ochus died, power devolved quite naturally onto Darius Codoman.

Darius III and the Achaemenid Royal Family

We obviously cannot simply choose one version in preference to the other. Neither is acceptable *in toto* because both are patently propagandistic. Codoman's *monomakhia* reflects a monarchic motif, while at the same time serial murder by and large reflects historical reality. Let us begin by examining the texts that present the humble origins of the new king. The Aelian passage (VH XII.43) must be placed in context. It is in fact a list of leaders and kings who came to power by rising from anonymity. Thus, we can see that it conforms to one of the most common motifs of monarchic literature, particularly in the Hellenistic period, when authors loved to contrast kings born to kings (*ek basileōs basileus*) with kings whose fathers were commoners (*ex idiōtou basileus*; cf. *Letter of Aristeas* 288). At any rate, even Plato stresses that Darius I, in contrast to Cambyses and Xerxes, was able to exhibit virtues precisely because he was not the son of a king (*Laws* III.694c–695d). Similarly, Herodotus, speaking of Darius I before his accession, calls him *idiōtēs* (VII.3). This is not to say that Darius at that time was vegetating in anonymity, because he was in Egypt as a spear-bearer (*doryphoros*) for Cambyses (III.139). We also find Darius I in Aelian's list of those who rose from anonymity to power (XII.43), and Aelian says that, under Cyrus, Darius was a royal quiver-bearer (*pharētrophoros*; XII.43). This is evidence for the striking titles so clearly displayed at Naq̄-i Rostam (DNC, DND). The same was true for the future Darius III: he was not called *astandēs*

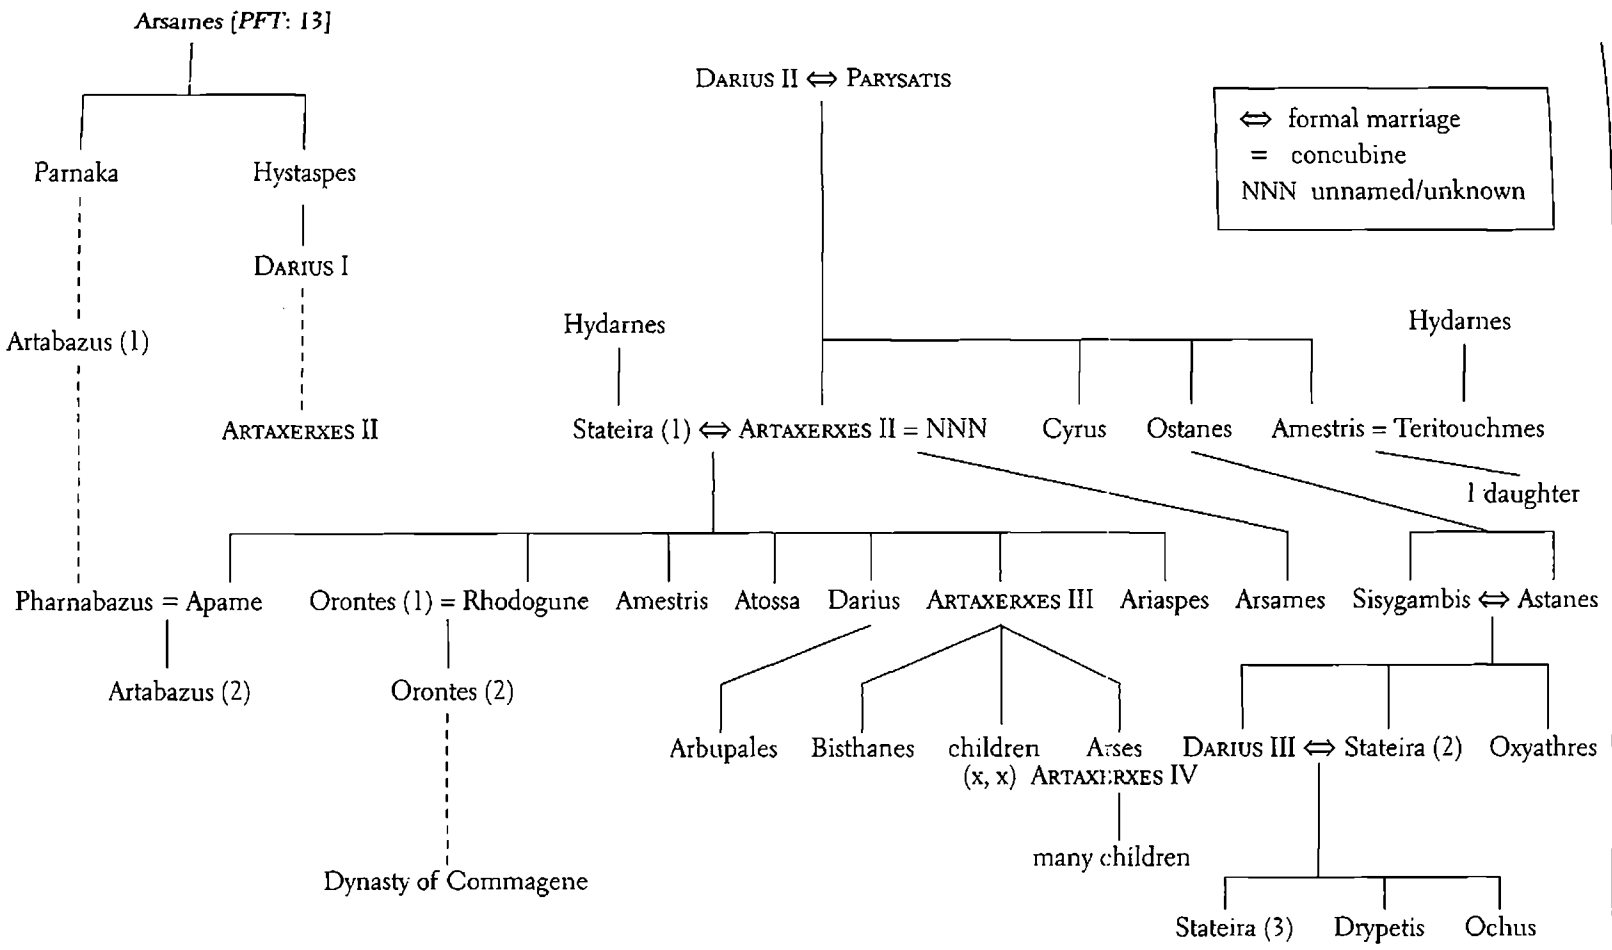

'courier' because he had been a letter-carrier! Instead, this was his court title, and the prestige of the office was symbolized and enhanced by the special robe he wore (cf. in particular Plutarch, *Alex.* 18.7; *Moralia* 340b; and Quintus Curtius III.3.5). The use of the adjective *doulos* does not throw this evidence into doubt; on the contrary, this adjective is precisely how the Greek authors frequently translate/transmit the Persian phenomenon of *bandaka* (e.g., [Arist.] *De Mundo* 398a, which counts the royal couriers [*hēmerodromoi*] among the king's *douloi*). In short, Darius III, who was born around 380 (cf. Arrian III.22.6), had been part of the royal inner circle probably since the end of the reign of Artaxerxes II and certainly during the time of Artaxerxes III. Thus we may usher out the unknown person manipulated into power by his "friend" Bagoas.

The dynastic-familial illegitimacy put forward by the Macedonian propagandists, on the other hand, is clearly nothing but fiction. Diodorus himself states that Darius "was the son of Arsanes, and grandson of that Ostanos who was a brother of Artaxerxes [II] who had been king" (XVII.5.5↔); he was thus Artaxerxes III's cousin. Darius was born to a brother/sister marriage (Arsanes/Sisygambis), and he himself married his sister Stateira. The alleged "Persian law" cited in Alexander's letter also reflects a biased interpretation of Achaemenid succession practice. If in fact the male descent of Artaxerxes III was reduced to its simplest form (namely, Bisthanes, the older half-brother of Artaxerxes IV) when Arses and his children had died, then the royal house was not limited to the sons of the dead king. In fact, when Arses/Artaxerxes IV died, the situation was quite similar to the conditions after the demise of Artaxerxes I (see our analysis in chap. 14/6). Artaxerxes I left only one legitimate son (Xerxes), who was soon assassinated; in order to confine power to the royal family, the throne passed to an illegitimate son of the deceased king (and half-brother of Xerxes II)—namely, Ochus, who soon seized power from his half-brother Sogdianus and took the throne name Darius II. With regard to the "Persian law"—that is, more precisely, Achaemenid succession practice—Darius III was thus perfectly legitimate.

Violence and nomos

Another Macedonian accusation referred to the fact that Darius III seized the throne by violence, against the will of the Persians. In truth, the vocabulary used by Arrian reflects some hesitancy from the beginning. The contrast between violence and *nomos* in fact recurs regularly in the Hellenistic texts that wish to delegitimize any rival to Macedonian tradition (cf. Diodorus XVIII.33.3). Of course, the accusation is not specifically Greek. Let us recall, for example, that in the *Cyrus Cylinder* Nabonidus is denounced for mistreating the Babylonians, and Gaumata is also delegitimized at Behistun because of his violence against the Persians. But under Arrian's pen the accusation takes on a more Macedonian tone, because during the famous debate on the *proskynesis*, Callisthenes recalls that the Macedonian king had to rule "not by force but in accordance with custom (*oude biai, alla nomōi*)" (Arrian IV.11.6↔).

Even more noteworthy is the fact that the reference to a Persian *nomos* in this area does not have much significance. In fact, very few royal successions occurred without problems. The existence and machinations of court cabals that supported one candidate over another are frequently attested (cf. Herodotus VII.2–4; Plutarch, *Art.* 6.1–2; 26.1–2, 27–28, etc.). Furthermore, the murders of Artaxerxes III and Arses were part of a long series. All we need to do is to draw up the list: one king dead on a military expedition (Cyrus), five kings dead of natural causes (Cambyses, Darius I, Artaxerxes I, Darius II,

↔ formal marriage
 = concubine
 NNN unnamed/unknown

Genealogy: The Succession from Darius II to Darius III

Artaxerxes II), and seven kings assassinated (Bardiya, Xerxes I, Xerxes II, [Sogdianus], Artaxerxes III, Artaxerxes IV, Darius III), to whom may be added Darius, oldest son of Artaxerxes II, who was surely guilty of plotting against his father and was executed. The excessive “cruelty” attributed to Artaxerxes III by the ancient authors does not appear to have been unique to him, if we also recall the serial murders of the representatives of the Hydarnes family, which were initiated jointly by Darius II and Parysatis (chap. 14/6).

Whether we condemn it or not (this is not the problem), the physical elimination of opponents and presumed rivals was also part and parcel of Achaemenid court practice; Ctesias in particular liked to emphasize the wanton cruelty of the punishment and executions, which were as terrible as the actions taken by Darius I against some of the “liar-kings.” Moreover, the legitimacy of a king who came to power through blood and iron was not *ipso facto* marked as invalid—as was demonstrated quite clearly by Darius I, Artaxerxes I, Darius II, and Artaxerxes III. All that a king had to do was to demonstrate his authority, which was a matter less of *nomos* than of results achieved in the political and military realms. This authority could later be challenged if the king did not succeed in creating a coterie of Persian aristocrats that supported him. This is the background to the other disqualification hurled against Darius III by Alexander: “As I have conquered in battle first your generals and satraps, and now yourself and your own force, . . . I hold myself responsible for all of your troops who did not die in the field but took refuge with me; they are with me of their own free will (*hekontes*), and voluntarily serve in my army (*xustrateuontai met'emou*)” (Arrian II.14.7◊). This reiterates one of the common motifs of the false propaganda put out by Cyrus the Younger’s camp against Artaxerxes II (chap. 15/2). Comparison of the two incidents tends to reinforce our suspicion about the arguments brought by Alexander in favor of his own royal legitimacy. Let us simply note that Alexander himself was not in the best position to wield this weapon because his own accession was accompanied by bloody purges of the Macedonian nobility; these purges can hardly be considered less excessive than the Persian behavior on this score, and Darius III himself sought to take advantage of the troubled context that resulted from the killings by encouraging conspiracies in his adversary’s camp.

Darius and Bagoas

One article of the indictment against Darius remains to be examined: that he became king only because he had been hoisted onto the throne by Bagoas, the “militant rogue” eunuch, in Diodorus’s words (XVII.5.3)—words that are both picturesque and damning. As we have already seen, the word *eunuch* by itself disqualified the person so called from being human in the eyes of most of the Greek authors. The *Dynastic Prophecy* shows that Bagoas actually bore the title *ša rēši*, the very word automatically “translated” *eunuch* by the Greek authors (chap. 7/3)! Bagoas certainly was an important person at court, since Diodorus calls him “the most faithful of his [the king’s] friends (*ho pistōtatos tōn philōn*)” (XVI.47.3–4). Thus, he was a privileged counselor to Artaxerxes III (§50.8). If Ctesias had had to mention Bagoas, he would certainly have used the generic phrase he was so fond of: “the most influential eunuch alongside [Artaxerxes III/IV].” In contrast, the words Diodorus uses to describe Bagoas’s promotion after the Egyptian campaign are extremely suspect. In the context, Diodorus sets up a totally artificial parallel between Mentor and Bagoas, who are dividing the Empire through an agreement of *koinopragia/koinōnia* that they had supposedly reached in Egypt: the West was to be Mentor’s, the East was to go

to Bagoas (XVI.50.6–8). The parallel comes from a biased source (certainly Ephorus) who tended to exaggerate the Rhodian Mentor's position and devalue royal authority. In reality, Mentor was certainly never commander-in-chief of Asia Minor, and the general command of the Upper Satrapies attributed to Bagoas is also very doubtful.

The only official title borne by Bagoas was *chiliarch* (Diodorus XVII.5.3). In this position, he held lands in Babylonia (cf. Pliny XIII.43; Theophrastus, *HP* II.6.7; Plutarch, *Alex.* 39.10). His responsibilities certainly provided opportunity to organize and carry out a plot against the king. But there is nothing to prove that he was the sole instigator on each occasion. Furthermore, Diodorus's own presentation, which suggests that he was actually "master of the kingdom" and a kingmaker (XVI.50.8♦), must not be overvalued. And when Plutarch compares Bagoas with the (supposed) role played by Atossa in the accession of Xerxes (a comparison that creates consternation for the modern historian!), he goes even further, stating that Bagoas "took up the kingship of Persia and bestowed it upon Oarses and Darius" (*Moralia* 337e♦). This presentation is already found in the ancient authors who reported the succession of Xerxes: the chiliarch Artabanus was at the heart of the conspiracy that led to the accession of Artaxerxes I, but some of the Greeks claimed that he himself aspired to the royal title and even that he seized it for himself (chap. 13/10). We have the impression that we are faced with an interpretation that was very popular in Greece and that was articulated with a series of repeated motifs. A frequently used motif is poison: Bagoas poisoned Artaxerxes III with the complicity of a physician, and Darius III poisoned Bagoas by handing him the cup from which the "rogue eunuch" had intended Darius to drink (Diodorus XVII.5.3, 6♦). Given the frequency of the theme of poison in the Achaemenid court, it is surprising that Diodorus, referring to the elimination of Bagoas, presents the circumstances as "making a moral point" (*mnēmēs axios*)! Even Parysatis was reputed to have poisoned her sister-in-law Statira by offering half a roast fowl to her (Plutarch, *Art.* 19.2–6; Ctesias §61).

The murder of Artaxerxes III certainly implies that at the outset there was opposition to the king, which Diodorus presents, in his own way, by stressing the hatred generated among the Persians by the king's cruelty (XVII.5.3). We can imagine that there were rival factions at the court and that, for reasons unknown to us, one of these factions favored the youngest son, Arses. In this we recognize a well-known pattern, one that is also illustrated at the end of Darius II's reign and again in the last years of Artaxerxes II. Another possible interpretation is thus opened up. We could also imagine that Arses, who was eager to seize power, propped himself up on Bagoas—just as Artaxerxes I had received the aid of the chiliarch Artabanus. We cannot be certain which of these possibilities matches the facts, since we know nothing at all of Arses before his accession. Was there opposition toward some other son, who may have received the title of crown prince? Whatever the case, the physical elimination of the new king's brothers certainly cannot be blamed on Bagoas alone: Artaxerxes IV himself certainly saw to the disappearance of all rivals. In any case, it has not been conclusively proved that he was the pawn of the chiliarch, since Diodorus himself states that the young king was far from willing to permit Bagoas free rein, and he even planned to bring an end to the latter's career (XVII.5.4). These were the circumstances under which Artaxerxes IV himself fell victim to an attack (late 336 – early 335).

Diodorus once again assigns responsibility to Bagoas alone, citing only "his habitual savagery (*synēthēs miaiphōnia*)" (XVII.5.6♦). Of course, the phrase seems quite

appropriate as one of the qualities attributed to this person, the “militant rogue eunuch” (§5.3; cf. Plutarch, *Art.* 17.8). Furthermore, the word used (*miaiphōnia*) carries another negative judgment, since it connotes the notion of degradation. But the explanation is a bit brief and no more convincing than Plutarch’s claim that attributes the accession of Ochus/Artaxerxes III to his “hot, violent, no less treacherous than bloody” character (*Art.* 26.2; ↯ 30.2–3↯). In reality, Ochus’s acquisition of supremacy was the result of a well-handled strategy that he had used to attract committed partisans (§26.2). At this point, we can mention the interesting phraseology used for the ancestry of the very close relatives of Artaxerxes III who figure in Darius III’s retinue: thus, the surviving son, Bisthanes, in Arrian (III.19.4↯) is called “son of Ochus, the predecessor of Darius [III] as King of Persia” (*tu pro Dareiou basileusantos Persōn*); the same idea is also found in Quintus Curtius (III.13.12↯) regarding the three daughters and the widow of Ochus, “who had reigned before Darius” (*qui ante Dareum regnaverat*). Arses is not mentioned in any of these cases; he had apparently become the victim of a sort of *damnatio memoriae* in the court of Darius, who certainly seems to have wanted to connect himself directly to Artaxerxes III. This may explain why, in the Persian version transmitted by Justin (X.3.3–5), Codoman succeeds Artaxerxes III, without resolving the issue of continuity. Along the same lines, there is other disturbing evidence. First of all, given the breadth of the purge widely attributed to Artaxerxes III upon his accession (Justin X.3.1), it is noteworthy that the branch Darius belonged to was not touched. It is tempting to conclude from this that Darius’s branch sided with Ochus and that its members (including the future Darius III) were among those who, in Artaxerxes II’s palace, had been fervent supporters of Prince Ochus (cf. Plutarch, *Art.* 26.2; cf. 30.1–2). This then calls to mind one of the royal legends about Darius: it was during one of Artaxerxes III’s campaigns that Darius/Codoman displayed his valor against a Cadusian—for which he was honored with *megalai dōreai* by the reigning king (Diodorus XVII.5.1). We are thus led to think that the prestigious court title (*astandēs*) and the distinction he enjoyed before his accession had been awarded to him by Artaxerxes III because of the assistance he provided to the king when Artaxerxes II died (359–358).

If, as Justin (X.3.4) says, Darius III actually was satrap of the two Armenias at the death of Artaxerxes II, he also held a territorial base and controlled armed forces. If this theory is valid, we may compare it to the situation of Ochus/Darius II, who was satrap of Hyrcania when his father Artaxerxes I died, according to Ctesias (§44). Therefore, it is even more doubtful that Bagoas himself placed Darius on the throne—though there is no doubt that he did lend his aid to the conspirators. Alexander himself, in his letter, “recognized” that it was Darius who had killed Arses, and the role attributed to Bagoas is that of accomplice rather than ringleader (*tu meta Bagōou*; Arrian II.14.5). Darius III was no more the puppet of the chiliarch than Artaxerxes I, at his accession, was the tool of Artabanus. Rather than, with Diodorus (XVII.5.5), making Darius III a “friend” of Bagoas, it is more correct to understand that the chiliarch was counted in the court category of Friends of Darius III, in the same way that he had been close to Artaxerxes III (XVI.47.3). Darius was a close relative of Artaxerxes III and IV, and therefore about 44 years old. As we have seen, he was a member of the “inner circle,” especially in the time of Artaxerxes III, and he was much more certainly the real head of the conspiracy; when the conspiracy succeeded, he did away with a henchman (Bagoas) who was probably judged overly burdensome.

The New Great King

The tradition transmitted by Diodorus (XVII.5.6) only enhances the prestige of Darius, because it was the king himself who put the chiliarch to death. Without doubt, this lovely story was invented from whole cloth by the royal propagandists. Thus, we understand why Diodorus thought it would "make a moral point"; but Diodorus (who nevertheless was depending on Persian tradition) seized on the phrase, thinking only that he wanted to enhance the memory of Darius, not of Bagoas! Furthermore, in keeping with the rule after a dynastic struggle, a classic royal legend then was promulgated at court and gained broad distribution, describing the monomachy won by Codoman over a formidable Cadusian adversary. The propagandists attributed to Darius, as to all his predecessors (chap. 6/4), a "regal" physical appearance: he was "the tallest and handsomest man of his time" (Plutarch, *Alex.* 21.6♦).

Finally, it is certain that Darius III underwent the royal investiture in the regular fashion, during which he put off the robe of the *astandēs* (cf. Quintus Curtius III.3.5: *in eodem habitu Dareus fuisset, cum appellatus esset rex*), then put on "that which Cyrus the first wore before he was king" (cf. Plutarch, *Art.* 3.2♦), since only this sequence can explain the rationale of the dream attributed to Darius (cf. also Plutarch, *Alex.* 18.7–8). This is exactly what Plutarch says: he states that Bagoas "stripped from [Oarses] the garb of a courier (*astandēs*) and put upon him the royal raiment (*stolē basilikē*) and the tiara that ever stands erect" (*Moralia* 340c♦). This certainly must have been when he abandoned his former name (Artašāta) to take the throne name Darius. Although he attributes the name Codoman to him (we do not know why), Justin also provides the information: "the people honored him with the name Darius, so that he would lack nothing of regal majesty" (X.3.5). It is quite noteworthy that he did not take the name Artaxerxes, because, according to Diodorus (XV.93.1♦), "Artaxerxes [II] had ruled well . . . , [and] the Persians changed the names of those who ruled after him and prescribed that they should bear that name." We wonder whether the new king, following Darius II, wanted to indicate by his throne name that, like Darius I, he was founding a lineage that, though it belonged to the progeny of his distant ancestor (the "royal stock"), had its own legitimacy. If so, the new king's ambitions were not small.

The Accession of Darius III in Achaemenid Dynastic History

It is thus a good idea to treat cautiously and skeptically the pseudolegal context in which Alexander's letter and the other writings record the circumstances of Darius's accession. Of course, Arrian is not the only one who refers to a Persian *nomos*. Herodotus, for example, mentions a *nomos* that required the king to name a successor before going on a military campaign (VII.2). Herodotus, referring to a Persian *nomos*, also claims that a bastard has no right to the throne (III.2). It clearly is to *nomos* that Demaratus (VII.3), Parysatis (Plutarch, *Art.* 2.4–5), and the partisans of Darius (son of Artaxerxes II; §26.1) appeal for support when they refer to the absolute right of the oldest son or to the right (no less absolute) of the child "born to the purple" (once in a while, the contrast between the son of a king and the son of an *idiōtēs* turns up; see above, p. 771). The circumstances of the accessions of Xerxes and Darius II illustrate the point at which these (reconstructed) debates become surreal and mask conflicting ambitions that end up being settled by the decision of the ruling king or by the fortunes of war. The only bulwark against the threat of a family coup d'état was the proclamation of a crown prince (cf. Plutarch, *Art.* 26.4), but the dynastic history eloquently proves that this barrier was

often breached (or threatened) by the sharp ambition of a younger son who was seething over being deprived of supreme power (examples: Bardiya, Cyrus the Younger, Ochus). The basic reason for this situation is easy to uncover: the Persian kingdom was not a constitutional monarchy with continuity determined by written rules of succession that were strictly applied by a sort of Supreme Court. This obviously would put us in the realm of total fiction: the justifications that Darius I gave for his authority, as we have seen (chap. 3/1), did not derive from a "right of succession" established for all time; they simply fleshed out his victory, which was confirmed *a posteriori* by proclamations that impress no one but their author. The same was true for Darius III: because he was king, he belonged to the royal House without having to prove anything. If there really were *nomoi*, then in an absolute monarchy (Aristotle's *pambasileia*), they would have no force of law with respect to the authority of the ruling king or the power relationships set up in regard to one of his rivals. Here as elsewhere (chap. 12/8), to render *nomos* as 'law' reflects the work of traducer rather than translator! As far as Darius III is concerned, the routine "legal" interpretations of the ancient authors were in every case completely overturned.

The only absolute rule binding the Achaemenids was that royal power was transmitted through the womb of the family. But, as we have seen, this was not a constitutional right; on the contrary, this conviction was built deeply into the family structure of Persian society and was expressed in the practice of endogamy (of which Darius III was a product and an exemplary performer). From this perspective, Achaemenid dynastic history after Darius I displayed a remarkable consistency: when there was no (or no longer a) legitimate son, the dead king's illegitimate sons disputed the succession among themselves, and one of them revived the royal stock by endogamy (Darius II); when the oldest son had died, one of the younger sons attained power (Artaxerxes I, Artaxerxes III, Arses); and when the king died without male descendant, either a competitor triumphed by force of arms and it became necessary to invent a prestigious ancestry after the fact (Darius I), or else power passed to a collateral branch and it was considered *a posteriori* as deriving without contest from the royal House (Darius III). All in all, the descendants of Darius I managed to bring to realization the dynastic program their ancestor had defined: the battles for supreme power were played out exclusively among members of the royal House. Never did an outsider manage to impose himself. As it turned out, the actual bases of the "dynastic pact" (chap. 8/7) remained solidly anchored.

At the same time, one might think that these practices weakened the central power, at least at the actual moment when contests were under way. There is hardly any doubt, for example, that secessionist tendencies (which were already manifest) took on new vigor after the execution of Bardiya; in addition, Diodorus states that the Egyptians took advantage of the unsettled succession after Xerxes to initiate a revolt (XI.71.3). But, in fact, the real threat came less from subject peoples than from the attitude of the Persian aristocracy, which was in the habit of supporting one candidate or another. This leads us to believe that each candidate had to make promises to the families that gave him their support. Did this practice necessarily weaken the new king? This is not at all certain, at least in the short term, if we recall the situation when Darius II and Parysatis wiped out nearly every representative of the Hydarnes family (chap. 14/6).

An Assessment

Whatever uncertainties remain about the details, the dynastic history between Artaxerxes III and Darius III provokes several reflections. First of all—and one more time—

about the Classical and Hellenistic sources: contrary to their claims, Darius III was an indisputable member of the "royal stock." He was an elite warrior, supported by broad segments of the court, the aristocracy, and of course the army; thus, he was indeed a legitimate Great King. But in these sources, the bases of disqualification from Persian royal power is found in at least two traditions that both appear (without mingling) in Diodorus. The first clearly goes back to the Greek polemicists of the fourth century, and especially Ephorus, who was Diodorus's inspiration in book XVI; in all of their activities, the fourth-century Persian kings are weak and little inclined to war or work. We would not insist on this point, which is rarely in evidence, were it not that the same theme is found in Ctesias, who is followed by Plutarch and many others. The problem is that this tradition has been taken up and magnified by Alexander's ancient historiography, which had the goal of exalting the Macedonian conqueror and was quite willing to use (or pretend to use) the Persian discourse of royal legitimation against Darius III.

At the same time, the discussions devoted to the accession of Darius III are included within a more general narrative that is designed to denigrate the memory of the last Great King. One illustration (of many) is found in Arrian, who transmits Alexander's fabricated arguments from 333; in Darius III's "funeral oration," he stresses that he was "dishonourable" in the battle of Gaugamela (because he fled), that "his life was one series of disasters," and finally that his fate was explained by his very character (or rather by his lack thereof): "No man showed less spirit or sense in warfare." Arrian then simply concedes that "in other matters he committed no offence." But the implicit contrast to other kings (Artaxerxes III in particular) does not really play in Darius's favor, since if he did not offend, it was "for lack of opportunity, since the moment of his accession was also the moment of the attack on him by the Macedonians and Greeks. So even if he had the will, he was no longer free to play the tyrant to his subjects, as his position was more dangerous than theirs" (III.22.2✧)! Let us stress in passing that the lack of "offence" (= firmness) was not really a royal attribute, as the propagandists of Cyrus the Younger and Ochus/Artaxerxes III emphasized in their time—they loved to denounce the "gentleness" (= weakness) of Artaxerxes II and his son Darius (Plutarch, *Art.* 2.1; 4.4; 6.1, 4; 26.1–3; 30.1–2).

The modern historian's task, obviously, is not compensatory exaltation of the memory of the last Great King. It is to attempt to understand why Darius lost the war. This is where, in the historiographic *longue durée*, the presentations by Alexander's authors have played a disastrously distorting role. It is tempting in fact to link the two traditions—the supposed weakness and the illegitimacy of Darius, the former "explained" by the latter—because Darius supposedly acceded to the throne contrary to Persian custom and only because he was propelled there by the eunuch Bagoas, who is thought to have been the real wielder of power. Textual and contextual analysis actually tends to prove that we have far too often promoted as conclusions what are nothing more than assumptions inherited directly from Macedonian propaganda. Obviously, we can assume that the same suspicions bear on the propaganda from the Persian side, which exalted Darius's courage in the face of Alexander (Justin X.3.6) and stressed his meticulous preparations for the impending military confrontation (Diodorus XVII.7.1–3). Meanwhile, the simultaneous disqualification of both traditions breeds its own contradictions, since the positioning of Darius III's accession in Achaemenid dynastic history makes quite a few of the details disappear—the very details that since antiquity have regularly been attributed to the event. As for the reality of the authority that might be boasted about,

“both in the palace and in the war-camp” (Dnb 27–31♦), Darius did not long delay proving it by eliminating Bagoas; his authority was also demonstrated by the fact that the recent conspiracy of Bagoas was quickly made the topic of a denunciation (Diodorus XVII.5.6).

2. The Great King and the Persian Aristocracy

The circumstances when Darius took power presuppose that he had support among the Persian aristocracy. Quite luckily, we have considerable information preserved by Alexander’s writers that illustrates this point. We will not discuss all the details of this large mass of data: on the one hand, not all of the notes are equally useful; on the other, our concern here is to analyze the composition and function of the dominant socioethnic class in general and to observe possible changes.

In the innermost circle of royal favor, the primary group was the Kinsmen. As we have already seen (chap. 8/1), the word itself refers to two distinct things that are well illustrated in Darius’s procession before the battle of Issus: one of the groups preceding the royal chariot was “those whom they call the king’s kindred (*cognati regis*), 15,000 men. . . . About two hundred of the noblest relatives (*nobilissimi propinquorum*) of the king attended him on the right and on the left [of the chariot]” (Quintus Curtius III.3.14, 21♦). The respective quantities and the different positions indicate clearly that the first group comprised the Kinsmen, as a class in the court hierarchy, and the second group was the actual relatives. At Gaugamela, the Kinsmen (*syggenesis*) were placed at the center, close to Darius (Arrian III.5), 10,000 of them who were “chosen for courage (*andragathia*) and for loyalty (*piستis*)” (Diodorus XVII.59.3♦). There were 40 of them at the Granicus (XVII.20.2), but these represented only the Persian nobility from Asia Minor. Also among the most coveted titles was Friend, a category that itself was crisscrossed with internal hierarchies. For example, Mazaeus was not simply a Friend of Darius (Diodorus XVII.55.1), but he also was “the most influential man at the court of Dareius” (Plutarch, *Alex.* 39.9♦). This hierarchy obviously developed as a function of royal favor (cf. Diodorus XVI.52.1: *Artaxerxēs proēgen [Mentōra] malista tōn philōn*); special positions resulted from an honor (*timē*) and at the same time illustrate the way royal favor worked (cf. Arrian I.12.10). It is easy to distinguish the inner circle of “very highly placed Persian officers of Darius (*hoi amphī Dareion Persōn hoi epiphanestatoi*)” (Arrian III.23.4♦). Artabazus was certainly one of these Persians. According to Quintus Curtius (III.13.13♦), he was “chief of the courtiers” (*princeps purpuratorum*); the word *princeps* renders the Greek *prōtos*, as Arrian III.23.7 shows: “he [Alexander] kept Artabazus and his sons by him in an honourable position (*timē*), as they were among the most eminent (*prōtoi*) Persians and especially because of their loyalty (*piستis*) to Darius.” These hand-picked examples prove that the relationship between the king and the aristocrats was always based on the exchange of gift/service (favor/loyalty) and that the nobles continued to define themselves in terms of their own origin and by the degree of intimacy connecting them to the king. Orxines, who commanded the Persian troops at Gaugamela, boasted that he descended from the Seven Persians (Quintus Curtius IV.12.8) and that he belonged to the lineage of Cyrus through his position as head of the tribe of Pasargadae (X.1.22–23). Under Artaxerxes III, Rhosaces was eager to let it be known that he “was a descendant of one of the seven Persians who deposed the Magi” (Diodorus

XVI.47.2♠). The example of Artabazus, among others (e.g., Arrian III.23.7), also proves that Alexander, within the framework of his policy of cooperation with the Iranians, took over the rationale of the Achaemenid system for his own advantage. By awarding the collective title “Kinsmen” to the Persians in his retinue (Arrian VII.11.1), and then to the Macedonians (§11.6–7), Alexander was merely stretching to the breaking-point a change that had already gained ground during the course of Achaemenid history—a change that tended to make the place of the nobility in the ranks of the court hierarchy more and more intimate in relation to the king.

Because a single word (*syggenesis*) is used in Greek for both categories, it is not always easy to distinguish kinsmen from Kinsmen, except when family ties are explicitly mentioned; when two texts supplement one another (e.g., Diodorus XVII.67.4 and Quintus Curtius V.3.12); when the author uses a complementary term (e.g., Diodorus XVII.73.9: “the brother and other relatives [*syggenēis*] of Darius”); or finally, when the author uses a specific term: according to Arrian (III.21.5), Bessus had family ties (*oikeiotēs*) to Darius—though even this word can mean ‘ties of familiarity’. The title is sometimes associated with “friend,” as in the “kinsmen” and “friends.” In some cases, it is difficult to tell which kinsmen/Kinsmen are involved (e.g., Diodorus XVII.31.1). Sometimes, the use of an apparently more precise term (*propinquus*) leads us to believe that the author is referring to a relative (Quintus Curtius III.3.25, compared with III.3.21), but this criterion is not always definitive (cf. IV.11.1). The number of relatives (200) in Darius’s procession should not surprise us: the numerous illegitimate sons of the king must have been included since, according to Justin, Artaxerxes II had no fewer than 115 of them (X.1.1). The phrase used by Quintus Curtius (III.3.21: *nobilissimi propinquorum*) seems to imply the existence of an internal hierarchy, probably based on closeness of blood ties. This helps explain several other phrases used by the same author: “Darius sent ten envoys, the leading men (*cognatorum principes*) of his court” (IV.11.1♠) to contact Alexander. Quintus Curtius (V.3.12♠) writes about Madates: he “had taken to wife her [Sisygambis’s] sister’s daughter, and thus was a near relative of Darius” (*Dareum propinqua cognatione contingens*); Madates was apparently married to a granddaughter of Ostanes (the brother of Artaxerxes II and father of Sisygambis); finally, Polyaeus calls Phraortes “a close relative of Darius” (IV.3.27).

Darius also had many representatives of his immediate family around him. First, we note the presence of members of Artaxerxes III’s family. Bisthanes, the sole surviving son, seems to have held a special position near the king (Arrian III.19.4–5). Three daughters and the wife of Ochus were also among Darius’s followers (Quintus Curtius III.13.12–13); they must also have been among the “wives of his relatives and friends (*propinquorum amicorumque conjuges*)” (III.3.25♠) who appeared at the end of the royal procession. We may also name a granddaughter of Ochus [Artaxerxes IV] “who had lately been king of the Persians”; she was born to one of the (unnamed) sons of this king. Moreover, her husband, Hystaspes, was “a kinsman (*propinquus*) of Darius [III]” and in this capacity had received a high military command (Quintus Curtius VI.2.7). We may also note Arbupales, a son of Darius who was himself a felonious son of Artaxerxes II (Arrian I.16.3). Apparently, Arbupales had escaped the purge that followed Darius’s execution. The already-cited examples of Bessus (satrap in Bactra), Madates (governor of Uxiana; Quintus Curtius V.3.4), Bisthanes, and Hystaspes show that the Great King systematically distributed important posts to his relatives (cf. Diodorus §31.1:

philoï kai syggeneis). Furthermore, Arbupales was one of the Persian leaders at the Granicus. We also know that a son-in-law of the king, Mithradates, was unhorsed and grievously wounded by Alexander (Arrian I.16.3). Among his closest family, Darius's son Ochus was too young to have held any job at all. In contrast, Oxathres, brother of the Great King, was known to have performed heroically at Issus (Diodorus XVII.34.2–3; Quintus Curtius III.11.8). He remained close to Darius until the final catastrophe (Quintus Curtius VI.2.9–11).

This is the way it also was in the great Persian aristocratic families. The association of sons and brothers with the responsibilities of fathers or brothers was everyday practice (cf. Arrian VII.6.4–5). At the Granicus, for example, Memnon arrived with his sons at the head of his horsemen (I.15.2), and Rhosaces came to the aid of his brother Spithrobates [Spithridates], satrap of Lydia and Ionia (Diodorus XVII.20.3–6). Memnon himself was in all probability the son of Rhosaces, who held the same post during the time of Artaxerxes III (XVI.47.2). Orontes, who (together with Mithraustes) led the Armenian contingent at Gaugamela (Arrian III.8.5), appears to have been a descendant of the satrap with the same name who, as son-in-law of Artaxerxes II, ruled Armenia around 400 (Xenophon, *Anab.* III.4.13; 5.17; IV.3.4). At Babylon, Mazaeus came to greet Alexander “with his mature children” (Quintus Curtius V.1.17–18♦). One of them, Brochubelus, had previously assisted him in his district of Cilicia–Trans-Euphrates (V.13.11). But the best example, because it is the best known, certainly is Artabazus and his family; he was a distant descendant of Pharnaces (the uncle of Darius) and grandson of Artaxerxes II by one of the king's daughters. We know that after his revolt Artabazus lost his satrapy of Hellespontine Phrygia, which his ancestors had ruled since the time of Xerxes. He had had to leave his country for Macedon with his entire family; this included not just his wife and many children but also two captains of Rhodian mercenaries, Memnon and Mentor, whose sister he had married (Diodorus XVI.52.4). After his exalted deeds in Egypt (343), Mentor had obtained a pardon for Artabazus from Artaxerxes III, and as a result Artabazus was able to return, along with his numerous progeny (eleven sons and ten daughters). Artabazus did not regain his satrapy (which then belonged to Arsites) but did regain royal favor, which reached its zenith in the time of Darius III (Quintus Curtius III.13.13; Arrian III.23.6). When they had returned, Mentor actively concerned himself with promoting his nephews, “giving them the most distinguished commands in the armed forces” (Diodorus XVI.52.4♦). The entire family appears again in the time of Darius III. Artabazus was too old to take part in battle, but the situation was quite different for his brother-in-law and his children. Even if it is hugely exaggerated by Diodorus (chap. 17/3 below), Memnon's role after the battle of the Granicus was quite noteworthy, until he died in the assault on the walls of Mytilene in the summer of 333. Before dying, he entrusted his authority to his nephew Pharnabazus, while awaiting Darius's decision (Arrian II.1.3; 2.1)—literal nepotism, which irresistibly leads us to an episode narrated by Herodotus (VIII.130). As ordered by Darius, who had confirmed him in his position, Pharnabazus turned over contingents of mercenaries to his cousin Thymondas (son of Memnon) and then led vigorous operations in the Aegean until he was captured at Chios in the summer of 332. Cophen, another son of Pharnabazus, had been the king's quartermaster at Damascus in 333 (Arrian II.15.1); he reappears in 330 close to Darius along with two of his brothers, Ariobarzanes and Arsames (Arrian III.23.7). Another son, Ilioneus, was taken prisoner after the battle of Issus, along with the wife and

sons of Pharnabazus, three daughters of Mentor, and the wife and sons of Memnon; Quintus Curtius comments: "Hardly any house of a member of the court (*domus purpurati*) escaped that great disaster" (III.13.13–14♦). According to Diodorus, Memnon had intentionally sent his wife and son to Darius: "He calculated that leaving them in the king's care was a good way to ensure their safety, while at the same time the king, now that he had good hostages, would be more willing to entrust Memnon with the supreme command" (XVII.23.4♦). The last part of Diodorus's comment is probably not true; the phrase instead alludes to a general rule that the wife and minor children of those in high positions at the center of the Empire usually remained at court, including occasions when the father was on a mission in the provinces or with the army or when the court itself was on the road, in time of peace or time of war.

The composition of the high imperial personnel of Darius III suggests several contrasting reflections. For one thing, continuity with the state of affairs in the time of Darius I and Xerxes is obvious—so much so that it can be reconstructed primarily on the basis of notes on personal names offered by Herodotus (cf. chap. 7). The continuity is illustrated especially well by the example of the descendants of Pharnaces/Parnaka at Dascylium and by the insistence some placed on connecting themselves to the time of Darius I (as a "descendant of the Seven": Rhosaces, Orxines). Continuity was created and sustained by the persistent custom of passing assignments through the same families and/or by the association of one or more sons with the satrapal responsibility of the father (or a nephew his uncle's). At the same time, the dominant Persian socioethnic class was open to some non-Persians (in the ethnic sense), as is illustrated by the promotion of Bēlšunu in Babylonia (chap. 14/8), the matrimonial alliances between the satrapal family of Dascylium and the Rhodians Mentor and Memnon (chap. 16/2), and personal names (cf. Abulites of Susa and the names of some of Mazaesus's sons; chap. 16/10). This certainly reflects a major trend to which we shall return when we consider its political significance, particularly beginning with the example of Mazaesus. Conversely, in 334 the satrapy of Caria, which had long been held by the Carian Hecatomnid family, was ruled for the first time by a satrap of Persian origin, Orontobates (cf. Strabo XIV.2.17).

3. The Royal Armies

The Greek Thesis

We know that from the Greek point of view—which is repeated ad nauseam in modern works, including some of the most recent—one of the most visible manifestations of Persian decadence was the inability of the Great Kings to put an army worthy of the name into the field against Greek troops, who were superior in both arms and courage. Under these conditions, the Great Kings would have had no alternative when they wished to make war than to rely first and foremost on corps of Greek mercenaries, who were the only ones capable of slowing the advance of the Greek armies sent against the imperial territories. This smug thesis was developed particularly by Xenophon and Plato, along with many fourth-century authors—hence the unbridled use of the "glorious" precedents for the Ten Thousand and the *anabasis* of Agesilaus.

We have already touched on the problem in previous chapters while analyzing the composition of the armies of Darius II, Artaxerxes II, and Cyrus the Younger (in 401). We noted there that the thesis is not tenable and that nothing in particular demonstrates

a connection between resorting to mercenaries and disintegration of recruiting bases for soldiers for the royal army in Babylonia or elsewhere. It is nonetheless important to reopen the discussion generally, because the thesis has been widely advanced, by ancient authors and again by modern authors in the context of Darius III's army. We may recall in particular that, according to Arrian (I.14.4), the Persian satraps at the Granicus had a force of 20,000 foreign mercenaries (*xenoi misthophoroi*), a number equal to the force of Persian horsemen. Quintus Curtius (III.8.1◊) writes that, on the eve of the battle of Issus, the Greek soldiers led by Thymondas (cf. Arrian II.2.1) were Darius's "principal and almost sole hope" and that the Great King had 30,000 mercenaries at that time (III.2.9). Does this mean that during the fourth century the military capacity of the Empire had shrunk critically?

In order to answer this question, we should first of all analyze the genesis of this thesis and identify its real creator. While Plato, Xenophon, and Isocrates certainly did much to support its credibility, the person really responsible for it is Diodorus, who is correctly thought to have used as his basis the work of Ephorus, an author whose anti-Persian bias is well known (cf. XVI.76.5–6). Diodorus, in fact, frequently presents the Greek mercenaries in action, particularly during the Egyptian expeditions, by using a form of narrative that tends, apparently at least, to provide objective, concrete details. These passages in Diodorus are quite widely paraphrased by modern historians. In order to lay bare the system of Diodorus, let us begin with his long account of Artaxerxes III's expedition against Egypt (XVI.46.4–9, 47–50; cf. 40.3–6, 41–45). We will study it alongside the stories of other Persian expeditions against Egypt transmitted by the same author: the expeditions of the 460s (XI.77.1–4) and the 370s (XV.41–44). Fragments about the operations with and against Artabazus in the 350s will be added, since they also appear to derive from Ephorus. It is easy to show that in every case Ephorus's thesis is illustrated by the same arguments and the same stereotypes:

(1) The pharaoh and the Great King reinforced their armies with the help of Greeks: there were 10,000 in Artaxerxes III's army (XVI.44.4) — 4000 of them mercenaries sent by Greek cities in Europe at his request (1000 Thebans under the command of Lacrates, 3000 Argives commanded by Nicostratus), to whom must be added the 4000 men of Mentor, the former mercenary commander of Nectanebo II (§42.2; §45.1); and the latter in turn had gathered another 20,000 Greek mercenaries (§47.6). In 373, Nectanebo I had "collected a large mercenary force": 20,000 according to Diodorus (XV.29.1◊), 12,000 according to Nepos (*Iph.* 2.4); and Tachos repeated this in 360 (XVI.92.2–3). The Sidonians also managed to recruit a multitude (*plēthos*) of mercenaries (XVI.41.4◊), and the same was true of the army sent by the Great King against Cyprus (§42.7–9). Furthermore, the army of Inarus in the 460s used mercenaries: the Egyptian rebel counted on military aid (*symmakhia*; XI.71.4) sent by Athens (cf. Thucydides I.104, 109), and his mercenaries are specifically portrayed by Ctesias within the framework of the Megabyzus saga (§§32–37).

(2) The Greeks always appear in the forward elements of the army. According to Diodorus, in 343 only the Greek army (*hellēnikē dynamis*) was engaged in the front lines and "the rest of the army" was held in reserve under the command of Artaxerxes III. The Greek army itself was divided into three regiments, each commanded by a Greek and a Persian: Lacrates and Rhosaces, Nicostratus and Aristazanes, Mentor and Bagoas. Given the prominent role attributed to the Greek leaders, we get the impression that the Per-

sian leaders were subordinate to them (XVI.47.1–4). This is also what Diodorus wants us to believe when he states that Artaxerxes was being very careful when he acquired mercenaries and their commanders because he remembered his previous defeat with great acrimony (§44.1–2). This is a curious conclusion, suggesting that on his previous expedition the Great King had had no mercenary troops, given that Diodorus himself continually exalts their role in all of the Egyptian campaigns (cf. XV.41ff.). Of course, Diodorus also notes the presence of “barbarian forces” in the Great King’s army (XVI.47.2, 4; §50.3; XI.74–75), but in every case he highlights the special value and courage of the Greek leaders and in every case he also introduces the contrast between the Greeks and their employers (whether Egyptian or Persian). Furthermore, the parallelism between the two armies that Diodorus wishes to present becomes even more striking when we consider the order of battle he presents: Nectanebo II and Artaxerxes both kept themselves in reserve, behind the front lines (XVI.47.5–6), as if the Greek mercenaries constituted the heart of their respective forces.

A similar scheme is also found in the tales concerning the participation of Chares in the rebellion of Artabazus. When Diodorus states that Chares fought alongside (*symmakhōn*) the satrap (XVI.22.1; 34.1), it is clear that he attributes the glory of the victories to Chares. He treats the Theban Pammenes similarly some time later: “By defeating the satraps in two great battles, [he] won great glory for himself and the Boeotians” (§34.2♦). The one (Ephorus?) who inspired a scholia to Demosthenes 4.19 even passes over the presence of Artabazus alongside Chares in silence: it is Chares alone who led 10,000 mercenaries to a stunning victory over Tithraustes, who commanded a considerable force of 20,000 Persians, most of whom were horsemen (cf. also FGrH 105 F5). We may emphasize in passing that this kind of presentation is not applied only to Persians; Diodorus adopts it for the pharaohs’ armies as well as for the Phoenician army that rebelled against the Persians. Using a stereotyped expression, he reports on the throngs of mercenaries raised by the authorities in Sidon (XVI.41.4). But, in reality, only Mentor’s 4000 mercenaries are specifically named (§42.2), and they primarily belong to the category of citizen-soldiers (*stratiōtai politikoi*)—who in fact do seem to have taken the main role in all of the fighting (§44.5–6; cf. §45.4–5).

(3) As Diodorus reports them, the confrontations of the 343–342 campaign thus seem to be reduced to fights between Greek mercenaries from the two sides. Though he mentions the presence of Libyans and Egyptians in Nectanebo II’s army (XVI.47.6), he scarcely brings them onto the scene in what follows; it is the Greeks who defend Pelusium courageously (§49.2), even as we learn incidentally that the garrisons comprised Greeks and Egyptians (§49.7). When Diodorus mentions this, it is primarily to illustrate the stark contrast between Greeks and Egyptians (§49.8; §50.2). The Persian side is handled similarly. The Thebans faced the Spartan Philophron, who commanded the garrison at Pelusium, and they threw themselves boldly into the battle, “being eager to show themselves the best of the Greeks that were taking part in the expedition” (46.8–9♦). The Argive Nicostratus was first to cross the Nile and thus determined the success of the operations, and it was another Greek, Cleinius of Cos, who opposed him in the Egyptian camp (§48.3–5). Similarly, Lacrates the Theban actively pursued the siege of Pelusium (§49.1–3), and Mentor the Rhodian took Bubastis and other nearby cities (§49.7–8). Likewise, again, in 371, Iphicrates dashed at the head of his men against a fortification on the Mendes Mouth of the Nile (XV.42.5).

(4) This presentation is articulated on the basis of a single assumption: the superiority of the Greeks, both soldiers and officers—who were so superior that victories were due entirely to them and defeats were attributable solely to their employers. Thus, Hakoris sent for Chabrias only because he “ha[d] no capable general” (XV.29.2♦). Similarly, it was certainly because Pharnabazus insisted that the Athenians sent him Iphicrates (XV.29.2), and Diodorus devotes an entire chapter to Iphicrates’ valor (XV.44). Likewise, Artaxerxes III himself asked the Argives to give the command to Nicostratus, who was famous for his bravery and valor (XVI.44.2–3). Chabrias and Agesilaus, alongside Tachos, are treated in the same way (XV.92.2–3), etc. Furthermore, Nectanebo II was conquered in 343 because of his military incompetence combined with overconfidence resulting from previous victories; in fact, Diodorus thinks, his earlier victory (in 351) was due to the fact that he had turned over command of the troops to commanders of Greek mercenaries, the Athenian Diophantus and the Spartan Lamius (XVI.48.1–2). The same explanation appears in this context that Diodorus had given for the failure of Tachos in 361–359; Tachos had ignored the “wise counsel” of Agesilaus (XV.92.3). Similarly, Pharnabazus had ignored the judicious suggestions of Iphicrates (XV.43). The Greek leaders were in fact swift and brave (XV.43.1–2, 5–6; 44.2), in contrast to the Persian generals, who were “cowardly and inexperienced” (XVI.40.4) and who were further characterized by their hesitancy and timidity (XV.43.1–2)—they were unable to march quickly on the enemy because they lost much time readying their armies and ceaselessly seeking the advice of the Great King (XV.41.2–5; XVI.46.7; cf. XVII.18.2). This resulted in frequent clashes between Persian and Greek leaders, the former supposedly envious of the latter (XV.43.2, 6), and this is the background for presenting the disputes between them in 343 (XVI.50.1–4) and again in 334 (Arrian I.12.10; cf. Diodorus XVII.18.3). The uncommon bravery of the Greek soldiers is illustrated primarily as a contrast to the cowardice of the Egyptian soldiers, who after the initial clashes could think of nothing other than trying to make peace with the Persians (XI.77.3; XVI.49.7–8).

(5) The superiority of the Greeks was recognized by the Persians themselves. This was already the significance of the description presented by Xenophon of the military review organized in Cilicia by Cyrus the Younger. It was the Greeks of his army—and they alone—who incited panic among the barbarians (*Anab.* I.2.17–18). The case was the same during the Egyptian campaigns: because he admired Greek valor, Megabyzus agreed to a treaty with them, for he feared direct confrontation (Diodorus XI.77.4). The Greeks saved their lives “by their courage” (*idia aretē*; §77.5♦). Some anecdotes from Polyaeus—who himself may have been dependent on Ephorus—also promulgate this stereotype. For instance, facing the Persians, Gastron, a Spartan leader in Egypt, armed the Greeks in Egyptian style and the Egyptians in Greek style and put the latter in the front line: “The Persians actually taking them for what they appeared to be, threw themselves into disorder and fled” (II.16). In a similar situation, Orontes was facing Autophrades: he hoped to impress his enemy and make him believe that a reinforcement of Greek mercenaries was on their way, so “he armed the most vigorous of the barbarians in Greek style” and mingled them with the Greeks: “Seeing the Greek arms, Autophrades convinced himself that these were the reinforcements he had heard tell of: not daring to risk combat, he struck camp and fled” (VII.14.4). The first anecdote is all the more striking in that it is not based on any sort of military rationale, even a false one (in contrast to Orontes’ actions): instead, we get the impression that the author was using the parable for purely ideological ends.

(6) The valor of the Greeks is even more noteworthy because, generally speaking, they were minority participants: in 343, there were 10,000 Greeks within the immense royal army (XVI.40.6: stereotyped figures; cf. XI.74.1); on the Egyptian side, again in 343, we find 20,000 Greeks alongside 20,000 Libyans and 60,000 Egyptian *makhimoi* (XVI.47.6).

The Use of Mercenaries and "Decadence": Achaemenid Truth and Athenian Filter

The coherence, and thus the apparent credibility, of the thesis we have just schematically laid out is even more noteworthy because it was already worked out in the fourth century by all of the Greek authors. But this only *seems* paradoxical—it is this very unanimity that casts grave doubt on every one of its constituent elements and thus on the totality of the thesis. In fact, it seems clear that it is built on a radical antithesis between Greek and barbarian that is quite frequently asserted by the masters of Panhellenism (Isocrates, Ephorus) and the advocates of the theory of "Persian decadence" (Isocrates, Ephorus, Plato, Xenophon in the last chapter of the *Cyropaedia*). The "analysis" of the decadence itself proceeds through convenient, effective stereotypes: wealth and opulence (*tryphē*) inexorably made the Persians effeminate and caused them to abandon their traditional warrior virtues. It is thus abundantly clear that this theory is embedded in the *longue durée* of Greco-Persian relations; We recall that it is already fully present in the speech that Herodotus gives Aristagoras of Miletus to deliver to Cleomenes of Sparta: the barbarians are not only immensely rich but they also "have little taste for war (*Oute* [. . .] *alkimoi*) . . . how easy they are to beat! you . . . are the strongest power in the Greek world" (V.49↔). It is clear, finally, that this certainty was conceived in the heart of the battles at Thermopylae, Salamis, Plataea, and Mycale, because we know that the memory of all of these clashes was both piously preserved and cannily transformed by the fourth-century Athenian authors. At any rate, it is enough to recall the explanation offered by Diodorus/Ephorus for the behavior of the Greeks in Egypt: at the time of their participation in the battles alongside Inarus, the Greeks hoped to be worthy of their predecessors' example at Thermopylae (XI.77.3–4). The precedent of the Persian Wars was also cited by Chares: after "his" victory over Tithraustes, he did not flinch from presenting it to the Athenians as "the sister to the battle of Marathon" (scholia on Demosthenes 4.14; cf. Plutarch, *Aratus* 16.3)!

The intellectual frailty and the implications of the ideological assumptions of this presentation no longer need to be pointed out. All the same, other authors have worked out totally different theories about the political components of the *tryphē* (symbol of power) and/or underlined the valor and courage of the Persian combatants, whether confronting the Greeks in 490–479 [480–479?] or Alexander's Macedonians. Nevertheless, to understand the logic and effectiveness of these stereotypes better—in order to render them harmless—they must be placed into an even more precise context. When they are put into the context of the 350s, these narratives on the use of mercenaries also reflect a debate internal to the city. Though there are several possible corpora to consider, it is enough to consider the harangues that Demosthenes delivered during the course of wars and conflicts with Philip II. In these harangues, the Macedonian king's power (just like the Great King's; cf. *Symm.* 3–9; 29–32) is sometimes highlighted and sometimes devalued, not as a function of observable change, but simply as a function of the orator's own forensic requirements. If the orator felt the assembly's resolve weakening, he would try to strengthen it by emphasizing the "decadence" of the kingdom of Macedon, which

he describes with the same stereotypes that were described as flaws in the Achaemenid system. For instance, Philip behaves like a barbarian, surrounding himself with buffoons—"The rest about him are brigands and parasites, and men of that character, who will get drunk and perform dances which I scruple to name before you" *Olynt.* II.19◇); This moral weakness is accompanied "quite naturally" by the decadence of the Macedonian army. Demosthenes appealed to testimony that was both anonymous and false (and against all probability) and was quite willing to slander the king's soldiers, Macedonian infantry (*pezhetairoi*) and mercenaries (*xenoi*) alike: "His mercenaries and guards, indeed, have the reputation of admirable and well-trained soldiers, but, as I heard from one who had been in the country, a man incapable of falsehood, they are no better than others" (§17◇).

It is not difficult to notice that, within his own civic rationale, the use of mercenaries was passionately opposed by Demosthenes. Mercenaries were eager for cash and booty, and their leaders often took initiatives contrary to the city's interests (e.g., *Olynt.* II.28; Isocrates, *Peace* 44). In the *First Philippic*, delivered in 351, he urged his fellow citizens to re-create citizen armies, and he denounced the leaders of the mercenaries who did not hesitate to sell themselves to the highest bidder: "they go off to Artabazus or anywhere" (§24◇), which the scholiast renders (4.24) with a very tendentious statement: "Not wishing themselves to fight because of the danger, the Athenians engaged paid outsiders (*xenoi misthōmenoi*)." The same evaluation is found in Diodorus (X.34.8–13), where it is included in a general discussion contrasting the Greek cities with the tyrants and kings. The author, who here also is presenting Ephorus's opinion, urges the Greeks not to resort to the deplorable habit of drafting mercenary troops (*xenikai dynameis*) in place of civic armies (*politikai dynameis*). Diodorus tirelessly embroiders the stereotype of the Greek (Athenian) vision of the Persian Wars, and he in fact stresses the superiority of valor/courage (*aretē* = Greeks) over number (*plēthos* = barbarians). In nearly identical words, Demosthenes and Diodorus describe the appeal to mercenaries as one of the symptoms of the decadence of civic spirit. Like Xenophon when he discusses the Persians in the last chapter of the *Cyropaedia* or the Spartans in the last chapter of the *Constitution of the Lacedaemonians* (the Spartans of "the olden days" and the Persians "of today" are themselves contrasted comprehensively in the *Agésilau*s IX), Demosthenes enjoys contrasting the virtue of the ancients with the moral decadence he sees in the Athens of his day. In ancient times, "the king of this country [Macedon] was submissive to them, as a barbarian should be to Greeks" (*Olynt.* III.24◇); in ancient times, instead of appealing to mercenaries, the people "dared to campaign for themselves" (III.30). The discourse is all-encompassing and takes on universal value: it applies to any state suspected of being unable to mobilize its own people against an enemy. This explains why the pharaohs counted less on their troops than on their country's natural defenses (Diodorus XV.42.1–3; XVI.46.7–8, 47.6–7, 48.7). This is also a well-known motif in Greek literature—condemnation of cities that put all their hope in their fortifications instead of counting first on the courage of their citizens. The same charge is brought against the Persians by Alexander (cf. Arrian VII.7.7).

Of course—and we have already repeated it several times here—the ideological de-cryption of the Greek sources cannot take the place of proof: Achaemenid reality is not the mirror image of Greek portrayals. But it is necessary to state that the many references to the Great King's Greek mercenaries do not in themselves have probative value; their

primary purpose is to charge the Persians with decadence of civic spirit, which is paralleled by the assumed weakness of the satraps' and Great Kings' armies—and both of these are presented in a convenient opposition between a “then” (virtue) and a “now” (decadence) that is constructed from whole cloth, whether it concerns Athens, Sparta, or Persia. In the logic of this discourse, the Persian (or Egyptian) reference thus primarily plays a supporting role; it does not require proof derived from verified or verifiable facts. But then, though no one would ever consider viewing the effectiveness and organization of Philip's army solely through the distorting prism of Demosthenes' harangues, how could any historian be so credulous as to portray the Persian Empire on the basis of the words of the Athenian orators and polemicists? We can only imagine that the ancient orators would be thoroughly amazed to learn that probative value is sometimes still today granted to an “analysis” of the Empire of Artaxerxes III or Darius III as a city unable to defend itself on its own and that put its security into the hands of foreign mercenaries without batting an eyelash!

Command Structure

We remain equally skeptical about Diodorus's presentation of the command structure when the leaders of Greek mercenaries took part in combat. We have seen that Diodorus claims that the command of the three regiments created by Artaxerxes III in 343 was entrusted to three Greek-Persian pairs; he even wants us to believe that the Greeks were in charge of the maneuvers. The vocabulary he uses does not give rise to the ambiguities because, in principle, the Greek was the *stratēgos* and the Persian was the *hēgemōn* (XVI.47.1), which implies that authority belonged to the latter. However, Aristazanes is said to “share the command (*synarkhōn*)” with Nicostratus (47.3), and Bagoas “fought alongside (*synstrateuto*) Mentor” (§47.4). Regardless of what their titles were, the actions of commanders in some other cases erase the doubts that Diodorus's vocabulary and presentation generate: after Lacrates made an agreement with the mercenaries of Pelusium, “Artaxerxes dispatched Bagoas with barbarian soldiers to take over (*paralambanein*) Pelusium” (§49.4; cf. 6: *paradidōmi*). The term used is clear: a Persian was officially responsible for taking possession of the town in the name of the king. At Bubastis, the Greeks of the garrison sent emissaries to Bagoas; again, he was the first to enter the town, at the head of the barbarian soldiers (§50.1, 4).

Furthermore, Diodorus portrays conflict that arose due to the coadministration of Persians and Greeks, such as the disputes between Lacrates and Bagoas (49.1–6) or Mentor and Bagoas (50.1–6). This evidence is also found in the campaign of 373: “Pharnabazus became suspicious of his [Iphicrates'] boldness and his courage for fear lest he take possession of Egypt for himself. . . . Some generals [on Pharnabazus's staff] indeed bore a grudge against him and were attempting to fasten unfair charges upon him” (Diodorus XV.43.2♦). The participation of the mercenary leaders in the staff's deliberations is also attested for Cyrus the Younger, but in every case the final decision rested with the chief of staff, who was always a Persian. So this much is clear: under the King's supreme authority, it was the Persians who retained command. Who can doubt it when Diodorus emphasizes the royal favor enjoyed by the three Persian generals in 343, all of them “preferred above the others for valour and loyalty” (XVI.47.1♦)? Rhosaces boasted of descent from one of the Seven (§47.2); Aristazanes “was an usher (*eis-aggerous*) of the King and the most faithful of his friends (*pistotatos tōn philōn*) after

Bagoas" (§47.3↔); and as for the last of the three, it was he "whom the King trusted most" (§47.4↔).

The Greeks appear as often as they do in part because of the highly partisan orientation of the work of Ephorus. We have also seen that an anonymous author attributes the direction of military operations against Tithraustes to Chares and Pammenes. Because of an incidental reference, we learn that, after a raid led by Pammenes, Artabazus awarded command of the troops to two of his brothers, Oxythras and Dibictus (Polyaenus VII.33.2). The Greeks might also be at the fore because the Persian leaders preferred to sacrifice the mercenaries before engaging their own "barbarian" troops. Finally, Greek commanders appear often because, as in Cyrus the Younger's army, the Greek leaders retained command of the unit they had themselves recruited (cf. XVI.48.3: Nicostratus *tōn Argeiōn stratēgos*). Nevertheless, this limited command was incorporated into a chain headed by Persians, and the general direction of operations and strategic decisions remained with the Great King himself (§49.6–7).

Memnon, the Persian Satraps, and Darius III

It is quite striking to observe that, once more, Diodorus—this time in book XVII—repeats the same sort of explanation to account for the unusual position of the Rhodian Memnon at the beginning of Darius III's reign. At the time of the first Macedonian offensive in 336–335, only Memnon seems to have been able to counterattack: he was the one who put Parmenion to flight near Pitane in Aeolis (§7.8). Even though Darius chose 'his best commanders' (*aristoi hēgemōnes*; unnamed), he selected Memnon as the one to whom he gave 5000 mercenaries "and ordered him to march to Cyzicus and try to get possession of it" (§7.2–3↔). What was the reason for this choice? Memnon was "outstanding in courage (*andreia*) and in strategic understanding." His special position is also evident during the war council at Zeleia, which is described by both Diodorus and Arrian. It is clear that Diodorus strongly preferred the scorched-earth policy that was promoted, against the rest of the Persians, by Memnon, whom Diodorus presents once more as "famed for his military competence"—portraying the Persian generals once again as incompetent, because they delayed making decisions and launching a campaign (§18.2–3↔). Memnon again was the one who appeared to direct the Persians' retreat to Miletus (§22.1) and then Halicarnassus, in the course of which it was he who repelled the initial assaults (§24.5), made a sortie, and inflicted heavy losses on the Macedonians (§25.5). He called a council of the officers (*hēgemones*) who surrounded him (*hoi peri ton Memnōna*; §25.3), who elsewhere (§27.5↔) are called 'generals and satraps' (*stratēgoi kai satrapai*). These officers, clearly, were first and foremost the commanders of mercenaries, among them the Athenians Ephialtes and Thrasybulus (§25.6; §26.2–3). Darius recognized Memnon's exceptional valor and sent a letter "to those who dwelt next to the sea, directing them one and all to take orders from Memnon. [He] assumed the supreme command" (*tōn olōn hēgemonia*; §23.6↔). To support him, Darius provided huge sums of money (§29.1). It is thus easy to understand the end result: "With his death Darius's fortunes also collapsed" (§29.4↔)—and with his death Alexander's confidence rose (§31.4). This is the point at which Diodorus depicts a war council assembled by Darius. The Athenian Charidemus proposed sending an army to the coast to be commanded by "a general who had given proof of his ability" (himself! §30.3), but Darius flew into a towering rage and decided to take the head of his troops himself: "he searched for a competent general to take over Memnon's command but could find no

one, and finally felt constrained to go down himself to take part in the contest for the kingdom (*eis ton hyper tēs basileias kindynon*) (§30.7✧). This is exactly the same explanation that Diodorus himself had given (XVI.40.5–6✧) for the choice Artaxerxes III had made prior to the Egyptian revolts: Artaxerxes was hobbled by the cowardice and incompetence of his generals and so had to get beyond his own weakness and laziness; thus, he “adopted the plan of carrying out in person the struggles to preserve his kingdom” (*tous hyper tēs basileias agōnas*).

The presentation in its entirety provides a portrait of Darius as an irresolute man who put all of his confidence in the Rhodian and his mercenaries. However, a single comment serves to destroy the presentation by Diodorus’s source: Darius was able to set out for Cilicia in the summer of 333, obviously, because he had already begun preparing his army at Babylon many months before, unable to anticipate that Memnon’s death would require him to do so. It is also clear that Diodorus focuses his story on Memnon and never names the Persian generals who abandoned the battlefield at the Granicus. This is not unlike what happens at Halicarnassus, where Diodorus very conveniently (for the consistency of his discourse) “forgets” to mention the active presence of Orontobates, the satrap of Caria (cf. Arrian I.23.1). It is also quite obvious that the arguments exchanged in the war council at Zeleia strangely recall the disputes between Greek and Persian leaders in Egypt, also reconstructed by Diodorus: in 334 at Zeleia, the accountability of the Persian leaders was criticized, just as Tachos and Pharnabazus had been condemned for refusing to adopt the strategic planning (“wise counsels”) offered by Chabrias (XV.92.3) and Iphicrates (XV.43), respectively. It is also clear that Memnon’s unusual position is conceptually parallel to the status that Diodorus conferred on his brother Mentor after the Egyptian campaign (XVI.50.7; 52.1–2)—which is hardly convincing. Furthermore, the Great King’s absolute confidence in Memnon singularly recalls what Diodorus (again) wrote about the assistance that Artaxerxes III expected from the arrival of the Argive Nicostratus at the beginning of the Egyptian campaign (XVI.44.2–3). Of course, Diodorus was not the only author to ascribe such importance to Memnon’s activities; but the support of Arrian and Quintus Curtius does not by itself confer validity on a theory that they are the only ones to develop with such consistency. We will return later to an analysis of the role played by Memnon at the beginning of Alexander’s offensive. Here let us simply observe that the many repetitions of motifs found in both books XVI and XVII of Diodorus lead us to consider with some caution the pre-eminence that the author attributes to the Rhodian and the Greek mercenaries—not to mention his judgment regarding the incompetence of the Persian generals and the cowardliness of the Great King.

The Great King and the Satraps’ Mercenaries

Furthermore, the stories concerning the mercenaries of Artabazus and Orontes have given rise to a more truly political analysis that carries a much more formidable weight because it is attributed to the Great King himself. In his presentation of the beginnings of Artabazus’s revolt against Artaxerxes III in the mid-350s (cf. chap. 15/9 above), the anonymous scholiast (Schol. Dem. 4.19) provides the following information:

The king of the Persians sent an order to the coastal satraps to disband their mercenary armies (*ta mistophorika strateumata*), on the grounds of the enormous expenses they were incurring; as a consequence, the satraps dismissed the soldiers (*stratiōtai*). Numbering about 10,000, these soldiers presented themselves to Chares, the Athenian general, who was

then leader of a mercenary army (*xenikē dynamis*), and they placed themselves under his command. Then in revolt (*apostas*), the Persian Artabazus was fighting against the king; he summoned Chares to take his army into the king's territory.

At first sight, the king's order seems to illustrate the thesis that the central authority was weakening in the face of satraps who could build up armies of their own using mercenaries. This interpretation in turn has sometimes been cited in support of the broader idea that there was a shift toward the creation of personal satrapal armies, such as can be seen in the Hellenistic period. This interpretation is also bolstered by noting one of Alexander's orders, as presented by Diodorus (XVII.106.3♦): "He wrote to all his generals and satraps in Asia, ordering them, as soon as they had read his letter, to disband all their mercenaries instantly." We may add that, at an earlier time, several satraps revolted with the assistance of mercenaries (e.g., Ctesias §37, §52).

However, this theory is weak. The comparison with Alexander's order, though obviously tempting, is purely formal. Diodorus's account is in fact quite clearly placed in the very unsettled context of Alexander's return from India; at that time, we know, the king had to take draconian measures against both usurpers (in Persia and Media) and satraps who had taken advantage of his absence to plunder and pillage the people. It is in this context that Diodorus reveals the fears of some of the generals: "Some who had mercenary troops revolted against the king's authority" (XVII.106.2♦). By giving the order that Diodorus reports, then, Alexander was trying to deny satraps and generals who had *already* entered into revolt the use of their mercenaries. There is nothing of this in the scholiast's text. Instead, for one thing, Artabazus recruited mercenaries *after* his revolt; and for another, the satraps (we do wonder who exactly they might have been) do not offer any objection to obeying the king's order. The impression prevails in the scholiast's account, that no one had challenged the king's authority and no one, at that time, was really threatened.

These observations lead us to view the information with considerable skepticism. We are tempted to think that the author has attributed to Artaxerxes III an attitude often attributed to the Persians by the Greeks, who loved to criticize the Great King's avarice (cf. Plutarch, *Alex.* 69.2) and his unwillingness to pay the Greek soldiers in his service (*Hell. Oxyr.* 19.2). Even if we grant the information credence, it must be observed that the scholiast contradicts Diodorus (XVI.22.1–2)—and this has certainly created difficulties for the commentators. Moreover, the scholiast has quite freely interpreted a passage in the *First Philippic*, where Demosthenes denounces the leaders of the mercenaries, who were quite willing to abandon the mission entrusted to them in order to set sail "to Artabazus or anywhere" (§24♦). While still following the course of Demosthenes' argument, the scholiast adds details found only in his account: departing from a discourse on civic concerns (see above), the inspirer of the gloss (Ephorus?) establishes a connection with a "fact" that appears to condemn the same evils among the Persians; and/or, perhaps, the gloss simply illustrates the policy that Demosthenes is proposing vis-à-vis the mercenaries—namely, to dismiss them. In sum, the text of the scholium does not make a contribution that solidifies the basis of the historical interpretation drawn from it.

Mercenaries and "Mercenaries": The Greeks and the Others

Of course, the presence of mercenary troops within the fourth-century royal and satrapal armies is beyond doubt. However, it is still necessary to inquire into the central

role attributed to them by the Greek authors, as well as into the internal changes in the Empire that might have fed the theory of the decadence of the Achaemenid military. Discussion of this point requires us to answer two preliminary questions: What was a mercenary in the Achaemenid armies? and were all the mercenaries Greek? These questions are not usually asked, even though it is obvious that the problem has (nearly) always been considered in the context of its Greek component—the significance of the use of mercenaries with respect to the internal sociopolitical development of the Greek cities. Indeed, neither the vocabulary used nor historical probability provides serious support for this interpretation—which nonetheless is confidently and assuredly proclaimed as certain. In order to make the proof more convincing, here we shall select examples taken exclusively from the Mediterranean theater of the Empire's operations, because we would like to believe that no one would dream of arguing that the garrisons of Babylon, Susa, Persepolis, Ecbatana, or Bactra comprised primarily Greeks!

Though we cannot claim to have performed a complete census, let us present some noteworthy examples taken from Alexander's ancient historians. Arrian, referring to the mercenaries (20,000 according to him) that were one of the components of the satrapal army in 334, uses the generic term *xenoi pezoi misthophoroi* 'foreign infantry mercenaries' (I.14.4♦; I.16.2); the Macedonians found themselves faced with *misthophoroi* at Ephesus (I.17.9), *xenoi hoi misthophoroi* at Miletus (I.19.1), *xenoi* at Halicarnassus (I.20.2; 23.5), *xenoi misthophoroi* at Hyparna (I.24.4), and so on. But were all these *xenoi* and/or *misthophoroi* actually Greeks? The presence of Greek mercenaries is certainly mentioned quite often, but they clearly constituted only a part of the *misthophoroi* (I.19.6; I.29.5; III.6.2). Several phrases used to describe these troops are unambiguous: at Sylleion, Arrian clearly distinguishes the *xenoi misthophoroi* from the [*xenoi*] *epikhourai* 'natives' (I.26.5♦), the latter clearly referring to soldiers that were recruited on the spot; at Celaenae, we find 1000 Carians and 100 *misthophoroi hellēnes* (I.29.1), and at Gaza *Arabes hoi misthōtoi* (II.25.4; cf. II.27.1 and Quintus Curtius IV.6.15: *Arabs quidam, Darei miles*), mixed with Persians (Quintus Curtius IV.6.30). It is thus undeniable that, even in the western regions, the mercenaries in Persian service were not exclusively of Greek origin. Furthermore, this fact could also be gained from reading Xenophon's general description of the occupation troops in the satrapies: "The king annually reviews the mercenaries (*misthophoroi*) and all the other troops ordered to be under arms" (*Oecon.* IV.6♦): the mercenaries are explicitly distinguished from the soldiers of the garrisons; but there is absolutely no reason to catalogue them all as Greeks (even if there must have been Greeks among them, at least in western Asia Minor). Here is another significant example: Diodorus, in the tale of the expedition against the Cypriot kings in the 350s, writes that the wealth of the island attracted hordes of "soldiers (*stratiōtai*) . . . in the hope of gain" (XVI.42.8–9♦). The context and vocabulary ensure that these were soldiers fighting for pay and a share of the booty, and it is just as clear that the passage does not refer to Greeks exclusively, because Diodorus states that they came from the mainland—namely, Syria and Cilicia. There obviously were plenty of people in those regions quite ready to sign up.

Where did these non-Greek mercenaries come from, and how were they enrolled? The answer seems obvious: mercenaries were hired in every region of the Empire and, more precisely, by the satraps and generals in the territories that came under their authority, such as the Arab *misthōtoi* who were hired by Batis at Gaza; the Chalybian and

Taochian *misthōtoi* in the army of Tiribazus of Armenia (Xenophon, *Anab.* IV.4.18); the Armenian, Mardian, and Chaldean *misthophoroi* found among the troops of Orontes and Artuchas (IV.3.4); and probably the Mysians in Pharnabazus's army (Xenophon, *Hell.* IV.1.24). Elsewhere, Xenophon writes that the Chaldeans of Armenia "serve for hire (*misthou strateuontai*) when any one wants them" (Cyr. III.2.7♦). The hiring of mercenaries was thus certainly a very general practice, and Strabo mentions that the Persians hired mercenaries (*misthophoroi*) among the Hydraces of India (XV.1.6); there are many examples of the use of mercenaries in India at this time (e.g., Arrian IV.26.1 and 27.3; Diodorus XVII.84; Plutarch, *Alex.* 59.3–4). This is perhaps what Ctesias is describing as well (*Indica* §22). Mercenaries are the troops that Xenophon refers to with the entirely characteristic description *hoi basileōs misthophoroi* (*Anab.* VII.8.15♦). This passage shows quite clearly that the author was specifying the territorial troops and garrisons of Mysia, who came to the aid of Asidates from all of the strongholds in the region; they included, for example, "Assyrian hoplites and Hyrcanian horsemen." We also know about the existence of Median, Hyrcanian, and Bactrian military colonies in Asia Minor in 334 (Diodorus XVII.19.4), Hyrcanian settlements in Lydia are attested by Strabo (XIII.4.13), and Bactrian settlements in the same region are mentioned indirectly by Athenaeus (XIV.636a–b). These examples first of all—as if it were really necessary—confirm that not all of the paid garrison soldiers of the Empire were Greeks. Furthermore, it seems clear that all of the soldiers permanently settled in this fashion are vaguely identified by the Greek authors as *misthophoroi*, which is translated by the quite ambiguous term 'mercenaries'. To some extent, the Greek word is not totally misleading, since these Achaemenid "mercenaries" received pay (in the form of rations: *trophē*). We can easily imagine that, if the Greeks had had the occasion to mention the garrison at Elephantine, they would have designated them as mercenaries, because they received rations in kind and money. But at the same time, the Greek word is misleading and introduces confusion, because the *basileōs misthophoroi* are not mercenaries in the precise sense that this word had in ancient Greece.

Let us return for a moment to Artaxerxes III in 345–343. Diodorus mentions that, alongside the mercenaries raised in Greece (and the ones led by Mentor), the king raised 6000 *stratiōtai* from the coastal lands of Asia Minor, adding that the army thus included 10,000 Greeks as *symmakhoi* 'allies' (XVI.44.4). These details elicit two remarks. First, the phrase used (*hoi tēn parathalattion tēs Asias oikountes* 'inhabitants of the seacoast of Asia Minor') does not necessarily imply (despite Diodorus: *Hellēnes*) that all 6000 soldiers were Greek; among them might have been Carians or Lycians (for example). Second, and more generally, Diodorus's merging of the mercenaries and the *symmakhoi* is highly doubtful. Even though the word *symmakhoi* can take on the broad and neutral enough sense of 'military reinforcements', it could also refer to something more specific. We know, for example, that during Darius III's (incomplete) reinforcement of Ecbatana, he received Cadusian and Scythian *symmakhoi* (Arrian III.19.3). Later, Bessus hoped to attract Saka to himself as *symmakhoi* (III.25.3), just as Spitamenes had counted on the *symmakhia* he formed with the Saka, to whom he had promised a share in the booty (IV.5.4–5). In addition, Bessus had brought some Saka to Gaugamela, and Arrian states that they had not been registered as 'subjects' (*hypēkooi*) but had sent a contingent 'on the basis of an alliance with Darius' (*kata symmakhian tēn Dareiou*; III.8.3♦). These last examples lead us to believe that the 6000 soldiers enlisted by Artaxerxes III were not mer-

cenaries in the Greek sense but “mercenaries” in the Achaemenid sense—that is, they were soldiers who signed up not on their own initiative but because of an imperial obligation placed on them collectively (as on the Arabs, Mysians, Taochians, Chaldeans, Mardians, Chalybians, and other Indians). The 6000 “mercenary” *symmakhoi* of the army in Egypt were probably nothing other than troops enrolled in the cities and among the subject coastal peoples by the Asia Minor satraps; they were then sent to the Great King, who was in Phoenicia at the time. Furthermore, it is entirely characteristic of Diodorus that he distinguishes them and collectively refers to them with the phrase *hoi tou basileōs Hellēnes* ‘the King’s Greeks’ (XVI.47.4), which clearly echoes Xenophon’s *hoi basileōs misthophoroi*. The distinction that he introduces does not refer primarily to the ethnic origin of the soldiers but to the institutional method of their recruitment.

In Achaemenid reality, the “royal mercenaries” must be distinguished, for example, from the soldiers of the Babylonian *ḫaṭrus*, who were required to bear the costs of enrolling themselves; in turn, these are distinct from the Persians of the imperial diaspora, who had to provide troops whenever they were requisitioned. The “royal mercenaries” in fact received their rations (*trophē*) from the central administration (Xenophon, *Oec.* IV.5–7). We thus should distinguish the levies that were organized in the framework of general or partial mobilizations (assessments comparable to tribute levies: cf. Herodotus III.67 and Justin I.9.12–13) from the enrollment of paid soldiers from subject peoples, even if both were constituents of the royal army (or a satrapal army). If this description of the system is accurate, the existence of troops of “royal mercenaries,” far from constituting a symptom of the withering of the Great King’s military resources, must instead be considered proof of the Empire’s ability to renew them. This also reminds us of the diversity of methods used by the central authority to control and exploit the peoples of the Empire: Carduchi, Taochians, and other Chaldeans, all of whom Xenophon (*Anab.* V.5.17) refers to as nonsubjects (*hypēkooi*) of the king, provided soldiers in the category of “royal mercenaries.”

“Greek Army” and “Barbarian Army”

In order to define the participation of the mercenaries more precisely, it is important to define the composition of the royal armies in the fourth century. Unfortunately, the ancient terminology is often muddled. The name “Persians” itself is ambiguous: the 20,000 Persians—especially horsemen—commanded by Tithraustes when he fought Artabazus (Schol. Dem. 4.19) were certainly not all of Persian origin, even though there is no doubt that he had recourse to mobilizing contingents that were led by representatives of the Persian aristocracy who had settled permanently in Greater Phrygia. Here, as in many other cases, “Persians” means ‘loyal soldiers levied within the framework of imperial structures’ (including ethnic Persians, obviously). In the case of Diodorus, he is most often satisfied to speak of the barbarian army, without further specification; nonetheless, apart from the obvious precedent of the “barbarian” army of Cyrus the Younger (chap. 15/2), the methods of enlistment used by Artaxerxes III in Babylon imply that forces levied in Mesopotamia and the east of the Empire were combined (XVI.42.1). As usual, the king was joined en route by satrapal contingents that came from Asia Minor (probably in Cilicia), including “a large force of cavalry and no small body of infantry composed of barbarians” led by Rhosaces, “satrap of Ionia and Lydia” (§47.2◊). It is also possible that Mazaeus and Belesys, who had previously been defeated by the Sidonians (§42.1–2), led

the contingents from Cilicia and Syria (if Belesys had not died in the meantime). In Phoenicia, they joined the mercenaries, as well as the *symmakhoi* of Asia Minor (§44.1–4). The royal army comprised the totality of these contingents, within which the portion singled out by Diodorus under the term “Greek army” (as in the army of Cyrus the Younger) constituted a numerical minority.

Other examples may be added that testify eloquently to the undiminished abilities of the military resources belonging to the satraps and Great Kings up to and including the reign of Darius III. One of the most interesting comes from the reign of Artaxerxes II, a period when it is generally agreed that the satraps very largely depended on the enlistment of (Greek) mercenaries. There is a very precise inventory in Nepos (*Dat.* 8.1–2♠) of contingents that Autophradates put on the line against the rebel Datames:

Of [Persian] barbarians he had twenty thousand horse and a hundred thousand foot, of the troops that the Persians call Cardaces, besides three thousand slingers of the same nationality; and in addition, eight thousand Cappadocians, ten thousand Armenians, five thousand Paphlagonians, ten thousand Phrygians, five thousand Lydians, about three thousand Aspendians and Pisidians, two thousand Cilicians, the same number of Captiani, and three thousand Greek mercenaries, along with an enormous number of light-armed troops.

This document, which there is no reason to doubt, is very clear. Nepos carefully distinguishes the Persians proper (barbarians, Persians, Cardaces) from the other contingents; he no less precisely distinguishes the Greek mercenaries from the troops levied from the Asia Minor satrapies as imperial assessments (Cappadocia, Armenia, Lydia, Cilicia; we do not know which *ethnos* is concealed behind the name “Captiani” [Cataonians?]). It is possible that the Pisidians and Aspendians were enrolled as “mercenaries” (in the Achaemenid sense; see above). Note, finally, that, whatever doubts may legitimately be nurtured about the absolute numbers, the share of Greek mercenaries is proportionally very small.

The composition of the satrapal contingents at the battle of the Granicus is stripped of all ambiguity. If at first we set aside the problem of foreign mercenaries—to which we shall shortly return—the methods of assembling satrapal troops provide information that is generally consistent from source to source. The Asia Minor satraps (those who are named are Arsites of Hellespontine Phrygia, Spithridates of Lydia and Ionia, Atizyes of Greater Phrygia, and Mithrobuzanes of Cappadocia) mustered their troops from everywhere: among them were Hyrcanian horsemen, Medes, and Bactrians (which may all have come from permanent colonies and garrisons)—that is, the “royal mercenaries” (above); the masters of *dōreai* (such as Memnon, and probably Arsames as well) brought their “own horsemen”; subject peoples provided a contingent to the satrap who ruled them (a contingent of Paphlagonian horsemen alongside Arsites). In the methods used to raise it and in its very composition, the army commanded by Arsites in 334 matches feature for feature the “barbarian” army assembled by Cyrus the Younger in Asia Minor.

Let us now consider the armies led in person by Darius at Issus and Gaugamela. The evidence poses two preliminary methodological problems. First, the numbers are immoderately exaggerated by the ancient authors (though by differing amounts). We may recall here what was said about the armies of Xerxes in 480 and suggest that it is impossible to establish a numerical value that is certain. Furthermore, we can note in passing that Quintus Curtius explicitly compares the review organized by Darius III with the census of Xerxes’ army at Doriscus (III.2.2), leading to the comment: “An all but innumerable mass of cavalry and foot, which gave the appearance of being greater than it ac-

tually was" (2.3♠)! Second, the analysis of the initial disposition of the troop formations and the unfolding of the battles in principle should have provided some basic information. Unfortunately, in this case as in so many others, the ancient tales are fragmentary and contradictory—so much so that reconstructing the maneuvers continues to divide the war-game specialists. This is especially the case for the battle of the Granicus, on which the reports of Arrian and Diodorus disagree from beginning to end.

In any event, the ancient texts are in sufficient agreement that we may state, without fear of error, that Darius created his armies with the help of ethnic contingents levied in every satrapy of the Empire that he controlled at the time (cf. the phrase *kata ethnē*: Arrian II.8.8; Diodorus XVII.58.1 [Gaugamela]). In order to prepare for the battle that was about to take place at Issus, the Great King brought troops from everywhere to Babylon. Though the extended time that the process took prevented the arrival of the contingents from the Iranian Plateau, the troops included in his army were (according to Quintus Curtius) Persians, Medes, Barcaeans, Armenians, and Hyrcani (Quintus Curtius III.2.4–9; order of battle: III.9.1–6; and Arrian II.8.5–8). Similarly, between 332 and 331, Darius once again convened his troops at Babylon, before bringing them close to Arbela. This time, the contingents from the Iranian Plateau had arrived in time (cf. Quintus Curtius IV.9.1–3), and they seem to have formed, according to Arrian (who refers to an official document preserved by Aristobulus), the heart of the new royal army (III.1.3–7); each satrap brought his own contingent(s) (III.8.3–7). Without analyzing each situation in detail, the conclusion is obvious: from 334 to 331, Darius employed all of the military resources of the Empire—all of which leads us to think that the troops at that time were both highly diversified (colonies, garrisons, soldiers of the imperial diaspora, contingents of the subject people, "royal mercenaries") and quite large.

The problem of the Darius III's Greek mercenaries remains—a problem that we have deliberately set aside until now. The ancient texts present three well-known problems: the number, the ethnic origin, and the technical specialization of these troops. We should first of all present the information on these problems provided by Alexander's authors, distinguishing them chronologically.

(1) Alone among the ancient authors, Arrian twice mentions the presence of 20,000 "foreign mercenary infantry" in the satraps' army at the Granicus, in addition to 20,000 "Persian" infantrymen (I.14.4; ♠ II.7.6). These mercenaries were commanded by the Persian Omaves (I.16.3). Diodorus speaks of 100,000 Persian foot soldiers (XVII.19.5♠). Plutarch alludes to foot-soldier combat when he states that the Persian infantry was not slow to flee: only the Greek mercenaries stood their ground, only to be massacred by Alexander (Alex. 16.12–14); according to Arrian, none survived, except for 2000 who were taken prisoner (I.16.2).

(2) After he decided to oppose Alexander directly, Darius ordered Pharnabazus, the nephew of and successor to Memnon (who had died in the summer of 333), to send foreign mercenaries (*peregrini milites/xenoi misthophoroi*) to him. Pharnabazus followed these instructions and brought them from Mytilene to Lycia, where he turned them over to Thymondas, son of Mentor, his close relative (Quintus Curtius III.3.1; Arrian II.2.1–2). The mercenaries seem to have been brought by sea to Tripolis in Phoenicia, and there they joined the royal army (Arrian III.13.3). Quintus Curtius stresses that Darius put all of his hope in these mercenaries (III.3.1; III.8.1). Just like Arrian (II.8.6), Quintus Curtius says that there were 30,000 mercenaries who, in his opinion, constituted "the undeniable elite of the army." They were placed under the command of Thymondas on

the right flank, while 20,000 barbarian infantrymen were placed on the left flank (III.9.2–3). Arrian states that the 30,000 Greek mercenaries were placed at the head of the “hoplite troops,” facing the Macedonian phalanx, while 60,000 “Cardacian hoplites” were placed on the other side (II.8.6). Behind the Greek mercenaries and the “Persian phalanx,” the other contingents were ranged *kata ethnē* (Arrian II.8.8).

(3) After the defeat, several thousand Greek mercenaries accompanied Darius in his train: the number was 4000, according to Arrian (II.13.1). Another 8000 left the battlefield on the orders of their leaders (Amyntas the Macedonian, Thymondas, Aristomedes of Pherae, and Bianor of Acarnania) and reached Tripolis in Phoenicia (Arrian II.13.2–3). At Gaugamela, close to Darius (at the center), there was a contingent of Greek mercenaries alongside his Persian troops, opposite the Macedonian phalanx (Arrian III.11.7). Quintus Curtius, who places Darius in the left flank (IV.14.8), is not explicit, but like Arrian (III.16.2) he mentions that foreign mercenaries accompanied Darius when he fled (V.8.3: 4000; 2000 in Arrian). According to Arrian, they were led by Paron of Phocaea and Glaucus the Etolian (III.16.2). Quintus Curtius also mentions this Paron (Patron) and gives him a speech in which he recalls that only a very small number of mercenaries remained out of the 50,000 that had begun the battle (V.11.5); he presents them as the last bulwark of royal legitimacy against conspirators (V.8.3; 10.7; 11.12). There is clearly much smugness in this claim about faithfulness—which is also found in Aelian (*Anim.* VI.25) when he speaks of the unconditional faithfulness of the Great King’s dog, which he directly compares with the faithfulness of Cyrus the Younger’s Tablemates at Cunaxa!

The numbers provided are both scarcely credible and difficult to check (cf. Polybius XII.17–22). It is clear that Quintus Curtius overstates the number of mercenaries in the Great King’s service—he has Patron refer to 50,000. Even if we assume that Quintus Curtius was totaling the 20,000 mercenaries from the battle of the Granicus (Arrian) and the 30,000 from Issus (which is not at all certain), each of these figures by itself is problematic. Throughout his story, the mercenaries occupy a special position alongside Darius, because he loves to contrast their courage and faithfulness with the cowardice of the barbarians (cf. III.9.11; 11.17–18). The barbarians are opulently clothed (“like women”), but they are far from courageous (see III.3.14; compare V.1.23). Arrian’s number (20,000 mercenaries at the Granicus) has long been rightly doubted, though he points out that he is referring to foreign mercenaries—not just Greek mercenaries (even though he later tends to “Hellenize” them). That the Asia Minor satraps had Greek mercenaries at their disposal is indisputable, but that they arrayed 20,000 of them at the Granicus is utterly impossible. Finally, let us stress that this infantry force does not seem to have held a significant place in the strategic thinking of the satraps, because they are never reported as having participated (except quite incidentally in Plutarch). It is thus risky to state that the Greek mercenaries were never as numerous in the Achaemenid armies as between 333 and 331. Though Alexander’s ancient historians strongly insisted on the number and valor of Darius III’s mercenaries, on the one hand, they did so because, by calling them Greeks, they could sing the limitless praise of Alexander’s “pan-Hellenic” merits (Arrian I.16.6); on the other hand, they did so because they loved to stress the unshakable devotion that some Greek leaders showed to Darius. Finally, for reasons already given, the “royal mercenaries” may have been included in the count of the *xenoi misthophoroi*, just like the colonists levied in Asia Minor (Diodorus XVII.19.4).

Since the problem of the numbers seems insoluble, we would do better to examine the function of the mercenaries at Issus and Gaugamela. First of all, it is clear that the Persian high command had no illusions about the military abilities of some of the contingents that were organized *kata ethnē*, despite the training sessions that all of the royal troops regularly received (Diodorus XI.75.3; XVII.55.1). At Issus, these groups were placed far from the front line indeed (Arrian II.8.8). Obviously, the Persians relied most of all on the contingents of Persian and Iranian horsemen, as is clearly seen in the three set battles. At Issus, there is no reason to doubt the order that Darius gave to Pharnabazus and Thymondas to assemble (some of) the mercenaries in Cilicia for the impending battle. The ancient authors state several times that Darius believed that they were the only force capable of stopping the Macedonian phalanx. Here again we see the classic theme of Greek tactical superiority in infantry combat, which in turn implies that the Persians had only poorly-prepared infantrymen. Does this mean that after the defeats of 480–479, the Persians never attempted to put an infantry worthy of the name into the field? On this point, we have serious reservations.

The order of battle at Issus and Gaugamela in fact suggests a considerably different interpretation. At Issus, the Greek mercenaries were not alone against the Macedonian phalanx; not far from them, in fact, “60,000 of the so-called Cardaces, who were also hoplites,” were placed (Arrian II.8.6◊). Together they constituted the “Darius phalanx” (II.8.10). Even though Arrian reduces the infantry combats to a duel between Greeks and Macedonians (II.10.5–7), there is no reason to follow him across this terrain that is so well known to the entire Greek tradition (cf. II.10.7: *tois genesi tōi te Hellēnikōi kai tōi Makedonikōi philotimia*, comparable with Diodorus XVI.46.9: *agōn/philotimia* between the Spartans and Thebans before Pelusium in 343). At Gaugamela, Darius also had a phalanx (Arrian III.14.1) that faced the Macedonian phalanx and comprised Greek mercenaries and “Persian troops” (III.11.7◊). Unfortunately we do not know exactly who the Cardaces were, but we could legitimately think that they made up the Persian phalanx. In support of this idea, we may note that they already appear in the army that Autophradates set against Datames some 40 years earlier; there were 100,000 of them, as Nepos would have it (*Dat.* 8.2: . . . *quos illi [the Persians] Cardacas appellat*). The term also appears in Strabo’s passage (XV.3.18) on the education of young Persians, which is perhaps an interpolation. According to Strabo, the term *Kardakēs* refers to military and physical attributes; in his context, it seems to refer, originally at least, to young men who had completed the rite of passage from adolescence to adulthood. But later (or simultaneously), it more likely refers to elite infantry troops who underwent training comparable to that of the Greek and Macedonian infantry.

Intermittent and accidental though they may be, several other pieces of information indicate that the Persians attempted to adapt their armaments and their tactics to Macedonian techniques. Diodorus, for example, states that Darius introduced some innovations in 332–331: “He had fashioned swords (*xiphē*) and lances (*xysta*) much longer than his earlier types because it was thought that Alexander had had a great advantage in this respect in the battle in Cilicia” (XVII.53.1◊). This tactic might seem to be too little, too late. Quintus Curtius explains that Darius actually had been doing this sort of thing since the beginning of his reign: he “had ordered that the form of the Persian scabbard of the scimitar (*acimacis/akinakēs*) should be changed to that shape which the Greeks used” (III.3.6◊). The adaptations go back even earlier: Cyrus the Younger’s elite

horsemen, who were the best equipped, carried Greek breastplates and swords (Diodorus XIV.22.6♦).

This evidence stimulates some reflections. While there is no reason to reject the evidence, it is important to stress the limits of its applicability. Diodorus and Quintus Curtius, who are dependent on their Greek and Macedonian informants, report only what they consider interesting from the Greek point of view—namely, that in order better to withstand Alexander, Darius had tried to mimic certain Greek tactics. Though the remark *may* (though far from certainly) imply a positive evaluation of the Great King within the rationale of one of Diodorus's sources (XVII.7.1), this says nothing more than that the information was meant to support the notion that the only hope for survival for Darius's Empire was "Hellenization." However, should we not recognize that the Persian general staff wanted to improve the tactical capabilities of their troops by adopting many other practices apart from those they could copy from the Greeks? To ask the question is to answer it. Arrian, for example, mentions the presence of elephants in front of the Persian battle line (III.11.6; see §15.6 and *FGrH* 151 F5). We can legitimately question the practicality of elephants in battle, but the novelty of the deployment (on the western front at least! [Ctesias §6]) and its Indian origin are beyond doubt. Similarly, all of the ancient authors report that Darius relied heavily on his scythed war chariots to disrupt the Macedonian battle line. This was a specifically Persian tactic (Xenophon, *Cyr.* VI.1.29–30) that the Greek troops, to their horror, had already experienced in Asia Minor when fighting Pharnabazus (*Hell.* IV.1.17–19) and at Cunaxa against Artaxerxes II (Plutarch, *Art.* 7.6). The occasional borrowing of Greek weaponry must not lead us to the conclusion that the Achaemenid army was suffering from technical stagnation, and the (limited) recourse to Greek mercenaries should not lead us to imagine a withering away of imperial military forces, and even less that Persia's native abilities were drying up. According to eyewitness testimony (Hieronymus of Cardia) about the region of Fahliyum, "Those who inhabited this country were the most warlike of the Persians, every man being a Bowman and a slinger, and in density of population, too, this country far surpassed the other satrapies" (Diodorus XIX.21.3♦)—and this does not include the contingents that the Diadochi were able to draw from the country (e.g., XIX.17.4: 10,000 archers). There is thus no longer any reason to follow Xenophon in his reconstructed speech on the decadence of the education offered to young Persians at the heart of the Empire.

In sum, in 334 as before, the Great King could rely on considerable military strength. To confront the Greek and Macedonian phalanx, he could deploy his own phalanx, and there is nothing to lead us to believe that from the beginning of the fourth century on the Achaemenid infantry had lost the maneuverability that had so impressed some of the Greek observers of the battle of Cunaxa (cf. Plutarch, *Art.* 7.4–6). We shall return to this later (chap. 18/5); but let us say for now that the defeats inflicted by Alexander must not be considered either proof, or even a significant indication, of military disarray in the Empire of Darius III.

4. Subject Populations and Tribute Economy

Hoarding and Stagnation: Obvious but False

One of the most frequently suggested causes for the weakening of the Empire and the victory of Alexander certainly is the structural crisis inflicted by the tribute economy. This crisis, which was bitterly resented by the subject population, would in turn explain

their disaffection with the Great King and their defection to the Macedonian conqueror. This theory was first formulated by Olmstead, who gave his chapter on royal assessments a title that left no room for ambiguity: "Overtaxation and Its Results." Olmstead begins with Herodotus's tribute list, which he contextualizes not at the heart of Darius's reign but at the pivot between Xerxes and Artaxerxes, as if to demonstrate more dramatically the notion of a general crisis that would be illustrated by the assassination of the Great King and bloody struggles for the succession. Olmstead's idea may be summarized as follows. The imperial fiscal administration created a unidirectional flow of wealth, from the periphery to the center, symbolized by the size of the treasuries captured by Alexander. This "surtax" created a shortage of money in the provinces—hence, he says, simultaneous inflation and price increases that are especially observable in Babylonia. This led to many revolts by the subject peoples and is even reflected in the need that the Babylonians found themselves faced with—to auction off their daughters (Herodotus I.196).

It is worth noting that this theory, despite the criticisms it has received from time to time, continues to permeate many recent works about both the Achaemenids and Alexander. It therefore might be worthwhile to investigate its origins. Droysen's publications deserve special consideration. One of the most remarkable innovations attributed to Alexander by Droysen, the "inventor of the Hellenistic period," was the "extent of economic success," which he explains first and foremost as a result of the fact that Alexander put the Persian treasuries into circulation. We cannot help quoting Droysen's splendid sentence on this topic:

When Alexander liberated these riches that had previously been sequestered, when [the new power] let them escape its bosom, as the heart pumps blood, it is easy to understand that labor and commerce spread them around, in faster and faster circulation, among the long-ligatured members of the Empire; we see how, by this means, the economic life of the peoples, from whom Persian dominion had sucked the life force like a vampire, had to recover and prosper.

It is quite noteworthy that Droysen is content to support his suggestion by referring only to Plutarch's *De Fortuna Alexandri* (I.8 [*Moralia* 330d]). In his delirious panegyric to the Conqueror, he emphasizes that Alexander did not come to Asia simply to turn it into booty; his true desire was "to render all upon earth subject to one law of reason and one form of government and to reveal all men as one people!"

However, although we can comprehend how, given both the rationale of his historical-philosophical vision and the state of the evidence in his time, Droysen was able to maintain the theory of the "vampirization" of the Empire, how can we explain why such a simplistic, not to mention poorly argued, position could have known (and could still know) such success? We can imagine that two historiographic streams, however generally contradictory, played a decisive role. First there is what might be called European colonial historiography, which in its search for models and precedents often turned to the "great colonizers" of Antiquity, such as Alexander. Mimicking Plutarch's presentation, historians have presented Alexander as a generous, chivalrous conqueror who brought progress to a stagnant Asia. The reestablishment of peace, opening of roads, founding of towns, and monetization of the Persian treasuries were the vectors and methods of unprecedented economic and commercial expansion. We will not dwell long on the failings of this reconstruction, which is based primarily on the assumption that a conquering and commercial Europe was culturally superior. What is more surprising—at least at first sight—is that Marxist historiography has contributed in no small

measure to spreading the model as well. We know that Engels and Marx conceived the theoretical model of the "Asiatic mode of production." "Asiatic" societies are fundamentally characterized by "stagnation"; in fact, to repeat the words of J. Chesneaux, Marx "was literally haunted—the word is not too strong—by the problem of 'Oriental stagnation.'" While Marxist scholars (aided by Wittfogel's analyses, which they also adduced) in the 1970s and 1980s vigorously rejected this notion, it is no less true that it has not disappeared at all—it is attested by the (highly politicized) use of the word "stagnation" in the language of *perestroika*. Even though Marxist thought has scarcely touched on the study of the Achaemenid Empire and Alexander's conquests, historians have nonetheless long made reference (most often implicitly) to a model that postulates both over-exploitation of tribute and economic stagnation, as seen in Olmstead.

It is true that the ancient sources also may be used to illustrate the centripetal circulation of resources. This is in fact the basic idea underpinning the ancient discussions of the king's table and the royal paradises: the untold wealth of the Great King is explained as coming from conquest and taxes (chap. 5/6). For example, Strabo, following Polyclitus, explains that each king had to build at Susa not only a residence (*oikēsis*) but also treasuries (*thēsauroi*) and storehouses (*paratheseis*), where they deposited the tribute money in hope of managing it wisely (*oikonomia*; XV.3.21). Diodorus states that the treasuries seized by Alexander at both Susa and Persepolis were the result of ceaseless accumulation from the time of Cyrus onward (XVII.66.1; 71.1). And Plutarch reports that at Susa "Alexander found . . . five thousand talents' worth of Hermionian purple, that had been laid up there an hundred and ninety years, and yet kept its colour as fresh and lively as at first" (*Alex.* 36.2♦). In the thinking of Pseudo-Aristotle, the good operation of the royal economy is the purpose and justification of the tribute system he analyzes. The royal economy, he writes, "is universal in scope." According to Pseudo-Aristotle, the Great King understood perfectly how to apply the maxim he records in these words: "The expenditure must not exceed the income" (II.1.6♦). We can also cite the passage where Herodotus explains how the Great King kept the gold and silver tribute in his stock (III.96; cf. Strabo XV.3.21). According to Strabo, the king used a very small part of tribute income for his well-known policy of redistribution through gifts and to enhance the opulence of his table and palaces. Both explain the political and ideological function of the Great King's treasuries. However, this is obviously only a partial explanation: the expenses to which Pseudo-Aristotle alluded were not limited to luxury goods. Even though the Greek authors took court expenditures into account, it is easy to understand why they considered the method of managing the royal wealth to be particularly "frugal," because the Great King had immense stores of precious metals at any point in time; as Strabo put it when describing a later period, he never struck more coins than he needed for anticipated expenses, bit by bit (XV.3.21). This was precisely the situation in the time of Darius III. In short, the king had no need for recourse to the financial strategies used by the cities, satraps, or generals—which are described and deplored by the author of the *Oeconomica*.

Each of these texts contributes to establishing a picture of a Great King who was stingy, if not greedy—someone who could part with his riches only with the greatest difficulty. In Greek eyes, in fact, the Great King was a model *economist*, in the sense of a careful administrator of a great estate (*oikos*), and they assimilate the Empire to this model in a manner that is both simplistic and suggestive. In fact, the Great King took

care of his expenses "with economy (*oikonomikōs*) and even with parsimony (*akribōs*)," as Heraclides of Cyme put it (Athenaeus IV.145d↔), and the Greek soldiers engaged in his service—so it seems—complained about it (*Hell. Oxyr.* 19.2). In the same vein, Plutarch does not even hesitate to state that the Great Kings (insofar as he knew!) rarely visited Persia, and Artaxerxes never went there at all, because they hated having to hand out gold pieces to pregnant women as royal custom demanded (*Alex.* 69.2). But the theory of hoarding/vampirization goes too far when both economic stagnation and violent, generalized discontent against Persian authority among the subject peoples are derived from it—all of which is marshalled to provide a historical interpretation of the Macedonian victory.

Even when it is stripped of its rhetorical excesses, this interpretation raises many doubts. First of all, it tends to minimize the very rationale for the operation of a system based on redistribution. At any rate, this is partially explained by Strabo himself: in the context of noting, like Herodotus, that the Great King spent gold or silver only at the moment it was needed, Strabo explains that only a very small portion was turned into coinage (as confirmed by the treasury inventories of 331–330) and that most of the precious metal was transformed into pieces of equipment (*kataskeuai*; furniture); furthermore, "they consider those metals as better adapted for presents (*dōreai*) and for depositing in storehouses" (*pros keimēliōn apothēsai*; XV.3.21↔). Indeed, as we have seen (chap. 8), "royal gifts" were the very essence of the king's relationship with the Faithful. In addition, it is certainly a mistake to state that the royal treasure was derived exclusively from the yield of tribute and gifts; some of it was the booty of war. After a conquest, the Great Kings seized the treasuries of the defeated kings and brought them to their capitals, which is exactly what Alexander did. Finally, though it is no doubt true that part of the tribute actually was taken all the way to Persia (Susa, Babylon), it is also clear that, despite the inadequacy of the ancient sources, the amount in the treasuries seized by Alexander in the great capitals was far less than the amount of tribute that we might theoretically reconstruct had been collected since Cyrus or Darius. It is obvious that a major portion of the tribute remained in the treasuries of the satrapal capitals, and Alexander took possession of these as well.

Moreover, the contrast often invoked between Achaemenid hoarding and the sudden circulation (monetization) of the royal wealth by Alexander should be evaluated carefully. The conclusions drawn, which are based on analysis of partial sources, come from two assumptions that are both open to challenge. The first assumption is that economic prosperity requires the use of coined money; but the case of Babylonia (which is not unique: e.g., PT 85) shows that weighed silver played a similar and equally effective role. The second assumption (which is almost dead) is that the Achaemenid Empire did not know the use of coined money; but this is false on two counts. First, in the Mediterranean lands, cash money was common and became more and more widespread beginning in the second half of the fifth century, as shown, for example, by the Cilician, Cypriot, Phoenician, Judean, and Samaritan issues. Moreover, small denominations appeared in more and more dense distribution, which in themselves were obviously one of the vectors for local monetary trade (even if trading was not limited to the monetary level). In addition, Athenian coinage (originals and imitations) circulated widely from Egypt to Central Asia. Assuming that this is really the basic point (which is far from certain), the least one can say is that the Achaemenid lands did not lack for means of

payment and trade. It is quite surprising that Olmstead, based on the Babylonian material, connects the lack of silver and coin to inflation, on the one hand, and to rising prices, on the other. Even if we assume that the word *inflation* is justifiable, we do not see how inflation could be connected with the lack of liquid assets. Instead, stagnation/deflation is a more likely result. It seems clear enough that the analytical tools commonly used (not without error and approximation!) in our capitalist societies are not directly applicable to Babylonia at the end of the fifth century. We have elsewhere discussed the difficulties faced by the historian in interpreting the “price increase” that took place at Persepolis around 466 (see chap. 11/8).

Let’s face it: though it is easy enough to expose the failures of one’s predecessors, it is vastly more difficult to offer an alternative positive reconstruction. The basic reason is the crying inadequacy of the sources and the absence of truly functional theoretical models; at least, the profusion of models reveals nothing more than our inability to describe and explain the general operation of an Empire where unity and diversity interacted dialectically. It is extraordinarily difficult to draw a picture of the flow of exchange that is both supportable and satisfying. However, we cannot be satisfied with a simplistic picture (such as the one painted by Alexander’s colonial historiography), which combines the opening of roads, the spread of peace, and the circulation of merchandise. We reject this simplistic explanation quite simply because the sources do not allow it—not the literary sources, not the numismatic evidence, and not the results of archaeology. It is enough here to observe that, for example, the texts (Greek or Elamite) bearing on the roads never associate the use of the great imperial highways with the traffic of merchants and merchandise. Only very rarely are we (fleetingly) informed about commercial prosperity of the sort achieved by Sidon around the middle of the fourth century (cf. Diodorus XVI.41.4: *dia tēs emporias*). Certainly, no historical inference is to be drawn from this silence; it can be explained first of all by the narrowly political (Persepolis tablets) and military (Greek and Hellenistic sources) orientation of the available evidence. Another factor is that a major portion of transportation was by water (seas and rivers), for which direct evidence is rare, except in Babylonia. The recent discovery of a customs memorandum from Egypt dating to the time of Xerxes reminds us of the dangers of any argument from silence (TADAE C.3.7; chap. 9/3: *Customs Collection and Trade*, above). Babylonia remains the best-documented region, and this presumably is why Olmstead made it the basis of his interpretations. But even in the case of Babylon, it is necessary to emphasize the gaps in the documentation, which primarily relate to the uneven chronological distribution of the tablets. Because of this, any attempt to follow the fluctuations of the Babylonian economy from Cyrus to Darius III will be at risk.

Center and Periphery

At the same time, it seems clear that the theory of Achaemenid hoarding/vampirization is based on another certainty—that the Great Kings, who were jealous for their power and authority more than anything else, had no interest in pursuing a policy that would develop the conquered countries, which were considered sources of revenue first and foremost. It is true that each of the elements of the interpretation that has just been presented in summary can be supported by evidence, whether it concerns the ostentatious luxury of the Great Kings or the severity of the assessments. After all, to Pseudo-Aristotle, the royal economy appeared to operate as a gigantic financial sump fed by the

satrapal economy. On the other side of the issue, we tend to distrust principles derived from monarchic ideology, which bestows on the king the image of a benefactor and defender of the workers in the fields. Even after the evidence has been gathered, the problem remains unsolved. The Empire was in fact not merely a "symbolic capital" but also a collection of means of production (primarily land and water) and productive powers (in particular human productive powers). In the vision—which was necessarily their vision—of an Empire destined to perdure, the Great Kings certainly did concern themselves with guaranteeing the regularity of their income; they were determined to preserve and increase their capital and to bequeath it to their successors magnified and enriched. The term *capital* must not send shivers down our spines; whether conquered, bought, or given, a city (or a territory) "could not be anything more than a productive organism susceptible to appreciation" (J.-M. Bertrand) and thus subject also to the calculation of profitability, which in the case of the Great King (his predecessors, his successors) was measured by the scale of its yield in tribute. This is in fact the significance of some Hellenistic inscriptions: for example, by guaranteeing that the inhabitants of a city retained possession of land that was contested by "barbarians," a royal governor reminded the citizens (Arsinoe in Cilicia) that they had to "fully cultivate the land and make plantations (*phyteu[santes]*), in order to live in prosperity and in order to pay the king greater revenues (*prosodoi*) than before" (SEG XXXIX.1426). Here, the gift of land, which often has been reduced to its political component, is explicitly considered by the king to be a long-term investment—and this will soon be confirmed by Polybius (X.28.2-4; below).

It is true that Xenophon presents a picture of the Great King as a wise economist: he was eager to see the tribute pour in regularly; he rewarded the governors charged with receipt of tribute, as well as the military leaders, who were responsible for seeing to the security of the fields. In the Great King's eyes, good governors, whom he rewards, are those "who are able to show him that their country is densely populated and that the land is in cultivation and well stocked with the trees of the district and with the crops" (Oec. IV.8↯). Xenophon highlights the fact that the Great King's interest in maintaining and developing the population and increasing the value of regions cannot merely be assigned to the ideological category of the "good gardener" (see chap. 6/5). The paradises were not merely striking evidence of the king's authority over the growing cycle, nor simply hunting preserves; they also were agricultural estates, places for horticultural experimentation carefully undertaken and cultivated by the villagers assigned to them (cf. Xenophon, *Anab.* IV.4.7; *Hell.* IV.1.15; PFa 33; ML 12). The granting of *dōreai* itself tended to improve production. The evidence frequently portrays holders of land grants as absentee landlords and simple farmers. But even if the Murašū tablets can support this interpretation, it nonetheless remains partial. First of all, even when they delegated responsibilities, the Murašū were concerned both with generating personal profit from renting land and gathering the royal duties. On the other hand, the "owner farm" grant holders had great interest in good yield from their lands, as attested by the Aršāma correspondence (DAE 68 [AD 7]).

In his discussions of the conquests of "Cyrus," Xenophon often mentions the conqueror's policy that had the goal of generating profit from the land and peasants. Thus, "Cyrus" stated with respect to the "Assyrian" peasants: "No change whatever shall come to you except that you shall not have the same ruler over you as before; but you shall

dwelt in the same houses and work the same farms; you shall live with the same wives and have control of your children just as now. But you shall not have to fight either us or any one else" (Cyr. IV.4.10–11; cf. III.3.22). Of course, Xenophon's model can be criticized, but is it anything other than a praise of "good kingship"? The ideological theme of "defense of the peasants" conceals a basic practicality in that the lands and peasants regularly filled the royal coffers with tribute. The maintenance of existing social structures (village communities) represents both a purpose and a means of gaining political and tribute dominion. In this respect, the ideology of peace is not a simple distortion of the truth: the king and his satraps were "protectors of the peasants," and this contributed to the maintenance of the level of production capability and guaranteed harvest and tribute, as Xenophon rightly insists. He has "Cyrus" speak the following words: "An inhabited country is a very valuable possession, but a land destitute of people becomes likewise destitute of produce" (Cyr. IV.4.5♦). This confirms the "birth-rate incentive policy" (cf. p. 733) attested in Persia both among the Persians themselves and among the *kurtaš*—a policy designed to increase human reproduction that, pursued throughout the Achaemenid period (Plutarch, *Alex.* 69.1–2; *Mor.* 246a–b), had some success, as attested by Diodorus Siculus at the beginning of the Hellenistic period (XIX.21.3).

It is quite clear that this evidence is disparate, vague, and susceptible to varying interpretations. Can we really speak of profitable investments that must have been financed directly by the royal administration, which then skimmed off part of the profits or derived tribute while hoping to generate additional future profits? Aside from the Persepolis tablets (chap. 11), the available evidence is terribly inadequate. The inadequacy is not simply quantitative but qualitative as well, in that no document explicitly speaks of a policy of economic development (and certainly none would be expected). The same evidence can support varying interpretations as a function of the assumptions and models used. The case of the canal from the Nile to the Red Sea is entirely typical in this regard. Once it has been proved that the goal of creation of the canal was not to establish a direct, permanent link between the Nile Valley and Susa, must we conclude that Darius's decision was based purely on political-ideological motives? Recent explorations in the Tell el-Maskhuta region has produced evidence of a rather sizable influx of pottery from various Greek cities (Chios, Thasos, Lesbos) and especially from Phoenicia. Was development of trade in the region Darius's goal, or does it merely represent a side effect of an action that emerged primarily from the political sphere? It is obviously impossible to offer a sure answer. However, if we place Darius's policy in the *longue durée* between Necho (cf. Diodorus II.158–59) and the Ptolemies (e.g., Diodorus I.33), it is not likely that we would think that the Great King had no commercial (fiscal) interest in the matter at all.

The evidence regarding water-resource policy seems clearer. At all times, in the great irrigated valleys, the king and his administration took charge of the great water works. This was true in Babylonia—a case that we have already had occasion to discuss (chap. 16/10)—as is shown by Arrian (VII.7.7; VII.21) and Strabo (XVI.1.11). The Babylonian texts reveal that there was a special Water Department. For Egypt, we have nothing but a single passage in Herodotus (II.90), which is interesting at least because it shows that the royal administration maintained and reinforced the levees that protected Memphis and environs each year (an activity that we might be inclined to doubt); in all likelihood, we once again have only a partial view of much more extensive work. There is another text that adds to this topic, a passage in Polybius that by pure chance preserves direct

information on the Great Kings' initiatives regarding the water supply. Within an account of Antiochus III's campaign against the Parthian king Arsaces, Polybius offers the following information on methods of bringing water to a part of Hyrcania that is referred to as desert:

Fig. 65. Plan of a qanat (showing profile and vertical views).

In the region I speak of there is no water visible on the surface, but even in the desert there are a number of underground (*hyponomoi*) channels communicating with wells (*phreatiai*) unknown to those not acquainted with the country. About these a true story is told by the inhabitants. They say that at the time when the Persians were the rulers of Asia they gave to those who conveyed a supply of water to places previously unirrigated the right of cultivating (*karpeusai*) the land for five generations, and consequently as the Taurus [Elburz] has many large streams descending from it, people incurred great expense and trouble in making underground channels reaching a long distance, so that at the present day those who make use of the water do not know whence the channels derive their supply. (X.28.2-4♦)

Polybius describes quite precisely installations called *qanats* that have been used for centuries in Iran: they are subterranean corridors that sometimes run tens of kilometers to water sources lying under the slopes of well-watered mountains. The technology certainly goes back before the Persian conquest, but Polybius includes a very important clarification of a well-thought-out policy of the royal administration. This work did not require the mobilization of a vast labor force (unlike the great Babylonian, Egyptian, and Bactrian canals); instead, it was carried out by the local populations. In exchange for investment in the form of labor, Hyrcanian communities received not ownership but use (*karpeusai*) of the land. The royal administration drew benefit from it in several ways. It is obvious, for one thing, that arrangements like this made it possible to place water reserves along the high road from Media to Central Asia. Furthermore, it enabled lands to be planted that had previously been unproductive and thus supported a policy of agrarian colonization. Finally, nothing suggests that the Hyrcanians received a tax exemption. The word *karpeusai* indicates only that they had the right to cultivate a plot of which they were not the real owner; it does not imply they were free of all royal assessments. In reality, the administration certainly expected to receive revenue from these parcels in the form of tribute and/or water taxes (cf. chap. 10/7). The fact that the description is an isolated example should neither surprise us nor create a statistical illusion; we have access to this information in the first place only because the *qanats* played a role in military strategy. Thus, we may draw the inference, without much risk, that the royal administration followed an identical policy in other parts of the Iranian Plateau and perhaps in other parts of the Empire (Arabia, Egypt). Of course, the form of royal involvement is different from what one would find in Babylonia; in Iran we find encouragement rather than direct intervention, but the contrast is essentially more formal than structural.

There is today every indication that the scope of the imperial administration cannot be reduced to extracting tribute. On the contrary, it is easy to see that many regions of the Empire, far from falling into somnolence, were actually in a stage of expansion and population growth, whether Syria, Babylonia, Susiana, or Bactria; whether Hyrcania or the *medinah* of Samaria or Arachosia (despite Plutarch [*Mor.* 328c], the Arachosians did not have to wait for Alexander to bring them agriculture!). Archaeological explorations have instead revealed a picture of sustained development from the time of the inception of the Empire on, even though in Babylonia it is not always easy to distinguish an Achaemenid phase from a Neo-Babylonian phase. Xenophon's account largely confirms that around 400 Babylonia was fully irrigated and cultivated (e.g., *Anab.* II.3.10-13; 4.13) by a dense population divided among prosperous towns and villages (II.4.13, 22, 25); it had paradises (§4.14) as well as lands held by Parysatis (II.4.27). Of course, the case of Bactria, to which we will not return here, shows that the development of production capa-

bility cannot always be put into a direct causal relationship with imperial control—even though the contrary is more obvious in Babylonia. But the fact remains: even when the two spheres, political and economic, are kept apart on methodological grounds, we must observe that the long Achaemenid dominion did not lead to general impoverishment that could be explained by “vampirization.”

In the end, Xenophon’s perspective is not so far from reality; his view of the economy coincides with that very likely held by the Great Kings: it is the careful management of an estate (*oikos*). The Great Kings understood that, to ensure the regularity—nay, the increase—of their revenues, they needed to take measures that would promote the development of production capabilities. However, we will not conclude that they followed an “economic policy.” For one thing, economic development cannot be reduced to central interference in matters; not all of the productive capability is controlled by the royal administration; far from it. Furthermore, the decisions made by the Great Kings do not belong exclusively to the economic sphere, which always was subordinated to political-military concerns. It would thus be better to speak of “tribute policy,” which implies that the income from development was primarily destined to exalt royal splendor in all of its aspects and manifestations. We could without difficulty add all kinds of activities related to construction (in the center and the provinces) to the sphere of indirect encouragement. For instance, the splendor of satrapal residences presupposes considerable development of artistic technique (well displayed by the activity of Greek artists, or artists working in Greek style, in many regions of the Empire); these royal and satrapal courts certainly created a market, especially for luxury goods intended for the Great King and the imperial and court elite (cf. Herodotus VIII.105; Athenaeus XII.531b; XIV.652b–c; Aelian, *VH* XII.1; Diodorus XVII.67.3 and 108.4). This example serves to illustrate one of the operating rules of the tribute economy, which Parmenion recalled for Alexander at Persepolis (Arrian III.18.11 ⚡): the circulation of the Empire’s products cannot be reduced to its centripetal component, since the (undeniable) sucking of riches from the periphery to the center requires that the periphery not be ruined by the demands and assessments of the center. If the center were sucking the periphery dry—as Parmenion puts it—the king would not be acting as a good manager of his property (*ktēmata*), and “the Asians would not so readily adhere to him.” If, in fact, the periphery fed (the “royal table”) and exalted the center, the center for its part contributed, by means of the State apparatus, to maintaining—even developing, and in any case favoring—the activities of the periphery.

“Overexploitation of Tribute” and Revolt

Let us return to one of the components of the argument brought by Olmstead and his followers: the growing burden of tributes and taxes would have generally stirred up discontent in the Empire and thus facilitated (in the long run) Alexander’s conquest. The real problem is that it is very difficult to assess the actual burden imposed by the various tributes and taxes paid to the Great King in relation to the production capacities of the countries; without this information, it is also difficult to infer that the tribute and taxes were an exhausting burden on the peoples. Sometimes (following Plutarch, *Mor.* 172f and Polyaeus VII.11.3) it is claimed that Darius’s tribute was fairly moderate, sometimes that it was (or became) unbearable—both without the claims’ being based on actual numerical analysis. The reason is obviously that the state of the evidence does not really permit such calculations. Even if we can make some assumptions about the level

of tribute, we still somehow need to add in the multiple taxes, which themselves are generally not quantified by the ancient texts, with only one exception (Neh 5:15). There is hardly any doubt that the special payments would heavily burden the resources of the people and cities; we are thinking particularly about the expenses occasioned by the visits of the court and about Herodotus's comment on the condition of the Greek cities visited by the royal caravan in 480: "The Greeks who had to entertain the Persian army and provide a dinner for the king . . . were utterly ruined, and were obliged to leave house and home" (VII.118◊); Herodotus emphasizes the resignation of the downtrodden: "The various places along the route did manage to carry out their orders, though not without severe suffering" (VII.120◊)!

In addition, the weight of tribute, taxes, and satrapal requisitions was added to the assessments already in effect in any given area (whether the land belonged to a sanctuary, an *ethnos*, or a city). We might think, for example, that in the Greek cities the system of double taxation—civic and royal—led to tensions between the civic government and the royal administration; we are thinking here of the tensions that are better known for the Hellenistic period, when cities begged the king or his representative to grant them control (*kyrioi*) of taxes that Pseudo-Aristotle considers among the satrapal levies. We know, for example, that when a city granted an 'exemption' (*ateleia*) to an individual, it stated that the royal taxes (*basilika telē*) were excluded from the scope of the decree. Part of production and wealth were ever after diverted to the royal treasury, with nothing but negative consequences for the immediate producers, especially the peasants, because the source of all wealth is in the land, as Pseudo-Aristotle insists several times. One of the aspects of the creation of the *dōreai* had the same effect, since the holders of the land grants only had to pay a fixed tribute and thus had every reason to increase the yield resulting from peasant labor. Let it suffice for now to make a brief reference to just one example—the tragic situation of the Jewish smallholders, who around the middle of the fifth century complained in these words: "We have had to borrow money on our fields and our vineyards to pay the king's tax (*middalphoroi tou basileōs*)" (Neh. 5:4◊). The tribute charged was all the heavier because it was a surcharge on top of the satrapal taxes (governor's bread: 5:14–15) and the various assessments paid to the Temple and its personnel (13:10–13).

The connection between regional crisis and imperial dominion is never simple to expose. We may observe, for example, that around 418 the price of foodstuffs suffered an exorbitant increase in several Babylonian towns. But who can say that this (brief and localized) "subsistence crisis" was due to royal taxation and not (e.g.) bad harvests? Astronomical tablets regularly refer to the unlucky consequences of torrential rains in some years, using a formula like: "There was a famine in the land. The people [sold their children]" (ADRTB no. -373; cf. nos. -366 and -369). We wonder to what extent these practices explain what Herodotus says in a passage (I.196) often used by Olmstead to connect Persian conquest with impoverishment of simple Babylonians. We obviously lack direct evidence of the perception that Babylonian peasants might have had of Persian control of tribute. We might nevertheless quote a tablet (YOS 7.128) from the time of Cambyses (528) that records a dispute brought before the *mār bani* of Uruk; in it, a priest of Ištar is accused by a shepherd from Uruk of stealing 60 sheep from the flock of Ištar and threatening that he would choke the shepherd with the cord of his necklace while whispering into his ear, "This is how Gubāru and Parnaka break the backs of people." Whoever Par-

naka may be (the future administrator at Persepolis under Darius?), he was the confederate of Gubāru, who can only be the satrap of Babylonia and E'bir Nāri. Should we see in the priest's threatening words evidence of the implacable nature of imperial coercion as it was experienced by the subject-administrators? Perhaps; but if the threat does refer to an actual event and is not merely a metaphor, we also wonder what perception the Babylonian social elite might have had about their relations with the satrapal administration and, more broadly, with the imperial organizational structures. We should also emphasize that historiography has long been affected by the theory of continued price increases in Achaemenid Babylonia; however, a recent study has cast doubt on this "certainty," because it finds that prices of some staple products fell between Artaxerxes I and Darius III. Other investigations on the same topic are in progress, and they no doubt will nuance and complement the analyses that have been based on a newly published but narrow corpus (the astronomical tablets). In short, it seems unlikely that there will ever be a return to the traditional theory.

Another interesting example just referred to comes from Judah in the time of Nehemiah. The peasants complain of "hav[ing] had to borrow money on [their] fields and [their] vineyards to pay the king's tax" (Neh 5:4♦). But the context makes it very clear that the overburdening of the peasantry is not due solely to the royal tribute: internal class warfare and temple assessments contributed just as much to the impoverishment of the Jewish peasantry (see chap. 14/5). Similarly, in the Greek cities (and elsewhere), in addition to the royal tribute, the city authorities levied civic taxes. More than anything, it was the totality of the various tax systems that explains various situations, whether in Judah or the Greek cities; and in Babylonia, it was the totality of state taxes and the profits siphoned off by the Murašū (and other land managers). But not all of the inhabitants of a community suffered equally, because the tribute drain did not accrue only to the Great King and his Faithful (even if they were the main beneficiaries, on both the political and the economic levels). An analysis of one example of the circulation of the income from assessments (in kind) of the *tagē* (sale of royal wheat: IC II², 207) implies that the Greek cities received back some benefit from the purchase of royal wheat (according to Antigonos, it was cheaper than the wheat available on the Aegean market: RC 3). While the political and financial advantage for the Great King and his satraps is obvious, the operation also profited the cities themselves and the richest citizens, who were adept at negotiating the situation to their advantage. In the same way, in Babylonia, the Murašū earned some of their profit from converting taxes paid in kind into silver, and their operations also contributed to the enrichment of the Persians who had received land there. An Aramaic document from Egypt records an association between Persians and non-Persians in a commercial enterprise (DAE 109)—a fact also well attested in the Babylonian evidence. In other words, the tribute system was not by itself the cause of tensions between the dominators and the dominated. Peasants, who certainly were part of the dominated (as seen in Babylonia), did not gain any advantage from the circulation of goods; rather, they suffered from it. This probably explains Herodotus's interpretation of the impoverishment of the Babylonian people (I.196: *pas tis tou dēmou*), even if the connection that he makes between conquest and impoverishment must be discounted, to say the least. In contrast, the local elites, who were closely linked to the imperial elite (or part of it), themselves profited from the circulation of the products paid into the royal tax system. This is probably one of the reasons for the long

life enjoyed by local dynasties and, more generally, client regimes; Persian authority was to some extent concealed behind the screen of the local gentry, who were entrusted with levying tribute and taxes locally, with the result that any possible discontent on the part of the peasants was aimed at these gentry (as seen in Nehemiah's Judah). In a way, the king's strategy for dealing with the sanctuaries and social elites of his provinces was nothing other than the political-ideological component of a much larger imperial project, and the success of this project presupposes both political centralization and social and cultural polycentrism.

It is important to observe that there is no evidence that would permit us to attribute the known revolts to the cause of tribute alone. The burden of tribute may be why the great revolts of 522 broke out (cf. Justin I.7.2), and this happens to be Bardiya's analysis—he exempted his peoples from tribute and military expenses for three years (Justin I.9.2; Herodotus III.67). It has also been suggested that the Ionian revolt was connected, at least in part, to tribute; if we have properly understood the meaning of the measures taken by Artaphernes, we can see that the royal administration was able to discern the consequences and thus reform the allocation of tribute, while maintaining the total amount (chap. 12/5). This is, after all, an explanation that would confirm that, like Bardiya, the administration of Darius was able to adapt to the needs of the hour. But the only explicit reference along these lines comes from Diodorus, who describes the revolt that was born in Egypt at the time of Inarus in these words: “Mustering an army, they revolted from the Persians, and after expelling the Persians whose duty it was to collect the tribute from Egypt (*kai tous phorologountas tēn Aigypton tōn Persōn ekbalountes*) . . .” (XI.71.3♦). There is no significant reason to reject this statement, even though it is embedded in a stream that is both dominant and suspect, a stream that says that the Persians “governed avariciously and arrogantly” (Quintus Curtius IV.7.1;♦ cf. Diodorus XVII.49.1 and Polyaeus VII.1.7). But are we really certain that all of the tribute-collectors in Diodorus's text were “Persians”? The available evidence implies that it would have been Egyptians who were in charge on the local level (cf. Arrian III.5.4; Ps.-Arist., *Oec.* II.33a). In Diodorus's version, the tribute-collectors were the primary symbols of Persian authority, whatever their ethnic origin. In another case (Sidon), the insurgents first attacked the satrapal paradises (Diodorus XVI.41.5♦). Even if the action had the additional purpose of destroying Persian fodder reserves, the symbolic import was considerably greater than a slap in the face. This is very clearly explained by Diodorus: “The first hostile act was the cutting down and destroying of the royal park in which the Persian Kings were wont to take their recreation”; this was neither more nor less than a declaration of war (cf. Plutarch, *Art.* 25.1–2). The same motivations probably prompted the leaders of the Egyptian revolt to put the “Persian” (that is, imperial) tribute collectors to death.

5. Transition

Whatever point of view one chooses, one irrefutable conclusion emerges: Darius III's Empire was not moribund, as it was smugly described by the Greco-Hellenistic authors. Whether the topic is the authority and aura of the Great King, his financial and military abilities, the productive activity of the various countries, or the cooperation of local elites, there is nothing to suggest that, from Darius I to Darius III, the internal capabilities of the Empire were crumbling. This observation confirms at the least that the theory

of "Achaemenid decadence" must definitively be relegated to a display case in the museum of historiographic wonders. But clearly this is no more than a partial conclusion that leaves the way open to another interpretation: the defeat at the hands of the Macedonians does not reveal a cyclic crisis of the Empire but a structural weakness. This is the hypothesis that we propose to test in the next chapter, which is dedicated to the imperial response to Macedonian aggression. The task is not a simple one because, like the Persian Wars, the war of Darius III is known to us only from authors entirely committed to the European cause. It is thus only in a vacuum that we can reconstruct the Achaemenid view of Alexander's conquest, after a close decryption of the ancient sources. To try to resolve the problem that has been raised, we will discuss three points in order, re-situated diachronically: Darius's strategy, the Persian aristocracy's attitude, and the position taken by the local elites when they were confronted by the Macedonian's overtures.

PART SIX

The Fall of an Empire (336–330)

Chapter 18

Darius and the Empire Confront Macedonian Aggression

1. Territories, Armies, and Strategies

The First Macedonian Offensive (336–335)

We know that after the victory at Chaeronea Philip set about creating a league of which he was *hēgemōn*. The officially announced purpose of the league was to carry out an offensive: the goal was to campaign against the Persians in revenge for the devastation of 480 and thus to liberate the Greek cities of Asia (Diodorus XVI.89). To this end, the king of Macedon sent an advance army corps to Asia Minor in 336 commanded by Parmenion, Attalus, and Amyntas, who were to prepare for the landing of the royal army (XVI.91.2; Justin IX.5.8). We are quite poorly informed about the operation, since the ancient authors (Diodorus and Polyaeus) cast their spotlight exclusively on Memnon of Rhodes. The first actions, certainly, were not favorable to the Persians; this is quite certainly when pro-Persian governments were ejected from Lesbos, Chios, Ephesus, and perhaps also Iasus. In the temple of Artemis at Ephesus and in several towns on Lesbos, statues of Philip were erected at this time, and Parmenion settled factions there that are referred to as “democratic” (cf. Arrian I.17.11). Perhaps the statue that Ariobarzanes had erected in the sanctuary of Athena Ilias was pulled down during the fighting in Troas (Diodorus XVII.17.6). The assassination of Philip II and the accession of Alexander did not interrupt the operations, but these events certainly created conditions more favorable for Darius III to mount a counterattack. At the beginning of his reign, Alexander sent a new detachment to Asia Minor led by Hecataeus; he joined Attalus and Parmenion, though his actual mission was to see to the death of Attalus, who had fallen under the suspicion of the new king (Diodorus XVII.2.3–6). Attalus’s machinations were stirring up trouble in the Macedonian army up to the moment he was assassinated, either by his own men (§5.1–2) or on Parmenion’s initiative (Quintus Curtius VII.1.3; VIII.7.5). Nevertheless, throughout 335, Parmenion’s advances were reduced to almost nothing. Although Memnon did not manage to take Cyzicus (Diodorus XVII.7.8; Polyaeus V.44.5), pro-Persian tyrants were reestablished in the cities of Lesbos and at Ephesus (cf. Arrian I.17.12: Syphax and his brothers). In Troas, Callas also suffered several defeats (Diodorus XVII.7.10). At the beginning of 334, apparently only Abydos was in Macedonian hands (cf. Arrian I.11.6).

Despite being poorly documented, these events stimulate several reflections. On the military level, the situation is mixed. Initially, the Macedonian expeditionary corps won major victories. Apparently, Parmenion had even been able to advance as far as Magnesia ad Sipylum (Polyaeus V.44.4), and this confirms the relative permeability of the Persian defenses (at least at an early stage)—something that was already apparent in the Greek offensives of the fifth and fourth centuries. At the same time, we need to stress that

our sources remain partial, in both senses of the word. Darius “thought to turn the coming war back upon Macedonia,” according to Diodorus (XVII.7.1◊), “and began to pay serious attention to his forces. He fitted out a large number of ships of war and assembled numerous strong armies, choosing at the same time his best commanders.” This is the context in which he turned to Memnon, who was “outstanding in courage and in strategic grasp. The king gave him five thousand mercenaries and ordered him to march to Cyzicus and to try to get possession of it” (§7.2–3◊). However, Diodorus’s presentation must at least be nuanced and supplemented. First of all, Memnon was certainly not the only campaign leader. The financial stratagems attributed to the Rhodian (Ps.-Arist., *Oec.* II.29 [1351b]) are evidence of the fact that he was acting as the head of a troop of mercenaries in the service of the Persians. Memnon paid and fed his men by imposing taxes on the cities; this perhaps explains the reaction of the inhabitants of Cyzicus (Polyaenus V.44.5), who had no desire to give in to extortion. Furthermore, it was not only Greek mercenaries that were hired, and Memnon was not made commander-in-chief of the royal troops. Specifically, it is impossible to think that Arsites, the satrap of Hellespontine Phrygia, did not participate in fighting that mostly took place in his territory, and we can make the same observation about Spithridates of Sardis. It is even extremely likely that, as in 341–340 (Pausanias I.29.10), so also in 334 (Arrian I.12.8–10) Arsites was the one who received the Great King’s direct orders. Moreover, Diodorus seems to imply that the Persians did not really get under way until after Alexander’s accession (§7.2), which occurred at almost the same time as Darius’s accession (summer, 335). However, the notion that the Persians responded slowly is also dubious; whatever the extent of the troubles at the center and in some provinces (Egypt?)—certainly less than is usually suggested—the central authority had probably been alerted by Arsites and taken appropriate action. The Xanthus trilingual and the appointment of Orontobates to the satrapy of Caria-Lycia (Arrian I.23.8) testify that the reign of Arses/Artaxerxes IV and the beginning of the reign of Darius were marked by more than palace intrigues. It simply turns out that Diodorus and Polyaeus, fixated on the personality of Memnon, had nothing to say about the operations of 336—and from this we cannot necessarily infer passivity on the part of the Great King. On the contrary, there is every reason to believe, with Diodorus (XVII.7.1–3), that even if other fronts (Egypt?) might have required their attention, Artaxerxes IV and Darius III very quickly became aware of the problems on the Asia Minor front.

Darius, His Satraps, and Alexander’s Landing (May–June 334)

Alexander was secure in his European rear and thus he and his army took the Thracian route in the early spring of 334 and crossed the Hellespont (Arrian I.11.6–8; 12.1–7). Parmenion was given the largest part of the army, which crossed unopposed from Sestus to Abydos with the aid of 160 triremes and a substantial number of cargo boats (*ploia*). Meanwhile, Alexander, assisted by a small troop, landed in Troas, where he carried out his “Homeric pilgrimage” (cf. Diodorus XVII.17.1–3; Plutarch, *Alex.* 15.7–9). Next, he came to Arisbe and Percote, before taking a position on the banks of the Granicus (Arrian I.13.1). Persian “satraps and generals” had gathered their forces near Zeleia, where they considered what action to take in response to Alexander’s landing (I.12.8–10).

One of the most controversial problems is: Why did the Persians not attempt to prevent the Macedonian landing? Diodorus is the only one to ask the question explicitly,

and he has a ready answer: "The Persian satraps and generals had not acted in time to prevent the crossing of the Macedonians, but they mustered their forces (*athroisthentes*) and took counsel [Council of Zeleia]. . . . So they decided to fight it out, and summoning forces from every quarter (*tas pantakhothen dynameis metapempsamenoï*) . . . , they advanced in the direction of Hellespontine Phrygia" (XVII.18.2, 4♦). This delay seems quite surprising, because both the initial Macedonian offensive of 336–335 and the preparations and public proclamations of Alexander left no doubt about his intentions. We recognize this as one of the favorite motifs of Diodorus as well as of Xenophon and other Greek authors: the deliberate pace of the Persian armies was a crippling handicap (e.g., XV.41.2). However, though this remark really can be applied to the assembling of immense royal armies (as at Issus and Gaugamela, for example), it is much less convincing for the army of the Granicus, which comprised territorial troops (military colonies, horsemen provided by the Persians of the diaspora and land-grant holders) and contingents of subject peoples (such as the Paphlagonians), all of whom could be brought together in a short time. Moreover, these troops (some of them, at least) had been mobilized before 334, since they must have taken part in the fighting in 336 and 335. Depending on the date assigned to the battle (April or May), we can imagine that the Persians might have assembled their troops in their winter quarters, which might have been rather far apart (compare XIX.44.4; 68.2). However, paradoxically, apart from the fact that this hypothesis would naturally lead to confirmation of the idea that the Persians had taken many months to assemble their army, a comparison with Arrian leads to a much more reasonable solution. In fact, as Diodorus writes, a war council was held at Zeleia; all the satraps of Asia Minor took part, and the list is given by Arrian (Diodorus names only Memnon). Arrian very clearly states that the Persian troops had already pitched their camp near the city at that time (I.12.8: *katestratopedeukotes*). In short, despite Diodorus's claim, the Persian generals certainly did not wait until their strategy was planned before issuing the order to mobilize. The reason for the situation was quite different. We quite simply doubt that a land army alone would have been adequate to prevent a landing, even if we recall that a Persian commander did challenge Greek ships with his horsemen on one occasion, near Abydos, as a last resort (Xenophon, *Hell.* I.1.6) and also that land troops could occasionally prevent a fleet from gaining access to water supplies (e.g., Arrian I.19.8). They would still have had to know which beachheads the Macedonian army intended to use for landings—something that would have been very difficult to determine, because Alexander, for reasons that might not have been due solely to his desire to pay homage to the Greek heroes of the Trojan War, chose to split his forces (Arrian I.11.6; 12.6). In short, the Persian generals did not bring their troops to the sea "to prevent the crossing of the Macedonians" (*diabasis*: Diodorus §18.2♦) quite simply because the very idea never crossed their minds.

If the Persians had decided to prevent the crossing by the Macedonian army, they obviously would have had to appeal to their sea power. To be sure, not one ancient text refers to the existence of even one Persian boat in the area. This is even more surprising because at that time, in comparison with the 160 triremes (and cargo boats) Alexander controlled (Arrian I.11.6), the Persians had undeniable naval supremacy. They dominated the sea (*thalassokratein*), writes Arrian (I.18.6) of the situation a few weeks later when Alexander was at the gates of Miletus. Arrian numbers the royal navy at 400 ships (§18.5) that were manned by well-trained crews, who had come from Cyprus and

Phoenicia in particular (§18.7; II.13.7). There also were contingents from Greek cities (I.19.11: Iassus). Arrian states that this fleet “[arrived] too late” at Miletus (§18.5), which indicates that the Achaemenid squadrons were already on the Asia Minor front; but this tells us nothing of their comings and goings in the previous weeks, because we do not know from what region they had set sail for Miletus. As a result, we continue to be surprised about the absence of the fleet from the Hellespont; most often, it is attributed to Khabbabash’s revolt in Egypt. While this theory is not unattractive, it should be recalled at the same time that the only available evidence—the *Satrap Stela*—does not permit a certain date to be assigned to events in the Delta. Obviously, to date this revolt on the basis that it delayed the arrival of the fleet on the coast of Asia Minor is to adopt circular reasoning that is historically attractive but methodologically has little to recommend it. As a result, we must conclude that we have no answer to the question or, more precisely, that none of the possible answers transcends the limit of probability, absent additional evidence.

Whatever the case, it is clear that the Persian generals did “hold a council of war,” to use Arrian’s phrase (I.12.8♦). He describes the meeting as follows: against the advice of Memnon, who recommended a scorched-earth policy, Arsites, with the support of the other Persian commanders, chose to give battle. Memnon’s suggestion was based on two considerations: first, “the Macedonians . . . were far superior in infantry”; second, “Alexander would not stay in the country for want of provisions.” In rebuttal, “it is said (*legetai*) that Arsites stated in the Persian council that he would not suffer one house to be burned belonging to his subjects.” He was supported by the other Persians, moreover, who “suspect[ed] Memnon of deliberately holding up warlike operations for the sake of the honour (*timē*) he held from the king.” The war council is also reported by Diodorus, who presents Memnon’s speech identically (XVII.18.2–4♦). Diodorus strongly supports the Rhodian’s strategic choice: “This was the best counsel, as after-events made clear.” Then Diodorus offers his explanation of the (in his eyes unreasonable) attitude of the satraps and generals: they rejected the Rhodian’s suggestions as “beneath the dignity (*megalopsykhia*) of the Persians” (§18.3♦).

The ancient tales and simple reasoning invite a number of questions, as much about the role of Memnon as about the reasons for the strategic choice of the Persians and about Darius’s participation. First, let us note that, while the versions of Arrian and Diodorus essentially agree, Diodorus has once more outrageously favored Memnon, who is once again presented as “famed for his military competence” (§18.2;♦ cf. §7.2 and §20.7). He makes Memnon the key person of the war council, without naming a single one of the Persian satraps and generals! The role that Diodorus attributes to Memnon and his evaluation of Memnon’s proposals are very much like other meetings he describes, particularly the discussions between Iphicrates and Pharnabazus in Egypt. In that case, too, the Greek’s advice (which is considered especially judicious by Diodorus) is rejected by Pharnabazus and the Persian leaders near him, for motives that strangely resemble those Diodorus attributes to Arsites and his colleagues: “Pharnabazus became suspicious of his [Iphicrates’] boldness and his courage for fear lest he take possession of Egypt for himself (*kat’idian*). . . . Some generals indeed bore a grudge against him and were attempting to fasten unfair charges upon him” (XV.43.2♦). In an observably similar manner, Diodorus exalts the figure of Memnon and confers on him an authority and influence he certainly did not have in the spring of 334. On the same occasion, Diodorus

credits him with plans ("transfer entirely the theater of the war to Europe") that were certainly not appropriate at that date. In reality, Arrian makes it clear that the council comprised Persians (*sylogos tōn Persōn*; 12.10) and that within it, logically, pride of place was held by Arsites, the satrap of Hellespontine Phrygia; it was he who bore primary responsibility for conducting operations, as he had in 341 (Pausanias I.29.10). In 334, Memnon was nothing more than the leader of a contingent of horsemen levied on the land he held in Troas (Diodorus XVII.19.4). If his opinion was asked for, it was only one opinion among many. It would be of great interest to know where the ancient authors got their information. If, as is likely, Arrian is depending on the same source as Diodorus, he has at least used it more circumspectly (*legetai* 'it is said') and with less partisanship, although he too reports that the Persian leaders feared the ambition of the Rhodian, who enjoyed royal favor.

The arguments exchanged by Memnon and the Persians continue to raise various critical doubts. *A posteriori*, we are tempted to agree with Diodorus that Memnon's strategy would have been effective. Alexander certainly needed to resupply his forces from the land, and all of the ancient authors stress that he was short of funds at the time. According to Quintus Curtius (X.2.24) and Arrian (VII.9.6), he had even inherited a debt of 600 talents from his father. The spoils of war and income from mines in Macedon had alleviated the situation, and at his landing, he had enough funds to allow him to sustain his army for 30 days. In other words, it was absolutely necessary that he gain a rapid victory that would allow him to get his hands on satrapal treasuries. Against these arguments, which seem both rational and reasonable, the Persian leaders, according to Diodorus and Arrian, advanced two arguments, which *a priori* appear to be rather inconsistent. Arsites' proclamation can be compared with other texts to show explicitly that a satrap's primary mission was to protect the land from the ravages of war (e.g., Quintus Curtius III.4.5); this is how he earned and retained the confidence of the Great King and was the basis on which he could expect promotions in royal favor (Xenophon, *Oec.* IV.8–11). These assumptions prevented him, in principle, from adopting Memnon's tactic. But we doubt that Arsites would have reached such a decisive conclusion simply by referring to these considerations. The debate is similar to the one between Artabazus and Mardonius in 479, reported by Herodotus (IX.41♦). Artabazus countered Mardonius's argument by proposing that they not give battle but instead persuade the Greeks to drop out of the coalition. Herodotus strongly takes Artabazus's side, describing him as "a man of some foresight," whereas Mardonius "expressed himself in much more uncompromising terms": he was certain that "the Persian army was much stronger than the Greek . . . it would be best . . . to engage in battle in the customary Persian way (*nomos tōn Persōn*)." From Herodotus to Diodorus and from Mardonius to Arsites, the similarities are obvious. The *megalopsykhia* ('arrogance') of the satraps in 334 clearly corresponds to the *nomos tōn Persōn* invoked by Mardonius; the satraps considered it unworthy of their rank and valor to refuse combat.

In spite (and/or because) of the striking convergence of the reports on Zeleia with Herodotus's story, it would be very unwise to adopt Diodorus's interpretation without nuancing it. The concept of Persian *megalopsykhia* that he invokes is developed in real life in the athletic-contest perspective that he imposes on the battle of the Granicus; its outcome was determined, as he presents it, by the result of a *monomakhia* that pitted Alexander against Spithrobatēs [Spithridatēs], "a Persian of superior courage. . . . To the

Persian, it seemed as if this opportunity for a single combat was god-given. He hoped that by his individual gallantry Asia might be relieved of its terrible menace" (XVII.20.2–3◊). The duel took place in the sight of the transfixed soldiers (§20.5) and is presented according to a model that Diodorus (XVII.83.5–6) and Quintus Curtius (VII.4.32–38) use elsewhere—the same model that several ancient authors apply as a way of interpreting the battle of Issus (Polybius XII.22.2; *FGrH* 125 F6). However, aside from the fact that Diodorus's tale is easily challenged, if the word (*megalopsykhia*) he employs is applied without discernment, we are likely to be led onto shifting and uncertain ground—the “psychology of peoples.” Though the courage of the Persians is hailed by all of Alexander's authors, there is nothing embedded in an aristocrat's genes that requires him to give battle at any cost! Perhaps contrary to what Diodorus intended, or in any case contrary to what some have made him say on one occasion or another, the Persians were not regularly stripped of common sense—whatever we may think of the tactical disposition they adopted in the battle. Their aristocratic ethic (*megalopsykhia*)—for which parallels may easily be found among the Macedonians—did not necessarily lead them to make “uncompromising” decisions (Herodotus IX.41◊) completely divorced from military rationality. Furthermore, Herodotus cannot hide the fact that Mardonius's decision was also based on a reasonable objective (to keep the Greeks from assembling their forces). Like all the *nomoi*, the *nomoi persikoi* [*tōn Perseōn*]¹—which was invoked, it seems, by Mardonius—were subordinate to the principle of reality. We can list many cases where the Persian leaders either applied the scorched-earth strategy (e.g., Quintus Curtius III.4.3; including Darius himself: e.g., Quintus Curtius IV.9.14; Diodorus XVII.55.2) or displayed tactical caution (e.g., Diodorus XV.43.1–2), or refused combat that they considered lost in advance (e.g., Xenophon, *Hell.* IV.1.17). Arsites and his colleagues certainly were aware of the relevant fact that, above and beyond (rather airy) discussions of traditional ethics, the Great King was interested in only one thing: victory. Thus, the situation certainly could appear favorable to them in 334 (the judgments *post eventum* pronounced by Diodorus and Herodotus in favor of Memnon's and Artabazus's choices were of interest only to their authors). The Persians had in fact achieved noteworthy successes over the Macedonian forces in the previous year; in addition, Arsites could legitimately estimate that his numerical superiority and the valor of his horsemen would confirm his optimistic view of the future.

But let us go further and ask a simple question: Was Arsites completely free to adopt the strategy of his choice? The ancient authors do not say a word about Darius III. If we consider that Diodorus states that the Great King had previously ordered a general mobilization (§7.2) and that elsewhere he never stops emphasizing (if only to deplore) the fact that the Persian generals depended on the king's orders for everything (e.g., XV.41.2), can we really imagine that Darius III was not interested in the situation as it stood in the spring of 334 and that he permitted Arsites to make the strategic decisions on his own? Only one author, Justin, alludes to this, and he does so very indirectly and, in the context, recalls the tenor of the arguments exchanged at Zeleia: “Meanwhile, King Darius, trusting in his forces, disdained to have recourse to a ruse and stated that to conceal his plans was to devalue the victory. . . . The first encounter therefore (*igitur*) took place in the plain of Adraste” (Justin XI.6.8.10). While Justin's formulations can be subjected to criticism, they at least suggest that Arsites had received orders from the Great King that he should plan for battle in Phrygia. This conforms with Achaemenid

practice: though the *tactics* in fact came from Arsites (who consulted his colleagues on this point), the *strategy* was imposed by Darius (cf. the exact parallel in Diodorus XVI.75.1–2) — just as in Greece Mardonius made his decisions on the basis of orders sent to him by Xerxes (chap. 13/4–5). This leads us very much to doubt that the Council of Zeleia was really called to choose between two strategies: it is far more probable that the main purpose was to decide on what tactics to adopt (choice of location, the disposition of the contingents, the role and position of each of the commanders). The satraps engaged in combat quite simply because they had been ordered to do so and because they feared that disobedience would look like treason to the royal cause and result in severe punishment by the Great King (FGH 151 F1.1; *Itin. Alex.* §19). Even if we agree that a debate took place in the terms recorded by Diodorus and/or Arrian, their interpretation of it (given in different words) is certainly incorrect. We may simply imagine that in the course of the debate there was an incidental “ethical” discussion. But the purpose of this discussion was not to define strategy or to question a royal decree that the Persians would easily accept because the battle would give them the opportunity to demonstrate the *megalopsykhia* that, according to Diodorus, was so important to them. It would also provide Arsites with an opportunity to display his valor before Darius III, although the opportunity came with a well-known risk (Arrian I.16.3 [suicide of a satrap, due to his failure]).

Darius in Babylon and the Asia Minor Front (334–333)

From the Achaemenid point of view, the defeat at the Granicus was not really a decisive event. On the other hand, taking into account the difficulties Alexander faced when he landed (on the financial level, for instance), the victory freed him from many of his fears. He had not been driven back into the sea, and he now had additional assets that he could use to pursue his goal. The victory was followed by a series of impressive successes: he took possession of Dascylium, which had been abandoned by its garrison, and he made Calas satrap of Lesser Phrygia and ordered the inhabitants to pay “the same taxes as they used to pay to Darius” (Arrian I.17.1–2♣). He soon made his official entry into Sardis, which Mithrenes had surrendered to him without a fight (§17.3–8), and he seized its treasuries (Diodorus XVII.21.7). At least for the short term, the Macedonian had no more financial woes. It was soon the turn of Ephesus, Magnesia, Tralles, and many other coastal cities (Arrian I.17.9–13; 18.1–2), and then of Miletus, which the Persian fleet could not really rescue, because it arrived after the Macedonian fleet, which was commanded by Nicanor. After some resistance, the garrison surrendered (§18.3–9; 19; cf. Diodorus §22.2–4).

From the Persian perspective, the military losses were appreciable though, as always, they are difficult for us to quantify (1000 horsemen according to Arrian I.16.2). Brave leaders fell: Arrian mentions Niphates, Petenes, Spithridates, Mithrobuzanes, Mithradates, Arbupales, Pharnaces, and Omares (I.16.3); Rhosaces (Spithridates’ brother) was also gravely wounded during the battle (I.15.7). Arsites fled the battlefield and chose suicide (I.16.3). Of the participants at the war council of Zeleia (I.12.8–9), only Rheomithres and Arsames survived, in addition to Memnon (and perhaps his sons: I.15.2). Rheomithres returned to Darius’s camp. Atizyes, the satrap of Greater Phrygia, also left the battlefield safe and sound after, it appears, stopping in his capital, Celaenae (I.25.3), which he had abandoned when Alexander arrived (I.29.1). Arsames, after trying to get

Cilicia into a state of defensive readiness, also joined Darius, who was then on the march toward Cilicia. Rheomithres, Arsames, and Atizyes later died in the battle of Issus (II.11.8). A major portion of the army nonetheless managed to retreat to the south; the units commanded by the escapees, including Memnon, fell back to Halicarnassus, a powerfully fortified city that was watched over by the satrap Orontobates. The arrival of the troops from the Granicus allowed the town to post an impressive garrison of Persians and mercenaries (I.20.2), and it was also reinforced by soldiers transported by the navy (§20.7). Alexander and his troops suffered several sizable reverses; for instance, at Myadus, despite promises made by deserters at the outset, the city refused to surrender (§20.5–7). The Macedonian efforts were ultimately successful, but only in part. When he left Halicarnassus at the end of 334, Alexander left behind a troop of 3000 infantry and 200 horsemen commanded by Ptolemy, who was ordered to take the two citadels that remained in Persian hands (§22.1–6; cf. Diodorus XVII.24–27).

The Empire at this time found itself in an utterly unheard-of strategic situation, the only possible precedent being Cyrus the Younger's offensive. It was not the first time satraps had known defeat in Asia Minor or that an enemy had camped just outside the walls of Sardis; but it was the first time that the citadel at Sardis had fallen and that the adversary had continued his march with no noticeable obstacles as far as the walls of Halicarnassus, proclaiming long and loud the entire time that his ambitions went well beyond the "liberation of the Greek cities." We would love to know how Darius and his advisers reacted to this avalanche of catastrophic news. We are quite poorly informed about this (to say the least), because the ancient authors follow Alexander step by step without paying the least attention to the Great King. We learn that, when Alexander took his winter campaign to Pamphylia-Lycia, the Great King attempted to stir up a conspiracy against his enemy: he sent a messenger to Alexander Lyncestes, who he had learned was prepared to betray Alexander. The royal envoy fell into the hands of Parmenion, the Lyncestian was arrested, and from the Persian point of view, that was the end of the matter (Arrian I.25). But the story itself should be taken with a grain of salt, because Persian participation in the plot may simply represent a later accusation. There is no doubt that the Great King sent messengers to certain leaders to urge them to resist to the end—this, at least, is what can be gleaned from the statements of the defenders of Celaenae (Quintus Curtius III.1.8). Nevertheless, it must be noted that we are certain about one specific major strategic decision: in the summer of 334, the Great King appointed Memnon (then at Halicarnassus) "to the command of lower Asia [coastal regions] and the whole fleet" (Arrian I.20.3; ♦ II.1.1; Diodorus XVII.23.5–6).

The title "commander of the fleet" reminds us that at this time the Persians held hegemony of the sea. At Miletus, in fact, Alexander ordered his navy to disband, except for the Athenian squadron and some cargo boats. According to Arrian (I.20.1♦), Alexander had long been certain of his inferiority on the water (cf. §18.6–8) and, furthermore, "he was then short of money"; lastly, "he reflected that as he now controlled Asia with his land troops, he no longer needed a navy, and that by capturing the cities on the coast he would break up the Persian fleet, since they would have nowhere to make up their crews from, and no place in Asia where they could put in" (§20.1♦). Alexander's decision to take this course of action was already questioned in Antiquity (cf. Diodorus XVII.23.1–3). The plan to destroy Persian naval power by conquering the coastline in fact presented considerable risk. The success that Alexander's troops had enjoyed when they

prevented a Persian landing near Miletus was quite unusual, because it simply required them to defend an area that was both well-defined and quite circumscribed—the isle of Lade and the port of Miletus (Arrian §§18.5; 19.2–3); the result was that the Persians were forced to seek water far away, at Samos (§19.7–10). But to extend this strategy to the entire Mediterranean front was a major gamble. It was impossible to control the entire area, at the cost of tying down thousands of garrison troops, because this would have considerably weakened the army as it moved forward (cf. Quintus Curtius IV.1.35). The conquest of Lycia, which was carried out, according to Arrian (I.24.3♦), “to render the enemy’s navy useless,” did not impede Pharnabazus at all when he proceeded to meet up with Thymondas’s ships in August 333 (II.2.1–2). Furthermore, when Alexander left Caria at the end of 334, he had not deprived the Persians of all of their mainland bases: Orontobates and Memnon still held two acropolises at Halicarnassus (I.23.1–6); the Persians also held the island of Cos, from which Memnon set sail some time later (Diodorus XVII.27.5), as well as Samos (Arrian I.19.8). Southern Caria constituted a first-class base for the Persians—especially after the Macedonian forces certainly suffered several defeats; the evidence for the defeats is that by September of the following year (333), Orontobates was in control of “the citadel of Halicarnassus, . . . Myndus, Caunus, Thera and Callipolis” (II.5.7; ♦ cf. Quintus Curtius III.7.4). Thereafter, Alexander’s strategy, at least in the short term, left the way entirely open to the Persian navy, which meant that, in the middle term, Persian naval superiority threatened to wipe out Alexander’s control of the Asia Minor coast. Alexander quickly became cognizant of this danger because, even before the death of Memnon (July–August 333), he ordered a new war fleet to assemble: “He gave Amphoterus command of the fleet at the shore of the Hellespont and Hegelochus of the land-forces, in order that these officers might free Lesbos, Chios and Cos from the enemies’ garrisons. . . . And the allies were ordered, as was provided by their treaty, to furnish ships to guard the Hellespont” (Quintus Curtius III.1.19–20♦). Meanwhile, Memnon had gone on the offensive and taken Chios, and the towns on Lesbos also surrendered, except for Mytilene.

It seems quite obvious that Darius and his advisers were kept up to date about the situation and that the appointment of Memnon to head the fleet and to defend the coast was intended to use him to the best possible advantage. Was Darius hoping that success would force Alexander to turn back? Or, was he beginning to build an army from this moment on? We know that around the end of the summer of 333 Darius departed from Babylon at the head of the royal army, accompanied by the entire court, “according to the traditional custom of the Persians” (Diodorus XVII.25.3). According to Diodorus, the decision to summon the royal army was made late, after a council that was held when the news of Memnon’s death was received in the summer of 333 (§§30; 31.1; Quintus Curtius places it when Darius was in Syria: III.8.2–11). However, as they are recorded by Diodorus, the terms of the discussion provoke suspicion because the presentation carries with it accusations against Darius that are identical to those brought previously against Artaxerxes III (XVI.40.5–6). Should we also be suspicious of the chronology? It is difficult to decide. When we realize how long these general mobilizations took (as often stressed by Diodorus himself: cf. XV.41.2), it seems difficult to believe that the army of 333 could have been gathered, armed, and trained in only a few months. In another respect, the draft of troops was not universal, because, to use Quintus Curtius’s phrase (III.2.9; cf. IV.9.1–2), the speed (*festinatio*) with which the assembly took place

prevented the contingents from the Iranian Plateau and Central Asia from being summoned. So two interpretations become available: (1) from this moment on, Darius began to levy his troops to prepare for any eventuality, or (2) he thought (or hoped) that leaders and troops in Asia Minor would be enough to deal with the problem. According to the second theory, Darius was behaving no differently from his predecessors: never, after Xerxes in 480–479, had the regions of Asia Minor seen a royal army. But if this be the case, we must also conclude that the Great King had not taken the measure of either the situation or his adversary's determination.

To be able to make a judgment regarding Darius's state of mind, we would have to know the content of Memnon's mission. In the course of a report that Diodorus provides regarding a council that Darius held when he learned of the Rhodian's death, he states that, until the Great King received the news, he "had counted on Memnon's transferring the impact of the war from Asia into Europe" (§30.1♦). The same information appears in Arrian (II.1.1). Diodorus adds that Memnon's initial successes encouraged many island cities to send delegations and even stirred up unrest as far as Euboea and Greece, whose leaders received bribes from the Rhodian (§29.3). Finally, according to Quintus Curtius (III.1.19–20) and Arrian (III.2.3), Alexander, while at Gordion in the spring of 333, ordered a navy to be rebuilt precisely because of the dangers posed by the situation; he agreed to considerable expenditures for this purpose and sent money to those in Greece who were looking after the cities. There can be no doubt, in fact, that on the eve of the battle of Issus some Greeks believed that the balance of forces tipped in favor of the Great King (cf. Aeschines III.164); in addition, Athens, Thebes, and Sparta had sent ambassadors to the Great King (Arrian II.15.2–4; Quintus Curtius III.13.5). However, that Memnon's campaign aroused such hope (in Greece) or fear (in Macedon) might simply have resulted from untrammelled rumor of the kind that Arrian passes on (II.2.4); whether the Rhodian actually carried out this strategy is a different question. In the spring of 333, Memnon reconquered Chios and then concentrated his forces on Lesbos: only Mytilene resisted, and it was during the siege of this town that Memnon died of an illness (July–August 333). This, in any case, is the skeletal narrative provided by Arrian (II.1.1–2) and Diodorus (§29.2: with an error). Clearly, Memnon at this time had no intention of taking advantage of his crushing superiority by carrying the war into Europe; instead, he dedicated many weeks to completing the blockade of Mytilene. Memnon's activities lead us to believe that his goal in the short term was to retake the coastal cities and the islands, foiling Alexander's appraisals of the situation (Arrian I.20.1)—thus explaining the Macedonian's reaction when he learned that his adversary was threatening not Europe but his prior conquests in Achaemenid territory. All in all, we can imagine that Memnon's military activities corresponded to the mission Darius gave him—a mission that is implicit in the geographical range of the expertise that brought Memnon the Great King's recognition in the first place, namely, the coast of Asia Minor.

It is likely that the European designs attributed to Memnon came from a Greek tradition that was originally concerned only with his and his family's memory (cf. Tod II no. 199) and that this tradition is best represented by Diodorus (chap. 17/3 above). Diodorus even says (and this seems quite unlikely) that the Rhodian had proposed carrying the fight to Europe already in the war council at Zeleia (§18.2). Diodorus (§29.4) and Arrian (II.1.3), in almost identical terms, present the death of the Rhodian as a major re-

chief to Alexander (Diodorus §31.3–4) and a full-scale disaster for Darius, so that he now had to take the leadership of the army himself (Diodorus §30; cf. also Quintus Curtius III.2.1). From this it is sometimes inferred that Darius at this time decided to abandon his maritime strategy in favor of a mainland strategy. However, none of these interpretations appears to be valid. First of all, Memnon's succession had already been dealt with: before he died, he had turned his responsibilities over to Autophradates and Pharnabazus son of Artabazus, his nephew, anticipating that Darius would confirm these arrangements (Arrian II.1.3)—and Darius did so soon afterward, confirming Pharnabazus in his position (II.2.1). In addition, the death of Memnon did not interrupt the maritime offensive at all, even though the dispatch of mercenaries to Darius probably weakened Pharnabazus's and Autophradates' capabilities. The operations that took place in the interim prior to the battle of Issus on the contrary demonstrate that Memnon's successors abandoned his strategic, somewhat dilatory caution and threw themselves more vigorously into the assault on Macedonian positions. Autophradates and Pharnabazus vigorously pursued the siege of Mytilene, which soon fell; the city became "allies of Darius on the basis of the peace of Antalcidas," a garrison was established, a friendly district was entrusted to one of the oligarchs who had been exiled by Alexander the previous year, and taxes were levied on the inhabitants (II.1.4–5♦). The terms of the treaty imposed on Chios (and shortly afterward on Tenedos: Arrian II.2.2) show that Darius was not in the least willing to accept the initial Macedonian conquests. On the contrary, the Great King tended to interpret the dictum imposed on the Greeks in 386 by his grandfather Artaxerxes II very broadly. The conquest of Tenedos was probably part of a much wider goal—to cut off the wheat supply coming from the Hellespont, a danger that Alexander had already prepared for even before the death of Memnon (cf. Quintus Curtius III.1.19–20). Nevertheless, it was only later that the Macedonian fleet became fully operational (cf. Arrian II.2.3), and this is clear from the fact that, even though Datames suffered a reverse of no great magnitude at Siphnos (II.2.4–5), it had no lasting consequences, and the Achaemenid fleet retained its superiority. The most painful setback for the Persians took place in Caria. When he was in Cilicia (September 333), Alexander to his great relief learned about the victory that Ptolemy and Asandrus (the satrap of Caria) had won over Orontobates, who went on to lose his positions at Myndus, Callipolis, Caunus, Thera, Tiopiium, and Cos (II.5.7; Quintus Curtius III.7.4). This was certainly a setback of the first magnitude; nevertheless, either Halicarnassus remained in Persian hands or they recaptured it shortly afterward (cf. Arrian II.13.6).

To answer the question raised earlier, we can be sure that Darius, at least from this time onward—but surely already since the preceding year—was perfectly well aware of the danger presented by the Macedonian offensive. To counter it, he and his counselors had devised a strategy that was both maritime (reconquering the coasts of Asia Minor) and mainland (preparing an army that would take the offensive). Despite Diodorus's statement (XVII.30.7), Darius decided to take the leadership of the army and lead it "toward the coast" not because he thought that the death of Memnon represented a decisive blockage of his goals at sea; on the contrary, while Pharnabazus, Autophradates, and their lieutenants led the offensive by sea, he personally prepared to confront the Macedonian army. However, as everyone knows, a strategic plan, however well conceived it may appear (especially as reconstructed by the modern-day historian!), is only worth the means that are actually available to carry it out and any advantage that the plan may

grant the creator of the plan vis-à-vis the enemy. From this perspective, the situation was ambiguous. First, it is clear that Alexander, who had just welcomed major reinforcements at Gordion, was not dissuaded from pursuing his march to the south, and he resumed doing so around June–July 333. At the same time, it must be stressed that the Macedonian still found himself in a precarious situation, caught, as it were, between a rock and a hard place: the Persian navy was still operating off the coast and the royal army was approaching from Cilicia. The fact that he summoned several garrisons that had been left in the rear (Quintus Curtius IV.1.35) shows that in some respects he had his back to the wall. In the short term, the success of his plan to conquer the coasts assumed that he would be able to take some Phoenician towns. Darius also understood this; the best proof of his eagerness (*festinatio*) to reach Cilicia is that he chose not to wait on the contingents from the Iranian Plateau and Central Asia (Quintus Curtius III.2.9). In order to compensate for their absence, the Great King in the summer of 333 ordered Pharnabazus to bring some of the mercenaries who were fighting on the Mediterranean front, despite the fact that this risked depleting a critical position, his Aegean rear (cf. Arrian II.1.2; Quintus Curtius III.3.1). The presence of Sabaces, the satrap of Egypt, at Issus implies that he had brought a contingent with him, and this probably weakened Persian positions in the Nile Valley (Arrian III.1.2; cf. Quintus Curtius IV.1.28). As long as we do not conclude from the results of the battle of Issus that the fate of the Achaemenid Empire was already definitively sealed, we must recognize that the battle about to unfold in Cilicia would take on critical importance for Alexander.

From Issus to Gaugamela (November 333 – October 331)

Alexander's victory at Issus made it possible for him to march on Phoenicia, and many Phoenician towns opened their gates to him: Aradus, Marathus, Sigon, Mariamme, then Byblus and Sidon (Arrian II.13.7–8; 15.6–7; Quintus Curtius IV.1.15–16). The Tyrians, however, offered him a pro forma rejection (Arrian II.16.7–8). In response, Alexander basically concentrated on capturing Tyre, a success that validated his strategic plan, which was to take the coasts before conquering the interior (Arrian II.17). The Macedonians did not even have to wait for the powerful Phoenician city to fall; the kings of Aradus and Byblus were ready to capitulate and “left Autophradates and his ships and joined Alexander with their own fleet, along with the Sidonian triremes; thus some eighty Phoenician sail came over to him. In the same days nine triremes came from Rhodes, . . . three from Soli and Mallus and ten from Lycia.” It was soon the turn of the kings of Cyprus, who commanded 120 ships; they also joined Alexander because “they were alarmed at the whole of Phoenicia being already in Alexander's power” (Arrian II.20.1–3; ↗ early 332). The concomitant arrival of a Macedonian ship marked the return of Alexander's navy in force to Aegean waters, commanded by Amphoterus and Hegelochus (Quintus Curtius IV.5.14). The successive defections of these forces confirmed the success of the strategy that was initiated by the disbanding of the navy at Miletus in the summer of 334.

But meanwhile, the Persians had not been taking it easy. They launched a vigorous counterattack in Asia Minor. We have only meager information about this land offensive in Quintus Curtius and Diodorus (but not Arrian). We know that quite a few of Darius's regiments had left the battlefield safe and sound, still under his command—4000 men, according to Arrian (II.13.1). Several mercenary units commanded by Amyntas (a

Macedonian exile), Thymondas, Aristomedes, and Bianor had managed to reach Tripolis in Phoenicia, where they gained reinforcements. One of them, Amyntas, on his own authority then led a fruitless attack on Egypt (Arrian II.13.2–3; Diodorus XVII.48.2–5; Quintus Curtius IV.1.27–33; cf. §7.1). Diodorus and Quintus Curtius include the adventures of these mercenary leaders in a more general discussion of Persian counteroffensives after the battle of Issus:

His [Amyntas's] experience was paralleled by those of the other officers and troop leaders who escaped at the head of their military units from the battle at Issus and attempted to maintain the Persian cause. Some got to important cities and held them for Dareius, others raised tribes (*ethnē*) and furnishing themselves with troops from them performed appropriate duties in the time under review. (Diodorus XVII.48.5–6♦)

Quintus Curtius returns to these events on several occasions:

The generals of Darius who had survived the battle of Issus, and all the force that had followed them in their flight, with the addition of vigorous young soldiers of the Cappadocians and Paphlagonians (*assumpta etiam Cappadocum et Paphlagonum iuventute*), were trying to recover Lydia. The governor of Lydia (*Lydiae praerat*) was Antigonus, one of Alexander's generals; he, although he had sent very many soldiers from his garrisons to the king, nevertheless scorned the barbarians and led his forces out to battle. There also the fortune of the contending parties was the same; in three battles fought in one region and another, the Persians were routed. (Quintus Curtius IV.1.34–35♦)

Quintus Curtius (IV.1.36) says that these last events happened at the same time (*eodem tempore*) that

a fleet of the Macedonians, which had been summoned from Greece, defeated Aristomenes, who had been sent by Darius to recover the coast of the Hellespont, and captured or sank his ships. Then (*deinde*) Pharnabazus, commander of the Persian fleet, having exacted money from the Milesians and put a garrison into the city of Chios, sailed with a hundred ships to Andros and from there to Siphnos. These islands also he occupied with garrisons, besides fining them. (IV.1.36–37♦)

Quintus Curtius comes back to this later, in the context of the celebration of the Isthmian Games (IV.5.11)—that is, June–July 332, after the fall of Tyre (during the siege of Gaza?). But the chronological connection is expressed quite loosely, as follows:

But not only was Alexander himself proceeding to reduce the cities which still rejected the yoke of his rule, but his generals also, distinguished leaders, had invaded many places: Calas Paphlagonia, Antigonus Lycaonia; Balacrus, having vanquished Hydarnes, Darius' satrap, had recovered Miletus; Amphoterus and Hegelochus with a fleet of 160 ships had brought the islands between Achaia and Asia under the sway of Alexander. (IV.5.13–14)

From this gap-filled but consistent and perfectly credible information we must conclude that, after the battle of Issus, Persian generals took positions in Cappadocia and Paphlagonia and carried on conscription efforts there. With the armies thus raised they launched an initial offensive that Antigonus thwarted. His victories, however, did not settle the problem: the second Quintus Curtius quotation shows that the Persians continued to occupy Cilicia, Paphlagonia, Lycaonia, as well as the Aegean coast (Miletus). It was not before mid-332, *at the earliest*, that the Persian danger was definitively overcome as a result of the Macedonian offensive that was carried out as much on land as by sea.

In fact, Pharnabazus and Autophradates were able to pursue objectives in the Aegean. Until the defection of the Cypriot, Phoenician, Lycian, and Cilician contingents, at the beginning of 332 (Arrian II.20.1), they had a nearly intact strike force. When Alexander appeared below their walls, at any rate, the Tyrians thought that "the Persians were still supreme at sea" (Arrian II.18.2♦). This was also, according to Arrian, Alexander's view (II.17.2–3). They could also count on support from their mainland bases in Caria—Halicarnassus and Cos (Arrian II.13.4) and probably Miletus as well (Quintus Curtius IV.5.13). In the autumn of 333 (before Issus), they had left Cos for Siphnus, where Agis of Sparta, who was planning to rebel against Antipater, had come to join them. They were in Siphnus when they received the stunning news of the defeat at Issus, and Agis was sent to Crete "to stabilize the situation." Pharnabazus reinforced the guard at Chios (some of whose inhabitants were considering a revolt), occupied Andros (Quintus Curtius IV.1.37–40), and then rejoined Autophradates at Halicarnassus (Arrian II.13.4–6; Quintus Curtius IV.5.15–16). This is *perhaps* when Autophradates carried out an operation in the region of Ephesus (Polyaenus VII.27.2) and launched a raid on Samothrace (Plutarch, *Mor.* 339e; cf. *Alex.* 48.4). Despite the presence of the Macedonian navy, then, the Persian leaders after Issus continued to actively pursue their objectives, even though it is difficult to follow their trail in detail because the evidence is fragmentary.

Thus, between the end of autumn 333 and the end of spring 332, combat continued unrelentingly on the mainland as well as along the coast and in the islands. In order to try to understand these conflicts on the various fronts, it is attractive to think that they all pursued the same strategy. According to this theory, the strategy could only have been defined by Darius himself, but two observations appear to argue against this interpretation. First, Amyntas's attack on Egypt reflects his own purely personal motives (cf. Arrian II.13.3), which Quintus Curtius thinks were based on his own interpretation of "finders-keepers" (IV.1.27: *velut certo jure possessum*). Second, the content of the diplomatic offers attributed to Darius after the battle of Issus seems to imply that he was deeply depressed. But neither of these observations actually would prevent alternative explanations. If Amyntas's designs on Egypt really were personal, it is very strange that when he reached Pelusium he presented himself as having been ordered to go there by Darius himself (Diodorus §48.3). Furthermore—precisely as Arrian implies (II.13.1–3)—the other leaders who accompanied Amyntas as far as Tripolis and Cyprus did not follow him to the Nile; in all probability, then, they were subsumed under Pharnabazus's command at Siphnos. Finally, we will return to Darius's diplomatic overtures later, because rather than being able to infer from them that the Great King was weak, we can only interpret them in the context of a *preliminary* elucidation of the royal strategy after Issus.

Of course, there are several accounts of Darius's involvement on the Aegean front after Issus. After his retreat from Issus, the Great King returned to Babylon, where he immediately began to assemble a new army, appealing particularly to contingents from the Iranian Plateau and Central Asia (Diodorus XVII.39.1–4; Quintus Curtius IV.6.1–2; 9.13). It seems utterly impossible that he was cut off from information about the progress of operations on the Aegean front, because he was fully aware that the fall of Tyre would obliterate all of his hopes of seeing Alexander turned back. We must therefore stress the reasoning that Diodorus attributes to the Tyrian leaders: "They wanted to gratify Darius and keep unimpaired their loyalty to him, and thought also that they would receive

great gifts from the king in return for such a favour. They would draw Alexander into a protracted and difficult siege and give Darius time for his military preparations" (XVII.40.3⇨). It is also not impossible that the problems Alexander had to deal with in Syria (the Beqa'a Valley) during the siege of Tyre can also be attributed to Achaemenid fomentation. Alexander may have taken the risk of "dividing his forces" because he thought the danger was real (cf. Quintus Curtius IV.2.24; 3.1, 7). In addition, the fall of Damascus and the naming of a satrap of Syria shortly after the battle of Issus (Arrian II.13.7) certainly did not signify the total submission of the country, as the revolt of Samaria made clear a short while later (332–331; Quintus Curtius IV.8.9–11). We also know that when Amyntas arrived in Egypt his attack was repelled by Mazaces, who must have been named satrap of Egypt shortly after Issus to replace Sabaces, who was killed during the battle for Cilicia (cf. Arrian III.1.2). Finally, we will stress Quintus Curtius's explanation of operations in the Hellespont at the beginning of 332: the Macedonian navy won a victory over Aristomenes, "who had been sent by Darius to recover the coast of the Hellespont (*qui ad Hellesponti oram recipendam a Dareo erat missus*)" (IV.1.36⇨).

The totality of the evidence thus leads us to conclude quite definitively that after his defeat Darius did not abandon the strategy he had formed in 334, which consisted of pushing hard to assemble a royal army and continuing offensives in Asia Minor in Alexander's rear. He could correctly believe that Alexander's territorial control in Asia Minor was very superficial, especially in the regions (Paphlagonia and Cappadocia) where his own generals had raised their armies. Quintus Curtius names only one of these generals, Hydarnes. But we have long known of coins from Sinope that were struck with names that can be identified as Mithropastes, Orontobates, and Hydarnes (in Aramaic). Mithropastes may be the son of Arsites, the former satrap of Dascylium, of whom we know only that he was exiled by Darius to the head of the Persian Gulf at an unknown date and under unknown circumstances (Strabo XVI.5.5). This Orontobates may have been the satrap of Caria who disappears from the sources after the fighting in Caria. Hydarnes, finally, may be one of the sons of Mazaeus, the former satrap of Cilicia-Syria. Whatever the case, we doubt that these generals took the offensive on their own initiative; it is far more likely that they were sent by Darius, who gave them letters authorizing the levying of troops and the use of any treasury funds that remained intact (without doubt in Cappadocia). According to a well-documented practice (cf. Ps.-Arist., *Oecon.* II.24a), the generals would strike coins to pay their troops in a coastal town, Sinope, which at that time still maintained its Persian alliance (Arrian III.24.4; Quintus Curtius VI.5.6). The goal entrusted to them clearly was to reestablish Achaemenid authority in Asia Minor, to cut Alexander's lines of communication, and to advance toward the coast (cf. Hydarnes to Miletus). This is probably why in Quintus Curtius's first discussion (IV.1.35) only Antigonus is named; it was his responsibility as satrap of Greater Phrygia and ruler of the strategic town of Celaenae to defend the royal road. The task attributed to Antigonus by Quintus Curtius (*Lydiae praeerat*), despite the terminological imprecision it implies, may indicate that he was ordered by Alexander to coordinate the Macedonian defenses.

It is also possible that royal orders reached the coast at the same time, as evidenced by Quintus Curtius's statement concerning the mission assigned to Aristomenes in the Hellespont (IV.1.36); furthermore, it was also on Darius's orders that Thymondas had come

to Pharnabazus at Siphnos and there turned over the mercenaries under his command. This interpretation would provide an even better explanation of why, during his private adventure in Egypt, Amyntas could claim to have been assigned an official mission by the Great King: "He proclaimed that he had been sent by King Dareius as military commander because the satrap of Egypt had been killed fighting at Issus in Cilicia" (Diodorus XVII.48.3♦). Amyntas thus would have been attempting to evict the satrap who had recently been named by Darius (that is, Mazaces; cf. Quintus Curtius IV.1.28), even though he had probably simply been ordered by the king to take mercenaries to Egypt to reinforce the garrisons there. Diodorus also says (§48.2♦) that Agis had "received from the Persian king ships and money," but Arrian does not mention a royal order and attributes the initiative to Pharnabazus alone (II.13.4–5). One of Pharnabazus's problems at this time was financial (cf. Quintus Curtius IV.1.37: levies of taxes at Miletus, Andros, and Siphnus by Pharnabazus). It is probable that, unlike the generals who struck coins at Sinope, the Persian coastal commanders did not have access to treasury funds, which in that region were controlled and used by Alexander. But it must not necessarily be concluded that communication between the Great King and Pharnabazus was cut off at that time, especially if we acknowledge, as seems obvious, that the Persian land and sea offensives were coordinated.

The initial victories of Antigonus and then, several months later (in the first months of 332?), of Balacrus (satrap of Cilicia) and Calas (satrap of Hellespontine Phrygia) marked the fall of Persia in Anatolia. Nevertheless, Cappadocia and Armenia responded to the royal order to mobilize; in the months after Issus, both regularly sent their contingents to the Great King, under the leadership of Ariaces (Cappadocia) and of Orontes and Mithraustes (Armenia) (Arrian III.8.5). At the same time, the Macedonian navy continued its offensive. Nonetheless, it was not before the end of 332 that the navy's admiral, Hegelochus, was able to report to Alexander, who was then in Egypt: he and Amphoterus had managed to take, successively, Tenedos, Chios (where Pharnabazus and Aristonicus, tyrant of Methymna, had been taken prisoner), Mytilene, and Cos (Arrian III.2.3–7; Quintus Curtius IV.5.14–22). Pharnabazus disappears (until 322) from the sources after his escape from Chios, and it thus appears that nothing remained of the Persian naval forces except perhaps some small residual groups of "pirate" ships. Only Agis continued the struggle in Europe, though without any direct connection with the Persian front.

Meanwhile, Alexander captured Gaza, and then Egypt was surrendered by the satrap Mazaces, who did not have sufficient forces to resist (cf. Arrian III.1.1–2). In 331, Alexander was able to take the road to Tyre and Babylonia and to confront Darius, and along the way he bloodily quashed the rebellion in Samaria (Quintus Curtius IV.8.9–11).

Darius and Alexander: War and Peace (333–331) — Another Reading

All of the ancient authors say that during the same period diplomatic negotiations between the two camps opened and that they were initiated by Darius. The number and date of the diplomatic missions and letters sent by the Great King vary from one to the next. Here is a summary of the information that the ancient authors report.

(1) According to Arrian (II.14.1–3♦) and Quintus Curtius (IV.1.7–14), the Great King sent a message to Alexander immediately after the battle of Issus, and the Macedonian would have received it when he was at Marathus (around November–December 333).

The Great King requested that the members of his family (mother, wife, children) imprisoned at Damascus (Arrian) be restored, for ransom (Quintus Curtius), and suggested a treaty of "friendship and an alliance."

(2) A second mission arrived during the siege of Tyre (Arrian II.25.1♦). Quintus Curtius (IV.5.1) dates it after the fall of the town, though without certainty (*isdem ferme diebus*). Once again the king offered ransom (10,000 talents) and a treaty of friendship and alliance, and for the first time he agreed to give up some territory, though the amount varies among the sources: "all the country west of the Euphrates to the Greek sea" (Arrian, *Itin. Alex.* §43); "the entire region lying between the Hellespont and the Halys River" (Quintus Curtius IV.5.1;♦ cf. Diodorus §39.1). Quintus Curtius and Arrian state that the Great King proposed sealing the treaty by a marriage between his daughter Stateira and Alexander, and Quintus Curtius adds the detail that the territory conceded (Lydia, the Ionians, Aeolis, the coast of the Hellespont," IV.5.7♦) was to be the dowry (IV.5.1, 7). Some of these proposed terms also appear in an anonymous author (*FGrH* 151 F3).

(3) With the notable (but logical) exception of Arrian, all of the authors speak of a third diplomatic overture, which took place when Alexander had already crossed the Euphrates. In addition to ransom for his mother and daughters (his son also remained hostage in Alexander's hands, according to Quintus Curtius IV.11.6) and a treaty of friendship and alliance, the Great King offered "all the country between the Hellespont and the Euphrates" and the hand of one of his daughters (Quintus Curtius IV.11.5;♦ Justin XI.12.10; Diodorus §54.2). Quintus Curtius reiterates that this territory would be the princess's dowry (IV.11.5). Diodorus adds: "Alexander would become Darius's son-in-law and occupy the place of a son, while sharing in the rule of the whole empire" (*koinōnon genesthai tēs holēs basileias*; §54.2);

(4) Plutarch, on the other hand, makes only one allusion to these negotiations, which he places at Tyre during Alexander's second stay (around June 331). He mentions the ransom (1,000 talents), "all the countries on this side the river Euphrates," a marriage, and amity and alliance (*Alex.* 29.7♦).

These data have long attracted the attention of historians, but they have not received an exhaustive treatment recently. While we can easily understand that Darius might have sent letters and ambassadors to Alexander, is the content, as recorded by the ancient authors, credible? Though the request that Alexander free captives does not present many problems, can we agree on the other hand that the Great King almost certainly would never have offered to give up part of his kingdom to Alexander, let alone that he would have offered to share his kingship with the victor of Issus (Diodorus)? Again, to put it more clearly: do the texts we have reflect, whether in whole or in part, the true nature of the relationship between the two kings at this time, or is it nothing but a piece of Macedonian propaganda?

The first task, obviously, is to establish a relationship between the concessions offered by the king and the military and political situation, both as the modern historian might analyze it now and also as Darius would have envisaged it then (the latter is not an easy task). The offers attributed to Darius by the ancient authors in fact necessarily imply that he felt that he was in an inferior position; thus, giving up territory appeared to him to be the only option. The ancient authors present the king's concessions as graduated: (1) the request to return prisoners, (2) the abandonment of territory as far as the Halys, and

(3) then the Euphrates. The progression actually seems logical: as Alexander ironically remarks, the Great King each time abandons only territories that he had already lost. There is an identical gradation in the varying amounts of ransom offered. But does the internal logic followed by the ancient presentations actually match what Darius decided? This is the crux of the problem.

Like the Tyrians (Arrian II.16.7♣), we today rightly believe that after the battle of Issus “the issue of the war . . . was still obscure.” As Diodorus explains (§39.1), Darius’s determination was steadfast. He still had immense resources in both men and money; specifically, he could count on the arrival of the contingents from the Iranian Plateau and Central Asia (cf. Quintus Curtius IV.6.1–2; Diodorus §39.3). In 331, the contingents available to him came from every imperial territory under his control, from Cappadocia to the Indus (cf. Arrian III.8.3–6). Alexander’s ongoing siege of Tyre immobilized him and allowed Darius to oversee the assembling of troops undisturbed. At the same time, as we have seen, Darius did not abandon his Aegean strategy. In addition, despite Alexander’s statements in his letter from Marathus (II.14.7), there is nothing to indicate that the Great King had suffered significant defections among the high-ranking Persian aristocrats (chap. 18/2 below). Between the end of 333 and spring–summer of 332 (the presumed date of the second embassy), the situation had partly reversed—to Alexander’s advantage—primarily because of the defection of Phoenician and Cypriot units from Pharnabazus’s navy and the renewed activity of the Macedonian navy. Meanwhile, the siege of Tyre dragged on; Quintus Curtius mentions twice that Alexander was even on the brink of despair and turning back (IV.3.11; IV.4.1). Despite some victories won by Antigonos, the Persian offensives in Alexander’s rear were not yet totally neutralized (cf. the chronological alignments in Quintus Curtius IV.5.11–14). Beyond Tyre, Alexander knew that he would also have to conquer Gaza, which was commanded by Batis; he had made considerable preparations that would probably let him put up a lengthy resistance (cf. Arrian II.25.4), and Quintus Curtius (IV.6.7♣) hails him as “a man of exceptional loyalty to his king (*eximiae in regem sui fidei*)”; the use of this phrase implies that he had received instructions from Darius (cf. V.3.4).

At Babylon, meanwhile, Darius actively pursued his military preparations; he even introduced technical innovations in the arming of his troops (Diodorus §53.1–3; Quintus Curtius IV.9.3–4). He and his advisers carefully chose the field of battle, at a spot (near Arbela) on the great road (DAE 67 [AD 6]) that they knew Alexander would take due to logistical considerations (Arrian III.7.3; Quintus Curtius IV.10.13). The royal army trained there every day (Diodorus §§53.4; 55.1). Supply logistics were meticulously organized (Quintus Curtius IV.9.8). In order to avoid the errors made at Issus (cf. Quintus Curtius IV.13.6), the ground was leveled (IV.9.10; Diodorus §53.4) to permit the cavalry and chariots to maneuver easily (Arrian III.8.7). According to Polyaeus (IV.3.17) and Quintus Curtius (IV.3.36), iron caltrops (a device with four metal points) had been driven into the soil as a hazard to the maneuvers of the Macedonian cavalry. The Great King took other measures to impede Alexander’s march. For instance, Mazaeus had been ordered to guard the Euphrates, and he did such a good job that the Macedonian pontoon-builders were not able to finish their work before Alexander arrived (cf. Arrian III.7.1–2). When he retreated, Mazaeus tried to apply a scorched-earth policy (Quintus Curtius IV.9.13; 10.10–13; Diodorus §55.1–2). Quintus Curtius repeats an unverifiable tradition and even adds that Darius tried to organize an assassination

plot against Alexander (IV.10.16–17). In conclusion, we see nothing in the deeds and behavior of Darius that might illustrate that he had a sense of panic or despair. Though the repeated successes of Alexander were undeniably nothing but failures for Darius, after Issus, he was still completely determined to confront the Macedonian army once more, and he did everything possible to prepare. It was Darius who determined the strategy at this time; Alexander had to adapt to the plans worked out by the Persian staff—not the other way round. Diodorus acknowledges this with the following appreciation: “He was not crushed in spirit in spite of the tremendous setback he had received” (§39.1♦). In short, the Great King was not in the sort of desperate situation that might be expected from the breadth of territorial concessions attributed to him.

The ancient authors clearly realized that they had a problem, because if the offers of territory (even “reduced,” contra Arrian, to the Halys border) are dated to the time of the siege of Tyre, they were made at a time when Darius had already issued the general mobilization order (hence the coordinated decision made by the Tyrians, following Diodorus §40.3; cf. FGrH 151 F1.7: *dia to speudein epi ton Dareion*). The ancient authors, even though they generate their own contradictions, all sidestep the problem by stating that it was the breakdown of negotiations that forced the Great King to prepare an army, “despairing of peace, which he had believed that he could obtain through letters and envoys” (Quintus Curtius IV.6.1;♦ cf. Arrian II.25.3; Diodorus §55.1). The problem is that Arrian dates this attitude of Darius to spring–summer 332 (approximately), while Diodorus dates it to summer–fall 331, at a time when the royal army had already been assembled (Diodorus) or was well along in the process (Arrian). The offer of the Euphrates is literally incomprehensible: at this time, it was evident that Darius had in fact decided to fight, because, as even Quintus Curtius avers, he left Babylon for Arbela (IV.9.6) before sending the third embassy to Alexander (IV.11.1; cf. Diodorus 54.1–2). The ancient authors offer two interpretations to explain the inexplicable.

(1) Darius preferred to arrange a peace rather than confront Alexander. This is the picture that drives Alexander’s responses, which are constructed on a consistent model. Thus, he refuses all of the territorial concessions, which would do no more than authenticate the conquests that had already been achieved. He aspired to control the entire kingdom and to wield undivided power. He goads Darius to another battle that will decide the contest. It is clear that this image is built on a very popular motif: Alexander never stops pursuing an enemy who slinks away in flight; and this motif was consistently driven home by the sources close to the Macedonian camp and spread wide in many depictions. Quintus Curtius even claims that for a moment (end of 332 – beginning of 331?) the Great King considered leaving Babylon and seeking refuge in the Iranian Plateau countries; he gave up this plan only because he understood that, because he faced so firm a foe, all flight was futile (IV.9.1–2). But whatever interpretation is put on the “flights” of Darius III at Issus and Gaugamela (chap. 6/4), the information on the Great King’s military preparations offered by Quintus Curtius and Diodorus themselves (above) impugns the interpretations that they suggest.

(2) The later overtures (for instance, the Euphrates as border) are explained by Darius’s passionate admiration for Alexander; after all, he had just learned from one of his eunuchs about the care with which Alexander had surrounded his wife Stateira, who had just died (cf. Quintus Curtius IV.10.18–33). This is presumed to explain the senseless speech given to the Great King: “O Gods of my fathers, . . . may no one, I pray, be

king of Asia, rather than that enemy so just" (§10.34♦), and the following: "Accordingly (*itaque*) . . . overcome by his enemy's contenance, Darius sent ten envoys" (§11.1;♦ cf. Justin XI.12.6–9: *itaque*). None of these laborious and/or rhetorical comments could convince anyone. Furthermore, it is clear that the speeches attributed to the Great King's ambassadors at this time are improbable reconstructions that bear no evidentiary value (cf. in particular Quintus Curtius IV.11.2–9). Whatever the (political or personal) importance Darius attached to the members of his family who were held in Alexander's camp, it is hard to believe that at the moment his army was actively training on the battlefield of Gaugamela he could imagine exchanging them for half of his territory. The offer is even more unbelievable because, under this "exchange theory," the Great King's prime concern would have to have been the fate of his son; indeed, according to Quintus Curtius (IV.11.6), Darius asked Alexander to return his mother and daughters but would be willing to let him keep the young boy hostage. This is all incredible—unless we assume that the Great King "had the virtues of a private citizen more than the attributes of the leader of an empire" (G. Radet)! It is easy to find two of the favorite components of Macedonian propaganda in the words and thoughts attributed to Darius by Quintus Curtius and Justin: the greatness of spirit and moderation of Alexander on the one hand, and on the other, the voluntary dismantling of the Empire by Darius, who with his dying breath charged his "chivalrous" conquerer to punish Bessus, the satrap who committed regicide (Diodorus §73.4; cf. Plutarch, *Alex.* 43.4; Justin XII.11.5).

In short, the ancient comments on the (imagined) personality of the Great King do nothing to clarify the political decisions attributed to him. Alexander's historians could provide no credible explanation for the strategy that they thought the Great King followed. The reason is simple: Quintus Curtius and Diodorus in particular faced an insurmountable paradox: they were unable to reconcile two very different pictures of the Great King—a decisive commander-in-chief on the one hand and a completely panicked head of state on the other. Only Arrian escapes the internal contradictions. His negative evaluation and judgment of Darius never varies and brooks not a single exception: the speeches he gives Alexander always contain canonical images of weak and effeminate Persians, in contrast to tough Macedonians and glorious Greeks (II.7.3–7)—a practice that is reminiscent of the precedent of the Ten Thousand (II.7.8–9; cf. I.12.3) and that certainly is dependent on his source, one of his favorite authors, Xenophon. Darius is presented as a pawn in the hands of his advisers (II.6.4); he has a defeatist mentality (§10.1); he is unwilling to part with any of the royal paraphernalia of opulence (*tryphē*), "even on campaign" (§11.10♦). All of these judgments about Darius are repeated in his funeral oration—"No man showed less spirit or sense in warfare" (III.22.2♦); and he was guilty of infamous cowardice at Gaugamela: "he himself was among the first to flee dishonourably at Arbela, and lost the greatest army of the whole barbarian race" (§22.4♦). Arrian had already developed all of these themes in the (highly suspect) text of the letter he had Alexander send to Darius from Marathus (II.14). The letter amounts to an organized attack on the legitimacy of Darius, composed according to the canons of dynastic propaganda. The Great King is contrasted with the powerful, victorious Alexander (who, however, is compassionate toward the members of Darius's family) and is disqualified on every count: he is not a legitimate king; he is abandoned by those close to him, who "voluntarily" turned to Alexander (Arrian II.14.7♦); he not only was vanquished on the battlefield but in his ignominious flight he abandoned the symbols of his

authority (bow and arrows, mantle, chariot), with the result that thereafter their symbolic power redounded to Alexander's glory (II.11.6; 12.4–5; III.15.6). In this context, the abandonment of territory would crown the entire picture, because Darius himself agreed to divide the Empire and even to grant Alexander an equal share of authority (Diodorus).

All of this confirms that there were two contradictory views of the personality of Darius III in Antiquity. It seems obvious that the tradition of abandoning territory emerged from a stream of Macedonian propaganda that obligingly emphasized the Great King's weakness and cowardice. Arrian followed this stream unswervingly. Diodorus and Quintus Curtius also adopted it, but they melded it with information from another, more "Persocentric" source. Because they inherited two traditions, their narratives are marked by many contradictions and awkward explanations. Moreover, we have already seen that Diodorus provides both versions of Darius's accession a few lines apart without realizing that they are mutually exclusive (§§5.3–6; 6–7.1–2). The only point on which the two agree is the notorious abandonment of territories, but it is probably accidental that Arrian is the only one who dates the offer of the Euphrates as a boundary to the siege of Tyre (II.25.1). Modern commentators almost unanimously reject Arrian's version and in so doing validate the other version, which describes the ceding of Trans-Halys Anatolia. But does this version really have better foundations? Is it more credible? This is indeed the problem.

The choice of the Halys and the Euphrates as the borders offered by Darius is no gauge of Achaemenid authenticity. The Greeks had known since the time of Herodotus (I.74♦) that the Halys was considered the border between the kingdoms of Media and Lydia, and the diplomatic agreement between the two had been sealed with a marriage between the son of Cyaxares and the daughter of Alyattes because "treaties seldom remain intact without powerful sanctions [family bonds]." Moreover, the territory thus "ceded" corresponds almost exactly to a theme, dear to Isocrates, by which conquest could be measured (*Phil.* 120: "Asia from Cilicia to Sinope"). The notion of the Euphrates as a border seems at first sight to have been transferred from the administrative term *Ebir Nāri*—that is, 'beyond the river', which is rendered in Greek as 'beyond the Euphrates' (*peran Euphratou*) in Darius's letter to Gadatas (ML 12). But the formulas used by Alexander's historians—"between the Euphrates and the Greek sea" (Arrian), "this side of the Euphrates" (Diodorus, Plutarch), "between the Hellespont and the Euphrates" (Quintus Curtius), and "as far as the Euphrates" (Justin)—clearly represent an Aegeocentric view of the Achaemenid world, simultaneously betraying a Greek or Macedonian hand (just like the phrase "this side of the Halys"). Furthermore, in Greek representations of Achaemenid space, the Euphrates was traditionally perceived as a cultural boundary beyond which deepest Asia, both mysterious and unsettling, commenced (cf. in particular Chariton of Aphrodisias, *Chaereas and Callirhoe* 5.1.3). There can be no doubt that these at least in part are the political-geographic assumptions that lie behind the construction of the (conventional) dialogue between Alexander and the elderly Parmenion, who here as elsewhere appears in his (entirely conventional) role of "peasant from the Danube" (Arrian II.25.2; Diodorus 54.4–5; Quintus Curtius IV.11.11–13). These observations lead us to take the probative value frequently accorded to the gradated nature of Darius's territorial concessions with considerable reservation. In reality, the theme of "gradated response" in the ancient authors typically relates to the

category of contrived evidence; it essentially serves as a *posteriori* legitimation of the successive phases of Alexander's conquests. To this end, the writers have deliberately taken over geographical-administrative terminology that would establish an apparent continuity with existing Near Eastern formulas, but they have reinterpreted them from a European perspective on imperial space.

If we attempt to see things from the Persian point of view, the preceding discussions invite us once more to reread the texts that, rather than portraying the thoughts of Darius, reveal the afterthoughts of Alexander. We must especially stress that never in Achaemenid history had there been a precedent for relinquishing territory in this fashion. To this observation one obviously might retort that no Great King had ever found himself in a similar situation in the past. The only parallel that might be suggested is when Artaxerxes II faced Cyrus the Younger. Of course, the two examples are not fully congruent, because this one concerns two royal sons—though on the military and strategic level, Artaxerxes II's position in the summer of 401 was at least as serious as Darius's (although, unlike Darius III, Artaxerxes did not have the contingents from the Iranian Plateau and Central Asia). Nevertheless, there never was a question, even for a moment, that the Great King would abandon an ounce of his sovereignty, even in favor of a younger brother. Diodorus's gloss (XVII.54.2) on the sharing of power (*koinōnon genes-thai tēs basileias*) is highly suspicious; strangely enough, it recalls a promise of the same type that (also according to Diodorus; XI.71.4) Inarus supposedly made to the Athenians in the 460s (*koinēn autois parexesthai tēn basileian*). Power-sharing and joint regency are in fact notions absolutely foreign to the Achaemenid concept of monarchy. The parallel sometimes suggested on the basis of the position that Diodorus (once again) attributes to Mentor after the Egyptian campaign (XVI.50.8) is built on sand: there never was a vice-regency at any time in the entire history of the Achaemenid dynasty.

Does Quintus Curtius's insistence on the idea of "dowry," in connection with the supposed offer of Darius's daughter to Alexander, allow us to alleviate the difficulty? To put it another way, to what extent would ceding land as a dowry possibly limit Alexander's future rights? To answer the question with any finality, we would have to understand "matrimonial law" among the Persians with some precision, which is not really possible. But to formulate the dowry theory is also to acknowledge that the conditions for devolution of power would have been understood by Darius and his entourage. In other words, adopting Quintus Curtius's theory raises new difficulties: who would reign after Darius's death—his own son or Alexander? And when Alexander died, would not power depart from the Achaemenids forever: would not a son born to a Macedonian father and an Iranian mother be considered a Macedonian, as is demonstrated by the Susa marriages? We do not really think that Darius could have been naive about this point. We are even more wary because the dissipation of a kingdom through dowry is one of the favorite motifs in monarchic literature that has a goal of justifying a conquest *post eventum* by claiming family rights. Let us simply recall the stories circulating in Persia and Egypt of a Persian-Egyptian marriage (cf. Herodotus III.1–2) or the fiction that made the Persians the heirs of the Median kingdom through an engagement agreed to by "Cyaxares" in the presence of his future son-in-law "Cyrus": "With her I offer you all Media as a dowry, for I have no legitimate male issue" (Xenophon, *Cyr.* VIII.5.19♦). This is a rather banal motif that probably goes back to Ctesias, because it is found word-for-word in Nicolas of Damascus (*FGrH* 90 F66.8): Astyages gives his daughter in mar-

riage to Spitamenes with "Media for a dowry." For all of these reasons, the dowry theory raises great reservations.

Nevertheless, it is not impossible that the Great King offered one of his daughters in marriage to Alexander. But on what basis and with what intent? First of all, we may note that in second-millennium Near Eastern interdynastic matrimonial practice, every dowry had a functional (and thus inseparable) association with the bride-price paid simultaneously by the future son-in-law. At the same time, it must be stressed that, in the Achaemenid context itself, to hold the position of king's son-in-law never conferred any special authority: instead, the position was a royal gift that obligated the recipient vis-à-vis his royal father-in-law (and not vice versa; see chap. 8/1). Is this how Darius would have understood it? From Darius's point of view, this union would in fact have served as a bargaining chip ensuring a retreat by the Macedonian forces. The response that Alexander seems to have made to this proposal (cf. Arrian II.25.3) implies that a marriage of this kind offered by Darius alone could in no way be considered equivalent to a sharing of power and/or territories. Alexander was both smarter and more ambitious than Pausanias (cf. Thucydides I.128.7)! Furthermore, the tradition of the dowry is repeated by an anonymous author, though in a form slightly different from Quintus Curtius's: Darius wanted to obtain the freedom of some captives and sent (apparently immediately after the battle of Issus) an embassy to Alexander seeking peace: "He gave him (*didous*) all the territories this side of the Halys, and whichever one of his daughters Alexander would choose to marry, and 20,000 talents by way of dowry (*emproikia*)" (FGrH 151 F1.5). In this account, the dowry is formally distinct from the ransom and it consists solely of a gift of money.

If, then, there is no doubt about the reality of diplomatic overtures, we nevertheless do not see how this would justify, from the Persian perspective, Darius's offers of territory—at least in the terms recorded by Alexander's historians (cession pure and simple, or as a dowry). Instead, we are led to conclude that the territorial concessions attributed to Darius between 333 and 331 were falsely promoted by Macedonian propagandists. Obviously, it is always difficult to reject a unanimous tradition on the basis that we consider the tradition improbable—an idea that itself comes from the historian's personal interpretation or his own conviction. But the agreement of Alexander's ancient historians is not sufficient ground to support their theory. In fact, the agreement essentially results from an illusion, if we agree that they used the same source for this detail. Furthermore, the agreement is no more than partial, because only Quintus Curtius and an anonymous author (FGrH 151 F1.5) provide the dowry clause, and they do so in different terms. Finally and most importantly, textual and contextual analysis nearly inevitably lead to this theory, because it is the only approach that actually takes into account the activities and decisions actually attested for Darius (in contrast to his assumed and reconstructed thoughts), the change in power relations, Achaemenid political traditions and concepts, and the internal contradictions found in the Hellenistic and Roman authors. The interpretation is made even less desperate by the fact that one tradition has echoed it even in Antiquity. According to Diodorus (XVII.39.2◊), in fact, when Alexander gathered the council of his Friends, he "concealed the real letter. Forging another more in accord with his interests he introduced it to his advisers." The chronological uncertainty of the passage does not lessen the force of the objection that it generates: the fabrication of forged letters (not to mention speeches!) was a practice well known in the

time of Alexander and in the Hellenistic period. The improbability of the strategy and of the thoughts attributed to Darius reinforces the conviction that we are dealing with a Macedonian fraud—a conclusion that is no more difficult to accept than the impossibility of proposing truly credible alternative explanations.

The Consequences of Gaugamela (331–330)

Despite his immense, intense military preparations, Darius was once again vanquished on the battlefield at Gaugamela. This defeat had considerably more serious consequences than the defeat at Issus. When the Great King returned to Arbela, he and his advisers held a conference. According to the ancient authors, they faced a dramatic choice: either to return to Babylon, where Mazaeus and his contingents were soon coming to seek refuge (cf. Quintus Curtius IV.16.7), and there take advantage of the strength of the position to prepare Babylon defensively and thus block Alexander's advance; or else to attempt to assemble a new army and thus prepare for a final confrontation. Because of the recent rout, both options presented major disadvantages: leaving open the Babylon road would in the end allow Alexander to seize the great capitals, their treasures, and the rich plains of Babylonia and Susiana; but to fall back to Babylon would be equivalent to recognizing that the fall of the city—however long the siege might take—would signify the end of Achaemenid dominion and the conclusive defeat of Darius III, who would then fall into the hands of the conqueror. Darius chose, against the advice of some of his intimates, it appears (cf. Quintus Curtius V.1.7), to fall back to Ecbatana, taking the road from Arbela across the mountains of Armenia (V.1.9; Arrian III.16.1; *ADRTB* no. –330). According to Arrian (III.16.2), this option was based on two considerations. First, Darius knew that Alexander would soon attack Babylon; the good road from Arbela to Babylon offered Alexander the supplies that his troops needed, which were not available on the route chosen by Darius; given these factors, the Great King was quite aware that his adversary was intent on capturing rich, prestigious towns such as Babylon. Second, Darius counted on rebuilding an army at Ecbatana, aided by a new mobilization that had been launched in the East Iranian satrapies (Diodorus §§64.1–2; 73.1), especially Bactria, which according to Quintus Curtius (V.10.3♦) “occupies a third of Asia, and the number of its men of military age equalled the armies which Darius had lost.”

We know that, when Alexander arrived in Babylonia, Mazaeus did not really attempt to organize the town's resistance, even though it was well fortified, and he capitulated to Alexander; the satrap of Susiana soon followed his example. Quintus Curtius, describing the surrender of Susa to Alexander by the satrap Abulites, muses that he did this “whether by order of Darius, . . . or of his own volition” (V.2.8♦). This is basically the problem faced by the modern historian as well. Diodorus, also commenting on Abulites, reveals varying traditions about his voluntary surrender to Alexander:

Some have written that he did this in compliance with orders given by Darius to his trusted officials. The king of Persia hoped by this policy, it is suggested, that Alexander would be kept busy with dazzling distractions and the acquisition of brilliant cities and huge treasures, while he, Darius, won time by his flight to prepare for a renewed warfare. (§65.5♦)

A little earlier, Quintus Curtius had offered his own interpretation, in the context of his discussion of the debate between Darius and his circle at Arbela after the retreat from Gaugamela. He says that, when he left the road to Babylon open, the Great King's thinking was as follows:

He himself had learned from experience that costly equipment and concubines and trains of eunuchs were nothing else than burdens and hindrances. Alexander, dragging these same clogs after him, would be inferior in the resources by which he had formerly conquered. (V.1.6♦)

This is obviously a personal gloss by Quintus Curtius (or his source) that regurgitates all of the clichés about *tryphē*, built on a litany of evocative terms: “costly,” “concubines,” “eunuchs.” Quintus Curtius and the other ancient historians would soon use the same images to criticize the “orientalization” of Alexander. Moreover, coming as it does from a Latin historian’s pen, the passage is very reminiscent of the description of Hannibal and “the delights of Capua” (cf. V.1.36–38). It is also difficult to make sense of the thoughts attributed to Darius by Diodorus, because the best way to gain time would obviously have been to order Mazaeus and Abulites to continue to resist as long as possible. Arrian also refers to the strategy of the Great King, who was then at Ecbatana:

Darius had determined, if Alexander were to remain at Susa and Babylon, to wait himself where he was in Media, in case there were any new developments [*neōterizein*: disaffection?] on Alexander’s side, but if Alexander were to march straight against him, he proposed to go up country to the Parthyaean and Hyrcania, as far as Bactra, ravaging all the country and making further progress impossible for Alexander. . . . He stayed himself in Ecbatana with the force he had collected. . . . [Alexander] was informed on the road that Darius had decided to meet him in battle and fight it out again. . . . (III.19.1–3♦)

Arrian’s passage raises several difficulties, because it is placed at a late time (May–June, 330) and confuses several stages of Darius’s strategy (which is perhaps the source of the chronological inversion of Susa and Babylon). The thoughts that Arrian gives to Darius do not mean that he believed that Babylon and Susa would not resist; the word used (*neōterizein*) even makes it possible to believe that the Great King hoped that Alexander might still find himself in the grip of difficulties. These thoughts are only understandable if in the meanwhile the Great King’s hopes had not been realized and he had learned of the fall of the capitals (by swift courier, the news could have reached him at Ecbatana in a day or two, via Persepolis and Gabae). This is probably the situation that lies behind the statements of Quintus Curtius and Diodorus: Darius hoped that for whatever reason (logistics, perhaps) Alexander would stay awhile in Babylon. It is only *post eventum* that Arrian (III.16.2) is able to state that, according to the Great King himself, since early October 331, Babylon and Susa comprised the ‘prize of the war’ (*tou polemou ton athlon*)—a phrase from the world of sports that gives Darius the false image of a competitor who recognizes, sportsmanlike, the victory of his opponent. On the contrary, as Arrian recognizes without attempting to evade the implications, it is clear that, throughout the winter of 331–330, the Great King did not abandon his initial plan, which was to raise an army and give battle: “Darius was preparing himself for battle rather than for flight” (Quintus Curtius V.8.2;♦ cf. Diodorus 73.1). Only later did he make the decision to withdraw toward the Upper Satrapies.

We can now answer Quintus Curtius’s question about Abulites’ behavior: “whether by order of Darius, . . . or of his own volition” (V.2.8♦). Whether it concerns Babylon or Susa, the first possibility—that Abulites acted on orders from Darius—seems even less likely, because the Great King was quite aware that a new mobilization would take quite a few months. We must thus assume instead that, quite logically, Darius had sent orders to Mazaeus and Abulites instructing them to put up the strongest possible resistance to

Alexander. In fact, Darius must have written to all of the satraps while at Ecbatana. According to Diodorus (§64.2♦), “he posted couriers to the satraps and generals in Bactria and the upper satrapies, calling upon them to preserve their loyalty to him.” The same applies to Madates, who was in command of a fortification on the road from Susa to Persepolis: he was “a man by no means a time-server; for he had decided to endure the utmost to the best of his loyalty” (*ultima pro fide*; V.3.4♦). This phrase reveals that he was personally involved with Darius (cf. IV.6.7), as Mazaeus and Abulites certainly had been; and this explains the uncertainty expressed by Quintus Curtius (V.2.8) and Diodorus (65.5), who, moreover, may be providing the excuse offered at the time by the rebellious satraps. The behavior of these two men poses other problems, to which we shall soon return, but we must not conclude that their actions reflect the position of the Great King; on the contrary, their deeds took him by surprise. By organizing the defense of the territories in his rear, Darius clearly hoped to gain the time needed to prepare a new army. Babylonia, Susa, and Persia were endowed with many strongholds, and the size of contingents placed at the Persian Gates show that the region was not devoid of officers and men. Mazaeus himself headed a force of Babylonian horsemen who figured in the procession that went to welcome Alexander (Quintus Curtius V.1.23). Perhaps these cavalrymen were among the troops that had followed Mazaeus all the way to Babylon (IV.16.7). For that matter, Alexander himself was much less optimistic than many modern-day historians. Before Mazaeus defected, he was quite fearful that the siege of Babylon would immobilize him for a long time (cf. Quintus Curtius V.1.17). Despite the successive surrenders of Babylon, Susa, Persepolis, and Pasargadae, Alexander was still uneasy in the spring of 330, which helps to explain the forced march that brought him to Media in twelve days. At the end of this march, he learned that Darius had decided to retreat toward the interior (Arrian III.19.4–5). We shall return later to Darius’s last weeks (chap. 18/4 below), but as a provisional conclusion, we must insist on a fundamental observation: there is no doubt that the victory at Gaugamela represented an essential step for Alexander—and was actually experienced as such (cf. Plutarch, *Alex.* 34.1)—and that the defeat was, *in the long run*, a catastrophe for Darius. Nevertheless, as of the evening of October 1, 331, the story had not yet been written. The battle seems decisive only because we know the rest of the story and only if we assume that Darius was totally discouraged after the defeat—a picture that all of the ancient authors throw into doubt. If any event can be called decisive, it was the surrender of Babylon, nearly a month after the battle; but, it was never anticipated that Mazaeus would surrender the town without a fight.

2. Darius and His Faithful

Mithrenes and the Persians of Asia Minor (334–333)

In his letter from Marathus, Alexander, according to Arrian (II.14.7♦), made his superiority evident in these terms: “I hold myself responsible for all of your troops who did not die in the field but took refuge with me; they are with me of their own free will (*ouk akountes*), and voluntarily (*hekountes*) serve in my army.” We can see that this is one of the well-known articles of royal justification. The voluntary (*hekousiōs*: e.g., Diodorus §65.5 [referring to Abulites]) defection of personnel close to a rival reinforces the right of the one who wishes to claim supreme authority. This has already been shown in the

case of all of the ancient authors who calmly record the propaganda issued by Cyrus the Younger against his brother Artaxerxes (chap. 15/2). As in the case of Cyrus, Alexander's statements must be viewed with caution. The behavior of the Persian satraps prior to the battle at the Granicus had already shown how much the Persian aristocrats were united around their king and how determined they were to carry out the orders given to them.

There are few examples of voluntary (*hekousiōs*: Diodorus XVII.21.7) defection; we can cite only the case of Mithrenes, phrourarch of Sardis, who after his defection was always considered a traitor (*proditor*) to the Great King (Quintus Curtius III.12.7). When Alexander arrived, Mithrenes, accompanied by nobles (*dynōtatoi*) from Sardis, sought the king outside the walls and "gave up . . . the citadel and treasury" (Arrian I.17.3♦). Mithrenes' reasons escape us. His attitude was entirely different from the mood of Hegesistratus, "to whom Darius had entrusted command of the Milesian garrison, [and who] had previously sent a letter to Alexander surrendering the city, but he had taken heart again, because the Persian force was no distance away; his intention was now to save the city for Persia" (Arrian I.18.4♦). But Mithrenes was aware that the town's position was virtually impregnable and that, in any case, Alexander would have to lose many weeks in order to force its surrender (because he obviously could not continue his march and leave such an important position behind him). Moreover, Mithrenes certainly did not realize that the fall of the citadel would allow Alexander to recover from his financial straits (cf. Diodorus §21.7). The death at the Granicus of Spithridates, the satrap of Lydia and Ionia, does not explain everything. In other words, given the nature of the balance of power at the time, Mithrenes' decision was extremely risky, especially if there had been a successful Persian counterattack. We would better be able to resolve the problem if we knew the personal and political pedigree of the phrourarch of Sardis—which, unfortunately, we do not. Mithrenes obviously thought that Alexander's offers were sufficiently attractive, and we know that in exchange for his surrender he received a prestigious position: "Mithrenes remained with him, with the honours (*timē*) of his rank" (I.17.4;♦ cf. III.23.7).

The Mithrenes episode and the vocabulary used indicate that after his landing Alexander was convinced that the conquest of the Empire and lasting dominion presupposed that he would be able to attract the support of the dominant Persian socioethnic class that, aside from occasional revolts, had remained closely tied to the Great King throughout Achaemenid history. The Hegesistratus episode implies that he had made contact with many important officials shortly after the victory at the Granicus (compare Arrian III.16.6). To bolster his attempts to win converts, he had devised a quite simple ideological stratagem that was copied from the technique that the Great Kings themselves had applied to the elites of conquered countries. Thus, Mithrenes was welcomed into the royal entourage, and he retained the perquisites of prestige that he had enjoyed in Darius's service. Alexander did not go so far as to integrate Mithrenes into the new ruling class; he did not receive a satrapy until 331. Up until 331, the high satrapal posts were exclusively reserved for Greeks and Macedonians. Even at that date, the Macedonians were certainly not ready to accept the Iranians as equals; from this, we can infer that, in these first years, an Achaemenid-style court hierarchy was created parallel to the Macedonian court hierarchy. An anecdote about Memnon recorded by Polyacnus (IV.3.15) also seems worth mentioning. After his landing, Alexander "ordered his troops to spare Memnon's lands . . . in such a way as to make him suspect." Alexander's policy

was quite different after the victory at the Granicus: at that time, he sent troops “to Memnon’s territory (*epi tēn khōran tēn Memnonos ekpempēi*)” (Arrian I.17.8♦)—which implies that the Rhodian had been dispossessed. This was a signal intended for those who were considering resistance: if they did not yield, they would also lose the economic advantages that they had enjoyed as a result of the favor shown to them by Darius (cf. Arrian I.12.10). These were probably the factors that Mithrenes took into account.

Alexander’s policy may be easy to understand, but we need to evaluate its impact and success. Apparently, aside from Mithrenes, there were not many defectors; we know only that someone named Sabictas/Abistamenes was put in charge of part of Cappadocia in the summer of 333 (Arrian II.4.2; cf. Quintus Curtius III.4.1), but we know nothing about him. Overall, the high officials’ faithfulness to Darius is verified throughout 334–332. The generals and satraps who survived the battle at the Granicus remained loyal to Darius: some came to defend Halicarnassus, others returned to their satrapy or country (Atizyes to Greater Phrygia, Arsames to Cilicia) before returning to Darius’s camp, and still others met their end in violent counterattacks against Macedonian positions before and after Issus. We also need to be able to trace the activities of the Persians of the imperial diaspora who were settled in large numbers in Asia Minor. They no doubt were confronted with the same problem that Mithrenes had to face. Unfortunately, we have no way of knowing what their attitude might have been at that time. Not until 332 do we have any interesting evidence: a Greek inscription from Amyzon, which reveals the granting of citizenship to someone named Bagadates and his naming as *neocore* of a civic sanctuary dedicated to Artemis. The context suggests that Bagadates was a Persian settler in Caria who, during the turmoil surrounding the collapse of Achaemenid dominion, managed to retain a prestigious position by being integrated into the civic ranks. But the late date of the inscription (after the death of Alexander) keeps us from making generalizations about the attitude of the Persians of Asia Minor after the Macedonian army had passed through in 334 and after the confrontations of 334–332.

The Surrender of Mazaces (332)

The first recorded surrender by a satrap is the case of Mazaces, who capitulated in Egypt in 332. Quintus Curtius indicates that Mazaces came to welcome the king outside the ramparts of Memphis, as Mithrenes had done at Sardis: he “delivered to Alexander 800 talents of gold and all the royal furniture” (IV.7.3–4♦). Arrian explains Mazaces’ decision as follows:

Mazaces . . . on learning how the battle of Issus had gone, of the shameful flight of Darius, and that Phoenicia, Syria, and the greater part of Arabia were in Alexander’s hands, and being without any Persian force, received Alexander in a friendly way into the cities and the country. (III.1.2♦)

We should establish a hierarchy for the reasons offered by Arrian and make distinctions among them. It is likely that Mazaces had been negatively influenced by the defeat at Issus, but the explanation nonetheless seems forced. In fact, it was only because Sabaces, the satrap of Egypt, had fallen at Issus, that Mazaces had been named satrap in his place, in the context of measures taken by Darius III after his Cilician defeat. Arrian’s bizarre explanation is also suspect because of the generalization it implies about the attitude of the Persians after Issus. It is built on one of the common themes of Macedonian propaganda that has already been highlighted in the letter from Marathus, as well as in the descriptions of the battle of Issus (and then Gaugamela): Darius III was

completely discredited by abandoning the symbols of royal authority when he fled. There is hardly any doubt that Alexander at this time had mounted a psychological campaign that was intended to force a split between the Persian aristocracy and the Great King, but there is no evidence that he achieved any degree of success in this area. There is in fact nothing to show that the Great King's prestige was deeply affected. The defeat, we have already seen, did not result in terrified flight among the high officials, who were certainly reassured by the energy that Darius displayed. The only "traitor" we can name is the governor of Damascus, who after the battle of Issus betrayed the confidence of the Great King (Quintus Curtius III.13.2-4); however, he was slain by one of his accomplices, "reverencing the majesty of the king" (§13.17♦), who brought his head to Darius. We also know that Batis, who was in charge of Gaza, maintained his commitments to the Great King to the end (Quintus Curtius IV.6.7), despite the shock of the fall of Tyre. On the other hand, we do know the name of a Persian (Oxydates) who had been imprisoned by Darius at Susa—"this made Alexander trust him" (in 331; Arrian III.20.3♦); but no general conclusion can be drawn from this incident, because we know nothing about the time or circumstances of the affair.

Along with his appointment, Mazaces would certainly have received orders from Darius to resist if the occasion arose, and Egypt had been a troubled theater ever since he had been assigned there. After the battle of Issus, Amyntas, a Macedonian deserter who was in the service of Darius, reached the Nile Valley accompanied by his mercenary troopunit. He claimed to have been named *strategos* by Darius; there was a battle, in which Amyntas perished (Diodorus XVII.48.2-5; Quintus Curtius IV.1.27-33). The affair probably reinforced the satrap's position, and he probably enrolled Amyntas's mercenaries in his service. The need to pay mercenaries is perhaps confirmed by the coins bearing his name that he issued in Egypt. At the same time, Alexander's crushing military and naval superiority must have worried Mazaces, who was now completely cut off from the Persian camp. We know about one of his subordinates, Amminapes, a Parthian, who according to Arrian "was one of those with Mazacus, who had surrendered Egypt to Alexander" (III.22.1♦). Quintus Curtius (who calls him Manapis) places the appointment of Amminapes at a later date and adds that he had been exiled during the reign of Ochus and had stayed at Philip's court during that time (VI.4.25). It would be risky to infer that Amminapes abandoned Memphis and took the side of Alexander because of his Macedonian past. Artabazus and his family, who also were exiled in the time of Artaxerxes III, exhibited unfailing loyalty to Darius III, despite the fact that their wives and daughters had been taken prisoner at Damascus (Quintus Curtius III.13.13-14).

It is far more likely that the motivations of the Persian leaders in Egypt are to be explained by the same considerations as those that motivated Mithrenes: they wanted to preserve their privileges, especially ownership of the estates from which they profited in the arable land (cf. Diodorus §48.4). However, unlike Mithrenes, they could claim that the balance of power had tilted decisively in Alexander's favor.

The Defections of Mazaeus and Abulites (331)

When Alexander arrived in Babylonia and Susiana in October and November 331, he accepted the surrender of the two capitals from Mazaeus and Abulites, respectively. The surrender followed the well-known royal-entry ceremony: Mazaeus came with his children to greet the victor, accompanied by an official procession; then Alexander made his triumphant entry into the town (Quintus Curtius V.1.17-23; 1.44; 2.8-10;

Arrian III.16.3–4). The same sequence took place at Susa, preceded by Abulites' coming to pay him homage "with gifts of regal splendour" (Quintus Curtius V.2.9♦). In both cases, the organization of the processions shows that prior negotiations with the satraps had taken place. The negotiation phase is attested in the case of Abulites at Susa; he surrendered voluntarily (*hekousiōs*; Diodorus §65.5; Quintus Curtius V.2.8) and promised to give up the town without a fight:

He himself [Alexander] set out [from Babylon] for Susa. On the way he was met by the son of the satrap of Susa and a letter-carrier from Philoxenus, whom Alexander had sent to Susa directly after the battle. In Philoxenus' letter it was stated that the people of Susa had handed over the city and that all the treasure was in safe-keeping for Alexander. (Arrian III.16.6♦)

This is when Quintus Curtius (V.2.8) and Diodorus (§65.5) express their uncertainty about the reasons for Abulites' behavior (pp. 840–842 above). Nothing, however, is mentioned about prior correspondence between Mazaeus and Alexander. Interestingly, there is a Babylonian tablet that, despite its uncertain reading, shows that Alexander had entered into communication with Babylon (ADRTB no. –330). This leads us to believe that Mazaeus had in fact made contact with Alexander, following a practice that is attested a few times. At the same time, certain details supplied by the ancient authors are problematic. First, Mazaeus included Babylonian horsemen in his procession (Quintus Curtius V.1.23). Second, Arrian (III.16.3♦) and Quintus Curtius (V.1.19) state that, when Alexander arrived near Babylon, he placed his army "in battle order (*hōs es machēn/velut in aciem*)," and Quintus Curtius adds that Alexander entered the town "surrounded by armed men" (V.1.23♦). While the organization of Mazaeus's procession poses no special problems (the presence of sumptuously caparisoned Babylonian horsemen was obviously part of the parade), this is not true for Alexander's formation. Does the notable presence of troops ready for battle imply that Mazaeus initially refused to surrender and/or that Alexander was afraid that Babylon would resist? This seems to be the interpretation held by the author of the *Itin. Alex.* §65. But how, then, can we harmonize this possibility with the earlier exchange of messages between Alexander and Babylon? In order to reach a conclusion, we will need to establish certain parallels that themselves will open the way to varying interpretations.

The events at Babylon and Susa evoke what happened when Alexander arrived at Taxila (chap. 16/16). Omphis, the king of Taxila, had previously (as was customary) made contact with the Macedonian, to let him know that he would offer no resistance (Quintus Curtius VIII.12.5). When Alexander arrived, "he went out to meet him with his army. . . . And Alexander at first thought that not an ally but an enemy was coming, and he also had already ordered his soldiers to take arms and the cavalry to withdraw to the wings, and was prepared for battle" (§12.7–8). The rest of the story shows that Alexander had misinterpreted the arrangements made by Omphis. It was obviously the general practice that, when a king or satrap was in the process of surrendering a town or a kingdom, he surrounded himself with his army, not to project ill will but, on the contrary, because political submission presupposes that the command of an army is symbolically handed over to the victor. The surrendering army is then incorporated into the triumphal procession, though in a subordinate place—at the end (Quintus Curtius V.1.23)—according to a symbolic hierarchical arrangement that *mutatis mutandis* can be observed in Xerxes' order of march as reported in Herodotus (VII.40–42♦). In Xerxes' procession, the royal chariot was preceded, followed, and surrounded exclusively by Persian troops; at a distance of two stadia it was followed by "the remainder of the army, a

mass of troops of no particular distinction." Generally speaking, when the Great King entered a town (in a chariot, like Alexander: cf. *Quintus Curtius* V.1.23), he too was surely surrounded by men at arms, if only for his security. This is proved by the details of the practice during a royal parade in Persia that are supplied by Xenophon (*Cyr.* VIII.3.9–10): "Rows of soldiers stood on this side of the street and on that" (cf. also Herodotus VII.40–41). Because the royal entrances we have discussed come from the Achaemenid period and nearly always took place in times of war, we may conclude that in these cases also the king was surrounded by his army (as Xerxes was when he left Sardis in great style). The king's goal, quite simply, was to display his own glory, just as the showcasing of his luxury was an aspect of making his authority evident to all (cf. Herodotus I.188; Aelian, *VH* XII.40).

Unfortunately, neither the parallel with the royal parades in Persia nor the surrender at Taxila allows us to draw confident conclusions about the situations at Babylon and Susa. Though the example of the royal parades allows us to understand why guards would be present around the king, it does not resolve the biggest problem: why did Alexander originally put his army into combat formation? As it happens, Arrian and *Quintus Curtius* add a noteworthy detail—"in battle order"—but the problem remains, because even in this form the military formation adopted raises some questions. When Alexander arrived at Taxila, he waited until the last moment to put his army in order, when he realized his mistake. Furthermore, we note that *Quintus Curtius* (V.2.8–10) does not record Alexander taking any action of this kind at Susa. It is true that *Quintus Curtius's* report (interesting because of the dromedaries in the satrap's procession!) may be incomplete. The case of Sardis, on the other hand, is presented in detail by Arrian: Alexander placed his camp on the outskirts of the town; at the camp, Mithrenes and the Sardian nobility surrendered the citadel and the city; while they were in his camp, Alexander sent Amyn-tas to take possession (*paralambein*) of the citadel in his name; finally, the king entered the town (I.17.3–5). The episode provokes two reflections: first, there is no mention of lining up the army, at any stage; second, Alexander exhibits a degree of caution.

Of course this is easily explained, because the surrender of Babylon was part of a long series of similar events. Experience had in fact taught Alexander that the promise (even in writing) of a peaceful surrender was not a guarantee that capitulation was certain. Four examples can be offered.

(1) Hegesistratus, the defender of Miletus, had sent a letter proposing peace to Alexander but changed his mind when he felt that the balance of power favored him (Arrian I.18.4).

(2) Alexander received a promise from some defenders of Myndus that they would abandon the town to him on the condition that he arrive by night, but when he arrived, the garrison showed no sign that they were willing to surrender (Arrian I.20.5–6).

(3) When the scoundrel governor of Damascus sent a letter to Parmenion, the latter's fears were not allayed—especially after the messenger absconded. Parmenion "feared a plot"; the governor himself "was already in a state of fear lest he had not been trusted"; as a precaution, he had the town evacuated, which signaled that he himself intended to flee (*Quintus Curtius* III.13.2–5♦). The governor's fears had a legitimate basis, because shortly afterward he was killed and his head was brought to Darius (III.13.17).

(4) At Persepolis, Tiridates sent a letter to Alexander (Diodorus §69.1), but he was afraid that other Persians would be prepared to resist, so he sent another message to Alexander, urging him to hurry (Diodorus §69.1–2; *Quintus Curtius* V.5.2).

Each of these four examples proves that betrayal by the head of a town was most often done in secret and that his promises bound only himself (or a small group of collaborators in the betrayal); this explains the advice of the Myndus traitors that Alexander should arrive at night. Alexander thus had to be cautious. The situation was very likely the same at Babylon, and this explains the deployment of the army in a way that was intended to forestall any risk if Mazaeus had changed his mind or been deserted by his compatriots. This explanation may converge with another: we can imagine a staged engagement—an imitation battle—suggested by Mazaeus and agreed to by Alexander; this would allow Mazaeus to pretend that he had resisted to the end (even if it would fool no one). We might argue against this interpretation by observing that Mazaeus's procession was organized according to an age-old, unchangeable ritual. Nevertheless, the contradiction can easily be resolved if we recognize that the ceremony *also* had the purpose of preventing those conquered from losing face.

This interpretation in turn gives rise to two important observations, which nonetheless cannot be presented as more than theories. First, the authority and prestige of Darius were still potent enough that the defector was motivated to conceal his betrayal under cover of defeat; he did not wish to be considered a traitor (*traditor*) by the Persian camp, like Mithrenes (cf. Quintus Curtius III.12.6–7) and like Mazaeus himself, according to Quintus Curtius (V.8.9–12) who in a speech that he gives to Darius combines the cases of the two “traitors.” Second, and more importantly, we wonder whether Mazaeus had experienced difficulty in convincing the other Persian officials in Babylon to accept his position; this may lie behind Darius's hope for ‘any new developments’ (*neōterizein*; Arrian III.19.1♦). It is obviously difficult to decide whether this is true, since the ancient authors shine the spotlight on Mazaeus and the only reference to another official does not support this theory. This official, Bagophanes, is mentioned only by Quintus Curtius; he was the **ganzabara* (‘treasurer’) who turned over the citadel to Alexander (V.1.44), and he also was the one who had set about decorating the streets of the town, apparently all on his own (V.1.20). Mazaeus thus obtained the cooperation of at least one colleague, and the behavior of this colleague makes it clear that, though he was still operating in concert with Mazaeus, he intended to show Alexander that he was acting on his own, perhaps because of a separate agreement he had reached with the king on his own (solely to ensure his personal future). This reconstruction also suggests that we should reflect on the attitude of the Babylonian elites. We will return to the question later (chap. 18/3 below), but for now we may offer one remark: even though it is fragmentary, the Babylonian tablet referred to earlier (ADRTB no. –330 reverse) in fact seems to concern only relations between Alexander and the inhabitants of Babylon (including the officials of the Esagila)—not the Persians. If we agree, as seems obvious, that Alexander made promises to the Babylonians, the Persian leaders of Babylon would have found themselves in a difficult situation. Given this context, we can understand how Mazaeus and Bagophanes, perhaps against the advice of some other Persians, may well have calculated that the possibilities of resistance were now illusory, as soon as they opposed those whom Arrian calls the city's “priests (*hierēis*) and rulers (*arkhontes*)” (III.16.3♦).

In order to understand the situation better, a few words must be said about the protagonist, Mazaeus; we know nothing about the prior career of Abulites. However, we know that Mazaeus had been satrap of Cilicia and Syria since the time of Artaxerxes III

(chap. 16/6–7) and had become an intimate of Darius and was considered one of his Friends (*philoî*; Diodorus §55.1). Plutarch even calls him “the most considerable man in Darius’s court (*ho megistos para Dareîōi*)” (Alex. 39.9♦). He thus belonged, beyond the shadow of a doubt, to the royal inner circle. Perhaps he was among those “suitable” men, Friends and Kinsmen, with whom the king surrounded himself before the battle of Issus (Diodorus §31.1♦). The relationship continued after the battle, and after the loss of Cilicia and Syria the king entrusted Mazaeus with crucial missions. It was Mazaeus who was instructed to lay waste the countryside in advance of the Macedonian troops who had crossed the Euphrates. He held a top-level position at Gaugamela, even winning an engagement on his flank, before falling back to Babylon at the head of his retreating troops. At Gaugamela, he commanded units drawn from Mesopotamia and Syria (Arrian III.8.5). It does not appear that he had been named satrap of Babylonia prior to Gaugamela, however, because the Babylonian contingents there were under the command of Bupares (III.8.4). However, if Bupares fell at Gaugamela, Darius may have conferred the position of satrap on Mazaeus (by letter) after the battle; his high rank in the court hierarchy and the prestige inherent in his recent military accomplishments (cf. Quintus Curtius V.1.18) would easily have justified his selection—but this is mere guesswork. We may add a remark that itself bears some importance: like Abulites of Susa, two (Artibelus, Brochubelus) or three (Antibelus; or is this name simply a result of confusion with the first?) of Mazaeus’s sons had Babylonian names; from this we might deduce that their father at least had cultivated close contacts with Babylonian society and perhaps that their mother was Babylonian. Thus, in Babylon and Babylonian society, Mazaeus was a man of both power and influence. If we note that “the siege of so strongly fortified a city would have been a great task” (Quintus Curtius V.1.17♦) and that Mazaeus commanded troops, then his defection truly was a decisive strategic event for Alexander. Quintus Curtius was certainly not wrong in thinking that Alexander hoped that the defection of Mazaeus “would by his example induce the rest to surrender” (V.1.18♦). We can easily understand why the Macedonian was ready to pay the price.

Apart from the (uncertain) case of Sabictas/Abistamenes, it was at Babylon and Susa that Alexander for the first time appointed as satraps men who had served Darius: Abulites retained his satrapy at Susa, the turncoat (*transfuga*) Mazaeus was named satrap of Babylonia, and the traitor (*proditor*) Mithrenes was appointed over the district of Armenia (Quintus Curtius V.1.44; 2.17; Arrian III.16.4; 16.9). In contrast, the old treasurer Bagophanes ended up losing his post (it was given to a Greek/Macedonian: Arrian III.16.4), though he received preferential treatment as compensation: Alexander “ordered [him] to follow him” (*se sequi iussit*; Quintus Curtius V.1.44♦)—in other words, he was admitted to Alexander’s entourage, just as Mithrenes had been after his defection at Sardis. The same was true for a son of Abulites Susa, Oxathres, who had been his father’s right arm (Arrian III.8.5) and who probably had been sent to meet Alexander on the road from Babylon (III.16.6). The following year, Oxathres was made satrap of the Paractacae (III.19.2). At this time, still remaining with Darius were Bagistanes, “a Babylonian and a noble,” and Antibelus, one of Mazaeus’s sons, who undoubtedly had accompanied the Great King on his retreat after Gaugamela (cf. Arrian III.21.1;♦ Quintus Curtius V.13.3). Mazaeus’s other sons had been with their father since he defected to Alexander (Quintus Curtius V.1.17). Several years later, two of them, Artibelus and Hydarnes, were accepted, along with some other Persians, into a mixed cavalry regiment

(Arrian VII.6.4)—which implies that they had also been incorporated into the king's entourage. Another son (or one of these?) was also rewarded by Alexander (cf. Plutarch, *Alex.* 39.9). In conclusion, let us emphasize that Mazaeus's career under Alexander was marked by two noteworthy characteristics. Though Alexander, at Babylon as elsewhere, named Greco-Macedonians to key positions (command of troops, levying taxes; Arrian III.16.4), the numismatic evidence shows that the new satrap was granted a unique privilege: he was authorized to issue coins of Cilician type bearing his name at Babylon. Second, he was one of the few former Achaemenid officials to retain his satrapy until his death (in 328) without apparently incurring any blame from Alexander for maladministration, unlike Abulites, for instance, who was executed (along with his son Oxathres) because of his failure to follow royal orders (Arrian VII.4.1; cf. Plutarch, *Alex.* 68.7). The overwhelming evidence is that, in contrast to many Iranian satraps, the satrap of Babylon displayed unflinching loyalty to his new master.

The Persians of Persia between Darius and Alexander

Flush with success, Alexander took to the road for Persia at the end of 331. He twice ran into opposition. At the entrance to Uxiana (Fahliyun region), he had to assault a citadel commanded by the Persian Madates, who had sworn to the Great King that he would resist to the end (Quintus Curtius V.3.4). When Madates capitulated, he and the survivors were granted their lives, and the Uxian region was declared exempt from tribute and was attached to Susiana (V.3.15–16; cf. Diodorus §67.4–5 and Arrian III.17.1). Then, after sending Parmenion, the equipment, and the majority of the army to Persepolis by the high road (III.18.1; Quintus Curtius V.3.16) and subjecting the mountain Uxians to tribute (Arrian III.17.1–6), Alexander arrived in front of the Persian Gates, where Ariobarzanes (the satrap of Persia, according to Arrian III.18.2) was stationed with a large force (no less than 40,000 infantry and 7,000 cavalry according to Arrian; 25,000/300 according to Diodorus §68.1). After fierce fighting and a classic trick (wrong directions from a shepherd), the Macedonian army opened up the road to Persepolis, where the king linked up with Parmenion (chap. 16/12).

In its matter-of-fact approach, the tale presents the Persians as having mounted the sort of resistance in Persia that neither Mazaeus nor Abulites thought wise at Babylon or Susa. This observation is based on reality, but it needs to be nuanced. According to Arrian (III.18.9), Ariobarzanes fled to the mountains with a band of horsemen; Quintus Curtius says he was “in haste to take possession of the city of Persepolis, the capital of the region. But shut out by the garrison of the city . . .” he was soon killed in a battle with the Macedonians (V.4.33–34♦). Meanwhile, Alexander received a letter from Tiridates, “who was in charge of Darius's finances” (Quintus Curtius V.5.2♦) and/or “governor of the city” (Diodorus §69.1♦): he promised to surrender the town; he made arrangements for the transfer to happen quickly so that “those who planned to defend the city for Darius” (Diodorus) would not be able to seize power and/or to prevent the townsfolk from pillaging its treasures (Quintus Curtius). Obviously, then, dissension occurred among the high Persian officials, some (Ariobarzanes) wishing to defend the town, others (Tiridates) thinking that surrender was open to negotiation. Some time later, another official followed Tiridates' example: Gobares, the governor of Pasargadae, turned over the town and the treasury to Alexander (V.6.10). The “traitors” were repaid: “For Tiridates, . . . the same rank was continued which he had held under Darius” (Quintus Curtius V.6.11).

The new satrap, Phrásaortes, son of Rheomithres (Arrian III.18.11), was obviously also one of those who aligned themselves with the new master (according to Polyaeus IV.3.27, who no doubt has confused him with Ariobarzanes, ; he had fought at the Persian Gates and "he was a close relative of Darius"). Finally, the wealth still enjoyed by Orxines, head of the Pasargadae tribe, in 325 clearly implies that he too had kept his possessions and position through the turmoil (Quintus Curtius X.1.22–25). Thus, we cannot speak of a general uprising of the Persians of Persia against the Macedonian invasion.

However, aside from the fact that we know nothing about any opposition Parmenion may have met on the road to Persepolis, the various episodes should be situated in the chronology and more clearly placed in the context of Alexander's political and ideological strategy. Even after the capture of Persepolis, the matter had not played out. Many points of resistance remained in Persia, and Alexander set out to subdue them during a hard springtime campaign (330). This campaign is fully described by both Quintus Curtius and Diodorus (despite the latter's chronological error). Quintus Curtius writes: the Macedonians "devastat[ed] the fields (*agri*) of Persia and reduc[ed] many villages into his power" (*vici*; V.6.17♠); and Diodorus: "Alexander visited the cities (*poleis*) of Persis, capturing some by storm and others by his own fair dealing" (XVII.73.1♠). When he used the word *poleis*, Diodorus must have been referring to the network of citadels and strongholds that were successors to those we know from the Persepolis tablets. Diodorus's matter-of-fact account shows that some phourarchs agreed to submit (probably after negotiations) and others put up stubborn resistance. Quintus Curtius reveals that the campaign also targeted the Mardians, "a warlike people (*gens* = *ethnos*) differing greatly from the rest of the Persians in their manner of life" (V.6.17♠). Let us recall that the Mardians were included by Nearchus as one of the "four predatory tribes [who] exacted tribute from the kings" (Strabo XI.13.6♠). The Mardians were regularly conscripted into the royal armies (Quintus Curtius III.13.2), especially as archers (cf. Arrian III.11.5), and certainly resisted Alexander strongly, as did the mountain Uxians and later (324) the Cosseans (chap. 16/11).

When Alexander returned to Persepolis (around April–May 330), he could believe that all military resistance was over. Indeed, we know that in May 330 he performed an action that bore great symbolic import: he set fire to the palaces of Persepolis. We will not rehearse in detail the historiography of the matter. Everyone agrees that it was a political decision that was carefully considered by Alexander. As far as we can tell, this act of destruction had no precedent during Alexander's entire Asian campaign, from the landing in 334 on. Everywhere, especially at Babylon, Alexander wanted to present himself as a preserver and restorer. In his mind, this act was certainly not a symbol of "Pan-hellenism" (even if his propaganda could lead to this interpretation), nor generally a signal pointed at the conquered populations. The royal order was clearly situated in a specifically Persian context. Indeed, Alexander could not have been unaware that, despite the importance attached to Babylon and Susa, Persia and its capitals had always represented the ideological center of Persian authority and dynastic grandeur (chap. 16/12). The matter is all the more intriguing because Alexander spared nothing to win the approval of the population. Even though most of the texts deal with Alexander's second visit, when he had returned from India, there is no doubt that, after taking Pasargadae, the Macedonian did everything he could to cultivate the memory of Cyrus and instructed the *magi* to maintain the regular sacrifices in front of the founder's tomb (cf.

Arrian VI.29.7; Strabo XV.3.17). His devotion to Cyrus was so well known that it gave rise to the epithet *philokyros* ('friend of Cyrus'; Strabo XI.11.4). It is clear that earlier, at the time when Darius was attempting to assemble a new army and Alexander had little information on events at Ecbatana (cf. Arrian III.19.4–5), he wanted to spark widespread defection of Persians. This did not happen. Quintus Curtius (V.7.2♦) and Diodorus (§71.2♦) very clearly set up a cause-and-effect relation between Alexander's decision to burn the royal palaces and the enmity of the Persians. Quintus Curtius writes that "those whom he had conquered were but lately subdued and were hostile to the new rule." It is true that this is a stereotypical expression (cf. IV.1.5), but Diodorus's statement is unambiguous: "He felt bitter enmity (*sphodra allotriōs*) to the inhabitants (*egkhōrioi*) [of Persia]. He did not trust them." It is difficult to read this evaluation as anything other than the reflection of deep apprehension on the part of the Persians toward the Macedonian conqueror. They had surrendered militarily—some of them voluntarily—but remained attached to their history, which was a mixture of the legends of kings and the great deeds of the dynasty—and Darius III was certainly in their eyes the lone representative of this heritage. Given the impossibility of achieving acceptance by the Persians, Alexander decided to burn the palaces. He thus demonstrated to the recalcitrant Persians that the age of imperial grandeur was over, unless they turned to him *en masse*. The regrets that the Macedonian expressed later imply that, from his point of view, the destruction decree of 330 was vengeance for a political failure.

3. The Local Elites, Darius, and Alexander: Popularity and Unpopularity of Achaemenid Dominion

Sources and Problems

Although it was very specific, Alexander's policy toward the Persians was part of a wider project—to win over the leaders of the cities, peoples, and communities that had been subject to Darius's dominion. Generally, the ancient authors insist that he was successful in this area, most often attributing his achievements to the anti-Persian sentiments of the Near Eastern peoples. "The Sidonians who loathed Persia and Darius," for example, "called him in themselves" (Arrian II.15.6♦). Diodorus especially likes to develop this theme with respect to Egypt and the Egyptians. He stresses the misdeeds of Cambyses (I.46.49) and Artaxerxes III (XVI.51.2) against the temples and the religion of the Egyptians. He broadens his perspective, beginning with the example of Cambyses, and also writes: "The Persians . . . ruled for one hundred and thirty-five years, including the periods of revolt on the part of the Egyptians which they raised because they were unable to endure the harshness of their dominion and their lack of respect for the native gods" (I.44.3♦). Using identical words and concepts, Diodorus (XVII.49.2♦) and Quintus Curtius (IV.7.1–3♦) describe the feelings of the Egyptians when they heard the news of Alexander's arrival:

For since the Persians had committed impieties against the temples and had governed harshly (*biaiōs*), the Egyptians welcomed the Macedonians. // The Egyptians, hostile of old to the power of the Persians—for they believed that they had been governed avariciously and arrogantly (*avere et superbe imperitatum*)—had taken courage at the prospect of Alexander's coming, since they had welcomed even Amyntas, although a deserter coming with authority depending on favour. Therefore a vast multitude of them had assembled at Pelu-

sium, where they thought that Alexander would enter the country. . . . The Persians did not await his coming, being greatly alarmed also by the revolt of the Egyptians.

The reference to Alexander's entry into Egypt obviously calls to mind his entry into Babylon, where, according to Diodorus (§64.4◇), "the people received him gladly, and furnishing them billets feasted the Macedonians lavishly." We know that Mazaeus and his children had come to greet him outside the ramparts (Quintus Curtius V.1.17–18). But Mazaeus was not alone:

The Babylonians came to meet him in mass, with their priests (*hieréis*) and rulers (*arkhontes*), each section of the inhabitants bringing gifts and offering surrender of the city, the citadel and the treasure. (Arrian III.16.3◇)

For some reason unknown to us, Arrian does not refer to Mazaeus's surrender, which is so well described by Quintus Curtius, who is careful to mention the presence of the Chaldeans and the Babylonian horsemen (V.1.22–23) in the procession (alongside Persian *magi*). In his arrangement, the delegation must have been functionally equivalent to the reception Alexander received outside Sardis, where Mithrenes was accompanied by "the chief citizens of Sardis (*Sardianōn hoi dynōtatoi*)" (Arrian I.17.3◇). Then came the triumphal entry into the town:

Bagophanes . . . , in order not to be outdone in alacrity by Mazaeus, had strewn the whole road with flowers and garlands, and had placed here and there on both sides silver altars, which he had piled high, not only with frankincense, but with perfumes of all kinds. As gifts there followed him. . . . (Quintus Curtius V.1.20–21◇)

Just as Alexander—in contrast to the impious Persians—respected and maintained the "native customs" in Egypt (Quintus Curtius IV.7.5◇), in Babylon he is presented as the restorer of the rights of the sanctuaries, which had been violated by the Persians:

On entering Babylon Alexander directed the Babylonians to rebuild the temples Xerxes destroyed, and especially the temple of Baal, whom the Babylonians honour more than any other god. . . . At Babylon too he met the Chaldaeans, and carried out all their recommendations on the Babylonian temples, and in particular sacrificed to Baal, according to their instructions. (Arrian III.16.4–5◇)

The picture of Alexander as a restorer of traditions, one who is greeted as a liberator, recurs at every stage. At Sardis, "the Sardians and the other Lydians were granted the use of the old Lydian customs (*hoi nomoi te hoi palai Lydoi*), and allowed to be free" (Arrian I.17.4◇); after this, Alexander climbed the citadel and founded a temple there dedicated to Olympian Zeus (§17.5–6). At Ephesus, he dedicated the tribute that the city had been paying to Darius to the sanctuary of Artemis (§17.10) and then issued a general proclamation to the Greek coastal cities: "He ordered the oligarchies everywhere to be overthrown and democracies to be established; he restored its own laws to each city (*tous nomous tous sphōn hekastois apodounai*) and remitted the tribute they used to pay to the barbarians" (§18.2◇). "Straightway all the cities sent missions and presented the king with golden crowns and promised to co-operate with him in everything" (Diodorus §24.3◇). In Phoenicia, "their inhabitants accepted him willingly" (§40.2◇).

At the same time, the ancient authors also mention resistance and revolt. For Alexander, there were only two categories of communities: those who agreed to surrender voluntarily, after reaching an agreement (*homologia*; e.g., Arrian I.24.4), and those who offered resistance. But several times, those who resisted were showing the effect of

Persian coercion. For example, when Tenedos was retaken by Pharnabazus, Arrian analyzes the event as follows:

The inclination of Tenedos was rather towards Alexander and the Greeks; but at the moment there seemed no hope of safety but in joining the Persians. . . . It was in this way, rather by terrorism (*phobos*) than by their consent, that Pharnabazus brought Tenedos over. (Arrian II.2.3◊)

Thus, because Alexander assumed that collaborators with Persian authority actually were hostile toward their masters, he readily granted them pardon. This was also true for the Cypriot and Phoenician kings who in the spring of 332 abandoned Pharnabazus and rejoined Alexander with their ships:

To all of them Alexander let bygones be bygones, supposing that it was rather from necessity (*hyp'anagkēs*) than their own choice (*kata gnōmēn*) that they had contributed to the Persian fleet. (II.20.3◊)

There would be no point in multiplying quotations from the ancient authors ad infinitum: from the Troad to the Indus, the picture of the conqueror is reproduced with perfect consistency. It is also clear that this consistency is the result of Macedonian propaganda that had the goal of legitimating Alexander's authority. Just like some Persians (Diodorus §§21.7; 76.1), local leaders came to surrender voluntarily (*hekousiōs*) to the one they considered the new master. This attitude of cooperation and "spontaneous" adherence tended to consolidate the conqueror's authority (cf. Arrian II.14.7: *hekontes*). Furthermore, these evaluations are certainly grounded in reality. Alexander always made many symbolic gestures toward cities and peoples that capitulated, "winning over the cities that lay on his route by kind treatment" (*philanthrōpiai*; Diodorus §24.1◊). The slogan "war of liberation" was obviously just one special aspect, in Asia Minor, of a strategy that Alexander followed systematically throughout the Achaemenid domains, and this was a strategy, as we have already noted, that was cast in the same mold as the plan that the Great Kings had always followed. Everywhere, Alexander took care to invoke the appropriate deities; he always made votive offerings intended to gain victory and recognition, such as before the battle of Issus (Quintus Curtius III.8.22: *patrio more*). That he carried out sacrifices "according to the Chaldeans' recommendations" (Arrian III.16.5) at Babylon should thus not be at all surprising.

This leads to an apparent contradiction: the presumed "enthusiasm" of the local leaders seems to imply that they had a visceral hostility to the Persians. Furthermore, the thesis is explicit in the cases of the Egyptians and the Babylonians: both are said to have been fundamentally opposed to the Persians, who had trampled their privileges under foot and violated or destroyed their sanctuaries. Of course, there is not a trace of this policy throughout Achaemenid history, except when it is a case of punishing a population that had just revolted. For example, we do not see what Arrian (I.17.4◊) means when he says that "the Sardians and the other Lydians were granted the use of the old Lydian customs," as if they had been abolished in the time of Persian dominion, which was obviously not the case. More generally, the tales of the ancient authors must be analyzed in the framework of Achaemenid (and, more widely, Near Eastern) institutions. As we have already stressed several times, the ceremony of the royal entry does not, *a priori*, imply any enthusiasm (other than that generated on command!) for the conquerors or visceral hostility to the former master. These processions accomplished nothing other than official symbolic sanction of the existence of a new authority. Furthermore, it must be

stressed that not all of the peoples and cities accepted the arrival of the Macedonians with gladness of heart. Examples of resistance and revolt are rife, as, for example, at Miletus (Arrian I.18.3–9), or during the winter campaign in Lycia-Pamphylia-Pisidia. Similarly, at Aspendus: initially, the ambassadors agreed to surrender the city on condition that it would not be occupied by a garrison. Alexander consented, but the Aspendians were required to provide 50 talents and as many horses as the city had provided as a *damos* to the Great King (I.26.3). When the Aspendians exhibited ill will about fulfilling these terms, Alexander toughened them: the Aspendians would thereafter have to obey Alexander's satrap and pay an annual tribute to the Macedonians (I.27.4). We also know that Tyre put up a lengthy resistance (we will return to it) and that, in circumstances for which we lack precise details, the inhabitants of Samaria burned alive the governor of Syria that Alexander had appointed (Quintus Curtius IV.8.9). When Alexander had returned from Egypt, he sent a punitive expedition (§8.10), directed by either himself or Perdicas, which led to massacres and, no doubt, to the foundation of a town or a military colony. Many Samaritan families had to take refuge in caves in the Wadi ed-Daliyeh—and as a result, we now possess documents of the greatest interest!

However, these acts of resistance can themselves be read in several ways. While the Tyrians' resistance was coordinated with Darius (cf. Diodorus §40.3), it is not certain that the Aspendians and Samaritans wanted to remain faithful to the Great King at all costs. The attitude of both groups was primarily dictated by their analysis of the balance of power, and this is what Arrian says with respect to the case of Hegesistratus of Miletus (I.18.4) and the Tenedians (II.2.3). The Aspendians were aware that Halicarnassus still held and that Alexander had no siege engines (cf. I.27.3). And, after Darius's arrival in Syria-Cilicia, "the people of the country . . . abandoned Alexander and came over to Darios" (Diodorus §32.4; cf. Quintus Curtius IV.1.5). For the inhabitants of Phaselis, whose ambassadors came to offer Alexander golden crowns, it seems primarily to have been a matter of obtaining protection from the king against attacks by the neighboring Pisidians (Arrian I.24.6)—protection that traditionally was provided by the satraps. Because it is impossible for us to elucidate every case, we have chosen here to analyze in more detail a few of the less poorly documented cases.

Ephesus, Miletus, and Aspendus

Alexander's arrival at Ephesus was marked by scenes of massacre so violent that the king himself had to intervene to bring them to an end (Arrian I.17.11–12). The massacres were initiated by partisans of the tyrants whom the Persians had reinstalled in the hope that they would displace the Macedonian forces after they had reconquered the region in 336–335: "Seldom did Alexander win a higher reputation than he did on that occasion by his treatment of Ephesus," concludes Arrian (17.13♦). Let us simply note that the Ephesians' rage was not really directed against the Persians themselves but against the "oligarchs," whom Alexander drove out and replaced with the Ephesian exiles who were in his camp. This is a typical example of the confusion that arises for us regarding the difference between conflicts internal to a city and conquest by an external force. It is thus hard to draw a general conclusion about the genuine reaction of the Ephesians, who had long been associated with the Persians of the high country (chap. 16/3). At the same time, we should note that the Ephesians turned down Alexander's offer to assume responsibility for the cost of rebuilding the temple of Artemis—so long as they met his demand that his name be inscribed on the stone (Strabo XIV.1.22). The

Ephesians obviously had no desire to pass from one dominion to another, even though they were only able to express their reaction symbolically.

Generally, the enthusiasm of the Asia Minor Greeks for the "war of liberation" must be considered from the perspective of hindsight. We must first recall that, beginning with the events of 336–335, this Macedonian slogan would have had only limited effect in the cities of Asia Minor. For instance, though the inhabitants of Cyzicus apparently were hostile to Memnon (Polyaenus V.44.5), not all of the towns spontaneously opened their gates to Parmenion, especially after the Persian counterattack was launched. Pitane withstood the siege victoriously. In the case of Grynium, which also resisted, "Parmenion . . . sold its inhabitants as slaves" (Diodorus XVII.7.9♣)—which left no doubt about the Macedonian king's ambition to dominate totally and destroyed any possible advantage he had expected from the slogan ("liberation of the Greek cities") that had been officially promulgated. Lampsacus—which still favored the Persian cause when Alexander arrived (Pausanias VI.18.2–4)—was also among the cities that had no interest in passing from Persian dominion to Macedonian dominion, after the Persian reconquest (Ps.-Arist., *Oec.* II.2.29a [1351b]). The events that transpired in the towns on Lesbos and at Ephesus are especially revealing of the bitter internecine struggles that occurred; the Persians and the Macedonians each successively attempted to play the situation to their own advantage. By depending on the support of tyrant families, the Persians managed to reestablish their authority in the cities that had been taken by Parmenion and the Macedonians. Garrisons were stationed in them. It is possible that from this time onward the leaders of the reconquered cities had to agree to "become allies with Darius on the basis of the peace of Antalcidas with (the Persian) king" (Arrian II.1.4;♣ 2.2 [in 333]). Of course, the granting of power to "tyrants" may seem like a fragile recovery. But these great families also relied on the support of local partisans, as is evident at Ephesus (Arrian I.17.11). Furthermore, the Persian reconquests in 334–332 demonstrate that the recovery by Alexander was also quite uncertain. Whatever the case, the events of 336–334 show that Persian dominion in western Asia Minor was not generally rejected—or (probably more precisely) it was not rejected as long as the Persians retained the means of forcing their dominion to be respected.

We also think it unlikely that the Macedonians were greeted with open arms because of Persian "overtaxation" (see chap. 17/5). This theory seems to be based on blind faith, supported by dubious arguments, that the local rulers of Asia Minor hoped—or had even received promises from Alexander—that the amount of tribute would be lowered. However, to make this argument would be to attribute considerable naiveté to the local rulers, and Alexander's first actions in Asia Minor do not justify this presumption: in every conquered satrapy, a tribute administration was established and tribute collectors were appointed (e.g., Arrian I.17.7; cf. III.5.4; 16.4). Generally speaking, these officials were assigned to collect "the same taxes as they used to pay to Darius" (I.17.1;♣ I.27.4). When exemptions were granted, it was always in connection with tribute paid to Darius (I.17.10; 18.2; II.5.9). Sometimes, the tribute paid to Darius was increased (I.27.4). An inscription from Priene records a decree issued by Alexander at this time (Tod no. 185): his sovereign rights over the territory are reconfirmed ("I know that this land is mine") with an ardor that matches the intensity Darius I demonstrated in the letter that he had sent to Gadatas (ML 12). The Macedonian king also reinstated the Achaemenid practice of the gift of towns, with himself as beneficiary (cf. Aelian, *VH* I.25; Plutarch, *Pho-*

cion 18.7). When favors were granted from time to time (see also the example of Babylon below), they were only given in the guise of a "Panhellenic" or "dynastic" beneficence (e.g., Arrian II.5.9) or when a community found itself in a balance of power that the Greek cities of Asia could never tip to their own advantage.

Only Miletus attempted to "sit on the fence." The Milesians were reassured by the proximity of the Persians in their ships (so-called "friends and allies") and sent Glaucippus, "one of the notables" (*dokimoi*) of the city, to Alexander. The Milesian offer to the king, relayed by Glaucippus, was "to open their walls and harbours to Alexander and the Persians in common" (I.19.1♦), but the proposal was rejected by Alexander. In a way, the offer by Glaucippus of Miletus expressed what must have been the deepest desires of the Asia Minor Greeks: though they were unable to claim the illusion of liberty, the Milesians imagined that there might be a sort of Persian-Macedonian co-administration. Did they hope that this status, which was acceptable in reality neither to the Persians nor to Alexander, would accord them some room to maneuver? Nevertheless, after the failure of the Persian navy, Miletus fell into the Macedonian's hands. Its leaders were not able to negotiate properly, even when the military situation again permitted it. The Aspendians committed a similar error (I.26.3; 27.4).

From Sidon to Tyre

After the battle of Issus, the first Phoenician towns (Aradus and its dependencies; Byblus) surrendered without a fight (Arrian II.13.7–8; Diodorus §40.2; Quintus Curtius IV.1.15). The Sidonians also put up no resistance; they appealed to Alexander because they "loathed Persia and Darius" (Arrian II.15.6♦). This is the first mention of strong opposition to Persian dominion from a subject community. The Sidonians' attitude can obviously be explained as due to the implacable treatment that Artaxerxes III had reserved for them after he retook their city (Diodorus XVI.45.5–6)—a severity that, we emphasize in passing, could certainly not have come as a surprise to the Sidonians, who had themselves declared that the war would be merciless (§41.5–6; cf. §45.2). But the matter is a little more complicated than it seems. The Sidonians were in fact divided regarding what position to take. King Straton—Quintus Curtius explains (IV.1.16♦)—"had surrendered rather at the desire of the people than of his own accord (*sua sponte* = *hekousiōs*) . . . [he was] supported by the power of Darius," and he was in a relationship of "friendship for Dareius" (Diodorus XVII.47.1♦). In other words, the situation at Sidon seems quite comparable to what prevailed at Ephesus, with Straton playing the role held by the tyrant Syphax at Ephesus, with respect to Persian authority. The decision made by Alexander in this case is also comparable: he placed a man (Abdalonimus) on the throne who would be totally loyal to him (cf. Quintus Curtius IV.1.18–26; Diodorus XVII.47); he "gave orders that not only the regal equipment of Straton should be assigned to him, but also many articles from the Persian booty" (Quintus Curtius IV.1.26♦). The Sidonians were drafted by Alexander (IV.4.15).

Then Alexander turned toward Tyre. At first, the "community" (*to koinon*) sent ambassadors to Alexander with this message: "Tyre had decided to accept Alexander's orders" (Arrian II.15.6♦). The difficulties mounted as soon as Alexander let it be known that he intended to sacrifice in the sanctuary of Heracles/Melqār: "The Tyrians decided to obey all Alexander's other commands, but not to admit any Persians or Macedonians within their city" (§16.7♦). This initial attitude of the Tyrians seems quite similar to the

Milesians', at least at first sight. Furthermore, their request could count on some precedents: the Paphlagonians, for example, convinced Alexander "not to enter their country in force" (§II.4.1♦) and, initially, the Aspendians were assured that Alexander would not station a garrison (I.26.3). But, when the threat of the Persian navy was becoming increasingly acute, and when the Tyrians ships commanded by King Azelmicus were fighting under the orders of Pharnabazus (II.15.7), Alexander understood that he needed to take possession of the city (cf. Quintus Curtius IV.2.5). To tell the truth, the Tyrians could not be unaware of his intentions, but they believed that they were in a position of strength: "This decision would be the easiest to excuse in the existing circumstances, and safest for the future and for the issue of the war, which was still obscure" (Arrian II.16.7♦). We know, in fact, that according to Diodorus (§40.3♦), "They wanted to gratify Dareius and keep unimpaired their loyalty (*eunoia*) to him, and thought also that they would receive great gifts (*kharis*) from the king."

Egypt and the Egyptians

We have seen the enthusiasm with which Diodorus (XVII.49.2) and Quintus Curtius (IV.7.1–3) describe the warm reception that the Egyptians, according to them, reserved for Alexander. In many respects, the Egyptians' situation appears unique. Not only had they revolted against Persian dominion several times during the fifth century, but they had won their independence between the end of the fifth century and 343, when Artaxerxes III succeeded in retaking the Nile Valley. Moreover, if Khabbabash is to be dated to this period (which is practically certain), a pharaoh was once more proclaimed and reigned for an undetermined period of time, some time between 343 and 336–335. The renewed Persian rule had been contested anew quite recently, during Amyntas's adventure after the battle of Issus. This, at least, is what Quintus Curtius and Diodorus say. According to Quintus Curtius, the Egyptians "had welcomed even Amyntas" (IV.7.1♦). He stresses that "the Egyptians [were] always at odds with their governors" (IV.1.28♦); nevertheless, next, while accusing them of being unstable, he tells how they battled Amyntas's troops, who were then ravaging the countryside. Amyntas forced them to retreat into Memphis, and this is when the satrap Mazaces victoriously led his troops into battle (IV.1.30–33). Diodorus, on the other hand, attributed the victory to the Egyptians alone (§48.4), without mentioning Mazaces. Nevertheless, it seems clear that it was indeed Mazaces who led the operations. In the White Wall, the satrap had Egyptian auxiliaries, who fought alongside the Persian troops, as their ancestors had more than a century before — those whom Thucydides (I.104.2♦) refers to as "Egyptians who had not joined the rebellion."

The contradictions between Diodorus and Quintus Curtius may appear uninteresting, but they are revelatory of the partiality of the ancient sources as soon as they touch on Persian–Egyptian relations. When the Egyptians revolt against the Persians, it is always a unanimous uprising. Thucydides makes it clear that this simplistic presentation cannot be accepted. The notion that the Egyptians intensely hated the Persians goes back at least to Herodotus, if we recall his interpretation of Cambyses' policy in Egypt (see chap. 1/9). Artaxerxes III himself was accused of impiety in regard to the Egyptian temples (see chap. 16/9). Ptolemy certainly took advantage of this idea, which conformed so well to his interests: in the *Satrap Stela*, he insists that he had restored the privileges of the sanctuary of the goddess Wajet of Buto that had been suppressed by

"Xerxes." Furthermore, in the same document these words are found: "He brought back the images of deities that had been found in Asia, and restored them to their original place. . . . And this great satrap excelled in benefactions toward the gods of Upper and Lower Egypt." His successors constantly repeat the theme of the return of deported statues. There is no doubt that Alexander, when he came on the scene, followed a policy designed to conciliate the sanctuaries. When he arrived in Memphis, "he sacrificed to the gods, especially Apis" (Arrian III.1.4♦), and several stelas dating to his reign refer to burial ceremonies for the mother of an Apis. He ordered and completed work in several Egyptian sanctuaries. The most spectacular accomplishment was the chapel of Luxor, where Alexander is represented with the attributes of the pharaoh. From Cambyses to Alexander, we can identify a general continuity in the conquerors' Egyptian policy.

However, how can we know the Egyptians' deepest sentiments? The plethora of revolts is a clue that obviously should not be disregarded. But in itself, this is not sufficient to answer the question. Fortunately, we have several autobiographical Egyptian inscriptions. Along the sides of the *dromos* of the Serapeum in Memphis, there are several private tombs that were discovered in the nineteenth century. One tomb belonged to Onnophris, son of Painou, whose memory lives on in posterity because of the inscriptions found there. This physician, who lived during the XXXth Dynasty, specialized in the prevention and cure of snakebite. One of his titles specifically is "prophet of the statues of the king's father, general Cha-hap-imu," who is known from other sources to be Nectanebo II's father. It seems that sometime around 360–359 Onnophris accompanied Tachos during the Egyptian offensive in Syria. The Egyptian war fleet (*kbnt*) is mentioned, and Onnophris embarked in order—he says—"to reach the place where the Sovereign of the Two Lands was. I found him in the land of Su[. . .]." In all probability, Onnophris's fate then matched the fate of Tachos, who was defeated by Prince Ochus and then dethroned by the revolt of Nectanebo; thus, he followed his conqueror to the court, where the Great King "appointed him general in the war against Egypt" (Diodorus XVI.92.5♦). We can imagine, without being able to prove it, that he was then able to demonstrate his medical abilities at the Persian court, just as Udjahorresnet had done 165 years earlier. Later, he returned to Egypt under these circumstances:

I remained silent. Then he said to me: "Do not be sad because of this. (Here is) my order: Hurry back to the land of your birth!" . . . Thereupon, I reached Egypt. I found a messenger from the Great One who governs Egypt; he embraced me, showered me with kisses, passed the day with me, and the day flew by, questioning me about everything.

Even though the subject ("he") is lost, it is likely that the order to return to Egypt was given by the Great King, perhaps Artaxerxes III, who may have assigned him a diplomatic mission to the pharaoh. Unfortunately, the fragmentary state of the text prevents us from being certain about what this could be. As in the two following examples, Onnophris may have intended to say that the idea of returning to the Nile Valley had been suggested to him by an Egyptian deity; to claim that this was the case was certainly more acceptable, specifically because it allowed the speakers "to completely disengage from responsibility for their stay with an enemy sovereign" (J.-J. Clère).

A small statue of the eldest son of Nectanebo II, the pharaoh conquered by Artaxerxes III, has also been found. Speaking of the goddess Isis, he states: "When I was among the foreign peoples, she caused me to win the esteem of their prince. She brought me back to Egypt." The chronological uncertainty remains great. Perhaps this person also lived

at the Great King's court. This possibility is inferred from another autobiographical inscription that was carved for another doctor, Samtutefnakht (a wāb-priest of Sekhmet, like Onnophris). Samtutefnakht addresses the god Herishef-Re, who intervened on his behalf "an infinitude of times" (trans. after O. Perdu):

You freed my walk to the royal palace,
the heart of the Perfect God being content with what I said;
You distinguished me before the multitude while you turned away from Egypt;
You inspire my affection in the heart of the Prince of Asia, while his courtiers complimented
me, when he gave me the position of chief of the wāb-priests of Sekhmet, in replacement
of my brother by my mother, the chief of the wāb-priests of Sekhmet for South and North,
Nakhthenbeb.

You protected me in the offensive of the Greeks until you repelled Asia;
they killed a mob around me without a single one raising his hand against me.
Subsequently I saw you in a dream, Your Majesty saying to me:
"Go then to Heracleopolis, I am with you."

I traversed the foreign countries being alone,
and crossed the sea without fear, knowing that thus I would not violate your order;
and I reached Heracleopolis without a hair on my head being harmed.

The historical context is far less certain in this case. We recognize an allusion to a Persian reconquest ("while you turned away from Egypt"), probably the one carried out by Artaxerxes III (but it could also refer to the Persian expedition that put down Khabbash). The direct reference to a struggle and a battle between the "Greeks" and the Prince of Asia is dubious: Samtutefnakht was captured in the turmoil of Alexander's invasion. Moreover, he was in the Persian camp when the Prince of Asia's troops were defeated. There is no question that this refers to the battle of Issus, in which Sabaces, the satrap of Egypt, took part and during which he died (cf. Arrian II.11.8). We do not know when Samtutefnakht returned to Egypt, though perhaps it was in the train of Alexander, or earlier with Amyntas, who certainly needed Egyptians with him as guides in the Nile Valley. Whatever the case, Samtutefnakht previously had been a favorite of the Great King (who may have been Artaxerxes III or IV or Darius III, depending on whether his career is related to Artaxerxes III's reconquest or to the expedition led by either Artaxerxes IV or Darius III against Khabbash). He received an appointment as chief physician. In this, too, even if he was not associated with the same sanctuary, the parallel with Udjahorresnet is striking: Udjahorresnet, we will recall, had been made chief physician at Saïs by Cambyses. In the pattern of Nectanebo's oldest son (if the parallel is legitimate), Samtutefnakht takes care to cleanse himself of the accusation of collaboration with the Asiatics. He no longer grants a pharaonic title to the Prince of Asia. He continually proclaims, however, that wherever he was, he enjoyed the protection of the god. This is explained easily enough by his later return to Egypt and by the dating of the inscription to the beginning of the Ptolemaic period. But the fact remains: we have a clear example of an Egyptian who turned to the Great King after the reconquest—or who at least did not refuse to serve him and take personal advantage of his relationship with him.

The many inscriptions found in the tomb of Petosiris at Hermopolis provide access to the preserved memory of a veritable dynasty of high priests of Thoth, because Petosiris (who exercised his chief priesthood and the position of *lesonis* [administrator] at the be-

ginning of the Macedonian period) had succeeded his brother Djethotefankh and his father, Sishu, who himself inherited the office from his father, Djethotefankh the Elder. Some inscriptions in honor of Petosiris, moreover, are the work of his grandson, Padikam. What is very interesting is that the careers of Sishu and his two sons unfolded between the times of Tachos and of Alexander and Philip Arrhideus. In the inscriptions, which are devoted to singing their praises, Sishu and Petosiris are depicted as men filled with wisdom and virtue, lovers of order and justice. This is not exactly the case for Djethotefankh, who in all probability succeeded his father at the end of Nectanebo II's reign and thus watched the reconquest of Artaxerxes III play out. His brother Petosiris had to defend his memory by giving him this speech: "I did not steal the ritual offerings, I never did any wrong against this country, for Maat is with me and will not be separated from me for all eternity." When Petosiris succeeded him, however, he encountered a compromised situation:

When a head of foreign countries [Artaxerxes III] exercised his protectorate over Egypt, there was no longer anything that was in its former place; since battles broke out in the interior of Egypt, the South being in agitation and the North in a state of revolt, men walked in bewilderment, there was no longer a temple that was available to its attendants, and the priests were distant (from the sanctuaries), in ignorance of what was going on.

Petosiris was able to reestablish the prosperity of the sanctuary not only because of his remarkable merits but also because of the sudden change in political conditions:

[I spent seven years] as *lesonis* of Thoth . . . doing everything excellently in his temple, expanding the importance of his priests, to fill his granaries with barley and wheat and his valuable reserves with all perfect things, beyond what existed before foreigners became governor of Egypt. (after trans. by G. Lefebvre, revised by B. Menu)

Though his older brother had had to deal with the disorders connected with the defeat of Nectanebo II by the armies of Artaxerxes III, Petosiris must have lived in the period of transition between Achaemenid dominion and the Ptolemaic period. He probably received the responsibility from his brother after Alexander's arrival. From the father (Sishu) to the younger son (Petosiris), the inscriptions are intended to provide an image of Egyptian history that is characterized by rectitude. There was a period of calm in the time of Nectanebo II, followed by a period of disorder in the time of Artaxerxes III and his successors, and then a return to order with the arrival of Alexander. Other Egyptians of this period celebrated the return to order. However, specifically because they were composed in a Hellenistic context, these declarations have only limited value as evidence: "It is difficult not to suspect the existence of a propaganda favoring these behaviors within the upper clergy and giving them all the means (notably economic) of succeeding, propaganda emanating from the high Macedonian administration and maintained by Ptolemaeus son of Lagus" (B. Menu). A general consideration of the fourth-century autobiographical inscriptions also leads to the conclusion that, as in the time of Cambyses and his successors in the fifth century, Egyptians did not hesitate to collaborate with the Persians. For the same reasons, they turned just as easily to Alexander, then Ptolemy. In other words, when Alexander took Egypt, it was not because there was a general Egyptian uprising that supported him; more simply, it was because the Persian officials in charge of the satrapy had no military means of opposing him. Thus, the behavior of the Egyptian aristocrats was entirely predetermined.

The Babylonians, Alexander, and Darius

The attitude of the Babylonians is much better documented. We would not return to Alexander's situation after Gaugamela were it not to reaffirm that the balance of power allowed the Babylonian leaders (present in the procession that came to greet the conqueror) to hope that they would receive significant compensation in exchange for their defection. An astronomical tablet (ADRTB no. -330) provides proof that, after Gaugamela, negotiations were opened between Alexander and the Babylonians. On October 8, a week after the battle, a text seems to refer to the arrival at Babylon of an envoy who delivered a message regarding the Esagila and its property. On October 18, Alexander is at Sippar, and he seems to promise (to the Babylonians?) that he will not allow his soldiers to break into their houses. Next, there is an allusion to the presence (participation?) of Greeks (*Iamana*) at a sacrifice. Finally, there is the entry into Babylon of Alexander, who bears the title "King of the Universe." Alexander came to sacrifice to Marduk and conversed with the Chaldeans on everything concerning the great god of the city (cf. Arrian III.16.5).

This is the context in which the Classical texts mention the destruction effected by Xerxes in the Babylonian temples as a contrast to Alexander's "benevolent" behavior. We need not tarry long on Xerxes' policy, except to recall that the presentation by Alexander's historians is erroneous and partial (see chap. 13/5). Instead, the attitude of the conqueror is situated in general continuity with the traditional policy of the Great Kings. Following the example of Cyrus, Alexander made contact with the leaders of the great sanctuaries—"their priests and rulers (*hiereis kai arkhontes*)" (III.16.3♦). In order to weaken the elites' will to resist, just after the victory, Alexander had begun negotiations with Mazaeus (and Bagophanes) and the Babylonian leaders. He promised the officials that he would respect the city and be sure to care for the sanctuaries, as Cyrus had done. This strategy is also shown by the rituals of the triumphal entry (Alexander in his chariot; Quintus Curtius V.1.23), which astonishingly resemble the protocols of Cyrus's official entry into Babylon in 539. At the same time, there is no doubt that Alexander began work on the Babylonian sanctuaries. Whatever its nature and extent may have been, this work could not have been begun until after the "Chaldeans" had been consulted, because this work in itself symbolized that Alexander was supported and accepted by the gods of Babylon. This is perhaps what Arrian is describing when he writes: He "carried out all their recommendations on the Babylonian temples, and in particular sacrificed to Baal, according to their instructions" (III.16.5♦).

Good relations between Alexander and the Babylonian leaders did not wane. Two episodes illustrate their relationship, both during the king's last years. Many ancient authors relate that the Chaldeans wanted to dissuade Alexander from entering Babylon, arguing against it on the basis of bad omens taken from examining the stars and constellations. According to an ancient tradition, Alexander did not give in to their pleas, because he suspected that they wished to keep for themselves the funds he wanted to dedicate to the reconstruction of the temples (Arrian VII.17.1-4). This anecdote has sometimes been thought to reveal that bad relations prevailed between Alexander and the sanctuaries at this time. In truth, when the warning from the Chaldeans is situated in the *longue durée* of Babylonian tradition, it appears that the Chaldeans were simply behaving consistently in the role that they had played throughout Antiquity: the Chaldeans, who were entrusted with observing the skies and drawing omens from them, sim-

ply wished "to report to the king the danger which threatened . . . that he must under no circumstances make his entry into the city; . . . but he must abandon his intended route and pass the city by" (Diodorus XVII.112.2-3♦).

Some time later, another incident made an unfortunate impression on the Greek observers, who then misinterpreted a Babylonian custom that they did not know existed. The ancient authors tell the same story in sometimes varying words. One day, a Babylonian of uncertain status, who was condemned by common law, managed to approach the king's throne and seat himself upon it: He "put on the royal dress and bound his head with the diadem, then seated himself upon the chair and remained quiet" (Diodorus §116.2-3♦). Arrian records the eunuchs' reaction as follows:

Owing to some Persian custom (*nomos persikos*) they did not drag him off the throne but rent their garments and beat themselves on their breasts and faces as if some terrible disaster had happened. (VII.24.3♦)

Once again, Arrian confirms that Alexander understood nothing about the matter. He suspected a plot and had the man questioned, but "he would only say that the idea had come to him to do so"; and Arrian adds, in the same vein, "This actually made the seers readier to interpret what had happened as portending no good for Alexander" (VII.24.3♦). According to Diodorus, conversely, Alexander then remembered the initial warning that the Chaldeans had given him, and he showered the advisers who had urged him to disregard it with reproaches, while he himself "was impressed anew with the skill of the Chaldaeans and their insight" (§116.4♦). For Diodorus, in both cases, it was a sign from the gods—a "portent about his kingship" (§116.5♦). Diodorus was well informed. Despite some (easily understandable) differences, the episode fits into a well-fed stream of Mesopotamian tradition—that of the substitute king. When omens regarding the life of the king were disturbing, a man of low birth was chosen, and he received all of the outward appurtenances of power: the raiment, the scepter, a queen, and a court—though the real power was exercised by the king who, in principle, was sequestered elsewhere. When the risk was believed to have passed, the substitute was put to death. We can thus reasonably imagine that this episode in 323 did not result from the spontaneous initiative of a poor wretch—as is implied in any case by Arrian's reference to a *nomos persikos* (actually, in this case, a venerable Babylonian tradition). The Chaldeans were more and more disturbed by the multiplication of omens and resorted to the substitute king ritual (with Alexander's consent) and thus cleansed the king of the threats accumulating around him. All of these episodes attest to Alexander's acceptance by the local elites at Babylon—the only condition being that he rule according to local tradition, as "King of the Lands," as the Great Kings always had.

While the reality of the "Babylonization" of Alexander seems generally to be well established, at the same time, other texts dissuade us from concluding that the reaction of the Babylonian elites harmonizes completely with the image of "liberator" that the ancient texts conventionally ascribe to Alexander. First, we may note that in a tablet dated to 329 Alexander is called "king of the Haneans," which highlights his foreign origin (ADRTB no. -328). However, another text is even more interesting—the famous *Dynastic Prophecy*. Though the text is difficult, because the tablet is broken and fragmentary, this prophecy (obviously *post eventum*) devotes several lines to the reign of Darius III. The composers record the invasion of the Macedonians (here also referred to as Haneans) and a defeat by Darius; they continue:

Afterwards, he (the king) will refit [his] army and ra[ise] his weapons; Enlil, Shamash, and [Marduk] will go at the side of his army [and] the overthrow of the army of the Hanaean he will [bring about]. He will carry off his extensive booty and [bring (it)] into his palace. The people who had [experienced] misfortune [will enjoy] well-being. The mood of the land [will be a happy one]. Tax exemption (*zakutu*). (BHLT, p. 35 [col. III.12–23])

There would be no point in comparing this text with the Alexander historians in an attempt to determine which historical events are referred to. Recording of events per se is in fact not the purpose of this kind of literature, which simply sets out “good” and “bad” reigns alternately. However, it is quite notable that here Darius (the king), aided by the Babylonian gods, in the end is victorious over Alexander (the Hanean), and this triumph is received with joy in Babylon, whose inhabitants then regain their prosperity. The person of Darius III has thus been reintroduced in the context of a traditional narrative on good Babylonian kingship. The text shows that the attitudes of the elite were at least ameliorated with respect to new masters.

One perfectly reasonable theory is that the text itself was composed at the beginning of the Hellenistic period in the context of the inauguration of Seleucus’s rule in Babylonia. Thus, we cannot conclude that it reflects the perspective of the Babylonians in 331; it is more likely that it expresses the change in relationship between Macedonians and Babylonians in the time of the wars that ravaged the country at the beginning of the age of the Diadochi. The text certainly does confirm that the Achaemenid period was not seen as particularly oppressive (at least in comparison with Macedonian dominion). It also stresses that the Babylonian leaders’ submission to Alexander was linked to royal behavior that was in accord with the country’s traditions—just as in Udjahorresnet’s Egypt, Cambyses and Darius had to follow the precepts of “right kingship” (“as did every previous benevolent king”). This obligation is reflected in the Macedonian propaganda, which described Alexander’s hydraulic constructions in Babylonia as worthy of “good rulers (*hēgemōnes agathoi*)” (Strabo XVI.1.10↔; cf. Arrian VII.21.6). In other words—and in conclusion—the defection of the leaders to Alexander did not occur because they were pressured by the enthusiasm of a population that craved liberation; the surrender was conditional, because it was based on negotiations that the Babylonians certainly came to with great caution. After all, the (subsequent) message of the *Dynastic Prophecy* was not particularly favorable to Alexander or, in general, to the Macedonian conquest, which the editors present as a (vain!) attempt to interrupt the happy course of the reign of the “good king,” Darius.

4. The Death of a Great King (330)

Darius at Ecbatana

Taking into account all of these elements—both military and political—makes it possible to evaluate Darius’s situation at Ecbatana. When Alexander suddenly left Persepolis in May 330, he had only a very small amount of information about the Great King’s actual situation; he thought that Darius, since October of the previous year, had been completing his preparations for a battle that would have to determine the final outcome of the war. When Alexander arrived in Gabiene (Gabae/Isfahan), at the Median Gates, he received urgent news that was delivered by Bisthanes (son of Artaxerxes III), “who reported that Darius had fled four days before, with his treasure from Media of seven thou-

sand Talents and with about three thousand cavalry and about six thousand infantry" (Arrian III.19.5♦). Quintus Curtius states that the news-bearer was a Babylonian, Bagistanes, who told Alexander that Darius "was in danger either of death or of fetters" (V.13.3♦). It is likely that Quintus Curtius confused the two messengers. It was only later (when Alexander reached the Caspian Gates) that Bagistanes and Antibelus, one of the sons of Mazaeus, informed him that Darius had been thrown in irons by the chiliarch Nabarzanes, Bessus the satrap of Bactria, and Barsaentes the satrap of Arachosia (Arrian III.21.1).

In October 331, Darius planned to gather a new army. He had with him some soldiers who had followed him on his retreat, and among them were several thousand Greek mercenaries—whose faithfulness the ancient authors like to exalt unreservedly—as well as the Bactrian cavalry, some Persians from the royal Kinsmen, and his guard of *mēlophoroi*—that is, those who had surrounded him during the battle (Arrian III.16.1; cf. 11.5). The Great King expected to draft soldiers in the regions near Ecbatana, particularly from the Cadusians and Saka, who in fact did send him contingents (Arrian III.19.3). Nevertheless, he was primarily counting on troops levied in eastern Iran (cf. Diodorus XVII.73.1). Quintus Curtius calculates his army at 30,000 infantry (including 4000 Greeks), 4000 slingers and archers, and more than 3300 horsemen, "mostly Bactrian" (V.8.3–4♦); Diodorus speaks of 30,000 men, "Persians and Greek mercenaries" (§73.1♦); Arrian counts 3000 horsemen and 6000 infantry (III.19.5). It is always difficult to compare the numbers. Meanwhile, when Darius learned that Alexander had arrived by forced march, Darius decided to set out for the Upper Satrapies. The change in the balance of power led some contingents—Saka and Cadusians—to abandon the royal army (III.19.4). Then, when Alexander resumed his pursuit of Darius from Ecbatana, "many of those who shared his flight deserted him during its course, and went off to their homes, and a good number had surrendered to Alexander" (III.19.4; 20.2♦).

The military collapse primarily reveals the continued weakening of the Great King's political position. Quintus Curtius, in an account that is very favorable to Darius, writes that Darius's prestige continued to be solid: "In those nations the majesty of their kings is extraordinary; in response to his mere name the barbarians assemble, and veneration for his former fortune attends him even in adversity" (V.10.2♦); or this: "the reply of all the Persians was about the same, that it was impious for the king to be deserted" (V.9.16♦). These are fine phrases, but they account for only a part of the situation and, as a result, distort it. Quintus Curtius himself also explains that Darius's decision to abandon Babylonia after Gaugamela had not been greeted enthusiastically by all who were close to him (V.1.7–9). Nonetheless, Darius's royal authority remained strong enough among the satraps, generals, and subject peoples that he was still able to issue a new order to mobilize and could urge the satrapal leaders to remain faithful to him (Diodorus §64.2). But internal opposition did not miraculously vanish. Though we are unable to date the conspiracy precisely, we may reasonably suggest that the successive capitulation of Babylon, Susa, and Persepolis, without a fight, dealt a direct blow to the King's authority, because these surrenders signified the failure of the strategy adopted after Gaugamela. The failure was military, but also and especially political, as first Mazaeus, then Abulites, Tiridates, and several others went over to Alexander. It is also likely that the torching of the palaces at Persepolis contributed even more to unsettling what had once been certain. Finally, the Persians of Ecbatana had certainly discovered by

now that Alexander had warmly welcomed officials who had transferred into his service, and he had entrusted high posts to them. Despite their attachment to the glorious memory of the Achaemenids, they must have thought that Alexander looked more and more like a credible alternative. This thought was reinforced even further after the conspiracy against the Great King.

The Conspiracy against the Great King

The sources are unanimous in naming Bessus as the one at the heart of the treachery that, already long in preparation, broke out during the retreat to the Upper Satrapies. At this time, Darius was already the hostage of the satrap of Bactria, who had absolute personal control over his contingent of horsemen (Quintus Curtius V.10.5, 12; 12.6). Against them, Darius basically could count on the loyalty of Artabazus, "the oldest of his friends" (V.9.1♦), who attempted to organize his defense (cf. V.9.13), aided by the Persian contingent (§9.16) and Greek mercenaries (who feared Alexander's vengeance). Henceforth, there were two camps and two armies face to face. As Alexander's progress became known, the treachery was soon in the open: the conspirators put Darius under arrest. It appears that initially the primary objective of the conspirators was to deliver Darius to Alexander, in the hope of obtaining large rewards (Quintus Curtius V.5.2; 12.1; cf. Arrian III.21.5 and 30.4). But they had so few illusions about the Macedonian's response that they were preparing "to kill Darius, and make for Bactra with the forces of their nations" (V.10.6♦); they were counting on the reserves of men in Bactria . . . and "they expected to regain the power of the empire, should they succeed in getting possession of the province" (V.10.4♦). Arrian is probably closer to the truth when he presents the plan of Bessus and his companions as follows: their intent was to "preserve their power in common" (III.21.5♦), by which it must be understood, on the one hand, that any idea of counterattack was ruled out, and on the other, that operations would be directed jointly by Bessus, Barsaentes, and Nabarzanes (cf. III.30.4).

Nevertheless, Bessus's position was already preeminent. According to Arrian, he "had been recognized as commander by the Bactrian cavalry and the other barbarians who had fled with Darius, except by Artabazus and his sons and the Greek mercenaries. . . . Bessus was in command for the moment because of his relationship to Darius and because the act was done in his satrapy" (§21.4–5). These are the circumstances under which some of the Persians in Darius's entourage decided to change their allegiance to Alexander (§21.1). The agreement among the conspirators scarcely lasted. Nabarzanes and Barsaentes assassinated the Great King. They then fled with several hundred horsemen (§21.10). Barsaentes returned to his satrapy, thinking that he would be able to organize resistance to benefit himself; Nabarzanes soon came, accompanied by "other very highly placed Persian officers of Darius," to surrender to Alexander (§23.4♦). The third conspirator, Bessus, for his part, reached Bactra with his troop of Bactrians and turncoat Persians; he had himself proclaimed Great King under the name Artaxerxes (§25.3; Diodorus §74.2; Quintus Curtius VI.6.13). Despite this royal claim by the satrap of Bactra, the assassination of Darius marked once and for all the end of the dynasty and the Empire.

5. The Fall of an Empire

Once the historian has recognized that the "decadence" explanation must be permanently discarded, he finds himself at a loss when he is required to throw the light of day

onto the causes and origins of an event as spectacular as *the fall of an Empire*. The massive symbolic weight of this phrase certainly describes a responsibility that belongs to the historian—but this fact does not make the task any less intimidating.

The Cornelwood Lance

It is necessary to observe that the Empire fell primarily because the royal and satrapal armies were conquered on the battlefields of the Granicus, Issus, and Gaugamela. The Great King found himself unable to parry militarily—or, more precisely, none of the imagined parries fulfilled all of the hopes he placed in them. Indeed, in 334, Darius had held naval superiority, and his armies and financial resources gave him a considerable strike force. At this same time, neither the energy nor the stability of the Great King, nor his strategic and military abilities, nor the connection of the officials to the dynasty could reasonably be challenged. In order to explain these defeats, we might invoke an entire series of more or less valid military causes. Arrian gives the following explanation for the victory at the Granicus: “Alexander’s men were getting the best of it, not only through their strength and experience but because they were fighting with cornelwood [dogwood] lances against short javelins” (I.15.5♦). This is why, according to Diodorus, during the preparation of his army at Babylon in 332–331, Darius “had fashioned swords and lances much longer than his earlier types because it was thought that Alexander had had a great advantage in this respect in the battle in Cilicia” (§53.1♦). However, even metaphorically, the historian is reluctant to reduce the Persian defeat to the superiority of the Macedonian cornelwood lance. This purely technical explanation is notoriously frustrating, even when we take into account the superior maneuverability of the Macedonian army and the clear vision, not to say genius, of its leader.

We may add—and this is surely more important—that the Empire was not prepared for the military and strategic challenge posed by Alexander. Agesilaus’s incursions had already proved that the imperial space was relatively permeable. In any case, the military cautiousness and the political impediments imposed on him after Sparta had prevented him from stirring up the *ethnēs* as a whole and shattering the dynastic loyalty of the Asia Minor Persians. Thus, because of these restrictions, as we have seen, Agesilaus’s attempt was doomed to failure (see chap. 15/5). However, as soon as an adversary had decided to wage total war against the Achaemenid armies and garrisons and had gained a firm foothold in Asia Minor, it was extremely difficult to dislodge him; now he was the one who was able to take advantage of the organization of Achaemenid strategic space around strongholds, treasuries, and storehouses—places where the Great King’s enemy could find ample supplies of money and materiel that had originally been created for the defense of the imperial territories (see chap. 9/2). Only a Persian victory in the open field of battle could have ended the Macedonian offensive. So we have come around to the starting-point: once all of these details have been gathered into a coherent argument (or, at least a credible one), they allow us to understand *how* the Great King and his satraps lost the battles. But the fundamental question remains: *Why* did Darius lose the war?

Persian Royal Power and Multicultural Empire

We must stress the absolutely novel character of the Macedonian offensive. For the first time in its history, the Empire found itself confronting an adversary who was resolved to pursue total war to the end—that is, a war of conquest. Furthermore, the adversary also understood that a victory in pitched battle was not enough to dethrone so

powerful a Great King, and he knew that war also proceeds by means other than arms. After each victory, Alexander, who had a connoisseur's appreciation of the Empire, would try all means possible to achieve political success, taking advantage of the structural weaknesses of the Achaemenid imperial structure. This is demonstrated by the attitude of the local elites—as long as it is not misinterpreted. Contrary to the repeated affirmations of Macedonian propaganda, the leaders of the subject peoples were not longing for a liberator. Not one of the countries of the Empire—not even Babylonia or Egypt—was imbued with an acute national awareness that drove them irresistibly toward independence. In fact, in each of these countries (and others), the population remained committed to its own norms and continued to cultivate the memory of its own glorious past. It is true that we should at this point note several distinctions. The case of Egypt, which over two generations returned to the course of pharaonic history, cannot be equated with the case of Babylonia, where the royal residences symbolized that Persian authority was taking root, or with the case of Susiana, which was linked closely by a long common history to the Persian high country (which itself was partly Elamized). In any case, the leaders of these great centers were not so naive as to believe that the Macedonian conquest signified a return to a Babylonia or an Egypt as it was before the conquest by Cyrus the Great. The choice was simply between one overlord and another. Finally, in the course of more than two centuries of subjection/cooperation, these peoples had woven often close relationships with the Persians and had themselves profited from the imperial system. In brief, the fall of the Empire was not due to general discontent on the part of the subject populations and their elites.

The weakness of the Empire at the point of the Macedonian invasion was perfectly wedded to the force that had held it together throughout the period from Cyrus to Darius III. The Persians had never attempted to attack the recognized traditions of their subjects: the multiethnic Empire remained multicultural, as is shown, for example, by its extraordinary linguistic diversity (e.g., Diodorus §53.4). Even if the political unity and the mixing of peoples in the Empire yielded remarkable intercultural achievements, it still is the case that, fundamentally, a Greek felt that he was a Greek and spoke Greek, an Egyptian felt that he was Egyptian and spoke Egyptian, and so on—for the Babylonians and every other people, including the Persians, who never attempted to spread their language or impose their religion. On the contrary, throughout their history, the Great King and the Persians demonstrated their desire for them to maintain their own ethnocultural traditions. The unity of the Empire was thus accomplished by means of the uncontested, but personal, supremacy of the Great King. Thus, Alexander relentlessly attempted to capture Darius himself after each battle, and the Great King certainly made every effort to escape his enemy (as was his duty)—both goals perfectly illustrating the fragility of the system (which was quite evident, at any rate, from the Macedonian side):

Thus, while there actually was an ideology of the King that continued to function perfectly at the center, an ideology of the Empire did not really exist, even though royal images were spread by means of seals and coins and by popular storytellers who narrated the court histories from land to land, echoes of which are found in Aelian's *Historical Miscellany*, as well as in Esther, Judith, and the *Tale of Ahiqar*. In other words, there was no Achaemenid identity that might have induced the peoples, in all of their diversity, to rise up and defend some common norms. In other kinds of state—nation-states, for in-

stance—a defeat in pitched battle did not signify the end of the community; the community might even organize a war of resistance in the adversary's rear. However, this strategy presupposes conditions that were foreign to the Achaemenid State. On the contrary, the political-ideological structures that organized and governed the territories and populations by definition abandoned the destiny of the Empire to the fate of arms, and this would quickly convince the country's elites to turn to the conqueror and transfer their allegiance to him. As soon as the royal military was conquered, local leaders found themselves with a simple choice (which their ancestors had known since the conquests of Cyrus): to negotiate with the victor a way to maintain their dominant position within their own society. Negotiation was feasible for the victor because he acknowledged the ideological attributes of the community's identity—namely, the potency of the sanctuaries and the perpetuation of traditional worship. These were concessions that Alexander was not only entirely prepared to grant but that he himself solicited.

The Dynastic Pact and Its Limits

Moreover, Alexander developed the same strategy toward the Persians. In its very structure, the Empire was organized around the supremacy of the Great King—who in Persia was king. Around him revolved all of the activities of the representatives of the aristocracy, who were provided with commands and economic advantages of all sorts. They were what we have called the dominant socioethnic class, united around the dynasty and values of the Persian community. Generally, the system continued to function satisfactorily throughout the Achaemenid Empire; analysis of the high-ranking personnel of Darius III shows that managing the Empire remained mostly a family matter. Despite occasional crises, the dynastic problem did not deeply or permanently alter the loyalty of the Persian aristocracy to the Great King. The known satrapal revolts were localized and never had a goal of imposing a king who was not of royal stock. The attitude of the Persian population (reconstructed on the basis of the policy followed by Alexander in the country) attests that Persia was always the heart of royal and imperial power. Finally, in every manifestation of his power, Darius III clearly had prestige and authority as great as that of his predecessors.

However, the shock of the conquest also demonstrates the fragility of this structure, whose creators had obviously never given thought to a challenge of such magnitude and scope. Indeed, during the first years of Alexander's campaign, there was no generalized desertion; on the contrary, the example of Mithrenes of Sardis remains an exceptional, basically inexplicable case. However, it also serves to reveal an attitude that many aristocrats were to adopt after defeat, especially after Gaugamela. Though the Persians constituted a highly homogeneous ethnocultural community, they were not formed into a nation. Their loyalty to the Great King was based on personal relationships, which could be transferred to another person who was endowed with the prestige of victory. As the military defeats accumulated, men like Mazaeus and Abulites, following Mithrenes, were anxious to conserve their prestigious positions and their economic privileges. Indeed, in his approach to them, Alexander had long understood (even before his landing) that the *political* defeat of the Achaemenid Empire would emerge from the reproduction of gift-for-service relations that had always cemented the close alliance between the Great King and the Persian aristocracy—according to practices quite similar to those known in the Macedon of Philip and Alexander (cf. Arrian I.5.4 and Plutarch, *Eum.*

8.12). Alexander was able to create the conditions for a balance between his own ambition and the nobility's desire not to perish in the turmoil. Even though a circle of aristocrats remained faithful to the Great King until the end, their attitude does not contradict this general tendency. Alexander's success is not measured simply in the number of defections; more importantly, he was able to attract to himself men who, like Mazaeus and Abulites, held key posts at decisive moments and could thus tip the balance of power one way or the other.

Furthermore, the way in which the loyalty of a man like Artabazus was expressed—"the oldest of his Friends"—can support two readings. He certainly seems to have resolved not to abandon his king, and there is no question that he upheld this resolve. But the reasons that Alexander gave for granting him an eminent position in his administration are also very interesting: "He kept Artabazus and his sons by him in an honourable position, as they were among the most eminent Persians (*en tois prōtois Persōn*) and especially because of their loyalty to Darius" (*kai tēs es Dareion pisteōs heneka*; Arrian III.23.7♦). Of course, Arrian is speaking from Alexander's point of view. But who could seriously imagine that, in the period between the death of Darius and the change in allegiance of Artabazus and his children, the Persian aristocrat did not enter into discussions with Alexander's camp? In one way or another, Artabazus was able to negotiate with Alexander for the loyalty that he had once demonstrated toward Darius. Because of his battlefield victories, Alexander had managed to persuade the Persians little by little to transfer their allegiance to him in exchange for concessions that are easy to imagine: land, power, and prestige (cf. Plutarch, *Alex.* 34.1). Moreover, the Persians had the same perspective as the elites of the conquered countries: in the process of transferring their allegiance, they did not wish to alter the nature of the relationships that traditionally had connected them to the sovereign. Thus, the "orientalization" of the Macedonian king and his court was the necessary compensation for his Iranian policy.

Mazaeus Once Again

Above and beyond the uncertainties that remain, the examples of Mazaeus and Abulites stimulate further reflection. The available evidence in fact strongly suggests that a man like Mazaeus, though inarguably of Persian origin, was also intimately immersed in Babylonian society; the names of some of his sons are irrefutable proof. There is no doubt that the same holds true for Abulites at Susa. Both are probably representatives of a human and political type: Persians who had woven close contacts with the elites of the countries they were sent to govern (though in the second case, perhaps, we have a "Persianized" Babylonian—hence the name of Abulites' son, Oxathres). With respect to the *ideal type* of an ethnically and culturally homogeneous socioethnic class, these examples might seem to be examples of the failure of Persian authority. But, as always, historical reality is contradictory. The maintenance of imperial dominion was also accomplished by personal connections and by non-Persians' access to command positions (of which the Babylonian Bēlšunu is the prime example). These men—who, based on all of the evidence, were always considered Persians and considered themselves Persians in the political sense of the word—were at the same time a sign of the success of the imperial enterprise. In their position as *cultural mediators*, they symbolized and accelerated the creation of a new governing elite, and this elite's origin and composition paradoxically favored the permanence of Persian dominion. In this respect, too, the overwhelming

challenge of the Macedonian conquest drove the contradictions to surface. If we assume that we have correctly understood the situation in Babylon in 331 following the defeat at Gaugamela, we may also imagine that the combined defections of Mazaeus and the Babylonian elites were coordinated, involving negotiations and discussions between the satrap and his friends and relatives in Babylonian society. At the very least, we can imagine this hypothesis.

Bessus in Bactria

Finally, let us return to the paramount case of Bessus. Unfortunately, his background is unknown to us, apart from the fact that he was related by blood to Darius and that Darius had made him satrap of Bactria, one of the richest and most powerful regions of the Empire (cf. Arrian III.21.5). His proclamation of himself as king obviously did not have much effect on his authority. On the other hand, it is interesting to note how he acquired his hegemony in the conspiracy: he had been acclaimed leader by his Bactrian contingents (§21.4) who, throughout the last weeks of Darius, had constituted a shadow army. Bessus intended to turn Bactria into a redoubt, with himself as the master. According to Diodorus (§74.1♦), “being known to everyone because of his administration, [he] now called upon the population to defend their freedom.” We must not see this as setting in motion a “war of nationalism” that would ultimately give way to a permanent “Bactrian independence.” In his books on the history of the Diadochi, Diodorus frequently uses the same sort of phrase: when Seleucus wanted to set foot in Babylonia, “most of the inhabitants came to meet him, and declaring themselves on his side, promised to aid him as he saw fit” (XIX.91.1♦). Peucestes, who was named satrap of Persia by Alexander, is described in the same way: despite the opposition of the other Macedonian leaders, he had learned Persian and adopted all of the Persian customs, with the result that he “had gained great favour with the inhabitants” (XIX.14.5♦)—so much so that Antigonos was irritated to see “that Peucestes was enjoying great favour among the Persians.” When Antigonos had decided to deprive him of his satrapy, “Thespius, one of their leading men (*henos de tōn epiphanestatōn*), even said frankly that the Persians would not obey anyone else” (XIX.48.5♦). We can easily list other examples from the age of the Diadochi that illustrate the ambition of some Macedonian leaders who wanted to create personal power on the basis of support from a country and a people with which they had woven relationships of confidence and intercultural cooperation. Diodorus’s phrase suggests that this was Bessus’s ambition in Bactria. In this respect, after the Great King had died, Bessus served as something akin to a prefiguring of the Diadochi after Alexander’s death. This shift was perhaps present in embryo in people such as Mazaeus who were closely linked to the governing elites of their satrapies. Nevertheless, in 334, the problem did not really arise; it is enough to consider the example of Artabazus and his family to realize that no matter how close connections with the local populations might be, they did not diminish in the least the Persian and imperial loyalty of the king’s men. The dominant socioethnic class, insofar as we know its composition under Darius III, remained united around its king and Persian power. Only the challenge posed by the totality of the Macedonian conquest led these people, one by one, to join the camp of the victor.

Conclusion

From Nabonidus to Seleucus

Within the framework of ancient Near Eastern history, the Achaemenid phase takes on special significance. For the first time, countries that were hitherto divided among hostile rival kingdoms were gathered into a single, unified state, from the Indus to the Aegean Sea. Over the *longue durée*, this is the fundamental contribution of the conquests of Cyrus and Cambyses. The successive capturing of Ecbatana, Sardis, Bactra, Babylon, and Memphis marked the incorporation of kingdoms into the wider framework of an empire. Whatever may have sometimes been claimed, this creation was not simply a façade. The prior kingdoms, as such, disappeared. For various reasons, the Great Kings simply acknowledged that at Babylon and Memphis they were putting on the older garb of Nabonidus and Psammetichus. Nevertheless, at the same time (or after a very short delay at Babylon), Babylonia and Egypt were transformed into satrapies governed by a satrap who held his position and made his decrees on the basis of direct orders from the Great King. The same was true at Sardis and Bactra (whatever state organization might have existed previously); so it was at Ecbatana, with the difference that, at least under the first kings, Media and the Medes continued to have a special place in the Empire. No ancient heritage—whether of Babylonia, Egypt, Media, or Elam—had been denied; each had, on the contrary, been integrated into the dynamic force of a new state construct, as is shown specifically by our analysis of Achaemenid court art; it was not a simple juxtaposition of preexisting Near Eastern elements but a genuinely new elaboration in which the stylistic and iconographic diversity, far from delivering a blow to the unity of the whole, managed to reinforce it into an integrated exaltation of the unlimited power of the Great King. In the same way, we can easily discover many elements within the royal ideology to which we can find parallels in the Assyro-Babylonian and Elamite kingdoms (warrior king, gardener-king, king of justice). However, they were incorporated into a new ideology for which, at its heart, the specifically Iranian and Persian elements constituted a driving force. Recall in particular the central role accorded to the great god Ahura-Mazda and, later, Anāhita and Mithra. We can make the same observations regarding Darius's tribute organization: it was grafted both onto realities already observable in earlier times and onto the initial tinkering carried out by Darius's predecessors; however, by the organizational power that it presupposes and that was its impulse, his system went well beyond simple borrowing of accounting practices. The inverse thesis, which reduces the Achaemenid structure to borrowings from preceding kingdoms, is based, it seems to me, on a historical and methodological error. So I have already written about Alexander, some years ago. I hope the reader will excuse me for quoting myself: "The danger of isolating components or structures that were supposed to have been borrowed by Alexander is in fact great. . . . We cannot historically isolate one structure from an overall system of ideological representations, and a system is more than the sum of its parts" (RTP 359). What is true for Alexander with respect to

Achaemenid ideology also is true for Cyrus, Cambyses, and their successors with regard to the organizational structures of the kingdoms they would literally engulf in the same way that white blood cells engulf bacteria. The Empire was in fact a new single-celled organism that grew by absorbing scattered, hostile cells that then cooperated within a new cellular dynamic.

In order to ensure the continuance of their power and rule, the Great Kings were first and foremost supported by the Persian aristocracy. Within the aristocracy, each family entity had privileged access to positions of power that were endowed with a genuine capacity for initiative—under the direction of the Great King. I have frequently (including in this book) referred to this group as the dominant socioethnic class, which was connected to the king through unequal relationships that were based on gift-and-service exchanges. Throughout Achaemenid history (including during the time of Darius III), the system continued to operate, because it was based on interests common to the dynasty and the aristocracy (the “dynastic pact”). At the same time, the Great Kings did not deny local elites access to the sphere of power. On the contrary, they received positions in the imperial hierarchy, sometimes at a high level. In parallel with the Great Kings’ treatment of local personnel, the central authority also recognized local forms of organization, whether dynastic powers or sanctuaries or religion. The only limit on recognition of local traditions was the adherence of the imperial elites to the means and goals of the Persian authority, for which they served as local representatives and indispensable contact points. Nevertheless, the Great King did not hesitate to take drastic measures against communities tempted by revolt (*drauga*), which since the time of Darius I had been identified with calling into question a Great King, who was the representative and earthly defender of the values of Truth-Justice (*arta*) that were exalted by Ahura-Mazda.

To repeat a banal cliché, the Empire was characterized by both unity and diversity. This can be seen especially in its cultural manifestations, which are so well exemplified by the large number of languages and religions. This is why it is so difficult to analyze the Achaemenid imperial evolution as a whole: we end up alternately stressing the Empire’s integrative power and its centrifugal tendencies. For reasons already discussed, these two aspects are not necessarily mutually exclusive. Across the long course of Achaemenid history, the creation of a Persian imperial diaspora in the provinces accelerated the processes of acculturation, even when the processes were not limited to the Persians and the elites of the subject populations. Marriages and many kinds of personal contact (cf. Artabazus of Greater Phrygia) led to closer and closer relationships, which can be illustrated, for example, by the rise to command positions of non-Persians (Bēl-šunu), of men who emerged from two cultures (Abulites), or of those who still participated in two cultures (Mazaeus, Orontobates). This development does not seem to have threatened the unity of the Empire. On the contrary, it tended to create a dominant imperial class that was not limited to its Persian component; at the same time, whatever their ethnic origins had been, the leaders always considered themselves Persian in the political sense—Persians, that is, who were linked to the Great King by the same unequal gift-and-service relationship and by common political and material interests. Even young people born to a mixed marriage could gain full Persian status (cf. Dames) through a privilege granted by the king (cf. Herodotus VI.41), following a procedure similar to that by which a Seleucid king granted the honor of a Greek name to a man of Babylonian origin (YOS 1.52). I am tempted to think that this development ex-

plains the state of equilibrium that was the Empire's when Alexander conquered it. By using the phrase "state of equilibrium," I obviously do not intend to project an image of peaceful, unbroken cooperation (cf. the revolts) but I intend instead to express what was a political desire of the center (in the long term) to overcome the conflicts that could not be avoided within an imperial dynamic that was founded on both the Persians' supremacy and their cooperation with the local ruling classes. The Macedonian victory, then, provides no basis for any inference about a "crisis" of the Achaemenid Empire in 334 and even less basis for any claim about its "decadence" throughout the fourth century. Put more simply, the genesis and nature of the Macedonian conquest prevented it from metamorphosing into a Nation-State that would have been able to consolidate itself through ideological norms that were common to all the peoples of the Empire in all their diversity.

Situated within the Achaemenid *longue durée*, Alexander's conquest takes on two conflicting characteristics. On the one hand, the short period initiated by the arrival of the Macedonian was the prolongation of that *longue durée*. from the geopolitical point of view; this observation further devastates the theory of "Achaemenid decadence." The Macedonian in fact took over, for his own benefit, the principles and organization of an empire whose structures were totally alien to the Balkan world. One piece of evidence — the *Oeconomica* of Pseudo-Aristotle — which we are inclined to think was compiled in the last quarter of the fourth century in Asia Minor — demonstrates that, for the Greeks, the royal and satrapal economies represented a form of tribute organization that no Greek State had ever managed to get off the ground; the only exception was the Athenian *arkhē* of the fifth century that itself borrowed much from the Achaemenid model. This is the context in which we must, to a great extent, seek the origins of the Macedonian conquest. As has often been noted, Philip II had already borrowed from the Achaemenid world, but in his time, these were nothing more than scattered borrowings that were not reintegrated into an overall dynamic. This dynamic was forced upon them by the conquest of the Achaemenid territory and the destruction-absorption of the imperial organization of the Great Kings. Whatever may have been the intentions of the King of Macedon when he launched the initial offensive against the royal territories in 337–336, his son pursued to completion a goal of unprecedented breadth that was based on the complete usurpation of the territorial and ideological forms of organization of Darius III's Empire, as well as the cooperation of the former ruling class.

However, by posing as the heir of Darius, Alexander at the same time caused insurmountable conflicts to erupt. First, some of the Macedonian nobility were hostile to the idea of accepting Iranians as totally equal partners. Despite all his efforts — symbolized by the grandiose Iranian-Macedonian marriages at Susa — Alexander never really succeeded in creating a new ruling class that was as homogeneous and stable as the socio-ethnic class that ruled the Empire of Darius III and his predecessors. The defection of local elites was not due in any respect to a deep disaffection with Persian power but was simply a function of the Great King's military defeat; it had also been conditioned by the deep and lasting acceptance of local norms by the new masters. Alexander's long absence in India had already shown that satraps (Macedonian or Iranian), thinking that the king's quest had failed, were quick to violate the agreements Alexander had made with the local elites. When Alexander died, none of the problems were resolved.

Furthermore, we should consider the dramatic inability of the Macedonian authority to organize any dynastic succession—thus demonstrating an extraordinary structural weakness, in contrast to the remarkable Achaemenid capacity for renewal even in times of the most intense dynastic crises. We know what happened to the Empire's unity, which was more and more torn apart by the rival Diadochi under cover of defending the sovereign prerogatives of the two putative successors to Alexander. It took just a few years for the geopolitical situation to revert to one that, even taking into account intervening historical changes, was reminiscent of that which prevailed in the Near East before Cyrus: the Empire was shattered into several rival kingdoms. The Macedonian enterprise, which in the short term was a continuation of Achaemenid imperial history, would soon dig the grave of the political unity the Great Kings had been able to establish and safeguard through the preceding two and a half centuries. From the point of view of Near Eastern imperial geopolitics, Alexander was indeed "the last of the Achaemenids."

At the same time, the invention of the great Hellenistic kingdoms was carried out in partial continuity with Achaemenid practice. We know that Peucestes, who was appointed satrap of Persia by Alexander, ingeniously attempted, despite the objections of other Macedonians, to adopt the social practices of the Persians over whom he was satrap in order to create a commonality of culture and destiny with the aristocracy of the country. Even though Persia did not recover its former independence at this time, it represents a sketch of the developments observed in other Near Eastern Hellenistic countries. Alongside other evidence (such as that of Diodorus), the *Dynastic Prophecy* suggests that Seleucus, with the assistance of his Iranian wife Apame, was able to win over the cooperation of the ruling elite in Babylonia; the latter were growing more and more frustrated by the destruction throughout the country that was a result of the continual wars of Eumenes and Antigonus. It was as a "King of the Lands"—not as a foreign conqueror—that Seleucus was recognized in Babylonia; he took up for his own benefit the political and ideological strategy that the Great Kings had faithfully followed.

However remarkable it may have been, the Seleucid enterprise was on a far smaller scale than that of the Achaemenid Empire—and it found itself in a context where all at once traditional hostilities with Egypt reappeared and centrifugal tendencies increased, set loose by the deaths of Darius III and then Alexander. This is what we see, for example, in Cappadocia and Armenia: here, where the Achaemenids defaulted sooner than elsewhere, their satraps were quick to establish dynasties with close connections (that they loved to stress) to the Achaemenid family. In a Greek-Armenian inscription from Ağaça Kale, men who may have been direct descendants of the Ariaces who led the Cappadocian contingents at Gaugamela were quite ready to adorn themselves with the nostalgic title "legitimate satraps."

Research Notes

Prologue

The Persians before the Empire

• *General bibliography.* Briant 1984a has been repeated here only to a rather small degree and in a largely reworked and modified form to take into account more recent specialized articles, particularly Miroschedji 1985 and 1990a.

1. Why Cyrus?

• *Discontinuous Documentation and the Longue Durée.* "Scandal of history" of the disappearance of the Assyrian Empire: see the discussion by Garelli (Garelli and Nikiprowetzky 1974: 125–28 and 239–42), and the summary of the topic in a more closely argued form in Zawadski 1988a: 14–22; and the interpretive suggestions of Na'aman 1991. The problem of the beginnings of Persian history is very well stated by Harmatta 1971 (even if stressing Median influence exclusively is debatable; see below); see also the reflections of Delaunay 1985: 71–81, on the reasons why Aramaic scribes were used during the time of Cyrus.

• *Persian History and Greek Representations.* See Briant 1989a; on Median-Persian relations, see also §§6–7, pp. 21–27.

2. The Founder Legends

Version of Ctesias in Nicolaus of Damascus: *FGrH* 90 F66, version of Dinon in Athenaeus XIV.633d–e; Cyrus legend and Sargon legend: Drews 1984 and B. L. Lewis 1980; on the theme of the abandoned child, cf. also Widengren 1966 and Binder 1964: 17–28; on royal legends in Iranian literature, in particular in Firdawsi, see Christensen 1936 (who finds similar traits in the legends reported by Herodotus and Ctesias), Davidson 1985, Duleba 1987, Krasnowolska 1987; remembrance of Cyrus among the Persians: Xenophon, *Cyr.* I.2.1; Herodotus III.160; Strabo XV.3.18; and Athenaeus XV.633d–e: cf. chap. 8/3 on the education of young Persian aristocrats.

3. The Kings of Anšan

Inscriptions of Ariaramnes and Arsames: cf. summary of the topic in Lecoq 1974a: 48–52, who concludes that "the inauthenticity [of these texts] has not been proved" (cf. also Herrenschildt 1979a); the discussion is directly connected to the interpretation given to Darius's dynastic claims, which are extremely suspect (on the genealogy recorded by Darius, see the keen reflections of Miroschedji 1985: 280–83): we return to these problems at greater length in chapters 2/10 and 3/1; seal of Kuraš of Anšan: Hallock 1977: 127, Miroschedji 1985: 285–87, Bollweg 1988; and most recently Garrison 1992: 3–7 (and n. 22).

4. Anšan and Susa

Arrival of the Iranians in the Zagros: cf. summary of the topic and bibliography in Briant 1984a: 79–83; add Sumner 1994, who prefers a higher dating (middle of the second millennium); on relations between the lowlands and the highlands, see Vallat 1980; Carter and Stolper 1984: 32ff.; Miroschedji 1990a; Tall-i Malyan tablets: Stolper 1984b; site of Malyan: Sumner 1988; co-existence of several Elamite "kings" at the beginning of the seventh century: cf. Stolper 1986;

“royal cities”: Miroschedji 1986 and 1990a: 65–69; battles of Elamite kings against the Assyrians: Carter and Stolper 1984: 44–53, as well as Gerardi 1987 and a brief presentation in Frame 1992: 255–56; assuming the title “king of Anšan”: Miroschedji 1985: 296–99; chronology and succession of the first kings: without denying that they are just hypotheses, I follow on this point the interpretations of Miroschedji 1985: 280–285 (who refuses to recognize Cyrus in the Aššurbanipal inscription published by Weidner 1930), but there remain uncertainties and discussion on absolute chronology: cf. Bollweg 1988: 56 (genealogical tree; explicitly denying the reconstruction of Miroschedji); the discrepancies explain why Cyrus the Great is sometimes numbered II, sometimes III (just as his father is sometimes designated Cambyses I, sometimes Cambyses II), depending on the weight given to Herodotus VII.11

5. *Persian Society before the Conquests: Herodotus and Archaeology*

- *Herodotus and Persian Society.* Text of Herodotus: Briant 1984a: 105–10, 1990a: 77–84; tribal organization: see also the reports of Xenophon (twelve tribes!) (*Cyr.* 1.2.5) and Strabo XV.3.1; cf. Von Gall 1972; Iranian terms: Dandamaev 1989a: 13; note that the term **zantu* does not occur in the Old Persian texts; according to Dandamaev and Livshits 1988: 459, it appears several times in the Elamite tablets from Persepolis as a constituent element in personal names, but see *contra* Schmitt 1990b; Greek (and Mesopotamian) view of the opposition nomads/farmers: Briant 1976 and 1982b: 9–56; *kāra* in OPers. can designate the army as well as the people (whence the problems posed by DB §14: see below, chap. 2/10); the title *karanos* appears in Xenophon to describe a military head with exceptional powers: Haebler 1982, Petit 1983, Sekunda 1988: 74; military prestige of the king: Briant 1984a: 114–17.

- *The Findings of Archaeology.* Absence of sedentary populations: Sumner 1972: 264–65, 1986: 4–7 (without enthusiasm: “unsatisfactory . . . assumption . . . hypothetical explanation”); conclusions repeated and strengthened by Miroschedji 1985: 288–94 (“radical sedentary depopulation”); see also Miroschedji 1990a; agricultural activities in Persian month names: cf. the analysis of Hinz 1973: 64–70; maintenance of pastoral populations in Achaemenid Fārs: Sumner 1986: 30–31; cf. Briant 1976. On the very incomplete character of explorations in Fārs: cf. the remarks of Miroschedji 1990a: 54–55; Elamite influences: Briant 1984a: 92–95, Miroschedji 1982 and 1985: 296–305, Calmeyer 1988b (dress), Bollweg 1988 and Garrison 1992 (seals); archaeological results in Khūzistān: Carter 1994; tomb of Arjan: Vallat 1984, Alizadeh 1985 (criticism by Vallat, *AbIran* 10 [1987], no. 217); cf. also Miroschedji 1990a: 55 and the article by Majizadeh 1992 (publication of a bowl with scenes of hunting, tribute-bearers, and banquets: the author stresses Phoenician and Assyrian influences); according to Duchêne (1986), Arjan is to be identified with Huhnur, halfway between the future site of Persepolis and Susa, by proposing a relationship with the place-name Hunair known from the Fortification tablets (cf. Koch 1990: 198–200). The Susa tablets were published in 1907; their dating was and is uncertain: Hinz (1987) defends a high date (before 680); 600–540 is suggested by F. Vallat (1984: 11, n. 26); see also Miroschedji 1982 and 1990a: 79, and Stève 1986, from whom I take the term “Neo-Elamite IIIB (ca. 605–539)” (pp. 20–21); quotation: Chirshman 1976b: 160; Iranian metallurgical tradition: Moorey 1984; on the term *irmatam*, cf. below, chap. 11/5, 11/9; Persians and Iranians in Babylon: Zadok 1977: 66–67; Babylonian populations in Khūzistān: Stolper 1986; importance of intercultural contacts before Cyrus: cf. Briant 1984a.

6. *Anšan, Ecbatana, Babylon, and Susa*

- *The Consequences of the Fall of the Assyrian Empire.* On the events that led to the demise of Assyria, see (besides Goossens 1952 and Garelli 1974: 125–28, 239–42) the recent analyses by Zawadzki 1988a and Naʿaman 1992. It will immediately be seen that the interpretations continue to differ on very important points: but it would not be appropriate to review the debate here, in the course of a discussion devoted specifically to the kings of Anšan. It will have to suffice to put in a

nutshell some facts and analyses that, even indirectly, might contribute to the understanding of the Near Eastern world upon the arrival of Cyrus II; downfall of the Assyrian capitals: see Goossens 1952: 90–93; Kuyper 1981; Scurlock 1990b; Dalley 1990, 1993; Kuhrt 1995 (now bringing into the discussion the tablets from Tall Sēḫ Ḥamad [valley of the Khabur]), which prove that the political end of imperial power did not mean the instant annihilation of the language or more generally of Assyrian culture: cf. the articles collected in SAAB 7/2 [1993]); on the role of the Medes after 610, see Baltzer 1973 (and Joannès 1995b, with the subsequent remarks of Gasche 1995 on the name and dating of the “Median Wall”); Astyages/Alyattes treaty of 585: the Labynetus of Herodotus cannot be Nabonidus (556–539) (to whom he gives the same name): cf. discussion in Beaulieu 1989a: 80–82; the Medes and Central Asia: Briant 1984b: 35–42, reconstruction of an Elamite kingdom centered on Susa: Miroschedji 1982, Vallat 1984, Stève 1986; the notion of the submission of Susa to Ecbatana is defended by Zawadski 1988a: 138–43 (cf. also Lukonin 1989: 61, according to whom Astyages imposed his domination over Elam in 585); but the evidence is contradictory: some take the opposite view, that there are a number of links between Susa and Babylon (Lukonin 1989: 58–59; Wiseman 1956: 36; and Carter-Stolper 1984: 54); in any event, it is quite possible that Elam was itself not unified, with various princes, who were not necessarily strictly under the control of Susa, controlling local territory; Babylonian conquests in the west: Wiseman 1956; name of the last Elamite king (Ummanīš): Miroschedji’s hypothesis 1982: 62–63.

- *Anšan on the World Stage.* Classical texts on the fall of the Assyrian Empire: in the final analysis, all that can be agreed to are a few contemporary notes (cf. Scurlock 1990b); we may add that the version of Amyntas is already found in part in Xenophon (*Anab.* III.4.8–13), who identifies the ruins he viewed in Assyria with the cities captured by Cyrus from the Medes; on the “Arabs” of Mesopotamia, cf. Briant 1982b: 120–22 and Donner 1986.

- *Median Dominion.* The hypothesis that the *Dream of Nabonidus* (cited below, chap. 1/1, p. 881) identifies Cyrus as *ardu* (‘slave’) of Astyages (so Dandamaev 1984b: 82–86) derives from a faulty reading: cf. Baltzer 1973; tribute under Median domination: cf. Justin I.7.2 (very general); on Herodotus’s Median dynastic chronology, see most recently Scurlock 1990a.

- *Dynastic Marriages?* Identification of Aryenis, daughter of Alyattes: Herodotus I.74 and especially a *scholion* to Plato (Pedley 1972: no. 96); note also that one of the daughters of Darius was called Mandane, at least in a court novel recorded by Diodorus XI.57.1. Another marriage tradition is found in Diodorus (II.10.1) and Berossus (apud Josephus, *Ag. Ap.* I.19): a “Syrian” king landscaped the Hanging Gardens of Babylon to please his wife “who was originally from Persia” (Diodorus) or Media (Berossus): cf. also Quintus Curtius V.1.35. The diminution of foundation legends attests above all to the vigor of the oral traditions.

7. From the Medes to the Persians

- *Borrowing and Inheritance.* The theory of Medo-Persian linguistic inheritance is found already in Meillet and Benveniste 1931 (cf. particularly p. 7: “For historical, geographic, and dialectal reasons, it can be nothing other than Median”); cf. also R. Schmitt, *RIA* 7/7–8 (1990): 617–18 s.v. “Medische [Sprache]”; this is the basis on which Harmatta 1971 reconstructed Median state organization, which supposedly was copied by the Achaemenids; on this point, see the critique of Sancisi-Weerdenburg 1988a: 208–10. The theory was strongly challenged by Skjærø 1983 (summarized here), as well as by Lecoq 1987, who elsewhere (1974b) sets forth the idea of a Perso-Median *koinē*; on the name Mede applied to the Persians, cf. Graf 1984, and Tuplin 1994.

- *The Structure of the Median Kingdom: Mēdikos logos* of Herodotus. Cf. Helm 1981 (oral traditions and Persian propaganda); Brown 1988: 78–84, Sancisi-Weerdenburg 1993a, also Scurlock 1990a (on the Median chronology of Herodotus, judged perfectly acceptable); note that Ctesias also devoted part of his *Persica* to Median history: cf. Diodorus II.32–34; cf. also IX.20.4, where he mixes information from Ctesias with some attributed explicitly to Herodotus, but which he cites in a faulty way; on the problems posed by the “Scythian interregnum,” see now the detailed analysis

of Lanfranchi 1990 and the interpretations of Vogelsang 1992: 181–90, 310–12; Medes and Assyrians: cf. chronological table drawn up by Brown, *RIA* 7/7–8 (1990): 620; role of Cyaxares: Brown 1988: 81–86, also Sancisi-Weerdenburg 1988a: 202–3, 211. Note that Ctesias calls Cyaxares “founder of Median hegemony”; but given that Diodorus (II.32.3) cites Herodotus, this is obviously a confusion with Deioeces; the same author claims (II.34.6) that Astyages is the name the Greeks gave to a certain Aspandas; finally, note in passing that Diodorus (II.34.1) cites a certain Astibaras among the Median sovereigns: this involves the evidence of a personal name copied from an Achaemenid title (*arštibara* = Gk. *doryphoros* ‘lance-bearer’) familiar from an inscription of Naqš-i Rostam (DNe) and from Babylonian tablets (Stolper 1985a: 55 n. 12). Scarcity of Median archaeological remains: see several articles of Muscarella (1987, 1994) and the refinement of Genito (1986), with the criticism of Vogelsang (1992: 177; but the use of country lists leaves me methodologically unconvinced) and especially Medvedskaya 1992, who concludes on the basis of observations of ceramics and geography that Bābā Jān can no longer be considered a Median site. On “Median art,” see the convenient presentations of P. Calmeyer in *RIA* 7/7–8 (1990): 618–19 and *Enclr* II (1988) 565–69 and D. Stronach, 1977: 688–98, 1981 and *Enclr* II (1988) 288–90. The theory of very limited spread of Median power is supported especially by Sancisi-Weerdenburg (1988a, 1993a); Brown (1986, 1988) considers the impact of Assyrian levies on the passage from a tribal society to a state society, beginning with the eighth century. The theory of the rewriting of history by the Babylonians in an anti-Median direction is very strongly supported by Zawadski 1988a: 132–48, dated by the author to exactly 576 (p. 148); the interpretation seems attractive but does suffer from a significant weakness: it postulates that the composers of the *Nabopolassar Chronicle* systematically designated the Medes with the name Umman-Manda (cf. pp. 127–29); however, this interpretation appears very doubtful (cf. Baltzer 1973); under these circumstances, the reassessment of the role of the Medes in the anti-Assyrian coalition does not carry much conviction.

• *Appraisal of the Discussion.* The importance of the Elamite legacy to the Persians has been stressed by numerous authors (P. Amiet, F. Vallat, M.-J. Stève, M. Garrison); cf. also Stolper 1984b: 4, regarding the tablets from Tall-i Malyan (“They supply a distant historical antecedent for Elamite administrative recording in Fārs under the Achaemenids”), and Miroschedji 1982 and 1985. Miroschedji concludes that the Persian administration in Fārs “was probably set up by Cyrus II in the middle of the sixth century, when the Empire was established” (1985: 301; see below, chap. 2/9, p. 895, on the organization of the sacrifices around the tomb of Cyrus); perhaps we should even consider that it was set up before the first conquests (cf. Briant 1984a: 118)? Note in this regard that two high officials in Persia at the time of Darius continued to use seals engraved with an Elamite name, Humban-ahpi (cf. Hinz 1972b: 281), and that the seal of Kuraš of Anšan himself is applied to six tablets (cf. on this seal most recently Garrison 1992: 3–10); on the other hand, the Median borrowings (arms, clothing) are usually reconstructed on the basis of later documents, in particular the Greek authors and the representations of Persepolis (cf., for example, Trümpelmann 1988; also Calmeyer, *RIA* 7/7–8 [1990] 615–17). On all these problems, see now also the interesting treatment by Tuplin 1994: 251–56.

8. Conclusion

It must be stressed that many of the hypotheses of the (supposed) relations between Nabonidus and Cyrus (cf. summary of the topic in Baltzer 1973: 87–88) are implicitly based on the assumption of the recognition of Anšan as a military power by the other kingdoms (specifically Neo-Babylonian and Median).

Chapter 1

The Land-Collectors: Cyrus the Great and Cambyses

1. Medo-Persian Hostilities, the Defeat of Astyages, and the Fall of Ecbatana (553–550)

• *General Bibliography on Cyrus.* Dhorme 1912; Olmstead 1948: 34–85; Mallowan 1972; Stronach 1978: 285–95; Cook 1983: 25–43; Cuyler Young 1988: 28–46; Dandamaev 1989a: 10–69.

• *Sources and Problems.* The *Dream of Nabonidus* is part of a long inscription of that king (Inscription 1 in Beaulieu 1989a: 22; translation, p. 108, and commentary, pp. 108–10); other Babylonian sources referring to the victory of Cyrus over Astyages: *Nabonidus Chronicle* (text edited and translated by Grayson, ABC: 104–11; cf. p. 106; cf. also the English translation in *ANET*: 305 and the important remarks of Tadmor 1965 on the literary models on which the text is built). The *Dream* (with other Babylonian texts) poses an interpretive problem regarding the generic term *Umman-Manda*; the problem has been discussed extensively and remains debatable: cf. Baltzer 1973; Zawadski 1988; Lanfranchi 1990; it looks as though a general identification as the Medes is no longer acceptable; but here, whatever the intentions of the author, it is clear that he intended to identify the Medes (and their king Astyages) by the generic pejorative *Umman-Manda*; the role of Harpagus is also stressed in a Greek tradition from Asia Minor that uses a chronological formula of the form “when Harpagus urged Cyrus son of Cambyses to revolt [against Astyages]” (Mazzarino 1947: 197 and 225); the tradition is suspect, because it could well come directly from Harpagus himself, whose links with Asia Minor are well attested; the problem consists entirely of determining when Harpagus seceded: at the beginning of (or even before) the revolt, or at the end of the Medo-Persian war? In the first case, one must suppose the war to have been very short (Herodotus); in the second, one must suppose that the defection of Harpagus can be explained by the defeats suffered by the Median armies after a series of victories: this is in fact the version of Diodorus IX.23; the date of the beginning of overt Medo-Persian hostilities is disputed, depending on the interpretation of the vague and contradictory chronological indications found in the *Dream of Nabonidus* (cf. Drews 1969; also Cook 1983: 27, 144; and especially Tadmor 1965). Nabonidus’s departure from Teima: Beaulieu 1989a: 149ff. Presumed relations between Nabonidus and Cyrus: Beaulieu 1989a: 109, 144: to explain the wait-and-see policy regarding Nabonidus at the beginning of his reign, the author notes: “It is likely that Nabonidus was waiting for Cyrus’ revolt to start, a welcome event which would give him total freedom of action in Syria, Palestine, and Arabia.” But we do not actually know whether in 556 anyone thought a Medo-Persian war was inevitable.

• *Offensives and Counteroffensives.* Cf. Stronach 1978: 282; the *Cyropaedia* of Xenophon does not mention a revolt; quite the contrary: once elevated to the court of his grandfather Astyages, Cyrus cooperated fully with his uncle Cyaxares, successor of Astyages(!), to the point that he commanded the united army in his campaigns against Sardis and then Babylon; despite several clashes due to the touchiness of Cyaxares, the agreement continued to hold until Cyrus married the daughter of Cyaxares (who was without male heir) and received all of Media as dowry (VIII.5.19); Xenophon was following or himself inventing a scenario that is obviously quite removed from reality—although from time to time he can supply an interesting piece of information (to the extent that it can be confirmed by an independent source; cf. below on the story of Gobryas).

• *The New Master of Ecbatana.* Tent and treasures of Astyages: Nicolaus of Damascus, *FG-RI* 90 F66.45; cf. *Nabonidus Chronicle* II.3–4; on the symbolism of entering the tent of the vanquished: Briant 1988c: 269; fate of Astyages and of Media: Herodotus I.130: “Cyrus kept him near

him until his death and did him no other harm"; Justin I.6.16: "Cyrus was content to deprive him of royalty and treated him like a grandfather rather than a defeated enemy, and since Astyages did not wish to return to Media, he gave him the government of the great nation of the Hyrcanians ("Barcaeans" in Ctesias §4; cf. Briant 1984b: 56–58); Ctesias, *Persica* §2: "Cyrus honored him like his father"; submission of the Central Asian peoples: Nicolaus of Damascus, *FGrH* 90 F66.46, and Ctesias, *Persica* §2; cf. Briant 1984b: 35–41; retention of Ecbatana as capital: cf. Strabo XI.13.5 ("it continued to preserve much of its ancient dignity; and Ecbatana was winter residence for the Persian kings" ⇨: cf. Briant 1988c); on the business conducted at Ecbatana by the Egibi during the reign of Cyrus, see p. 72. [See now Tuplin 1994: 253–56.]

2. The New International Situation and Cyrus's Projects

- *The Median Territorial and Diplomatic Heritage.* On the Lydian kingdom, see the old work of Radet 1893, still useful though outdated; cf. also Mazzarino 1947 and Talamo 1979; one should also recall that Lydia's participation in Near Eastern international life was long-standing and is well attested, especially in the Assyrian inscriptions; see the convenient summary in Frei 1979.

- *Chronological Problems and Cyrus's Strategy.* Very clearly set forth by Cargill 1977 and Kuhrt 1988b: 34; Cargill concludes (p. 110): "There exists . . . no clear evidence for the exact date of the conquest of Lydia"; most recently, and of the same opinion, Stork 1989; Nabonidus at Teima and Belshazzar at Babylon: Beaulieu 1989a.

3. The Defeat of Croesus and the Establishment of a Mediterranean Front

- *The Successful Counterattack by Cyrus (547–546).* On the Lydian alliances: with Nabonidus: cf. Beaulieu 1989a: 79–82 (discussion of the identification of King Labynetus mentioned by Herodotus I.74, 77, 188); with Sparta: discussions in La Bua 1977: 40–43; with Amasis: La Bua 1977: 43. Campaign of Cyrus: Radet 1893: 242–59; Balcer 1984: 95–117; attitude of the Greek cities: La Bua 1977: 44–61; Pytharcus of Cyzicus: Athenaeus I.54 (cf. Briant 1985b: 50; Austin 1990: 296–97); defeat of Cyrus (before his final victory): Polyaeus, VII.8.1; Eurybates: Diodorus IX.32.

- *Takeover of the Lydian Kingdom.* On the siege of Sardis, cf. the recent publication of a helmet by Greenwalt-Heywood 1992, and Greenwalt 1992; fate of Croesus: Herodotus I.153, 155; Xenophon, *Cyr.* VII.2.9–14, 29, but the ancient tradition is highly contradictory (Wiesehöfer 1987a: 116–17), because it was marked by quasi-mythical reconstructions in Athenian imagery (Francis 1980: 67–70; Miller 1988); gift of a town to Croesus: Ctesias, *Persika* §4 and Justin I.7.7 (cf. Briant 1985b: 56–58). Treasures of Sardis: Xenophon, *Cyr.* VII.2.14, 3.1, 4.12–13, 5.57 (their arrival in Babylon, because Xenophon dates the conquest of Asia Minor after the taking of Babylon; perhaps it should be Ecbatana: cf. Herodotus I.153, or "the country of the Persians": I.157); Diodorus (IX.33.4) speaks of the confiscation of properties (*ktēseis*) of the inhabitants of Sardis for the royal treasury (cf. also Herodotus I.153: . . . *kai ton khryson tōn allōn Lydōn*); perhaps this refers to the confiscation of the product of the mines of Lydia; Tabalus: Herodotus I.153 (cf. Petit 1990: 34–35).

- *The Revolt of Pactyes.* Herodotus I.154–61 and the anti-Herodotian polemic of Plutarch *De Mal. Her.* 20 (*Moralia* 859a–b); duties of Pactyes: Legrand (ad loc.) understands that Pactyes had been detailed by Cyrus to transport (*komizein*) the riches (*khremata*) of Croesus and the Lydians to Babylon; but the term used by Herodotus (*komizein*) can also refer to the action 'look after' as well as 'transport'; since Pactyes remained at Sardis after Cyrus left, Picard (1980: 34–36) concludes that Pactyes was "the intendant for Persian revenues in Asia Minor"; he would have been concerned with "the tax due on the royal lands and the other domains"; the suggestion goes back to P. Naster, cited and discussed by Lombardo 1974: 718 and n. 131; demobilization of the Lydians: cf. the remarks (in large part metaphorical) of the ancient authors stating that, at the suggestion of Croesus himself (Herodotus I.155), Cyrus decided to transform the Lydians, who previously were considered the most "virile" and "courageous" people in Asia, into "effeminate shopkeepers"

(1.79); identical discussions are found in Polyaeus, Justin, and Plutarch (the last, however, speaking of Cyrus's policy toward Babylon); the tradition is linked to Greek stereotypes bearing on the relation between wealth and military weakness and is thus suspect (cf. Briant 1989a: 42–43). It is often suggested that after the defeat of Pactyes, some Lydians were deported to Babylon (van der Spek 1982: 281); Wiesehöfer 1987a: 117); but there is no certain proof that the Lydian communities found in Babylon in the second half of the fifth century (Eph'al 1978: 80–83) date from the time of Cyrus; to be prudent, the suggestion must remain just that; on the presence of Lydian craftsmen at the construction of Pasargadae, cf. especially Nylander 1970; Cyrus and the Greek temples: Branchidae (Parke 1985: 59–61); Aulai (ML 12, lines 26–27; Boyce 1982: 47–48; Boffo 1983: 63–64); Claros (Picard 1922: 29, 116, 120, 129–30, 422, 606–7; Boffo 1983: 11).

• *Harpagus in Asia Minor.* On the administrative position of Harpagus: Petit 1990: 36–38; submission of the Greek cities: Diodorus (IX.35) says that it was before Harpagus that the Spartan delegation appeared; on these chronological problems, see the discussion of Boffo 1983: 10ff. (who, pp. 48–51, considers unlikely the assembly of Ionians at the Panionion, the center of the Ionian League: Herodotus I.141); conquests of Mazares and Harpagus: Boffo 1983: 26–45 and 56–58; situation of the islanders: note meanwhile that Mytilene and Lesbos sent a naval contingent for the campaign against Egypt in 525 (Herodotus III.13) — which implies some sort of subjection to Persian power (which had to have been established between 546 and 525).

4. Cyrus in Central Asia

On the possibility (enunciated by Ctesias) of an expedition by Cyrus in Central Asia before the conquest of Lydia, see above, p. 34; the situation of the countries of Asia Minor before Cyrus: Briant 1984b; Bactriana and the Saka before Cyrus: Briant 1982b: 182–90ff.; 1984b: 13–43; chronology and problems of Cyrus's conquests in this region: Mallowan 1972: 8–9; Cook 1983: 19–30, Francfort 1985 and 1988: 170–71 (who thinks there was only one expedition led by Cyrus in Central Asia, that it should be dated after the capture of Babylon, and that it resulted in the death of the conqueror); note that according to Polyaeus (VII.6.4) and Justin (I.7.3–5) it was Babylon that Cyrus marched against upon leaving Sardis.

5. The Capture of Babylon (539)

• *Sources and Problems.* Critical presentation by Dougherty 1929: 167–85; more recently Sack 1983; Kuhrt 1983, 1988b: 120–125, and 1990c; as well as Rollinger 1993; translation of the *Cyrus Cylinder*: Eilers 1974; cf. Kuhrt 1988c: 63–66; *Chronicle*: Grayson, ABC: 104–12; *Panegyric*: ANET: 312–15 (cf. Lackenbacher 1992); *Dynastic Prophecy*: Grayson, BHLT: II.24–33; although in this text, as in the other three, Nabonidus is portrayed as an oppressive king, the difference is that Cyrus is also denounced in the same way (Grayson, BHLT: II.22–24), which raises some questions about the identity of the composers and the date of composition (Sherwin-White 1987: 10–14; Kuhrt 1990a: 181–82). Beginning with an analysis of Deutero-Isaiah, Sidney Smith (1944) and Morton Smith (1963) went a long way toward spreading the historical interpretation of Cyrus as a liberator; see the criticism of Kuhrt 1990c: 127 and 144–46. On Babylonian affairs, see MacGinnis 1994: 213, who appears to take up in turn the idea of a general hostility of the “priestly powers” of the Babylonian temple against Nabonidus and their siding with Cyrus, but his observations are not convincing; see rather Beaulieu 1993a: publication of tablets showing that, at least four months before Cyrus's attack, Nabonidus had brought to Babylon divine statues coming from several Babylonian sites (including the Eanna of Uruk), accompanied by staff and attendants; hence the mention in the Cylinder of the return of these statues under a decree of the victorious Cyrus.

• *The Military Conquest.* Possible Persian-Babylonian hostilities before 539: Beaulieu 1989a: 197–203 (the presence of Belshazzar in a locality called “fortified military camp [Dūr-karāšū]” suggests that the text actually alludes to hostilities between Cyrus and the Neo-Babylonian army, stationed at the fortifications at the north of the kingdom); but see Gadd 1958: 76–77, citing an inscription of Nabonidus that refers to the treaty made not only with Egypt and the Arabs

but also with "the city of the Medes," an expression designating the new power of Cyrus after the capture of Ecbatana; this would thus indicate a treaty between Nabonidus and Cyrus; but the interpretation remains tentative (it is not discussed or refuted by Beaulieu 1989a: 173); cf. on these problems also the analysis of Von Voigtlander 1963: 194–95 and the remarks of Kuhrt 1988b: 120–23; Delaunay (1985: 80) states that around 545 Cyrus took Subaru and Harran and on this occasion he enlisted Aramaic scribes in his service; but the documentary evidence is lacking. [At this writing (1992), vol. 2 of Delaunay's work, which will contain the scholarly apparatus, is not available.] Fortifications ("Median Wall") north of the Neo-Babylonian kingdom: Barnett 1963; Vallat 1989b; the archaeological articles in *NAPR* 1 (1987) and 2 (1989); and most recently Gasche 1995; hostilities at Uruk: Beaulieu 1989a: 219–20. Ugbaru/Gobryas: Kuhrt 1988b: 122–23; Beaulieu 1989a: 226–30, 1989b; Petit 1990: 49–55; Dandamaev 1992a: 72–73; the taking of Susa is not precisely dated: 539 is generally accepted (Zadok 1976: 61–62, followed by Miroschedji 1985: 305 and n. 161), but cf. Briant 1994f: 54 n. 20; note simply that the *Dynastic Prophecy* calls Cyrus "king of Elam" before the conquest of Babylon; but this mention after the fact may be nothing but a "deliberate archaism" (Grayson 1975a: 25 n. 7). Siege of Babylon and resistance of Nabonidus: Kuhrt 1990c: 131–35; the information of the Classical authors about the resistance in Babylon does not seem to square with the chronological information in the *Chronicle*; cf. Glombowski 1990. The book of Daniel also contains a number of direct allusions to Babylonian events: note in particular that it was at the end of a feast and a banquet that King Belshazzar (son of Nabonidus) was assassinated; Belshazzar's feast has often been compared with Xenophon's indication that Cyrus took advantage of a feast and drinking-party to send Gobryas to seize Babylon (*Cyr.* VII.5.15–30); it was in this assault that the "king" (i.e., Belshazzar) would have been killed (*ibid.* 30; cf. Daniel 5:30 and the remarks of Yamauchi 1990: 59 on the identification [which has been debated for so long] of "Darius the Mede"; cf. also Dandamaev 1992a: 73); on the fate of Nabonidus, cf. discussion by Beaulieu 1989a: 231; cf. also Briant 1985b: 57 n. 3; dating of the tablets relating to the capture of Babylon: Petschow 1987; administrative status of Babylonia after the Persian conquest: see below, chap. 2/3, pp. 67ff.

- *From Nabonidus to Cyrus.* Entry of Cyrus and Alexander into Babylon: Kuhrt 1988b: 68–71, 1990b: 122–26; Briant 1988c: 257–63; propaganda of Cyrus in the *Cylinder*: Kuhrt 1983, 1988a–b, 1990c; Nabonidus and Harran: Beaulieu 1989a: 62–65, 205–9; Kuhrt 1983: 90 and 1990c: 135–46; construction by Nabonidus at sites that Cyrus claims to have restored: Beaulieu 1989b; *Cylinder* and Aššurbanipal texts: Walker 1972; Harmatta 1974; Kuhrt 1983; Cambyses and the New Year: cf. *Chronicle* III.24–28 (but the text is very broken); position of Cambyses: Kuhrt 1988b: 126 ("an interim measure to cope with the problems raised by the conquest of such a large and politically complex area") and Peat 1989.

6. Cyrus, Trans-Euphrates, and Egypt

- *Trans-Euphrates after the Capture of Babylon.* Policy of Nabonidus and his predecessors concerning the countries of Trans-Euphrates: Wiseman 1956, Bing 1969: 144–63, Eph'al 1982: 170–91, Briant 1982a: 153–61, Beaulieu 1982a: 149–85, Hoglund 1989: 9–40; importance of raw materials: Oppenheim 1967; summary of the history of Judah: Oded 1977a–b–c; Weippert 1988; see also Wiseman 1956: 21–39; Judah between Egypt and Babylon: Malamet 1988; on the situation of the king of Judah at the Babylonian court: Weidner 1939.

- *Cyrus and Jerusalem.* The text of Second Isaiah poses numerous historical and chronological problems: cf. Kuhrt 1990c: 144–45; edict of Cyrus: de Vaux 1937, Bickerman 1946, Yamauchi 1990: 89–92; doubts about its authenticity in Wiesehöfer 1987: 113–14 and Grabbe 1991 and 1993; the problem is linked to complex questions regarding the date and authorship of the books of Nehemiah and Ezra: cf. Ackroyd 1968, 1984, 1988; Oded 1977d (note incidentally that the decrees of Cyrus are also recorded by Josephus, *Ant.* XI.104); on the policy of Cyrus, cf. also van der Spek 1982 and 1983. Sheshbazzar and Zerubbabel: Japhet 1982; Petit 1990: 64–66 (*tiršata*: Skjærø

1994b: 501); status of Judea: Avigad 1976, MacÉvenue 1981, Williamson 1988; chronology of the construction of the temple: the hypotheses of Bickerman 1981 are contested by Kessler 1992; deportations in the Assyrian period: Oded 1979; deportations and returns of statues: Cogan 1974; the return of the Jews to Jerusalem has sometimes been compared with the return of a Syrian community exiled in Babylonia to Neirab (cf. Eph'al 1978: 84–87); but the Neirab texts continue to pose major chronological and historical problems that necessitate some care in their interpretation: most recently Oelsner 1989 and Cagni 1990.

- *Cyrus and the Trans-Euphrates.* On Cyrus and Arabia, despite recent reaffirmations (Beaulieu 1989a: 180 and n. 23), a Persian conquest of the Arabian oases before 539 is highly doubtful: Eph'al 1982: 201–4; Briant 1982b: 162–63; Graf 1990a: 138; satrapy of Babylonia and Trans-Euphrates: Stolper 1989b, especially pp. 296–97 (cf. also Heltzer 1992b); on the 5th *nomos* of Herodotus: critical view in Calmeyer 1990b; Cyprus: see the proof by Watkin 1987; according to Herodotus (II.82), Pharaoh Amasis “was the first king in the world to capture Cyprus and reduce it to paying tribute”: Wallinga 1987: 60 thinks this conquest happened in 539; Sidon and the Phoenician cities: discussion of the date of submission to the Persians in Elayi 1989: 137–38, who prefers the high dating (Cyrus).

- *Cyrus and Egypt.* Egyptian doctor and dynastic marriage: apart from Herodotus, see Atheneus XIII.560d–f, who relates the contradictory opinions of Ctesias (daughter of Amasis requested by Cambyses) and Dinon and Lyceas of Naucratis (Cambyses, son of Nitetis); see also Polyaeus VIII.29 (Nitetis married by Cyrus, who would have been the first to think of vengeance by attacking Amasis); Lloyd 1983: 286 and 340 (considers the possibility of a marriage); Atkinson 1956 (Persian propaganda started in Cambyses' time); at the same time, it seems clear that these legends were created in a Near Eastern context (Zaccagnini 1983 positions the episodes recounted by Herodotus in the *longue durée*); Amasis's fear in the face of Persian might is not surprising; sending an Egyptian doctor to the court of the Great King is not in itself unlikely: for one thing, the reputation of Egyptian physicians had long been celebrated in courts throughout the Near East; for another, the story of this Egyptian oculist (“plucked from his wife and children”) is included in a long series of “diplomatic gifts” of this kind between Egypt and Babylonia (cf. Zaccagnini 1983: 250–56); the “gift” in question seems to illustrate the inequality of the relations established between Cyrus and Amasis; it is the same with the sending of an Egyptian princess, a request with which Amasis would not have complied had not “the power of the Persians made him uneasy and he took fright” (III.1); in analogous cases known from the history of Egypt, it was foreign princesses who came to Egypt to marry. Otherwise, the fact that the “winged genius” of Pasargadae wears the Egyptian crown and shows Phoenician influence does not require us to think that Cyrus actually conquered Egypt; this characteristic simply indicates the intensity of cultural exchange, which goes back to a time before the Achaemenids (Nylander, in a comment after Donadoni 1983 [pp. 41–43], suggests that in doing this Cyrus symbolically signified his claim “to worldwide dominion, to the four corners of the earth, the ancient heritage of the Assyro-Babylonian kings”); on Cyrus and Egypt, see now the fine summary by Tuplin 1991a: 256–59.

7. From Cyrus to Cambyses

Last campaign and death of Cyrus: Francfort 1985 (who thinks that this was the first and only expedition of Cyrus in these regions); on the differing oral versions of the death of Cyrus, cf. Sancisi-Weerdenburg 1985; “apanage” of Bardiya: Briant 1984b: 75–76 and 1985b: 55–56; the extent of this government is described differently by Xenophon (*Cyr.* VIII.7.11: “satrap of the Medes, the Armenians, and the Cadusians”) and Ctesias (*Persika* §8: “Bactrians and territory of the Choramnians, Parthians, and Carmanians”); both traditions are difficult to interpret (we cannot see how Bardiya could have controlled both Bactriana and Carmania at the same time). From reading Ctesias, it would appear that Bardiya's center of power was located at Bactra. It is possible that after this date the satrap of Bactra had special strategic responsibilities from the Syr Darya to

the Hindu Kush (Briant 1984b: 71–74). Portrait of Cambyses: Hoffman and Vorbichler 1989; Brown 1982; Munson 1991; balanced summary by Lloyd 1988. Greek authors and “Persian decadence”: Briant 1989a; and Sancisi-Weerdenburg 1987a–b.

8. *The Egyptian Campaign (525–522)*

- *The Egypt of Amasis*. Conquest of Cyprus by Amasis: in 539 according to Wallinga 1987; 60; Egypt under the Saïtes: Lloyd 1983; Naucratis and Greek and Carian mercenaries in Egypt: Austin 1970; cf. also Masson-Yoyotte 1988 and Ampolo-Bresciani 1988; on the American excavations at Naucratis, cf. Coulson-Leonard 1981, with the very important remarks of Yoyotte 1993; 634–44; trade in Greek wine in Saïte Egypt: cf. Quaegebeur 1990: 259–71; Saïte customs: Posener 1947; role of Polycrates and relations with Amasis: Labarbe 1984, Wallinga 1987: 60–62 and 1991, König 1990, Villatte 1990; on his coinage in relation to historical events, cf. Barron 1960: 35–39; reorganization of the navy under Necho II: Perdu 1986: 33; Chevereau 1985: 319–22; Lloyd 1972; Wallinga 1987: 55–66; Darnell 1992.

- *The Conquest of the Nile Valley and Its Approaches*. Cambyses, creator of the royal Persian navy: Wallinga 1984, 1987, and 1993: 18–129; Cambyses, the king of the Arabs, and Gaza: Briant 1982b: 163–65; the vital importance of a fleet for seizing Memphis and Egypt is clearly illuminated by Thucydides’ story about the Athenian expedition (I.104.2; 109.4; 110.1–4). Memphis: *LÄ* 4 (1980), s.v. “Memphis”; its direct links with the sea: Goyon 1971 and 1974: 136–45. Note also that, in an unusually confused story, Ctesias (*Persica* §9) states that the Egyptian campaign was conducted by Bagapates, who managed to defeat Pharaoh Amyrtaeus [sic] “thanks to the eunuch Kombaphis, powerful minister of the king of the Egyptians, who surrendered the bridges and betrayed all of Egypt’s interests in order to become its governor”; we might think that behind the legend of Kombaphis lies a reference to the treason of Udjahorresnet, but the connection remains suspect; perhaps it is better to see it as a fictionalized reminiscence of the Phanes episode (Schwartz 1949: 72). Cambyses and Cyrene: Mitchell 1966 (Cambyses’ designs on Carthage [Herodotus III.19] have been doubted by several historians, in my opinion with good reason). Saïte precedents for Cambyses’ campaign to the south: expedition of Psammetichus toward the Fayyum and Libya: Perdu 1986: 23–37; of Amasis toward Nubia in 529–528: Zauzich 1983: 423–25; Cambyses and Nubia: Desanges 1978: 229–33; see also Tuplin 1991a: 261–64 and Morkot 1991, especially p. 327 (very carefully: “The fall of Egypt to Persian rule may have led the Cushite kings to attempt an expansion into Lower Nubia. Beyond this, we can say little at present”); the article by Leveïro 1992 adds nothing new; on Cambyses’ expedition against Ammon, see also the texts and commentaries of Leclant 1930: 210–18, who says (p. 215) Cambyses had the intention “[of] occupying the strategic position of the oases in the west, Egypt’s outer bulwark and gate to the continent of Africa.” On the excavations at Dorginarti and the historical implications that can be drawn from them, see above all Heidorn 1991 and 1992 (I am very grateful to the author for sending me a copy of her dissertation), which include a detailed treatment of Saïte policy (pp. 123–32) and of Cambyses’ campaign (pp. 132–34); while remaining circumspect about the “Achaemenid” purpose of the fortress, the author concludes clearly: “There is little doubt that Level II at Dorginarti remained active into the fifth century” (p. 146); she also thinks that the orders must have come from Elephantine. Since most of the documentation (relatively inexplicit nonetheless; P. Loeb 1) comes from the reign of Darius (Cush in the royal lists), it might just as well be supposed that the initial attempts by Cambyses were followed up by Darius.

9. *Cambyses and the Egyptian Traditions*

- *The “Madness” of Cambyses*. “Ozymandias” is nothing but the mythical representation of Ramses II (Drews 1973: 123–125); deportation of statues: cf. the remarks of Morschauser 1988: 216–19 and Devauchelle 1995; funerary rites of the Apis: Posener 1936: 30–47, Vercoutter 1962; disorder linked to the Persian invasion: at Saïs: Posener 1936: 167–69; at Elephantine: *DAE* 102

[AP 30–31], lines 12–13 (Briant 1988a: 146–47); Lüddeckens 1971. Booty seized in Egypt by Cambyses' soldiers: cf. the text translated by Dandamaev 1984b: 107–8, and see Tuplin 1991a: 260–61; burial by Cambyses of the Apis that died in 524: Posener 1936: 30–36, 171–75; according to Polyaeus (VII.11.7), upon his arrival in Egypt, Darius exhibited a great reverence for Apis: Atkinson (1956: 170–71) thinks that the episode actually refers to Cambyses: see summary by Tuplin 1991a: 265–66, who gives full weight to the chronological difficulties in Polyaeus's text; Cambyses' Egyptian seal: Hodjache-Berlev 1977.

• *Udjahorresnet and Cambyses.* Inscriptions of Udjahorresnet: Posener 1936: 1–29 (edition and annotated translation: 164–71); French translation only in Lalouette 1984: 187–91; historical commentaries: Lloyd 1982 and Briant 1988a: 158–66; Persian propaganda: Atkinson 1956; *damnatio memoriae* of Amasis: Meulenaere 1938 (doubts of Tuplin 1991a: 257–58); “cult” offered to Udjahorresnet one hundred sixty years later in Memphis: Bresciani 1985a; on the recently discovered tomb, cf. Verner 1989 and Barš 1992.

• *Collaboration and Resistance: the Persian kings and the insurgent Egyptian “dynasties”:* Briant 1988a: 149–50; donation stelas: Meeks 1979; on their disappearance as of 525, see *ibid.*: 655: the author remarks that they reappear under Darius I; their “disappearance” in 525 is thus perhaps nothing but an automatic reflection of fragmentary documentation, whatever the case, the corpus in its current state of preservation seems to indicate a desire on the part of the Great Kings to control and limit the economic and financial power of the Egyptian sanctuaries; “decree of Cambyses”: Spiegelberg 1914: 32–33; Bresciani 1989: 31–32; Bresciani (1983) thinks that the three temples cited are not the only three to have been exempted; the text simply mentions three temples of the region of Memphis; if this is true, the extent of the royal activity ought to be fundamentally reevaluated; fiscal pressure under Cambyses: Wallinga 1984; nomination of Aryandes: Herodotus IV.166; on the basis of a text published by Strassmaier (*Camb.* 344), Ebeling, *RIA* 1.454C §36 thinks that we have from this period mention of a “governor of Egypt” who, moreover, has a typically Babylonian name; but, as F. Joannès and A. Kuhrt have pointed out (personal communications), this represents a faulty reading (cf. Kuhrt 1992): it really is a governor (of Egypt?), but his name is not given (on this point at least, Stolper [personal communication of 31 May 1993] agrees with Kuhrt and Joannès). The events surrounding the death of Cambyses have given rise to two hypotheses: suicide or natural circumstances; it is clear that Herodotus's text repeats a series of motifs, such as the wound in the thigh (cf. Sancisi-Weerdenburg 1985: 467); but examination of the terminology used by Darius at Behistun and of Herodotus's text has decided in favor of the second: Walscr 1983 (and Bresciani 1981b on the allusion to the event in the unclear text on the verso of the *Demotic chronicle*, as well as Malbran-Labat's remark 1994: 109 n. 103 on the formal analysis of the passage corresponding to *DB Bab.* §10).

There is a French translation of the text on the verso of the *Demotic Chronicle* in Devauchelle 1995: 74–75 (also Bresciani 1996)—the “decree of Cambyses.” Otherwise, beginning with chronological observations (dates on the Apis stelas, methods of succession of Apises), the author comments (cf. also Devauchelle 1994b: 102–3) that doubts must remain as to the now standard theory (which I have included in the text) absolving Cambyses of all blame: “It is thus not possible to definitively exclude the hypothesis of the murder of a ‘young’ Apis before he succeeded the Apis who died in Year 5—doubtless before his enthronement, which would explain the fact that memory of him would have been erased—but it remains subject to caution” (p. 70). Starting from the same premises, Depuydt 1995a arrives independently at the same conclusion, in a still clearer form; according to him, there is no contradiction between Herodotus and the archaeological evidence; the murder of a young Apis thus remains perfectly imaginable: “In light of the evidence, I would personally rather believe that Cambyses is to be presumed guilty until proven innocent” (p. 126). If this hypothesis concerning the defections to the Persian conqueror, is accepted, I am somewhat less sorry about suggesting that the fiscal measures taken by Cambyses responded perhaps to the opposition of certain sanctuaries, and not the reverse: if the “murder” of the young Apis is

accepted—whatever the narrative schema implicit in such an expression—we can without doubt think of the same chain of causation: Egyptian resistance followed by reprisals from Cambyses. We then recall another politico-religious situation well known throughout Achaemenid history: drastic punishment of peoples and sanctuaries guilty of resistance and rebellion; that is, a situation exactly the opposite of the one generally reconstructed on the basis of the statements of Udjahorresnet. It is true that not all of the sanctuaries and their authorities necessarily reacted in the same way to the Persian conquest. This also means that this interpretation does not completely invalidate the earlier one, which is *also* based on an irrefutable official document, the stela of the Apis buried in Year 6 of Cambyses (on which, see the reservations of Devauchelle 1995: 70 and n. 15). We ought rather to think of two stages or two sides of royal policy defined and executed either simultaneously (in one sanctuary or another: e.g., Memphis vs. Saïs) or successively (the policy represented by the stela and the inscriptions of Udjahorresnet following a period of repression). Although all of the authors stress that doubts remain (the process of “putting to death” is obviously explained only by Herodotus), it would be a good idea to modify my text, to take into account new discussions on a question that had seemed fully closed (the historiographic analysis of Depuydt is quite interesting); nonetheless we must (at least!) avoid speaking of an “inevitable conclusion”! I remark finally that this interpretation adds fuel to the counterattack recently remounted by W. K. Pritchett against Fehling 1989 and more generally against all those (Kimball Armayor, S. West, etc.) whom Pritchett calls (collectively and rather misleadingly) *The Liar School of Herodotus* (Amsterdam, 1993).

Chapter 2

The Conquest and After: An Interim Summary

1. From Cyrus to Darius: Sources and Problems

• *Cyrus and the Persian Gulf.* An Achaemenid palace similar in structure to the residential palace at Pasargadae has been discovered at Borazjan, about 70 km northeast of the port of Bushire, on the road between central Persia and the Iranian coast of the Persian Gulf; it is no doubt an unfinished residence dating to the reign of Cyrus the Great (cf. Sarfaraz 1971, Stronach 1978: 293–94, Boucharlat and Salles 1981: 66–70). Pasargadae inscriptions: texts in Kent 1953: 116 and, more fully, Lecoq 1974a: 53–63 and Stronach 1978: 97–103, 136–37. I do not wish to enter into a discussion that exceeds my competence in epigraphy and linguistics; innumerable articles have been written about Behistun §70, trying to decide whether Darius was the creator of Old Persian cuneiform writing (see Lecoq 1974a for a history of the debate; most recently Herrenschmidt 1989b and Mallbran-Labat 1992b); I tend to agree with Stronach (1990), essentially for reasons related to my understanding of the word *Achaemenid* (cf. p. 111 above). Ghirshman (1965) worked out the theory of a *damnatio memoriae* intentionally inflicted on Cyrus by Darius, but a number of documents make it clear that this theory is unsupportable: cf. Root 1979: 55, 62, 92 n. 147, 297–99 (cf. p. 900 below). Two related comments: (1) In a recent article, C. Herrenschmidt (1989b) suggests that the Old Persian inscription at Behistun was based on an earlier version taken from royal annals, similar to the *basilikai diphtherai*, which (according to Diodorus) would have been used or consulted by Ctesias. But for reasons already given elsewhere (RTP 497), I do not believe that any such annals existed (cf. also Sancisi-Weerdenburg 1987a: 38–39); at this period as well as later, the attested archives were administrative (cf. Ezra 6:1), not a written record of the deeds and accomplishments of the Great Kings. (2) Several Greek authors from Alexander's entourage claim to have copied inscriptions from the tomb of Cyrus, some of which were even supposedly written in Greek! But (pace Heinrichs 1987) we can grant no credibility to this kind of testimony, which must remain irrelevant to the discussion of the inscriptions actually found in Cyrus's capital (cf. RTP 389–90 and, most recently, Schmitt 1988).

2. Satraps and Satrapies

• *The Satraps of Cyrus and Cambyses.* See the recent review by Petit 1990: 13–97 (I will indicate in passing a few disagreements); also Lehmann-Haupt 1921. Xenophon (*Cyr.* VIII.6.7) gives a list of satraps Cyrus is supposed to have appointed: “Megabyzus in Arabia, Artabatas in Cappadocia, Artacamas in Greater Phrygia, Chrysantas in Lydia and Ionia, Adousios in Caria”; but for many reasons, this information is historically worthless: cf. Leuze 1935: 5–10. According to Petit (1990: 41–42, 182), there was no satrapy of Dascylium at the time of Mitrobates; but the arguments are debatable. Satrapy of Gubāru: Stolper 1989b; links with Media: *ibid.* 302. Subdivisions of satrapies: cf. Tuplin 1987b: 122; see also Stolper 1989b: 298 on Babylonia and Trans-Euphrates. Cilicia before the Persian conquest: Albright 1950, Houwinck ten Cate 1967: 17–30, and especially Bing 1969; more recently Davesne, Lemaire, and Lozachmeur 1987: 372–77; and Beaulieu 1989a: 22, 117, 127 (campaigns of Nabonidus); Erzen (1940: 98) thinks the military bases known at the end of the sixth century go back to the time of Cyrus, but the documentary proof is lacking. We have no information on the territorial control exercised by the *synnecesis* or on the relations set up between the Persians and the Cilician coastal cities (on these, cf. Bing 1971). Note that in Cambyses' navy there was no Cilician detachment, in contrast to what is known from the time of Darius and Xerxes. On the importance (evident later) of the Cilician coast in Achaemenid military

organization, cf. pp. 497–500. Lycia: according to Treuber (1887: 98), there was no Persian occupation at this time, but the proof is weak. For a long time, it has generally been thought that the dynasty known at Xanthus from the 480s resulted from the marriage of a Lycian woman and Cyrus's general, Harpagus the Mede (Bryce 1982: 331–32), mostly because of a reference to a Harpagus in the ancestry of a Xanthian dynast at the beginning of the fourth century (cf. Bousquet 1975 and 1992). According to Bryce (1983: 33–34; 1986: 100–101), it is even quite likely that this Xanthian dynasty was established by the Persians, who would thus have been able to control the country without recourse to direct administration. The “Irano-Lycian” origins of the Xanthian dynasty are strongly emphasized by Shahbazi (1975: 32–46), principally on the basis of an analysis of a later monument, dating to 480–470, traditionally called the monument of the Harpies, on which Persian influence is undeniable (cf. already Tristch 1942; pp. 503–505). I will note meanwhile that the hypothesis of descent from the Mede Harpagus has again been cast in doubt by A. G. Keen (1992b: 58), who thinks, first, that the Xanthian dynasty was installed by the Persians and that, then, under Cambyses assistance was provided for a change of dynast, to the benefit of Kheziga (Kossikas?). Caria: Hornblower 1982: 2–21.

• *The Duties of the Satrap.* Words for ‘satrap’ in various languages of the Empire: Schmitt 1976a; in Demotic: Smith 1988; for the Greek, see Tuplin 1987b: 114 and n. 22 (in Greek, the term is often used to designate a high person of noble origin: e.g., Polyaeus VII.4; Strabo XV.3.18; Aelian, *VH* XII 1, etc.). In Akkadian, the term *pihātu* (like Greek *satrapēs*) does not necessarily refer to the satrap per se (Stolper 1987: 398–99, 1989b: 291; also Petit 1988b and 1990: 15–20). As for the transcription *ahšadrapānu*, it can just as well be applied to a subordinate officer (Stolper 1985a: 58; 1987: 396; cf. Dandamaev 1992b); *bandaka*: cf. Herrenschmidt, *EncIr* III (1988), s.v.; and above, pp. 324–326. Military forces of the satraps: according to Tacitus (*Annals* III.63), the sanctuary of Persian Diana [Anāhita] at Hierocaesarea [Lydia] went back to the time of Cyrus. Indeed, in a general way, the establishment of sanctuaries dedicated to Persian divinities or divinities of Persian origin goes hand in hand with the founding of Persian settlements (*RIP* 457–62). On the garrisons, see especially the impressive collection of sources by Tuplin 1987c; garrison of Babylonia: Xenophon, *Cyr.* VII.5.33–34; “commander of the citadel” at Babylon (under Darius): Joannès 1982: 24–25; Egyptian garrisons: at Elephantine: Grelot 1972: 33–43; at Memphis: Herodotus III.91; cf. Segal 1983; other Egyptian garrisons: Tuplin 1987c: 185–86; on the site of Migdol, see the results of exploration and excavation by Oren 1985; Tabalus at Sardis: Herodotus I.153–54; citadel of Sardis: Mierse apud Hanfmann 1983b: 46–47; texts collected by Pedley 1972; garrisons of Asia Minor: Xenophon, *Cyr.* VII.4.1–11; cf. *RIP* 176–78; on the citadel of Kapišakanīš, where Vivāna won a victory over Vayahazdāta, see Bernard 1974 (Kapisa taken as the citadel of the capital of Arachosia, Arachōtoi); garrisons on the Iaxartes: *RTP* 244–45; Francfort 1988: 171; in northern Bactriana: Gardin 1995. On satrap/phourarch relations, cf. the remarks of Tuplin 1987c: 168–71, 228–31; we return to this point more fully below (pp. 340–343). Satrapal secretaries: in the satrapy of Babylon (under Darius), see Stolper 1989b: 298–303; exchange of correspondence between Gubāru and an officer in Media: Stolper 1989b: 302.

3. Tributes and Gifts

• *Revenues and Fiscal Administration.* On the treasures of vanquished kings: Astyages: p. 33; Croesus: Herodotus I.153–54; cf. Xenophon, *Cyr.* VII.4.12–13 (inventory), VII.5.57 (delivery of the treasure of Sardis); Cambyses in Egypt: pp. 55–57; treasure of Babylon: Ezra 1:7. Various votive objects of Mesopotamian origin have been found in the Persepolis Treasury (Schmidt 1957: 57–65); these may have been derived from booty brought back by the conquerors. Mithradāta: his duties certainly correspond to those of Bagasarū, who was very likely his successor during the time of Darius (Dandamaev 1969c); according to Petit (1990: 41), “Oroites had complete authority over the finances of the territories he was in charge of”; but the text added for support (Diodorus X.16.4) says nothing about this. Treasuries, tributes, and gifts: cf. *RTP* 202–6; exemption of Ariaspi: Wiesehöfer 1989: 187.

- *Tribute-Paying Peoples and Gift-Giving Peoples.* The passage of Herodotus on gifts/tributes has long stimulated confusion and ingenuity among commentators; see recent commentaries in Tuplin 1987b: 140; Dandamaev 1989b: 177–78; Sancisi-Weerdenburg 1989b: 129–30; Wiesehöfer 1989: 186; also the relevant analyses of Eph'al 1982: 207–8; the discussion is taken up again on pp. 394–399 above. On exemptions: Wiesehöfer 1989; Near Eastern precedents: Zaccagnini 1989: 195–98; Liverani 1979 (difficulties of rendering the polymorphous reality of Egyptian terminology); also Descat 1989a: 83. Similarities between Achaemenid and Athenian tribute: Balcer 1989b; Wallinga 1989b; and the remarks of Kuhrt 1989a: 218.

- *From Cyrus to Darius. Kapēlos.* Wallinga 1984: 411; and Descat 1989a: 80–81 (but see now Descat 1984); fiscal oppression under Cambyses: Wallinga 1984 and 1987.

- *Tribute and Coinage.* The role of the satraps under Cyrus and Cambyses is deduced from the presentation by Polyaeus (VII.11.3). Problem of the “Croesids”: Picard 1980: 66; Price 1989; Descat 1989; Stronach 1989; Carradice 1987; Alram 1993: 23–24; Le Rider 1994b; Descat 1994: 164–66. According to Wallinga (1984: 412–13), Cambyses began to monetize tribute, but I do not see how he arrives at this idea.

4. Continuities and Adaptations: The Case of Babylonia

- *Changes and Integration.* Government of Babylonia at the beginning of the reign of Cyrus, and Cambyses' titlature: San Nicolò 1941: 21–22, 51–64; Petschow 1988; also Kuhrt 1988b; Joannès 1990a: 176–77; Peat 1989; and Graziani 1983, 1989. Petit (1990: 54–55), on the contrary, thinks that Gubāru became satrap upon the conquest of Babylon in 539, but the documentation is incomplete: see Stolper 1989b. On relations between Nabonidus and his son, cf. Beaulieu 1989a: 185–97. Babylonian archives—private archives: cf. Joannès 1989a (p. 121); temple archives: Joannès 1982. References to regulations from the Neo-Babylonian period: Durand and Joannès 1989; Beaulieu 1989b (cf. 1989a: 111–27); Dandamaev 1984b: 500–501; and now more fully, Frame 1991. Retention of Babylonian administrators after the Persian conquest: see especially San Nicolò 1941. Sippar scribe: Dandamaev, *Orientalia* 55/4 (1986) 466. Širikti-Ninurta at Nippur: Joannès 1982: 3; cf. Stolper 1988b: 129.

- *Craftsmen's Charter.* Weisberg 1967 (cf. pp. 48–49, but the political context outlined by the author generates some reservations). Activities of the Egibi: Bogaert 1968; at Ecbatana and in Iran: Stolper 1990c; at Matezziš: Zadok 1976: 67–78; and Stolper 1984a: 306–8 (but on the identification of the king, see now Zawadski 1995a: Bardiya, not Vahyazdāta). Dandamaev (1972b: 259) cites a document of 538 (*Camb.* 143) that according to him shows that Itti-Marduk-balātu bought a slave in Elam that he resold at Opis on the Tigris; but this interpretation is based on a reading that has been questioned by Greenfield (1991: 183): the wrist of the slave in question bears an inscription “in Akkadian and Aramaic” (not Elamite, as Dandamaev [1984b: 230–31] claims).

- *Temple Lands and Royal Administration.* Fields and orchards of the Eanna: Cocquerillat 1968: 14–36; Joannès 1982: 115–260; Frame 1991. Administration of the temple and its properties: San Nicolò 1941: 24 (*qīpu*), 26 (*šatammu*), 29–30 (“royal commissioner . . .”); on the hierarchical relations between the royal commissioner and the *šatammu*, see Saggs 1959; Joannès 1982: 131–36; Garelli 1974: 159–61; and, more recently, Frame 1991: 69–79. Role of the *mār banē* and the assembly (*puḫrū*): Dandamaev 1981. *Ferme Générale*: Cocquerillat 1968; Joannès 1982: 126ff. (quotation, p. 126); also Van Driel, *JEOL* 30 (1987–88) 61–64. Nabonidus's policy: Kuhrt 1990c: 146–50; Frame 1991. On all these problems, consult MacGinnis 1994 and especially 1995, on the administration of the sanctuary of the Ebabbar of Sippar during this period.

- *The Fiscal Obligations of the Babylonian Temples.* See especially Dandamaev 1966; also idem 1994a; and Tuplin 1987b: 150–51. Problems of the tithe: cf. Dandamaev 1967 and Giovinnazzo 1989a. Deliveries to the palace: San Nicolò 1949; Dandamaev 1984a, 1989b: 363 (text in translation) and most recently 1992b: 119–22; but MacGinnis (1994 and 1995: 185–86) shows quite clearly that, even under Darius, the royal administration sent important offerings to the Babylonian temples. Guardpost archers: Joannès 1989a: 179–91; corvées: Joannès 1989a: 157–59

(temple); Dandamaev 1984b: 250–51 and 315–26 (private); canal digging and maintenance: Joannès 1982: 193–201.

- *The Justice of Gubāru*. Letter from Gubāru to Ardiya: Cocquerillat 1968: 73; Gubāru's order regarding canal-digging: *ibid.* 100; cf. also Giovinazzo 1983 (many texts in translation); and Dandamaev 1992a: 74–80. Gubāru's intervention between the Eanna and Uruk: Saggs 1959: 35 and Dandamaev 1984b: 518–19 (text in translation). The Gimillu affair: San Nicolò 1933a; Olmstead 1948: 72–73; Cocquerillat 1968: 102–3; Dandamaev 1984b: 533–37. Note that a "canal of Gubāru" is known from a tablet of Cambyses' time and another dated to Xerxes: Joannès 1982: 325–26; Van Driel, *JESHO* 32, 205–6; should it be compared with the passage where Pliny (VI.30.120) mentions the "prefect" Gobares, to whom he attributes major hydraulic works in Babylon? Or is this Gobares the Gubāru known in a comparable administrative situation in the time of Darius II? Cf. chap. 16/10, research notes, below.

- *Administration of Land*. In general: Dandamaev 1967. Babylonian paradises: Dandamaev 1984a; Gubāru's estates: text in translation in Dandamaev 1979: 101–2, but perhaps this actually deals with lands allotted to communities settled in Babylon (Van Driel 1989: 205–6); Gubāru's canal is known from later texts (Joannès 1982: 326). Other Iranians' estates near Nippur: Zadok 1977: 93; origins and development of the *ḥatru* system under Cyrus and Cambyses: see summaries and discussions in Dandamaev 1967, 1983, and 1989a: 147–51; Kuhrt 1988b: 128–29; Stolper 1989c; Van Driel 1989: 205–8; Zaccagnini 1989: 203–8 (precedents; on this point cf. also Stolper 1985a: 98 n. 113 and 71 n. 6). Lands in Nippur: Stolper 1988b: 140–41. Reverting to an interpretation first presented in 1967, Dandamaev recently reaffirmed (1989b: 150) that the *ḥatru* system began to break down during the reigns of Cambyses and Darius; but this is an interpretation that has neither documentary weight nor logical probability in its favor. See the reflections of Stolper 1989c (esp. pp. 150–52) and above, pp. 597–599; *bit qašti* in the Babylonian version of Behistun: p. 104 above.

5. From Bactra to Sardinis

- *Bactrian Polity and Achaemenid Power*. On the Persian impact in Central Asia, cf. summary of the topic and discussions in Briant 1984b and, since then, reaffirmation of the archaeologists' position in Gardin 1986 and Lyonnet 1990, 1994; cf. also Vogelsang 1992; the discussion will be taken up again in chap. 16/15 below.

- *Central Authority and Cultural Polycentrism*. Briant 1987c and 1988a. Imperial Aramaic: e.g., Delaunay 1985; Cambyses' navy: Wallinga 1984 and 1993; Near Eastern legacy and Achaemenid planning at Pasargadae and Persepolis: cf. especially Nylander 1970 and Root 1979; also Nylander 1991 (diffusion of the toothed chisel in Achaemenid construction) and Stronach 1978: 43 (Cyrus's tomb). Pasargadae gardens: Stronach 1989a.

- *Text and Image*. Greek authors and regions of the Iranian Plateau: Briant 1984b: 63–68.

6. Persians and Conquered Populations

- *Military Conquest and Ideological Strategy*. Number of Persians: Xenophon (*Cyr.* I.2.15) states that "the Persians, it is said, number about 120,000"; but I cannot see what this estimate is based on; and does it refer exclusively to adults, or to the whole population? In any case, the estimate is obviously very rough. Interpretation of the archaeological data led W. Sumner (1986: 11–12) to estimate "the sedentary Achaemenid population" in Fārs as 43,600. On the flourishing demographics of the great Persian families, cf. Briant 1987c: 21–22. The religious policy of the Achaemenids has often been scrutinized: Duchesne-Guillemin 1967–68; Gnoli 1974; Dandamaev 1975c; Tozzi 1978a; Briant 1986a, 1987c, and 1988a; Firpo 1987; Heinz 1987; see the discussions of the policy adopted by Cyrus and Cambyses (above) and the analyses sited in their particular historical contexts (below). Resistance to the conquest: pp. 59–61 above. Defection of Lydian aristocrats: Myrsos, son of Gyges: Herodotus III.122 and V.121; cf. (in Xerxes' time) the

case of Pythius of Celaenae, son of Atys, perhaps a descendant of Croesus (Herodotus VII.27); companion of Psammetichus: Herodotus III.14 (Briant 1989b: 42).

• *The Political Personnel of Cyrus and Cambyses.* Babylonia: cf. Kümmel 1979 and Zawadski 1990; cf. also Weisberg, *JAOS* 104/4 (1984) 739–43 (review of Kümmel 1979). Persians and Egyptians in Egypt: Briant 1988a: 160–64; cf. de Meulenaere 1987 and 1989. “Petition” of Peteisis: Griffith 1909. Medes in the Empire: Mazares and Harpagus: Herodotus I.156 (*Mēdos*), 162 (*genos . . . Mēdos*); Takhtmaspada: DB §82 (*Mada*). Datis, also cited in a Persepolis tablet (Lewis 1980), is regularly called “Datis the Mede” (without patronym) by Herodotus (VI.94, 199 etc.); but is this really an ethnonym or simply a surname (Suidas, s.v., has Datis *Persēs*)? Marriage of Cyrus and Amytis, daughter of Astyages and widow of Spitamas: Ctesias, *Persica* §2, who wrongly makes her (ibid. 10) the mother of Cambyses and Bardiya; he also states (§8) that Cambyses had made the two sons of Spitamas and Amytis satraps before his death: Spitaces supposedly “satrap of the Derbices” and Megabernes “satrap of the Barcaeans”; but this version (Median in origin) is extremely doubtful. Place of Media in later royal lists: Vogelsang 1986: 131–35; Media in the tale of Darius and the problems it poses, cf. Dandamaev 1989a: 95–99; satrap of Media: Stolper 1989a: 302. In the course of his work, Ctesias gives the names of royal favorites, often eunuchs (but see pp. 274–277): the eunuch Petesacas “who enjoyed the full confidence of Cyrus” (*Persica* §§5–6) and, after the death of Petesacas, Bagapates (also a eunuch), who, with Artasyras and the eunuchs Izabates and Aspates, was among the “most influential men around Cambyses” (§9). All of the personal names sound “Iranian”; on a single occasion Ctesias gives an ethnic background: he calls Artasyras a Hyrcanian (cf. also Aelian, *VH* VI.14). Are we to think that, as Xenophon indicates several times in the *Cyropedia*, the Hyrcanians held a special place near the Great King? Why? But here as elsewhere the analysis of personal names is troublesome, for the Iranian onomasticon we have is largely undifferentiated, so that in the absence of an ethnonym it is difficult to identify a Mede, a Bactrian, or a Persian. In some texts, even the mention of an ethnic background does not provide an absolute guarantee (cf. Briant 1984b: 89–91). Perhaps Pharnaces/Parnaka should also be counted among the Achaemenids serving under Cyrus and Cambyses; he was the chief administrative official at Persepolis, according to Elamite tablets from the reign of Darius I and in all probability was the son of Arsames and thus the uncle of Darius (cf. Hallock 1972: 11–14); according to Dandamaev (1972c: 19 n. 81), Pharnaces/Parnaka is found on a Babylonian tablet from 528 (YOS 7.128), as a subordinate to the satrap Gubāru (repeated in Dandamaev 1992a: 108–9; confirmed to me by F. Joannès [personal communication]).

• *Contacts and Acculturation.* Personal names at Macezsiš: Zadok 1976: 73. Babylonian concubines: Ctesias §14 (Smerdis/Bardiya: but Ctesias’s chronological references are always subject to caution). Polycrates: cf. Athenaeus XII.515e, 540; Vilatte (1990) exclusively insists on the Greek aspect of Polycrates’ power; see Briant 1991b: 235 n. 45. On the paradise: cf. Briant 230–36 with references. Tombs of Sardis and Taš-Kule: Ratté 1992 and Cahill 1988; tomb of Kizilbel: Mellink 1979.

7. The Seats of Power

• *The Old Royal Residences.* On Herodotus’s description of Ecbatana, see the remarks of Gnoli 1974: 118 (the colors indicate Babylonian influence, which implies that Herodotus himself received the tradition from Babylonian informants). Ecbatana as a royal residence: cf. the Babylonian tablets studied by Stolper 1990c (see also Chevalier 1989 on the results of early explorations, and Brodersen 1991 on the very late traditions regarding hypothetical structures of Cyrus at Ecbatana). On Ecbatana in the time of Cyrus, see also the reflections of Tuplin 1994: 253–54. Royal residences and paradises in Babylonia: Dandamaev 1984a. Xenophon’s point of view: to be compared with the reasons he gives for the “central” position of Athens in *Revenues* I.3–8. On Greek notions of the “periphery” in the Achaemenid Empire, cf. Briant 1984a: 64–66. Moves of the Achaemenid court: chap. 5/4, pp. 183ff. Beginning of construction at Susa: Miroshedji 1982 and

1985; place of Susa before Darius: according to Herodotus (III.70), Smerdis was assassinated in the palace at Susa, but this information is worthless, for Darius himself states specifically that the drama played out in Media (cf. Briant 1993b).

- *Palace and Gardens of Pasargadae*. In general, see above all Stronach's 1978 monograph; also Treidler 1962 (especially useful for the critical presentation of textual sources on the city). Date of Palace P: opposing points of view expressed (prudently) by Stronach 1978: 95–106 (Darius) and Root 1979: 49–58 (end of Cyrus's reign), respectively; see also discussion by Farkas 1974: 7ff. In a general way, the date of construction of Pasargadae has not been securely placed within Cyrus's reign; archaeological evidence of the presence of Lydian craftsman leads us to adopt a date after 546 (conquest of Sardis): cf. Nylander 1970: 53–70, 101–2, 126–28; Stronach 1978: 21–23. Alexander at Pasargadae: RTP 386–92. Gardens of Pasargadae: Stronach 1977: 108–12, and 1989a. Babylonian paradises: Dandamaev 1984a.

- *The Beginnings of Persepolis*. Tilia 1972: 73–91; Sumner 1986; Stolper 1984a: 306–9; Stronach 1978: 302–4 (Takht-i Rustam); Koch 1990: 25–30. Lydian and Greek workers at Pasargadae: Nylander 1970; on the process, cf. Diodorus I.46 (referring to Cambyses' pillaging of the Egyptian temples): "He carried off with him Egyptian artists to build the royal palaces that are so famous at Persepolis, Susa, and in Media." We may add that deportation of specialist craftsmen is already attested in the Neo-Assyrian and Neo-Babylonian periods (Oded 1979: 54–59; Weidner 1939). Ration system: cf. Arrian, *Anab.* VI.29.7 (whose information agrees best with the specifics in the Persepolis tablets: p. 95).

- *Persian Society and Empire*. Persian agro-pastoral populations in the Achaemenid period: Briant 1976, and 1982b: 57–112. Babylonian tablets: Zadok 1976: 67–78 (but on the date—Bardiya, not Vahyazdāta—see Zawadski 1995a); *tamkāru*: Dandamaev 1971 and 1989b: 219; Greek texts on the absence of markets among the Persians: Strabo XV.3.19, Aelian, *VH* X.14; Herodotus I.153. In a discussion of the education of young Persian aristocrats Xenophon states that merchants (*agoraioi*) existed in Persia but that the markets themselves were "relegated to some other spot, so that the hurly-burly would not disturb the concentration of those who were being instructed" (Cyr. I.2–3: cf. also Stolper 1988b: 142–43).

8. Royalty and Authority

- *Royal Representations and Titles at Pasargadae*. Sculptures of Palace P: Nylander 1970: 124–38 (time of Cyrus); Stronach 1978: 95–97 (about 510); "Winged genius": Barnett 1969; Nylander 1970: 126; Mallowan 1972: 1–3; Stronach 1978: 47–50; Root 1979: 47–49 and 300–303; seal of Cyrus of Anšan: Miroshedji 1985: 285–87; Stève 1986; Bollweg 1988; Garrison 1992: 3–7. King of Anšan: Miroshedji 1985: 296–300. Bardiya's titlature in the Babylonian version: Schmitt 1980: 110.

- *Royal Protocol*. The thesis that the privileges accorded to the Seven existed from the time of Cambyses is offered by (e.g.) Dandamaev 1989a: 101–2, but see above, pp. 131–132. Although incomplete, a Pasargadae relief (fig. 5, p. 89) indisputably shows an official procession (cf. Stronach 1978: 66ff.; Root 1979: 51–58), which could be taken to indicate a system of court protocol at the time of Cyrus (if it dates to Cyrus and not Darius).

- *From One King to the Next*. See Briant 1991a and below, chaps. 13/2 and 17/1.

9. The King and the Gods

- *Persian Religion and Iranian Traditions*. Interpretation of the archaeological evidence: cf. Boyce 1982: 50–61; measured viewpoint in Boucharlat 1984: 124–26; cf. also Stronach 1984 and 1985a. Zendan-i Sulaiman and "Zoroastrian Ka'aba": cf. Sancisi-Weerdenburg 1982, as well as the remarks of Bernard 1974b: 279–84. Zoroaster in Classical texts: Bidez-Cumont 1938; and recently Kingsley 1995. Composition and date of the books of the Avesta: Kellens 1988a–b and 1991a–b; let us note here an interesting cylinder seal from the fourth century B.C. with the name Zarathustrīš

and a typically Persian cultic scene: two *magi* sacrificing to the Fire (Bordreuil 1986a: 104 and 1992: 152; fig. 35b, p. 249 below). Cyrus and Mithra: Duchesne-Guillemain 1974; Herrenschmidt 1990a (with caution). Replacement of Mithra by Ahura-Mazda as "great god" as a result of the Mazdian reform: Kellens 1976b: 127–31. Cyrus in Zoroastrian context: Boyce 1988.

- *The Tomb of Cyrus and Persian Funerary Practices.* "Stripping" of corpses and funerary customs: Widengren 1968: 156–58; Grenet 1984: 31–42; cf. also Bernard 1985a: 32 n. 1 (texts from the start of the Hellenistic period) and Jacobs 1992. Note that a Greek-Aramaic inscription from Limyra in Lycia, carved on the façade of a rock-cut tomb in the name of Artimas and his family, refers to the tomb (Greek *taphos*) with the Iranian word *astōdana* (cf. Lipiński 1975: 162–71). This is the oldest attestation of an "Avestan" word that basically means 'receptacle for bones, ossuary'. In a somewhat speculative discussion of Artimas and his family, Shahbazi (1975: 125–34; followed by Boyce 1982: 210–11) notes on the one hand that the word can also mean 'tomb' and on the other that it refers here to an ossuary. He thinks that the evidence (both literary and archaeological) for burial refers rather "to exceptional circumstances, that is, after a campaign" (p. 126), and he highlights the Herodotus passage I cite in the text. He also takes into account the dimensions of funerary cists, which he says make it impossible for Artimas to have been buried. If so (but after a visit to the site I am not entirely convinced), it would make sense to reverse his hypothesis and to claim that the case of Artimas is the exception, since the attestations of the other custom are numerous and definitive (cf. also Grenet 1984: 108 n. 20). On funerary practices, cf. also the case of Clearchus analyzed above, pp. 238–239. Susa tomb: de Morgan 1905 (on the date, see most recently J.-G. Elayi 1992a). Deve Hüyük cemetery: cf. Moorey 1975 and 1980, who also refers to other Achaemenid-period cemeteries; at Persepolis: Schmidt 1957: 115–23.

- *The Sacrifices around the Tomb of Cyrus.* Strabo (XV.3.17) also refers to sacrifices and *magi*, but he erroneously states that horses were included in the *magi*'s rations. Pliny (VI.29.116) seems to refer to the 'small structure' (*oikēma smikron*) reserved for the *magi* as 'Phrasargis, citadel' (*castellum*), where the tomb proper was located. Persepolis tablets: cf. Hallock 1969 = PF 336–77 and 2029–30 (Category E); 741–74 and 2031 (Category K1). On these texts, cf. Koch 1977 and 1987a. Sheep rations: compare them with what was received by Parnaka, the highest administrator of the Persepolis region at the time of Darius: 2 sheep a day, as well as 90 measures of wine and 180 of flour (Hallock 1972: 11). Horse sacrifices: cf. Widengren 1968 (index, p. 419); Armenian horses: see also Xenophon, *Anab.* IV.5.24 and 35 (horse dedicated to the Sun). *Magi*: cf. Benveniste 1938; Clemen 1928; Bickerman and Tadmor 1978; Gnoli 1989; the Classical texts are collected in Bidez and Cumont 1938. We will return to the *magi* several times in different contexts (cf. the index). Cambyses' tomb: Ctesias (§13) states that the mortal remains of the king were returned to Persia; it has long been thought that Cambyses was buried in the (unfinished) monument near Persepolis called 'akht-i Rustam, on account of its great resemblance to Cyrus's tomb: cf. Stronach 1978: 302–4 (with caution).

10. Bardiya's Usurpation (522)

- *Bibliography.* The bibliography on this topic is huge. See especially Sancisi-Weerdenburg 1980: 84–110; Dandamaev 1976 and 1989a: 83–113; Wiesehöfer 1978; Balcer 1987, where complete prior bibliography will be found (on Bardiya in Babylonia, cf. the recent publication by Graziani 1991, with the critical remarks of Jursa 1993). I will avoid systematically listing my agreements and disagreements with this or that author, in order not to bloat the discussion excessively and uselessly. I reject the "Median" explanation of the revolt: even though Darius calls Gaumata/Bardiya simply "*magus*" (DB §11), Herodotus (III.65, 73) follows some of his informants in stating that Gaumata/Bardiya is a Median *magus* and that Cambyses exhorted the Persian nobles "not to tolerate hegemony passing anew to the Medes" (§65). Several authors have nevertheless denied any truly Median character to the revolt (cf. Dandamaev 1976: 133ff. and Wiesehöfer 115ff.). We may note that the theory of a Median revolt makes sense only if Gaumata is exactly

what Darius says! It is true, as Schmitt (1980: 111) emphasizes, that in the Babylonian version (§10) Gaumata is explicitly called a Mede; but in the same version Bardiya is presented as “Bardiya, the son of Cyrus, king of Persia” (Schmitt 1980: 111). Given the Persian origin of Bardiya, the revolt does not necessarily imply a desire for restoration of Median power: Herodotus seems to have confused this situation with the importance of the Median revolt of 522–521, after the death of Gaumata/Bardiya. He probably also fell victim to an oral version that was circulating in his time. On the problem of “Median *magi*,” cf. the (somewhat overly-subtle, it seems to me) interpretations of Bickermann, in Bickermann and Tadmor 1978.

- *The Reputation of Cambyses.* Burying people alive: a religious rite seems to figure in Herodotus VII.114, since it is presented as an offering to a subterranean deity. It is difficult to say what divinity is concerned. Xenophon mentions sacrificial victims (animals) with throats cut in honor of Earth (Cyr. VIII.3.24); the Earth cult is also mentioned by Herodotus (I.131) and Strabo (XV.3.13); but this does not seem to allude directly to the subterranean world. Several Greek authors (Aristotle, Plutarch) identify their Hades with Ahriman. In the *Gāthās*, Ahra Mainyu is opposed to Ormazd (Ahura-Mazda) in every regard. He is a liar (*drugvant*) where Ahura-Mazda is master of truth; he symbolizes darkness and evil, while the other blossoms in light and good. It is because of their characteristics that in Plutarch the kings invoke Oromazes (Ahura-Mazda) (Art. 29.12, *Alex.* 30.5) or Areimanios (*Them.* 28.6). Opposing Boyce (1982: 157), who thinks that Herodotus (VII.114) alludes to Yama, “king of the dead,” Gnoli (1980: 151 n. 164) thinks he refers to Areimanios (following Bidez and Cumont 1938: 1.9 n. 3). On the infernal deities, see also Bivar (1975a: 60–63), who proposes that the motif of the lion and his prey (bull, stag)—present at Persepolis and very widely represented on stamp seals and coins—symbolizes the gods of death in different cultures, but the argument is not fully convincing. On Ahriman in the Classical sources and the Iranian texts, cf. Rapp 1865: 77–89; Duchesne-Guillemin 1953. Whatever may be the case, we are not required to conclude that human sacrifice, which was also known among the Scythians in connection with royal funerals (IV.71–72), was a regular practice among the Persians for exclusively religious motives. Amestris buried the physician Apollonides alive (Ctesias §42); Parysatis gave the same treatment to several members of the family of Teritouchmes, son of Hydarnes (§45). These two cases obviously involve torture, and this is doubtless also true of the episode concerning Cambyses in Egypt in Herodotus (III.35).

- *Smerdis, Tanyoxarees, Mergis, Mardos.* The name Tanyoxarces (Ctesias) refers to the physical and warlike characteristics of its bearer (Wiesehöfer 1978: 47; Dandamaev 1989a: 85 n. 5).

- *Cambyses and Bardiya.* In addition to Herodotus, see Ctesias (*Persica* §12): “Cambyses offers a sacrifice, but the blood does not flow from the slaughtered victims; he is distressed. Now Roxane bears him a headless baby; his distress increases. The *magi* interpret the signs; he will leave no successor to the throne.” Wives of Smerdis: he married women who had previously been married to Cambyses—Atossa, daughter of Cyrus; and Phaidime, daughter of Otanes (Herodotus III.88).

- *Bardiya and the Persian Aristocracy.* On the Babylonian version of Behistun, cf. von Voigtlander 1978: 17, who believes that the word *ūqu* when construed as a plural refers specifically to the army. Nonetheless, I note that, even though she refers (1978: 109 n. 101) to Voigtlander’s interpretation without apparent disagreement, Malbran-Labat (1994: 110, 163–64) translates ‘the people’; likewise for the Elamite *taššup*, translated ‘the people’ by Grillot-Susini, Herrenschmidt, and Malbran-Labat 1993: 44, even though they take it as ‘troops, army’ in many other unambiguous passages in DB Babylonian and Elamite. The word *taššup* is translated ‘army’ once by Hallock (PF 200), more often ‘people’ (e.g., PF 1600), without clearly stating the reasons for the choice; the context is exactly the same in PF 200 and PF 1600. Nor am I convinced by Dandamaev’s 1972c: 24 commentaries on the meaning of *taššup*/troops in PF 113, 1602; I do not see how, given the available materials, he can write: “From all the evidence, this concerns troops.” I mention in passing that in an entirely different context, exactly the same discussion has gone on about the mean-

ing of Greek *plēthos* and Latin *populus*, when ancient authors refer to gatherings of what is customarily called the "Macedonian assembly." Does this refer to 'people', to the 'army', or even to 'armed people' (cf. Briant 1973: 291–92, 303–7)? On the word *agru*, cf. Stolper (1985a: 57), who identifies it with *kurtaš*. Dandamaev (1989a: 110) thinks that the formulation of the Babylonian compilers is difficult to understand, but he offers no real alternative explanation (he thinks that Bardiya was supported by the lower class [see particularly 1976: 170–207, his analysis of DB §14]—an interpretation that is absolutely contradicted by the rest of his argument). On the other hand, Stolper (1985a: 154) poses a relationship between Bardiya's confiscation of land from nobles who had revolted and redistributing it to loyal supporters and the decision, reported by Herodotus III.67, to grant a three-year exemption from tribute and military levies; but in my opinion these are two completely distinct spheres of activity (Persian nobles/subject peoples). On the system of *dōreai* and the *ḥaṭru*, cf. in particular Stolper 1985a: 52–69, 90–91, 100–103 and Briant 1985b (but it must be noted, as pointed out by Stolper, that the word itself is not attested in this meaning until the time of Artaxerxes I? Darius II?, in the Murašū archives: cf. below, chap. 14). It is likely that the Babylonian version refers specifically to the Babylonian situation (von Voigtlander 1978: 17), but it cannot be excluded that the same kind of measures were taken for the *dōreai* located in other regions of the Empire. Malbran-Labat's (1994: 110, 134) translation of *ē qašātu* as 'domaines [estates]' seems strange to me; in any case, remarkably imprecise.

• *Bardiya and Tribute from the Empire.* Cf., e.g., Dandamaev 1976: 134–35 and Wiesehöfer 1989: 184.

Chapter 3

Trouble, Secession, and Rebuilding (522–518)

1. Darius Comes to Power (Summer–Autumn 522)

• *General Bibliography.* Dandamaev 1976 and 1989a: 103–13; Gschnitzer 1977; Wiesehöfer 1978; Herrenschildt 1982; Balcer 1987.

• *The Conspiracy of the Seven: Darius and Herodotus.* On the different versions used by Herodotus, see Gschnitzer 1977. The names of the conspirators are given very inaccurately by Ctesias §14: Onophas [Otanés], Idernes [Hydarnés], Norondobates, Mardonius [likely confusion with his father, Gobryas], Barisses, Artaphernes [Intaphernes?], Darius. Gobryas's role in the murder of Smerdis is also illuminated by Justin (I.9.22–23), who elsewhere (9.14–18) also makes Otanes (Hostanes) the inspiration and instigator of the conspiracy. Aeschylus (*Persians* 776–77) makes “Artaphernes” (Intaphernes?) the conqueror of the *magus*—helped “by several friends who came together for this purpose.” Obviously there were many family versions that were embellished and subsequently circulated among the Greeks. For introductions to the conspirators: Dandamaev 1976: 159–61; Wiesehöfer 1978: 168–74. Darius gives not only the name and ethnic group of the six nobles (they are all called Persians) but also their patronymic; these details are not found in Herodotus, except for Otanes. But where Darius and Herodotus disagree about Otanes, it is obviously Darius who must be followed, for he and his counselors knew Otanes' ancestry perfectly well. When Herodotus makes him the son of Pharnaspes elsewhere (III.68), he has obviously become confused—understandably so, since the risk of homonymy in the case of Otanes was considerable (cf. the list compiled by Legrand, *Herodote: Index analytique*, pp. 60–61).

Aspathines and Aspacānā: *DNd*: “Aspacānā, *vaçabara*, bears the battleaxe of Darius the King” (the meaning of *vaçabara* is disputed [‘chamberlain’ or ‘bow-bearer’]: see Hinz 1973: 57–59; Schmitt 1980: 125; also Gschnitzer 1977: 20, 25). Aspathines may be the son of Prexaspes, who, Herodotus says (III.74–75), denounced the fraud of the *magus* (see sources in Dandamaev 1976: 158 n. 666). Gobryas (not to be confused with Gubāru I or Gubāru II): the Babylonian version of DB (§54) gives his complete family status: “Gubāru, son of Marduniya, Persian, Padišumarīš [Pastichorian]” (Schmitt 1980: 125). On the term *Pastichorian*, see also Briant 1984a: 108 and 1990a: 83–84. The term *prōtoi*: Briant 1990a: 74–75 and Calmeyer 1991b; cf. Justin I.9.18: *optimates Persarum*, and I.10.1: *principes*; Ctesias §14: *episēmoi*. Cf. also Stolper 1993: 10–11 on Bab. *parastāmu*.

• *The Problem of Power.* The bibliography on the “constitutional debate” is considerable (cf. Gschnitzer 1977: 30–40; Wiesehöfer 1978: 203–5). Many authors think that Herodotus (who states that he received his information from Persian sources) has passed on a Persian reality in Greek form (cf. Dandamaev 1989a: 106). This interpretation is itself closely linked to the assumption that Bardiya was a bitter enemy of the nobility. It is also based on the theory of the existence of an Assembly of nobles, to whose decrees even the kings had to submit. For various reasons, this “feudal” theory seems to me unsustainable. On the structure of Herodotus's story of Oebares' ruse, see Köhnen 1990. Dumézil (1984) insists that there are Indian parallels, but the parallel of King Rusa of Urartu seems much more apposite (cf. Wiesehöfer 1978: 205 n. 2). We may note in passing that the sun motif is also found in Justin XVIII.3.8–14 (arrival of Strato of Tyre).

• *The “Rights” of Darius.* The various “genealogical” hypotheses are conveniently presented by Miroschedji (1985: 280–83, with references to the previous literature). On the founder legend repeated by Aelian, cf. Binder 1964: 45–46. The “premonitory” dream that Cyrus reported to Hystaspes, the father of Darius, perhaps belongs to this tradition: “I saw your eldest son with wings on

his shoulders, and one overshadowed Asia, the other Europe" (I.209). On the relationship between the eagle and royal power, cf. Harmatta 1979 and Nylander 1983: 22–27. On the Pasargadae inscriptions, cf. most recently the convincing demonstration of Stronach (1990). The mounting doubts explain why Mayrhofer (1975: 12–13) has suggested new sigla (*D_{Ma}*, *D_{Mb}*, *D_{Mc}*) for the inscriptions traditionally ascribed to Cyrus (*C_{Ma}*, *C_{Mb}*, *C_{Mc}* in Kent).

- *The Primacy of Darius*. Aeschylus uses the name *Artaphernes* for the man who, "helped by several friends who came together for this purpose," put an end to the reign of Mardos (*Persians* 775–77). It is nearly unanimously postulated that *Artaphernes* is a mistake for *Intaphernes*, and this is seen as further proof of the false character of Darius's version. This lie might be considered a further indication of Darius's secondary role in the conspiracy and of the deeply aristocratic nature of the elimination of Smerdis (see particularly Dandamaev 1976: 162, who recalls that Hellanikos calls him Daphernes; along the same lines, Wiesehöfer 1978: 205–6). Ctesias (§14) also includes *Artaphernes* in an admittedly imprecise list, and he seems to have confused him with *Intaphernes*. But if we recognize that Darius (like the other conspirators) was accompanied by men of his House, we can also hypothesize that the name in Aeschylus in fact identifies one of Darius's brothers who is well known elsewhere (this is also the position of Balcer 1987: 115 and 159 n. 12, without discussion).

The execution of Smerdis might be compared with what the ancient authors say of the murder of Xerxes and subsequent episodes (cf. particularly Ctesias §30, *makhē*) and especially with the veritable civil war that led to the accession of Darius II (see chap. 16/6). On the position of Darius, we will not go so far as to propose (pace Balcer 1987: 100) that Darius himself killed Cambyses or that he gave the job to a friend; as has now been established with certainty, Cambyses died of natural causes (cf. Walser 1983).

- *The Elimination of Bardiya*. For the victory over Gaumata in the Behistun inscription, cf. Vogelsang 1986: 127–31.

- *A Remark on Method*. On the symbolism of the numbers, cf., for example, Root 1979: 201 n. 55. It would be excessive to pile up examples of the number 7 in conspiracies (e.g., Appian, *Mith.* 2.9). On the actual formation of the conspiracy of 522, a very similar schema will be found in Arrian's tale (IV.13.3–4) of the conspiracy of the pages (cf. also Quintus Curtius VIII.6.9).

2. Revolts and Reconquests (522–518)

- *The Liar-Kings*. Herodotus (III.150–59) records a Babylonian revolt, which he places at the beginning of the reign of Darius while distinguishing it (§150) from the "*magus*" period and presenting the final fall of Babylon as the "second" (§159), that is, after the conquest of Cyrus in 539. Considered in a context furnished by Ctesias and some others, Herodotus's text poses problems that remain debated (cf. Balcer 1987: 125–30, Briant 1992a: 9–13). The Babylonian and Aramaic versions of DB have been published by Von Voigtlander (1978) and Greenfield and Porten (1982), respectively. The Persian version has been reedited by Schmitt (1991b), who is also responsible for fundamental studies comparing the different versions (1980 and 1990c). A French translation of the Elamite version has been prepared by Grillot, Herrenschmidt, and Malbran (cf. JA 1993; also Malbran-Labat 1994 [DB Bab.], and Porten and Yardeni 1993 [DB Aram.]).

On the chronology of the Babylonian revolts, see Parker and Dubberstein 1956: 15–16; Weisberg (1980: xvi–xxiii) sheds doubt on the existence of a second Nebuchadnezzar (on the chronology of Nebuchadnezzar III and IV, cf. Dandamaev 1993a and 1995a; Zawadzki 1995b–c). Egypt: reasonable solution in Tuplin 1991a: 264–67 (followed here). Jerusalem: cf. Bickerman 1981 (propones a revolt at the end of 521); doubts in Dandamaev 1989a: 127–28 (following Ackroyd). Bickerman's chronology is now strongly challenged by Kessler (1992), who thinks there is nothing in Haggai to justify postulating an anti-Persian movement in Judah.

"In a single year": the bibliography is considerable. Cf. the summary of the topic in Wiesehöfer 1978: 213–20; Bickerman and Tadmor 1978: 240–42 (Mesopotamian precedents); Nylander 1994;

Vogelsang (1986: 121–27, against Borger 1982) thinks that the order of liar-kings on the relief is not strictly chronological.

- *The Victories of Darius and His Lieutenants* (522–521). Story of the events: Burn 1984: 96–103; Dandamaev 1989a: 114–31; Vogelsang 1992: 119–32. Cf. also Koch 1993a: 49–69.

- *The Victories of Darius: A Military Evaluation*. On the figures, cf. Schmitt 1980: 108. The text of *DB* on the Armenian events presents many chronological and historical problems, which were recognized by Poebel 1937–38: 152–62 (and the publication of the other versions does not provide a solution). On Herodotus and the Median revolt, cf. also III.65 (speech of Cambyses) and 126. But Herodotus (who says nothing about the great revolts of 522–521) is very confused about Median affairs (cf. III.73).

- *The Political Aspect of the Revolts*. Babylonian tablet dated to 19 Nisān, Year 1 of Barzia, king of the countries: Zadok (1976: 74–76) thinks this is Vahyazdāta, because the transaction took place at Matezziš, very close to the site of Persepolis. (On the tablets dated to Barzia, cf. now Graziani 1991, with the critical remarks of Jursa 1993; still more recently, Zawadski 1995a has cast doubt on Zadok's interpretation: the tablets actually date to the reign of Bardiya I). Popular participation in the revolts, cf., for example, Dandamaev 1989a: 119 (Media), 126 (“the revolt in Margiana was one of the important popular uprisings of antiquity”). Regarding Martiya: he might be an Elamite with a Persian name (Zadok 1976: 74). On Arkha, cf. Dandamaev 1989a: 122–23. Aryandes and the Egyptians: Briant 1988a: 141–42, and below, chap. 10/5: Darius and Aryandes.

- *Darius and Vahyazdāta*. The social character of the Vahyazdāta revolt (supported by the peasants against the nobles): the theory is worked out at great length by Dandamaev 1976: 170–86. It should be emphasized that this presentation of Vahyazdāta's policy is closely linked (cf. p. 186) to an analysis of §14 of *DB*, to which (pp. 186–206) it is the prelude, and to the presentation of Darius as the head of an aristocratic restoration (206–14); cf. Briant 1993c: 407–8, 421–22.

- *The Rebellion of Oroetes*. On Oroetes' refusal to do obeisance, I follow the persuasive hypothesis of Poebel 1937–38: 159–61.

3. The Aftermath of Victory: The Official Story

- *Crime and Punishment, Publicity and Propaganda*. Fragments of the Behistun inscription at Babylon: Voigtlander 1978: 63–66. Date of the Aramaic copy: Greenfield and Porten 1982: 1–4 and Porten 1990: 17. Fragments of the relief at Babylon: Seidl 1976; at Susa(?): Canby 1979; and Muscarella in Harper, Aruz, and Tallon 1991: 218 n. 2, 221 n. 14.

- *Truth and Lies at Behistun: Darius and Ahura-Mazda*. Since Rawlinson, the monument at Behistun has stimulated a vast number of studies (see the interesting historiographic discussion in Dandamaev 1976: 1–22). The analysis has been renewed by the German archaeologists, who were able to examine the relief at close range in 1963–64 and distinguished five chronological phases in the erection of the monument and the carving of the various versions (cf. Trümpelmann 1967 and Luschey 1968; more recently, Borger 1982). Many analyses and important reflections are also found in Root 1979: 58–61 and 182–226 (with references to the earlier bibliography). Site of Behistun, cf. Bernard 1980. On Semiramis at Behistun, cf. Briant 1984b: 30. Functional relationships between the inscriptions and the relief: Root 1979: 186–94. On *artadāta*, cf. Bucci 1972; P. O. Skjærø (Enclr. 3 [1990] 696, s.v. “Old Persian Arta”) emphasizes the surprising rarity of the term *arta* in the royal inscriptions (a single occurrence in *XPh* in the form *artāvan*); nevertheless, in the royal narrative taken as a whole, the frequency of references to the antonym *drauga* (*Av. druī* ‘lie’) confers on *arta* (‘order, ordinance’) a central place in Persian religious and political thought (cf. especially Kellens [1995], who even creates the [French] neologism *artavanité*, p. 30). Cf. also Pirat 1995 on the ethnonym *Artaioi*.

Individual in the winged disk: for a long time, historians have engaged in debates on his identity (e.g., Shabazi 1974, 1980b); Lecoq's (1984) demonstration that the figure is Ahura-Mazda has convinced me completely (cf. also Root 1979: 169–76). Rite of investiture at Behistun: Lecoq

1984: 306–7; Vanden Berghe 1987: 1513–14 (who thinks that the ring represents the *Kh'arnah*, the Glory/Radiance that, according to other authors, is represented by the individual rising from the winged disk). Darius and Ahura-Mazda: cf. the interesting reflections of Gnoli 1974: 163–79 (and pp. 170–75 on the wiping out of the idea of *Kh'arnah* beginning in Darius's reign; also Gnoli 1990). In a personal communication (July 27, 1992), A. Kuhrt expresses doubts about the nature of the object held by Ahura-Mazda in the relief; in her opinion, it is not a ring: "In Mesopotamian usage, [it is] a thing called *šerret* = 'halter' or 'leading rope'; its character as a rope of some kind is fairly clear on the stele of Urnammu." On the passage of oral memory into writing, cf. the reflections of Herrenschildt 1989b: 207 and Cardona 1980: 282–83 (following Gerschevitch), as well as the analyses of Sancisi-Weerdenburg 1980: 103–13.

- *New Campaigns, New Additions: Imperialism and Religion.* Campaign against the Saka: the major lacunae in the text have resulted in an inflated number of studies bearing principally on the identity of the Saka. Are they really the Saka of Central Asia (called Scythians by the Greeks: Herodotus VII.64), or is the text instead a description of the campaign of 513 by Darius against the Scythians of Europe, narrated at great length by Herodotus? We cannot give a long list of references here; pace Cameron (1975), there is no longer any doubt that the text is about an expedition led by Darius in Central Asia in 519: cf. Harmatta 1976, Shahbazi 1982. It is certainly this campaign to which an anecdote of Polyaeus (VII.11.14) refers. Religion and politics in DB V: Kellens 1987 (followed here); see already the lucid analyses of Sancisi-Weerdenburg 1980: 16–21, repeated and developed in Sancisi-Weerdenburg (in preparation).

4. Darius and the Six

- *Primus inter pares?* The theory of a restoration of the aristocracy was developed particularly by Dandamaev (1976: 210–12), who alongside Herodotus and Plato cites Aeschylus (*Persians* 956–960) and Esther 1:14. But these last two citations add nothing to the discussion. Dandamaev presses his hypothesis very hard because he sees the basic reason for the structural weakness of the Achaemenid Empire in this restoration (pp. 210–14): cf. Briant 1993c: 421–22. On the so-called Council of Seven, cf. the appropriate doubts of Lewis 1977: 23. I remain hesitant about the interpretations of Petit (1990: 222–26) in what he presents as the birth "of a new aristocracy" (the Six) at the expense of the "tribal nobility"; the statistical analyses Petit uses are, strictly speaking, worthless. The existence of a title understood as "guardian of one of the seven parts" in Achaemenid Egypt (DAE 49 [BMAP 8]; Bogoljubov 1967) cannot in any case support the views of Plato on a division into seven parts, whatever, e.g., Gnoli (1981: 271 n. 33) thinks of it (cf. Calmeyer 1987b: 133–40); it simply confirms that the figure 7 possessed a particularly productive symbolic meaning in Iranian cosmological thinking (compare, for example, Shahbazi 1983, with the remarks of Calmeyer 1983a: 199–203). I would add that I scarcely believe the "feudalist" theses of Widengren (1969: 102ff.), who would have the king elected by a noble *Landtag*, because the Achaemenid sources adduced for support are hardly probatory and because the consultation of later sources (pp. 108ff.) follows an unreliable method. Quite the opposite, we may suppose that the reunited nobility would acclaim the new king (cf. chap. 13/2: The Royal Investiture). On the "*sylogos* of the Medes and the Persians" known to Arrian, cf. Briant 1994c: 286–91. Regarding royal judges, we may note in passing that, according to Diodorus (XI.57), Mandane, the daughter of Darius, demanded that Xerxes punish Themistocles, who was considered responsible for the death of her children in 480. In this she was joined by "the noblest Persians" and incited the 'mob' (*okhlos*) to gather in front of the palace to demand of the king a trial in right and proper form. Xerxes gave in and agreed to form a tribunal (*dikasterion*) made up *ek tōn aristōn Persōn*, whose verdict he would accept in advance; Themistocles was ultimately acquitted. But this entire story is scarcely credible (likewise the marriage of Themistocles to a Persian woman: Diodorus XI.57.6). Apart from the factual errors, we recognize a well-known motif: the Persian princess who demands the punishment of a rebel guilty of killing her children (cf. Ctesias §35–36; cf. also §59 = Plutarch, *Art.* 14.9–10, 16–17).

• *Darius's Point of View: Nobles and King at Behistun.* The word *amušiyā* itself is not specific, because it also qualifies the members of the immediate entourage of the liar-kings (DB §13, 32, 42, 47). See on this the summary of Gnoli 1981, who thinks that the word is very close in meaning to *bandaka*; see also the very interesting remark of Malbran-Labat (1994: 121 n. 165) on the Babylonian vocabulary. The compiler did not use *qallu*, the "equivalent" of *bandaka* in DBBab. Identification of the bearers of royal arms at Behistun: Luschey (1968: 68–71) suggests Gobryas and Intaphernes, but the reasons given are purely speculative.

• *The Six and Court Protocol: The Intaphernes Affair.* See the analysis of Gschnitzer 1977 (although I do not agree with every step of his argument); see also the remarks of Sancisi-Weerdenburg 1983: 30–31.

• *The Marriages of Darius.* Darius's marriage to Gobryas's daughter was before 522 (Herodotus VII.2); this union produced Artobarzanes, Darius's eldest son (VII.2), who was thus born when his father was a 'an ordinary commoner' (*idiōtēs*; VII.3), that is, before 522. We do not know when Gobryas himself married one of Darius's sisters (VII.5), but neither case supports the thesis that the king was required to choose a wife from the conspirators' families. The only uncertainty concerns Xerxes; we do know that he married a "daughter of Onophas" (Ctesias §20): see below.

• *The Saga of Otanes.* See first of all the argument of Meyer 1879: 31–38 (followed by Reinach 1890a: 1–4); also Marquardt 1895: 489–512; and, on the fragment of Polybius and the demarcation of the land, compare the legend recorded by al-Bīrūnī, where the royal concession is measured with respect to the flight of an arrow shot by the recipient (cf. Panaino 1988: 233). On the fiscal concessions granted to Otanes, cf. Briant 1985b: 55 (compared with other cases of the same type) and 1990b: 88; Wiesehöfer 1989: 187. Other examples of hereditary royal grant: Herodotus VII.106–7. It does not seem possible to conclude that Otanes and his family "were not compelled to obey the king as long as they did not infringe Persian laws" (so Dandamaev 1989a: 104, who paraphrases Herodotus very freely). On the identification of Xerxes' father-in-law, the controversy continues at full tilt; but it seems presumptuous to claim with great confidence that this Onophas/Otanes is even the same as the conspirator of 522 (cf. doubts presented by Burn 1984: 334–35; see already Marquardt 1895: 497). The reconstructions proposed by Herrenschildt (1987b: 58–62) seem weak to me, since they are based on the assumption that the name *Thukra* is a nickname ("the Red"), which thus would not contradict Herodotus's statement. The proposal is interesting but remains unprovable and not even very likely. In fact, I would point out again that the pedigrees given for the conspirators at Behistun are precise, so it is hard for me to believe that Darius would have simply given Utāna's father his nickname.

• *The Family of Gobryas.* Cf. Lewis 1985: 110–11. Seal of Gobryas: cf. Root 1991: 19–21. Among the Persian chieftains at the Eurymedon, Callisthenes lists an "Ariomardos, son of Gobryas" (Plutarch, *Cimon* 12.5), but it is difficult to place him in the genealogy of Darius's lieutenant; nor do I know what to do with "Mardonius the Elder (*ho palaios*)," enumerated by Ctesias among those close to Xerxes at his accession (§19). It seems as though it could only be the son of Gobryas, but why this epithet *palaios*? Was there another, younger Mardonius? This is not certain, for the expression could just as well distinguish two persons not necessarily linked by family ties (cf. Theophrastus *HP* II.6.7). On Mardonius's lands in Babylonia, cf. Stolper 1992d. Petit (1990: 186–88) finds our Gobryas in Gubāru, "*pihātu* of Babylonia and Trans-Euphrates" in the time of Cyrus, but the hypothesis (also postulated by Dandamaev 1992a: 79) seems unfounded to me. We know that the satrap Gubāru had a son associated with him as his deputy, named Nabūgu (Dandamaev 1992a: no. 206), but whatever the Iranian form of this name, it is not to be found in the family of Gobryas. That this Nabūgu was in all probability the oldest son of Gubāru seems to me to raise a very strong objection to this hypothesis, for the oldest son of Gobryas was in all probability Mardonius.

• *The Saga of Megabyzus.* Brown's article on Megabyzus (1987) adds nothing new.

- *Hydarnes*. Satrap of Media according to Lewis 1977: 84 n. 14 (comparing the Miturna of the Persepolis tablets; cf. now unpublished tablets used in this sense by Koch 1993a: 12–13). On Tissaphernes, cf. *ibid.* 83–84, but there are many uncertainties (the ascendancy of Tissaphernes is induced from the inscribed Column of Xanthus, which calls him son of Hydarnes). On the ancestors of Orontes, cf. Reinach 1890b; Dörner 1967; Osborne 1973: 519–21.

5. Summary and Perspectives

- *A New Foundation for the Empire*. On Darius's memory of Cyrus: in addition to Herodotus III.160, see the reference to Cyrus in the stela of Tell el-Maskhuta (Posener no. 8, p. 61), which remains regrettably mysterious because of the deplorable condition of the stone. It is also certain that Cyrus was among the ancestors (*progonoi*) that Darius invoked collectively and anonymously as glorious precedents in his letter to Gadatas (ML 12; and see chap. 12/4, pp. 491ff.).

Chapter 4

Darius the Conqueror (520–486)

1. *The Pursuit of Territorial Expansion (520–513)*

• *Darius, Democedes, and the West.* On the deeds of Democedes and the structure of Herodotus's tale, see the interesting analysis of Griffiths 1987, and the comments of Asheri 1990: 341–48.

• *Darius, Syloson, and Samos.* Asheri 1990: 256ff. and 348–54; Descat (1989: 79 and 1990a) thinks that after the execution of Oroetes at Sardis, Darius was supported by Otanes and Cappadocia; but this interpretation (which is based explicitly on the very suspect text of Diodorus XXXI.19.2) assumes that Otanes was in fact satrap of Cappadocia, which in my opinion is very doubtful for the reasons given above, chap. 3/4: “The Saga of Otanes,” pp. 132ff. [Herodotus's tale of Syloson: Van der Veen 1995.]

• *Darius, the Indus, and the Nile.* On the date of the conquest of India, cf. Shahbazi 1982: 233 n. 218 (519 B.C.) and Tuplin 1991a: 270–71 (around 518); on the expedition of Skylax and the suggested connections with the creation of the canal from the Nile to the Red Sea, see especially the very strong warnings of Salles 1988: 79–86 (p. 84: “The periplus of Skylax must be kept strictly separate from the stelas of Suez”), and Salles 1990: 117–18 (p. 118: “In the present state of our knowledge, it is better to see the periplus of Skylax as only an adventure, sufficiently daring to have struck the imagination, but only a unique adventure”); on Darius's canal, the basic reference is now Tuplin 1991a, which, while adding (p. 271 n. 23) some nuances to Salles's skepticism, nonetheless agrees with him overall (cf. his conclusion, p. 278) and, moreover, stresses quite opportunely (p. 242) that Herodotus's passage does not imply that Darius wished to establish direct communication; see also chap. 12/1.

• *Aryandes and Barca.* The date is disputed: cf. discussion in Mitchell 1966; on Amasis the Maraphi, cf. Briant 1988a: 160; on Herodotus's Cyrenian excursus, cf. Corcella and Medaglia 1993: 332ff.

2. *The Persians in Europe*

• *Darius's Scythian Expedition (513).* The bibliography is expanding but continues to lack consensus, except that there is no doubt about the date, for it is now acknowledged (*pace* Cameron 1975) that the expedition led by Darius against the Sacian Skunkha (DB) had nothing to do with the one against Scythia in Europe (cf. Harmatta 1976; Shahbazi 1982; the contrary attempt pursued by Petit [1984 and 1987; cf. 1990: 108–9] has not convinced anyone). *Pace* Petit (1990: 205 n. 421), the mission entrusted to Ariaramnes of Cappadocia (Ctesias §§16–17) seems perfectly understandable to me, including the geographical aspects. In contrast, the objectives and consequences of the Scythian expedition remain widely disputed; to the bibliography cited by Gardiner and Garden (1987), add the important article of Momigliano (1933) and the balanced perspective found in Nenci (1958: 144–156) and, since then, Fol and Hammond (1988: 235–43); on the geographical and logistical aspects, see the article of Nowak (1988), who depends too much on the assumptions of Engels (1978); Gallota's 1980 article adds nothing. We may mention in passing that an inscription on clay attributed to Darius has been found at Gherla in Romania [DCh in Mayrhofer 1978: 16] and published, with many restorations, by Harmatta (1953); how much Darius had to do with the stelas that were inscribed during his expedition (Herodotus IV.87, 91) remains very hypothetical, since the authenticity of the stelas in question is far from proved (RTP 390 n. 278, as well as West 1985: 296 and Schmitt 1988: 32–36). [Paintings showing the Scythian expedition: Calmeyer 1992a.]

• *The Persians in Thrace.* Castritius 1972; Fol and Hammond 1988; on the Paeonian tribes on the lower Strymon River, see Samsaris 1983. The existence of a satrapy of Thrace at this date (a theory defended by Hammond 1988a–b) is generally deduced from the reference to western peoples in some lists of countries: the “Saka beyond the sea” (*paradrava*; *DSe, DNa*), “Those beyond the sea” (*DPe*), and Skudra (*DSe, DNa, DSab, XPh*), Yauna “with a hat in the shape of a shield” (*Yaunā takabarā*; *DNa*), Yauna “who live beyond the sea” (*DSe, XPh*). But it must be stressed that a reference to a people does not necessarily imply the existence of a satrapal government (cf. the following chapter); it must also be stressed that the identification of these peoples continues to be problematic: Castritius (1972: 9–15) thinks (not without good arguments) on the contrary that the satrapal government dates simply from the Mardonius expedition. The theory of the integration of Macedonia into the satrapy is defended by Hammond (1979: 59–60), based especially on the case of Bubares, “governor or adviser to the governor of the satrapy”; on these problems, see the summary of Balcer (1988) who, *contra* Hammond, approves and specifies Castritius’s interpretations; and Borza (1990: 100–103); read also the related discussion of Hatzopoulos and Loukopolou (1992: 15–25). Status of Oebares at Dascylium: hyparch and not satrap according to Balcer (1988); doubts of Petit (1990: 183–85). On the Achaemenid influence in Thrace (discernible basically in the fourth century), cf. Briant 1991c: 234 n. 42, where a bibliography is found; and a suggestion on the use of the word “parasang” by Arrian I.4.4.

3. The Ionian Revolt (500–493)

The bibliography is impressive, and there is no possibility here of carrying out a systematic (and vain) review; an analysis can be found in Tozzi (1978b) and Murray (1988); see also Burn 1984: 193–217; Will 1972: 86–89; Walser 1984: 27–35; on the position and sources of Herodotus, consult the always pertinent pages of Nenci (1956: 156–91) and Tozzi (1978a: 23–74); Nenci 1994 (commentary on book V of Herodotus) reached me too late to be properly used here.

• *The Thread of Events and the Problems Posed.* Persepolis tablet Q 1809: see Lewis 1980; in contrast, to look for an allusion to the revolt in certain “lists of countries” (so Stève 1974: 25) seems to me a hopeless exercise for, contrary to what Stève assumes, a diachronic analysis of the country lists in royal inscriptions does not permit the historian “to follow the fluctuations of Persian expansion, the establishment of recently acquired provinces, the dismantling of ancient administrative units and their reorganization into a new ensemble.” On this question, see chap. 5/2–3. The gaps in Herodotus leave some chronological problems open: cf. Tozzi (1978b: 100–13) and Murray (1988: 473): “Within these limits [499–494] any detailed chronology is to some extent arbitrary.” The author rightly stresses that there is a gap of several years in Herodotus’s tale. This documentary situation makes it difficult to answer the question “Why did the revolt last so long?”

• *An Economic Crisis?* The theory of the economic weakness of the Ionian towns as an after-shock of the Persian conquest has recently been revived by Tozzi (1978b: 113–28) and Murray (1988: 477–78); the exact opposite theory in Roebuck 1988: 453–53; see also Picard 1980: 81–95 (but his conclusion on p. 90 seems to me too sudden); Ionians at Memphis, cf. Segal 1983 no. 26; on Ionians and Phoenicians doing business side by side in a delta port at the time of Xerxes: see the very clear text *TADAE* C3.1–29 (cf. Porten and Yardeni 1993; Yardeni 1994; and Lipiński 1994); Greek pottery from Asia Minor in the Near East: Perreault 1986; Ionian and Phoenician pottery on the site of Tell el-Maskhuta: Paice 1986–87 (although the Phoenician pottery is much more abundant).

• *Civic Tensions and Achaemenid Power.* The link between social problems and revolt has already been put forth by Hegyi (1966, 1971); social conflicts and tensions at Miletus (last quarter of the fifth century): cf. Robertson 1987: 375–77; *contra* Graf (1985), Austin (1990) expresses the idea that the Persians were in fact systematically supported by the tyrants; I am not sure that the two interpretations are really antithetical, as I hope I have shown in the text; on the slogan “liberty for the Greeks of Asia” and its history, cf. Seager and Tuplin 1980. I note also that according to

Murray (1988: 475–76), the Persians in Asia Minor could not find support from a “priestly caste,” contrary to the situation in Babylon, Egypt, and Jerusalem; but, aside from the fact that the expression “priestly caste” is not really appropriate, I believe that the contrast he emphasizes (based on the letter from Darius to Gadatas: ML 12) is hardly substantiated (on this document, see below, chap. 12/4).

- *The Strategy of Aristagoras: The Beginnings of the Revolt.* Concerning the logistical problems related to the fleet, I have accepted the fascinating explanations of Wallinga 1984. Otherwise, it seems that the Athenians and Eretrians did not play a very important role, despite the claims of Lysanias of Mallus, cited by Plutarch (*Mor.* 861a–c; cf. Tozzi 1978b: 60–61). On the relations between Histiaeus, Artaphernes, and Darius, the mystery continues unabated, especially because Herodotus’s chronology is very uncertain: Hegyi (1971) sees here a clash between two strategies, Darius’s and his satrap’s, regarding the relationships to be established with subjugated populations; I am not convinced. On the role of Histiaeus, see also the reflections of Burn 1984: 207–8; Murray 1988: 486–87 [and Kienast 1994].

- *The Persian Victory.* On the very lax character of the organization at the heart of the Ionian League: Roebuck 1955; Neville 1979; Lateiner 1982; the Ionian League was not suppressed by the Persians after the revolt (cf. *Tod* no. 113), which implies that it did not represent much of a threat in their eyes (Murray 1988: 489). The existence of a revolutionary coinage (Gardner 1911) has now been cast in doubt (cf. Graf 1985: 103 n. 22; but see Tozzi 1978b: 81–92). Reconquest: the excavations at Old Paphos on Cyprus have confirmed that the Persians destroyed sanctuaries there (cf. Tozzi 1978a); they also illustrate the technical abilities demonstrated by the Persians during sieges (cf. Herodotus IV.200); in the excavations of the siege ramp, 422 stone shot weighing between 2 and 12 kg were found—a discovery of something totally new, since it was generally believed that the invention of machines for hurling, such as the catapult, dated to Dionysius the Elder at the beginning of the fourth century (a point of view once again expressed by Y. Garlan, *CAH VI*² [1994]: 682–84, where rather surprisingly there is no reference to the discussion started by the Paphos discoveries); the recent find of a stone ball at Phocaea dated to the siege of the town by Cyrus in 546 (Ozyigit 1994) now provides reinforcement for the hypothesis (cf. bibliography and summary in Briant 1994h).

4. From Thrace to Memphis (492–486)

- *The Mission of Mardonius in Thrace.* See especially Castritius 1972; Balcer 1988; Hammond 1988b: 493–96; and now Zahrnt 1992. Regarding the expression used by Herodotus (VI.43) to describe Mardonius in 493 (“newly married to a daughter of the king, Artozostra”), cf. *PfA* 5 with the remarks of Hallock 1978: 110 and Lewis 1984: 596.

- *From Cilicia to Marathon.* On the different stages of Darius’s strategy, one may read with profit the lucid remarks of Will 1964: 73–78.

- *The Conquest of the Islands.* The famous *Chronicle of Lindos* (cf. Blinkenburg 1912: 379–85; 1941: 177–200 = *FGH* 532), which lists donations to the sanctuary by Datis, has long posed many problems; we start off by questioning the reality of the deeds reported: several authors believe it is a useless fake; cf. Baslez 1985: 138–41, remarking in particular that the Delian dedication attributed to Datis is certainly a later falsification; same opinion, Murray 1988: 468–69; but not all doubts have been resolved: see Bresson, *REA* 1985/1–2: 155, explicitly opposing Baslez; Burn (1984: 218) places the episode during the Ionian revolt, Datis having acted on the initiative of Mardonius; citing for support information found on some Persepolis tablets, Heltzer (1989a) suggests the date 497, at the time of the attacks on Cyprus; an alternate hypothesis would be to date these donations to the time when Datis left Cilicia and headed toward Naxos.

- *Persian Conquest and Greek Medism.* Cf. Graf 1979 and 1984; the work of Gillis 1979 is of little interest.

- *Marathon.* On the battle, cf. Hignett 1963: 55–74; Burn 1984: 239–53; Hammond 1988b: 506–17; Lazenby 1993: 48–80; on the absence of the cavalry, cf. the hypotheses of Whatley 1964

and Evans 1987; on the exaltation of Marathon and historical distortions among the Athenians, cf. Loraux 1981: 157–73.

• *From Marathon to Memphis.* On the Egyptian revolt: Aristotle's phrase (*Rhet.* II.20.3 = 1393B) does not add much to the discussion (cf. Tuplin 1991a: 266). Date of the death of Darius (Nov. 486): it is established with the help of Babylonian tablets (Stolper 1992a); it is noteworthy that the most recently published tablets show that for three weeks after the death of the king (until 21 Dec.), scribes at Sippar continued to date their documents according to the reign of Darius, although at Borsippa the first document dated to the reign of Xerxes is from 1 December 486: cf. Zawadzki 1992.

Chapter 5

Images of the World

1. *The Builder-King*

• *The Remodeling of Susa.* See the special issue of *Dossiers Histoire et archéologie* 138 (1989), with dense summaries by the best specialists as well as an up-to-date bibliography (p. 90). Archaeological evidence for the break between the Elamite and Achaemenid levels: Miroschedji 1987. The Susa epigraphy is published by Stève 1984 and 1987. *DSf*, *DSz*, *DSaa* are published with commentary by Vallat 1971, 1972, and 1986; trilingual inscription of the Darius Gate: Vallat 1974b. Copy of the Behistun relief at Susa: Canby 1979, and Muscarella in Harper, Aruz, and Tallon [1991]: 218 n. 2 and 221 n. 4 (a reconstruction based on a minuscule fragment). Date of the beginning of construction of Susa: high date (beginning in 520) according to Stève 1974: 27, followed by Vallat 1986: 281; I find the hypothesis tempting, but the Classical texts adduced in support do not have the value claimed by these authors (cf. Briant 1993b). Death of Hystaspes: Stève 1974: 168–69 and Vallat 1986: 221. Urban planning at Susa: Perrot 1981 and Boucharlat 1990a; work on Susa: Perrot 1974; Perrot, Laditay 1974 (Darius Gate).

• *The Beginnings of Persepolis.* See in general Schmidt 1953: 39ff. *DPf*: Herrenschildt 1990; date of *DPh*: Stronach 1985a and Root 1988 and 1989; cf. also Root 1979: 76ff., as well as Koch 1987b (cf. p. 157); see especially the detailed suggestions of Roaf (1983: 127–59), who attributes the beginnings of construction of the Apadana, the Treasury, and the palace of Darius to the reign of Darius (but at the beginning of the fifth century)—all projects completed by Xerxes; among the evidence used in the dating, Roaf (p. 150) includes the Treasury tablets (*PF*): the earliest attestation of craftsmen (*marrip*: cf. *PFT*: 45–46) receiving rations at Pārsa is dated to Year 15 (*PF* 1580), or 508–507; but the significance of the statistical distribution of the tablets ought to be taken into account; on these problems, see also the important suggestions offered by Garrison 1988: 383–85, 391–93, and 474–75. Persepolis fortifications: Schmidt 1953: 206–11, Shahbazi 1976b: 8–9, and now Mousavi 1992 and Kleiss 1992b.

• *Work Carried Out in the Other Capitals.* Chronological problems relating to building Pasargadae: Nylander 1970; cf. most recently Koch 1987b: 158; Treasury and *kurtas* at Pasargadae: Koch 1990: 30–31. The construction of a new palace at Babylon is attested by a tablet dated to Year 26 of Darius (*BRM* 1.81), referring to the “new palace” (Joannès 1990a: 186); on the other hand, the *Perserbau*, often attributed to Darius (Haerincq 1973), was the work of Artaxerxes II (Vallat 1989a); *apadana* at Ecbatana: cf. Stronach, *Enclr*, s.v. “Apadana.”

• *The Royal Tomb of Naqš-i Rostam.* Methodical description by Schmidt 1970; also Calmeyer 1975; Root 1979: 72–76 and 162–81; and Von Gall 1989; text of Ctesias (§15): Balcer (1972: 117–19) thinks that Ctesias has definitely confused it with the cliff at Behistun; meanwhile, the funerary nature of the monument described hardly leaves any room for hesitation; *Nupistās* (**Nipišta*): Gershevitch 1969: 177–79 (with reflections on the chronology extracted from the tablets); Hinz 1970: 425–26 (in the form of a question), but see Hallock 1977: 132 and Koch 1990: 49 (n. 235).

• *Royal Art and Imperial Towns.* On the dynastic and imperial program, see especially the analyses of Root 1979, 1980, and 1990 (largely repeated here).

2. *The King and His Peoples: Inscriptions and Iconography*

• *The “Foundation Charters” of Susa.* Vallat 1971 (*DSf*, *DSz*), 1972 (*DSaa*, *DSz*), 1986 (*DSaa*); also Stève 1974 and 1987, as well as Kent, *OP*. The sigla for Susa inscriptions (e.g., *DSc* 001) are taken from Stève 1974 and 1987.

• *The Country Lists*. From the burgeoning bibliography, see especially Herrenschmidt 1976–77 and 1980c; Calmeyer 1982, 1983a, and 1987b (where numerous comparisons with Classical texts will also be found).

• *The People Bearing Thrones*. Reproductions and analyses in Schmidt 1970 and Walser 1972; Susa statue: cf. CDAFI 1974 (exhaustive analysis by Roaf) and Calmeyer 1991a; on the canal stelas, cf. Posener 1936: 48–87 and 181–88 and Tuplin 1991a: 242–46; the written and visual documents are also analyzed at great length by Vogelsang 1992: 94–119 and 132–65 (who probably uses the criterion of dress too systematically). In general, see the very important contribution on this topic by M. Root (1979: 227–84: “The Tribute Procession”). The table presented on 175 is taken from Shahbazi 1976b: 24–25.

3. An Idealized Image of Space and Imperial Power

• *Space and Administration*. Synoptic lists are found in Roaf 1974: 149 and Calmeyer 1982 107; on the meaning of *dahyu* in the royal inscriptions, see especially Cameron 1973, whose conclusions have been universally accepted; cf. most recently Lecoq 1990a.

• *Subjugation and Collaboration*. See especially Nylander 1979 and Root 1979.

• *The Empire and the Known World: Representations and Realities*. *Eskhatiai* of the Empire: Briant 1984b: 64–65; the interpretation of *būmi* as ‘Empire’ comes from Herrenschmidt 1976: 43–65; this interpretation has been challenged by Frye 1977: 75–78. Periplus of Sataspes: Desanges 1978: 29–33 and recently Colin 1990. Circular schema of representations of the world: first proposed by Goukowsky (1978: 222–24), repeated (with minor modifications) by Herrenschmidt 1980c and Calmeyer 1982. Space and religious concepts: the hypothesis is proposed by Shahbazi 1983, on which see the reservations of Calmeyer 1983a: 199–203. These images of peoples subject to the Great King may be compared to monuments from the Roman period, in particular the *simulacra gentium* of Aphrodisias of Caria (R. R. R. Smith, *JRS* 78 [1988]: 50–77; cf. p. 77: “It seems clear that in the Sebasteion the selection of outlandish peoples was meant to stand as a visual account of the extent of the Augustan empire, and by the sheer number and impressive unfamiliarity of the names, to suggest that it is coterminous with the ends of the earth”); among the numerous studies of the Assyrian depictions, cf. in particular Calmeyer 1983a: 181–90; much thoughtful material is also found in Liverani 1990: 33–102.

• *Center and Periphery: ‘Aryan of Aryan Stock.’* Persians, Medes, and Iranians: the word *Arya*: see various articles by Gnoli (1983, 1988a, and 1990) that deny any existence of a concept of “Iran” in the Achaemenid period; cf. also the articles “Arya” (Bailey) and “Aryans” (Schmitt) in *Enclr* II (1988); more recently, Lamberterie 1989; Schmitt 1991c; and Skalmowski 1993, 1995. On the place and role of the Iranian peoples in the country lists, see in particular Herrenschmidt 1976: 59–61 and Calmeyer 1982: 135–39 (cf. also pp. 164–66; 1983a: 220–21 and 1987b: 141); the former writes, for example: “The non-Persian Iranians are subject to the Persians like the others, pay tribute, furnish soldiers; but they have an advantage on the other peoples by reason of their Iranian origins”; according to the latter, six countries always listed together (Parthia, Aria, Bactriana, Sogdiana, Khwarezm, Drangiana) represent historical *Aryanē* (p. 138); on the various proposed interpretations, see the analyses of Calmeyer 1983a: 194–214.

• *Center and Periphery: Persia and the Empire*. See many analyses by Herrenschmidt (1976, 1977, 1980a, 1980b, 1980c), in which the author presents the hypothesis of a “Persian kingdom” formally distinct from the concept of Empire (*būmi*); this interpretation has been challenged by Frye 1977 and Schmitt 1978b; cf. also Gschnitzer 1988 (p. 989 n. 12 quoting *DPh* in particular), who suggests a very tempting chronological rearrangement of the inscriptions; but we know the difficulties involved in dating these texts precisely: the proposed method (p. 101 n. 18, based on the countries listed) does not really work (cf. Vallat 1986: 282); see also his reflections (pp. 99–101) on *DPe*. On the administrative situation in Persia during the time of Darius (a problem also mentioned by Gschnitzer, p. 114 and n. 37), see chap. 11. According to Herrenschmidt (1976: 61), the

place of the Medes shows that “the rapidity and importance of his [Darius’s] conquests extended the reach of his power so far that there were not enough Persians qualified for political, administrative, and military leadership. They thus had to turn to the Medes”; this interpretation has been criticized by Vogelsang 1986: 131–35, who throws in relief the exceptional position of the Persian country [cf. also Tuplin 1994].

4. Images and Realities: The King among His Peoples

• *Peoples and Gifts: An Imperial Festival at Persepolis?* The bibliography on this topic is huge. Here let us simply recall that the so-called New Year ceremony was reconstructed by Pope 1957 and Ghirshman 1957 (followed since then, much more systematically even to the point of caricature, by Fennelly 1980); on comparisons with Indian rites, see most recently Musche 1989 (coronation festivals). See now the very clear summary by Sancisi-Weerdenburg 1991b, where both a clear presentation of the sources and problems and a fascinating history of the hypothesis based on the reports of European travelers since the seventeenth century will be found (cf. also 1987 [ed.] and 1991a); I note only that she does not systematically use the sources that I analyze here, particularly in the last subsection, “Return to Persepolis”; see also Calmeyer 1979b: 156–57 and 1986: 77–79 (where the passages of Theopompus and Aelian are cited), as well as Root 1979 (278–79: on the hypothesis of the Now Ruz; 236–40: unity of the whole composition, taking into account the central location of the audience relief). M. Root and P. Calmeyer both insist on a timeless, nonspecific analysis of the reliefs (whatever that is). But we must remain open to the hypothesis of an imperial festival, not completely excluded by M. Root (p. 157) and more definitely indicated by H. Sancisi-Weerdenburg: “It is clear that no Nowruz is attested for the Achaemenid period. This, however, is not proof that it did not exist at that time” (1991b: 201). As for the proposed timing of royal visits to Persepolis (summer), I note simply that Darius came to Persepolis, where he died (Ctesias §19) in November 486 (on the date, Stolper 1992a and Zawadski 1992), which provides confirmation—if any were needed—that the Great King frequently stayed at Persepolis throughout the year, in accordance with the official cultic calendar (confirmation of this point is now found in Koch 1993a: 61–91, esp. pp. 88–89); on the parades described by Xenophon, Herodotus, and Quintus Curtius, cf. the synoptic comparison prepared by Calmeyer 1974: 51–54 and 1986: 79–82; on the relationship between Xerxes and the Persepolis depictions, see especially Sancisi-Weerdenburg 1980: 184–216.

• *The Nomadic King.* I have treated this problem at length in Briant 1988c; additional references to ancient texts and modern studies are found there (cf. also Briant 1991c: 233 and n. 34); on Aelian, *VH* XIX.41, cf. Briant 1992b; entries of Cyrus and Alexander into Babylon, cf. Kuhrt 1990b; on the gifts of Persian peasants, cf. Briant 1993c. Many interesting analyses are also found in the work of Koch 1993a: 61–91, which uses the Persepolis tablets, including many unpublished ones; it turns out that the information drawn from the tablets does not completely agree with the claims of the ancient authors on the chronology of the annual visits of the court to this or that capital; while the sojourns at Susa and Persepolis are amply attested, the same cannot be said for the visits to Babylon and Ecbatana: cf. pp. 89–90. [Migrations of Darius to the east of Iran: Giovinazzo 1994b.]

• *The Return to Persepolis via Babylon.* The embassies received by Alexander are also described by Arrian VII.14.6, 15.4–5; 19.1–2 (the author admits some doubts about the reality of some of them) and by Justin XII.13. On Pliny VI.30.119–20, see also Dilleman 1962: 168–70, 245 (cf. RTP 453).

5. Images and Realities: The Imperial Festivals

• *The Large Army of Xerxes.* The interpretation presented here has already been published in preliminary form (Briant 1990a: 81 n. 20; cf. Briant 1988b: 175); since then, I have learned that Burn (1984: 470), without working it out, offered a similar observation (the levying of ethnic contingents relates to “considerations of royal prestige”); he nevertheless thinks (cf. also p. 324) that

these contingents, though they did not actually fight, accompanied Xerxes to Attica; he argues for this based on the fact that Artabazus exercised command over the army that accompanied Xerxes to the Hellespont (Herodotus VIII.126◊), recalling that at Doriscus Artabazus is called the chief of the Parthians and Chorasmians (VII.66◊). But it is precisely this style of argument that appears questionable to me because it assumes that Artabazus retained the command of the Parthians and Chorasmians, who do not appear in any battle. I am rather inclined to believe that, for one thing, the Doriscus contingents (which need not be more than small squads, purely representative of their peoples) returned to Asia after the parade, and for another, the Persian chieftains were then integrated into the organizational chart of the elite troops as "commanders of thousands and myriads of men" (VII.81◊). Some may also have soon gotten their civil authority back: thus, Herodotus calls Artayctes, who at Doriscus "commanded" the Moschians and the Tibareni (VII.78◊), governor of Sestos in Hellespont at this time (IX.115); in fact, he still had that job in 479–478 (VII.33; IX.115–18), and there is no sure evidence that he actually participated in the march to Athens. I note finally that Armayor (1978: 6–7) also thinks that it was a parade, but he adds that Herodotus's description comes from a Greek model that has no relation to Persian reality—a conclusion that seems excessive to me, even if the memory of the parade really did take on additions and exaggerations; cf. especially Josephus, *Ag. Ap.* I.172–73◊; quoting Choerilus of Samos, Josephus even assumes that the Jews also sent a contingent, whose clothing and general appearance were no less surprising than those of the contingents described by Herodotus; what is most interesting is that the citation of Choerilus (who wrote toward the end of the fifth century) shows that the composition of the army had been reworked by tradition, because he lists the inhabitants of the Solymanian hills (assimilated to Jews by Josephus), an ethnonym not found in Herodotus. On the grand army of Xerxes, see also chapter 13. [On this point at least—nonparticipation in battle of the ethnic contingents listed by Herodotus—I find myself in agreement with Barkworth 1992.]

• *From Artaxerxes III to Ptolemy II.* On the Isocrates passage, cf. Meiggs 1972: 433–34; on the transportation of tribute, cf. the scene on the Darius Vase and the remarks of Villanueva and Puig 1989: 289–96; and, regarding bags (containing the Athenian tribute), the judiciously proposed comparisons of Bernard and Rapin 1980: 20 n. 3. *Pompê* of Philadelphia: the quotations are taken from F. Dumand, "Fête et propagande à Alexandrie sous les Lagides," in *La Fête, pratique et discours*, Paris (1981): 18, 21, 24–25; on Persian borrowings (tent), cf. Lavagne 1988: 96–99 and Perrin 1990.

6. Royal Table and Royal Paradise: Exaltation of the Center and Appropriation of Space

• *On the Royal Table.* Cf. Briant 1989b and 1993c; on the paradise, cf. RTP 453–56, Fauth 1979, and Stronach 1989a; for the Assyrian period: Oppenheim 1965; Albenda 1974; Wiseman 1983a; see also Lackenbacher 1990: 91–96 ("Canaux, vergers et jardins") [I note in passing that the text of Aelian (*Anim.* VII.1) on the oxen of the paradise at Susa gives strength to the interpretation of Cardascia (1951: 132 n. 1) on the existence of norias in Achaemenid Babylon (on this, see now Stevenson 1992, esp. pp. 48–51, although unaware of the Aelian text)]; on the ideological function of the royal gardens in pharaonic Egypt (appropriation of the known world), cf. Beaux 1990: 314–17; on Cotys, cf. Briant 1991c: 232–35; on Alcibiades, cf. Briant 1985b: 59; Alexander: Pliny VIII.44 is discussed by Bodson (1991: 132–33); the author thinks that the connection between Alexander and Aristotle (made explicit by Pliny) must be reviewed, which seems reasonable; meanwhile, I do not believe that we can simply use Pliny's passage to show the impact of the Macedonian conquest on the development of the natural sciences in Europe; the principal goal of the conqueror seems to me to be consistent with the (Near Eastern) model of the paradise, which, after all, he probably knew about before 334 (cf. my discussion of this point in Briant 1991c: 230–36). Gardens of Versailles: quote from J.-M. Apostolidès, *Le Roi-machine: Spectacle et politique au temps de Louis XIV*, Paris (1981): 136–37.

Representations of Royalty and Monarchic Ideology

1. Sources and Problems

• *The Variety of Evidence: Complementary and Specific.* On the relationship between Classical sources and the reliefs, cf. the relevant critical remarks of Calmeyer 1979b. A large number of fragmentary objects (gate decorations, precious stones, jewelry, etc.) have been found at Persepolis that originally must have been ornaments on the reliefs: Schmidt 1957: 70–80; colors at Persepolis: Tilia 1978: 31–68; Krefter 1989: 131–32 (and pl. I in color, with Calmeyer's brief comment in AMI 9 [1989]); at Susa: Stève 1974: 144–45; in the palace of Artaxerxes II at Susa, fragments of a painted frieze showing a line of donor peoples has been found, similar to those sculpted at Persepolis: Boucharlat-Labrousse 1979: 67–68 (cf. photos in Briant 1992d: 50); wall paintings in an Armenian apadana from the Achaemenid period: cf. Summers 1993: 94; reconstructions of the tablet that decorated the *Stoa Poikilē* in Athens in Pausanias's time: C. Robert, *Die Marathonschlacht in der Poikilē*, Halle, 1895 (cf. Briant 1992d: 148–49). Persian tapestries decorated with "woven figures": Athenaeus V.179b; cf. IV.138c; images of monsters and griffins in Persian style: Athenaeus XI.477d; cf. Dumas 1985: 293; high Persian garments in color (*poikilmata*): Aelian, *Anim.* 5.22; Pazyryk carpets: see good color photos in Gryzanov 1969: 132–35; some motifs on carpets found at Pazyryk have nearly identical correspondences at Persepolis: Tilia 1978: 49–52 (see now Lerner 1991). Plutarch's text on Themistocles (*Them.* 29.4): some translators (cf. *Vies de Plutarque*, II, CUF, Paris [1961]: 135) understand *poikila strōmata* as 'historiated carpets', but the primary sense of *poikilos* remains 'variegated' (e.g., Ps.-Arist., *Oecon.* II.1.2, with the remarks of Descat 1990b: 86–87). Evidence of Philostratus: cf. the appropriate critical remarks of Bigwood 1978b: 41 and n. 37; the *Alexander Romance* is quoted from the edition by G. Bounoure and B. Serret (Paris: Les Belles Lettres, 1992); we may remark on this passage that it also contains a reference (entirely imaginary, in my opinion) to a painting of Xerxes (II.15.8). On the distortions introduced by travel accounts, cf. Sancisi-Weerdenburg 1991a–b, who studied particularly striking examples, and the documents in Sancisi-Weerdenburg (ed.) 1987c. Semiramis: see Bigwood 1978b: 41–43. On Herodotus IV.88–89, cf. Hölscher 1973: 35–37. Among the errors (or approximations) of the ancient authors, let us mention also that Ctesias (§15) placed Darius's tomb "on the mountain with two peaks," i.e., at Behistun (cf. Balcer 1972b: 117–18). Diffusion of Persian images ("perseries") in the Greek world, cf. especially the painstaking study by Miller 1985 (also Miller 1989 on the adoption/adaptation of objects from the Achaemenid court [parasols] in Athenian high society); on the *himation* (garment) of Denys the Elder, cf. Jacobsthal 1938 (whom I follow despite Robertson 1939) and the remarks of Childs 1978: 80; on the Greek use of Achaemenid motifs on the Acropolis (a hotly debated issue), see Lawrence 1951 and most recently Root 1985 (who has edited a book [still unpublished] on this question); on the references to Persepolis in the Classical-period text, cf. the appropriate remarks of Cameron 1973: 56. Darius vase (fig. 13, p. 204): Villanueva and Puig 1989 (with prior bibliography) and, most recently, Ghiron and Bistagne 1992–93.

• *Center and Periphery.* On this theme, see the stimulating reflections of Root 1991, as well as the remarks and analyses of Jacobs 1987: 52–58 (but I do not share the views expressed on pp. 15–23); audience scene on a shield on Alexander's sarcophagus: Cabelmann 1984: 68 and von Graeve 1987; pictures of Sassanian hunts: Harper 1986; Assyrian hunts: Magen 1986: 29ff.; absence of reference to the hunter-king in the inscriptions: see my remarks in RTP 389–91 and, since then, Schmitt 1988: 29. The hypothesis of exact identity between the hunting scenes on the

"Greco-Persian" stelas and hunting scenes formerly present (?) in the royal residences is developed in particular by Cremer 1984 (based on Classical texts), but I think it is better to be cautious about proof in this matter; the immutable, fixed, and timeless character of Achaemenid court art has quite specifically been stressed by M. Root and P. Calmeyer in many articles (with the regional exception analyzed in Calmeyer 1992a: 16), on court art and royal propaganda in different media, and on the relationship between the "Court style" of stamps and monumental art, cf. in particular Garrison 1988: 383–93 and Garrison 1992; on the propagandistic program systematically developed on the royal coinage, cf. Stronach 1989b.

2. The Prince in His Own Mirror

- *Darius at Naqš-e Rostam.* Description of the façade of the royal tombs: Schmidt 1970: 79ff.; Root 1979: 72–76 and 162–81; see also Houtkamp 1991: 24–25 and 38–39 (fire altars). The translation of *DNB* is taken from Herrenschmidt 1985: 134; the third part (here §14b) poses major translation problems; the discovery of the Aramaic version in the Behistun papyrus from Elephantine allowed Sims and Williams (1981) to resolve a significant number of difficulties; the translation of the last sentence is adopted from Hinz 1988.

- *The Victorious King and the King of Justice.* Bow, royal insignia: RTP 374–75; perhaps awarded to the king at his enthronement: Briant 1991a: 8.

- *Text and Image.* The different poses of the king on the coins are graphically presented by Vanden Berghé 1987: 146–47, and by Stronach 1989b: 260 (here fig. 17, p. 214). Artaxerxes' seal: cf. Porada 1979: 88–89 (fig. 46); combat with a Saka: cf. Porada 1979: 86 n. 68; king against Greek warrior: *ibid.*, 89, fig. 47; seal of Kuraš of Anšan (PFS *93): e.g., Bollweg 1988 and Garrison 1992: 3–7; Aršāma's seal: drawing in Moorey 1978: 149 fig. 8, where a drawing of the Oxus cylinder will also be found (fig. 7).

3. The King in Majesty

- *The Statue of Darius.* I return to the articles published in *JA* 260/3–4 (1972) and *CDAFI* 4 (1974); see also chap. 12/1 below for the Egyptian context; *DAE* 70: cf. Fleischer 1983 and Roaf 1979: 72; the authenticity of the inscription on the statue of Darius (Herodotus) is put in doubt (not without good reason) by Schmitt 1988: 30–32; on the symbolism of the colors of Darius III's robe, cf. Dumézil 1985; on the statue of Xerxes mentioned by Plutarch, cf. the remarks of Calmeyer 1979b: 60 and n. 51; we may also note the statue carved in honor of Artystone [Darius's favorite wife] according to Herodotus VII.69. On the statue of Darius and especially on residual traces of Achaemenid statuary (including at Susa), see also Spycket 1981: 394–401; and Harper, Aruz, Tallon (eds.) 1992 = French edition 1994: 219–21 (fragment of a royal head from Susa) [[and Traunecker 1995 on a "Perso-Egyptian" head in the Strasbourg Museum]].

- *Iconography from Persepolis.* On the audience relief found in the Persepolis Treasury, cf. Tilia 1977: 69–74, and chap. 14/1, with the notes (Artaxerxes I at Persepolis).

- *The King on His Throne.* *Diphros* of Xerxes, cf. Miller 1985: 110–11 (war booty); Frost (1973: 118–19) tries to show, based on Dinon, that the translation 'throne' is incorrect; but his proof is inconclusive, since it is clear that the word *diphros* designated not only footstools but also seats (cf. in particular Herodotus III.146, where the word seems to be used as a synonym for *thronos*: III.144); it is thus not impossible (contrary to Frost's conclusion) that Xerxes sat on his gold *diphros* (cf. Plutarch, *Them.* 13.1); Alexander and the royal Achaemenid throne: cf. Calmeyer 1973: 137–46; on the Achaemenid throne, cf. Jamzadeh 1991.

- *The Royal Audience.* The texts are given and analyzed by Gabelmann 1984: 7–21; role of the *hazarapatiš*: cf. texts and commentaries in Briant 1994e: 291–98, and chapter 7/2 below; problem of the *proskynesis*: see Bickerman 1963 who, with others (cf. Frye 1972a), considers the *proskynesis* to be precisely the rite shown on the audience reliefs; disagreeing, Gabelmann 1984: 15–16, 88–95 (though the author unfortunately shows no awareness of Bickerman's article); I note in passing that in some Mari tablets there is a hierarchy among ambassadors, with some of them

exempt from *proskynesis* and others having to bow three or two times: cf. J. M. Durand, *NABU* 1990/1, no. 24.

- *Royal Horses and Chariots*. Cf. RTP 374–75; Calmeyer 1974; also Stamatou 1989.
- *The Royal Hero*. Root 1979: 118–22 (seals) and 303–8 (the interpretation followed here); Garrison 1988 and 1992; also Porada 1979: 82–85, Boardman 1970a: 30–37, Bivar 1970, and Stro-nach 1989b: 272.

4. The Good Warrior

- *A Tall and Handsome King*. On the (supposed) length of Darius's arms, see also the nickname *Makrocheir*, which Pollux interprets as 'grasping power from afar' (Schmitt, *Enclr*, s.v. "Artaxerxes I"); it is thus not certain whether Strabo has confused Darius I and Artaxerxes I. Dynastic competitions: cf. chapters 14/1, 14/6, 15/2, 17/1. Garments of the king and Ahura-Mazda at Persepolis: Tilia 1972: 41ff.; colors: Widengren 1968: 179–80 and Dumézil 1985. Hairpieces (cf. Miller 1985: 283–85): all the iconographic evidence shows the care with which the Persepolis sculptors delineated beards and moustaches: Tilia 1972: 39.

- *The Commander-in-Chief: Representations and Realities*. See the accurate reflections of Widengren (1968: 179) regarding Darius III: "The battle lost, he fled, for his duty was not to fight, but simply to survive to rule. It would be wrong to view this as cowardice, which it absolutely was not. In the *Mahābhārata*, Yudisthira, a model king, does not participate in combat; he is content to supervise and direct it"—to be read with both the critical and the assenting remarks of Nylander 1993: 150–51; on the importance of the theme of the victorious campaign in the first regnal year among the pharaohs, cf. Zaccagnini 1990: 39.

- *Darius III in Battle: An Agonistic Perspective on Royalty*. I repeat here some earlier reflections (RTP 373 n. 113); on the *Mosaic of Naples*, cf. especially Nylander 1982, 1983, and 1993.

- *The Hunter-King*. Cf. Briant 1991c (where I tried to collect the documentation without claiming exhaustiveness), and below, chapter 7/6. The seal showing the king's combat with a griffin is discussed by Hill 1923 (also Briant 1991c: 220; photo in Briant 1992d: 102–3).

5. The King, the Earth, and the Water

- *The Good Gardener*. On Xenophon's text, see RTP: 176–88, 455–56; on the paradise, cf. *ibid.*, 451–56 and Fauth 1979; see chap. 11/5 and the index, s.v., and Pomeroy 1994: 237–54 (following Briant and Fauth); paradise scenes on the *Daseylium* stamps: Kaptan-Bayburtluoglu 1990; work scenes: the cylinder seal (in the Louvre) is reproduced on the back cover of RTP and in Briant 1992d: 103; a photograph of the Tarsus coin is found in Franke-Hirmer 1966: 124 and no. 194 [cf. also Casabonne 1995b n. 6]; the relationship between the two documents was judiciously proposed by Sancisi-Weerdenburg 1990: 266.

- *Xerxes and the Plane (or Sycamore) Tree*. On the texts offered, see a few preliminary remarks in RTP 447–48 and 456; see also Eddy 1961: 27–30. Stamps: PTS 24–25; king before the tree of life: Menant 1878: 71; cf. SXe (with the critical remarks of Schmitt 1981: 26–32); such scenes are also common on Babylonian seals of the Achaemenid period: Legrain 1925: 43; cf. also Delaporte 1909 no. 633. In every case, the tree is a palm tree: cf. the remarks of Schmidt 1957: 8; Porada (1979: 85) offers the hypothesis that the theme could have been borrowed from Egypt by Darius (the seal is supposed to have come from Egypt: Yoyotte 1952); on this theme, cf. also Garrison 1992: 19–20; but the theme of the palm tree seems instead to emerge from the Babylonian inventory, later reintegrated into Persian thought (cf. Strabo XVI.1.14).

- *The Plane (Sycamore) Tree and the Golden Vine of the Great King*. The texts on the Golden Vine are collected by Jacobsthal 1927: 102–11; cf. also R. Vallois, *L'architecture hellénique et hellénistique à Délos*, Paris (1944): 290–98, 427.

- *The Rainmaker and Master of the Storm*. *Tiṣṭryā* and *Mithra*: cf. the recent articles by Panaino 1986 and 1988 (without referring to Classical texts), and his edition of the *Yasht* dedicated

to this god (Panaino 1990; volume 2 is in press); see already Bidez and Cumont 1938: 115 n. 3, 124–27; my note in Briant 1994f: 61 n. 30 [Mithra?] must now be corrected. After this discussion was written, I became aware of Calmeyer 1989 [1991], who also, with even more documentation, proposes identifying Tištryā as lying behind Polyaeus's Apollo. On the theme of rain and storm, cf. also Widengren 1968: 75–77, 264–67, 349–50; Nicolaus of Damascus's text on Cyrus: cf. the remarks of Binder 1964: 25.

6. Between Men and Gods

It is not my intention in the pages that follow to treat Persian religion *in extenso* or to offer solutions to all of the pending problems. Such an enterprise—which exceeds my competence—requires an entire book. Here, my topic is centered primarily on the religious component of Achaemenid monarchic ideology, even if I am led here and there to delve into the file on this or that deity. I have made great use of the following works: Rapp 1865; Clemen 1929a–b; Duschesne-Guillemin 1952 (cf. also 1972); Widengren 1968; and Boyce 1982—while of course many specific studies will be cited where appropriate. Cf. also chapter 2/9 above, where the innovative articles of J. Kellens are cited (in the research notes). [Ahn's 1992 book reached me too late for me to be able to incorporate his analyses and discussions, but at first sight he seems to me to lay too much weight on the later Avestan texts.] Let us remark at the outset that no building at Persepolis is identifiable as a temple (cf. Bouchardat 1984: 130–32); the interpretation of Darius's *tachara* as 'sanctuary' offered by Fennelly (1980: 143–47) smacks of fiction; I remain equally cautious about the proposal of Roaf (1974: 96), repeated by Moorey (1979: 221), suggesting that the live animals carried by servants on some Persepolis reliefs were intended for sacrifice (on these reliefs, cf. the remarks of Sancisi-Weerdenburg 1993c). Herodotus (I.131) and Strabo (XV.3.13) tell us that the Persians erected neither statues (*agalma*: Strabo) nor altars (*bōmos*: Strabo, Herodotus) nor temples (*naos*: Herodotus) to their gods but sacrificed in the open air on high places (cf. also Polyaeus VII.11.32 analyzed above). If this information is correct, research into Persian sanctuaries becomes even more difficult, since they did not give rise to construction. It is true that Herodotus may be referring to popular religion—the oldest stratum of Persian beliefs (cf. Briant 1984a: 103–4); later documents (fourth century) seem to indicate, however, that these regulations did not last the entire time of the Achaemenid Empire (cf. the order given by Artaxerxes II: chapter 15/8 below); the clearest text (but just as problematic!) is a fragment of Dinon (*FGrH* 690 F28): in repeating the prohibition evoked by Herodotus and Strabo, Dinon adds that the Persians erected statues only in honor of Fire and Water. A final remark: the specific example of Anāhita (discussed on p. 253) reminds us of the general problem of the constituent elements of Achaemenid monarchic ideology, which I cannot treat fully here (it would require a specialized work). Disagreeing with the Indo-European interpretation (frequently offered by Benveniste, Dumézil, and even Widengren), Gnoli (1974) has strongly emphasized the Mesopotamian and Babylonian borrowings; Root (1979) has introduced the significance of the Near Eastern iconographic repertory in royal Achaemenid art, but at the same time she rightly stresses that these are not simply borrowings and copies but elements reinterpreted in the framework of a new and original concept (cf. also the reflections of Kuhrt 1984: 159 and Calmeyer 1994, and chaps. 15/8 and 16/10 in this volume).

• *Royal Prayers*. See especially the articles of C. Herrenschildt (1977, 1985, and 1990a–b), which I have used extensively; nondivine character of Persian royalty: cf., e.g., Calmeyer 1981; on the "trifunctional" prayer of Darius in *DPd*, cf. Benveniste 1938b: 538–43 and Dumézil 1986: 617–21; on the relationship between private and public cults, cf. already the remarks of Gnoli 1974: 181 and Herrenschildt 1991: 14–16.

• *Official Religion*. Xenophon's Cyrus and the sacrifices: cf. Sancisi-Weerdenburg 1980: 184–216, 1985; also Eddy 1961: 53–54 (but some of his interpretations are moot); the existence of an official cultic calendar (which I deduce from Ctesias §19) is fully confirmed by Koch's (1993a: 86–89) analysis of the Persepolis tablets. Gods and cults in the Persepolis tablets: see the specialist

studies by H. Koch (1977, 1987a, and 1991); cult of natural forces: Rapp 1865: 75–77; cult of the mountains and waters in the Persepolis tablets: Koch 1977: 96–100, 1991: 93–95, with my remarks in Briant 1994f: 48, 61 (also p. 47 n. 8 on hydromancy among the Persians according to Strabo XVI.2.39). On the rite of purification of the army, cf. Masson 1950. Achaemenid legacies in Hellenistic Persia: cf. Wiesehöfer 1991a and 1994.

- *The King, the Sacrifices, and the Magi*. Mentions of *magi* in the tablets: Koch 1977: 156–58; the Dascylium stela was published by Macridy 1913: 348–52 and has frequently been discussed since then (cf. Nollé 1992: 93–96); another fairly similar scene (altar base found near Kayseri, described in chapter 16/6 here): cf. Bittel 1952.

- *Sacrifices and Banquets*. On Strabo XV.3.14–15, cf. Benveniste 1964: 53–58; sacrifice scenes on seals and sealings, see the documents collected and interpreted by Moorey 1979; the seals affixed to Treasury tablets with cult and religious scenes are described by Schmidt 1957: 9–10. Postsacrificial banquet: see also the text of Nicolaus of Damascus, *FCrH* 90 F66.41. Sacrifices and banquet presided over by Peucestes at Persepolis: cf. RTP 80 n. 4 and, since then, Calmeyer 1982: 185–86 (followed by Wiesehöfer 1991a: 130).

- *The King and the Cult of Ahura-Mazda*. Boyce, *EncInr.*, s.v.; Ahura-Mazda in the Classical texts: Rapp 1865: 47–53; in the Persepolis tablets: Koch 1977: 81–85; *lan* sacrifice: Koch 1977: 129–41, 1987a: 241–45, and 1991: 89–91; Persepolis seals: Schmidt 1957: 8–9.

- *The King and the Worship of Fire*. On the Fire in the Classical texts, cf. Rapp 1865: 73–74 (with the important remarks of Benveniste 1964: 53–58 on the terms *pyraithoi* and *pyraithēia* in Strabo XV.3.15); titles in the Persepolis tablets: Koch 1977: 159–70 (but, as Benveniste 1964: 57 stresses, *athravan* is simply “the generic and archaic term for priest, with no connection with fire”); Darius at Naqš-i Rostam: Root 1979: 177–79 and Jamzadeh 1991: 95–97; representations of fire altars, cf. Houtkamp 1991; fire altars on the Treasury tablets: Schmidt 1957: 9–10; Zarathustrā’s seal: Bordreuil 1986a, no. 136 (fig. 33b, p. 244 here); extinguishing the Fire at the death of a king: Briant 1991a: 2. [Contrary to the hypotheses developed by Pitschikjan 1992, the Bactrian temple at Takht-i Sangin (whose construction he places solidly in the Achaemenid period: p. 35) is probably not a Fire temple but a sanctuary dedicated to the cult of the deified Oxus River (Bernard 1994a), so that any comparison with the very doubtful “Fire temples” of Susa or Persepolis is based on circular reasoning (cf. Bernard, p. 96 n. 51). Pitschikjan’s article has spawned another, by H. Koch (Koch 1993c [1995]); after a very skeptical survey of the archaeological literature on Achaemenid-period Fire temples, Koch also rejects Pitschikjan’s interpretation; she proposes an architectural connection between the building of Takht-i Sangin and the Persepolis Treasury and suggests rather surprisingly that the “temple” could have been the headquarters of “a high officer, or even a satrap of the Achaemenids,” which would have been occupied in the third century by a Seleucid satrap (p. 186).]

- *The King, Mithra, and the Sun*. The Classical texts on the Sun are collected by Jacobs 1991; cf. the important study of Rapp 1865: 53–60. Mithra and the horse sacrifice (in this volume, chapter 2/9 on the sacrifices around Cyrus’s tomb). We should note a very interesting coin from fourth-century Samaria with a very unusual scene in which an unidentified person confronts a horse (CS 58; fig. 61e, p. 715 here): cf. Meshorer and Qedar 1991: 23 and 55 (a theme apparently absent from the seal impressions at Wadi ed-Daliyeh: cf. the annotated list prepared by Leith 1990: 475–76). Relationship between the Sun and Mithra: cf. the study of Gnoli 1979; *Yasht* to Mithra: Gershevitch 1967 and Benveniste 1960; Hvarira: Koch 1977: 94–95; drunkenness of the king at the Mithra festival: the hypothesis of *haoma* [an intoxicating beverage?] is offered by Bowman 1970: 8 (cf. already in this sense Eddy 1961: 55, and my remarks in Briant 1994f: 47 n. 7); on the *persique*, L. Séchan (*La danse grecque antique*, Paris [1930]: 100–101) is unfortunately highly condensed, and he does not cite the Dinon text; M. H. Delavaud-Roux is also silent about this in *Les Danses armées en Grèce antique*, Aix-en-Provence (1993).

• *The Cult of Anāhita.* I have drawn much profit from the clear remarks in Moorey 1979, where drawings of the two stamps described in the text are found; however, I will not conceal the fact that this cultic interpretation has always suffered several difficulties, brought out by Brosius 1991: 190–93 (whose conclusion is opposite to Moorey's); for the Oxus ring, cf. Dalton pl. XVI (p. 103) and the commentaries on pp. 26–27 (the iconography of the goddess with the lions is found later at Hierapolis Bambyke: Oden 1977: 51–53); Anāhita and the dove: cf. Shepherd 1980, who cites the Achaemenid seals (pp. 56–58); see also the very suggestive article by Hanaway 1982; we may add the tale of the young Semiramis fed by doves, as it is presented by Diodorus (II.4.4–6); cf. also the story of Derketo in Ctesias (Strabo XVI.4.27), which was probably the inspiration for Diodorus (Oden 1977: 69–73); a dove also plays a role (in relation to Aphrodite [Astarte]) in the story of Aspasia in Aelian, VH XII.1. We may note that Isidore of Charax (*Parthian Stations* §1) mentions the existence of a sanctuary of Artemis founded by Darius in Babylon on the site of a royal residence (*basileia*; on the location, cf. Galikowski 1988: 82); Artemis was probably Anāhita disguised (even though in §6, speaking of Ecbatana, the author refers to her with the more usual name Anaitis [cf. Polybius X.27]); but it is difficult to be sure that this story actually relates to Darius I. Policy of Artaxerxes II: chapter 15/8.

Chapter 7

People and Life at Court

1. Sources and Problems

- *The Greek Authors and Persian Court Organization.* On the contribution of the Persepolis tablets, cf. most recently Koch 1993a, esp. pp. 61–91.
- *Tents and Palaces.* See especially Briant 1988c: 263–67; on the word *gangabas*, cf. Mancini 1987: 9–60, esp. 43–55 (= **ganzapa*; cf. Elam. *kanzabara*, Aram. *gnzbr'*); Odeon and Xerxes' tent; cf. most recently the (prudent) clarification of Miller 1985: 116–24; on Alexander's and Ptolemy's tents (*pompē*), cf. Lavagne 1988: 95–99 and Perrin 1990. Private apartments in Susa: the interpretation is worked out by Perrot 1981: 86–89; doubts in Amandry 1987: 161; Boucharlat (1990a: 153–57) stresses the weakness of the permanent settlement; settlement in the Persepolis plain: Tilia 1978: 73–91; Artaxerxes II's palace on the bank of the Shaur: CDAFI 10 (1979); bathing rooms at Persepolis: Tilia 1977: 74; military quarter at Persepolis: Schmidt 1953: 206–10 and 1975: 97–101; dishes: Schmidt 1957: 81–95; the word *katalyzeis* used by Diodorus (XVII.71.8) may imply that habitations were used only temporarily during the periodic stops of the central court: cf. for comparison Herodotus V.52 and Aelian, VH I.33; Alexander's banquet is evoked by Boucharlat 1990b: 225 n. 1, in the wider context of the history of the Susa palace during the Hellenistic period. Royal furnishings in various cities of the Empire: cf. references in Briant 1988c: 267 n. 16.

2. Household Staff

- *The Chiliarch and the Audience Service.* On the hypotheses regarding the chiliarch, I refer to my discussion in Briant 1994e: 291–98 (where the bibliographic references will be found). The words *gate* and *door*: cf. Vallat 1974b: 176; on the Darius Gate, cf. the precise description by Perrot and Ladiray 1974; on the terms *Porte* and *Sublime Porte* in the Ottoman Empire, cf. J. Deny and U. Heyd, *EnclIslam* I (1960): 859–60.
- *The Royal Guard: Immortals and Bodyguards.* On the guards portrayed on the bricks at Susa, cf. de Mecquenem 1947: 53–54, who also remarks that their garments differ noticeably from the descriptions in the Classical authors; on the word *Immortals* and its probable meaning in Persian, cf. the clarification by Gnoli 1981 and 1982.
- *Protocol and Security.* On the interpretations in Xenophon's *Hellenica*, cf. Santoro 1979, whose conclusions I accept.
- *Royal Meals and Protocol.* The taster (*progeustēs*) was called *edeatros* according to several grammarians; the texts are excerpted and discussed by J. Kalléris, *Les Anciens Macedoniens: Études linguistique et historique*, I (Athens, 1954): 162–69 (who concludes, rather too dogmatically, that the career was Macedonian and not borrowed from the Persian court: cf. Briant 1994e: 284 n. 2).
- *The Great King's Water and Wine.* See my article on this specific topic: Briant 1994f; we may remark on this passage that the cupbearer was required to pour the drops into his left hand, considered by Cyrus (Xenophon) "as more exposed to attack than the right" (*Cyr.* VIII.4.3).
- *The Court Physicians.* The recent article by Huysse (1990) is very unclear and adds nothing on this question; on the chronological problems posed by Ctesias's biography, see the recent clarification by Eck 1990; the Democedes romance has been interpreted with panache and humor by Griffiths 1987: this clearly was a very popular story (cf. Athenaeus XII.522a–d); Egyptian physicians and their specialties: cf., e.g., P. Ghalioungui, *BIFAO* (Bulletin du Centenaire) (1980): 11–18; Udjahorresnet, cf. Posener 1936: 21–26; on leprosy and related diseases in the ancient Near

East, cf. M. Stol, "Leprosy: New Light from Greek Sources," *JEOL* 30 (1987-88): 22-31; according to Dandamaev 1992c: 19, tablets from the archives of the barber Kuṣur-Ēa show that several barbers had to take care of people struck by leprosy [but Stolper 1994c and Joannès 1995a show that this represents incorrect readings]. We know far more of the diagnostics and treatments practiced by the physicians of the Assyrian court: see particularly Parpola 1983: 230-38; one text seems to allude to the fear of being poisoned by a prescription: *ibid.*, 131.

• *The Magi, Their Herbs, and Their Stones.* Cf. Bidez and Cunont 1938 II: 106-30, 167-74, 188-91; see also Delatte 1936 and Bidez 1935; on *kardamum* ('cardamom'), cf. Sancisi-Weerdenburg 1993d and 1995; on the Sages at the Neo-Assyrian court, cf. Parpola 1983: xiv-xxi.

3. The Eunuchs

• *Bibliography.* There is no specialized monograph, but in Guyot (1980: 80-91) there are several pages on the eunuchs at the Achaemenid court, as well as an entry on each eunuch named in the ancient sources (pp. 181ff.); also several pages in Miller 1985: 280-82 and Schnoll 1987: 115-18; by way of comparison, one might also consult the articles "Eunuque" in *DictBib.* II (1899): 2044 and "Khasi" in *EnclIslam* IV (1978): 1118-24, as well as "Homosexualität" in *RIA* 4: 459ff. (J. Bottéro).

• *On the Perfidy of Eunuchs.* On homosexuality among the Persians and an overly simple text of Herodotus (I.135: Persian borrowing of Greek morals), cf. B. Sergent, *L'Homosexualité initiatique dans l'Europe ancienne*, Paris (1986): 192-98, who collects the Classical texts (add *Sext. Emp. Pyrrh.* I.152); see also Petit 1961: 62-63 and notes; on the eunuch Bagoas, lover of Darius III and then Alexander, cf. Badian 1958; on the Egyptian legend of Bagoas, cf. Schwartz 1948; Bagoas as a generic name: cf. Maas 1921: 458-60.

• *Xenophon and the Paradigm of the Faithful Minister.* On the *Dea Syra*, I have closely followed Benveniste 1939 (on the work of [Lucian], cf. the commentary of Oden 1977, esp. pp. 36-40 on Kombabos); Ptah-hotep's inscription: Posener 1986; I do not think anyone has previously attempted a comparison with Xenophon; on the theme of the faithful minister in the romanticized framework of the Achaemenid court, cf. also the curious Qumran text published by Eisenman and Wise 1992: 99-103 (I owe the reference to Amelie Kuhrt).

• *Eunuchism and Emasculation.* Caria: cf. Maas 1921: 458; on the education of royal children, we may note that Quintus Curtius notes the presence "of the king's children and their governesses" (*et quae educabant eos*) in Darius III's procession (III.3.23); this could just as well refer to the king's daughter's (*mārat šarri*) nursemaid, named in a Babylonian tablet dated to Xerxes' accession year (Graziani 1986, no. 8; let us emphasize that this nurse's name, Artim, could be Iranian or Anatolian [cf. Artimas] and that in Babylonian the king's daughter's name is transcribed Itahšah, or Ratahšah; Dandamaev 1992a: no. 51, 252, and 265).

• *Title and Duties.* Batis: sources collected by Berve II, no. 209, and Guyot 1980, no. 23, who call him a eunuch (cf. also Schnoll 1987: 115-16, who is rather imprudent in definitively excluding all sources that call him "king"); Josephus gives his name in the form Babemesis: Marcus (*Josephus* 6, Loeb. Class. Lib. 6 [1966]: 468 note c) reconstructs an Iranian name, Bagamisa, but coins unambiguously confirm the name Batis (cf. M. Delcor, *VT* I [1951]: 118-19). On beardless persons at Persepolis, cf. the apposite remarks of Yamauchi 1980: 138-39 (repeated in Yamauchi 1990: 260-64); we may also note that elsewhere Ctesias records the story of the totally effeminized Sardanapalus, who shaved his beard as close as possible (Athenaeus XII.528f); on this theme, cf. also Chiasson 1984; on the beard/beardless problem in Assyrian reliefs, see the very careful interpretations of Reade 1972 (who still postulates the presence of many eunuchs on the reliefs); on the Assyriological discussions, summaries are found in Oppenheim 1973 (who, while obviously acknowledging the existence of eunuchs, rejects the systematic interpretation of *ša reši* as eunuchs), Tadmor 1983 (who does not want to take a position on the basic problem [cf. n. 10]), Garelli 1974: 276-77 (quotation from p. 277), who opposes Kinnier Wilson's interpretation (1972: viii-ix, 46ff.);

generally speaking, the theory of a large number of eunuchs at the Assyrian court seems to have fewer supporters these days (cf. the long critical note of J. A. Brinkman and S. Dalley, ZA 78 [1978]: 85 n. 27), but it remains hardy nonetheless: the theory of "eunuchization" of the Assyrian court has been revived by J. M. Durand in *Dossiers d'archéologie* 171 (1992): 6; Parpola (esp. 1983: 20–21), on the other hand, continues to think that the *ša rēši* has to be considered a eunuch and nothing else; this is based in part on Classical sources (including Ctesias), or at least he includes references to them; but the connection he suggests between the two corpora overlooks the interpretive problems examined here. On the Hebrew word *saris*, see Yamauchi 1990: 261–62; in the hieroglyphic inscriptions, cf. Posener 1936: 118–19 (court title, "probably borrowed from Aramaic"); cf. also Ray's (1988: 273 n. 47) remark: there is nothing to suggest the translation of *saris* as 'eunuch'; the author suggests understanding it as equivalent to *pehā*; and Vergote 1959: 40–42; to my knowledge, Levy (1940) was the first and only person to use the evidence of the Wadi Hammamât inscriptions. Let us note, finally, that the term *ša rēš šarri* is also found in Achaemenid-period Babylonian tablets as an attribute of high persons (including the one sometimes translated 'the king's principal', who was entrusted with overseeing the administration of the sanctuary of the Eanna): there is no reason to think these persons were eunuchs (cf. Brinkman 1968: 309–11; Oppenheim 1973: 329; see several attestations of *LÚ rēš šarri* in Dandamaev 1992a: 220, s.v.).

4. The Women's Side

Thanks to the Maria Brosius's generosity, I have been able to consult her unpublished monograph (1991), which discusses the Persepolis tablets at great length along with the Classical texts; I will cite it only occasionally and not discuss some of its interpretations, because the author is currently working on a publication version.

- *Wives and Concubines.* The title *dukšiš* is given to Irtašduna (Artystone), one of Darius's wives, in the tablet Fort. 6764 (cf. also PF 1795); the word must not be translated 'my daughter' (as Cameron 1942 does); it must include the meaning 'princess', as shown by Benveniste 1966: 43–50; but, probably under the influence of Greek vocabulary, he is also inclined to interpret it as 'queen', which is wrong: for one thing, the title *dukšiš* is known for several high-ranking women (wives, sisters, and probably daughters of the king) in the Fortification tablets (PF 823; Q 812; PFa 31; see Brosius 1991: 29–32); to speak of 'queens' (Königinnen) in regard to Darius's wives, as Koch 1994 regularly does, risks leading us into error: later on we will return to the place of the king's mother at court and the political role of the princesses (chapter 13/2: Darius, Xerxes, and Atossa). On the slaves of the king (*arad šarri*) and the palace (*arad ekalli*), cf. Dandamaev 1984b: 561–64 and 565–67. On depictions of women in Achaemenid art, cf. the preliminary remarks of Spycket 1980 and the annotated collection of documents in Brosius 1991, chapter 5; we may add to the category of female statuettes (cf. Amiet 1972: 173–80 and Cooney 1965) the recent discoveries in the "Achaemenid residence" of Abū Qubūr north of Sippar: Spycket 1991; additionally, the Olympia relief erected by Lysippus in honor of Polydamas (who had just fought the Immortals at Darius II's court: Pausanias II.5) showed, according to the original editors, the king seated on his throne along with four women (cf. *Historische und philologische Aufsätze E. Curtius* [Berlin, 1884]: 240–42; drawing p. 240; cf. most recently Gabelmann 1984: 80–82); but the highly damaged condition of the sculpture allows serious doubt about the interpretation; in the drawing, hardly anything is visible except for the king on his throne and the bottoms of several robes, but are they women's—or do they instead belong to the Immortals referred to directly by the sculptor?

- *The Great King's 360 Concubines.* On the figure 360 in tributes, see the reflections of Asheri 1991: 49–53 (followed here) and Nylander 1993: 157 n. 62; the doubts raised by Schwartz (1986: 273) on Herakleides' text do not strike me as justified; on the other hand, the author does a good job of showing the interpenetration of the various versions in Josephus and the book of Esther.

- *Cloistered Women? The Myth of the Harem.* On the social activities of the princesses, cf. Brosius 1991: 91ff. The word *gynaikōnitis* is found in Diodorus's description of the oasis of

Ammon: "The second enclosure contains the court of the *gynaecium*, the dwellings of the children, women, and relatives, as well as the bodyguards of the overseers of the *gynaecium* . . ." (XVII.50.3); on the Egyptian vocabulary, cf. Ward 1983; on Mari, cf. Durand and Margueron 1980; Weidner's use of the term *harem* (1956: 261–62) has no semantic justification; letter (i.e., the private chancellery) of Atossa, cf. Briant 1992b; theme of the woman-warrior: in addition to Ctesias, cf. the curious text of Polyaeus VIII.60 (within a chapter dedicated to fighting women); Polyaeus introduces one Rhodogune, whose story is copied from Semiramis's (VIII.26), and the author concludes: "This is why the impression of the Persian royal seal shows Rhodogune with her hair hanging down and attached with a knot": this has no basis in fact (cf. Baldus 1987)! Women warriors in Iranian literature: Hanaway 1982. Seals and depictions of women: see especially Brosius 1991: 179–93 and Garrison 1988: 477–78 (Artystone) and 1992: 4–10.

5. At the Great King's Table

- *Service at the King's Table.* Polyaeus's text has not received a great deal of study (aside from a curious note signed L. L. in *Cf* 30 (1827): 370–74); D. Lewis (1987) deserves credit for recognizing its importance: the author is especially interested in comparisons with the tablets, without offering a detailed commentary on the passage; he rightly establishes a correspondence with a well-known inscription of Aššurnāširpal II (cf. Wiseman 1952 and Grayson 1991 no. 30); on the royal banquets and consumption of ostriches, see also Sancisi-Weerdenburg's note 1993c [on the same point for the Neo-Assyrian period, see Mallowan 1966, I: 119–21 and Joannès 1995: 186–88, and for the Achaemenid period, Bennett and Blakely 1989: 263]—and, by way of comparison, K. Wilson 1972: 32ff. (as well as Mattila 1990) and especially the remarkable study of Milano 1989; on this subject, see most recently Sancisi-Weerdenburg 1995. On Polyaeus's source (cf. Lewis 1987: 81 and n. 3): the reference to an inscription of Cyrus seems to confirm that Polyaeus acquired his information from a companion of Alexander (on epigraphic propaganda in Alexander's time, cf. *RTP* 389–91); on the use of the *marriš* in Polyaeus, cf. Bernard's note 1985b: 93–94; abundance of the table and "decadence" in the Greek authors: Briant 1989a; redistributions: cf. Briant 1989b and Sancisi-Weerdenburg 1989b; on the word *potibazis*, Xenophon's vocabulary (*Cyr.* VIII.1.9), and their relationship to Akkadian vocabulary, cf. esp. Eilers 1940: 64–81; see also Stolper 1985a: 57–58 (Wiseman 1983b: 85 n. 26 notes that the word *potibazis* is also found in the Nisa materials); on administrative aspects, see also Heltzer 1979, who uses a Babylonian tablet dated to the "month of Ayar [of the] first year of Darius, king of Babylon and king of the countries" [= D. Owen, *Mesopotamia* 1975, no. 33]; the text anticipates the delivery of dried apples and raisins to the cooks, with each of the 28 named cooks receiving a given quantity. On dairy products, cf. also *RTP* 349–50; raising waterfowl in Babylonia: Cardascia 1951: 173; on beer in Mesopotamia, cf. Stol 1994; on fish-farming in Babylonia (Neo-Babylonian and Achaemenid periods), cf. Dandamaev 1981b; tablets from Category J and the seals on them (including Kuraš of Anšan's: PFS 93): cf. Garrison 1992: 2–3. Distribution of Near Eastern arbutuses in the West Anatolian and Greek region: cf., e.g., Cousin and Deschamp 1889: 536–37; on the terebinth/pistachio tree, cf. Amigues 1995: 71–72.

- *Musicians, Dancers, and Artists.* For the preceding periods, cf. the entries *nārtu* (female musicians), *nāru* (male musicians), and *nārtutu* (music) in the CAD; I am strongly tempted to think that the pseudo-personal name Annaros in Ctesias (Athenaeus XII.530d) was formed on this Akkadian root—which would give even more sense to the popular story Ctesias heard in the Babylonia of his time. [M. Stolper reminds me, following Roth, *CSSH* 29 (1987): 740ff., that many Neo-Babylonian occurrences of SAL.NAR = *nārtu* mean not 'women musicians' but 'girls'; this remark does not formally invalidate the hypothesis I present here on the possible etymology of Annaros.] On Polydamas, cf. Gabelmann 1984: 80–82 and my remarks above.

- *Cups and Couches.* On Achaemenid dinnerware, cf. especially Amandry 1958a–b; Culican 1971; von Bothmer 1981; Moorey 1984, 1985, 1988: 82–89; also Miller 1985: 124–37; Gunter

1989: 22–30; Prömmner 1991; Miller 1993; Rozenberg 1993. On the reclining banquet and the special position of the king, cf. Dentzer 1982: 64–69; cf. also Lavagne 1988: 96–101 and Perrin 1990: 224–26 (the king is placed under an *ouraniskos*).

6. *The Royal Hunts*

Cf. Briant 1991c and 1993b, where more complete references will be found; cf. also pp. 230ff. above on royal hunt protocol; on hunting with nets, cf. Meuli 1975. It is likely that, as with the Assyrians, the hunters were accompanied by dogs: Xenophon mentions 'those in charge of the horses and the dogs' (*hippōn kay kynōn epimeletai*; *Cyr.* VIII.1.9); it is also possible that two Persepolis tablets (PF 1264–65) refer to hunting dogs (PF: 40). We especially have information on the breeding of dogs of war, such as those mentioned by Herodotus in Babylon (I.192: Indian dogs), and by Pliny (VIII.61) in Colophon and Cilicia (later period); but it does appear that these are the same dogs that were taken hunting (cf. Aelian, *VH* XIV.46), as Xenophon indicates in *On Hunting* (9.1; 10.1). On Darius III's pet dog, cf. Aelian, *Anim.* VI.25. On the dogs (statues) at Persepolis, cf. Kawami 1986: 260–63.

7. *Royal Pomp*

On the Greek concepts of royal *tryphē* (Achaemenid or Hellenistic), cf. Briant 1989a.

Chapter 8

The King's Men

Bibliography

This chapter constitutes a considerably expanded rewriting of analyses presented in preliminary form in Briant 1987a: 21–31 and Briant 1990a.

1. The Giving King

- *Bibliography.* See Sancisi-Weerdenburg 1988b and 1989b in particular. [Also van der Veen 1995 debating Gould 1991 on the story of Syloson.]
- *The King's Benefactors.* Cf. Wiesehöfer 1980, who reminds us (p. 8) that the likely etymology of the Iranian word (corresponding to *orosangae*) goes back to **varusanha-*, i.e., 'highly renowned'; register: cf. also Josephus, *Ant.* XI.248 (plagiarizing Esther).
- *The Royal Gifts.* See for comparison the article "Hiba" in *Enclslam* III² (1971): 353–60 (there are many similarities); on Herodotus IX.109, cf. Sancisi-Weerdenburg 1988b; the gift of robes of honor is also well known among the Incas: cf. J. V. Murra, "Cloth and Its Functions in the Inca State," *Amer. Anthropol.* 64 (1962): 710–28; on the importance of dress as social indicator for the Persians, cf. esp. Plutarch, *Mor.* 173c.3 and 565a; cf. also Sancisi-Weerdenburg 1983: 27–30 (on Herodotus IX.108–13); a hierarchy of gifts in relation to the value/weight of the object is well attested at the court of Hammurabi of Babylon: see the very interesting note Joannès 1989d (to which I return below in the research note to chap. 10/5, royal coinage); Masistios: Briant 1990a: 100; on Ctesias §22, could the "gold millstone" be, if not the same as, at least comparable to the *plinthos khryse* on which the royal counsellor stood, before receiving it as payment "if his counsel was judged good and useful" (cf. Aelian, *VH* XII.62, with the remark of Villanueva-Puig 1989: 293)?
- *Gifts and Honors: The Court Hierarchy.* On the king's table, cf. also chaps. 5/6 and 7/5; Ptolemaic court hierarchy and its probable Persian antecedents: cf. the (careful) discussion by Mooren 1977: 17ff.; on *philos*, cf. Wiesehöfer 1980: 11–14; titles and functions: cf. the very wide diffusion of the title "lance-bearer" (*ašṭebarriāna*) in the Babylonian tablets: Stolper 1985a: 55 and n. 12; king's relatives: cf. Benveniste 1966: 22–26, who on the *br byt*' of the Aramaic papyri writes: "Sons of the House' no longer applies to a single person, the crown prince, son of the king, but to a class of royal princes who probably had no immediate kinship with Darius II"; cf. also on this subject the analyses in Gauger 1977 (whose conclusions I do not follow in every respect) and the thoughts of Mooren 1977: 40–41.
- *Gifts and Redistribution of Wealth.* Gold phial of Demos, cf. Vickers 1984 and Sancisi-Weerdenburg 1989b: 134, as well as C. Gronatelli's interesting remarks in *Scienze dell'antichità* 2 (1988): 249–50; this document seems to indicate, as seems logical (cf. Xenophon, *Cyr.* VIII.2.8), that the royal gifts bore a distinguishing mark which in some cases (vessels) could be an inscription: cf. Nylander 1968: 124–27; Sancisi-Weerdenburg 1989b: 134, 142 and n. 14; Gunter and Jett 1992: 69–73. PT 4–5, cf. Hinz 1973: 75–76 (who offers a highly speculative narrative explanation) and Cameron PT 89–91 (but I doubt that the Parnaka listed in PT 4 is the high official found throughout Pt); land grants, cf. Briant 1985b; Sancisi-Weerdenburg 1989b and below, chapters 10/7 and 11/9; Satibarzanes: on the date see Briant 1994e: 309–10. Royal table and redistribution: Briant 1989b, Sancisi-Weerdenburg 1989b: 133–35; 1993e; and 1995; Aššurnaširpal's banquet: published in Wiseman 1952 (latest edition in Grayson 1991: 292–93); distribution of foodstuffs at the Neo-Assyrian court, cf. also Fales-Postgate 1992, no. 157. Quotation from J. Bottéro, *RIA*, s.v. *Mahlzeit*, 260.

2. Unequal Exchange

- *Gifts with Strings Attached.* In general, see M. Mauss, *Essai sur le don*, Paris 1923–25 (= *Sociologie et anthropologie*, 1968); on the Thucydides passage, cf. Mauss 1921, who compares the Thracian practice described by Xenophon, *Anab.* VII.2.35–38 and VII.3.21–34 (Seuthes festival); the Benveniste quotation comes from “Don et échange dans le vocabulaire indo-européen,” *Annales de Sociologie* 1948–49 (p. 7); cf. Briant 1982b: 88–94; on the royal banquet (*tykta*), cf. Sancisi-Weerdenburg 1980: 147–51 and 1989b: 132.

3. The King and His Faithful: The Rationale of the System

- *Faithful and bandaka.* On the Persian word and its connotations, see the articles “banda” (W. Eilers) and “bandaka” (C. Herrenschildt) in *EncIr* III: 682–85; on the belt, cf. Widengren 1968 who, here as elsewhere, insists without much support on the “feudal” character of Persian society; the importance of Xenophon’s passage on Orontas has been rightly stressed by Petit 1909: 148–49 (n. 161); right hand: cf. Sherwin-White 1978; rows of nobles at Persepolis: cf. Roaf 1983: 83–114; Trumpelmann 1983: 231–37, and 1988; Calmeyer 1991b.

- *Education and Ideological Integration.* See RTP 449–51; see also Widengren 1969: 82–86 and Knauth and Najamabadi 1975: 76–92, who also compare the rite of passage with the Lacedaemonian *kryptie* (on which, cf. the rich analyses of Vidal-Naquet 1983: 125–207 and 1989 who (p. 402) suggests lines of comparison with Iranian societies, following Davidson 1985: 81–87); on the *kardakes*, see the discussion by Knauth and Najamabadi 1975: 83–84; and the texts quoted by Segre, *Clara Rhodos* 9 (1938): 193–94 (n. 2); and Bosworth 1980a: 208 (we will return later to this military category, which poses many interpretive problems; cf. Index s.v. *kardakes*); on the diet and the identification of *terminthos* = pistachio nut, see Amigues 1995: 71–72 and Sancisi-Weerdenburg 1995. On *alētheia*, cf. also RTP 381–83, 449, and Sancisi-Weerdenburg forthcoming (2); and on the name *Artaioi* previously given to the Persians according to Herodotus (VII.61), cf. Pirart 1995. On the name Angares: I do not recall ever having seen any commentary on the Athenaeus passage presented in the text; I am tempted to offer the same hypothesis that I presented on Annaros (above, p. 921). On the role of the *magi* as preservers of memory, cf. also the hypotheses of Gershevitch 1969: 181, s.v. *piramasda* (“It would be a possible designation of priest who had learned to recite the largest number of hymns required”) and, on memory transmission, Cardona 1980: 282; in this context, some importance is sometimes accorded to Persepolis tablets that mention in such-and-such a year, Persian *puhu* “copied texts at Pittaman” (PF 871, 1137)—which would seem to imply that writing was widespread among the Persians. But such documents are not conclusive; in fact, they concern *kurtas* who were probably trained in the scribal craft, which does not imply extensive literary knowledge or direct access, for example, to royal inscriptions (cf. Cardona’s remarks 1980: 280 n. 6). Let us also recall that, according to Pausanias (V.27.5–6), in his time a *magus* sang the invocations in a foreign language in the Persian sanctuaries of Hierocaesarea and Hypaipa, reading them from a book (Robert 1976: 28–29). The last detail may imply a development toward writing down the songs that the *magi* had traditionally transmitted orally (cf. Briant 1985a: 192 n. 71 following Cumont); on the epithet Mnemon given to Artaxerxes II, cf. Schmitt, *EncIr*, s.v. Artaxerxes II (p. 656). A final remark on the youths: based on an erroneous (in my opinion) interpretation of Arrian IV.13.1 (Briant 1994e: 298–307), a hypothesis was developed by Kienast (1973) according to which the institution of royal pages (*basilikoi paides*) was borrowed from the Achaemenid court by Philip II. Since I wrote my article in *AchHist* VIII, I have learned that Clamer (1952) used the French word *page* for the persons who were in Ahasuerus’s service in Esther 6:1. But this translation is unwarranted; in any case, it is not clearly relevant to the thesis of the existence of “royal pages” at the Achaemenid court. For one thing, the Septuagint uses the word *diakōnos* (better translated ‘servant’ by L. C. L. Brenton, *The Septuagint Version: Greek and English* [1970]: 658–59); as for the Hebrew word *na‘ar* (pl. *ne‘arim*), it simply refers to a “group of young men, or youths, in the service of a patron” (Bordreuil 1992: 190); it thus expresses a hier-

archy based on both age and rank (cf. Bordreuil and Israel 1991–92); we find the same ambivalence in Greek *país* as well as Elamite *puhu* (on which cf. Hallock 1960: 93–94, and PFT: 38–39, 47, 746; also the remarks of Lewis 1994: 24, 26; and Giovinazzo 1994a–b, who translates it with ‘valet’). Although the word *page* in French or English renders the word used in Greek (*paides*) to designate the well-known Macedonian institution of “royal pages,” I see no need to modify my former conclusion; on the contrary, I restate that the institution of royal pages is inserted into a political context quite different from the context of the Achaemenid court (cf. on this exact point Briant 1994e: 302–7). Finally I will add that since this note was written, Kienast’s interpretation has been repeated by Borchhardt 1993c: analyzing a sculpted block of the *hérōon* of Limyra, he proposes (pp. 352–53) that we find portrayed there the corps of *basilikoi paides*—a Macedonian institution created, he claims, after an Achaemenid precedent; starting with this belief, Borchhardt then inappropriately overlays the texts about Macedonian pages onto the supposed Persian institution, claiming (as if to provide better backing for his Lycian interpretation) that the central institution had been adopted in “every court within the Persian Empire”; I think that, if my proof is recognized, it becomes more interesting to ask why so many people on the Limyra frieze (including those in the scene analyzed by Borchhardt: cf. fig. 54, p. 673) wear the low-brimmed hat (i.e., a Macedonian fashion).

4. The King and His Faithful: The Dynamic of the Contradictions

- *Birth and Royal Favor.* **azata* (‘nobility’): cf. F. de Blois 1985; the word has been found in an Aramaic document from Egypt (Benveniste 1954: 298–99); *anata* (‘noble’): cf. Harmatta, *Entretiens Hardt XXV* (1990): 106–7; on social distinctions, cf. Briant 1990a: 71–77, followed now by Calmeyer 1991b (who also uses the Persepolis reliefs)—as well as Stolper’s remark (1993: 10–11) on the Babylonian word *parastāmu*, which he tentatively suggests comparing with *prōtoi* (‘princes, aristocracy’).
- *Royal Favor and Social Mobility.* Cf. Sancisi-Weerdenburg’s reflections 1989a: 139; on Maraphii/Marappiyaš, cf. Benveniste 1958a: 56–57.
- *Persian Aristocratic Houses.* On styles of greeting, see, from the point of view of comparative history, the recent work of Y. Carré, *Le Baiser sur la bouche au Moyen Âge: Rites, symboles, mentalités* (Paris, 1992); on the Athenaeus passage (IV.145f–146a), cf. the important suggestions by Eilers 1940: 73.

5. King and Satraps

- *Bibliography.* Lehmann-Haupt 1921; Petit 1990.
- *Family Strategies and Royal Control.* On the Pharnacids of Hellespontine Phrygia, cf. Lewis 1977: 52 and Hornblower 1982: 145ff.; for other examples, cf. Briant 1987a: 25–28; Aspathines: cf. Cameron PTT 103 and Schmitt 1957, seal no. 14; see Lewis 1985: 115.
- *The Satrap and the Armed Forces.* This is a much-debated problem, on which see the overview by Tuplin 1987b, esp. pp. 228–32 (who rightly judges that the satrap had to count on the aid of the garrison commanders); Petit’s position (1990: 109–19) appears to me insufficiently qualified (diminution of satrapal powers under Darius; separation between civil and military powers); it relies heavily on reconstructions of Xenophon (cf. RTP 176–88); *karanos*: cf. Petit 1983 and 1990: 133–44 (once again too schematic, on the presumed date [Darius] of the institution: pp. 143–44); on the chain of command at Elephantine, cf. most recently Wiesehöfer 1991b (and on *rab haylā*, Lipiński 1975: 176; in a Greek-Aramaic bilingual from Farasa, the word is rendered by Greek *stratēgos*); the Babylonian tablet VS 6.128 is translated and annotated by Joannès 1982: 24–25 and 1990b: 187 n. 60 (with some changes); cf. also Van Driel 1989: 207 (who makes Guzānu the *šakin tēmi* of Babylon); on the dependency of the *gazophylax* (‘guardian of the treasury’) with regard to the central authority, cf. the Hellenistic texts quoted in RTP 211; satrap and coinage: cf. my remarks in Briant 1989c: 328–30 [and the brief considerations of Mildenberg 1993: 58–60].

- *Royal Inspectors*. Cf. Hirsch 1985a: 101–34.
- *Satrapal Courts and the Royal Court*. A few summary pages appear in Petit 1990: 147–52; and an attempt at synthesis in Borchhardt 1990; on the paradise (a theme often broached in the course of this work), cf. index s.v.; Dascylium bullas: Kaptan-Bayburtluoglu 1990. Satrapal audiences: Gabelmann 1984: 35–61 (Lycian documents); on the throne of Cyrus the Younger, we may mention that a throne of Achaemenid type (but certainly made locally) was found in the excavations of Samaria (Stern 1982b: 143–44); further, Nehemiah 3:7 refers to “men of Gibeon and Mizpah (belonging) to the throne (*lʾkisseʾ*) of the governor of ‘Trans-Euphrates’”; whether this concerns land connected directly to the governor (Briant 1985b: 67) or a satrapal residence (Lemaire 1990: 39–40), we must stress that the “throne” symbolizes satrapal power itself (comparable with a Babylonian formula: Joannès 1982: 28 n. 1).

6. *The King and His Faithful: The Persians, the Greeks, and the Others*

An entry on each of the Greeks listed below will be found in Hofstetter 1978; cf. also Wiesehöfer 1980 and Herman 1987: 106–15 (on the *dōreai* of the Achaemenid and Hellenistic periods; summary table, pp. 109–10). The story of Themistocles at the court of the Great King and the jealousy shown toward him by the Persian aristocrats has a parallel (or a copy) in the story of Daniel at the court of Nebuchadnezzar (Daniel 6); another imaginative “good story” on the theme of Themistocles at the court of the Great King: Diodorus XI.57 (marriage and judgment of Themistocles). The list of satraps compiled in the text was drawn up using information from the Persepolis tablets by recognizing with Hinz (1970: 430) and many others that the person who provides a sealed authorization (*halmi*) to travelers is in fact the satrap of the place of departure (cf. Briant 1991b: 70 n. 13 and 1992c). On this point, see Koch 1993a: 5–48, where analyses will be found dealing with nine provinces of the Iranian Plateau as well as India and Syria; summary table, p. 47; list of the satraps of Babylonia and Trans-Euphrates: Stolper 1989b: 290–91. [I note that my very tentative conclusion on the place of the Medes among the imperial political personnel (chap. 8/6, last sentence) agrees very closely with the position laid out by Tuplin 1994: 255–56.]

7. *Achaemenid Royalty and Persian Aristocracy*

- *Power and Kinship*. On Parnaka, see below, chap. 11; the distinguished place of Hystaspes, father of Darius, in Parthia-Hyrcania in 522 is deduced from DB §35 (cf. Koch 1993a: 33–34), information that seems to contradict Herodotus’s mention of Hystaspes “*hyparkhos* of Persia” (III.70); we may rightly suppose that the DB version is more accurate than Herodotus (whose mention probably comes from a version of the Founder Legend; cf. Nicolaus of Damascus, FGrH 90 F66.10: Cyrus makes his father Atradates the satrap of the Persians); on the status of Persia, cf. below, chap. 11/10. On the relatives of Darius and Xerxes in Herodotus’s catalog, cf. Burn 1984: 333–36; Megabates: Lewis 1985: 115; satraps from the royal family: Briant 1984b: 75–76.

Chapter 9

Territories, Communication, and Trade

• *Bibliography.* An up-to-date and virtually exhaustive bibliography is found in Briant 1991b and Graf 1993, 1994. The existence of these recent works (cf. also Wiesehöfer 1993: 350–51) leads me to limit the number of bibliographic references given here.

1. *The Network of Roads*

• *The Royal Roads.* On the PF (Category Q), see especially Koch 1986, 1993a [[and now Giovinnazzo 1994a–b]]; use of military historians to reconstruct the landscape (RTP 141–45) and itineraries: cf. Engels 1978 (to be used with extreme caution); Seibert 1985; and, on Xenophon's sources and method, Tuplin 1991b: 46–48 and Briant ed. 1995b; among the most useful works, although late and concerned solely with the central and eastern part of the Empire, is the *Mansiones Parthicae* of Isidore of Charax (ed. Schof), on which see Dillemann 1962, Khlopov 1977, Chaumont 1984, Walser 1985, and Galikowski 1988. Persepolis–Susā road: cf. Mostafavi 1960, Hallock 1977, Koch 1986, and Sumner 1986: 17, 28; also RTP 161–73 (use of Classical sources); Briant 1976 and 1988c (roads between the royal residences); on the Cossaeā road, cf. Briant 1976 and 1982b: 81ff.; the course of Herodotus's Sardis–Susā road continues to sustain long-fought problems: cf. Briant 1973: 49–53; Seibert 1985: 18–19; Graf 1993a; Chaumont 1986–87 (Matiene: region between Lake Urmia and the headwaters of the Little Zab); also Mutaḥian 1988 I: 113–18; route of Cyrus the Younger: see Cousin 1904; Manfredi 1986; Mutaḥian 1988 I: 119–21; [[and Müller 1994, Graf 1994: 173–80, Debord 1995; Syme 1995: 3–23 was actually not written recently]]; place-name Labirū (La'ir) in DAE 67: cf. Dandamaev 1993c.

• *Secondary Itineraries.* References in Briant 1976: 197 and 243–44 n. 52; 1991b: 74–75; Arrian, *Ind.* 43.3; cf. Tarn, CR 40 (1926): 13–15; Briant 1982b: 117–19, 129, 132; and now the arguments of Winnicki 191: 193–97; Esarhaddon, Cambyses, and the Arabs: Eph'al 1982: 137–42; Briant 1982b: 163–64.

• *Road Building and Maintenance.* *Hamaxitos*: Briant 1991b: 74; search for Achaemenid roads: Schmidt 1957: 20–21; Kleiss 1981; Mousavi 1989; to fill out the information, one might be tempted to use what the ancient authors wrote about Semiramis's road-building activities (Diodorus II.13.5; Polyænus VIII.26), but this is an uncertain method, despite the concurrence between Achaemenid achievements and the achievements legendarily attributed to Semiramis, on the problems posed by the vocabulary of some Persepolis tablets, cf. Briant 1991b: 73 n. 20. The figures regarding ancient China come from J. Needham, *Science and Civilisation in China* (Cambridge 1954): IV, 36 (the entire chapter, pp. 1–38, should be read).

• *Bridges and Bridge-Builders.* Bridge near Persepolis: Nichol 1970 (cf. Sumner 1986: 13–16); Pasargadae: Stronach 1978: 113–16; “bridge-builders” at Nippur: Stolper 1985a: 76 and 1992c: 76–77 (publication of tablets; the author notes, p. 74, that elsewhere the head of the “bridge workers” has the title “Head of the tolls at Opis[?]”); Mazzarino (1966: 78) stresses that, unlike the Greeks, the Persian engineers had some knowledge in this area; they had probably learned a great deal from their predecessors, as Parpola rightly stresses (1983: 245 and 295; he also notes that a tablet from the time of Darius mentions a bridge at Borsippa); on the bridge at Babylon, cf. Wiseman 1983b: 63–64. [[On Arrian V.7.3–5, see now Bosworth 1995: 219–27.]]

2. *Control of the Imperial Territory*

• *Satrapal Authorizations—Military Escorts—The Highway Patrol.* Cf. Briant 1991b: 70–73 and Briant 1992c (The *Letters* of Themistocles are edited, translated, and annotated by Doenges

1981); on Alcibiades' flight and his route, cf. Robert 1980: 257–307; on the journeys of Ezra and Nehemiah, cf. Williamson 1991: 54–61 (a reading of the biblical texts in the light of PF). The Arad ostraca were published by Naveh 1981; cf. also Aharoni 1981 and Temerev 1980 (studies of rations, compared with those known from Elephantine); see also the Beer-sheba ostraca: Naveh 1973 and 1979 (hundreds of Aramaic ostraca of the same type and date [fourth century] as those from Beer-sheba have recently come on the antiquities market originating from unknown sites in Idumea; some are in the course of publication: André Lemaire, pers. comm.); meanwhile, there is some doubt about the interpretation of the post as a station on a road (see on this subject the reflections in Tuplin 1987c: 187 and de Salles 1991a: 221–22); on one of Herodotus's anecdotes on the highway patrol (V.35), cf. Foucault 1967a.

- *Royal Mail and Royal Couriers*. *Aggareion*: Rostowzew 1909; also D. Sperber, "Angaria in Rabbinic Literature," *AC 38/1* (1969): 162–68, and Herrenschildt 1993a–b; *astandēs*: Chantraine *DELG*, s.v., and most recently Happ 1992; *piradaziš*: PFT 42; Q 1809: the tablet is published and commented on by Lewis 1980; visual signals in the Empire: Aschof 1977a; also P. Girard, "Les signaux lumineux dans l'Agamenon d'Eschyle," *REA 11* (1909): 289–95; in Judea: Lemaire 1977: 113–14; at Mari, G. Dossin, "Signaux lumineux au pays de Mari," *RA 34* (1938): 175–76; Egyptian post in the Seleucid period: Preisigke 1907: 241–77, and Van't Dack 1962: 338–41 thinks that the spread of the system to Egypt goes back to the Persians, including pyro-telegraphy. It is clear that in all these areas the Persians themselves borrowed much from their Assyrian predecessors. On the royal roads (*harrān šarri*), the relays and postal stages (*marditu*), and the express couriers (*kallē*) in the Neo-Assyrian kingdom, cf. esp. Weidner 1966, Wilson 1972: 57–58, Malbran-Labat 1982: 12–29, and *harrānu* and *marditu* in CAD; *harrān šarri* ['royal road'] passing very close to Nippur in the Achaemenid period: Zadok 1978: 286–87; but we may also go back much further in time, as is shown very instructively in M. Sigris's article "Les courriers de Lagaš" in *Fragmenta Historiae Elamicae* (Paris, 1966): 51–63, where the administrative system described (assignments, couriers, tablets, archives) resembles very closely what can be discerned in the Category Q tablets; by way of comparison, see also the synthesis by A. D. Crown, "Tidings and instructions: How news travelled in the Ancient Near East," *JESHO 17/3* (1974): 244–71, as well as the article *Barid* in *Enc-Islam I²* (1961): 1077–78 (D. Sourdel); on Diodorus XIX.17.6–7, see the doubts expressed on this tradition by Aschof 1977b (with the comments of Graf 1994: 168).

- *Lines of Communication and Strategy*. *Via militaris* in Quintus Curtius: cf. Briant 1984b: 66–68; stores of water: Briant 1982b: 164 and Briant 1984b: 67; cf. also more generally Briant 1986c. [Baslez 1995.]

- *The Gates of the Empire and the Network of Garrisons*. On the Cilician and Syrian Gates, cf. the discussion in Mutaftian 1988 1.125–29; see also Bosworth 1980a: 198–204; Manfredi 1986: 74–77; Hammond 1994; Caspian Gates: Bosworth 1980a: 333–41 [bibliography in Bernard 1994b: 483 n. 11]; Gates at the entrance to Persia: cf. discussion and bibliography in RTP 161–73; on the garrisons, see Tuplin 1987c and 1991b: 54–57; site of Thapsacus: cf. Briant 1991b: 77 and 78 n. 37 with Lendle 1988 and Manfredi 1991; Deve Hüyük: Moorey 1975 and 1980 (with the critical remarks of Mazzone 1991–92: 66–67, who stresses that the history of the site extends throughout the *longue durée* from the time of Iron I). The limits of using the military historians to reconstruct the network of permanent Achaemenid garrisons are well laid out by Tuplin 1987c: 209–10 (on the Cilician Gates and the Persian Gates); cf. also Tuplin 1991b: 56 (who notes that many garrisons could have been located in the flat country and remarks that the lack of supplies and difficulty in crossing rivers were sufficient obstacles in normal times in the face of a strong enemy).

- *The King's Service*. Xenophon (*Cyr.* VIII.6.17) and Herodotus (VIII.98) state that the royal couriers traveled day and night; this information is sometimes compared with a passage in the Behistun inscription: "What was said to them [subjects], day or night, they did" (DB §§19–20); but Darius's statement rests on a very different foundation than a simple roadway metaphor: "These lines implicitly say that the Achaemenid king offers his empire the same protection as some deities:

he is alert and issues orders in the night to forestall the threats of the Druj [*drauga*] and to conserve Order [*arta*] during the time when it is invisible" (Kellens 1995: 25). For what it's worth, the highly ideologized concept transmitted by the Greek authors of the dominion exercised by the Great King thanks to the roads and the postal service can be compared with what (it seems) Confucius says of the Empire of the Chou High Kings: "The radiation of virtue is faster than the transmission of [imperial] orders by stages and couriers (*chih yu*)"; J. Needham, *Science and Civilisation in China* (Cambridge, 1971) vol. IV, part 3: 35, from whom I take the quotation, observes that "this remark [of Confucius] would have been made, it is curious to note, at a time exactly contemporary with the functioning of the Persian Royal Road, ca. 495."

3. Lines of Communication and Trade

- *Commercial Arteries?* I touched on this problem briefly in Briant 1991b: 79–82. I largely withdraw my earlier remarks; cf. also Wiesehöfer 1982 (with my remark in Briant 1991b: 81 n. 44); Xenophon's *Anabasis*: the hypothesis about the phrase *polis oikoumenē* ("autonomous" city) was developed by Geysels 1974, but to me it seems to be only a partial explanation; the problem was touched on in several presentations at the international conference *Dans le pas des Dix-Mille: Peuples et pays du Proche-Orient vus par un Grec* (Toulouse, 2–3 February 1995) = Briant 1995b.

- *Land Routes and Water Routes* See Briant 1991b: 75–79, where many additional bibliographical references will be found.

- *The Euphrates Boats.* De Graeve 1981: 5–93; also Fales 1983 (Neo-Assyrian period) and Frame 1986 (Neo-Babylonian– and Achaemenid-period contracts); in the Eanna's archives: Joannès 1982: 198–202, 252–53 (cf. 328–29); and the very interesting texts published by Beaulieu 1993a (use of waterways and location of boats to transport divine statues and personnel, shortly before the arrival of Cyrus's Persian troops in 539); networks of canals in Babylonia: Cocquerillat 1968, 1981, 1983; Joannès 1982: 117; Zadok 1978 (who stresses [p. 275 n. 53] among other things the importance of Nippur in the trade network between Babylonia and Elam); "commander of the boatmen": Joannès 1982: 10; on the price of boats in Babylonia, cf. Dubberstein 1939: 40, Joannès 1982: 328–29, and Giovinazzo 1983: 563–65; on the *kelek*, cf. also *EncIslam*², s.v.

- *Transport on the Tigris.* Cf. Briant 1986b (p. 21 n. 15 on Opis).

- *From Babylonia to Elam.* Briant 1986b; Joannès 1990a: 183; Babylonian tablets: Dandamaev 1972b (but on *Camb.* 143, cf. Greenfield 1991: 183); on the Diodorus passage (XVII.77.4), cf. Bosworth 1987: 545–46.

- *From the Mediterranean to Babylonia.* Briant 1991b: 77–79 (with Joannès's [1995: 182–83] remarks on the difficulties of navigation at certain places and at certain times of the year); on the *Letter of Themistocles*, cf. Briant 1992c; importance of the site of Myriandrus: Kestemont 1983: 66; 1985: 135–37; Babylonian merchants in Syria (Neirab tablets): see overviews in Oelsner 1989 and Cagni 1990; on the Tell Tawilan tablet (Dalley 1984), cf. the critical remarks of Joannès 1987 (Dalley's reply 1990: 79–80); caravan commerce and importance of the site of Gaza: Briant 1982b: 142–45, 150–52 and Eph'al 1982: 195–96; Charter of Susa and presumed role of the Ionians: Mazzarino 1966: 76–77; Aginis: Högemann 1985: 153 (= Dur-Yakin); Neo-Babylonian tablets and commerce between Phoenicia and Babylonia: see the illuminating article of Oppenheim 1967, as well as Joannès 1982: 235–60; on regional trade in the eastern Aegean in the Achaemenid period, cf. Salles 1991a, 1994; cf. also Salles 1991b (on Elayi 1988).

- *The Inland Waterways of Egypt: The Nile between the Mediterranean and the Red Sea?* The pharaoh Sesostris could be none other than Darius (cf. chap. 12/1); boatbuilding: cf. DAE 61 [AP 26] (commentaries by Grelot 1970b; 1972: 296–95; and Whitehead 1974: 119–54); river commerce: Milik 1967: 551–57; Memphis: Segal 1983: 8–9; 41–42; DAE 109: Porten 1988b; connections between Memphis and the Nile, cf. Goyon 1971. Naucratis: cf. Yoyotte 1993; on Darius's canal between the Nile and the Red Sea, see chap. 12/1; on the surveys in the area of Tell el-Maskhuta, cf. Holladay 1982 and 1992, and Paice 1986–87; in a more recent article, the same

author (Paice 1993) suggests that from the Saite period to the Ptolemaic period the canal linked Red Sea trade (incense for example) with the Nile Valley; on Dorginarti, cf. Heidorn 1991 and especially 1992.

• *Customs Collection and Trade.* On the Pseudo-Aristotle passage (assessment of a tenth: *dekātē kata ton nomon*), cf. Andréadès 1929: 5–8; Van Groningen 1933: 194; tolls at Opis: Joannès 1982: 10 and Stolper 1992c: 74 n. 22; at Babylon: Joannès 1990a 186 and n. 56 (translated text); on Asia Minor, we may note the tax mentioned by Pseudo-Aristotle, who notes the existence of sales taxes (*agoraiā telē*; i.e., assessments) in the satrapal economy (*Oecon.* II.1.4); we have available mostly indirect but nevertheless revealing documents, for instance those by which a satrap (or perhaps also a town) exempts this or that community from import-export duties: see esp. the Greco-Lycian inscription published by Bousquet 1987: Pixodarus abandons the *dekātē tēs emporias* to the cities of the Xanthus Valley—that is, 10% assessed on commercial trade; let us also mention that in the now-famous Roman regulation of customs in Asia, reference is made to earlier documents going back at least to the Attalids (cf. *BE* 1976 no. 595 and 1991 no. 480); we may also note that the regulation of the tax farm in the territory of Colophon (third century B.C.) also refers to royal regulations (*BE* 1991, no. 476); although it is impossible to prove, it would not be unexpected if such regulations go back to the Achaemenid period (on these continuities, cf. chap. 10/1 with the notes). The new Aramaic document (announced in Porten 1990: 17) is published by Porten and Yardeni 1993 (I heartily thank the authors for providing me with an advance copy): see also Yardeni 1994 and Lipiński 1994; I think the *natron* came from traditional areas west of the Delta, such as the Wadi el-Natroun (cf. Aufrère, Golvin, Goyon 1994: 167–72): in this case, it must be recognized that the customs post was also located at the outlet of the western Delta (I may also note in passing that companies of garrison soldiers in Memphis paid part of the taxes due to the royal Treasury in the form of “eastern *natron*”: Segal 1983: 5, 40). On Saite customs, cf. Posener 1947; the Saite regulations were in essence repeated by Nectanebo I, at least at Naucratis: Lichtheim 1980: 86–89 [and Yoyotte’s remark 1994: 683]. On caravan commerce and royal assessments, I follow the compelling interpretation of Eph’al 1982: 206–10 (despite the reservations of Graf 1990a: 138–39). Perhaps it would make sense at this point also to recall some hypotheses on caravan commerce in Egypt in the Persian period: according to Aufrère, Golvin, and Goyon 1994: 83, “The oases seem to benefit, beginning in the Persian period, from the introduction of new technology that simplified transportation, desert travel, and agriculture. The Persians introduced a new kind of ceramic travel container shaped like a cask with the opening on top, well adapted to a pack animal’s packsaddle. This kind of container was very popular among the general population, in the oasis and elsewhere. What we are referring to here is the *ciga*. Also, the Persians brought with them the camel, native to Bactria, which was harder than the donkey and allowed the crossing of much greater distances”; they also suppose (p. 148) that during his expedition against the oasis, Cambyses sought to “check Cyrene on the commercial level” (on this point, cf. also chap. 2/8); I will simply note in passing that the chronology of the diffusion of the so-called Bactrian camel in the Near East is a very complicated problem (cf., e.g., Briant 1982b: 221–22 and 1984b: 20) and that the date suggested for Egypt by these authors is but one suggestion among many (i.e., the introduction of the camel to Egypt could just as well go back to the Assyrian period).

Chapter 10

Royal Assessments and Tribute

1. Sources and Problems

• *Diachrony and Synchrony.* Hellenistic sources and Achaemenid institutions: besides RTP *passim*, see, e.g., Préaux 1954; Descat 1985; Briant 1993b and 1994e; also the treatments of Hellenistic decrees by Wörle (1977: 60; 1978: 223–24; 1979: 110–11; 1988: 458–65) and the remarks by Savalli 1987 and de Gauthier 1989: 28–29. Study of the Babylonian tablets of the Hellenistic period offers comparable results: see Stolper 1989a, 1993 (esp. 68, 84–85: first attestation of a Babylonian calque, *azdakarri*, on Old Persian **azdakara* in a tablet dated to Antigonos the One-Eyed) and 1994a. The *Oeconomica* of Pseudo-Aristotle: van Groningen 1933; Rostovtzeff 1941: 440–46 and 469–72; Altheim and Stiehl 1963: 137–49; Cracco Ruggini 1966–67; Thillet 1969; Corsaro 1980a; Descat 1990b.

2. Satrapies and Tributes

• *Nomes, Satrapies, and Peoples.* I will not list and discuss the entire bibliography that has been dedicated to Herodotus's text. Nor will I discuss here the geographical aspects— not that they are devoid of interest but simply because doing so would not result in sufficient depth of analysis of the system's operation and because discussion of the geographical issues presupposes extremely detailed analysis that would be out of place here (cf. Toynbee 1954; the book by Högemann 1992, received belatedly, has a very deceptive title [matching its content]). Generally speaking, the commentators have attempted to combine Herodotus's list with the lists and depictions of peoples found here and there on the walls, a method that does not stand up to analysis; the views of Kimball Armayor (1978a) are not devoid of interest, but the arguments are not always systematic (cf. my remarks in *AbIran* 3 [1980], no. 197). I would add that according to Pirart (1995: 65–68) the total of 20 satrapies (actually: *nomoi*) in Herodotus can be explained by Iranian mythological notions. Concerning the amounts of tribute and Herodotus's method, cf. Picard 1980: 70–72 and Descat's (1985) demonstration. The (hypothetical) list of satraps provided here is based in part on the "travel texts" of Persepolis, by postulating that the persons who granted safe-conducts (*halmi*) to travelers were in fact the satraps of the region; the suggestion goes back to Hinz 1970: 430 (cf. Briant 1991b: 70 n. 13), and it is amply worked out by Koch (1993a), where much valuable information will be found, taken (in part at least) from unpublished tablets; for the satraps of Babylonia-Trans-Euphrates, cf. Stolper 1989b: 290–91; meaning of *dahyu*: most recently, Lecoq 1990.

• *Setting the Amount of Tribute.* See Descat 1989a: 80–81; *kata to megethos*: Theopompus apud Athenaeus IV.145a (contributions for the king's Table); Diodorus uses a synonymous formulation: *kata dynamin* (IX.25.4: Artaphernes in Ionia in 492—compare Plutarch, *Aristides* 24.1: *kat'axian ekastōi kai dynamin*: tribute of Aristides; see also I.55.10: tribute obligations [gifts] imposed annually by Pharaoh Sesostris on the subject peoples of his empire, see also XVII.114.4: exceptional "contributions" imposed by Alexander on the cities of Babylonia to help pay for the expenses incurred by the funeral rites of Haephestion); cf. also Aelian, *VH* I.32 (*kata tēn hautou dynamin*: obligations laid on the simple Persian peasants [gifts to the king]), and Strabo XI.13.8 (*megethos kai dynamis tēs chōras*: tribute charges compared between Cappadocia and Armenia during the Persian period); applied to a specific region in a financial context, the word *dynamis* refers unambiguously to the region's ability to contribute: cf. Herodotus I.192. Measurement of tribute: suggestion by Descat 1985; cf. also Heltzer 1991 (who discussed the interpretation of the inscription *Syll.*³ 302 that Descat proposed in Ann Arbor in 1990 but did not retain in Descat 1994).

3. Gifts and Tribute

• *Herodotus's Viewpoint.* In this section I am bringing the discussion begun above in chap. 2/3 to its logical conclusion.

• *The Gifts of the Tribute-Paying Peoples.* Nile water: cf. Briant 1993c; on Arrian (III.4.3), cf. Leclant 1930: 246–47; functions of the Persepolis treasury: Cahill 1983 (though I largely agree with the critical remarks of Tuplin 1987b: 139); crowns: cf. Briant 1988c: 261 n. 9 (for the Seleucid period, cf. Bickerman 1938: 112).

• *From Persepolis to Babylon.* “Gifts” in Babylonian financial documents: cf. Dandamaev 1979: 102–6 (translated texts), Cardascia 1951: 98–99 (translated as ‘redevances’ [rent, taxes]; see also pp. v–vi, 69–70, 125, etc., on the polysemy of the word *nadānu* ‘give, remit’); on *nidintu šarri* ‘royal gift’ (*dōrea basilikē*), cf. Stolper 1992b: 126; according to Giovinazzo 1989b, the Akkadian word should be transcribed *nadānu* in the Persepolis tablets, rather than *nutanuyāš* (‘breeding place’). Exemption for Persia: I abandon the interpretation presented in RTP 344, for reasons relating to the interpretation of the Persian nobility’s relations with Bardiya and then with Darius as developed above in chap. 2/10 (Bardiya and the Persian aristocracy); see also Wiesehöfer 1989: 183–84.

• *The Gifts of the Persian Peasants.* On Aelian’s texts, cf. Briant 1988c: 256–57 and 1993c: 62–63; Calmeyer (1979b: 57) sees in these texts a reflection of the donor reliefs at Persepolis; Tuplin (1987b: 143) proposes (carefully) comparing them with certain Persepolis tablets that record payments made for royal provisions (Category J); cf. *PFT*, pp. 24–25 and Garrison forthcoming; gifts made by the king to the Persians: cf. Xenophon, *Cyr.* VIII.3.3–8, etc.; cf. also Plutarch, *Alex.* 69.1; *Mor.* 246a–b; and Nicolaus of Damascus, *FGrH* 90 F77.43 (gifts to pregnant Persian women).

4. Tributes, Gifts, and Assessments

• *Taxes.* Royal taxes in the cities of Asia Minor: Hornblower 1982: 161–62; Corsaro 1985; Bousquet 1987 (*dekātē tēs emporias*); Wörle 1978: 223–24 (*apomoiia*; Achaemenid continuities) and 1979: 91–94 (epigraphic attestation of *kheironaxion*; Achaemenid precedents); the decree of Aigai has been published by Malay 1983; one of the problems posed by the Hellenistic decrees is that they generally refer to civic taxes, which are not necessarily the equivalent of royal taxes (they are often distinguished, when a town is under the authority of a king, by an expression such as “the taxes controlled [*kyrios*] by the town”). Taxes on the sale of slaves in Babylonia: I follow closely the explanation of Stolper 1989a. [On other potential Achaemenid-Seleucid financial continuities in Babylonia, cf. Rostovtzeff (1941: 470), who seems to suggest that the salt tax might go back to the Achaemenid period; but while this suggestion fits well into current historical perspectives (i.e., Hellenistic adaptations of Achaemenid states of affairs: cf. Stolper 1989a: and 1993; Kuhrt and Sherwin-White 1994), to my knowledge we have no unequivocal documentation of such a tax (we may simply note that *Ezra* 7:22 implies that stocks of salt were found in the royal storehouses; similarly, in the fortresses: RTP 21 n. 11; at most, we might find an indication in the gifts of salt sent to the king by the Egyptians: Arrian III.4.3).] We may note in passing that no tax on the sale of slaves (at least not in so many words) is listed by Pseudo-Aristotle; a Greek inscription from Caria (*BE* 1979, no. 466) is sometimes considered proof of its existence, at the end of the Achaemenid period or the beginning of the Hellenistic (cf. Hornblower 1982: 161), but the text does not require this interpretation (cf. the very tempting suggestions of Hahn 1985, that the inscription actually concerns a complete financial exemption [*ate[lē] einai*] except for the *phoroi basilikoi*, conceded to those of the slaves [hierodules according to Hahn] who look care of the tomb of a man named Skoranos, who [with his wife] had dedicated an estate to Apollo and Artemis); Corsaro 1985: 90 (followed by Gauthier 1991: 66) observes that, in the cities of Asia Minor, the only known taxes were not on the sale of slaves but on their labor (we may simply add that the Xanthus regulation provides that “those who are to be freed [*apeleutheroi*] will pay the god two drachmas”:

lines 18–20 of the Greek version; siculi in the Lycian version). As for the head-tax (*epikephalaion*) listed by Pseudo-Aristotle, it is known from the Hellenistic period (Bickerman 1938: 111; and now the in-depth consideration by Gauthier 1991 in the context of Greek towns), but we have no attestations from the Achaemenid period; however, we must cite a passage of Theocritus (apud Plutarch, *Mor.* 11a–b): one of the obligations that Alexander imposed on towns and peoples was a head-tax in silver; but the question is, to what extent was this a continuation or an innovation?

- *Mines.* Mines of Lampsacus: Polyaeus II.1.26; silver mines of Bactria: Ctesias, *Indica* 12; of India: *ibid.* and 5; Cilicia, Lebanon, Ionia, Cyprus: Oppenheim 1967; Joannès 1982: 255 (Ionian iron cost 8 or 9 times as much as Lebanese iron); Wadi Hammamât quarries: Posener 1936: 179–80; Goyon 1957: 1–9, 28–29, 128–30; Niriz workshops: PT 52 (with commentary by Cameron, *PTT* 166); Pythius: see Descat 1989b: 25–26; also Sekunda 1991: 119–21.

- *Corvée.* *Urāšu* system: Joannès 1989a: 151–59 (cf. also Stolper 1977: 254–59); *phoros leitourgikos*: RTP 106 (I note in passing, with Gauthier 1991: 56–58, that the tax known in the Greek towns from the exemption formula [*ateleia tou sōmatos*] has nothing to do with service at a sanctuary or temple); on Aelian, *Anim.* XV.26, cf. Briant 1988c: 259 (the late texts relative to the *agga-reion* imply the existence of taxes and corvées: Rostovtzeff 1909; cf. Mitchell 1976).

- *The Obligations of Hospitality.* See in general Briant 1988c. Aside from Herodotus's text, we have a striking description of hospitality customs in Theopompus (*FGrH* 115 F263a), quoted extensively above in chap. 5/4; tax paid by Babylonian oblates during a visit by Artaxerxes II to Susa: Joannès 1988 and 1990a: 183; on the tablets of Category J and their relationship with the royal Table, see Garrison forthcoming.

- *Royal Taxes and Satrapal Taxes.* On the texts concerning the migrations of Alcibiades, cf. Briant 1985b: 59; on the Nehemiah passage (5:15–17), cf. the evaluation offered by Heltzer 1992a.

- *Military Levies and the Tax System.* War expenses: cf. Briant 1986c; financial and military obligations of the tenant farmers of *ḫaṭrus*: cf. Cardascia 1958 and 1978; Joannès 1982: 16–26; Stolper (1985a: 98–99) stresses that the *ḫaṭrus* did not constitute military colonies alone: “The main concerns are the production of crops, taxes and rents” (p. 99); levy on the companies of Memphis: Segal 1983: 5, 7; on the operations of the military *ḫaṭrus* during the time of Darius II and later, cf. chap. 14/7 (Darius II and his armies) and chap. 17/3.

5. Payments of Tribute: Metal and Coin

- *The Phantom of the Natural Economy: Coast and Interior.* The vocabulary deserves a historical investigation; I will simply note in passing the reservations of M. Mauss (1921: 388), who discusses barter as follows: “a system which it is customary to distinguish with the term ‘natural economy,’ without being certain that there has ever been a society where such an economy operated exclusively or regularly”; regarding Herodotus's tribute list, Will (1960: 269) believes that it is “a monetary evaluation, Greek style, of payments made largely in kind” (an idea recently repeated by the same author, *RPh* 65/2 [1991]: 35): but see the apt remarks of Picard 1980: 76–78 and Descat 1989a: 83; Will's article nevertheless poses a real problem, that of the transformation into silver of certain payments provided in kind outside tribute proper (*parex tou phorou*), including some of the *tagē* (on this point, see chap. 11/8, and Briant 1994d: sale of “tribute” wheat on the Aegean market)—additionally, an Aramaic papyrus from Saqqara (Segal, no. 24 and p. 7, 40) shows that the Memphis garrison paid a tribute (*mdt?*) in “industrial” products: natron and alabaster. Role of the Babylonian business firms: this is well known from the time of Artaxerxes I and Darius II through the Murašū archives; but beginning with the reign of Darius I, the lands of the treasurer Bagasarū were entrusted to the management of the Egibi: Dandamaev 1969c. Strabo XV.3.21: in a brief discussion of this passage, Descat (forthcoming) judges that Polyclitus “had a good understanding of financial matters” (n. 5), and he seems to think that the author was referring to the shipment of exotic items to the central court; but this remark does not resolve the difficulty of the text; I do not see on what Wallinga (1984: 412–13) bases his claim that Polyclitus's text refers to

"the monetization of tribute"; I agree instead with Tuplin (1987b: 138–39), who thinks that Poly-clitus's representation is "certainly false" and perhaps derives from the observation that money was preferred in the coastal regions; purchase of merchandise by Cyrus's Greek mercenaries: *Anab.* I.5.10; agreements with Tissaphernes and the opening of markets (*agora*): II.3.26–27; "It is against payment that you will have our goods": II.4.5, 9; pillages or markets: IV.5.16–18; V.7.13ff.; coast and interior in Hellenistic texts: *RTP* 74–81.

• *Royal Treasuries and Tribute.* Transportation of tribute to the central authority: cf., e.g., Nepos, *Datames* 4.2; PF 1342 (transport of silver between Susa and Matezziš), PF 1357 ("treasure" of Babylon transported to Persepolis), PFA 14 ("treasure" transported from Kerman to Susa), and the unpublished tablets (Q 1898, 2149, 2580) used by Koch 1993a: 23–25; also *DAE* no. 71–72 [AD 10–11] (transport of taxes from Egypt to Babylon); the exact interpretation of Herodotus's wording (III.96) comes from Schlumberger 1953: 14; Near Eastern precedents: Torrey 1943; Oppenheim 1946; gold and silver in the Babylonian temples: Joannès 1982: 236; 1992b: 174–76; and Beaulieu 1989c.

• *The Problem of Royal Coinage.* I am aware that my discussion of this subject is brief and perhaps superficial. Doubtless it reveals the difficulties I feel in approaching these questions, which remain largely the province of specialists. I must say that despite numerous recent contributions on the subject (particularly those collected in *REA* 1989 = R. Descat [ed.] 1989), I remain perplexed due to the breadth and complexity of the problems raised by such studies (however fine they may otherwise be). I have attempted to synthesize as much as possible to get to the heart (or at least what appears to me to be the heart!) of the matter. On the monetary policy of Darius, I have made considerable use of the various works of Descat (1985, 1989a–b, 1994, forthcoming), through which the development of the author's ideas can be followed on important points; see also Root 1988 and 1989 (impression on a tablet and evolution of the types emerging from studying the Persepolis seals), Carradice 1987 (attempt at relative chronology), Stronach 1989b (ideological-iconographic analysis), as well as O. Picard's chapter on the topic (1980: 65–79; "The Persians and Coinage"), the article by Alam (1993: 25–29), and last but not least Schlumberger (1953), who in particular points out, by analyzing the treasuries known in his time, the limited distribution of the siculus in contrast to Athenian coins; I note finally that G. Le Rider touched on several of these problems in his 1995 lectures at the Collège de France (text to appear in *ACF*: I thank the author for sending me an offprint). On the political-ideological function of the daric (and the ideas about Darius that it suggested to me), see F. Joannès's (1989d) conclusions regarding stamped "medals" distributed by Hammurabi during a festive reception in his palace: "One should . . . note the parallel with the gold daric of the Achaemenid period, which the specialists consider a true coinage: the weight of the daric was also based on the Babylonian siculus [. . .]; it was provided with a mark and did not appear in general commerce but seems to have been reserved for particular uses." [At this point the author is referring to the use of the daric by Cyrus the Younger to pay his mercenaries; actually, in the context, the word *daric* refers to the weight standard; we might more appropriately compare a custom of the Achaemenid court that established quite precisely the value and weight of gifts made by the Great King to foreign ambassadors (Aelian, *VH* I.22): cf. Joannès p. 80: "The gifts to the Mari military personnel [were distributed] after a precise codification establishing the relationship of the rank of each one with the value of the gift he received."] The author thinks that Hammurabi's pieces of silver were not coins (unlike the darics), even though their nominal value (greater than their actual weight) was set by the royal administration; however, I would ask what, precisely, in the context of royal policy, distinguishes a silver medal from a gold coin? Not to press the paradox, but one might as well say that the darics were not coins (in the usual sense of the word) but "medals" used by Darius in the context of a policy of (re)distribution that exalted his ostentatious splendor and the attribute of donor par excellence (cf. the annual distribution of gold pieces [darics] by the Great Kings to pregnant Persian women: Plutarch, *Alex.* 69.1; *Mor.* 246a–b; also the gift of a gold vessel and 1000 darics from Arta-

xerxes II to a simple Persian peasant: Aelian, *VH* I.33). Let us stress, to finish up on this point, that the thought-provoking comparison proposed by F. Joannès also calls to mind an old yet still vital debate on potential Near Eastern forerunners of coinage (e.g., Powell 1978; Paris 1987; also Joannès 1994a): while the archer sculus clearly was born out of the culture of Lydia (chap. 2/3), it is not as easy to determine the derivation of the daric. We might also mention the debates that sprang up concerning the origins of Achaemenid coinage after the discovery of small inscribed silver bars at Nūš-i Jān (Bivar 1971; Curtis 1984: 11–14). Compare this discovery with other discoveries of inscribed pieces of metal that have all too rapidly been called *coins* by some (cf. the debates among Figulla 1954, Hulin 1954, 1972, and Henning 1972); I would add that metal bars perhaps comparable to those from Nūš-i Jān were discovered near the site of Cemin Tepe in Armenia (and subsequently lost: Summers 1993: 87); however interesting these sources and the reflections they stimulate may be, they cannot themselves answer the question: why at a specific date did Darius decide to create the royal archer coins? To be sure, the commentators mentioned give due weight to the political function of coinage, unlike other interpreters, who insist on its economic function. But I must emphasize that the case of the darics must be distinguished from the case of the silver siculi, and western Asia Minor from Babylonia or Persia; at the time of Darius and Xerxes, the creation of royal coins did not lead to any monetary economic advances in Persia itself, contrary to what was thought in the first stage of commenting and reflection on the Treasury tablets, since it is obvious that the silver given to the *kurtas* (if in fact it really was given!) was weighed and not minted (cf., e.g., Cameron 1958: 161, 168–72; Naster 1970a and 1990; error of Martin 1985: 120 n. 120; also chap. 11/8 here: “Return to Persepolis”).

• *Darius and Aryandes*. The episode of Darius and Aryandes has stimulated a flood of articles; the problem is extensively treated by Tuplin 1989, who includes discussion of the minting of coins by the satrap; on the other hand, Descat (1989b: 27–28) and Price (REA 1989: 82–83) think that Aryandes did not mint coins but that he manipulated the value of silver in Egypt (cf. also Descat 1989a: 85–86); on the Polyaeus text (VII.11.7) and the assumed date of Darius’s arrival in Egypt, see the overview by Tuplin 1991a: 265–66.

6. The Administration of Tribute: Continuities and Adaptations

• *Peoples and Territories*. Military regions: cf. Briant 1990b: 50–51; maritime regions: Wallinga 1991; chiliarchies: RTP 210–11; *medinah*: texts in Dandamaev 1989b: 103 n. 4, who wrongly speaks of “120 to 127 satrapies”; satrapal subdivisions: cf. Tuplin 1987b: 120–27.

• *Cadastrs in Western Asia Minor*. Sardis archives: RTP 191–92 (on potential Hellenistic continuations, cf. Wörrle 1988: 465).

• *The Case of Babylonia*. It is now agreed that, contrary to the traditional interpretation (e.g., Joannès 1982: 224), the administrator called *zazakku* was not in charge of the cadastre (Dandamaev 1994a; Joannès 1994b). Royal real estate archives in Babylonia in the time of Darius I: Stolper 1985a: 29–31 and 1989a; Babylonian fields: Nemat-Nejat 1982: 1–24, 277–79; the texts are related by Dandamaev 1985 (94–95) to the reforms of Darius; but we note that from year 2 of Darius (520), tablets of this type are known for transactions concerning houses (Joannès 1990c); Bagasarū the treasurer: Dandamaev 1969c and 1992a, nos. 98a and 197e; tax on the sale of slaves: Stolper 1989a (quotation from p. 91) and 1977: 259–66 (on **kārahmara*).

• *The Case of Egypt*. Egyptian *sent*: Yoyotte 1989 (followed here); military lots at Elephantine: Porten 1968: 35; Grelot 1970a: 122–23. DAE 69: Briant 1985b: 68 and Whitehead 1974: 77–84 (compare with the Babylonian example analyzed by Stolper 1985a: 67: transmission of the *dōrea* [*nadnu*] of Pitibiri in the house [*bit*] of Sitūnu; military lots at Memphis: Segal 1983: no. 31; on the office of writing in Egypt, cf. Meeks 1972: 58 (which clearly compares to the *basilikai graphai*).

• *Weights and Measures*. *Ardab*: Malimine 1950: 17–19 (whose suggestion is taken up here, without reopening the whole matter of the Egyptian *ardab*., e.g., Vleeming 1981); weight standards: cf. in general Bivar 1985; at Elephantine: Porten 1968: 62–72; Grelot 1970a: 124; see also

(in other contexts) Heltzer 1991 and Eph'al and Naveh 1993; weights from Susa and Persepolis: Stève 1987: 83–85; Schmidt 1957: 105ff.; lion weights from Abydos: cf. Mitchell 1973 and Descat 1989b: 18–20; weights from Trebizond: Kunkel and Haas 1986.

7. *Tribute Economy and Appropriation: Royal Land and Tribute Land*

- *Royal Territory and Empire.* The discussion begun here is the result of thinking that has been developing for many years (cf. RTP *passim*) on the problem of knowing what lies behind the expressions “royal land” and “tribute land” (in particular in the Hellenistic inscriptions). I have already tried to make the point in another work (Briant 1982c: esp. p. 307 n. 81, on the distinction that must be made between “ownership of the means of production” [false debate on “Asiatic despotism”] and “control of the means of production”). On all of these problems, cf. also the basic overview of Zaccagnini 1981, and the work of van der Spek, most recently 1995: 195–97; see also C. Herrenschmidt’s reflections on the term *būmi* in the royal inscriptions: she interprets it in the sense of empire (cf. Herrenschmidt 1976 and 1977); even though these articles suffer from some weaknesses (the Wittfogelian expression “hydraulic Persian royalty” [1977: 52] seems especially unfortunate to me) and even though Herrenschmidt has been debated fiercely (e.g., Frye 1977: 75–78), the perplexities that drive her strike me as illuminating; her conclusions in a way answer Altheim and Stiehl’s statements, in the course of their interesting discussion on the relationship between private and public domains among the Achaemenids: “Bezeichnend, daß sich kein Ausdruck für das ‘Reich’ der Achaimeniden ermitteln läßt” (1963: 178). The discussion continues in chap. 11/10.

- *The Great King’s Sluices and the qanats of the Hyrcanians.* Cf. RTP 418–30 (also chap. 11/10).

- *Royal Land and Concession Lands.* See also chap. 10/6 (on Egypt), where I compare RC 11–12 and DAE 69 [AD 8], and chap. 11/9; generally, see my overview in Briant 1985b [add to the bibliography Wörle’s essential 1978 article, and now the comments of Savalli 1987] with the remark (p. 70) on a Hellenistic detail, namely, that in some cases the donor returned to a town land conceded as a gift (but I must ask whether we might not detect a comparable process in the gift to Esmunazar of Sidon, who returned “forever” the conceded territory: Gibson III, no. 28); on DAE I, see the republication by Szubin and Porten 1992, where a detailed commentary is found (whose conclusions are accepted completely here).

- *Darius and Gadatas, Alexander and Priene.* On ML 12 compared with Tod 185, cf. already a few words in RTP 361; on Tod no. 185, cf. Sherwin-White 1985, esp. p. 83 (Alexander’s retaking of Achaemenid royal estates), and Marasco 1987: 68–73; on the word *hebelos*, cf. Chantraine, DELG, s.v. (the word is very clearly the opposite of a sacred territory); attributions of lands to towns in the Hellenistic period: RTP 244ff. and Jones and Habicht 1989; on the implications of *attributio* in the Roman period, cf. Bertrand 1990 (pp. 139–45 on Hellenistic practices).

- *Tribute-Producing Lands and Crown Lands.* On the *tagē*, see especially Descat 1989a: 81–83 (whose conclusions I incorporate); the expression “crown lands” was first suggested to me by a hypothesis in Thillet (1969: 578) on a possible Iranian etymology of *tagē* (‘diadem’), although I am a bit skeptical of this suggestion (a Greek etymology from *tassō* and *tagos* [DELG, s.v., without explicitly referring to *tagē*] seems more likely), I have kept the phrase, since it allows me to avoid the ambiguous form “royal land” [on the etymology of *tagē*, see most recently B. Helly, *L’État thessalien* (Lyon, 1995): 19–38, without reference to the use of the word by Pseudo-Aristotle]. Life-supporting gifts: cf. Briant 1985b and below, chap. 11/9; on the Lake Moeris fish, cf. Dumont 1977; royal stud farms: RTP 209 (Aeolian stud farm), 354–55; royal forests: for Sardis, the Seleucid inscriptions are edited and annotated by Gauthier 1989: 22–32 (who also quotes the texts regarding Mysia, Cilicia, and the Lebanon); I translate *exagagesthai* with ‘cause to leave’ rather than ‘export’ for reasons explained in chap. 11/8.

• *An Appraisal and Some Uncertainties.* Royal lands in Babylonia: on the vocabulary of the Babylonian tablets, cf. Stolper 1985a: 35ff. and 1992b (p. 126 on *nidintu šarri* translated 'crown-grant' [but one could adopt the literal translation 'royal gift']); see also the (deceptive) focus of Cagni 1988 and Oelsner's 1988 article.

*Persia: Empire and Tribute Economy**1. The Persepolis Archives*

One preliminary detail: my interest in this material is longstanding (cf. my articles of 1977 [1979] and 1978–79 reprinted in RTP 202–11 and 331–56), but I have no special philological competence in the area. Because of the numerous differences among specialists and because of my lack of competence in Elamite, I do not claim that the following pages are anything more than an attempt to take a position on a series of problems that appear to me to be essential for understanding the operation of the royal economy in Persia and the Empire. Individual articles are numerous, but I have not come across any satisfactory synthesis; despite its obvious interest, the recent book by Koch (1990) contains less than the title promises: it is much more a matter of *Verwaltung* than *Wirtschaft*; the author also has reprinted several earlier articles (cf. Koch 1988a) in the framework of a synthesis: Koch 1992, esp. pp. 25–72, 264–85; she continues her analyses in Koch 1993₁ (which appeared after this chapter was written); Cardascia (1978: 6) announced a work by J. A. Delaunay, *La Place des Iraniens dans l'administration royale à Persepolis* (forthcoming), “which studies the two thousand documents published by Hallock from the administrative and economic point of view”; but by the time my manuscript was finished, it had still not appeared (I imagine Delaunay 1976 constitutes a preliminary study). I will simply explain that I decided in each case to start from the texts (in transliteration and translation) while trying to take into account the findings of philological and etymological studies (cf. Hinz and Koch 1987), but I cannot claim to have read everything or even to have grasped all of the subtleties of the specialists’ arguments; when I have chosen among several interpretations, it is sometimes on the basis of “historical probability,” and the subjective nature of this process is well known. [A magnificent illustration of this phenomenon appeared at the very moment that I was ready to put the final touches on the additions and corrections. Some tablets found in Armenia (Armavir-blur) had been read by the *editores principes* as a fragment of the Gilgamesh Epic (Diakonoff and Jankowska 1990); three years later, H. Koch (1993a) “proved” that they were actually tablets of the Persepolis-Achaemenid type, and I therefore used this interpretation in this book (cf. chap. 16/14) — partly, also, because it reinforced some of my views on imperial organization (cf. chaps. 11/6, 16/18); later, F. Vallat published a note (Vallat 1995) in which, while announcing a detailed study in preparation, he states that neither hypothesis is acceptable; according to him, the text is a private letter dating probably from the first half of the sixth century. Vallat, a renowned authority, concludes as follows: “By the way, this threefold interpretation of a single document shows very clearly that Elamite remains the least well known language of the ancient Near East!” I do not know whether this remark is supposed to reassure or frighten off the outsider!] We can hope, finally, that the Chicago tablets will be made available to scholars within a reasonable time. The longer that these texts remain unpublished, the more each scholar will have to resort to quoting isolated unpublished tablets, and the more his results risk being questioned; cf., for example, the statement in Vallat 1993: vii: “Without this considerable contribution [unpublished Hallock transcriptions] . . . , the RGTC would have been a mere skeleton for the Achaemenid period” — which probably also accounts for his judgment (p. cxliv) on Koch 1990, which did not utilize unpublished tablets (Koch 1990: 2 n. 3).

- *Fortification Tablets and Treasury Tablets.* In addition to the introductions and commentaries on P1T, P1T, PF1, PFa, and Hallock’s (1972) both general and detailed presentation, an excellent introduction to the archives will be found in Garrison 1988: 168–84, who (p. 162) estimates the number of unpublished tablets at 25,000–30,000; on the P1T; see also the long and important reviews by Hinz (1970) and Dandamaev (1972c and 1973), and on the PTT the reviews of Goos-

sens (1949), Hallock (1950), and Altheim (1951); see also Benveniste 1958a, the many articles by Koch, Giovinazzo, Kawase, Uchitel, Vallat, etc., and the excellent introductions by the late and sorely missed David Lewis (1977: 3–13; 1984: 592–600; 1985; 1990a; and 1994), who at the end of his life was working on a manuscript on the tablets of Category Q; many interesting comments will also be found in Brosius 1991. Isolated publications of tablets: Lewis 1986 (Q 1809), Grillot 1980 (no indication of provenance), Vallat 1994 (2 tablets from the Fribourg University museum), Balcer, *BiOr* 36/3–4 (1979): 280 (Fort. 1771). Aramaic texts and legends: Bowman 1970; cf. Stolper 1984a: 300 and n. 5 (there is an unpublished manuscript by Bowman); wood tablets: Briant 1992b (wood and ivory tablets in the Assyrian period: cf. Mallowan 1966, 1: 149–63; on the wood tablet found in the wreck of an ancient boat at Ulu Burun, cf. the detailed presentation by Symington 1991); references to documents on parchment in Babylonian tablets: cf. Stolper 1985a: 158–60 and 1992b: 120; on the disappearance (or nondiscovery) of part of the Persepolis archives, cf. the reflections of Hallock 1973; on the chronological division, cf. Hallock, PFT: 51 (Category Q); the other percentages are the result of personal evaluations; the seals on the Treasury tablets (PTS) were published by Schmidt 1957: 4–49, plates 1–19 (reviewed by Porada 1961); the seals on the Fortification tablets (PFS) have been studied by M. Root and M. Garrison (cf. programmatic presentation by M. Root, DATA 1993 n. 14).

• *Accounts and Archives.* The conversion of Persepolis weights and measures into the metric system poses many problems, since we do not really know (for example) what kind of barley is involved (and the translations of ancient words for grain are very often uncertain); as a result of all sorts of variables (dry vs. moist grain, for example), the proposed equivalences can vary considerably (these problems are treated in a thesis being prepared by M. Gabrielli at Toulouse under my direction); here I conventionally use the equivalents proposed by Hinz (1970: 431): 1 BAR = 10 QA = 9.7 liters, and 100 liters of barley weigh about 66 kg (on metrology, cf. also Hinz 1973: 101–4; Hallock PFT 72–74; and Lewis 1987: 86); on the *marriš* (a word occurring in the only tablet in Greek, Fort. 1771, and in a Saqqara papyrus, Segal no. 42a), cf. Bernard 1985b: 93–94; on the *šum-marriš* measure, see most recently Giovinazzo 1993. The use of seals and even the method of archiving continue to pose major problems (cf. Garrison 1988: 181 n. 3), so research on the geographical-administrative partition of Persia leads to notably different results: cf. Hallock 1972: 17–21 and 1977; Sumner 1986 (also utilizing the facts derived from archaeological exploration and ecology); Koch 1990 (synthetic summary, pp. 247–310, with maps): the author stresses (p. 311) that the current state of research deals with “relative topography” — that is, sites are located in accord with their relationships to other sites; see also the useful reflections of Tuplin 1987b: 115–16 and now Vallat 1993. *Halmi*: Hallock 1950: 247–48; Benveniste 1958a: 63–65; Vallat 1994: 269–70; Giovinazzo 1994a (Category Q). PF 1980: translation (customary law) taken from Grillot-

2. Administrative Hierarchy and Organization of Production

• *Parnaka.* Hallock 1972: 11–13 and Lewis 1977: 7–11; on the administration for which he was responsible, see also Hinz 1972: 301–11 and Koch 1990: 229–34. Irtašduna: Cameron 1942 (with an error on the title *dukšiš* borne by Irtašduna: ‘princess’ not ‘daughter’; note that at the same time, Irtašduna received 200 *marriš* of wine, on order of the king transmitted by Parnaka to the wine-cellar-master Yamakšedda: PF 1795); Hallock 1969: 52 and 1972: 11 and n. 1; cf. Lewis 1985: 110. The large amount of daily “rations” given to Parnaka poses a problem (so also for other high persons; cf. figures collected by Koch 1983: 45–47); at one time, Hallock thought, in a very plausible and tempting hypothesis, that Parnaka fed his entourage; he later reversed this opinion when he published a tablet (PFa 4) showing (along with other, still unpublished tablets) that Parnaka’s *pulu* received their own rations (cf. Hallock 1978: 110; cf. also the remarks of Lewis 1987: 80). I wonder, however, whether the payment of these quantities of foodstuffs and sheep really took place daily in physical form; I am now much less sure (cf. Briant 1985b: 64) that the comparison made by Dandamaev (1972c: 20–21) with the food gifts known to the Classical authors (e.g.,

Themistocles) is really appropriate; keeping in mind the example of the "house of Aršāma" in DAE 67 [AD 6] (§5: *imatam*; *ulhi*; §9: *imatam*; *ulhi*, lands in gift; analyzed below), I propose instead, as a hypothesis, that these "rations" were quite simply transferred on a "paper" accounting basis to the "house of Parnaka" — that is, that Parnaka had credit that he or his subordinates could draw on at the warehouses during relocations organized on his initiative (similar to the credits on which Aršāma and his steward Neḥtiḥōr could draw, as well as Irtašduna or Irdabama).

- *The Department Heads.* On animal husbandry, cf. Hinz 1972: 288–90, RTP 331–56; and Kawase 1980 (but cf. Giovinazzo 1989a: 203–6, who proposes a radically different interpretation of the word *nutamuyāš*, generally understood as stockyard; cf. PFT, s.v.; and Hinz 1973: 86–87); Giovinazzo sees the word instead as a transcription of the Akkadian word *nadānu* 'gift, that is, a form of tax); a recently published tablet with Harrena and Parnaka (distribution of sheep rations to a goldsmith: 1 sheep per month for 6 months): Vallat 1994: 264–71; on the related words *mundura-battiš*, *harmabattiš*, etc., see Gershevitch 1979: 170, 174, 179; names of horses: PFT 47; cf. Lewis 1980; their rations in wine or beer: cf. the remarks of Delaunay 1976: 19 n. 38 (from which I also take the translation of several administrative terms) and Bernard 1985b: 93–94 (on rations given to elephants).

- *The kurdaš Heads (kurdabattiš).* Hinz understands as 'majordomo' (1972: 280); cf. review of viewpoints in Stolper 1985a: 57; list in Koch 1990: 237–45; Iršena and Šundayauda: Hallock 1972: 14–15; Hinz 1972: 282–85.

- *Treasurerships and Treasurers.* Cf. Hinz 1972: 261–64; Koch 1982 and 1990: 235–37; the remarks of Tuplin 1987b: 130–31; and the note of Lewis 1994: 23 n. 38; the list of treasurers and sub-treasurers in the Aramaic texts on mortars and pestles was compiled by Bowman 1970: 56–62, but the dates proposed must remain hypothetical, as noted by Delaunay 1975: 194–95. Bowman dated the first texts to 479/8; but in reading the rather surrealistic comments he wrote on the close connection he postulates between what I will call the "haoma chronology" and the chronology of defeats of Xerxes (pp. 60–62), I have the very clear impression that his proposal emerges from his desire to show at any cost that "[the Persians] desperately sought support and victory. They needed the wise guidance and support of Mithra . . . in such a context the haoma ceremony became meaningful . . ." (p. 62): in short, the institution of the haoma cult was supposedly a response to the defeats of Salamis, Plataea, and Mycale! Of course, Bowman's cult theory has never found much acceptance (see, e.g., Delaunay 1975; Boyce 1982: 149; Dandamaev 1989b: 334–35; curiously enough, Koch 1993a: 26 and 1993c: 181 nonetheless continues to believe that the mortars and pestles were ritual objects [*Kultgegenstände*]); but, other than confirming the fecundity of ideas on the enormous importance generally accorded to the year 479 (cf. chap. 13/1, below), my note here is simply intended as a reminder that the chronology of the texts remains open, since, among other things, palaeography cannot decide it (Delaunay 1975). Transportation of tribute: in addition to the documents cited in the text, cf. the unpublished tablets (Q 1898, 2149, 2580) quoted and used by Koch 1993a: 23–25. Workshops: cf. Hinz 1972: 234ff. and Koch 1982. Kawase (1986) interprets the word *kapnuški* in the narrow sense of specialists in the treatment of hides (cf. critical remarks of Uchitel 1989: 234); on the words *kapnuški*, *ganzabara*, and *ganzaba*, cf. also Mancini 1987: 46–54 (in a discussion of the word *gangabas*, which Quintus Curtius [III.13.7] says means 'porter'); on the role of the treasury-fortresses, cf. also RTP 202–7 and, on the meaning that must be assigned to the word *hirtā* (*halmarriš* in the tablets), Lemaire and Lozachmeur 1987.

3. The World of Work: The kurtaš

Surprisingly, the subject of the *kurtaš* has hardly ever been treated on its own; until recently (Kawase 1984 and 1986; Uchitel 1989 and 1991), there was virtually nothing but Dandamaev's excellent 1973 review article on PFT, which he reprinted without evident change in Dandamaev 1975a and 1989b.

• *Kurtas̄ Craftsmen.* More or less detailed discussions will be found in any treatment of the tablets. Craftsmen on the construction sites of Persepolis in the PT: cf. Roaf 1979; craftsmen in the treasury-fortresses: Hinz 1972: 266–68; Koch 1982: 244–46 and 1990: 238–39 (tables); Uchitel 1989 (partial tables) and 1992; much is to be found in Kawase 1984 as well (women-*pašap*) and 1986 (*kapnuški*), even though the interpretations presented have been strongly contested by Brosius (1991) in the first case and Giovinnazo (1989a) in the second; Greeks at Persepolis: Lewis 1977: 12–14; also Delaunay 1976: 24 (someone named Philippos in PF 1276?) and Nylander and Flemberg 1989.

• *Food Rations and the Organization of Production.* Rations: cf. Koch 1983 and 1994 (rations given to women); Dandamaev 1989b: 161–65; cf. also Guépin 1963–64, with summary and synoptic tables of rations known from the P1. We may also note in passing that the workers doubtless also received clothing from the administration (*sig-ba* ‘wool rations’ in the Mesopotamian terminology: Gelb 1965: 235), but these archives have been lost (Hallock 1973: 323); on the rations and their value, see most recently Giovinnazo 1993. Meat rations: let us note in passing that, although the testimony of PF 1793–94 is not equivocal (despite the absence of the word *kurtas̄*), the process implied in PF 823–25 (without using the word *kurtas̄*) is not absolutely certain (cf. PFT 27), see especially PF 823, where Bakeya receives 2 sheep with Ištin, a woman with the title *dukšiš* ‘princess’; in these circumstances, Bakeya is probably a high-ranking person (Lewis 1984: 600 and 1985: 112 thinks he was the princess’s husband, perhaps recognizable in Bagaeus, son of Artontes, in Herodotus 3.128); see also the tablet published by Vallat 1994: 264–71 (a goldsmith receives a sheep each month for 6 months). Organization of labor among the women-*pašap*: I accept the interpretation of Kawase 1984, which has been criticized by Brosius 1991: 154ff; teams on the Persepolis construction sites: cf. Roaf 1983 (some of whose methodological choices are strongly contested by Sancisi-Weerdenburg 1992). Manufacture of stone objects at Persepolis: I faithfully follow the proof of Delaunay 1975, but I must state that this is only one possible interpretation out of several—since the debate remains lively and complex and the materials are difficult, which can open the door to interpretations that vary widely (see, for example, Williamson 1990 on the Aramaic gloss *gl* on Pf 1587, challenging [p. 84] Delaunay’s interpretation of the word); following Bernard 1972, some authors (Vogelsang 1992: 169; Williamson 1991: 43; Koch 1993a: 26) stress that the treasurers Dātamithra and Bagapāta bear the title “treasurer who is in Arachosia” (see already the doubts expressed by Bowman 1970: 28–30); they conclude that the objects were made in various places in Arachosia, then deposited at Persepolis as gifts presented to the Great King by high officials of the province; mortars and pestles would then no longer have any connection with the Persepolis workshops.

• *Origins and Status of the kurtas̄.* On the deportations of peoples and the “extremities of the Empire” (*eskhatia*), cf. Briant 1984b: 64–65; on the status of laborers at the construction sites of Persepolis, see also the thoughts of Guépin 1963–64: 38–40, who thinks that they cannot have been free workers.

• *Demographics and Population Growth.* In his most recent work (1989b: 160), Dandamaev repeats without change an interpretation he had presented earlier (see 1973: 6–8, detailed table; p. 9, table in percentages); as he himself notes (1973: 9 n. 28, using the tablet PT 37: Carian goldsmiths), the hypothesis of *kurtas̄* living in families goes back to Guépin 1963–64: 36; it has recently been repeated in Kawase 1984: 19–20; but meanwhile, an important article by Zaccagnini (1983) has come out, though it has not received the circulation it deserves; in this article (pp. 262–64), Zaccagnini seriously challenges Dandamaev’s conclusions (which I followed previously); Zaccagnini’s article also includes a major discussion of the concept of free labor in the ancient Near East; for the figures and percentages quoted, in part I used the calculations of Kawase 1984 and 1986; royal slaves and palace slaves: Dandamaev 1984b: 565–67.

• *Family Breakup and Ethnic Uniformity.* On the status of communities settled in Babylonia, see especially Eph’al 1978; cf. also Heltzer 1981; on the Babylonians in Persia, cf. Stolper

1984a; Elamite and Babylonian gods in Persia: Koch 1977: 101–19, repeated and developed in Koch 1987a and 1991; see also Dandamaev 1975: 196–97. On PF 337: Vallat 1994: 272 believes that “the grain was not intended for the ‘religious ceremony’ itself, but rather for the workers concerned with divine service”; on the *laoi*, cf. RTP 93–133, and below, chap. 11/9; PF 999: I owe the note on the wife of a *kurtas̄* to Brosius 1991: 28.

4. Agriculture: Produce and Levies

• *Baziš and Other Levies.* The meaning of *baziš*, compared with *baji*, has been discussed frequently; it is generally recognized that the word goes back etymologically to a gift rather than a tribute, properly speaking; more precisely, it concerns ‘the [king’s] part’, as in Akkadian *zitti šami*, for example (see RTP 215 n. 75; Herrenschmidt 1989a; Sancisi-Weerdenberg 1989b: 137–38); as for the complex problem that is more basically financial (including the problem of the *bazikara*), there is little hope of agreement (cf. opposing views in Herrenschmidt 1989a and Koch 1989). In a recent article, Giovinazzi (1989b) proposes that the *baziš* and *mandattu* are equivalent, and she thinks that the Elamite *nutayunaš* is a transcription of Akkadian *nadānu*; her research has also brought to light the existence of another tax referred to by the Akkadian word *halla*t; one of her other articles (1989a) is an excellent clarification of the methods of collecting produce within districts, thanks to her new interpretation of the phrase *ha duš ha duka* in the tablets; on Raubasa: cf. Herrenschmidt 1989a: 113–14, who thinks (contra Hinz and Koch) that the *bazikara* do not levy taxes but are responsible for the royal flocks; I am not convinced that the two explanations are mutually exclusive (see below, chap. 11/10); *rušdabaziš*: hypothesis of Hinz 1973: 96; contra Herrenschmidt 1989a: 118 n. 4, who understands the word as ‘who has part of the harvest’ and concludes: “Exit tribute. But there are other problems with this word”; tithe: Koch 1981: 123–24; *ukpiyataš*: Hinz 1973: 88; Stolper 1977: 254–59; Joannès 1989a: 153–54.

• *The Direct Producers.* Tuplin (1987b: 143) proposes interpreting Aelian I.31 in light of the Category J tablets; *nutanuyaš/nadānu*: Giovinazzo 1989b: for this author, the *nadānu/nutanuyaš*, in animal form, is “delivered to the gate/before the portico” of the palace; taken literally, the phrase seems to mean that every year the producers had to deliver formally, as a “gift,” part of their flocks to the king or his representatives. Can we establish a link between small Persian peasants and these deliveries “at the gate”? In the absence of irrefutable confirmation, I remain cautiously optimistic. On farm rent: the hypothesis was developed by Koch 1981 (repeated in Koch 1992: 269–72); it is strongly contradicted by Vallat, *AbIr* 4 (1982) no. 166 (cf. also Herrenschmidt 1989a: 116–17); since the discussion is based on philological facts, I am not competent to participate; I will simply observe that there certainly was terminology for farm rent in Old Persian, since it is found in the form of calques in an Aramaic papyrus from Egypt (Benveniste 1954: 304). On the question raised at the end of chap. 11/4 (assessments vs. taxes), cf. the position of Herrenschmidt 1989a n. 6: “In sum, I do not believe at all that the grain that circulates in the Persepolis tablets comes from ‘tribute’. It comes from fields cultivated under royal authority and circulates from one branch of the administration to another for various needs”; I have myself expressed some reservations with reference to Giovinazzo’s 1989a article (Briant, *AbIr* 13 [1990] no. 94: “Meanwhile, it seems there is nothing to prove that ‘these documents illustrate the levying of a special tax’ [p. 15]—at least to take the word ‘tax’ in such a general sense that it loses its descriptive meaning”); at the same time, Herrenschmidt’s model appears to me to be too positive, since it implies that all the land in Persia belonged to the category of *royal land*—which is exactly what remains to be proved (see chap. 11/10).

5. Lands and Estates

• *Partetaš.* Despite the doubts expressed here and there (PFT 15, quoting a letter from Benveniste withdrawing his previous interpretation: Benveniste 1954: 309), I see no persuasive arguments against the equation of “paradise” and *partetaš*; on the other hand, the “paradise” of Artaxerxes’ inscription at Susa (A²Sd) must be excluded from the discussion (Stève 1987: 98;

Lecoq 1990b); "paradise" in Classical sources: RTP, index, s.v.; Fauth 1979; also Briant 1991c: 230–36; *paradeisoi* and market gardens in the Mnesimachus inscription: Buckler and Robinson 1912: 78–79 and Briant 1991c: 231 n. 30; on *kēpos*, see also Caroll and Spilleke 1989; Fahliyūn region in the Classical sources, cf. RTP 161–70 and 206–7; in the tablets: Hallock 1977: 131–32; Koch 1986 and 1990: 135ff.; hydraulic improvements: in the parks: RTP 453; at Pasargadae: Stornach 1985d: 108–10; Kleiss 1992a; in Persia: Sumner 1986: 13–17; Kleiss 1988 and 1992a; administration of the *partetaš*: Koch 1981: 119–20.

- *Irmatam*. In the Susa tablets, cf. Hinz 1987: 130–32, who calls Vivāna's *irmatam* the "feudal residence" (*Lehenssitz*); cf. also Hinz 1973: 60–63; in the Persepolis tablets, cf. Sumner 1986: 26–27 (also using 9 unpublished tablets); the rebel attacks on Vivāna's *irmatam* can certainly be related to the devastations of the satrapal parks often mentioned in the Classical texts (RTP 456); the associations of tablets PF 152/640–41 and 153/637 were suggested to me by Giovinnazzo's 1989a article.

- *Ulhi*. On princesses' houses, cf. Brosius 1991: 131–34, and pp. 137ff. on their *kurtas* (add text B published by Vallat 1994: 271–74; *kurtas* of Irdabama); see also Koch 1994: 134–40 (who unfortunately continues to call them "queen," or even "Mitkönigin," throughout: p. 137).

6. The Persepolis Tablets and the Imperial Administration:

Sources and Problems

Cf. already RTP 207–11; on the importance of the problem, cf. also Lewis 1990a: 5 and Koch 1990: 311; "chancellor and scribe," cf. Stolper 1989b: 298–303; *phoinikistēs*: Lewis 1977: 25 n. 143; Chantraine, *DELG* 1218; and G. P. Edwards and R. B. Edwards, *Kadmos* 6 (1977): 131–40 (with bibliography); Dasylium gullas: Akurgal 1956; Balkan 1959; Kaptan and Bayburtluoglu 1990; Arad ostraca: Avigad and Naveh 1981. Discoveries of Elamite tablets: Briant 1984b: 59 (to the best of my knowledge, the tablet found at Kandahār has not been the subject of a single publication); cf. also a tablet found at another site in Fārs: Wilkinson 1965: 344 (the seal impressed there has a "Royal Hero" scene), the Elamite tablet (YBC 16813 published by Jones and Stolper 1986: 248–53); the Susa tablet MDP 11.308 republished by Garrison (forthcoming), and the Elamite tablets of Armavir-blur in Armenia (Koch 1993b; chap. 16/14 below [but cf. Vallat 1995!]); on Category Q tablets, cf. also Briant 1991b: 69 n. 8. (M. Stolper and C. E. Jones are currently preparing an article that assembles all of the documents that are identical or comparable to Persepolis documents).

7. The Management of Property and the Royal Warehouses in Egypt

- *The Resupplying of the Garrison of Syene–Elephantine*. P. Loeb 1, cf. Hughes 1984: 75–77; on the resupply boats, cf. also Milik 1967: 554–55; seal of Petosiris the boatman: Duchesne-Guillemin and van de Valle 1959–62.

- *The Repair of an Administration Boat*. Cf. Grelot 1970: 23–31; 1972: 283–95; and especially the detailed commentary by Whitehead 1974: 119–54.

- *Royal Dockyards and Workshops*. Memphis dockyard: Aimé-Giron 1931: 54–63 and Bowman 1941; Egyptian vases from Susa: Posener 1936: 137–51, 189–90; Amiet 1990; Persepolis vases: Schmidt 1957: 81ff.; pre-Achaemenid Egyptian dockyards: Griffith 1909: 71ff.; cf. also BIFAO 76 (1976): 1–15; 54 (1954): 7–12; 78 (1976): 17–35; "hamarakara: cf. Eilers 1940: 43–59; Greenfield 1972; Stolper 1977: 259–65; *dgalîn* at Memphis: Segal 1983: 8.

8. Management of Surpluses

- *Back to Pseudo-Aristotle*. Eumenes and the royal stud farms of the Ida: cf. RTP 209.
- *Surplus in Kind and Exchanges*. Letter from Antigonos to Teos: cf. the commentary of Préaux 1954 (followed here; cf. already Briant 1986c: 47–48 n. 23, where the reference to Strabo XV.3.21 is irrelevant, for the reasons laid out above, chap. 10/5), to be compared with a letter from Antiochus III to Heraclea by Latmus (Wörle 1988: 468–69); Orontes and Athens: the text is given

by Osborne 1982: 52–54, 1983: 65–80 (without touching on the problem discussed here; the text has primarily been used in the context of the “great satrapal revolt” and the reconstruction of Orontes’ career); on all these documents, see now Briant 1994d.

- *The Athos Canal Workers*. Cf. already a few words on this subject in Briant 1986c: 47 n. 14.
- *Return to Persepolis*. See the review of the various hypotheses in Dandamaev 1989b: 165–67, to which may be added the discussion by Naster 1990; comparisons with Pseudo-Aristotle: Altheim 1951, followed by Cameron 1965: 168–72; cf. Altheim and Stiehl 1963: 157–67. The hypothesis put forth here (credits to the warehouses expressed in weighed silver) is taken in part from Guépin 1963–64: 37, who, noting the tiny amounts of some silver rations, suggests: “It is just possible that the silver was not ‘given’—paid out—at all, but that the earner could pay with a kind of check (or scrip) received from the treasury.” To explain better the process proposed here, I would like to compare what is known about the payment of wages in the Hellenistic armies: (1) Soldiers sometimes received *symbola* [a kind of token] from the administration that constituted evidence of their right to receive rations (cf. Launey 1949, 2: 776 n. 4, 770–71, 773). (2) Compared with the Herodotus text on the people of the Athos Peninsula (VII.25), the administrative machinery glimpsed at Persepolis could be considered a pale reflection of the *adaeratio* in the Hellenistic armies (cf. Launey 1949, 2: 1280 s.v.): in this system, part of the wages in kind was calculated in silver, at a rate established by the military administration; in principle, the ratio was advantageous, since the prices were lower than in the market (Launey 2: 735–40, 779); in some cases, however, the soldiers lost out in the exchange (p. 771); following this hypothesis, the disadvantage would clearly be greater for the workers, if we agree (as I believe: see below) that there was no free market, properly speaking, at Persepolis (in any case, the profits earned by the administration on this occasion are stressed by Cameron 1958: 172). Prices in the year 467–466: cf. Hallock 1960: 94–95 and 1972: 25, who thinks that the price explosion must be seen in relation to the military operations in Asia Minor (battle of the Eurymedon)—which seems to me to be a desperate hypothesis: cf. Briant 1993c: 414 and nn. 47–49); transfers between warehouses: cf. Hallock 1960: 92 and 1972: 27, who suggests instead that the head of warehouses made the exchange with a private merchant (on these transfers, cf. also Giovinzano 1993 and Vallat 1994); the existence of a private market is also suggested by Hinz 1970: 432–33, followed by Dandamaev 1973: 16 n. 7 = 1989b: 166. It is true that the phenomenon of increasing prices at Persepolis raises thorny interpretive problems. But I have the impression that the usual explanations presuppose that the market played a determinative role, which appears highly unlikely to me; see by way of comparison the article by Gentet and Maucourant 1991, who, contesting previous interpretations, describe the operation of the Egyptian economy as follows: “The Egyptian economy is an economy of redistribution. A center, consisting of the administration and the granaries of the public and religious institutions, assesses and redistributes the majority of the wealth produced. . . . The Egyptian economy is not a merchant economy” (pp. 13–14); we could repeat this definition for the Achaemenid palace economy nearly word for word, insofar as it can be seen operating in Persepolis; the authors stress (p. 17) “that a price increase concerning grain” would not be the same as inflation; they also note: “Price increases must no longer be taken as sufficient proof of famine, since in a redistributive economy it would not have an automatic effect on prices” (p. 22); nor does the existence of a scribal evaluation of the change in value of commodities in monetary form imply that there was a change in cash commodities (p. 25); as the authors note at the end (p. 30), “increase in prices always implies a transfer of resources.” For all these reasons, an interpretation that calls on market mechanisms to explain what we see at Persepolis seems to me to have been firmly refuted.

9. Lands and Peasants

- *Kurtaš, garda, gardu*. On the care required when facing terminological identity, see the apt reflections of Stolper 1985a: 31 n. 115; on the Aramaic documents, cf. the notes of Whitehead 1974: 72ff.; on Hinzanāy, cf. also Roaf 1979: 72, and Briant 1988a: 167–68; see especially the

reflections of Zaccagnini 1983 (without referring to this example) on itinerant artists and craftsmen in the ancient Near East. "Craftsmen of all kinds": Benveniste 1958a: 60–63. Cilicians: on their ethnic origin, cf. Goetze 1962: 54 n. 55 (opposing the opinion of Cazelles 1955: 93, which I followed in Briant 1988a: 143 n. 10). Tattoos: in an earlier article (RTP 311 n. 89), I followed the opinion of Harmatta (1963: 207), who says that the term *tattoo* comes from an incorrect reading; but this isolated opinion does not seem acceptable (cf. Whitehead 1974: 75); on the practice of marking Babylonian slaves with the names of their successive masters, cf. Cardascia 1951: 172; tattooed Babylonian slave (*Camb.* 143): reading by Greenfield 1991: 183.

- *Garda and gardu*. See mainly Dandamaev 1984b: 568–73 and Stolper 1985a: 55–59; *piti-pabaga* and *potibazis*, see mainly Eilers 1940: 73–81, with the complementary remarks of Stolper 1985a: 57–58. *Rabbap*: Dandamaev 1984b: 173 (free workers); cf. also Summer 1986: 30 ("local people . . . temporarily assigned to work groups") and more recently Uchitel 1992; but see Gershevitch 1969: 184, who thinks, however, that *rabbap* cannot refer to free workers; he thinks that the word *zamip* refers to free workers, but with many questions.

- *Tissaphernes and the Peasants of the Villages of Parysatis*. On the Xenophon passage and its translation, cf. RTP 61 n. 3; on the *Cyropaedia* passages, cf. RTP 176–81 and 480–81.

- *Irmatam, ulhi, and Gift Lands (doreai)*. See Briant 1985b and Stolper 1985a: 52–69; *dōrea* of Mnesimachus: Descat 1985. *DAE* 67: cf. RTP 311 n. 89 and Whitehead 1974: 60–66, who independently reach similar conclusions (Briant 1985b: 66); on the relationship proposed in the text between *DAE* 67 and certain Persepolis tablets regarding princesses' subordinates, see also Delaunay 1976: 19: "Only . . . the princesses can thus pay out of the public coffers and require either directly or by intermediary (*šaramana*) that the assets they control be released." In disagreement with Dandamaev's position (e.g., 1972a: 29–31; 1974), I continue to believe that land concessions, just as in the Hellenistic period, could be revoked by the king (cf. RTP 58–59 [note], 93; and Briant 1985b). [Additional note on Aršāma's "estates": in a recent article, Dandamaev (1993c: 122), who seems not to know my 1979 note reprinted in RTP 311 n. 89 and my article 1985b, ends up agreeing with Whitehead's opinion, quoted (p. 122) via Stolper 1985a]; on this point cf. also Porten 1987: 43, 47 (on *dšn'* in *DAE* 62): "It was thus not a grant to be held by the father and his estate, but a gift subject to revocation by the sovereign benefactor. . . . Thus *dāšna* is a royal grant, especially of land, of *usufructum* but not of absolute ownership in fee simple or fee tail. . . . It is revocable at the will of the sovereign benefactor" (on the word **dāšna* in *DAE* 62 [earliest attestation], see also Benveniste 1954: 300–301; note that this Persian word is probably found in a Persepolis tablet [PF 337] in the sense of sacrificial offering for Ahura-Mazda: cf. PFT index s.v., p. 681). On Parysatis's property, see Cardascia 1991, who also believes that the royal princess was simply the beneficiary of the income from rather than the owner of the lands from which she received the revenue; on the land concessions made to the stewards of the houses, cf. Stolper 1985a: 65; he compares the case of Babylonian stewards with those known in Egypt—on which see now Porten 1985 (on *DAE* 69); cf. also Szubin and Porten 1988: 42–43.

10. The King's House

- *The King's Sheep, Camels, and Horses*. On the warehouses, cf. Hallock's position, PFT 19; following him, Dandamaev (1972c: 14–16) thinks that the absence of *sunkina* is not particularly significant. "On all evidence," he writes, "there was not the slightest boundary between governmental property and royal property, between imperial revenue and royal property" (also, see Dandamaev 1973: 20 on royal *kurtas*); this is also the basis of the presentation given by Altheim and Stiehl (1963: 177–79), but in a form both more nuanced and more conceptual; I note that Lewis (1977: 11 n. 40) also expresses certain prudent reservations about Hallock's interpretation of the Category E texts (warehouses); on scribal practices (regarding PFA 29), cf. Hallock 1978: 114 (comparable, in an entirely different context, with remarks by Bernard and Rapin 1980: 19–20); on the phrase "attached to the house," cf. Gershevitch 1969: 175–77, followed by Hallock 1978: 112;

on the other hand, the examples from the P1 first put forward by Cameron must now be excluded: cf. Cameron 1965: 176.

• *Two Economic Domains?* On the exchange of produce, cf. also Hallock 1972: 26–27 and PFT 62, as well as Giovinazzo 1993 (on the *sut* process; Hallock thinks these exchanges were carried out in the context of a private market, but this interpretation does not convince me; cf. above); on the word *zak/zakme*, cf. Hallock 1960: 92; Fort. 19191: I know this unpublished tablet only from Hallock's 1972: 22 n. 4 reference. On the tablets naming Umizza, I am close to the interpretation suggested by Herrenschildt 1989a: 114 (although I am reluctant to follow her on the meaning of *bazikara*, p. 115).

• *Parnaka, Persia, and Darius.* On Parnaka's position and the nonexistence of a satrapy in Persia, I agree basically with Lewis 1977: 8–9 (correctly contesting the previous hypothesis of Hinz); cf. also Tuplin 1987b: 115, and now Koch 1993a: 16–22 (on the satraps of Pura/Puruš and Maka(š) named in some tablets); peace officers and police: Gershevitch 1969: 169, 181–82; Hinz 1973: 72–75; *datābaru* in Babylonia: Stolper 1985a: 91; on the word *dayyānu* in the tablets, cf. Eilers 1940: 6–7 (note).

• *Royal House, Persia, and Empire: A Hypothesis.* As the title of this section indicates, I must stress that the interpretations proposed here are nothing more than hypotheses, since they in turn raise several difficulties of which I am aware and which the above analyses do not entirely dispel; but it seems to me that even if my solutions do not convince the readers, the problem that inspired them remains. Some additional remarks:

1. On the text of Chares of Mytilene (Athenaeus): On the expressions used by the Greeks to describe the royal gifts (belt, slipper, etc.), cf. Briant 1985b: 59–62. Without being aware of my article, Cardascia (1991) recently returned to this question, and he too understands them as “for her maintenance” or “for her personal privy purse,” what I have called here “civil list.” Nor am I persuaded that the formulations of the Greek authors have to be rejected (despite his note, p. 365 n. 16) or that the accounting procedures they describe smack of “improbability” (cf. Briant 1985b: 61–62); I also note the existence of comparable formulas in Egyptian texts: cf. Meeks 1972: 68–71 on the lands whose revenues are dedicated to the care of animals (institutions known from Diodorus 1.83.2: *epimeleia, trophē*), to be compared with the examples enumerated in the Achaemenid Empire and presented in Briant 1985b: 60–61; cf. Meeks 1972: 109ff.: “lamp fields. Doubtless fields whose revenues were applied to the maintenance of lamps in the temple.” The identity of the formulas implies that, from the point of view of Chares of Mytilene, the king's pillow and footstool took on the same political-economic significance as the queen's girdle or slipper, that is, assessments reserved for the personal maintenance of the king: we there find the definition given by Hesychius for the *tagē* (*basilikē dōrea kai hē syntaxis tēn pros to zēn anagkaion*); if we pursue this interpretation to the end, we are led to believe that the king's cushion and footstool were supported by the revenues (in metal) of the *tagē*, that is, the royal land in the strict sense. (I hesitate, however, to conclude that the title *custos regiae pecuniae* [Quintus Curtius V.5.2, V.1.20; Nepos, *Dat.* 5.3] names the manager of this private treasury; they seem rather, at least in the first two examples, to be *gazophylax*.)
2. Rapin (1992a: 273–74) is the only author I know of who has commented on the Chares passage, in the context of a discussion of the architectural organization of the palace, where he distinguishes “the actual royal treasury” or the “specifically royal treasury” from the warehouses, but without clearly explaining what he means by “actual royal treasury.”
3. Of course, the basic problem posed by my hypothesis is that it implies the existence of a *patrimonium* of the prince. I note that this is Bickerman's position (1938: 180), who, for the Seleucid era, argues for the existence of “the royal estate proper . . . called, it seems, *khōra basilikē*. This patrimony consisted of the old property of the Achaemenids, Alexander, and his successors.” Against this position, Corsaro (1980a: 1165 n.13) suggests that “the entire

khōra phorologoumenē [tribute land] must be considered *khōra basilikē*." Without repeating the entire discussion presented above (chap. 10/7), I will observe that Corsaro's too-clear-cut position is disputable, especially after Descat's studies of the *tagē*, which clearly imply a difference between the two categories of land and taxes—in silver for the tribute, in kind for the *tagē*.

4. In the suggested development toward the installation of a state system, it is difficult to determine what goes back to Darius: it is possible that the restricted sense of the word *Achaemenid* (chap. 3/1) signified that, from that point on, the property of the royal family was distinguished from the lands of the Achaemenid clan (at least lands of the latter that were not included within the royal house). Herodotus reports that Darius included among his wives Phratagune, daughter of his brother Artanes, who was also a son of Hystaspes, and he states, "By marrying his daughter to Darius, he had given him his entire *oikos* as dowry, since she was his only child" (7.224). It is sometimes thought (cf. Lloyd in the discussion of Briant 1990a; also Brosius 1991: 66 n. 123) that Herodotus imposed the purely Greek phenomenon of the *epiclēre* daughter [daughter with an additional name] on Persia; the objection is obviously possible, but in my view, the story can be understood just as well in the Persian context (cf. the thoughts of Atkinson 1956: 173–77) and in what we know of the internal organization of the Persian aristocratic houses (cf. chap. 8/4); the conclusion I draw from this would instead be the following: the Achaemenid practice of endogamy had the additional purpose of keeping the property of the various princely houses within the broader framework of the royal house. On the other hand, and even though my interpretation agrees in general lines with that proposed by Herrenschildt 1989a, I have some reservations regarding part of her argument: I do not think, in particular, that one can date the shift in meaning of the word *baziš* from king's part to tribute [on **dmabāziš*, Hinz 1973: 66] so specifically (after DB: p. 115); if the development did happen (which I also believe), we can think only of the *longue durée*, especially if we recognize (or suppose) that the royal administration in Persia did not begin with the first dated tablet (cf. my reflections on this in chap. 2/9 above, regarding Cyrus's reign).
5. It is possible, finally, that the royal house was also distinct in the religious area; I note in fact that in addition to the deities of the official pantheon (for example, Ahura-Mazda), Darius III invokes the 'gods of [his] ancestors' (*theoi genethlioi*; Plutarch, *Alex.* 30.12; the explanation given in *RIP* 379 n. 166 is obsolete because it used an outdated translation of *DPd*): if Plutarch's formulation corresponds to reality, we are led to suppose that, as in the Hellenistic period (cf. Gauthier 1989: 67–73), the *theoi genethlioi* were specifically the protective gods of the royal family.

11. Transition

On the Egyptian documentary context and its characteristics, cf. Briant 1984b: 58.

Chapter 12

The King of the Lands

1. Darius and Egypt

• *Bibliography.* The basic references will be found in Bresciani 1958, 1984, 1985c; Briant 1988a; Ray 1988; and Tuplin 1991a; see also Kienitz 1953; Kraeling 1953: 32–40; and Bianchi 1982.

• *Satrap and Satrapy.* Persian titles in Egypt: cf. Wiesehöfer 1991b; Demotic documents: Hughes 1984 (on P. Loeb I, cf. also Heidorn 1992: 130–32); Memphis: cf. *LÄ*, s.v. “Memphis” and “Saqqara”; Petrie 1909–10; Segal 1983; on the internal organization of the garrison at Syene–Elephantine, see especially Kraeling 1953: 41–48; Porten 1968: 28–61; Grelot 1972; and Tuplin 1987c: 225.

• *Udjahorresnet’s Return to Sais.* Posener 1936: 21–29, 175–76; Blenkinsopp 1987; Briant 1993e; on his recently discovered tomb, cf. Verner 1988 and Bareš 1992.

• *Darius and the Egyptian Laws.* Besides Spiegelberg’s publication of the text and his commentary 1914: 30–32 and the old article by Reich (1933), see especially Bresciani 1981; Allam 1986, 1993; and Méléze and Modrzejewski 1986, both of whom suggest (cautiously but explicitly) a relationship between Darius’s code and the Demotic customary laws of the Ptolemaic period [likewise Johnson 1994: 157–58 and Devauchelle 1995: 76 (see also Briant 1996b)]; a translation of the Demotic text is also found in Devauchelle pp. 74–75 (and in Bresciani 1996)]; on the “sacred law” and the role of the priests of the Houses of Life, cf. Quaegebeur 1980–81 (with a comparison, pp. 239–40, with the codification ordered by Darius); on a possible use of these customs at Elephantine in the time of Darius II, cf. the hypothesis proposed below in chap. 14/8 (taken up and elaborated in Briant 1996b).

• *Pharandates and the Sanctuary of Khnum at Elephantine.* Hughes 1984; on the Petition of Peteisis, cf. Griffith 1909: 43–110; French translation by Capart 1914; cf. also Lloyd 1983: 304–5 [and now Chauveau 1996]; on the site of Teuzoi, cf. Szubin and Porten 1992: 72–73; on the Aramaic papyrus studied by Milik 1960, cf. the corrections in Porten 1985b: 438–39.

• *Darius in the Temple of Hibis (El Kharga).* Winlock 1941; Davies 1953 (with many drawings of the depictions of gods that she surveyed; some are reprinted in Briant 1992d: 62); Cruz-Uribe 1988; Aufrère, Golvin, and Goyon 1994: 88–94; see also El-Sayed 1982, 1: 92ff.; 2: 421–22 (with the translations used here); ritual of divine suckling: J. Leclant in *Mélanges Mariette* (1961): 251–84; French translation of the Darius inscriptions at El Kharga: Drioton, *ASAE* 40 (1940): 339–77. Without going into detail, I note that the chronology and interpretation of the buildings and reliefs are somewhat problematic (cf. Cruz-Uribe 1986); the most recent commentator (Cruz-Uribe 1988: 192–98) thinks that the absence of Neith points to some reworking of Darius’s Egyptian policy—which privileged the gods of Upper Egypt (Thebes region) over those of the Delta; I must say that, in relation to everything I have read elsewhere, this author’s interpretations are problematic; but we probably should await the publication of vol. 2 before deciding. We may also note that networks of *qanats* for supplying the oasis with water have been discovered; they are generally thought to date to the Persian period and thus to Darius (cf. Goblot 1979: 113–14, who quotes and uses earlier studies made on the spot by archaeologists; on Goblot’s work, cf. Planhol’s criticism [1992]); on the *qanats* in the oasis, see also Aufrère, Golvin, and Goyon 1994: 85 (Persian period), and also the article by Bousquet and Reddé 1994 (site of Douch). Meanwhile, in a private letter dated July 1, 1992, for which I am grateful, M. Betro (Pisa) alerts me to investigations by A. Fakry at Bahria (*ASAE* 40 [1940]: 855–96 and *Recent Discoveries in the Oases of the Western Desert* [Cairo, 1942]: 71–87), whose results may imply that the system of *qanats* known at El Kharga

predates the conquest. [I will also mention the discovery of Demotic ostraca in a recent excavation at Douch; some are dated to Darius I (pers. comm. from N. Grimal, February 1995).] Sporadic mentions of Darius at other sites: Yoyotte 1952; Traunecker 1973–77; Ray 1988: 264.

- *Darius at Heliopolis.* Yoyotte 1972, 1974 (publications of hieroglyphic inscriptions); on the iconography, cf. Roaf 1974 and Calmeyer 1991a (distinguishing the Persian and Egyptian elements).

- *Darius's Pharaonic Reputation.* On Darius and Sesostris: cf. Posener 1934; Malaise 1966; Lloyd 1982a: 37–41; Gaggero 1986; Morschauser 1988; Obsomer 1989: 151–58; and West 1992— with the authors disagreeing to some extent.

- *The Pharaoh and the Great King.* On the *naos* of Hermopolis, see the detailed commentary by Mysliwiec 1991 (but the interpretation of the role attributed to Pharandates in the matter makes me wonder); another Darius *naos*: photo in Briant 1992d: 60 [another interesting object recently republished by Traunecker 1995: a carved head melding Persian and Egyptian traditions]. On Darius's position, cf. the valid remarks of Tuplin 1991a: 243–47; Darius and the Suez Canal: cf. Posener 1936: 48–87 (canal stelas), 180–89 (interpretation of the lists), and Posener 1938; see clarification in Salles 1990: 117–18; Tuplin 1991a; also Briant 1991b: 78–79; surveys in the region of Tell el-Maskhuta: cf. Holladay 1982, 1992; Paice 1986–87, 1993 [as well as Redmount 1995 on the route of the canal].

- *From Cambyses to Darius.* On Polyaeus VII.11.7, cf. Tuplin 1991a: 265–66; on the stela mentioning the interment of the mother of an Apis, cf. Smith 1988: 188–89; 1992. The decree on the back of the *Dem. Chron.* concerning Cambyses' taxation and the possible role of Darius is not clear (did or did not Darius overturn Cambyses' decree?): cf. Bresciani 1983, 1989 [and Devauchelle 1995: 76; Bresciani 1996]; P. Berlin 13582: Hughes 1984: 84–85 (but the text contains several obscurities). [On Cambyses' Egyptian policy, see now Devauchelle 1995 and Depuydt 1995a, analyzed above, chap. 1/9, Research Notes, pp. 887f.].

- *Persians and Egyptians.* Cf. Briant 1988a, esp. pp. 160–66; on the titles given to the Egyptian elite, see also Meulenaere 1989: 569: the titles "Venerable before the king" and "Truly known to the king" "fell out of use after the Persian invasion, just as the 'Known to the king' disappeared from Egyptian autobiography under the invaders. Only an avowed 'collaborator' like the famous Udjahorresnet could boast, with good reason, of having been a "Truly known to the king"; on Persian names in Egypt from later papyrological sources, cf. Huysse 1990b, 1991. See also the interesting funerary document (drawing in Ray 1988: 273; photo in Briant 1992d: 90–91) from Memphis showing the deceased dressed in Persian (Median?) style: cf. Martin and Nichols 1978: 66–80; another funerary stela evidencing acculturation (Greco/Carian[?]-Egyptian) was published by Gallo and Masson 1993. [In this regard, the most fascinating new evidence is the funerary stela discovered in 1994 at Saqqara and briefly described on p. 1031 below thanks to information kindly provided by H. S. Smith and A. Kuhrt (published in *JEA* 81 [1995]); the inscription seems to attest to an Iranian-Egyptian marriage, which (along with other considerations) leads me to retract what I wrote in Briant 1988a: 166]. On Ahmose/Arsames, cf. Posener 1936: 177 and Briant 1988a: 160; Egyptian *sentî*: Yoyotte 1989. Knemibre: besides Posener (1936: 88–116), see Guyon 1957: 17–20 (on the military nature of the expeditions that gathered and transported stone from Wadi Hammamât; cf. *ibid.*, 28–29: inscriptions of Atiyawahy); I note that new Aramaic documents found in the Wadi Hammamât are published by Bongrani Fanfoni and Israel 1994, who also republish the hieroglyphic texts (though some of the historical commentaries seem questionable to me); origin of the stone for the statue of Darius: Trichet and Vallat 1990 (results of petrographic analysis). Votive bulls: Michaelidis 1943: 99 (Mithrobaïos), who interprets it as an object dedicated to the Mithra cult, but see the critical remarks of Yoyotte 1952: 167 n. 5. The only evidence for Persian religion in Egypt is the mention of two *magi* (Mitasareh and Tâta) as witnesses in a private contract from 434 (DAE 45 [= BMAP 4]; cf. Lipiński 1981–84; cf. also Kakosy 1977). But obviously no historical inference can be drawn from this lacuna, which results solely from the nature of the

available sources. Ptah-hotep: Cooney 1954a; Ray 1988: 272; on his duties, cf. most recently Bresciani 1989: 30–31 [and Devauchelle 1995: 78]. Seal of Peteisis (uncertain date): Duchesne-Guillemain and van de Valle 1959–62, comparable to the Persian-Egyptian seal published by Barnett and Wiseman 1969: 95 no. 49 (a falcon in front of a footed censer, and in front of it an ibex-horned bull, in a field bordered by *udjat* eyes); statue and inscription of Pedon: Ampolo and Bresciani 1988; and Masson and Yoyotte 1988; concerning the gift of the town, the latter authors think that it was the gift of ruling a town and that this sort of gift cannot be integrated into a Greek context; in any case, we can only stress the striking parallel with the gifts of towns in the Achaemenid period (Briant 1985b; cf. the careful considerations along these lines of Bresciani [p. 241], who nonetheless thinks it had to do with a land concession within the framework of the “colonization” policy followed by Psammeticus: Herodotus II.154); the remark about Udjahorresnet’s jewelry comes from Amandry 1958a: 16 n. 55 (the author’s entire long note is important; see also the remarks of Muscarella 1980: 26–27, 35–36; and Musche 1992: 278, drawing). Egyptian votive stela: published by Burchardt 1911: 71–72 (plate VIII, 1; cf. drawing in Ray 1988: 265), who thinks it really does relate to a cult of the king; the importance of the object is stressed by Lloyd 1982b: 174–75; compare monuments from the reign of Nectanebo in relation to the cult of kings of the XXXth dynasty: Nectanebo II is frequently awarded the epithet “falcon” there (cf. Meulenaere 1960, who relates the royal cult to the pharaoh’s building activity).

• *A Brief Evaluation*. On the institution of the “Divine Consort,” cf., e.g., Gitton 1984; on its disappearance after the Persian conquest, see the brief but clear remark in Meulenaere 1938: 187 (the last known seems to be Ankhnesneferibre, who, according to the author [p. 187 n. 2] “still lived under Psammeticus III”); unfortunately, as far as I know, this extremely important remark has never been followed up; I will simply observe that, without quoting Meulenaere, Tuplin (1991: 267) proposed to see in it an illustration of the decline of Thebes in Egyptian policy—a point of view that seems to me somewhat paradoxical, since Thebes continues to be an important center during the Achaemenid period [in addition, see Johnson 1994: 150 n. 5, and the whole article on the problems of continuities/discontinuities]; nonetheless, Tuplin’s general opinion is completely relevant: “Darius did not aim to return everything to its pre-525 status quo.” On the problems posed by the official enthronement of a foreign pharaoh, see the reflections of Burstein 1991 (concerning Alexander).

2. *Babylonia under Darius*

• *Sources*. Clear analysis by Kuhrt 1988b: 129–33; also Joannès 1990a: 173–74; Cocquerillat 1984b: 154–55 (Murānu). On the nonpublication of private documents from the time of Darius, see the impressive figures provided by Dandamaev 1992c: 172; he also notes (quite rightly) that it is not certain that Darius destroyed the Eanna, and he suggests that beginning with this king the Eanna kept its records on wooden tablets [same reasoning on the Ebabbar of Sippar in Dandamaev 1995b], but this last point remains to be proved. [See also McGinnis 1994, 1995, which I received late.]

• *Satrapes and Governors*. Petit 1990: 186–96 must be completed and filled out by Kuhrt 1988b: 130–32 and Stolper 1989b; *šandabakku*. Stolper 1988b: 128–30; new palacc: Joannès 1990a: 186 and n. 159; **vardana-pāti*: *ibid.*, 178 n. 21; *Bagasari*: Dandamaev 1969c, 1992a no. 98b; *širku*: Joannès 1990a: 186 (and n. 56 for the translation of TCL 13.196); and Abraham 1995. Concerning the office of *zazakku* (on which, see Joannès 1994b: royal secretary, not cadastre officer), Dandamaev (1994a: 40) thinks it was abolished by the Persian conquerors; this is possible, but the reasons given are not particularly convincing.

• *Estates and haṭru*. Cardascia 1951, 1958, 1978, Stolper 1985a; Van Driel 1989: 206–8; Joannès 1982: 21–22; service in Elam: Dandamaev 1972b: 260; Joannès 1982: 22–23; *urašu* service: Joannès 1982: 23–25, 1989a: 151–59; payment of taxes in silver-equivalent from the reign of Darius I: Joannès 1982: 21–22 (see chap. 14/7, Darius II and his armies).

• *Persians and Babylonians.* See Zadok 1977 and Dandamaev 1989b: 303–4, 1992a: 166–67; Joannès 1990a: 179–80 insists on the hegemonic role of the Persians, especially starting with Xerxes, but I am not sure that the available documentation allows us to draw such firm conclusions (cf. chap. 13/6); on the seals and the information that can be gleaned from them, see Zettler 1974, who says that beginning with Darius a large number of seals exchange traditional images for images known elsewhere from Persian seals; but see Graziani 1989 and esp. 1991: 164–65, who concludes that, on the contrary, 31 of 32 sealed tablets dated to Darius continue to bear Babylonian scenes (cf. also his remark on p. 161); on this point, see also the recent article by MacGinnis 1995: 164–81, and on the seals on the later tablets of the Murašū archives (to which I will return later, chap. 15/8), see now the detailed study of Bregstein 1993. I will add one remark: even though in Babylonia we have no evidence as clear as the inscription of Pedon in Egypt (above), we may note that the practice of royal gifts can equally as well be inserted without difficulty into the Assyro-Babylonian *longue durée*: see, e.g., Fales and Postgate 1992 no. 58 and pp. xxii–xxiii.

3. *Trans-Euphrates*

• *The District of Trans-Euphrates.* The period between the accession of Darius and the arrival of Nehemiah is the most lacking in documentation; see the recent collection of sources in Weippert 1988: 682ff. Tattenai: Olmstead 1944; cf. Rainey 1969; Eph'al 1988; Stolper 1989b; Petit 1990: 189–90; Heltzer 1992b; see critical doubts about Herodotus's Vth *nome* expressed in Calmeyer 1990b. On Damascus: I am aware that it has been suggested that Sidon may have been the capital of Ēbir Nāri, but I must say that the theory, based on a late and not very convincing text of Diodorus (XVI.41.2), has always seemed strange to me: see also Eph'al 1988: 154–55, who agrees; in a discussion that is not always clear, Ēlayi (1989: 144–46) seems to agree that the Damascus theory is well grounded but at the same time thinks that the problem "is badly posed because the capital . . . need not have been unique and fixed": this remark could only hold for the paradise-residence that Xenophon places at the sources of the Dardas (*Anab.* I.4.10), not for the permanent headquarters of the satrapy. Concerning the government of Ēbir Nāri, a recent article by H. Koch (1993a: 39) poses some problems; after mentioning that an unpublished tablet (Q 1888) refers to Cypriot *kurtas* in Persia around 495, she compares this tablet with another (PF 1527) that deals with the movement of 1150 *kurtas*, where the name of the person who delivered the *halmi* (Dātāna) is the same as the one in Q 1888; from this she deduces that this person was then satrap of Syria (of which Cyprus was a dependency). But: (1) this conclusion is based on the assumption that people who deliver *halmi* must always be considered satraps—which sometimes raises problems: cf. Briant 1991b: 70 n. 13; (2) in PF 1527, the ethnicity of the *kurtas* is not stated, so this tablet and the other (Q 1888) could simply involve two people having the same name.

• *The Province of Judah.* Governors of Judea before Nehemiah: the inscribed bullas were published by Avigad 1976, and his interpretation has found widespread agreement (e.g., Laperrousaz 1982; Greenfield 1988; Lemaire 1989b: 95–96, 1994: 16–18; Meyers 1985 suggests that Elnathan is none other than the son-in-law of Zerubbabel); meanwhile Avigad's datings have been contested by Bianchi 1989, who concludes from analyzing the archaeological context that they are the Hellenistic period. Administration of Judea: cf., e.g., McLÉvenue 1981; Williamson 1988; and Lemaire 1990: 29–45 (the entire documentation is collected and interpreted, and the province of Judah is set among the other provinces [*medinah*] that make up Trans-Euphrates; revised version in Lemaire 1994a); seals with Achaemenid motifs struck (sometimes) with Iranian names have been found in the region, but the dates are not all precise: see Bordreuil 1986a no. 125ff.; Shaked and Naveh 1986; Stern 1971, 1982b: 196ff. Darius and Jerusalem: cf., e.g., Yamauchi 1990: 155–59; Bickermann's (1981) chronology has been seriously questioned by Kessler (1992). I mention in passing—not wanting to launch into a thorough-going critical analysis of Ezra and Nehemiah (cf. chap. 14/5 Research Notes)—that in a recent article Dequeker 1993 maintains that the reconstruction of the temple in Jerusalem should be dated to Darius II, not Darius I.

• *Cyprus*. The Phoenician presence in Cyprus is amply attested; see Masson and Snycezer 1972; Maier and Karageorghis 1984; and the articles by Destrooper and Giorgiadès, Hermay, Greenfield, and Yon in *Studia Phoenicia* 5 (1987), as well as Collombier 1991; the Cypriot kingdoms are clearly presented in their environment by Collombier 1990 (she stresses [p. 31] the uncertainties surrounding the function of the palace at Voumi, interpreted by Gjerstad as the residence of a Persian governor who would have been appointed after Cyprus's participation in the Ionian Revolt); cf. also Wiesehöfer 1990; Petit 1991; Reyes 1994: 85–97; Maier 1994: 297–308. I recall (above) that, according to Koch 1993a: 39, an unpublished Persepolis tablet (Q 1888) provides evidence of the presence of Cypriot workers (*kurtas*) in Persia around 495; she also says that the adjective *kupirriyaiḫ* does not refer to the place-name Gaufriya but to Cyprus [cf. the Babylonian astronomical tablet ADRTB -440, where Cyprus is called *KUR ku-up-ru*].

• *Phoenicia*. Generally speaking, Jidejian's syntheses on Tyre (1969) and Sidon (1971) are useful but very general; likewise Katzenstein's 1979 article; one may also consult the many studies by J. Elayi (cf. bibliography); the earlier, Assyrian sources allow the study of the extension of Phoenician occupation in the Gulf of Alexandretta (Myriandrus): cf. Kestemont 1983: 53–78, 1985: 135–65 (cf. also Bunnens 1983b); sources for the early Achaemenid period are scarce, aside from the role played by the Phoenicians in the Ionian Revolt and their relations with Carthage (cf. Ferjaoui 1992: 56–62), and aside from an Akkadian tablet found at Tyre dated 492 (sale of a female ass; Wilhelm 1973); not until the start of coinage, beginning in the second half of the fifth century, and the Classical texts bearing on the fourth-century revolts and Alexander's conquest do we have documentation (still indirect) dealing with the nature of the relationships between the Phoenician kings and the Great King; however, I note that quite recently Dandamaev (1995c) thinks that he has found mention of a governor of the town of Tyre [LÚ-NAM ša^{um} gub-ba-al^{ki}] in a Babylonian tablet from the reign of Darius (CT 55, no. 435); the governor has a Babylonian name, and the text proves that the first Achaemenids kept very close watch over the Phoenician cities — all interpretations that require confirmation. Seal and tablet from Persepolis: PT 7; cf. Schmidt 1957 no. 32; cf. p. 11 (drawing in CAH IV² [1988]: 157 [fig. 50f, p. 606 here]). Ešmunazar inscription: text in Gibson III no. 28; the French translation is taken from Lemaire 1990: 56 (see also Lemaire 1994a: 31–32; text and photo of the sarcophagus in Briant 1992d: 85); on the date and the circumstances of the allocation to Sidon, see Kelly 1987, who reviews the previous interpretations and concludes that it was due to the activity of the Phoenicians against the Ionian rebels; to Kelly's bibliography add Garbini 1984 and Coacci Polselli 1984 (who places Tetramnestus between Ešmunazzar I [490–481] and Ešmunazzar II [475–461]); finally, in the course of a lucid article, Bondi (1974: 154–55) sees the first indication of Sidon's special place in the Achaemenid administrative system in Phoenicia in the royal concession (which he dates to the Egyptian revolt of Inarus); this special status could be based on the absolute fidelity of the kings of Sidon, which is clearly shown later on by the place of the Great King on the city's coins: cf. chap. 14/8. The king of Sidon close to Xerxes: I repeat here the conclusions of Hauben 1970, 1973 (compare the theories of Wallinga 1984, 1987, 1993 on the construction and organization of the royal fleet).

4. From Jerusalem to Magnesia on the Meander

• *Darius, Gadatas, and the Apollo of Aulai*. The inscription was published by Cousin and Deschamps 1889 (cf. Cousin 1890) and gave rise to many analyses: cf. Boffo 1978; the identification of the sanctuary referred to in the letter comes from L. Robert 1987: 42–43; the authenticity of the document has been reconfirmed by Wiesehöfer 1987b, soundly refuting Hansen 1986 [but some doubts remain in Tuplin 1994: 238]; the letter in Iranian context: Brandenstein and Mayrhofer 1964: 91–98; the identification of Gadatas as satrap (claimed, for example, by Tuplin 1987b: 145) is offered once again by Petit 1990: 179–80 and Chaumont 1990: 588–90, but the arguments are far from convincing; Gadatas, steward of a paradise: Dandamaev 1984a: 114 (“probably”); on the date proposed here (Darius at Sardis during the return from Europe): suggested by comparison

with the embassies sent by the sanctuaries to the Roman Senate: Tacitus III.60ff. (cf. Briant 1993a: 11–12); note that on this occasion “the Milesians invoked an order of King Darius” (III.63), which obviously gives us every reason to think it predated the Ionian Revolt.

- *Darius, Tattenai, and Gadatas.* On the founding of Nemrud Dagh by Antiochus of Commagene and the status of the hierodules, cf. Dörrie 1964: 83–88 and Debord 1982: 85–87; [and Sanders (ed.) 1996] Artemis Barzochara: *BE* 1970, no. 538 and *BE* 1971, no. 669.

5. Western Asia Minor: Cities, Dynasts, and Empire after the Ionian Revolt

- *Border Wars and Arbitration.* See already Briant 1987a: 3–4; RC 7: cf. the illuminating comments of Curty 1986 on the value the judges ascribe to the writings of local historians; on Tod 113, see also Picirilli 1973: 155–59.

- *The Question of Tribute.* Let us remark at the beginning that here as elsewhere the word *Ionians* is problematic: it seems difficult to believe that the tribute reorganization was limited to Ionia; it is quite a bit more likely that the measure extended to the other coastal regions of Asia Minor. Herodotus VI.20 is frequently referred to, but primarily in the context of the continuity between Achaemenid and Delian tribute (Evans 1986; Wallinga 1989, with the remark by Kuhrt 1989a: 218), less frequently in the framework of an independent investigation of Achaemenid tribute organization (see, however, Thompson 1981); on this, see the important contribution by Murray 1966 and the remarks by Descat 1989a: 81 and 1989b: 29 (monetization of tribute, in relation to the introduction of the daric; according to Descat, a reduction in tribute when compared with prior payment methods in weighed metal. Herodotus does make a statement about the slight difference between the earlier tribute and the tribute established by Artaphernes; but I am not sure I fully understand what Descat means by “monetization of tribute”); cf. also the suggestions about quantity made by Descat 1985: 99–103 and the remarks by Tuplin (1987b: 148), who thinks that Artaphernes’ measure does not imply that the satrapal administration later interfered in the internal affairs of the cities. It was the responsibility of each city to determine the means of raising the tribute according to their own rules (cf. also pp. 145–46); the author might be right about this point, as long as it is always kept in mind that, according to the Greek epigraphic formula so often encountered in Asia Minor (including in the Achaemenid period), a city was not ‘master’ (*kyrios*) of “royal tribute [taxation]”; it could not grant an exemption on this part of its obligation (cf., e.g., *BE* 1971 no. 622, 1973 no. 408; Corsaro 1985; Savalli 1987); in other words, the city’s autonomy in the matter is reduced to setting the rules governing the raising of an *obligatory* tax whose amount is *fixed* by the imperial authority!

- *Democracies and Tyrannies.* Besides Briant 1987a: 4, cf. Graf 1985 and critical remarks by Austin 1990: 306; cf. also Frei 1990: 162–64.

- *Autonomy and Military Control.* On Phocaea and other naval bases, cf. Wallinga 1984: 408, 1987: 68, 1991; on the presence of Persian garrisons in other cities, cf. Diodorus XI.60.4 (in the 460s).

- *Persian Power and Dynastic Powers in Asia Minor.* Cilicia: Erzen’s study (1940) remains important; Desideri and Jasink’s book (1990) provides nothing new on the status of the *syennésis* (pp. 178–202), a point to which I will return (chaps. 14/8 and 16/6); on the other hand, Desideri takes an interest in situating the Achaemenid period in the *longue durée* (on the Assyro-Babylonian period, see also Bing 1969, 1971, as well as Hawkins and Postgate 1988); for an overview taking into account epigraphic, archaeological, and numismatic data, cf. Lemaire and Lozachmeur 1990; Persian arsenals in Cilicia: Wallinga 1991; Cilician tribute: Asheri 1991; Cilician horses imported to Egypt: cf. Milik 1960 (but the readings are disputed by Porten 1985b); Meydançikkale: see Laroche and Davesne 1981 and Davesne, Lemaire, and Lozachmeur 1987. I am not taking into consideration here the identification of Cilicia on the gift-bearer frieze at Persepolis, since there is no certain textual basis; on the other hand, following many authors, Asheri (1991: 41–42) thinks that behind the *Yaunā drayaha* and the *Yaunā tyaīy drayaha* of the royal inscriptions an

indirect allusion to Cilicia may be found, the Cilicians being included there with Cyprus “and the other inhabitants of the sea”; cf. also Wallinga 1991: 278–79, who thinks that the phrase represents an actual administrative and strategic unit including Cyprus–Cilicia–Phoenicia; he rejects the nonetheless convincing interpretation of Schmitt (1972), for whom “those from the sea” designates the peoples of the satrapy of Dascylium (Hellespontine Phrygia). But this discussion accords perhaps too much administrative value to the vocabulary of the royal inscriptions (cf. chap. 5 above); the Achaemenids seem to have adapted the Assyro-Babylonian vocabulary, which frequently uses the phrase “kings of the coast” to refer not only to the Phoenician kings but also to all the princes of southern Anatolia, Syria, and Palestine; as for the Cypriot princes, Esarhaddon (Prism) calls them “those who are beyond the sea.”

• *The Persians in Asia Minor.* On the military levies, in addition to the Herodotus passage (V.102) and the example of Asidades (cf. Tuplin 1987c: 213), see Xenophon, *Hell.* I.2.6; III.2.15; also probably Diodorus XI.34.3; I note in passing that a late Greek inscription (*BE* 1983 no. 359) mentions a place called Tetrapyrgia in the plain of Castolus (Castolou Pedion in Meonia), which Xenophon (*Anab.* I.1.2; I.9.7) names as one of the assembly locations (*syllogos*) for territorial troops in western Asia Minor. Pharnakides near Dascylium: Sekunda 1988a: 178; Celaenae: Sekunda 1991: 120–21; for place-names incorporating Cyrus and Darius, see the reasonable interpretations of Sekunda 1985: 20–23. Many sources are assembled in the works of N. Sekunda (1985, 1988a, 1991), but for the most part the documents date to the fourth century and thus will be taken up later; cf. also Briant 1985a (Greco-Roman sources); Baslez (1985) stressed the dangers in the use of Iranian onomastics from Asia Minor (cf. also Sekunda 1991: 87–88), but I must say that I do not follow her all the way to the end of her argument; the method used by L. Robert (cf. *RTP* 458ff.) continues to appear valid to me (to reconstruct Iranian settlement on the basis of late documentation: Iranian personal names and sanctuaries dedicated to Persian Artemis/Anaitis). Mixed marriages in Caria: Hornblower 1982: 26 and Sekunda 1991: 96. Dascylium stela: first published by Macridy 1913: 348–52, who also published two other stelae—a procession of women on horseback and a banquet; and a hunting scene; Macridy dates them to the end of the fifth century (on the very difficult chronological problems, cf. also Dentzer 1969: 200ff.); gold plaque from the Oxus treasury: Dalton 19–20 and pl. XIV; Sultaniye Köy stela: Altheim et al. 1983 (Nollé 1992: 19–22); Elnap stela: Lipiński 1975: 150–53 and Nollé 1992: 15–16 (but the problem of the date must remain open).

• *Satrapal Art and Local Artists.* On the entire question of “Greco-Persian” art and its relation to court and satrapal art, see Root’s stimulating thoughts (1991); she begins with a well-known though generally badly treated problem, that of the Persian presence in the Empire, considered in relation to its archaeological and iconographic vestiges (cf. Briant 1984b: 57–68, 1987a: 6–11; Sancisi-Weerdenburg 1990a; Root 1991; chap. 16/18 below). The crucial importance of the “intermediate zone” in the cultural exchanges between Iranism and Hellenism has been particularly emphasized and brilliantly illustrated by Asheri 1983a, 1983b: 15–82; on Ephesus and its “barbarization” (Iranization) at the end of the fifth century, cf. Plutarch’s evocative text *Lysander* 3.3 and my remarks on this text in Briant 1985a: 181–82 and 1987a: 16, as well as chap. 16/3 below; at an earlier date, Herodotus’s statement (VIII.105) describes the place of the town in trade between Greeks and Persians; we also know that the highest official (*neocore*) of the Artemision bore a name-title borrowed from Persian: Megabyzus, i.e., Bagabuxša (Benveniste 1966: 108–13); on the Iranization of Ephesus, see Papatheophanes 1985, who, following Picard 1922 and Boyce 1966, poses hypotheses that seem rather adventurous to me. The Greco-Persian stelae have been published in many scattered places, which I cannot exhaustively list here [cf. Nollé 1992]: cf. Metzger 1971; Starr 1977; Sekunda 1988a, 1991; von Gall 1981–83 [1990]; likewise for the seals: cf. Boardman 1970b; on the hunting scenes and their relationship to lost monuments at Persepolis, as suggested by Cremer (1984: 91–99), cf. my reservations expressed in chap. 6/1 above; Aršama and Hinzanāy (*DAE* 70 [= AD 9]): cf. Briant 1988a: 168; also Fleischer 1983 and Roaf 1979:

72. Workshops in Asia Minor: Melikian-Chirvani 1993; royal workshops in Egypt: chap. 10/6 above; wood and ivory objects: Bernard 1976 and Stucky 1985; goldsmithery (cf. also Pfrommann 1990 and McKeon 1973): Amandry 1958a: 16 n. 54, 1958b: 44–46, who notes: “It is true that in the Achaemenid period a certain unity was established, in motifs and style, throughout the entire Empire” (p. 16); objects from Manisa and Sardis: Akurgal 1961: 170–71 (photographs); cf. also the very interesting, still unpublished stela in the museum of Manisa in Greenwalt and Heywood 1992: 16 (photo); still with respect to the workshops, which in my opinion were located throughout the Empire, we may note an interesting passage in Athenaeus (XI.486c), who in the course of an inventory from the time of Alexander refers to typically Persian vases made in Lycia (*lykiourgeis*; but the text is uncertain). [I now see the same interpretation in Tsetschludze 1994:99, who thinks that the inventory might come from a letter written by Nearchus when he was satrap of Lycia.] Dascylium bullas with scenes of paradises: Kaptan and Bayburtluoğlu 1990; scenes of the Royal Hero: Akurgal 1961: 174, fig. 122; and Mellink 1988: 220 (drawings [here fig. 56b, p. 700]); audience scene: Miller 1988: 85–86, who rightly notes, “Pictorial elements of Achaemenid imperial iconography were reproduced on a smaller scale”; an excellent drawing appears in Musche 1989: 147 [here fig. 15, p. 210]; scene on the shield: von Graeve 1987 [here fig. 14, p. 209]; audience scene on Persepolis seal impressions: PTS no. 26.

• *Royal Persian Art and Lycian Dynastic Art.* See in general Asheri 1983b, esp. pp. 64ff.; and Jacobs 1987. I note that the Xanthian documents pose other problems of a more specifically political sort, and these will be taken up in subsequent chapters. Building G: description in Demargne and Coupel 1963: 49–61 (ca. 460); on the Achaemenid influences, see esp. Bernard 1965 (quotation, p. 285; cf. p. 287; on this particular point, see Rodenwalt 1933: 1031); Monument of the Harpies: Demargne 1958: 37–47; on the Iranian influences, the basic work remains Tritsch 1942, whose interpretation is repeated (and amplified) by Shahbazi 1975: 15–50 (who refers to the monument as Monument of the Harpagide, on the basis of the identification that he suggests); tomb of Karaburun: cf. Mellink 1979, 1988: 222 (475 B.C.); see color photos provided by the author in Briant 1992d: 66–67; also the detailed analysis in Dentzer 1982: 227–30; Persian iconography on the coinage of Kprlli: Mørkholm and Zahle 1972: 90–98; Zahle 1991: 150; and now Keen 1992a, chap. 5.1, who locates Kprlli around 480–440. We may add that Iranian names are common in Lycia (cf. Bernard 1964: 210–11; Briant 1984b: 94–96; Sekunda 1991: 97–105; [now add REG 107 (1994): 325–26]); however, there is much disagreement on this point: according to Schmitt 1982, they do not seem to have spread widely beyond the imperial diaspora properly so called; and, contrary to P. Bernard, Bryce (1986: 162–63) thinks that the settlement of many Persian families after Harpagus’s conquest cannot be assumed (cf. also Zahle 1991: 152); if with Keen (1992b: 58 and n. 24) we agree that Harpagus the Mede is not the founder of the dynasty, then the discussion self-evidently takes an entirely different direction: “The evidence for Iranian settlement in Lycia is minimal” (Keen 1992a chap. 2.2: “The Repopulation of Xanthos”).

6. Population Resettlement and Deportation

• *Deportation of Greeks and Other Peoples.* There is no general treatment; Ambaglio 1975 remains partial; on the other hand, there is much to be found in Asheri 1983b: 33ff.; on Persian policy (settlements in the *eskhatiai* of the Empire), which was also applied to rebellious Persian nobility, cf. Briant 1984b: 64, 97; deportation of the Branchidae to Bactria, cf. Bernard 1985a: 123–25; on the deported Fretrians, the abundance of Greek documentation has stimulated some specialized studies: cf. Grosso 1958, Penella 1974; the deported Greeks in Lower Babylonia are compared with the Ionians and Carians listed in the Foundation Charter of the palace at Susa by Mazzarino (1966: 76–77); language problem: Briant 1984b: 95; the tale of the deportation of the Paconians in Herodotus provokes numerous questions: cf. Foucault 1967b.

• *The Status of Displaced Communities.* Greeks in Persepolis in 330: cf. RTP 329 n. 161, 343–44, and chap. 16/12 below; Yaunas in the tablets: Delaunay 1976: 24, Lewis 1977: 12–13 (who

reviews the existence of other texts attesting to Greek presence on the construction sites: cf. Roaf 1979: 70); on the graffiti, cf. Nylander and Flemberg 1981–83. Ethnic diversity among the *hatrius*: Stolper 1985a: 72–79; on the Saka: Dandamaev 1979, 1992a: 159–62 (and the whole book on the subject mentioned here); the ethnic diversity of Achaemenid Babylonia is well attested, especially by the onomastics, but it is not due only to massive deportations (see Zadok's articles, *BASOR* 230 [1978]: 57–63, *Tel-Aviv* 6/3–4 [1979]: 164–81, *Assur* 4/3 [1984]: 3–28); on Arab penetration into Mesopotamia, cf. Eph'al, *JAOS* 94 (1974): 108–15 (eighth century) and Fales 1989; on the status of foreign communities in Babylonia, cf. esp. Eph'al 1978; also Heltzer 1981 (Jews in Babylonia) and Dandamaev 1992a: 176–77 (who sees it as the precedent for the Hellenistic *politeumata*); Babylonians in Persia: Stolper 1984a: 309–10 (cf. also chap. 11/3: "Family Breakup and Ethnic Uniformity," p. 437).

- *The Garrisons of Egypt*. See esp. Kraeling 1953: 49ff.; Porten 1968: 28ff.; Grelot 1971b, 1972; each of these authors discusses at length the phenomenon of intercultural encounters; on Jewish ritual practices at Elephantine, cf. also Vincent 1937 and Milik 1967; on the Caspians, Grelot 1971: 101–17; Memphis garrison: Segal 1983: 7–9; Memphis workshops: Aimé-Giron 1931, 1939; Asia Minor: Assyrians and Hyrcanians: Xenophon, *Anab.* VII.8.15; Bactrians: Briant 1984b: 92–94; Deve Hüyük: Moorey 1975, 1980 (but see the critical remarks of Mazzoni 1991–92: 65–66). Tuplin 1987c: 218–22 focuses on the ethnic origins of the garrisons in various regions of the Empire.

7. Unity and Diversity

- *Imperial Administration and Multilingualism*. There is no point in providing an exhaustive bibliography on the spread of Aramaic throughout the Empire: see Fitzmyer and Kaufman 1991 (on Palestine, cf. the exhaustive list in Lemaire 1989b); I consider this claim by Petit (1990: 152) a complete fantasy: "The use of Aramaic as administrative language is doubtless to be included among the reforms of Darius" (referring, curiously, to Tiratsian 1981: 160); it skips over the developments of the Assyro-Babylonian period; Aramaic on the Iranian Plateau: see esp. Benveniste 1958b: 43–44, Briant 1984b: 59–61, Rapin 1992a 111–12; inscribed wrist of a Babylonian slave: Greenfield 1991: 183, contesting the reading of Dandamaev 1984b: 230–31; correspondence of Pharañdates: Hughes 1984: 77–84. Linguistic exchanges: I do not see the basis for Dandamaev's statement (1989b: 296) that "Cyrus the Younger . . . spoke fluent Greek"; Plutarch, *Per.* 24, which he cites, says nothing of the sort, while Xenophon (*Anab.* I.8.12) implies just the opposite (cf. Cousin 1904: 123); Iranian languages: cf. (e.g.) Maricq, *JA* 1958: 395–99 and C. Fussman, *BEFEO* 1974: 3–38; see also Benveniste 1958b (Aramaic version of the Asoka inscription, filled with Achaemenid Iranian words) and Rossi 1981; on the concept of Ariane in Strabo, see chap. 5/3 above; on the Mardians and other Persian ethnic groups, cf. Briant 1976, esp. p. 233 n. 125; on the East Iranian dialects and Alexander's interpreter, see Briant 1984b: 61, 94–96 [but doubts in Bosworth 1995: 25]]. It is likely that some *kurtas* learned Persian, not only those who worked in the administrative offices (e.g., Yauna: Lewis 1977: 10–11) but also people involved in production (cf. Quintus Curtius V.4.4). Example of Tissaphernes: Lewis 1977: 101 n. 72. On the interpreters, Mosley 1971 offers nothing new, despite the attractive title of the article; cf. Asheri 1983b: 20–22, 68. Babylonian tablet Amherst 258: published by Ungnad, *AfO* 19 (1960): 79–81 (partial translation in Dandamaev 1989b: 112). The doubts stated in the text were suggested to me by M. Stolper (pers. comm.); see also some remarks in Tuplin 1987c: 179 and n. 29, and, on the Persians or Iranians who were close to Uštānu, the notes of Dandamaev 1992a nos. 8, 29, 42, 61, 100a, 272, 336a.

- *Royal Law and Local Law*. The thesis of the spread of a royal law or common precepts throughout the Empire was developed by Olmstead 1935, 1948: 119–34 (beginning primarily from the spread of the phrase *dātu ša šarri* in the Babylonian documents and a supposed connection with Hammurabi), whose positions were strongly contested by (e.g.) Dandamaev 1989b: 117; cf. also the careful remarks of Kuhrt 1988b: 132 and Petit 1990: 164; the interpretation developed here concurs with what Frei 1984 presented (the discussion is connected with relations between royal [satrapal]

authorities and local sanctuaries; cf. Briant 1986a). On the judges (*dātābaru*) and *dātu ša šarri* in Babylonia, cf. Dandamaev 1989b: 116–18, 122–25; Joannès 1990a: 179; cf. also Stolper 1985a: 91, Tuplin 1987b: 118–20, and more recently Dandamaev 1992a: 42 and no. 341b; CAD (s.v.) translates ‘royal edict (concerning a particular matter)’, which corresponds much better to the concrete realities; but, to offer a truly justifiable conclusion, one would have to inventory every tablet with the word *dātu*; I will add that my reservations about translating *dātu* as ‘law’ are also inspired by the remarks of Bottéro 1987 on the “code” of Hammurabi (cf. esp. pp. 218–20 on the phrase *simdat šar-riim* ‘decisions of the king’, which reminds us of the Babylonian-Achaemenid category *dātu ša šarri*). [On the problems connected with the use of the calque *dātu* in the Babylonian tablets, see Stolper 1993: 60–62, 1994a: 338–41.] Judges in the Saqqara papyri: Segal 1983:5; in the Elephantine papyri: cf. Wiesehöfer 1991 and Porten 1968: 47–50 (who makes an erroneous comparison with Persian royal judges, p. 49; cf. the justifiably critical remark of Petit 1990: 164 and n. 253). The word *dāta* in PF 1980: see the commentary by Giovinazzo 1993: 124 n. 28 (which I learned of at the last minute, well after this section was written); while taking over the translation ‘according to the former law’ from Grillot and Susini 1987: 71, the author also emphasizes the importance of the phrase in line 20: *meni inni huttik šutur*, which, contrary to Hallock and Grillot, she understands as ‘then [the count] was not done [according to the] rules’—a phrase she compares with *datam ap-pukaka*; this interpretation, it seems to me, tends to confirm my understanding of *dāta* in PF 1980. The word *datah* also appears in two Aramaic inscriptions from Asia Minor: one is too broken to offer commentary (cf. Davesne, Lemaire, and Lozachmeur 1987: 368–70; Lemaire 1991c: 206); the other occurs in the Aramaic version of the Xanthus Trilingual; it perfectly confirms the relationship that existed between the “law” of the satrap and the local laws; as Bousquet (1986: 105) correctly notes, the satrapal decree on the trilingual “is not exempt from financial preoccupation” (I independently developed the same interpretation in Briant 1986a: 435–37; cf. now also the remarks of Lemaire 1995c); while regretting that there is no exact equivalent in the Greek version, we note especially that in this text the Persian-Aramaic *dāta/dath* is rendered in Lycian by *marā*, which in another Lycian text (Bousquet 1986: 101) refers to a fiscal decree by the same Pixōdaros in Lycia (on the word *maraza* ‘arbitrator/conciliator’ in the Pilier inscription, see Melchert’s 1993 suggestions). All of these comparisons confirm that the translation of *dāta* as ‘law’ is at best ambiguous; in every case, the translation ‘regulation’ is probably closer to the administrative reality. *Dath* in the biblical texts: the word also appears several times in Daniel 2:9, 13–15; 6:9, 13–16, with the same meaning it has in Esther; once again it refers to “the law of the Medes and Persians,” which held for example that “no edict or decree can be altered when once issued by the king” [JB]; on the phrase *patrios nomos* in the context of Hellenistic Judaism, cf. Briant 1990a: 58–60 (following Bickerman’s work). Last, I observe that some of Darius’s acts are presented by Plato (*Laws* III.695c) as a ‘law’ (*nomos*): “He also included in his code regulations (*nomos*) about the tribute (*dasmos*) promised to the people by Cyrus” [Hackett]; but, contrary to what is frequently stated, it is not certain that Plato was really referring to the tribute form properly speaking; the context actually makes it clear that his acts are being discussed exclusively in the context of relations with the Persians and Persia (*ouk . . . das-mophoros*: Herodotus III.97), so that the *dasmos* (and not *phoros*!) that the author speaks of could just as well refer to the gifts given to the king by the Persians, which we know from Aelian (VI I.31) were strictly codified by a *nomos persikos* (on the word *nomos* and its polysemy, cf. in particular Modrzejewski 1966: 149–56). Two closing remarks concerning the “legislator/nomothete” king (Diodorus I.94–95): (1) According to Robert (1975: 314), in a Greek inscription from Sardis, the word Baradates is an *epiclēse* [additional name] of Zeus, the entirety being understood by him as “Ahura-Mazda Legislator”; but, aside from the fact that Gschnitzer (1986) has shown that it is a personal name, we would expect to find *databarēs* (*dātābara*) in the Greek instead; (2) Grillot (1990) recognized the word *te-nu-[um-ta-ut-ti-ra]* in DSf (Elamite) and translated it ‘sole legislator among many’, although Hinz (1950: 3) and Vallat (1972: 9) translate ‘sole lord among many’ (on this word, cf. also Gershevitch 1983 analyzed by Grillot, *AbIran* 7 [1984] no. 159).

Chapter 13

Xerxes the Great King (486–465)

1. Sources and Problems

• *The Year 479 and Xerxes' Reputation.* I have learned much (relating to this entire chapter) from Sancisi-Weerdenburg 1980, 1987a, 1989a, 1991a–b, 1994; on the sources for the reign of Xerxes, cf. also Yamauchi 1990: 187–92; on the romance of Masistes, cf. Sancisi-Weerdenburg 1980: 48–83; I note in passing that the relations between Amestris and Xerxes, as seen by Herodotus, have a nearly exact duplicate in the story of the relations between Semiramis and the king of Assyria reported by Aelian (*VH VII.1*) after Dinon; on a specific point (gift of an army), Sancisi-Weerdenburg 1988b; on Ctesias and the Persian Wars, cf. Bigwood 1978a; Ctesias and Xerxes at Babylon: Briant 1992a.

• *Persian History and Hellenocentrism.* According to the *Suda*, Dionysius of Miletus wrote a work called *Ta met' Dareiou*, but the content of this lost work continues to be problematic (cf. Hignett 1963: 12–13; Moggi 1972); Thucydides and the Persians: cf. Andrewes 1961; also Schmitt 1983b.

• *The Idea of Decadence.* Sancisi-Weerdenburg 1987a; Briant 1989a, quotations in the text (on Xerxes' "intolerance"): Mayrhofer 1974 (cf. idem, 1973b: 282); see also Olmstead's surprising claim 1939: 318: "[After Salamis, Xerxes] completely lost his head"; on the relationship between the year 479 and the institution of the "haoma cult" at Persepolis according to Bowman 1970, see my critical discussion above, chap. 11/1 Notes. The theory of Persian decadence is still found in recent work: cf. Briant 1993e, 1994b (on the significance of Droysenian historiography among Iranists, cf. my remarks in RTP 318–23). *Daivā* inscription: see chap. 13/7 below.

2. From Darius to Xerxes

• *Chronology and nomos.* On the date of Xerxes' selection as crown prince by Darius: according to Calmeyer (1976b: 83), Xerxes was "king and co-regent" for twelve years beginning in 498; but, aside from the fact that I am skeptical of the author's general thesis of "double kingship" (the king never shares power), the archaeological evidence offered is hardly probative: the Babylonian tablet to which he refers (in Olmstead 1948: 215 n. 4), and which he considers "very seductive" evidence, speaks only of a new palace at Babylon (BRM 1, 81; Joannès 1990a: 186 and n. 59), and it has not been directly related to the naming of a "co-regent" at this date; we may note further in passing that it dates to 496 (*Dar.* 26), not 498. Another document that has been brought to bear on the question is inscription *XPK*, which is carved on the clothing of the royal figure on the east stair of the Median gate of the *tacara* of Darius: "Xerxes, son of King Darius, Achaemenid king," but it is especially difficult to draw chronological conclusions from the inscription (cf. the discussion of Roaf 1983: 138, cf. also Root 1979: 73–75); but the hypothesis offered (Darius at first chose Artobazanes) comes from a misinterpretation of the phrase "leave the throne"; for the same reasons, the suggestion (Porada 1979: 81 n. 51) to identify Artobazanes on a Persepolis seal (*PTS* 26) becomes void. On possible satrapal duties that Artobazanes would have assumed, cf. Koch 1993a: 40, who also suggests on the basis of an unpublished tablet (*Q* 931) that the person would have borne the title "*visa-puthra*. This remains a real problem, for which Herodotus offers no solution.

• *Darius, Xerxes, and Atossa.* See especially Sancisi-Weerdenburg 1983: 25–27 (faithfully followed here; her interpretations have been challenged by Carney [1993, esp. n. 20], but in the course of a comparison that raises several criticisms, to the extent that it is not free of circular reasoning). On the title "queen" falsely attributed by Classical authors, see chap. 7/4: "Wives and Concubines," Research Notes, p. 920.

• *The Crown Prince.* On the king's birthday banquet (*tykta* in Herodotus IX.110), cf. Sancisi-Weerdenburg 1989b: 132–33, who suggests that it might have served as the setting for an annual renewal of royal power (the king's birthday party is also attested in the Seleucid period: Bickerman 1938: 246; Gauthier 1989: 67–68); on the *kidaris*, cf., e.g., Quintus Curtius III.3.19 and Atkinson's commentary 1980: 128–29 (we may note in passing the phrase used by Antiochus of Commagene: *prōtos analabōn tēn kidarin*: Wagner 1983: 199, 201); on the title for the person we know as the crown prince (terminology not found in ancient documents; cf. Briant 1994d: 466 n. 22), cf. the thoughts of Benveniste 1966: 22–26, 51–65; as M. Stolper notes (pers. comm.), the title is reconstructed from the Akkadian form *umasupitrū* and the Elamite *misapušaš*, “translated” into Akkadian as *mār biti* ‘Son of the House’ and into Aramaic as *br byt* ‘Prince of the House’, titles that do not necessarily imply actual kinship (Benveniste 1966: 22–26); on the title **viθ(a) puça* in Demotic, cf. recently Vittmann 1991–92, on “second after the king,” cf. also Briant 1993b: 292–93.

• *A Principle of Primogeniture?* On the text by Agathocles of Cyzicus, cf. some remarks in Briant 1994f: 47–51. I now wonder whether the term “oldest son” is as unambiguous as it appears. I was originally led to raise the question while reading Goedicke's remarks (1985: 42 n. 46) on the Egyptian phrase “oldest son,” which is found applied to the son of a Great King in the famous *Stela of the Satrap*: “This designation expresses importance rather than physical age” (no comment on this point in Clère 1951); see also Bonhême-Fargeau 1988: 264: “The phrase ‘oldest son of the king’ does not designate the firstborn of the sovereign but all the royal principles [princes? P.B.] in the Old Kingdom and only some of the king's sons in the New Kingdom, including the future pharaoh, chosen from among the sons from time to time. Because of very high infant mortality, it was the oldest surviving son who sometimes inherited the kingdom; this was the case for the future Ramses II. Furthermore, the title ‘oldest son of the king’ did not really have a precise meaning, as seen for Amenophis II: the future king is called ‘oldest son of the king’ and ‘royal son’ in the same text. Cross-checking information and the attribution of the title should allow us to disentangle the uses of this appellative, taking into account diachrony, and to know whether some sense of primogeniture must be applied to it, in addition to its role of classifying the royal sons.” Then, on another occasion, these thoughts recurred upon rereading a well-known document that curiously had never been brought to bear on the problem under consideration here. In fact, in a bilingual inscription from Kandahār (whose Aramaic version is crammed with Persian-Achaemenid words), the Greek *presbyteros* renders the Persian *maθišta* (cf. Benveniste 1958b: 42–43; I do not know why Benveniste does not make any comparison at all with the Xerxes inscription, either here or in 1966: 64–66); the “translation” can be interpreted two ways: either we take it as confirmation of the place of the oldest son in the succession, or else the word that (following the Greek authors) we render ‘oldest son’ was a title rather than a biological-familial designation; under this hypothesis, the crown prince would automatically be called the oldest son using the term (with two meanings) *maθišta*. I leave it to those more expert than I am to judge the validity of this suggestion; I will simply observe that in the PF (e.g., 1063–64), the word *matištukkašpe*, built on *maθišta*, clearly refers not to the age but to the status (‘head’; Elamite *iršara*) of the *kurtuš* so labeled (PFT 34–35).

• *Funeral Ceremonies.* Briant 1991a: 4–6; we have no original documents to prove that the king's corpse was embalmed (Goukowsky's translation [1976, ad loc] of Diodorus XVII.71.7 as ‘embalmed body’ is unjustified [*ta nekra*]); but the texts from Alexander's time strongly suggest it, as does comparison with the custom carefully described by Firdawsī in the *Shahnameh* (the Firdawsī passage is analyzed by Shahbazi 1975: 154–57).

• *Royal Investiture.* On the “magical” importance of the royal robe, cf. Sancisi-Weerdenburg 1983a: 29; among the Persian nobility: Plutarch, *Mor.* 173c, 545a; Ammianus Marcellinus XXX.8.4; cf. also the incidental remark of Kuhrt and Sherwin-White 1987: 74–75 on a royal Assyrian custom.

• *The Successor of Darius.* Xerxes and Ariaramnes: cf. the analyses by Sancisi-Weerdenburg 1980: 67–74; also Briant 1984b: 75–77, 1991a: 8–9 and n. 6. We may note that in connection with

the accession of Xerxes, Plutarch uses the word *anagoreusai*, that is, 'acclaim' and not 'recognize [as king]' (compare Briant 1973: 309–10; henceforth, I challenge views expressed previously [Briant 1984a: 112–13] on the role of a *Landtag* such as had been put forth on several occasions by Widengren; cf. Briant 1994c: 286–91): perhaps the word *anagoreusai* refers to a ceremony of acclamation that then took place at Pasargadae: cf. Sancisi-Weerdenburg 1983b and my additional remark in Briant 1991a: 8–9 n. 6; on the potential dangers between the death of the king and the enthronement of his successor, cf. Briant 1991a: 4–6 (in order to interpret the delay between the death of Darius and the first mentions of Xerxes in Babylonia, Zawadski 1992 suggests that the scribes awaited the official proclamation, namely, news of the enthronement ceremony); inscriptions on the Darius Gate: Vallat 1974.

- *Crushing Rebellions*. The causes and extent of the Egyptian revolt are very badly documented: cf. remarks in Briant 1988a: 140–43 (it is possible that the interment of the mother of an Apis must be dated to Xerxes' first year, but the reading of the figure is uncertain: Smith 1992a: 205–6); the dating suggested here for Bēl-šimāni's rebellion is a hypothesis I worked out in Briant 1992a. The theory of a Judean revolt (put down by Xerxes on his way back from Egypt) goes back to Morgenstern 1956–57, 1960; but this thesis is based on biblical texts that do not demand this interpretation (cf. Oded 1977d: 525–26; Hoglund 1989: 90–109); Morgenstern's theory has recently been followed by Balcer (1989a: 133) in the context of discussion of the generally insurrectional state in the Empire, which might partially explain the defeats of 480–479; but Balcer's arguments are scarcely cogent.

- *Returning to the Greek Affair*. On the debates at Xerxes' court, cf. the remarks by Legrand, vol. VII: 15–23 and Hignett 1963: 90–91; on Xerxes' dream and the Babylonian practice of substitute king, cf. Bottéro 1978: 3–4, Germain 1956, and Parpola 1983: xxix–xxxii (cf. Briant 1991a: 4); according to Wallinga (1987: 73 n. 77), Xerxes' prime objective was to annihilate Greek naval power; on the phrase "earth and water" and the persistent uncertainties, see Orlin 1976, Kuhrt 1988a. With many others, I doubt the existence of a Persian-Carthaginian alliance confronting a Greco-Syracusan alliance: cf. Asheri 1988: 766–74 (on the traditions of the Himera–Salamis parallel, cf. Gauthier 1966).

- *"The Unconquerable Swell of the Seas"*. The discussions are too many and too varied to all be mentioned here: one may profit from the (obviously contradictory) foci of Hignett 1963: 345–55, Burn 1984: 325–33, Cuyler Young 1980, Cook 1983: 113–17, Hammond 1988c: 532–35, and Yamauchi 1990: 194–200. Everyone (at least since Beloch, quoted by Hignett 1963: 354–55) agrees on the decisive importance of the number of soldiers commanded by Mardonius at Plataea (cf. Hammond 1988b: 534: "our only yardstick"), I note that Wallinga (1987: 72) accepts the figure of 1,200 triremes in Xerxes' navy; on these problems, see most recently the discussions by Lazenby 1993 and Barkworth 1992 (both received late); on the tablet *Dar*. 253: Joannès 1982: 18.

- *Logistical Preparations*. On the Athos Canal, cf. Isserlin 1991; Isserlin et al. 1994; and the remarks of Nicolet-Pierre 1992.

3. From Sardis to Sardis (480)

- A preliminary remark: in the following pages, we have not attempted to enter into all the military-historical debates (cf. the overall analysis in §5 below) or to analyze the problems that directly concern the Greek viewpoint (for example the famous decree of Trezene); my aim is first of all to center the discussion on the viewpoint of the history of Xerxes and the Achaemenid Empire. On the chronology of operations, cf. table in Hammond 1988b: 591, and thorough discussion in Hignett 1963: 448–57; on Greek Medism in 480–479, cf. Gillis 1979: 59–81 and especially Graf 1979: 141ff.

- *From Salamis to Sardis*. Hignett 1963: 240–47 refutes (successfully) the old thesis that the Phoenicians regained their cities after the battle; Burn 1984: 470–71 (compare Xerxes' decision to the decision of Darius, who upon returning from the Danube left Megabazus in Thrace while he

himself resided at Sardis); Hammond 1988b: 581–88 (if Xerxes changed his plans, this was in part because of the cool weather that was about to set in; in Hammond's way of thinking, Xerxes would undoubtedly have already decided to return to Europe—as proved by the fact that all of the royal equipment was left with Mardonius: Herodotus IX.82).

4. *Xerxes between Two Fronts (480–479)*

- *Xerxes in Sardis and Mardonius in Europe.* Cf. especially Hignett 1963: 240–344.
- *Xerxes from Sardis to Babylon.* Cf. Briant 1992a (where more detailed references will be found; see most recently the clear historiographic focus of Rollinger 1993: 52–56, 218–26, unaware of my article); on the factuality of the settlement of the Branchidae in Bactria, cf. Bernard 1985a: 123–25.

5. *The Persian Defeat: Its Causes and Consequences*

- *Some Questions.* On the difficulties of reconstructing the battle of Plataea (even though it is the best documented), consult especially the long analysis by Hignett 1963: 289–344; cf. also Barron 1988: 599–611; see especially on this point the caustic observations of Whatley (1939); most recently, the sensible and balanced pages of Lazenby 1993: 248–61.

- *Arms and Tactics.* The analysis that follows derives a number of suggestions from Rahe 1980: 79–87 (where additional bibliographic references will be found; but I hardly believe “that there were few imperial divisions of well-trained and disciplined archers,” p. 79) and Evans 1987; on what credibility can be granted to Herodotus, cf. Jackson 1894; Sakian military practice: Briant 1982b: 199–202; Babylonian horseman: cf. Joannès 1982: 16–17 (who compares Herodotus VII.67); on the vulnerability of the Persian cavalry in precipitous retreats, see also Quintus Curtius III.11.15 and Arrian II.11.3. Although he does believe that the cavalry was indeed created by Cyrus (disagreeing with Tarn on this point), Bernard (1964: 207–8) nonetheless thinks that the Persian horsemen at Plataea do not seem to have worn these heavy breastplates but that the cavalry on this occasion seem to have been “light horse” (elsewhere, he stresses that cataphractaries did not appear until late in Central Asia: *BEFEO* 68 [1980]: 60–63); but Herodotus VII.84, which he quotes, does not seem probative to me (“The Persian cavalry were equipped like the infantry . . .”): the example of Masistios ensures at least the use of breastplates by the Persian cavalry at Plataea; the same author (Bernard 1964) has given an excellent description and definition (repeated here nearly word for word) of the *jambeaus* worn by the Persian horses and riders.

- *The Persians and the Others.* On the role of the epibates, I repeat a suggestion by Wallinga (1989: 175); on the Saka in Babylonian and their armament, cf. Dandamaev 1979, 1992a: 159–62; on the basic role of the Iranian contingents, cf. already Briant 1988b.

- *Artabazus and Mardonius.* The adoption of Greek arms by the Persians is not attested before Cyrus the Younger (Diodorus XIV.22.6); Darius III also introduced them at the beginning of his reign (Quintus Curtius III.3.6): see below, chap. 17/3, end. On the “Persian custom” invoked (according to Herodotus) by Mardonius, see also chap. 18/1, “Darius, His Satraps, and Alexander's Landing (May–June 334),” pp. 818ff.

- *The Consequences of the Defeats: Persian Losses.* The thesis of lasting military weakness is embraced for example by Cook 1983: 125, who estimates the loss as 25,000 men; he wisely comments: “The numbers might be made good in a generation,” but he soon adds (without any proof): “But the former military ascendancy could be never regained”; on the persistent vigor of the Persian population, cf. in particular Diodorus XIX.21.3 (see Briant 1987a: 21–22; 1994b: 128).

- *The Consequences of the Defeats: Territorial Setbacks.* We will return below (§7) to the affairs of Asia Minor; Argive alliance: cf. Burn 1984: 349–50; Badian 1987: 2. Wallinga (1987: 72–74) thinks that after Xerxes' vain efforts to fight the Athenian navy in 480–479, the organization of the royal navy established by Cambyses was abandoned; but, to my way of thinking, analysis of the policy followed by Xerxes and then by Artaxerxes I at the beginning of his reign does not appear to

fully confirm "this drastic weakening of Persian sea-power"; or, in any case, it seems hazardous to attribute responsibility for it to Xerxes or to date the alteration precisely to 479; if there were changes in 479, they were primarily because Athens from then on had sufficient funds to combat the royal fleets: Persian weakness is thus above all relative. On the concept of periphery in Persian strategic thinking, cf. my reflections in Briant 1993f: 412.

• *The Consequences of the Defeats: The Great King's Prestige.* Regarding the List of Countries in *XPf*, it must be kept in mind that none of these documents is archival in nature, and they were not meant to give a faithful picture of the peoples who were actually subject at the time of preparation of the inscription: cf. chap. 5 and, on the Xerxes inscription, the reflections in this direction by Sancisi-Weerdenburg forthcoming (1) (where the problem of the date of the inscription is treated in detail); Achaemenid version: cf. Briant 1993c: 411–12; Greek booty from the Persians, most recently Miller 1985: 105ff.; on the chariot episode: Tripodi 1986; Darius III after Issus and Gaugamela: *RTP*: 373–75; booty brought back by Xerxes: Perdrizet 1921 (cf. Briant 1988a: 153 and n. 28); statue of the Mother of gods at Sardis: Perdrizet 1921: 71–74.

6. Xerxes and His Peoples

• *Xerxes and Babylonia: The Babylonian Materials.* The proof is borrowed in toto from A. Kuhrt (cf. Kuhrt and Sherwin-White 1987; Kuhrt 1988b: 134–35) and Stolper 1989b (on the problem of Babylonia–Trans-Euphrates; cf. also Kuhrt 1988b: 135 n. 174); on the Kish materials and the methodological remarks suggested by them, see McEwan 1983; among other possible cases, we may also cite Agade: until the recent publication of a Hellenistic tablet (Beaulieu 1989b), it was believed that Agade disappeared at the end of Darius's reign (cf. Durand and Joannès 1988); on the increase in tablets dated to Xerxes, cf. Graziani 1986; Kuhrt 1988b: 133; Stolper 1991 and 1992d; on a statistical attempt to classify the tablets under Cyrus and Cambyses, cf. Cagni, Giovinazzo, and Graziani 1985 (but the political inferences drawn on p. 582 leave me skeptical); the theory of the sudden loss of a private archive at Borsippa as an aftereffect of Xerxes' measures is offered by Joannès 1989b: 118–26 (followed by Van Driel 1992); cf. idem 1990a: 175–76, in drawing from it very sure conclusions on Xerxes' measures in Babylonia (cf. chap. 13/7: "Xerxes and Persia," pp. 553ff.). Today we can no longer accept an argument like Olmstead's (1948: 237): "So thoroughly was Babylonia ravaged that hardly a half-dozen tablets have survived from the remainder of his [Xerxes'] reign." [On these problems see also now McGinnis 1994, and the end of the following section.]

• *Xerxes and Babylonia: The Greek Materials.* According to Ctesias (who places the event before the Greek expedition (wrongly in my opinion: cf. Arrian VII.17.2; Briant 1992a)), Xerxes was then at Ecbatana, in the Great Kings' summer residence. Diodorus (who was not aware of the Babylonian revolt) for his part writes that, after leaving Sardis, Xerxes reached Ecbatana (XI.36.7). This was probably the occasion on which he deposited certain ritual objects there that had been taken from the Greeks. Thus it is not certain that the Great King himself went to Babylon; but, given the fragmentary nature of the documentation, this is not impossible. It would even be surprising if, once the revolt was quashed, the king did not make a ceremonial entry into the town. Ctesias also gives indications on the relations between the Great King and the Babylonians, at a period he continues to place before the 480 expedition: "He reached Babylon and expressed a desire to see the tomb of Belitanas. Mardonius showed it to him, but Xerxes was unable to fill the sarcophagus with oil as prescribed by the inscription" (§21); there follows the mention of the revolt of Babylon put down by Megabyzus (§22). The tale is found in Aelian (VH XIII.3), who sees it as a warning of the unfortunate destiny of the European expedition. It is difficult to draw firm conclusions from the stories Ctesias certainly heard in the Babylon of his time; he may have turned into unfavorable signs what was nothing but the carrying out of a ritual regularly carried out by the king of Babylon in the sanctuary of Marduk (cf. McGinnis 1987b); the mention of the presence of Mardonius, who was considered to be the man truly responsible for the upset at Plataea (so con-

sidered by the Persians as well, says Herodotus VIII.99), makes us think the story was reworked after the defeats of 479: at this point I note an observation presented by Perdrizet (1921: 58 n. 4), in the Greek context: "In sum, in the time of Pausanias, more than ten centuries after the Persian Wars, the tradition lays at the feet of Xerxes and Mardonius much destruction that they had nothing to do with"; of course, Ctesias was writing only a century after the events, but across such a timespan the Babylonian stories had certainly been considerably embroidered: we may remark, for example, that the motif of a king violating sepulchres is very widespread (cf. I.187: Darius violating the tomb of Nitocris; on this, see Marquardt 1892: 574–75 and the interesting comparisons in Krappe 1928, and now Dillery 1992). This is why I also remain very skeptical about the illustration of the anti-Babylonian policy of Xerxes that has sometimes been sought in the book of Esther (Littman 1975). On the interpretation developed here, see basically Kuhrt and Sherwin-White 1987b and Kuhrt 1990b; among other sources, Diodorus (II.9.9) repeats the theory of Persian pillaging, but the construction of the sentence may imply that he is referring only to ritual implemments; Plutarch (*Mor.* 173c) merely transmits a *topos* on the fate reserved for rebels (transformed into "women": Herodotus I.155–56; Justin I.7.11–13, Polyaeus VII.6.4: Cyrus and the Lydians). [After this section was written, I was able to become acquainted with Dandamaev 1993d at the last minute; he thinks that Kuhrt and Sherwin-White's 1987 article "is not indisputable" (p. 43) and that, all in all, "the problem of Xerxes' policy in relation to Esagila remains, and only future discoveries of Babylonian texts may help to provide a solution." If in fact no interpretation ("working hypothesis" according to D.) can be considered proved once and for all, and if everyone agrees in hoping for the publication of new tablets (cf. also Briant 1992a: 15), we must also agree on the necessity of understanding and interpreting the documentation as it exists today, without constant recourse to the argument *a silentio* (contrary to what Dandamaev does, p. 43: "It is true that there is no contemporary Babylonian documentary evidence that corroborates Greek sources [on the destruction carried out by Xerxes], but it is also important to note that Babylonian documents do not refute the Greek accounts"); for one thing, the dating of the Babylonian revolts is considerably less certain than the author seems to say, p. 41; for another, one of the arguments developed by Kuhrt and Sherwin-White concerns the interpretation of Herodotus I.183; against their position, Dandamaev (p. 43) lets it be understood that Herodotus's statement could well refer to the removal, by Xerxes, of a statue of Marduk from the Esagila—but on grounds that are very weak methodologically: in fact, instead of referring to the text in the original Greek (cf. *agalma* vs. *andrias*) and discussing the actual textual argument of Kuhrt and Sherwin-White (pp. 71–72), Dandamaev quotes only a sentence from Ravn (which in itself proves nothing). I will add that here as elsewhere (cf. Briant 1993c), the author has scarcely tried to gather the recent articles actually bearing on the subject; no mention is found, for example, of Stolper 1989b (on the satrapy of Babylonia and Ebir Nāri), Kuhrt 1990b (on the texts bearing on Alexander's Babylon policy), or Briant 1992a (examination of the cuneiform and Greek texts bearing on the Babylonian revolts against Xerxes).—I will note, finally, that the hypothesis of the destruction of the Esagila in Xerxes' year 2 again serves as the basis for the suggestion for dating an unpublished tablet (BM 68777) in MacGinnis, *NABU* 1993 no. 93. But at the same time, it is quite remarkable to observe the evolution across a decade or so of the historical interpretations proposed by the Assyriologists: all or nearly all of them used to think that the loss of the archives had to be related to Xerxes' reprisals; it seems that since then this opinion is all but universally abandoned (see most recently Dandamaev 1995b, McGinnis 1995: 188); this visible shift simply strengthens me in my interpretation (presented in Briant 1992a), at the end of which, as Arrian very clearly says (VII.1.1), the Second Babylonian Revolt dates to 479; in fact it very much seems, at least at the present moment, that no Babylonian documentation (or: interruption thereof) is going to call into doubt this interpretation.]

• *Xerxes and Egypt.* I have already provided some information on this topic in Briant 1988a: 164–65; I find myself in basic agreement with the arguments presented briefly by Kuhrt and Sherwin-White 1987b: 77–78—except for their doubts concerning the Egyptian origin of the

statue of Darius (which is now proved: cf. Trichet and Vallat 1990); but it is also true that we know nothing of the circumstances under which it was transported to Susa; there is nothing to prove that it was relocated by Xerxes in 486 (despite Vallat 1974a); the foundations of the Gate in fact go back to the reign of Darius (on this see Perrot and Ladiray 1974: 52–53); it is thus also entirely likely (1) that the order goes back to Darius and (2) that the statue (or statues) at Susa were simply replicas of statues that had been left in place in Heliopolis: under these conditions, the link (sometimes suggested) between the relocation of the statue and the Egyptian revolt is just a false argument; for identical methodological reasons, I remain highly skeptical of the absolute dating (486) suggested by Holladay (1982: 25–26) for the Persian abandonment of the site of Tell el-Maskhuta: it appears to me that the chronological hypothesis is based first of all on a preconceived view of Xerxes' Egyptian policy. The theory of the satrapization of Egypt can be discovered in nearly every article and book dealing with the question: it was formulated by Kienitz 1953: 66–69; among the most recent works, cf., e.g., Cook 1983: 99–100 and Dandamaev 1989a: 178–87 (cf. Briant 1993c: 413). The bronze carrying handle was published by Michaëlidis 1943: 95–96 (the source of the quotation in the text); on Darius at Karnak, cf. Traunecker 1973–77, who, notwithstanding, infers from the poverty of documentation the “proof” that the Achaemenid power displayed “reserve with respect to Thebes, the religious capital and possible seat of nationalist movements” (cf. also Traunecker and Le Saout 1981: 13–15): this, in my opinion, is a groundless suggestion (compare Cruz-Urbe 1988: 192–98, who thinks on the contrary that Darius favored the Theban cults, to the detriment of the Delta cults). Beyond the texts presented here, texts dated to Xerxes are rare in Egypt: on the hieroglyphic documents, cf. Posener 1936: 131–36 and, on this text (full of gaps and still a mystery), the remarks and suggestions of Smith and Kuhrt 1982; Aramaic documents: Gibson 1982 no. 23 (funerary inscription); *DAE* 85 (Saqqara stela dated to year 4 of “Xerxes, king of kings”), *DAE* 3 (= *AP* 11) certainly 479) and *DAE* 54 [= *AP* 2], dated to year 2 of Xerxes; the publication of a new Aramaic document dated to Xerxes (*TADAE* C.3.7; Aharoni 1994; Lipiński 1994) once again reminds us of the weakness of any statistical conclusion; similarly, the recent publication of a stela from Memphis: the document deals with the interment of the mother of an Apis in year 1(?) of Xerxes (Smith 1992a: 205–6). [We can obviously stress that no stela of the interment of an Apis is known between 487 and 398 (except, perhaps, one under Darius II in 412); but, as Devauchelle himself remarks (1995: 70), to whom I owe the information, “[this lack] is perhaps due only to the chance preservation of ancient monuments”; see on this the arguments laid out in Devauchelle 1994b: 104–6.] We may add Herodotus IV.43, on the adventures of Sataspes, a text that seems to imply that, in imitation of Necho, Xerxes took an interest in circumnavigating Africa, but I must admit to my perplexity faced with a discussion built on a series of motifs (cf. Desanges 1978: 29–33 and, most recently, Colin 1990, on the geographical aspects). The inscriptions of Wadi Hamamât are published by Posener 1936; the distinction between two series of vessels (A and B) based on their titlature was suggested by Posener himself (1936: 140–41); but the argument concerning Artaxerxes (ibid., 146) no longer holds since the publication of the vessel of Orsk (by Saliéva, apud Ray 1988: 233 = *A¹Orsk*; cf. Mayrhofer 1978: 28–29). Whatever the case, it is quite extraordinary to see how this rich documentation has been used: Olmstead 1948 (a posthumous work to be sure, based essentially on Herodotus: p. 235 n. 17) from Posener's (obviously cursory) reading retains only the title “Xerxes, the Great King” (p. 237). He also refers (p. 236 and n. 18) to Gunn 1926, and he says that upon the death of an Apis the Egyptian priests “forgot” to place Xerxes' name in the cartouche on a sarcophagus, to work vengeance on a king who had refused to accept the pharaonic titlature; but there is nothing of the sort in Gunn's article (cf. 1926: 90). To return to Dandamaev, he seems to have grasped the difficulty but, concerned primarily to reiterate his theory (which he continues to proffer, nearly unaltered, with respect to Babylonia [1989a: 183–87]), evades it by means of a disarmingly candid expression (ibid., 182): “The stone, however, which was quarried there, was not used for buildings, but rather for sarcophagi”! I add in passing that I do not see what basis the same author (p. 95) has for stating that the rebellious Egyptians

were aided by the Athenians; nor do I understand why he says (p. 182) that “the sources lend not support for [the] hypothesis . . . that Xerxes commanded the punitive expedition himself”; but what sources is he referring to? The *only* available source is Herodotus VII.7, which does not exhibit the slightest ambiguity on this point (*stratiēn poiēetai*); finally, his conclusion that “after Darius I the Persian kings were basically uninterested in the internal affairs of Egypt” (p. 243) defies plain common sense. (Conversely, it is just as surprising to find Kraeling [1953: 30], referring to Olmstead, stating: “The reign of Xerxes [486–465] saw the zenith of Persian power.”) On the *Stela of the Satrap*, cf. the discussion below, chap. 18/1, pp. 820ff., with the Research Notes.

- *Xerxes and the Greek Gods*. A late tradition claims that upon leaving Abdera (doubtless during his return from Salamis: cf. Herodotus VIII.120), Xerxes left the *magus* Ostanēs and other *magi* there “as private tutors” (cf. Bidez-Cumont 1938, I: 167–74); Xerxes and the Hellespont: the adventuresome interpretations of Reinach 1905 were rightly demolished by Perdrizet 1912; the Iranian interpretation (Sun = Mithra; Water = Apām Napāt) suggested by Briquel and Desnier (1983: 22–30) and recently repeated by Desnier (1995: 20–21) has not convinced me, any more than the (terribly systematic) interpretations of Boyce 1982: 166–67; sacrifice of a bull to a river in the Iranian context: cf. Plutarch, *Lucullus* 24.5; prayers of Alexander before Issus: cf. Bing 1991.

- *From Cyrus to Xerxes*. On the modifications of Xerxes’ titulature at Babylon, see Joannēs 1989a: I have deliberately not introduced this discussion here, for as F. Joannēs himself remarks (following A. Kuhrt), “There is no relationship between the revolts . . . and a modification of the titulature.”

7. Xerxes, Ahura-Mazda, and Persia

- *The daivā Inscription*. The following pages owe a great deal to the pioneering work of Sancisi-Weerdenburg 1980: I–47, now repeated and expanded in Sancisi-Weerdenburg forthcoming (I). It is quite noteworthy and damaging that this work has been so little read, or at least so little cited (I already reported and followed it in Briant 1986a; cf. also Papatheophanes 1985: 109–10); she was the first, as far as I know, to come up with the idea that XPf is not a narrative text; a related idea is found in Kellens 1987 (who does not quote Sancisi-Weerdenburg), as well as (in a different form) in Bianchi 1977.

- *The King, Ahura-Mazda, Life, and Death*. On the word *artavān*, cf. (among others) Duchesne-Guillemin 1953: 51–54, Menasce 1974, and Herrenschildt 1991: 17–18; on the eschatology, cf. also Bianchi 1977: 7–12 and Kellens 1988b: 344–47 (in the *Gāthā*), and quite recently Kellens 1995 (from which, p. 36, the quotation in the text is taken); on *šiyāti*, the position of Herrenschildt 1991 has been definitively rebutted by G. Gnoli, *EW* 42/2–4 (1992): 528, and subsequently by Kellens 1995: 34–39; on the phrase *artācā brazmaniya*, cf. most recently Herrenschildt 1993c (followed by Kellens 1995: 36 n. 40) and Skalmowski 1992–93.

- *Ahura-Mazda and the daivā*. On the *daēuua* in the *Gāthā*, I follow faithfully the analyses of Kellens 1988b: 360–63, where (pp. 347–48) clarifying reflections on the correct methods of sacrifice in the *Gāthā* in relation to the discussion of the *daēuua* are also found.

- *The Land of the daivā*. Locating the *daivā*: in Greece was defended by Levy 1939; the Median hypothesis was developed especially by Ghirshman (1976a; 1976b: 169–77); he wishes to distinguish the “rebellious” countries (Egypt and Babylonia, he says) from the country of the *daivā*, which he says is Media; he proposes to find archaeological proof in the excavations of Nush i-Jān: cf. their publication by Stronach 1977, at the end of which Ghirshman, pp. 608–10 repeats his interpretation; but D. Stronach (1981: 126–27; 1984: 479–83) himself expressed (convincingly) very strong reservations about this interpretation. Contra Ghirshman and several others, Sancisi-Weerdenburg (1980 and forthcoming [I]) proposes lowering the date of the inscription and a new interpretation of it (adopted here in its essentials); the comparison of DB (V) and XPf is due to the same author; it is also found in Kellens 1987: 681; Bianchi 1977 stresses the Iranian cultural context of the royal statements; the translation of DSø 001 is taken from Stève 1987: 61–62; let us

remark incidentally that, just like the introductory sentences of *XPf*, the first paragraphs of *DSe* (§1–2) reproduce the first lines of *DNa*; these observations make me think that it would be wrong to use *DSe* and *DSe* 003 to date the beginning of work at Susa (cf. chap. 5/1); *yaud* and *hamičiya*: cf. Kent 1953: 204, 213; cf. also *DAE* 69 [= AD 8] Grelot 1972: 316 note c; and Whitehead 1974: 73–74); perhaps the two words differ in the same way as Greek *tarakhē* ‘trouble’ and *apostasis* ‘secession, revolt’: cf. also Briant 1988a: 142–43 (on the Egyptian word *bks*).

• *Xerxes and Persia*. On Xerxes’ royal ideology, cf. Sancisi-Weerdenburg forthcoming (1). The modification of the Babylonian titulature is presented in Joannès 1989b, who draws from it the conclusion that it was adopted here to promote “an imperial ideology of Iranian dominance much more clearly than under his predecessors,” rightly remarking (in the wake of Kuhrt and Sherwin-White 1987) that no relationship with the revolts may be seen in it, since they are later; cf. also the important remarks of Stolper 1992d: 214, on scribal practice: “Not only was the change in titulary not an immediate consequence of the Babylonian revolts, not abrupt, and not consistently applied, but it was also not perceived as obligatory or even meaningful.” In another article, however, F. Joannès (1990a: 175–76) alters his position considerably: even while remarking in passing that “the sources are much less numerous than under Darius,” the author in fact makes a series of statements not one of which appears to me well founded: (1) The cessation of documentation at several sites reveals a sudden change after rebellions; (2) “The system of land ownership changes consistently so as to turn it over nearly exclusively to Persian hands”; (3) “The socio-economic autonomy of Babylonia ends, and Xerxes, then his successors, succeed in wiping out any trace of the ancient powers”; (4) “The effort pursued by Xerxes and his successors bore fruit, since the beginnings of the Hellenistic period show that, if the region is prosperous, any trace of local ideological autonomy has disappeared.” But: (1) We recall (above) that the quantitative diminution of documentation bears no logical relation to the modification of the titulature (cf. Van Driel 1987: 162–63); (2) In Xerxes’ time we see no proof of a sudden change in the property system: onomastic investigations show nothing relevant (cf. the chronological classifications drawn up by Zadok 1977); I do not preclude that the reign of Xerxes marks an extension of the Persian diaspora in Babylonia (similar to what is found in Asia Minor: see below), but the Babylonian documentation from Xerxes’ reign is still too sparse to confirm this hypothesis; (3) The author frequently refers to the Murašū archives and to Xerxes’ successors: that there were changes is certain, but nothing allows us to ascribe all the changes to the reign of Xerxes: these things must instead be envisaged over the long term, that is, since Cyrus, Cambyses, and Darius; (4) The end of socio-economic and ideological autonomy of Babylonia is a matter for speculation: it is rather the perseverance of Babylonian traditions that strikes the observer of the beginnings of the Hellenistic and Seleucid periods (cf. most recently Beaulieu 1989c; Kuhrt and Sherwin-White 1991, 1993, 1994; also Beaulieu 1989c, 1992; Stolper 1993, 1994a); in sum, I prefer to adhere to the prudent remarks of Kuhrt and Sherwin-White 1987: 77. [Concerning the “disappearance” of private archives toward the beginning of Xerxes’ reign, I observe, incidentally, that in a more recent article (1992b: 160–61) F. Joannès makes a very different interpretive suggestion from the one I challenged above. Cf. also McGinnis 1994, 1995: 188 (contra Joannès), but I am very skeptical about the alternative explanation offered by this author: a changeover from cuneiform to Aramaic and from clay tablet to perishable media (the same explanation in Dandamaev 1992c: 172 with reference to the archives of the Eanna [and 1995b for the archives of the Ebabbar of Sippar]); while the use of wooden tablets is actually attested in the Achaemenid period (cf. Briant 1992b), it is in fact very ancient in Mesopotamia (cf. Mallowan 1966, 1: 149–63); for another thing, the use of Aramaic obviously does not date to the Achaemenid conquest (even if it expanded at that time), and finally, everyone knows that cuneiform on clay remained in widespread use all the way into the Hellenistic period (including vouchers and notarized documents), so much so that it seems to me utterly impossible to imagine a sudden change happening at the beginning of Xerxes’ reign; if such a changeover did take place, it obviously could only have been gradual and over a long

period. And, in any case, another possibility must not be forgotten: quite simply, these “missing” archives are still underground (or even sometimes “misaid” on museum shelves).]]

• *The Builder King.* The dates of construction of several buildings in Persepolis continue to pose complex problems, which my lack of competence in the area prevents me from rehearsing here: I refer to Roaf’s summary 1983: 138–40; on the tablets, cf. Roaf 1979; Xerxes at Susa: cf. Valjat 1974. Add the inscription published by Shahbazi 1985b: 11–12 (“Darius the Great King, King of Kings, son of Hystaspes, an Achaemenid”: *DPb.h*), which does appear to show that, contrary to another theory, the *hadiš* was built by Darius, not Xerxes (cf. Henkelman forthcoming).

8. Athenian Offensives and Royal Territories (478–466)

• *The Creation of the Delian League and the Royal Territories.* The following pages should also require long discussions of Athenian policy, which I cannot treat here *in extenso*; it is no longer possible to provide an exhaustive bibliography (given its exponential increase!); I will thus mention recent work in which state-of-the-art reviews can be found [cf. Briant 1995a]]. On the (highly contested) chronology, see most recently Badian 1988 and Delorme 1992; according to Loomis 1990, the League was created in 477 (not 478). A lot of ink has been spilled on the origins and original composition of the Delian League: see Meiggs 1972: 50–58, 459–64; also Rhodes 1985: 6–11; the “minimalist” view of the extent of the League was presented by Scalcy 1966, not without good arguments (but see Meiggs *contra*); on the danger of using the (“so-called”) ATLS without caution, cf. the strong reflections by Pritchett 1969, especially p. 20: “Our information about the Athenian Alliance between 476 B.C. and 454 B.C. is so limited that any interpretation of the period is like grasping at straws in the wind!” The same author reasonably thinks that we cannot permanently “correct” Thucydides and remarks: “Now the picture in Thuc. I.99 is clearly one of slow development of the Confederacy or Alliance” (p. 21). Cyprus: an inscription in the Cypriot syllabary refers to a siege of Idalion by “the Medes and the people of Kition”; but, through arguments from pottery and numismatics, the inscription is dated either to the 470s or later to the 440s, so it cannot support an argument for a Persian counterattack in the region at the high date (cf. summary in Meiggs 1972: 476ff.; see also Wieshöfer 1990: 245; Collombier 1990: 34–35; and Petit 1991: 163–65). The amount 460 talents of silver given by Thucydides for the first levying of tribute poses extremely difficult problems (cf. Meiggs 1972: 58–67; Finley 1978: 109–14); Persian and Achaemenid tribute: cf. Evans 1978 and Wallinga 1989. On Plutarch’s chronology in *Cimon*: cf. Meiggs’s strongly stated reservations (1972: 73–75), who thinks Cimon’s first conquests on the Asia Minor shore date to the 470s; but, in my opinion, doubt remains; for Eurymedon, I adopt the most commonly accepted date (466) (Meiggs 1972: 80–82; Badian 1987: 4–7).

• *The Eurymedon and Its Consequences (466–465).* On the Persians’ offensive strategy, cf. Meiggs 1972: 78–83 (opposing the most commonly advanced theory). On a Peace concluded after Eurymedon, cf. Badian 1987 (add to the bibliography Schrader 1976, an opponent to the “Peace of Callias”); since then, see Bosworth 1990, who offers some (good) remarks on the meaning that ought to be found in the statements Plutarch ascribes to Callisthenes; to judge by the English summary (VDI 1991/1: 168), V. M. Strogetsky’s recent article does not seem to add anything particularly new. Contrary to the interpretation offered here, Badian (1987: 3) states that both adversaries desired peace, but he offers no arguments to persuade the reader, and he does not quote the Diodorus passages that give exactly the opposite impression for the Great King; what is the basis for the author’s bald statement, “We are told in fact that Xerxes was eager for peace”? It seems clear, from reading what follows, that Badian hypothesizes that the Egyptian revolt had already begun, which is far from being proved. [Contrary to Badian’s interpretation, see most recently Bloedow 1992 and the critical remarks of G. Shrimpton, *JEMC* 13 (1994): 415–18 = review of Badian 1993, which comprises the revised republication of Badian 1987 and 1988.] Finally, contrary to Meiggs’s opinion (1972: 80), I see no compelling reason to exclude the testimony of Plutarch (*Cimon* 14.1), that after Eurymedon the Persians still held parts of the Chersonesus, with the

assistance of 'Thracians: cf. Fol and Hammond 1988: 249; let us add that if with Pritchett (1969) we date the transfer of the Treasury to the League before Eurymedon, the ancient texts refer to the Persian threat in the Aegean (Plutarch, *Per.* 12.1; Diodorus XII.38.2); on Greek propaganda after Eurymedon: cf. especially the vase published by Schauenberg 1975 (cf. on this document the remarks of Francis 1980: 70–71 and Daumas 1985: 300–302). All these uncertainties lead us to remark (among other things) that it is fortunate that no specialist in the Peace of Callias (meanwhile see Cahill 1985: 381 n. 40) seems to have happened on the interpretation given (although with some reservations) by Hallock (1960: 95) of the rising prices in Persepolis in 466: he sees it as a direct consequence of the Persian defeats at the Eurymedon, which would have caused a shortage of grain at the heart of the Empire; we may imagine what grist such a theory, instantly transformed into a factoid, could bring to the mill of those who continually insist on the notion of "Persian decadence" and think that the Great King was then forced to sign a humiliating treaty with Athens!

• *The Case of Lycia: Text and Image.* Destructions at Xanthus causally related to Cimon's expedition: cf. Demargue and Coupel 1963: 27, 80–81; doubts of Bryce 1986: 103–4; I note that the problem posed by the Lycian case is methodologically similar to that very clearly attacked by Zettler 1979, regarding Babylonia, the problem "of the relation between political-historical change and changes in material culture" (cf. also on this theme Briant 1984b, and chap. 16/18 below); the idea of a strict correlation between Persian cultural influence and subjection to the Great King was developed by Borchhardt 1979; it is based partly on a questionable interpretation of the east face of the Monument of the Harpies: the author thinks the seated prince is none other than the Great King, but this analysis is scarcely acceptable, as has rightly been shown by Gabelmann 1984: 41–42, who thinks on the one hand that the frieze of the Monument of the Harpies is not properly speaking an audience scene (even if the Persepolis influence is undeniable) and on the other hand that the person cannot be anyone but a dynast of Xanthus (cf. also with this opinion Tritsch 1942; Demargue 1958: 44 suggests identifying him as Cyberniscus, who led the Lycian ships to Xerxes: Herodotus VII.92, 98; *contra* Shahbazi [1975: 47–49], who thinks that the one he calls "the elderly prince" of the east Face is Harpagus, the founder of the dynasty, and recognizes Cyberniscus on the north Face, with the erection of the structure ascribed to the Spmdaza dynasty known only from coins). Borchhardt's theory is repeated (in a highly weakened form) by Metzger 1987: 15 (concerning Lycian dynastic iconography): "Perhaps the similar development [of Elmali and Kizilbel] should be ascribed to a stronger Iranian grip despite the Persian defeat at the Eurymedon, and to a possible sharing of influence between Athens and the Great King"; a related idea is found in Childs 1980: 56–62, who, p. 61, issues some reservations on Borchhardt's position (while calling it interesting, "though probably premature to accept"); on the basis of an examination of monetary standards, the author offers the hypothesis that only western Lycia was "probably" subject to the Delian League (pp. 57–61); but the rarity of Lycian evidence for this period certainly prevents us from mapping Persian and Athenian "zones of influence." In any event, in each of the monuments that we have considered, the Greek influences are also very noticeable (Metzger 1983); quite rightly, Metzger (1987: 14) also highlights the specifically Lycian foundation, regarding the "Harpies" (Sirens): "The artists working in Lycia, painters [Elmali] or sculptors, often grafted onto local themes images borrowed from the western world, the world of Greece"; on this, cf. also Dentzer 1982: 230 (on the tombs of Elmali and Karaburun)—but neither does the diffusion of Greek images imply Athenian political domination (cf. with this opinion Eddy 1973: 242–43); in this context see the wise remarks of Miller (1985: 59–60) on "the difficulties of reading" facts on the basis of pottery; in particular she remarks that the influx of Greek pottery is found on many other sites, such as Sardis and Gordion, that clearly remained within the Achaemenid orbit! To end for a moment with this point, we must stress here that the political inferences proposed to be drawn from stylistic and iconographic analyses cannot in every case be placed too precisely within the chronology, for the simple reason that buildings as important as Building G, the Monument of the Harpies, or the tomb of Karaburun are dated only approxi-

mately, within a bracket of 20 to 30 years, on the basis of stylistic relationships, always difficult to establish, and archaeological evidence that is not always certain (I note for example that Bryce [1986: 103–4] thinks that the Monument of the Harpies is earlier than the arrival of Cimon, disagreeing on this point with the reconstruction of Metzger 1958: 81); on the difficulty of dating the Lycian coins of the first half of the fifth century, cf. the revision proposed by Zahle 1991. From all this, we must conclude that the greatest prudence is still required on the question of the “status” of Lycia at the end of Xerxes’ reign—Lycia which was for all that certainly not united, despite the presence (to some extent concomitant) of Iranian themes at Xanthus and Milyas (on the relations between Milyas and Lycia, cf. Hall 1986: 142–44): cf. Childs 1980: 57–62 analyzed above. One last remark: the Lycian *kurtas* (from Termila) are especially numerous at Persepolis and environs, but the available documentation lists them only in the years 501–499 (PF 857–62, 1000–6, 1141–42, 1172, 1565, 1823, 1946–47; cf. Uchitel 1989: 236; 1992: 127–29).

9. Xerxes’ Western Strategy

- *Xerxes and the Asia Minor Satrapies.* Celaenae: cf. Briant 1973: 74–89; on the colonization, cf. Sekunda 1991: 110–13, 119–23 (basically I share some of the conclusions, but others seem a bit adventurous to me; I do not believe [p. 112] that the Arsames listed by Polyaeus VIII.28.2 can be identified with the other Arsames who, in the same chapter of Polyaeus, leads the army to Barca around 513; this is probably Polyaeus’s confusion with the story of Datames given by Diodorus XV.91.2–6). Xenagoras: I repeat here a suggestion by Erzen (1940: 112); Xerxes’ vessel at Halicarnassus: Kent 1953: 115; while noting the existence of this vessel, Hornblower (1982: 25) thinks that Halicarnassus joined the League at the start, referring to Meiggs 1972: 54ff., but this author is fairly cautious on the subject (even if he finally ends up with the hypothesis of sticking with the high date); on the other side, correctly in my view, Wallinga (1991: 279) stresses the strategic implications of Xerxes’ measure in Cilicia. Artabazus: cf. Lewis 1977: 51–52; the discussion by Petit 1990: 181–86 serves only to complicate matters unnecessarily; the Dascylium bullas are presented in summary by Balkan 1959; the author (n. 4 and p. 127) suggests (without arguments) that they date to the satrapy of Megabates and illustrate the importance of the satrapy during the invasion of Greece in 480: I have the strong impression that this dating is itself inferred from the “retreat” postulated for Xerxes after 479! On the bullas, cf. also Kaptan and Bayburtluoglu 1990, who leaves open the date of the documents (p. 25).

- *Xerxes and Pausanias.* The problems relating to the career of Pausanias are well presented by Graf 1979: 212–25; the Justin passage has always given rise to numerous problems, made more difficult still by the absence of any other direct source (cf. Sealey 1966: 248–52). We will not enter here into the interlacing of the arguments, simply remarking that many authors, today, admit the validity of Justin’s information as well as the (ill-defined) breadth of the Persian reconquests in the 470s (cf. Meiggs 1972: 466–68); Badian 1988: 300–302; Schumacher 1987); on the interest and credibility of Justin’s text, see especially Fornara’s proof (1966: 267–71), whose conclusions I have adopted here; Balcer 1986 (with others) thinks that the letters quoted by Thucydides are fakes forged by the *ephors* [‘overseers, supervisors’], but the argument is not very convincing (cf. Olmstead 1933; Westlake 1977: 102–3; see also Nylander 1968).

- *Gifts of Lands and Towns: Colonization and Territorial Control.* On the policy of colonization carried out systematically by the Persians with the aid of exiled Greeks, see the excellent work of Asheri 1983b: 51–54, 78–80; status of Gongylus and Demaratus, cf. Briant 1985b: 62–64; on the Gongylus, cf. also the note by Fogazza 1972a, Robert 1973, and Pareti 1961; on Mania, cf. Lewis 1977: 55 n. 32 and 128 n. 3; in the fifth century we may also note that Pharnaces, a son of Pharnabazus, gave lands to the Delians at Adramyttium (Thucydides V.1.1; cf. discussion in Lewis 1977: 80 n. 198 and Asheri 1983b: 79). The case of Arthmios of Zeleia raises several problems, because the Athenian decree condemning him is known only from quotations by fourth-century authors: cf. Meiggs 1972: 508–11 (followed cautiously by Lewis 1989: 230 n. 9) and

Manes 1982, both of whom accept the reality of the episode (whatever its date, which is difficult to fix precisely).

• *Themistocles at the Court of the Great King.* Role of Artabazus: cf. Briant 1992c; we may note that according to Thucydides (I.135.2), Themistocles landed at Ephesus, not in the Aeolid, as in Plutarch; the authors of ATL III:111–12 express doubts on the central role attributed to Artabazus in the *Letters* attributed to Themistocles (meanwhile, see Nylander 1968); it is obvious that many versions circulated, more or less romanticized (cf. Diodorus XI.57), but, on this point at least, I see no compelling reason to prefer Thucydides' version. Moreover it is not impossible that the differing versions go back to contradictory information that the Greek authors could have collected later, perhaps in the Dascylium satrapy, perhaps the Sardis, which had always been circulating, and which were incessantly disputed in the neighboring territories (cf. Weiskopf 1982: 350–53; 1989: 41–43, on the southern Troad); under this theory, the "Letter of Themistocles" and Plutarch's version stems from Dascylium, and the Thucydides version comes from the satrapal circles of Sardis. At any rate, it is not possible to infer from the documentation that Artabazus had then replaced the satrap of Sardis, since our sources are silent on Sardis until the end of the 440s, aside from a fleeting allusion to an (unnamed) satrap of Sardis in Plutarch (*Them.* 31.1–2) at the beginning of Artaxerxes' reign. On chronological disputes, I refer (*inter alia*) to Badian 1987: 4–5; but I will add one observation (already suggested by Olmstead 1948: 289–90): if the chiliarch Artabanus who received Themistocles upon his arrival is the same Artabanus who conspired against Xerxes and was put to death by Artaxerxes (chap. 13/10 below), we must conclude that Themistocles was indeed received by Xerxes. On the towns received as a gift by Themistocles, cf. Briant 1985b: 59–62, with the critical supplements of Savalli 1987; these donations have always been used as an argument by those who oppose the theory of an Athenian-Achaemenid peace (e.g., Meister 1982: 32ff.; contra, e.g., Badian 1987: 20; see also the discussion of Frost 1980: 220–23, and already ATL III:113); on Themistocles' coinage, cf. Cahn-Gerin 1988 and Cahn-Mannsperger 1991.

10. From Xerxes to Artaxerxes

• *The Assassination of Xerxes: The Literary Motifs.* We may remark that an Athenian vase painting (inscribed with the name Artoba[] = Artabanus?) is sometimes considered a depiction of the murder of Xerxes (cf. Hölscher 1973: 48–49): this would confirm that the event attracted special attention in Greece.

• *The Assassination of Xerxes: The Dynastic Problems.* Youngest son and satrapy of Bactra, cf. Briant 1984b: 75–77; Hystaspes, satrap of Bactra: cf. PF 1287, 1555 (Lewis 1977: 19 n. 96); Xerxes and his son Darius: the problem of knowing whether the former had named his son as successor during his lifetime remains very complicated, being very badly documented (if it really is Xerxes who is named in the *Stela of the Satrap*, and if the expression "oldest son" really refers to the oldest son [but see above, chap. 13/2, Research Notes], this would be the only attested association of Xerxes and Darius!). Even if we agree with some people that the audience relief on the central panel of the Apadana of Persepolis represents Xerxes and his son (and not Darius and Xerxes: below), this theory gives no precise chronological information; despite Legrand (*ad loc.*), I am tempted to think that the task entrusted to Artabanus was close enough to what Herodotus says Cambyses conferred on the *magus* during the Egyptian campaign (III.61: *meledōn tōn oikion*; cf. Wiesehöfer 1978: 49–50; on the title *meledōn* [also found in Greek inscriptions], cf. Lévy 1940: 237 and n. 5; in an "Achaemenid context," cf. Aelian, *VH* II.14 and *Anim.* XIII.18). Post-accession propaganda: we may recall at this point that several authors (cf. Tilia 1977: 70–71; Calmeyer 1976: 78–79) think that the shifting in the Treasury of the audience relief from the central panel of the Apadana is due to Artaxerxes; this theory is based on another one supposing that the royal persons represented are not Darius I and Xerxes, but Xerxes and his son Darius: under these circumstances, Artaxerxes would have removed from view a scene that was an unpleasant reminder that his brother Darius, whom he had assassinated, was the legitimate heir. But I hesitate to use the

argument, given the risk of circular reasoning—especially since the kings shown might have had an urge toward anonymity [??] (see Henkelman forthcoming). Africanus: without digging deeper into the question, Badian (1987: 3 n. 8) thinks: “This can hardly be wholly invented” (cf. also Calmeyer 1976: 77, without taking a firm position; Dandamaev [1989a: 234] does not rule out that Artaxerxes “was only formally the king”). But comparative study of the information from the chronographers about the XXVIIth dynasty does not in the slightest confirm such confidence in Africanus: cf. Waddell 1966: 70–71; a fragment of a Greek papyrus repeats the datum on Africanus (cf. Bilabel 1924: 35–48), but this lends no weight to such a highly suspect tradition. We have not a single datum showing that Xerxes’ power was weakened in his last years. Dandamaev (1989a: 233–34) brings in two items: (1) for one thing, we have known since Hallock 1960: 94–95 that a sharp increase in grain prices is visible at Persepolis at the end of 467 and the start of 466; Hallock proposed to see it as a consequence of the Persian defeats at the Eurymedon, but this is a very unlikely theory: in any case, the connection between a *relative* increase in prices and economic weakening remains to be proved; (2) referring to Hinz (1979: 24), Dandamaev cites numerous dismissals/appointments (about one hundred) of high-ranking administrators in Persia, which he interprets through the royal desire “to pacify the discontent in Persia.” The theory goes back in part to Bowman (1970: 27–28, 57), who concludes from an examination of the datings of the *segan* and treasurers in the Aramaic texts (inscribed objects) that there was a general alteration of job titles in 467–466. But, for one thing, the absolute dates proposed by Bowman must remain hypothetical; for another, the examples given hardly allow us to state that the change was sudden and general or that they have to be closely related to the shortage of 467 (despite Hinz 1972: 308)—especially since the very existence of a shortage has to be evaluated with great care; in any case, it is hard to see the connection that might be established between appointments to high positions and discontent in Persia, and still less the relationships among the price increase, discontent, crisis, and the assassination of Xerxes (despite Cahill 1985: 381 n. 40, who, moreover, even suggests a link with the Peace of Callias!): actually, the replacement of administrators can just as easily be interpreted as a proof of royal authority (cf. Diodorus XI.71.1: accession of Artaxerxes I). Accession of Artaxerxes: the Babylonian documents are presented by Parker and Dubberstein 1956: 17; cf. also Stolper, *CAH* VI²: 237; Aramaic documents in Egypt on the transition between the two kings: Porten 1990: 26–27.

II. An Assessment

- On the Frieze of tribute-bearers on the façade of the palace of Xerxes–Artaxerxes I, see especially Tilia 1974: 132–33 and 1977: 74–76; cf. also Shahbazi 1976b: 57–58; Root 1979: 108–10; Roof 1983: 140.

From the Accession of Artaxerxes I to the Death of Darius II (465–405/404)

1. One King after Another (465)

• *Sources and Problems.* On the difficulty of dating the Babylonian documents, cf., for example, the remarks of Joannès 1982: 331–32, 358; cf. also pp. 5–6 (dating of a trove from the reign of Artaxerxes II); see also on this subject the remarks of Kuhrt 1987a: 152, Stolper 1990b: 561–62, and the striking example presented by Sachs and Hunger 1988: 69, with the comments of van der Spek 1993a: 96; on the dating of the Aramaic texts from Egypt, cf., for example, Porten 1987b (on DAE 9 [= AP 7], dated by Grelot to Artaxerxes I, by Porten to Artaxerxes II) and Lemaire 1991c: 199–201 (DAE 75); even if the question has not really been reopened recently, I recall the arguments over the dating of the Aramaic texts from Persepolis: cf. Bowman 1970: 56–62 and my remarks above, p. 940; same difficulties in dating the Demotic papyri: Lüddeckens 1965, Cenival 1972 (palaeographic criterion); on the Greek inscription from Sardis, cf. chap. 15/8: Droaphernes and the Sardis Statue, pp. 677ff.; the Aramaic inscription from Cilicia (Meydançikkale) was published by Lemaire and Lozachmeur (Davesne, Lemaire, and Lozachmeur 1987: 365–70); it is dated to year 16(?) of Artaxerxes; the editors remain prudently uncertain about the identity of this king (I or II? cf. also Lemaire 1991c: 206); on Ezra–Nehemiah, cf. chap. 14/5, pp. 583ff.

• *The Position of the New Great King.* On royal metonomasia [use of throne names] (known from several Classical texts and attested more specifically in Babylonian tablets): cf. Schmitt 1982c (correcting Schmitt 1977), and now van der Spek 1993a: 95–96; dynastic nature of the Bactrian revolt: cf. Briant 1984b: 76–77; identification of Artabanus: cf. remarks of Lewis 1977: 19 n. 96; changing satraps at the beginning of a reign: Briant 1991a: 9 [hence my doubts on the recent commentary on Diodorus XI.71.1 by Balcer 1992b (1995)]; court measures attributed by Plutarch to Artaxerxes I: cf. my discussion in Briant 1994e: 307–10 (on rules regarding royal hunts); comparison with Babylonian tablets: cf. Stolper 1985a: 270 and the note regarding text no. 91 dated to Darius II (the similarity in punishments is striking; the comparison implies that royal decisions were not limited to the Persian aristocrats—which poses new problems, which M. Stolper returned to in 1995a).

• *Artaxerxes I at Persepolis.* The works accomplished by Artaxerxes I at Persepolis have been brought to light by the investigations of Tilia: cf. Tilia 1972: 191–208, 1974; 1977; as well as Calmeyer 1990a: 15–16. The hypothesis of a change in the function of Persepolis is developed by Frye 1974, who thinks that, from this time on, Artaxerxes I chose Susa as his capital, but the supporting arguments do not carry conviction: whether they concern the reception of Greek ambassadors at Susa (Herodotus VII. 151) or the absence of tablets: is it necessary to repeat that the gap is accidental? We may also stress that in Herodotus the seat of power of the Great King is regularly placed at Susa, which for him is the very symbol of royal power (cf. Briant 1993b); in supposing that the other kings until Artaxerxes II did not use Persepolis frequently (p. 384), Frye fails to take into account the entirety of Classical documentation (cf. Cameron 1973), or lets himself be misled by a worthless moralizing tradition, without quoting it, such as is repeated by Plutarch, *Alex.* 69.2 (same distortion in Dandamajev 1989a: 312; cf. Briant 1993c: 421); as for the suggestion that Artaxerxes I “perhaps found mid-March on the plateau too cold to live there” (p. 385), this reckons on the one hand on the royal presence exclusively at the time of the New Year’s festival (cf. chap. 5), and on the other on the special “sensitivity to cold” of the Great King that is pure fiction (if Ctesias §19 transmits truth, we see that in November 486, Darius was in Persepolis; the text also suggests

that the king regularly went to Persepolis in accordance with the ritual calendar [[on this point, see now Koch 1993a: 61–91, who contrasts the information given by the Classical authors on the relocations of king and court [Briant 1988c] to the facts provided by the Persepolis tablets; the study particularly confirms [pp. 88–89] the theory that I drew from Ctesias on the requirements of the ritual calendar]]; lastly, I remark that, in the framework of Frye's interpretation, it is hard to understand why beginning with Artaxerxes II the Great Kings chose to have their tombs dug above the Persepolis terrace (cf. Calmeyer 1990a: 13–14). Based on all other arguments, the theory of a change in function of Persepolis is also offered by Cahill 1985, who takes into consideration the relocation of the audience reliefs and what he considers "the cessation of bringing gifts into the treasury" (a point on which I remain skeptical); at the same time, the author rightly remarks that the remaining uncertainties require great caution on the part of interpreters (pp. 388–89).

2. The Egyptian Revolt (ca. 464–454)

- *The Revolt of Inarus and the Athenian Intervention.* On Ctesias, cf. Bigwood 1976, whose conclusion (p. 21) is unexceptionable: "This account of the Egyptian episode may afford us some amusement. But there is no major historical problem which it helps us to resolve"; on the Athenian intervention, Meiggs 1972: 101–4, 473–76; on the revolt itself, cf. Kienitz 1953: 69–72 (the role attributed to the Nile–Persia maritime link, p. 69, comes from an erroneous understanding of the canal's function), Salmon 1965: 90–192 (long and heavy), and most recently Hoglund 1989: 250–87.

- *Characteristics and Consequences of the Revolt: Persian Egypt and Egyptian Egypt.* Cf. Briant 1988a: 140, 147–51, 171–72 (repeated here for the basics); on the origins and relations of the marsh kings, cf. the articles "Amyrtaos" (de Meulenaere), "Psammetichus IV, V" (Spalinger) in the *LÄ* (on the Delta, cf. also Yoyotte 1961, Bertrand 1988, Favard-Meeks and Meeks 1992); despite Dandamaev (1989a: 242–43), the hypothesis (taken from other authors whom he cites) of a high dating of the archives of Arsāma must be abandoned, as well as the hypothesis of a reference to Inarus in an Aramaic papyrus (DAE 66 [= AD 5]) in connection with some troubles in Upper Egypt: cf. Cazelles 1955: 97–99; the name must no doubt be read Anudañ and not Inarus: Grelot 1972: 309, Whitehead 1974: 57 (on the absence of troubles in Upper Egypt, cf., for example, Porten 1968: 26–27 and Grelot's remark 1972: 81, who replies to Kraeling 1953: 31, without mentioning him, regarding the use of "weights of Ptal"); Artaxerxes' seal: according to Porada (1979: 88–89), the seal of the Hermitage Museum in St. Petersburg, fig. 18a–b, p. 215 here (a Great King, bow and quiver on his back, a lance in his hand, holding in his hand a rope that wraps around the necks of four captives, while the king brandishes his lance against a kneeling man with Egyptian hairstyle [*pschent*]), could represent Artaxerxes I and Inarus, but it is not impossible that it could be Megabyzus (on this seal, cf. also Nagel 1963: 134 and fig. 11, and the remarks of Henkelman forthcoming); we may note that a seal on the Treasury tablets (PTS no. 28) bears a similar scene, with the difference that the captives bound with a rope around their necks and the warrior on his knees killed by the king are Greeks: Schmidt 1957: 10, 29; a nearly identical scene on a Babylonian impression (communication from L. Bregstein and M. Stolper) and even on a bulla of (or: from?) Artašat of Armenia (Root, DATA 1993, p. 13, and the forthcoming articles by Khatchatrian and Manukian).

3. Trans-Euphrates Matters

- *Artaxerxes and Megabyzus.* On the literary motifs constituting Ctesias's tale, cf. Bigwood 1976: 19–21; the ill-informed article by Brown (1987) provides nothing new; Petit (1990: 194–95) strongly insists that Megabyzus held the position of satrap at the time, but by means of arguments that do not convince (in particular he has not considered Stolper 1989b); Petesas and Spitamas: cf. Stolper 1985a: 94; the importance of the episode in the framework of the history of the Greek merchant class in the Achaemenid Empire is analyzed by Seibt 1977: 35–39; Rahe (1980: 88–90) thinks that Megabyzus (followed by his son Artyphius) was the first (before Pissuthnes and Cyrus

the Younger) to understand the importance of organizing joint maneuvers by the Persian cavalry and the Greek infantry, but I am not sure that the existing evidence allows us to attribute this innovation to a particular person (which moreover presupposes the decadence of the royal Achaemenid army: cf. pp. 79ff.; but cf. chap. 14/7: Darius II and His Satraps, pp. 593ff., and chap. 17/3); Lewis (1977: 51) thinks that the revolt weakened the king's position (but see below, chap. 14/5, on Nehemiah's mission); see most recently Høglund 1989: 196–299 (he denies a revolt by Megabyzus; I have not been able to consult Høglund 1992).

• *Troubles in Judah?* Cf. Oded 1977d: 527; see also Yamauchi 1990: 251, who, following others (cf. Blenkinsopp 1987: 416), compares the Egyptian affair with the revolt of Megabyzus, thinking in particular that, if a few years later the king allowed Nehemiah to rebuild the fortifications of Jerusalem, it was because meanwhile the revolts had been suppressed: the basic problem remains (should we or should we not accord explicit historical value to what appears to be an interpolation (cf., e.g., Ackroyd 1984a: 9; 1988a: 41–42)? On possible troubles in the time of Xerxes, cf. my skeptical remarks, chap. 13/2: “Crushing Rebellions,” p. 525.

4. The Asia Minor – Eastern Aegean Front

• *Athenian-Persian Hostilities (the 450s).* Controversy exists in regard to the condition of the Athenian and allied forces after the Egyptian campaign: Meiggs (1972: 104–8) thinks that the campaign was a disaster that had weakened Athens in the eyes of its allies; starting with this belief and examination of several texts (Erythrae, Miletus, Sigeion), Meiggs factors into this context the support that Athens's opponents found in the Asia Minor satraps (1972: 109–28); an opposing position on the consequences of the Egyptian campaign has been worked out anew by Holladay 1989. Without being able to cover the whole bibliography here (cf. Briant 1995a), I will simply stress that most of the arguments (including mine) are burdened by a whole series of chronological difficulties (whether involving the historians' texts or epigraphic documents). On Cimon's campaign in Cyprus, cf. the clarification by Wiesehöfer 1990: 246–47.

• *Return to the “Peace of Callias.”* Cf. the bibliography cited above, in the Research Notes to chap. 13/8 (pp. 967ff.), as well as Dandamaev 1989a: 250–55 [contrary to what the author states (p. 254), Demosthenes, *Amb.* 273 does not imply that the Athenians were unhappy with the terms of the treaty negotiated by Callias], and especially Lewis 1992a: 121–27, who, not without exhibiting a certain impatience with those who hold the opposite opinion (p. 126), thinks that the historicity of the Peace cannot be doubted; he makes three arguments: (1) the Peace of Epilycus that renewed the Peace of Callias is “now virtually certain”; (2) the missing year in the ATL is very likely 448; this gap is to be linked to the conclusion of the Peace; (3) the Periclean building program was financed by the League's funds transferred to Athens: “The only conclusion which can be drawn is that the Athenians were confident before starting work on the Parthenon that the Persian War was over, by mutual consent. Beside this conclusion, the details are relatively unimportant” (p. 126); without neglecting the relevance of Lewis's arguments, I remark that: (1) the first argument *risks* being one segment of a circular argument; (2) in the opinion of Lewis himself, doubts remain regarding the identification of the missing year (p. 125: “Clearer evidence would be welcome”); (3) the use of the allies' tribute for building the monuments on the Acropolis, denounced by Plutarch and long disputed, is an interpretation that has just been challenged, not without excellent reason, by Giovannini 1990. The dating of Herodotus VII.151, which is in close chronological relation to the Peace, is placed in doubt by the theory's opponents: cf., e.g., Meister 1982: 22–24, who dates the Argive embassy to the beginning of the reign of Artaxerxes I. I stress that several authors have rightly warned against the temptation to interpret too rapidly the gaps in the ATL by reference to a Peace of 449 and to believe, with circular reasoning, that the Peace explains the gaps (and vice versa): cf. Robertson 1987: 386 (“The Peace of Callias is a joker in the pack; it makes a better game to play without it”), Piérart 1987: 296 and Giovannini 1990: 146 and n. 43; on the activities of the satraps, cf. Meiggs 1972: 111–18, 188–90, 314–15; on the Miletus

affair, see the important corrections to Meiggs's theory on the basis of the publication of a new fragment of the decree: Piérart, REA 87/1–2 (1985): 42; also Robertson 1987: 384–90 (in fact, the decree concerns an internal crisis and not a revolt against Athens); on the Colophon and Notium affairs, cf. Piérart 1984: 168–71; these various episodes are also reviewed by Badian (1987: 19–26), who, strongly supporting the notion that a peace concluded after Eurymedon, thinks that the satrapal actions do not imply a declared state of hostility between the satraps and Athens—a presentation that appears to me to be based on a legal fiction (which I am tempted to attribute to the author and not to Artaxerxes or Pisuthnes; see on this subject also the analysis of Eddy 1973 and the reflections of Lewis 1977: 59–62). It would be good to add that two other very important aspects remain unresolved: (1) Thucydides mentions several times that the cities of Ionia were deprived of fortifications: was this dismantling brought about by a treaty imposed by the king, or was it the result of an Athenian decision? (Meiggs 1972: 149–50 prefers the second interpretation; Wade-Gery [1968: 215–16], by contrast, imagines that Athens accepted this condition in exchange for the Great King's agreement not to send the royal army to fight in western Asia Minor; in agreement Lewis 1977: 153 n. 118): it is impossible to decide; (2) did the cities allied with Athens continue if not actually to pay tribute (though some authors admit even this possibility) then at least to owe the Great King tribute? (cf. Meiggs 1972: 148, who answers in the affirmative, and the remarks of Frost 1980: 220–29 on cities granted to Themistocles). On the strategy of Pericles, cf. the remarks of Giovannini 1990: 145–46. On the diplomatic contacts between Sparta and Artaxerxes: cf. the analysis by Lewis 1977: 63–70; between Athens and the Great King: Hegyi 1983. We may note that in the context of the traditional interpretation of the Peace of Callias, the question why the Great King did not send an army to the coast receives an answer if we agree that the treaty forbade the royal army to interfere there—a standpoint developed by Wade-Gery 1968: 215ff., but always on the foundation of (contradictory) texts whose credibility can be doubted. For his part, following Wallinga (1987: 47–48), Descat (1990a: 544) thinks that after Salamis and Mycale “the Achaemenids no longer had a permanent navy”; aside from the fact that this interpretation remains hypothetical, all it does is push the problem back, or rather raise another: when and why did the central power decide on such a sudden change of strategic direction?

• *Return to Xanthus.* On the Tribute Lists, cf. the tables prepared by Meiggs 1972: 538–61, and the cautious and wise observations of Piérart 1987: 294–95 (and n. 14) on the change in Caria's tribute beginning in 446, then after 440–439; Athenian efforts in the islands between 428 and 425: Piérart 1984; disappearance of Lycia: Meiggs 1972: 246–47; on Caria and Lycia: cf. also Eddy 1973 and Keen 1993a (who stresses the strategic value of the Lycian coast; on this point, cf. also Zimmermann 1992). We may mention regarding Caria/Lycia that a passage in Ctesias is problematic; in his presentation of the Megabyzus saga, he notes that his youngest son, Zopyrus, left the king's camp to seek refuge in Athens: “With those who accompanied him he fled toward Caunus and demanded that they turn over the town to him. The people of Caunus replied that they would hand the town over to him but not to the Athenians with him” (§43): the date of this expedition is not certain, but it was before the death of Artaxerxes (§43), perhaps between 430 and 425: cf. Eddy 1973: 255, who reasonably thinks that Caunus rose up against Athens, perhaps with the aid of Pisuthnes (the counterarguments of Badian 1987: 23–24 do not appear valid to me); see also Meiggs 1972: 436–37 (who proposes linking the episode to Melesander's mission); Descat (1991: 39) sees in the Zopyrus affair the expression of a break between Athens and the Great King; my opinion on this question is not very settled: all I would like to stress here (even without collecting all of the examples) is that the available documentation (Greek texts and Pillar inscription: cf. Shevoroshkin 1977 and Melchert 1993) attests to the exceptional importance of Caunus in Persian strategic thinking in the southwest corner of Asia Minor (up to and including Darius III [cf. also Descat 1994b]); at the time of the Diadochi, one of the two magnificent citadels defending the city and access to the port (cf. Diodorus XIX.75.5) was called the *Persikon* (Diodorus XX.27.2). Pillar Inscription of Xanthus, cf. Demargne 1958: 79–105; on the author (Kheriga) and date (around

400), I adopt the position of Bousquet 1992: 167–74; on the events, cf. Childs 1981: 62–66 and Bousquet 1992: 175; on the status of Lycia during this entire period, see now the detailed work of Keen 1992a (consulted through the author's generosity), chap. 5/2 (he adopts the hypothesis of a Peace of Callias in 462–461): "It seems likely that Lycians returned to Persian allegiance when they left [the allegiance] of Athens"; on Melesander's (then Lysicles') expedition and the information gleaned from the Pillar Inscription, cf. *ibid.*, chap. 6, and Keen 1993b.

5. *Ezra and Nehemiah in Jerusalem*

• As a result of various kinds of argument, it has often been proposed that Ezra actually carried out his mission under Artaxerxes II, in 398: a summary may be found in Oded 1977d: 503–9 (which adopts the low chronology), Yamauchi 1990: 253–56 (which inclines rather toward the dating adopted here, without denying that the other interpretation is not unappealing), Williamson 1987: 69–76, and Hoglund 1989: 73–80 (Ezra before Nehemiah). Among the arguments sometimes adduced in support of the low chronology is the Egyptian situation at the beginning of the fourth century, and it is thought that Ezra's mission fits with the king's desire to protect the approaches to the Nile Valley (cf. Cazelles 1954: 114–19); this is a traditional explanation, often offered also to explain Cyrus's measure of 538 (cf. chap. 1/6); but this is a simple argument of similarity, without any evidence as a basis: at the risk of appearing naïve (or ill informed), I must insist that even and especially after studying a map, I have never really understood what decisive strategic advantage against Egypt the small land of Judah could have had in the eyes of the Achaemenid central authority (or in the eyes of certain modern interpreters?); other historical arguments are equally weak: thus the admission of Dor (near Sidon) to the Delian League (accepted by Meiggs 1972: 420–21), sometimes interpreted as an argument in favor of Ezra's high dating (cf. studies cited by Yamauchi 1990: 254 n. 60), is anything but certain (cf. Lemaire 1990: 56 n. 135; the note is not repeated in Lemaire 1994: 33). The debate, finally and especially, is part of a subtle and complex discussion of the content of the "Memoirs" of Nehemiah and, thus, the work and chronology of the Chronicler; long under way, the discussion seems to have taken on new life these last few years (cf. the articles collected by P. R. Davies 1991), perhaps under the influence of the rebirth of Achaemenid studies (cf. Hoglund 1989, 1991; Williamson 1991; Weinberg 1992a, b; Grabbe 1992b [seen too late]); my lack of competence in the material keeps me from participating (cf. the clear summary by Ackroyd 1988; developments can be followed by means of the *Chronique* by P. Abadie, *Trans.* 1 (1989): 170–76 and 4 (1991): 141–45; see most recently Dequeker 1993, who, dating Ezra to the Artaxerxes II period, thinks that the reconstruction of the temple took place under Darius II and not Darius I [and Lemaire 1995a: 57–61, who, on the basis of the Egyptian situation and the Elephantine documents, chooses the date 398]); I will state nothing but an impression: to go by the recent literature, the nonspecialist would not do well to intervene in the discussions and polemics, whose scientific bases escape him more and more as the readings multiply (cf. Dequeker's baffling 1993 article); we have the impression that at the present time no tradition enjoys the status of "historical fact" (cf. in particular Grabbe 1994): in short, the dates in the text have been adopted purely by convention: my only justification is that I am in good company; but I would be no less so if I held the exact opposite position!

• *Ezra's Mission.* See the discussions in Cazelles 1954 (who sets Ezra in 398); Oded 1977b: 535–36; Purvis 1988: 169–70; Yamauchi 1990: 256–57, who following Blenkinsopp (1987) sets up a parallel with the mission entrusted by Darius I to Udjahorresnet and the similarity of the "Egyptian laws": but, with Grabbe 1994: 294–95, the parallel does not seem particularly legitimate to me; see also other reflections by the same author, who has multiplied the warnings and reservations on currently accepted interpretations of Ezra's mission; I find myself agreeing with one of his observations (p. 297): "The closer one looks, the more enigmatic Ezra's mission becomes," and "We have to conclude that Ezra's mission is a puzzle" (p. 298).

• *Nehemiah's Mission.* It is impossible for Nehemiah to have been a eunuch; it is even highly unlikely that he was a cupbearer to the king (cf. Oded 1977b: 528 and, both more detailed and more certain, Yamauchi 1980b, 1990: 260–64). The literature on his mission is considerable: a summary may be found in Yamauchi 1990: 264–78; on the governors before Nehemiah, cf. chap. 12/3 above; on the extent of the province of Judah, cf. a summary of the issue in Lemaire 1990: 32–45 (cf. pp. 39–40 on *pelek* and the satrapal residence at Mizpah and Gibeon, with the remarks of Briant 1985b: 67); the duties of the commissar (Neh 11:24) remain mysterious (cf. Heltzer 1989: 346 n. 71, and now Heltzer 1994: a summary will be found there [pp. 109–13], and comparisons [interesting, but in my opinion not very convincing] with Udjahorresnet, Histiaeus of Miletus, and Arlissis of Caria); on relations with the central authority, cf. also the reflections of Graf 1985: 92–93 and Weinberg 1977: 32–38 (who thinks that Nehemiah was not *pehā* of the province of Judah, but rather head of what he calls the “Bürger-Tempel-Gemeinde”: cf. now Weinberg 1992a, b); on Weinberg's views, cf. Dion 1991 and the critical remarks of Blenkinsopp 1991; on Nehemiah's social reforms, cf. (inter alia) Yamauchi 1980a, 1990: 272; Kreissig 1973; Kippenberg 1982: 54–77; Heltzer 1989b; on Nehemiah's fortification, cf. Laperrousaz 1979.

• *From Jerusalem to Elephantine.* DAE 89: cf. Grelot 1972: 354–67, Porten 1986: 12–13; on the *Pascal Papyrus* (DAE 96), cf. Grelot 1955, 1972: 378–86, 1981; most recent restoration in Porten 1986: 7; on the interpretation, cf. also Vincent 1937: 249–61, Briant 1986a: 432–34, Frei 1984: 16–17, and, quite recently, the (to say the least) surprising proposals of Dequeker 1993: 89–92 (who connects the document to the reconstruction of the Jerusalem temple, which he places under Darius II and not Darius I, on the basis of textual exegesis in which I refuse to get involved [and Lemaire 1995a: 60]); finally I do not believe that we can say, with Porten and Yardeni 1993: 59, that the document attests to the favor that Darius II in particular is supposed to have manifested toward the Jewish community of Elephantine. On the Jews in Babylonia, cf., e.g., Coogan 1974, Purvis 1988: 154–62 (who poses, pp. 158–60, the problem of the possible existence of a temple).

• *The Enemies of Nehemiah and Judah.* On the province of Samaria and the information coming from Wadi ed-Daliyeh, see the various publications of Cross (1963, 1966, 1971, 1974, 1985); some of the papyri have been studied by Gropp 1986, but we are still waiting for the final publication; the coins were recently published by Meshorer and Qedar 1991 (we will return at a suitable point to this rich material: chap. 16/7); see also Lemaire 1990: 64–67 (on the province of Samaria) and Lemaire-Lozachmeur 1987 (on *byrt' / birtā*); summary and review on Gašmū and Tobiah in Lemaire 1990: 45–54, 68–72. Tobiah: on his residence at Iraq el-Famir, cf. the publication by Will and Larché et al. 1991: 5–9. Gašmū the Arab: on the vessels and dedications of Tell el-Maskhuta, cf. Dumbrell 1971, Briant 1982b: 172–73 (with some doubts on the generally proposed reconstructions), and, since then, Graf 1990a: 139–40; Knauf 1990: 207; as well as Holladay 1992: 590; Paice 1993 [cf. Lemaire 1995a: 54–55]; Sanballat's hostility is easily explained if we accept the theory (worked out by Alt) that before Nehemiah, Judah was a dependency of Samaria; but the discovery of bullas inscribed with the names of governors before Nehemiah has done away with this interpretation (unless the datings are challenged, as was recently done by Bianchi 1989); on Alt's position, see also the critical remarks of Høglund 1989: 123ff.; [on relations between Judah and the Samaritans, cf. also Macchi 1994: 33–44]. Lastly, I note that in several works (cf. 1965, 1985), M. Dunand connected the edifices built by Nehemiah in Jerusalem with a vast royal project to defend the “Mediterranean front of the Empire” such as, for example, some Sidonian buildings (temple of Eshmun), both of them characterized by the presence of a “Persian podium”; but this whole reconstruction is purely hypothetical, without solid foundation (cf. my remarks in *AbIran* 12 [1989] no. 229, and J. Elyasi's, *Trans.* 1 [1989]: 190–91, as well as the doubts of Mazzoni 1991–92: 66).

6. One King after Another (425–424)

• *Ctesias and the Babylonian Tablets.* Cf. Lewis 1977: 71–76, Stolper 1985a: 104–24, as well as my remarks in Briant 1994b: 118 n. 20; on the chronology, see the summary by Stolper 1983,

1985a: 116–20, and most recently Depuydt 1995b; on the estates of the princes and princesses, cf. Stolper 1985a: 54ff., 64–66 (Aršāna), 89–93 (Artarios, Menostanes, Artoxares), 96 (Arbarius/Arbareme); on these people, cf. also the notices of Dandamaev 1992a nos. 16, 26, 33, 43, 185, 250, and on Menostanes (and his brother or associate, Uštapānu), the text published by Donbaz and Stolper 1993.

- *Families and Powers.* Cf. also Briant 1990a: 95–96 (and n. 49); like Lewis (1977: 83–84), I doubt that Hydarnes, father of Tissaphernes (Xanthus Pillar Inscription), can be the father-in-law of Darius II: it is highly unlikely that Ctesias would not have mentioned the fact in the context.

- *Legitimacy and Propaganda.* Cf. Briant 1991a: 4–6; Lewis (1977: 77 n. 77) stresses that the epithet “illegitimate” is applied to Darius II by late sources.

- *Darius the Great King.* Lewis (1977: 78 and n. 182) published an inscription of Darius II that is said to come from Hamadan (= D^2Ha ; cf. Mayrhofer 1978: 17, 29–30).

7. Affairs on the Western Front

- *The Situation in Asia Minor (424–413).* On the various problems, cf. Andrewes 1961: 1–7, Lewis 1977: 80–82, Cartledge 1987: 187ff., Briant 1995: 116–32; on the Peace of Epilycus, cf. most recently Descat 1991, who stresses its novelty, and Lewis 1992a: 122, 1992b: 422 n. 132; on the problems posed by the Athenian aid for Amorges, cf. the discussion of Lewis 1977: 85–86, and the readings of the Pillar inscription by Shevoroškin 1977: 127–28 n. 1 (but several have now been dismissed by Melchert 1993, analyzed in the next paragraph); on the Ionian War, I have made much use of Lewis 1977: 86–135 as well as Westlake 1979 and, on some chronological problems, Robertson 1980 (who places the mission of Arthmios of Zeleia in the context of 408–407; cf. also on this point Walbank 1982, 1983, 1989).

- *The Spartan–Achaemenid Treaties (412–411).* Lewis 1977: 90–107; Levy 1983; cf. also Canfora 1990 and Cartledge’s doubts (1987: 187) on the character of “treaty”: the author speaks of an “agreement.” While the author’s suggestion along these lines remains very modest (p. 34), it is perhaps in this context that we might locate the new readings of several lines of the Pillar Inscription by Melchert 1993: he thinks the text refers to an accord sworn between Tissaphernes, son of Hydarnes, and his Lacedaemonian allies; presided over by the dynast of Xanthus (who speaks in the first person), who acts as arbitrator/conciliator (*maraza*) between the two allies, the agreement would have been written on two stelas, one deposited at Hytenna [a reading that removes from the text the pseudo-Persian personal name Utāna/Otanes] in the sanctuary of Maliya, the other at Caunus in the sanctuary dedicated to Maliya, Artemis, and Basileus Caunius; it is thus possible that there we have, seen from the Lycian side and expressed in Lycian, a reference to the negotiations opened at Caunus between Tissaphernes and the Spartan leaders (Thucydides VIII.58.1), but it could also deal with a different episode. Whatever the case, an article like Melchert’s, coming after many others (e.g., Shevoroškin 1977), once again sharpens the historian’s hope of one day having a complete text that hopefully would fatten the skinny file of non-Greek narrative sources for the Achaemenid period.

- *Darius II and His Satraps.* Concerning his escape from Sardis, Alcibiades claimed “perfidiously that Tissaphernes had let him go” (Plutarch, *Alc.* 28.1); on the diplomatic hesitations of Tissaphernes, cf. Lewis 1977: 129–31; on the military inferiority of the satraps, cf. Westlake 1979: 37–40; cf. *ibid.* on the fiscal levies imposed on the Greek cities, which, he says, were one of the reasons for the limited enthusiasm on the part of those cities for participating in the war against Athens. The phrase *idia khřēmata* is not unreminiscent of others used later by Xenophon: in 405, Cyrus the Younger “assigned to Lysander all the tribute which came in from his cities and belonged to him personally (*tous phorous tous ek tōn poleōn, hoi autōi idiōi ēsan*)” (*Hell.* II.1.14♦); when he arrived in Asia Minor with 500 talents released by Darius II, Cyrus also declared himself ready to “use his *idia*” if the royal funding proved insufficient (*Hell.* I.5.3); and, later, Cyrus begged his brother Artaxerxes II “that these Ionian cities should be given to him instead of remain-

ing under the rule of Tissaphernes" (*Anab.* I.1.8♦): "for, in fact, the Ionian cities had originally belonged to Tissaphernes, by gift of the King (*dedomenai*)" (I.1.6); the phrases used by Xenophon are problematic; but I am not certain that the author is thus referring to a gift of towns, comparable to what was given to Themistocles (a theory defended cautiously by Lewis 1977: 119–22, thinking that the gift was given to the person, not the satrap); I am tempted rather to think that in this way the king allowed the satrap entrusted with the war to finance it with the profit of the tribute, which comes down to authorizing him not to pay the full amount to the royal treasuries—an obligation that, by contrast, fell on Cyrus (*Anab.* I.1.8), doubtless the source of his discontent; on these problems, cf. also Tuplin 1987a: 133–35; on the financing of military campaigns in these years, see especially Lewis 1989: 231–34; on Cyrus's coinage, cf. Weiser 1989 (with the strong objections of Casabonne 1995b).

• *Darius II, Asia Minor, and the Other Fronts.* State of siege at Uruk: Stolper 1990b: 572 (with caution, since the parallels invoked date to the seventh century); the royal concern for the other fronts is particularly stressed by Lewis 1977: 133–34; in an earlier article, the same author (Lewis 1958) presented the idea that the Phoenician navy was rerouted to Egypt in 411: on this point, cf. my critical remarks in Briant 1988a: 143; moreover, the text of Thucydides VIII.35 is less forthcoming than supposed by Kienitz 1953: 73 (which I made the mistake of following too closely in Briant 1988a: 150). Indeed, the absence of documents from the center and certain recently published Babylonian tablets must lead the commentator to caution and not overestimating the Aegean front in the imperial strategy of these years. But, on the one hand, the orders given by Darius II to Pharnabazes and Tissaphernes show that the decision to reassert authority over the Greek coastal cities was indeed made by the king; on the other, an expedition such as the one against the Cadusians certainly did not take on such military importance that it could endanger the Achaemenid engagement on the western front (on the "Cadusian Wars," cf. my interpretive remarks in chap. 16/18). In short, it seems to me reasonable to doubt that these fronts could have led Darius to neglect the affairs of Asia Minor (cf. also the reflections along these lines in Tuplin 1987a: 139–42 and Cartledge 1987: 189–90).

• *Darius II and His Armies.* On the Greek stereotype of Persian military decadence, cf. Briant 1989a and the systematic analysis carried out in chap. 16/3; on compensated service (repayment in silver for the *ilku* charges), cf. Joannès 1982: 20–21, who, while noting that it is already known in the time of Darius I (p. 21), thinks that "it even became the rule from the reign of Artaxerxes I" (p. 20) and that the contrary texts (convocations at Uruk under Darius II: texts pp. 19–20) constituted nothing but "a few exceptions"; cf. also pp. 25–26: "Under Artaxerxes I and Darius II, this is the system that prevailed and, at least under unusual circumstances, the feudatories of the Nippur region were not normally compelled to do anything but pay the *ilku* in silver"; this interpretation had already been presented by Cardascia (1951: 8) and Dandamaev (1967: 41–42) and it is widely accepted among those who study the development of the Greek institution of mercenaries under the Achaemenids: cf. Picard 1980: 222–23 (with several notes of caution nonetheless, p. 223); also Rahe 1980: 90–93, and Petit 1993 (cf. Briant 1994b: 120–22); in contrast, more cautious regarding the Greek texts, Seibt (1977: 121–38) does not know the Babylonian material; on the Gadal-jāma affair, cf. Cardascia 1951: 179–82 (but I vehemently reject the conventional "feudal" interpretation) and 1958, from which I take the translation of UC 9/68 by P. Beaulieu in Joannès, *CANE*, p. 1481 (cf. also Cardascia 1977); regarding the translation 'secretaries of the army' ['army cashiers' *sipīru ša ūqu*], Cardascia 1951: 58 n. 2 mentions but does not accept San Nicolò's interpretation (*non vidi*), which compares the phrase *grammateis tōn dynamēōn*; the suggestion seems quite sensible to me: in the Hellenistic period, these *grammateis* (scribe/*sipīru*) were required to take the function of soldiers (*hoi grammateis tōn tagmatōn*): cf. Launey 1949 II: 672, and pp. 778–79 on their role in the distribution of military rations; on the Babylonian phrase, cf. also Stolper 1985a: 31 n. 116 and 93; convocations at the *sylogos*: cf. texts gathered by Widengren 1956: 152–60; texts dated to Artaxerxes II: analyzed by Dandamaev 1992a: 18 (on the barber's

archives, cf. Van Driel 1987: 164–67). The circumstances of tenants' indebtedness at the time of the fight between Sogdianus and Ochus are analyzed in detail by Stolper 1985a: 104–24; he develops the idea (pp. 106–14) that the tablets record that the members of the *ḥaṭru* had to pledge their plots (or more precisely the revenues derived from their plots) to the Murašū to be able to outfit themselves during the events relating to the succession. I stress that Joannès (1982: 22), Picard (loc. cit.), and Rahe (1980: 92) all refer to Stolper's work (who in turn cites Parke and Seibt, p. 150 n. 69, in a sort of "bibliographic tautology"); but Stolper's analysis does not necessarily lead to the conclusions they come to: cf. the critical remarks by Van Driel (1987: 174–76; 1989: 223–24); it furthermore seems to me that, more recently, Stolper has modified his initial proposal a bit (cf. Stolper 1989c: 150, discussing Dandamaev 1967); on the (limited) use of Greek mercenaries in Asia Minor before the revolt of Cyrus the Younger, cf. Seibt 1977: 35–51. To these remarks I will add one more (in the form of a suggestion): we might in fact ask to what extent the "pessimistic" interpretation of the generalization of payment in silver is not a distorted view, derived from a "flat" use of the evidence considered. On the royal taxes incumbent on the *ḥaṭru*, in fact, we have nothing but tablets from the archives of the house of Murašū (and other houses from at least the time of Darius). More specifically they relate to the category analyzed by Cardascia (1951: 98–120) under the name "tax receipts": managing lands entrusted to them by the concessionaires, the Murašū took their profit in the form of rent, and it was they who, for this reason, paid the taxes to the *šaknūtu*, who, in turn, paid it to the royal treasury (cf. the clear analysis by Cardascia 1951: 188–98). This procedure calls forth three remarks: (1) we have no trace of the "normal" procedure, in which the concessionaire paid the tax directly to the *šaknu* (Cardascia 1951: 192); (2) to pay the tax in silver, the Murašū had to transform the farm produce, either by sale (cf. Cardascia 1951: 198) or by the transformation of some agricultural products into "industrial" products, dates and beer in particular (Van Driel 1989: 211, 235–36); in this way they played a central role in the system (as Van Driel 1989 rightly insists), since the royal treasury preferred to deal with silver rather than agricultural products (see also Briant 1994d); (3) the payment in silver by the Murašū thus does not necessarily mean that the concessionaires did not owe actual military service; on the contrary, this was an obligation that cost quite dearly and that required purchases from craftsmen (arms, etc.): it was through the Murašū as intermediaries that they got this silver, for, besides the taxes, the Murašū obviously paid a fee to the concessionaires for the lots they were managing. In other words, the generalization of the land management system (and thus of payment in silver) did not conflict with the military capacities of the *ḥaṭru* (which is by and large concealed by the nature of our evidence); quite the contrary, it was a primary condition of their maintenance. — On all of these problems, see also the clear reflections of Kuhrt 1989: 220 and the important comments by Tuplin 1987b: 153–56, in particular pp. 155–56 on "compensated service"; the author, it seems to me, has reservations similar to those I suggest here (citing the tablets relating to the barber Kušur-Ea, while agreeing nonetheless that the actual levy of the "king's soldier" became rarer and rarer in favor of the appeal to mercenaries (p. 157). I maintain meanwhile that the available documentation does not allow such statistical inferences: from recently published tablets, we learn for example of a convocation of the army by the king in 370 (ADRTB no. –369), or of the existence of fighting in 368 (no. –367); this suffices to exemplify the accidental nature of military events showing up in the Babylonian documentation; anyway, it is not impossible that every year the members of certain military *ḥaṭru* had to send fully armed soldiers, such as the sumptuously equipped "Babylonian horsemen" who regularly came to welcome the king on his frequent visits to Babylon (cf. Quintus Curtius V.1.23; cf. also my reflections in RTP 45 and n. 2, as well as Kuhrt and Sherwin-White 1994: 312); according to Xenophon, in any case, speaking in general of troop reviews, they were annual reviews (*Oec.* IV.6); besides, such regularity would certainly make it possible to maintain the troops' military readiness at an appropriate level. [On paid service, see most recently the text BM 49718 explained by Jursa 1995, who compares it with the texts concerning Kušur-Ea.]

• *Cyrus in Asia Minor.* The theory of a new treaty between Sparta and Darius (the so-called treaty of Boiotios) was developed by Lewis 1977: 124ff.; it has found strong and reasoned opposition from Tuplin 1987a (some of whose arguments appear to me to be conclusive); on the amounts Cyrus received from the king, cf. Lewis 1977: 131 n. 138; 1989: 231 (he notes the interest of the passage *Hell. Oxyr.* 19.2 and stresses that for the first time the king brings into play his own resources); on Cyrus and Lysander: cf. Bommeleier 1981; the title *karanos* borne by Cyrus: cf. Petit 1983; Haebler 1982; and most recently Bernard 1994b: 500 and n. 53 (on the coins of the first Parthian kings, we find the word *karanos* in Aramaic, rendered in Greek by *autokrator*).

8. The Great King in His Countries

• *The Murašū, Babylonia, and the Royal Administration.* I summarize here with broad strokes the work of Cardascia 1951, Joannès 1982, Stolper 1985a, and Van Driel 1989 (who have just been quoted above with respect to mercenaries and *ḥaṭru*; cf. also Stolper 1990c, 1992c; CAH VI²: 245–53). Much information and analysis will also be found in Bregstein 1993, in particular pp. 114–207, where the author with great precision presents the functional identity of the owners of a seal: it thus constitutes the most detailed presentation of the administrations and administrators in Achaemenid Babylonia; I mention in passing that in 418 we observe a price increase in some Babylonian towns; it is possible that it lasted until 416, but the sparse available documentation does not allow us to infer a deep structural crisis (cf. Joannès 1982: 276–79): there is in any case no trace of a Babylonian revolt in these years, contrary to what the mistaken reading of a tablet had led us to believe (cf. Stolper 1988a: 197–98).

• *Bēlšunu.* On his career, cf. especially Stolper 1987, 1990a, 1995, and the remarks of Graf 1993: 153–54; I thank F. Joannès for providing me with a translation of the document TBER AO 2569 (cf. also English translation by Stolper 1992b: 123–25; the translation ‘governor of Babylon’ seems to me better than ‘satrap of Babylon’): in another article (1989b: 298), Stolper raised doubts about his earlier reconstruction, stressing that Bēlšunu seems to have remained subordinate to the satrap of Babylon (on the uncertainties of Persian administrative vocabulary and its Akkadian calques, cf. Stolper 1985a: 58; CAH VI²: 252–53; Dandamaev 1992b); on Bēlšunu’s activities as manager, cf. also Stolper 1985b (with doubts now expressed in Stolper 1990a: 205), Van Driel 1989: 223–26; TCL 13.204: Stolper 1987: 392 and n. 17.

• *Darius II in Egypt.* On the paradoxical situation concerning evidence in Egypt, cf. Briant 1984b: 58; Aramaic documents of the reign of Darius II: list in Bresciani 1958: 187 (add Segal 1983: 4, probably Darius II); Darius II at El-Khārga: Kienitz 1953: 73–74; Winlock (1941: 7f.) thinks that it relates to Darius I instead, but, more recently, Van Wijngaarden (1954: 69–70) attributes the document to Darius II (cf. Bresciani 1958: 181, who also cites a sherd inscribed with the name “[–], son of Artaxerxes”; she thinks it could relate to Darius II but does not exclude Arses); according to Grelot (1972: 398, referring to Posener 1936: 78–79), Darius II had a hymn to Anon carved in the sanctuary of El-Khārga; I do not know where this information comes from (not found in Posener): we thus see that some uncertainty remains regarding the possible presence of Darius II at El-Khārga. Furthermore, Cazelles (1955: 87 n. 3) asks whether the *naos* found at Hermopolis Magna could be attributed to Darius II (rather than Darius I), but Mysliwiec 1991 seems to exclude this hypothesis. Darius II’s gifts at Edfu, cf. Meeks 1972: 20, 55, 133–35; on SD²a and the uncertainties of dating, cf. Schmitt 1981: 33–34; Aramaic version of Behistun (and Naqš-i Rostam: Sims-Williams 1981), cf. Greenfield and Porten 1982: 2–4; Porten and Yardeni 1993; Porten 1990: 17 on the date; I add that in their new publication of the Aramaic text of Behistun (TADAE C.2.1), Porten and Yardeni 1993: 59 repeat the theory already presented in Greenfield and Porten 1982 of copies for student use (for DB and DNa [Sims-Williams 1981]), and they add this political explanation: “Perhaps the text was read periodically on public occasions”; observing that the earliest date in the text on the verso is 417, they suggest that the new copy “may have been written to commemorate the 100th anniversary of the great victories of Darius I which fell shortly

after the accession of his later namesake, etc.” Even though the idea of a political impetus that had its source at the center came to my mind as well, I did not believe myself able to adopt this suggestion when I wrote the text of this note, and I do not believe myself able to sway from this rule of interpretive caution, quite aside from the fact that the authors’ comparison between the revolts put down by Darius I and those faced by Darius II seems excessive to me. Lack of interest in Egypt on the part of the Great Kings in the fifth century is suggested, for example, by Kienitz 1953: 73–74 (based—astonishingly!—on the presumed silting up or filling with sand of the canal from the Nile to the Red Sea); a similar idea is found in Dandamaev 1989a: 243: “After Darius I, the Persian kings were basically uninterested in the internal affairs of Egypt” (referring to the limited number of documents dated to Artaxerxes I); it is clear that this position comes directly from the traditional view of the rupture introduced by Xerxes, a point of view that does not stand up to analysis (cf. chap. 13/6). Regarding the absence of stelae for the interment of an Apis or the mother of an Apis after those dated to Darius and Xerxes, then their reappearance beginning with Hakoris in 391, Smith (1992a: 207) suggests that one must see this as testimony to the restoration of the sanctuary, which “could well have been one of the principal preoccupations of the local government after the end of Achaemenid dominion in 404”; this is obviously a tempting interpretation, because of the historical inferences it suggests; I will simply allow myself three remarks: (1) Smith himself stresses the special character of the stela that refers to Darius and Xerxes (cf. Smith 1988: 188; 1992a: 205), a sort of official document, as opposed to the stelae of the fourth century (up to and including Alexander), which were inscribed by the masons at work during the interment of the mothers of Apises; moreover, the first stela was reused later on, which opens the way to a different interpretation, namely, that the stelae dating from the first Persian dominion were destroyed after 404; the final publication will certainly provide important information on this point; (2) meanwhile, I note that in the time of Artaxerxes I we see no evident change in the position of the Great King in Egypt: in the quadrilingual inscription on a vase (A¹Orsk), the hieroglyphic text calls him “Artaxerxes the great pharaoh” (*vazraka* in the reconstructed Persian version: Mayrhofer 1978: 28); these remarks do not alleviate the difficulty, but they might awaken interpretive caution; (3) [lastly I will take up what D. Devauchelle has very recently written (1995: 70): “We may remark the absence of attestations concerning the three or four Apises who lived at the end of the first Persian dominion; this is perhaps due only to the chance preservation of ancient monuments”; nonetheless the author thinks it is possible that according to the recollections found on a stela of the Ptolemaic era, the interment is dated either to ca. 412 or to the reign of Darius II (he develops and explains this point in Devauchelle 1994b: 104–6)].

• *The Persian Authorities Confront Jews and Egyptians in Elephantine.* I repeat here the basics of my proof in Briant 1988a: 144–47 (where the bibliography may be found), which I amend and complete in some points; the relationship between the “code” of Darius and the Syene-Elephantine affairs were suggested to me by reading Allam 1986, 1993; Méléze-Modrzjewski 1986, 1989; I also note in passing that the phrase “in the time of Cambyses” is found in a Saqqara papyrus but not in any explanatory context: cf. Segal 1983: 4. The fate and career of Widranga raise many problems; first of all, the punishment that he is supposed to have received (humiliation?) is inferred from a very difficult passage in the petition sent by the Jews to the governor of Judah (DAE 102 [= AP 30], line 15): the variety of solutions imagined by the translators is considerable (cf. Kraeling 1953: 105 n. 15; Porten 1968: 288 n. 19; Grelot 1972: 410 notes s and t); besides, Widranga seems to be named in a (badly damaged) letter dated to the accession of Nephertites (Kraeling no. 13 = DAE 105), which seems to imply that he had not lost his job and in any case that he had not been executed, since he would have been present and active on Elephantine in 399 or 398 (cf. Kraeling 1953: 111–13; Grelot 1972: 422 with doubts about the identification of this Widranga; [Lemaire 1995a: 53–54 with some annoying typos in the dates]). The question was reopened by Lemaire 1991c: 199–201, who proposes dating the Aswan stela (DAE 75) to Artaxerxes II (398), not Artaxerxes I (458); he makes basic corrections: rather than seeing in it the erection of a Persian

sanctuary, he thinks that Widranga dedicated a sanctuary to "Osiris the powerful" — hence his note (p. 201 n. 7) on DAE 98 [= AP 38] and Widranga's "Egyptophilia": for reasons already given in Briant 1988a: 167, the Persians' marked devotion to Egyptian practices does not seem to me sufficient proof of Egyptophilia (in the political sense implied by the authors who use the word: e.g., Donadoni 1983: 35, referring specifically to Widranga); all we can think is that, after the end of Persian dominion, Widranga (just like the garrison) allied himself with the new masters: but from this nothing can be inferred about his "Egyptophilia"; after all, when the Persians switched sides to Alexander (cf. chap. 18/3), no one dreamed of accusing them of "Macedonophilia": they simply obeyed whoever it seemed to them at the moment to be in their interest to obey; for all these reasons, I do not think that the new readings proposed by Lemaire in themselves allow us to understand the reasons for Widranga's decision against the Jewish sanctuary at Elephantine. I consider the entire matter in detail in Briant 1996b.

- *A Business Letter*. Besides Grelot's commentary, see Porten 1888b and Briant 1988a: 169–70; on "joint ventures" in Babylonia (without any Iranians), cf. Dandamaev 1984a: 321, 332, 371.
- *The Great King in Sidon and Elephantine*. On the coinage, besides Babelon (1910 II.2: 545–58), see more recently Betlyon 1982: 3–9 and J.-A. G. Elayi 1993: 125–61; the beginning of coinage at Tyre and Sidon is dated ca. 450 by Mildner 1990: 144 n. 30 (cf. also J.-A. G. Elayi 1992b). PTS 32: cf. photo in Briant 1992d: 74 and drawing in Eph'al 1988: 157, who thinks it shows a "Phoenician trireme" (on the presence of fortifications on some of these coins, cf. Childs 1978: 79, Elayi 1986); seals from Dor: Stern 1990, 1994c: 190–92; coins of Syene–Elephantine: Lipiński 1982: 27. Debate on Sidonian coins: beginning with study of the later coins, where another person (with Egyptian hairstyle) walks behind the chariot (Babelon no. 906ff.), Seyrig (1959) offered the hypothesis that the king in the chariot is not the Great King but an image of the god Baal of the city; this interpretation was cast into doubt by Schlumberger 1971, using arguments that seem very strong (cf. also Betlyon 1982: 10); it should be recalled that the motif of the king on his chariot is also found in Phoenician imagery before the Achaemenid period: cf. a Cypriot-Phoenician bowl from Praeneste (drawing in Childs 1978: fig. 29 = fig. 50c, p. 606 here): hunt near the royal city (represented by two towers); standing under a parasol, the king rests his right hand on the driver's shoulder who, leaning forward, holds the reins of the horse (two horses?); there as elsewhere, the imagery beyond doubt owes much to Neo-Assyrian models (on these bowls, cf. Childs 1978: 54–56, who is not directly interested in the motif of the king on his chariot). Sarcophagus of the satrap: the date and interpretation are controversial; against Kleeman 1958 (around 430), Gabelmann 1979 proposes the decade 380–370, after a stylistic comparison with the Lycian monuments: the comparison is also systematically done to extract a historical interpretation from it (see most recently the discussion by Stucky 1993); the "theory of dependency" (principal person = Great King) was worked out over several years by Borchhardt (cf. in particular 1983, and most recently 1993a: 50–52); against this position, see Kleemann (1958: 163–65), Gabelman (1984: 63–68, on the audience scene), and Jacobs (1987: 71–73).

- *The Lycian Case*. On the Lycian texts of the Xanthus Pillar and the Greek epigraphic corpus, cf. the analyses by Childs 1981: 62–69; Bryce 1986: 105–8; and now Bousquet 1992 (discussed by Keen 1992a, chap. 17); according to Childs (1981: 69), the sarcophagus of Merehi should be attributed to Kheriga, because of an inscription on it; but Demargne (1974b: 96) thinks the iconography leads to a lower date. Coin of Tissaphernes at Xanthus: publication by Hurter 1979: 100–101, 108; on the uncertainties of the historical interpretation, cf. Harrison 1982a: 391–96; the theory of the satrapal portrait has been developed particularly by Cahn in many works (cf. Cahn 1975, repeated in 1985: 594; 1989): on this subject, see in particular many works of Zahle: 1982, most recently 1989: 175–76: contra Cahn, the author thinks it is a portrait of the dynast plain and simple; at the same time he agrees that such coinage explains the military participation of Lycians with the satrap and that, according to him, it was the satrap himself who supplied the silver for the minting; entirely opposed, Savalli (1988: 118 and n. 78) stresses the uncertainty of the restoration

"Tissaphernes" on the Xanthus coin, and she writes: "For this entire period [440–380 approx.], there is no trace of any control on the part of the Achaemenid kings and/or their satraps, other than [this coin]"; the suggestion seems incautious to me because of the generalization it draws, especially from analyzing the Greek poems from Xanthus (interestingly, for all that); cf. the opposite position of Bryce 1986: 109 (the author of the pillar was "an ally, if not a vassal, of the satrap Tissaphernes"), and the appreciation of Keen 1992a: chap. 7 ("In general the ruling dynasty at Xanthus seems to have become more pro-Persian, both politically and culturally, after the accession of Kheriga"). On the poems celebrating the deeds of Gergis and Arbinas, cf. now especially Bousquet 1992 (from whom I take much); on the poem of Arbinas: the theory of a direct borrowing from Persian concepts is developed (following Robert 1975: 328–30) by Herrenschiidt 1985; against this position, Savalli (1988: 106–10) exhibits the deeply Greek character of the poem; I am closer to the subtle position of Bousquet, who while challenging Herrenschiidt's interpretation, describes Arbinas as "a dynast brought up in the Iranian fashion" (1992: 181); on the Xanthus dynasts' own objectives during the Ionian War, cf. the historical reconstructions of Bousquet: "On the occasion of the war in Caria, Gergis had to lay his hands on the land of Caunus," from which, later, Arbinas perpetrated his conquests in the Xanthus Valley (1992: 175–78, 180), but see now Melchert 1993, analyzed above.

- *The Cilician Case.* On Cyrus the Younger in Cilicia, cf. Erzen 1940: 116–20, where the sources are gathered; according to Kraay (1976: 9–11), several Cilician coins of Tissaphernes were issued to finance the (famous) Phoenician navy in 411–410, but the hypothesis remains very dubious: cf. Harrison 1982a: 46–51; Capecchi 1991: 68–69; Price, *REA* 91/1–2 (1989): 106; on the "dynastic" coinage, cf. the doubts brought out by Harrison 1982a: 440–50 and Moysey 1989: 127 n. 5; on this coinage, see also Capecchi 1991: 68–72 (and 72–85 on the coinage of the Cilician cities) and Weiser 1989: 278–81 (who thinks this might be coinage of Cyrus the Younger during his passage through Cilicia); according to Davesne (1989: 161), the Cilician coinage in its entirety expresses "the adoption of a common standard, derived from the Persian shekel, [which] seems to indicate that the Achaemenid power was at the root of this production"; but this political interpretation seems weak to me. On these numismatic and monetary problems, see now Casabonne 1995a, b.

- *The Persians and the Kings of Cyprus.* Cf. Wiesehöfer 1990a and Collombier 1990, 1991. A Babylonian astronomical tablet (*ADRTB* no. –440) refers directly to events taking place around Salamis on Cyprus; it has been dated (not without reservations) by the editors to the reign of Artaxerxes I (hence its numbering); but I am persuaded by the arguments of van der Spek (1993a: 96) who tends to date it to the reign of Artaxerxes II; the text will thus relate to the affairs of Cyprus in the 380s (chap. 15/6: "The Offensive against Evagoras (387/386–383/381)," p. 652; also chap. 15/1).

Chapter 15

Artaxerxes II (405/404–359/358) and Artaxerxes III (359/358–338)

1. *The Reign of Artaxerxes II: Sources and Problems*

• *The Greek Authors' View.* Cf. Briant 1987b, 1989a, 1994b, and Sancisi-Weerdenburg 1987a; on Plutarch's *Life of Artaxerxes*, cf. Orsi 1979–80, 1988, Manfredi and Orsi 1987, Tagliaferro and Manganello 1991–92; as for the stereotyped view of Artaxerxes II and the court conspiracies (fanned by the inescapable Parysatis!) discussed by Dandamaev 1989a and Petit 1993, I have explained elsewhere what I think of it (Briant 1993c; Briant 1994b: 118–19); for all these reasons (laid out as needed in the course of this chapter), I do not share the confidence Moysey 1992 asks us to place in Plutarch, or that the same author (1991: 112–14) grants to Ephorus on the grounds that he is an “eyewitness” (see chap. 15/7: A Summary of the Discussion, pp. 674ff.). On Dinon (FGH 690), cf. Stevenson 1987; on the *Oxyrhynchus Hellenica*, cf. Bruce 1967 and McKechnie-Kern 1988; on Xenophon's *Hellenica*, cf. Krentz 1989 and now Tuplin 1993 (who centers his proposal on Greek matters); on the phrase “Ten Thousand,” see Masqueray 1928.

• *The View from Susa, Babylon, and Persepolis.* On Belesys/Bēlšunu, see several articles by Stolper (most recently CAH VI²: 238–39 and Stolper 1995). ADRTB no. –369: on the place-name Razaunda, I owe the suggestion (Media) to Stolper, CAH VI²: 239. ADRTB no. –440 is dated to Artaxerxes I by the editors (despite the doubts already expressed by Schmidt 1982c: 87); the tablet should instead be dated to Artaxerxes II, as suggested in turn by van der Spek 1993a: 96, who places it in the context of the Persians' battle against Evagoras known from Diodorus XV.2ff.; if we were able to date precisely Diodorus's phrase “this year” (§2.1♠), we could also place the tablet within Artaxerxes II's reign (the editors' suggestion “year 24?” is no more than that). Obviously we can inquire why a Babylonian scribe would look to the Aegean front for a chronological marker, given that generally speaking references to events are strictly Babylon-centric (Sachs and Hunger 1988: 36). It is obviously not easy to discover why at this point the scribe felt it would be useful to mention a fact that (for us) belongs to imperial history (cf. van der Spek 1993a: 93–95). My suggestion (all else being equal) is as follows: examination of the astronomical tablets and other Babylonian chronicles of the Achaemenid and Hellenistic periods suggests (it seems to me) that extra-Babylonian regions are referenced only when the king or a member of the royal family was on the spot: this holds, for example, for ABC, Chronicle no. 9 (p. 114), which deals with Artaxerxes III's expedition against Sidon and Phoenicia (Diodorus XVI.40 6ff.), or ABC, Chronicle no. 13, reverse: expedition of Seleucus in Asia Minor and Macedonia (Sherwin-White, JNES 42/4 [1983]: 266–67; Briant 1994c: 463–67), as well as some astronomical tablets, such as ADRTB no. –273 (Sherwin-White and Kuhrt 1993: 46–47), or another one (no. –255) that announces the death of Queen Stratonice in Sardis (“That month it was heard in Babylon: queen Stratonikē died in Sardis”). I thus conclude from this that, if van der Spek's proposed dating is correct (which it has to be if the reading is [Ar]šū), then ADRTB no. –440 refers to a time when Artaxerxes II led the troops in person against Cyprus (or at least that he was at the front at the beginning of the war); although we can never be absolutely certain, it is what Diodorus writes (XV.2.1): *Artaxerxēs . . . estrateusen ep' Euagoran ton Kuprou hasilea*, where *estrateusen* should be taken in its primary sense of ‘make (or participate in) a military expedition’, that is, for a king, to lead at the head of his troops (compare Diodorus XVI.40.4–6; cf. Herodotus VII.3–6); doubtless it is this presence that the tablet is referring to with the unfortunately broken formula “. . . of the land lamuniammu which the king made [. . .].” Thus no conclusion can be drawn from this text about the suggestion that Babylon was

concerned with the “particular” importance of the Aegean front; for a Babylonian scribe, it was equally noteworthy in other years to indicate that the king had led his troops against the country Razaunda (ADRTB no. –369), or that the “king’s troops had given battle [somewhere]” (no. –366), and far more interesting to mention planetary conjunctions, the level of the Euphrates flood, or the price of barley on the Babylon market (cf. Slotsky 1993).

2. The War of the Two Brothers (404–401)

• *From Darius II to Artaxerxes II.* We know nothing of the reasons for Parysatis’s preference for Cyrus (on the relationships of Parysatis, Cyrus, and Artaxerxes, the ramblings of Hüsing 1933 must be relegated to dead storage, despite the echoes that still are occasionally encountered today): an ancient tradition (Aelian, *Anim.* VI.39; Plutarch, *Mor.* 328c) holds that she engaged in incestual relations with her younger son; this tradition doubtless goes back to Ctesias (cf. *FCrH* 688 F44). The name (Aršu) of Darius II’s first son (called Arsices by Ctesias and Oarses by Dinon; Plutarch, *Art.* 1.4) is confirmed by Babylonian tablets (cf. Schmitt 1982c: 84–85; 88–89, and now van der Spek 1993a: 95–96); lands belonging to the “son of the king (*mār šarri*)” are attested in the Nippur area by tablets dating between years 1 and 7 of Darius II (Stolper 1985a: 54–62), but the designation used does not require us to suppose that Arses had been recognized as crown-prince from that date; although in fact the translation-interpretation ‘crown prince’ (adopted by Stolper) can be justified for the Seleucid period, when the custom of associating an heir-designate with the throne—and even double kingship—existed [Sherwin-White and Kuhrt 1993: 23–24; Sherwin-White, *JNES* 32/4 [1982]: 265–66; Briant 1994d: 466 n. 22]], things were quite different in the Achaemenid period, for which nothing indicates that the person called *mār šarri* actually was the one who was recognized by his father in the ceremony described by Plutarch, *Art.* 26.4–5 (it is even excluded in the case under analysis here): the problem is doubtless different for the title *umasupitrū*, which is also translated ‘crown-prince’ by Stolper, pp. 59–61, following Eilers: cf. on this point also chap. 13/2, p. 520. Concerning Athenaeus XII.548e, doubts remain, because of the various men called Ochus; it could refer to either Darius II or Artaxerxes III (the same problem with Polyaeus VII.17; see chap. 15/8: From Artaxerxes II to Artaxerxes III, pp. 680ff.); but the characteristics attributed to the dying king, the insistence on the length of his reign, and especially the conditions surrounding the succession of Artaxerxes II make us prefer to believe that the author is actually referring to the transition from Darius II to Artaxerxes II; Justin V.11.1 may derive from the same tradition: “In his last instructions, Darius left the throne to Artaxerxes, and to Cyrus the towns of which he was governor.” On the interpolation included in the *Hellenica* (II.1.8), cf. the doubts of Lewis 1977: 104 n. 83; but, if Xerxes is corrected to Artaxerxes, the datum can be accepted (cf. Cousin 1904: 32–33); on this point, we may also stress the curious detail included by Thucydides (VIII.37.1) in the text of the second treaty between the Persians and the Lacedaemonians, in winter 412–411: the contractual parties swearing to it on the Persian side are listed as: “The king [Darius], the sons of the king (*hoi paides tous [tou] basilōs*), and Tissaphernes.” Altheim and Stiehl (1963: 150–51) think that the phrase designates Autoboisaces and Mitraeus, who the *Hellenica* interpolator says were “sons of Darius’s sister”; they also think that this (unnamed) woman was Artaxerxes I’s daughter—hence the murders of Autoboisaces and Mitraeus by Cyrus: these are a lot of assumptions (it might also simply be a diplomatic formula just like the one doubtless found in Ezra 6:10). On anti-Cyrus propaganda, cf. Orsi 1979–80; Cyrus’s coinage at Sardis: Weiser 1989.

• *Cyrus’s Preparations and Artaxerxes’ Response: From Memphis to Sardis.* I know of no investigation intended specifically to place the events in the framework of Achaemenid history proper; recent studies are particularly interested in the itinerary of the Ten Thousand, on which they provide often important and interesting commentary: see Cousin 1904: 213–33; Manfredi 1986; Donner 1986; Lendle 1984 and 1986; Debord 1995; Joannès 1995; etc. In contrast, Cook

(1983: 211–13) and Dandamaev (1989a: 274–85) offer nothing new on the level of historical interpretation, other than sometimes surprising suggestions; in particular, I do not see the basis for Dandamaev's (1989a: 274) "It is possible that he [Cyrus] hoped to diminish the influence of the Persian nobility and to create a centralized government, comparable to those which were established in the Hellenistic period": on this point, cf. Briant 1993c: 421–22; despite its age and a few faults, Cousin's book (1904) sometimes offers more interesting questions than many recent studies. Cyrus and Tissaphernes: according to Lewis (1977: 120–21), control of the cities was taken from Cyrus to be given by Artaxerxes II to Tissaphernes; see the critical remarks of Tuplin 1987a: 142–45; on the hierarchical relationship between the two men, cf. the discussion by Ruzicka 1985a, who offers several important suggestions. Alcibiades and Pharnabazus: on the record and its contradictions, cf. Hatzfeld 1951: 341–49 (who thinks, contrary to the position defended here, that Cyrus's intentions were unforeseeable by anyone in 404; cf. also Ruzicka 1985a: 211 n. 22); on the path followed by Alcibiades, cf. Robert 1980: 257–99; the Pharnabazus theory is adopted by Cousin (1904: 63–68). Egyptian revolt: we may note that, according to Xenophon's sources (*Anab.* I.8.9; II.1.6), Egyptian soldiers fought in the royal army at Cunaxa: but this might refer to Egyptians who had settled in Babylonia; on the date of DAE 7 [AP 35] (September 11, 400), see Porten 1990: 19. Psammetichus and Amyrtaeus: cf. valid remarks of Kienitz 1953: 76, and now Lloyd 1994: 337 and 347 n. 48; on the chronology of the Egyptian revolt and the Persian retreat, see Le-maire 1991c: 200–1 and 1995a: 51–56. Tamos and Psammetichus: despite Cloché 1919: 222, there is no reason to infer from the murder of Tamos that Psammetichus was a "Persophile"; the Tamos episode has quite recently been cited by Lloyd 1994: 347, who believes that Diodorus's text is too allusive to support historical interpretation; this justifiable caution leads me to stress once more that the idea (discussed in my text) of an alliance sought by Cyrus is simply hypothetical; on the other hand, the existence of a privileged relationship between the Egyptian dynasts and Carian-Memphites in the service of the Persians is confirmed by Diodorus XV.9.4, who places himself some twenty years after Cyrus's revolt: Glus, son-in-law of Tiribazus, makes a *symmakhia* with Pharaoh Hakoris; of course, Glus was himself the son of Tamos (Xenophon, *Anab.* II.1.3; Briant 1988a: 161).

• *Cyrus the Younger's Army.* There are a great many studies on Cyrus's Greek mercenaries: one may especially consult Roy 1967, Seibt 1977: 51–69, and Marinovic 1988: 24–36; cf. also the analysis by Cousin 1904: 133–212, which has the (rare) distinction of considering Cyrus's "barbarian" army (pp. 108–32): on this point see also Briant 1985b: 62–63; among the available sources, Westlake (1987) with good reason reevaluates Diodorus Siculus's contribution. On the size of Artaxerxes II's and Cyrus the Younger's armies: as usual, the figures offered by the ancient authors are both contradictory and barely usable: Diodorus (XIV.19.7) makes the ratio between mercenaries and barbarian army 1 : 7, Xenophon (I.7.10) 1 : 10, proportions leading to evaluations that are much too high (if only for logistical reasons); just as with Xerxes' army in 480, there is virtually no way of coming to a decision, other than by appealing to the eminently subjective notion of "reasonable figures": cf. most recently G. Wylie 1992: 123, who (following others) suggests the sum total of 30,000 for the rebel army. Is it necessary to add that the ancient estimates concerning Artaxerxes II's army are equally unacceptable? On these problems, see also now the discussions and analyses of Gabrielli 1995 and Descat 1995.

• *Propaganda and Legitimation.* On the crossing of the Euphrates and Xenophon's tale, cf. some remarks along these lines by Desnier (apud Briquel 1981) and by Briquel and Desnier 1983 (which I do not follow for all their interpretations) [[taken up again in Desnier 1995: 21–22, 25–26 (received at the very moment our final revision was being completed)]]; on the date of the event, cf. Cousin 1904: 307–8; on the crossing of the Euphrates by Lucullus, cf. Cumont 1905a. According to Weiser 1989, Cilicia was where Cyrus first struck coins with his image, coiffed with the royal *kidaris*. If the theory is correct, the message was clear: Artaxerxes was not facing any ordinary satrapal revolt. In his mind, Cyrus was already acting as a Great King would. But it must be recognized

that the interpretation is highly speculative: anyway, see now Casabonne 1995b. In any case, I have the very clear impression that Cyrus was seriously in need of metal reserves: it is no doubt out of the question that promises of bonuses were predicated on the victory to come (*Anab.* I.4.13; on these problems, cf. also Descat 1995).

• *Personal and Dynastic Loyalty.* Cousin (1904: 92ff.) also holds grave doubts about the scale of defections to Cyrus, and he thinks (p. 92) that “the true strength of the king lay in the loyalty of his people,” rightly supposing that it was a case of propaganda intended to legitimate the rebel’s kingly pretensions; unfortunately, the author does not exhibit the same critical attitude when he characterizes Artaxerxes II as a weak prince, isolated within his harems (pp. 99–100); on Megaparnes’ title *phoinikistēs*, cf. Lewis 1977: 25 n. 143; on the phrase “enemy land,” cf. RTP 58 n. 4; on Tamos and Glus: cf. Briant 1988a: 161; administrative position and family of Orontes of Armenia: Osborne 1973: 517–22; Belesys and Gobryas in 401: at that date, Bēšunu/Belesys was “governor of Ebir Nāri” (cf. Stolper 1987); the case for Gobryas is less certain; a man with that name was “governor of Babylonia” or “governor of the country of Akkad” in the first years of Darius II, with the last (currently available) mention dating to 417; it might be the same person (Stolper 1987: 396–98). [I wonder whether this Gobryas could be identified with the Gobares (*praefectus*) of whom Pliny (VI.30.120) recalls that he dug a canal to protect Babylonia from the Euphrates flood; according to him this was the Narmalchas (*regium flumen*). It is true that the risks of homonymy are great (as much in personal names as in river names) and that the text might just as well be referring to Gubāru in the time of Cyrus and Cambyses, both because several tablets mention a “Gubāru canal” (Joannès 1982: 326) and because there were confusions in the Classical authors among the various “royal” canals (cf. the presentation of the problem in van der Spek 1992: 236–39). Pliny might also be echoing a memory of the major works carried out by (the later) Gubāru in redigging/improving an older canal (cf. for comparison the text from the time of Xerxes, quoted by Joannès 1982: 326: recruitment of workers “for digging the Gubāru canal,” not to mention that the canal is already found in a text from the time of Cambyses). The question must remain open.] I also note that according to Bivar (1961), one Artimas (he publishes a seal of his bearing his name in Aramaic), whom the author presents as holding an official position in Lycia, defected to Cyrus (subsequently, Shahbazi 1975: 119–24 connects him to Megabyzus’s family); but the use of the “satrapal list” in *Anab.* VII.8.25 is very risky, and Bivar’s theory thus carries a very high coefficient of uncertainty, especially because Artimas is not a specifically Persian name (cf. also the incidental remark of Dandamaev 1992a: 45); the name is very common in Caria (cf., e.g., Lipiński 1975: 166; Blümel 1990); furthermore, Robinson (editorial note following Bivar) stresses that the Lycian origin of the document is far from proved. Bivar’s theory has nonetheless been repeated quite recently by Melikian-Chirvani 1993: 114–15; the latter, moreover, makes him the descendant of the Artimas whose name is written in Lydian on a footed censer, whose text (Artymalim) was published with commentary by Gusmani 1983: this all makes for quite a rickety scaffolding of hypotheses! Three final remarks: (1) If as I suggested in the previous paragraph Cyrus had run out of money (until the moment he was partly rescued by the *syennesis*), it has to be admitted that he did not succeed in winning over all the treasurers and other gazophylaxoi along the route, who continued to demand an authorized chit from the royal chancellery before turning over funds, which Cyrus was unable to provide (cf. for comparison the texts quoted in RTP 29 n. 3 and 49 n. 2, as well as my remarks in Briant 1989c: 328–29): a process of resistance no doubt illustrated by Cyrus’s retaliative acts (studied in the text) in Lycaonia; (2) if Cyrus recruited so many Greek mercenaries, I am not convinced that it was only because of some intrinsic technical superiority that he recognized in them — it may also have been because a certain number of regular contingents from Asia Minor refused to defect to him; under this hypothesis, the call to the Greek mercenaries would reflect less a tactical choice than a political constraint; (3) some of the problems treated in this section have just been broached by Joannès 1995, who wonders (pp. 183ff.) why Cyrus took a secondary road along the east bank of the Euphrates; Joannès suggests a possible element of surprise (p. 185); he also thinks that this choice proceeded from Cyrus’s distrust of some of his close associates.

• *Artaxerxes and Cyrus Face Off.* On the Median Wall, cf. Barnett 1963; see also Lendle 1986: 211–14 and Vallat 1989b, as well as the articles on the subject in *NAPR* 1 (1987) and 2 (1989), and now Gasche 1995; on the word “Arabia” in Xenophon, cf. Briant 1982b: 121–22 and Donner 1986 (also Joannès 1995); on the delays in Cyrus’s progress, cf. the remarks in Cousin 1904: 317–21. It is particularly difficult to reconstruct the battle of Cunaxa, because of the contrasting and contradictory descriptions: cf. Bigwood 1983; G. Wylie 1992; and Erhardt 1994, whose discussion (pp. 1–2) bears a title (“Who won the battle of Cunaxa?”) that says a great deal about the persistent uncertainties, and whose conclusion deserves to be quoted: “In short, Tissaphernes won at Cunaxa.”

3. Artaxerxes the Victor

• *The Process of Relegitimation.* Royal propaganda in Plutarch’s biography, cf. Orsi 1979–80. According to Cameron 1955: 96, these were the circumstances under which Artaxerxes authorized a foundation legend that made Cyrus into Mardes, the son of common peasants, and had fake inscriptions carved in the names of Ariaramnes and Arsames in order to discredit Cyrus’s lineage. But, for all sorts of reasons (in particular, the way foundation legends are embellished), Cameron’s interpretation is far from convincing. Besides, according to Shahbazi 1972b, the tomb of Guri Dukhtar (in the valley of Buzpar, southwestern Fārs), published by Vanden Berghe 1964 [whose high dating, before Cyrus the Great, is no longer accepted today: cf. Nylander 1966], was raised by Parysatis, on the model of Cyrus the Great’s tomb (cf. fig. 2, p. 87 here), to lay to rest the meager remains of Cyrus the Younger (head and right hand); but, aside from the fact that the monument could just as well date to the end of the Achaemenid period or even the Hellenistic period (Stro-nach 1978: 302) and that the Ctesias passage (§59) quoted by the author actually seems to refer to a burial at Susa, one might reasonably doubt whether after such a fierce struggle the king would have authorized the erection of such a monument to the honor of Cyrus, which could have become a dangerous rallying-point within Persia itself (compare the political measures taken by Cyrus against the memory of the “rebel” Orontas: *Anab.* I.6:11♦: “no grave of his was ever seen”); in fact, the king had already made an exceptional concession to Parysatis by securing the head and right hand that had been cut off according to custom (Ctesias §58; Plutarch, *Art.* 13.2), since normally the head and hand of a usurper would simply be discarded/exposed (Strabo XV.3.17: *riptetai*), which is to say, probably left for the animals: cf. the fate of Cyrus’s Greek *strategoí* who were decapitated (in Xenophon’s version, *Anab.* II.6.29) and then “torn in pieces by dogs and birds” (Plutarch, *Art.* 17.7♦; above, p. 239 and chap. 2/9, pp. 93ff., on Persian funerary customs); this was probably the fate meted out so secretly by Cyrus the Younger on Orontas (entrusting it to the faithful Artapates), whence Xenophon’s sentence, “From that moment no man ever saw Orontas living or dead, nor could anyone say from actual knowledge how he was put to death,—it was all conjectures, of one sort and another; and no grave of his was ever seen” (I.6.11♦).

• *Reward and Punishment.* On the career of Ariaeus, cf. Lewis 1977: 119 n. 78 and Hornblower 1994a: 78–79; on the possible modification of royal protocol and the chronological problems posed by the ancient texts, see Briant 1994e: 307–10 and chap. 14/1 above.

• *The Great King and His Armies.* On the Persians and their “military weakness” in Plutarch’s *Artaxerxes*, Xenophon’s *Agésilas*, and Isocrates, see some reflections in Briant 1987b and 1989a; on the role of the Greek mercenaries, see the reflections of Seibt 1977: 63–69; and Rahe 1980, who makes the mistake, to my way of thinking, of considering it an established fact that the Babylonian *ḫaṭrus* no longer furnished soldiers: on the *ḫaṭrus* in the time of Artaxerxes II, cf. the material investigated by Joannès 1982: 4ff.; also Dandamaev 1992a: 18, and chap. 14/7: Darius II and His Armies, pp. 597ff.; we will return to all these problems later: chap. 17/3.

4. Conditions in Asia Minor and Artaxerxes II’s Strategy (400–396)

• *From Sardis to Memphis.* Return of Tissaphernes to Sardis, cf. Lewis 1977: 138–39; Amyrtaeus at Elephantine, cf. Porten 1990: 19, who dates the papyrus *DAE* 7 [AP 35] to September 11,

400; but Lemaire (1991c: 200–201) proposes redating the Aswan stela (DAE 75) and considers it possible that Persian control of Syene could have lasted until 398; on the chronology of the first independent pharaohs, cf. also Traunecker 1979 and most recently Lloyd 1994; we may note finally that perhaps these pharaohs did not make a sharp break with the Persian court, if we go by an anecdote preserved by Phylarcus (apud Athenaeus XIII.609b): an (unfortunately unnamed) Egyptian king sent the famous courtesan Timosa to Stateira, the wife of Artaxerxes: the word used (*dōron*) without doubt refers to a “diplomatic gift,” the kind well known between the pharaohs and Near Eastern kings. [The record of the Egyptian break was reviewed by A. Lemaire in a talk given in Paris at the colloquium “Égypte et Transeuphratène” (May 10–11, 1993) = Lemaire 1995a: 51–56.]

- *Artaxerxes, His Satraps, and the Asia Minor Front.* On the Sparta policy, cf. Lewis 1977: 139ff. and Westlake 1986; on Tissaphernes and Pharnabazus, cf. Westlake 1981; Evagoras’s attitude: cf. Costa 1974: 46–50; *synnēsis* of Cilicia: the theory of his political demise goes back to Erzen 1940: 114–20, but the author rightly remarks that no document exists to positively support it (at least until the nomination of Mazaeus/Mazdai around 350: cf. Briant 1994b: 124); it is however not entirely certain that at that time (400) Cilicia was transformed into a satrapy in the full sense, since the coins struck in Cilicia by Tiribazus, Pharnabazus, and Datames are not satrapal coins properly speaking but “karanic” coins (cf. Briant 1989c: 329); on the doubts that do need to be retained on this point, cf. Lemaire and Lozachmeur 1990: 146–47; and now Casabonne 1995b.

5. Agesilaus in Asia Minor (396–394)

- *The Defeat of Tissaphernes.* Agesilaus’s offensive and the circumstances of the battle of the Pactolus continue to pose topographic and historical problems, because of contradictions in the ancient sources: see Dugas 1910, Foss 1978, and the analyses of Bruce 1967 (ad loc.), particularly pp. 150–56 on the battle of Sardis; most recently, cf. Cartledge 1987: 215–17; Botha 1988; Wylie 1992; De Voto 1988; Dillery 1995: 109–14.

- *The “Anabasis” of Agesilaus.* See especially Dugas 1910 and Bruce 1967, as well as Wylie 1992 (who rightly holds Agesilaus’s strategic ability in low esteem); on the man and his campaigns, cf. the synthesis by Cartledge 1987, esp. pp. 180–218 (who also, pp. 217–18, revises downward the territorial ambitions assigned to Agesilaus by the ancient authors).

- *Persian Defenses Confronting Agesilaus’s Offense: Satraps and ethnē.* On relations between the Persians and the interior peoples, cf. Briant 1976 and 1982b: 57–112 (chap. 16/18, pp. 762ff.). Orontes’ title (“satrap of Mysia”) has caused much ink to be spilled in the service of studies dedicated to reconstructing the “Satraps’ Revolt” (chap. 15/7, pp. 656ff.); the validity of the information provided by Diodorus is accepted by Osborne 1973 (fully empowered satrapal government centered at Pergamum: cf. OGIS 264, lines 4–9), although Hornblower (1982: 176–78) thinks (unconvincingly, in my opinion) that toward 361, Orontes was still satrap of Armenia; cf. also Osborne 1982: 65–80 (where a profound discussion of the opposing views is found, in particular a vigorous reply to Hornblower, who thereupon reiterated his view in Hornblower 1994b: 220); Osborne’s viewpoint is adopted by Moysey 1987; see also Weiskopf 1982: 108–18 and 1989: 70–76, who, while admitting that Orontes received a position in Mysia, denies the existence of an autonomous administration and compares Orontes’ position to that of an Asidates, who was provided with land and estates; the author recalls that Diodorus’s phraseology is very elastic and suggests that the same holds for Diodorus’s mention of a “satrapy of Paphlagonia” (1982: 114); on this point, cf. also Robert (1980: 265ff.; cf. also 203–19), who without attacking head on the problem discussed here thinks it self-evident that the satrap of Paphlagonia resided at Gangra, not far from Ancyra, the very spot—we may note in passing—where the Paphlagonian leaders went to submit to Alexander in 334, with the king ordering them to obey the satrap of Dascylium, as in the past (Arrian II.4.1–2); let us add in passing that Paphlagonia is not devoid of Persian iconographic evidence: cf. Doncel-Voute 1984 (chap. 16/2, fig. 55, p. 699) and von Gall 1966; on Polyaeus VI.10 (Aeolid) and the fortifications of Asidates (Mysia), see RTP 190; Tuplin 1987c: 212–13; and Debord 1994.

• *The Persians and Agesilaus Face Off.* On Spithridates and his estates, cf. Sekunda 1988a: 178–80; on his relations with Agesilaus and the limited character of the threat he posed at the time, cf. Weiskopf 1989: 23–25; coins struck in the name of a Spithridates are known, but this one's precise identification is problematic; he might be a satrap known from Classical sources in 334 (cf. Harrison 1982a: 416–18, Cahn 1989: 101); on Pharnabazus's reply to Agesilaus (*Hell.* IV.1.35–36), cf. the reflections of Lewis 1977: 150–51, and chap. 8/7: “The Dynastic Pact,” p. 354.

6. Achaemenid Successes and Failures: From Asia Minor to Egypt (ca. 396 – ca. 370)

• *The Defeat of Sparta.* Conon at Rhodes: Berthold 1980: 35–38 and Westlake 1983 [[and now CAH VI²: 67–70; 103–6]]; on the military operations in Asia Minor, cf. Lewis 1977: 142–47.

• *The Persians Caught between Athenians and Lacedaemonians.* The position of Struthas (called “satrap of Ionia” in Tod II, no. 113) raises several problems that support an abundant literature on the holders of the satrapy of Sardis and on the administrative delimitation of this jurisdiction during these years (cf. Lewis 1977: 118 n. 75; Weiskopf 1982: 88–93; Hornblower 1982: 37 n. 10; Petit 1988: 309–11; Chaumont 1990: 598; Hornblower 1994a: 77–78), but each of the solutions that has been suggested runs up against difficulties that appear difficult to surmount with certainty. On the creation of the satrapy of Caria, cf. Hornblower 1982: 34–38 and Ruzicka 1992b: 16–20; against this (universally accepted) position, Petit (1988) has defended a paradoxical thesis: he says the Hecatomnids were never officially recognized as satraps by Artaxerxes; but, to use a litotes, the proof lacks conviction (cf. my brief remarks in *Abst. Iran.* 12 [1989] no. 283 and Descat's, *Topoi* 3/1 [1993]: 265–66, as well as Hornblower 1994b: 215–16; on the status of Mausolus, see also chap. 16/18, pp. 767f.).

• *From Cyprus to Egypt.* On Evagoras's policy, cf. Costa 1974: 48–56, Weiskopf 1982: 154–56, Collombier 1990: 35–37, and Maier 1994: 312–17; dynastic affairs in Egypt: Traunecker 1979: 401f. (on the chronological problems, cf. also Tuplin 1983: 185–86 and Lloyd 1994); on the Athenian intervention in Cyprus (according to Lysias), cf. Tuplin 1983 (who dates the operations to 390–389). Phoenician inscription from Kition: published with commentary by Yon and Snycezer 1991, 1992 (I follow here the gist of their interpretation here).

• *The Initial Operations (391–387/386).* The entire period ca. 391–381 poses major chronological and historical problems, on which see Tuplin 1983 and the focus by Shrimpton 1991; the dates adopted in the text are with reservations (examination of the numismatic evidence [coins struck by Tiribazus] leads Harrison [1982a: 304–15] to date the second Cyprus expedition to 382–380 [and not 387–386], but his arguments are no longer compelling).

• *The King's Peace (386).* See most recently the focuses of Urban 1991 and Badian 1991.

• *A Universal Conflagration?* On the logical connection between the King's Peace and the resumption of Persian preparations for the Cyprus matter, cf. Sinclair 1978, and the interesting remarks of Ruzicka 1983a (on the Clazomenae problem treated by this author, cf. also Aikyo 1988); concerning ancient texts on the general nature of the revolt, see the suitable thoughts of Weiskopf 1982: 161–92 (who I think, however, underestimates the threat posed at this date by Evagoras: cf. p. 190); Datames: Sekunda 1988b; on Cilicia and the numismatic evidence (coins struck by Tiribazus), cf. Lemaire and Lozachmeur 1990: 147, and Davesne 1979: 162 (but the proposed connection with the elimination of the *syennesis* must, I think, be given up, for reasons stated above), and especially the systematic presentation by Harrison 1982a: 304–15, as well as Capecchi 1991: 85–95; on Datames' first campaigns, cf. Sekunda 1988b: 38–40; on the role of Hecatomnus, cf. Weiskopf 1982: 157–60 (who thinks that the 391–390 campaign ended quickly via an agreement with Evagoras, and that there is no trace of a rebellion by Hecatomnus, who, he suggests perhaps a bit excessively [p. 167], did not even participate in the expedition: “Diodorus interpreted his absence as secret support”), and Ruzicka 1992b: 26–29 (also rebuts Diodorus's and Isocrates' presentations); on the “king of the Arabs,” cf. Briant 1982b: 163–64. The theory of a quasi-collapse of

Persian domination in Palestine beginning with Artaxerxes II is presented (e.g.) by Eph'al 1982b: 205–6, but on the basis of archaeological evidence that does not appear to me to support this conclusion with certainty (cf. also Stern 1982b: 254–55, whose chronology seems to me to apply instead to a later phase of the reign of Artaxerxes II, though it will remain unverified nonetheless, because archaeology has a strange tendency to require written documentation as corroboration; I am equally at a loss to understand the relation that Betylou (1986: 636) seeks to establish between the appearance of the first Jewish coins around 400 and the “decadence” of the Empire. We must particularly emphasize the cruel absence of written evidence on the history of these regions in these years; the only possibility of glimpsing the intervention of the central authority is to date Ezra’s mission to the 7th year of Artaxerxes II and to see it as an index of unrest stirred up by the Egyptian revolt (e.g., Cazelles 1954 [Lemaire 1995a]); here we will not reopen this debate, which is far from ready to die out (cf. chap. 14/5).

- *The Offensive against Evagoras* (387/386–383/381). On the terms of the treaty imposed on Evagoras, cf. Weiskopf 1982: 178–92. For reasons presented in chap. 15/1 above, the tablet ADRTB no. –440 probably refers to the very beginning of the war against Evagoras; the text reads: “[. . .] the land Saminē, a famous city of the land Kupru, which for making [. . .]sundu of the land Iamunnammu which the king made [. . .].”

- *The Egyptian Defeats*. See especially Kienitz 1953: 80–92 and Lloyd 1994: 346–48; the date of the campaign of Pharnabazus, Tithraustes, and Abrocomas against Egypt (Isocrates) primarily derives from the fact that Pharnabazus was recalled to the court around 387 (Xenophon, *Hell.* V. 1.28), from which it is deduced that Ariobarzanes succeeded him at that time (cf. Weiskopf 1982: 120–27 and 1989: 27–28); but many uncertainties remain (cf. Cloché 1919: 230–32 and 1920: 85–88); according to Moysey (1986: 10, 15), some coins attributed to Pharnabazus might have been struck in Cilicia between 386 and 383, at the time of preparation for the Egyptian expedition, but other possibilities exist: cf. Harrison 1982a: 315–21 and Lemaire and Lozachmeur 1990: 147, who suggest dating them instead to the 370s (that is, to the second expedition); concerning the possible offense-oriented mindset of Hakoris: note the discovery in Phoenicia of altar bases with the cartouche of Hakoris, which are generally taken to indicate an attempt at an Egyptian offensive (cf. Traunecker 1979: 435), but the interpretation remains uncertain (Lloyd 1994: 347 n. 50). On the Greek mercenaries on the Egyptian expedition, see Seibt 1977: 80–83, who notes particularly that it was the first time a Persian army included so large a number of Greeks but without offering a more detailed interpretation; according to Sekunda (1988b: 42), Datames adopted some components of Greek arms, and it was also he who first established a Persian infantry corps (Cardaces: Nepos, *Dat.* 8.2): on all these problems, see chap. 17/3 below. Nectanebo I’s coming to power: Traunecker 1979: 435–36, Meulenaere 1963, Lloyd 1994: 357–59; possible kinship (by marriage) between Chabrias and Nectanebo I: Kuhlmann 1981: 276–78 [but for the convincingly argued contrary view, see now Huss 1994b]. Pharnabazus’s expedition in 373: Cloché 1920: 88–99; Datames’ participation in Pharnabazus’s expedition is inferred from Nepos (*Dat.* 3.5; 5.1), but the text poses certain problems of interpretation that are presented and treated by Sekunda 1988b: 40–41; no one could believe that Artaxerxes would have endangered the Egyptian expedition to distract Datames in a campaign without glory against a Cataonian dynast (*Dat.* 4; 5.1–5), or that Datames would have suddenly rebelled at the very moment when he received the command of the army of Egypt on the pretext that a court cabal had sworn to lose it (5.2–5): this would grant a rather naïve confidence to a text belonging to the genre of family saga; for these reasons, Weiskopf’s reconstruction of Datames’ career (1982: 205–7) strikes me as more satisfactory (even if it includes its share of speculation: we are now in the realm of comparison of likelihoods, nothing more: the author [pp. 207–9] thinks that after the victory over Aspis, Datames was promoted to satrap of Cappadocia).

- *Artaxerxes and the Greeks*. See now also Seager, *CAH* VI²: 156–58.

7. Artaxerxes II, His Satraps, and His Peoples (ca. 366–359/358)

• *Diodorus and the "Great Revolt" of the Satraps: The Empire in Flames?* In all that follows, I have been greatly influenced by Weiskopf's analyses (1982, 1989), which contain very innovative, very convincing interpretations rendering largely obsolete previous work (particularly Judeich 1892 and Meloni 1951); an up-to-date bibliography is found there, so I will not systematically provide references; but it must be recognized that Weiskopf's theses have been vigorously criticized by Moyses 1991–92; I must say that this is not my point of view (cf. Briant 1994b: 127 n. 45), while admitting that Weiskopf's work suffers here and there from certain weaknesses (cf. below on Orontes' planning): the problem is that Weiskopf 1982 (doctoral dissertation) has not been published, and the evaluations have been made exclusively on the basis of the minor work of 1989 (had it been the other way around, I doubt whether Moyses 1991: 120 could have criticized Weiskopf for not using the numismatic evidence, which, moreover, does not fully support some of the historical conclusions that Moyses 1989 believes he can draw concerning Datames' plans: below; see also Hornblower's criticisms, CR 40 [1990]: 363–65; 1994a: 84). On Diodorus's text specifically, see in particular Weiskopf 1982: 337–41, as well as Moyses 1975: 96–99 and 116–17; cf. also Briant 1989a: 38–39; on IG II² 207, see in particular the epigraphic and historical analyses by Osborne 1971, 1981: 52–54, 1982: 61–80, Moyses 1975: 25–65, 1987, Weiskopf 1982: 401–5, and myself in Briant 1994d; on Tod 145, cf. the contradictory views of Moyses 1975: 143–48 and Weiskopf 1982: 398–401 ("a display of diplomatic fantasy"), 1989: 84–85 (an analysis that has stimulated the lively criticism of Moyses 1991: 120; but, because of major uncertainties I recognize in the text, I do not think that this document, in any case, can be considered "a major stumbling block to W's thesis," unless one supposes, as Moyses does through a very willful formulation, that "only one context makes sense").

• *The Initial Revolts: Datames.* In addition to Sekunda 1988b (which I do not follow on the beginnings of the revolt), I have been greatly influenced in this section by Weiskopf 1982: 197–220 and 418–25; on Datames' coinage struck at Sinope, cf. Harrison 1982a: 263–65 (by comparison with stratagems described by Polyaeus and Pseudo-Aristotle).

• *The Troubles in Western Asia Minor (366–361).* Ariobarzanes: texts and commentary in Osborne 1983: 50–53, who raises the problem of the date; on relations between Ariobarzanes and Athens, cf. also Moyses 1975: 80–84 and Weiskopf 1982: 353–80; on Ariobarzanes' demise, cf. theories of Weiskopf 1982: 381–85, who thinks that his son Mithradates then went over to Datames' camp (on Weiskopf's genealogical theories, I must say that in part I share the reluctance of Moyses 1991: 117). Orontes: Weiskopf 1982: 395–98; 1989: 89–90; on the coinage attributed to Orontes, cf. *ibid.*, pp. 388–94; see also Troxell 1981, but his dating to the 350s is certainly wrong: cf. Moyses 1989: 123–25; the role of leader that Diodorus says (XV.91.1) was accorded to Orontes by the other satraps is not explained; the argument fails if we recognize with Hornblower (1982: 176–78) that Orontes remained satrap of Armenia: but, on Hornblower's arguments, cf. the convincing critical remarks of Osborne 1982: 67ff. (despite Hornblower 1994a: 86); Artabazus and Autophradates: cf. Moyses 1975: 119; see especially the discussion of Weiskopf 1982: 423–29; death of Orontes: cf. Osborne 1973: 542–51; contra Moyses 1975: 109, who thinks that Orontes regained his command in Mysia. On IG II² 207 (sale of wheat by Orontes to Athens): cf. Briant 1994d, where I demonstrate that the deed does not in the slightest reveal a secessionist policy on the part of the satrap (see also Moyses 1987: 100 n. 100, but in the context of a chronological proof that does not persuade me: see chap. 15/9: "Artaxerxes III and Philip II," Research Notes, pp. 1005f.).

• *The Egyptian Front.* On the (disputed) chronology and the problems raised by Tachos's offensive, cf. Cloché 1919: 212–18; 1920: 99–107, as well as Kienitz 1953: 96–100 and 180–81; Weiskopf 1982: 405–12; and Hornblower 1982: 174–75; on Cha-hap-imu and his kinship with Tachos and Nectanebo, cf. Meulnaere 1963; Tachos's offensive is the context in which was written (with an unfortunate degree of uncertainty) the (fragmentary) biographical inscription of the Egyptian Onnophris, "prophet of the statues of the father of the king, the general Tcha-hap-imou,"

who apparently accompanied Tachos (who is not named) when he "went to Asia"; comparison with Diodorus's version does not resolve all of the difficulties in the text, and it is not even impossible that Onnophris accompanied Tachos to the Great King's court (cf. von Känel 1980 and 1984: 198–201, who compares Onnophris with Udjahorresnet and Samtutefnakht; cf. chap. 18/4).

• *Orontes and the Egyptian Front.* Regarding Orontes in Syria (Trogus Pompeius, *Prol. X*), see the critique of Weiskopf (1982: 405–12; 1989: 81–84), who, however, in my opinion goes too far: I think it is misguided to throw out the only direct evidence in the record; cf. in contrast the unconvincing remark of Osborne 1973: 537; for his part, Moysey (1975: 106) thinks that Orontes tried to join the Egyptian forces in Syria; on the decree honoring Straton of Sidon, cf. in particular Moysey 1975: 244–53 and Weiskopf 1982: 458–59; Austin's (1944) attempt to infer from the decree that Athens had then taken part in the revolt against Artaxerxes is hardly persuasive; on the other hand, cf. Moysey 1987: 99 n. 27 and 1989: 120–21 on Hieron., *Adv. Iovinian.* 1.45; on Straton's coinage, which has sometimes, since Babelon 1910, been thought to illustrate a pro-Egyptian policy, cf. Betlyon 1982: 9–10, 29–30: but the interpretation poses certain difficulties (cf. Moysey 1989). According to Diodorus (XV.92.5♦), "Tachós . . . made bold to go up to the King by way of Arabia"; this mention immediately recalls what Arrian wrote (*Indica* 43.5) concerning Cambyses' soldiers and Ptolemy's troops, who chose to return to Babylon by the fearsome route crossing North Arabia (cf. Briant 1982b: 129, 132): but why choose this itinerary, if Tachos was then at Sidon (on the "normal" route, as also suggested by the decree honoring Straton, cf. Briant 1991b: 77–79)? I must declare myself incapable of responding reasonably to the question, which, moreover, may be moot anyway because of the meaning (unknown to us) that Diodorus assigns to the name "Arabia" (on the use of this word by Classical authors, cf. Briant 1982b: 120–22); not to mention "Syria" (cf. Sartre 1988). Ochus's campaign in Syria: Cloché 1919: 245–46; Weiskopf 1982: 410 and 460 n. 109; Tachos at the Great King's court: Briant 1985b: 57–58. On Tachos's and Chabrias's fiscal measures and their political repercussions in Egypt, cf. Will 1960; on the fragile internal situation of the pharaohs, cf. Meulenaere 1963: 93; Ray 1986: 149 and 256; 1987; as well as Briant 1988a: 155–58 and the reflections of Yoyotte 1992.

• *Back to Datames.* "Grandiose" plans of Datames: Olmstead 1948: 419, followed by Moysey 1975: 107–8 (n. 25) and Harrison 1982a: 411–13; cf. also Osborne 1973: 537 n. 104, who draws the rather surprising conclusion from Polyaeus's text that Datames, just like Orontes, got as far as Syria; position contrary to Weiskopf 1982: 424 (now see also the doubts of Hornblower 1994a: 87); on the coins of Tiribazus and Pharnabazus struck in Cilicia, cf. Harrison 1982a: 304–20 and Moysey 1986. The interpretation of Datames' coins (discussed in the text) is from Moysey 1989: 108–19, esp. 109–12; while emphasizing that it is a "conjecture," the author thinks that the comparison with Polyaeus is "a plausible explanation, given the long enmity toward the king and the precedent for such an invasion established by Cyrus the Younger" (p. 110); the author, without explanation, appears to think that Datames' goal was to drive Artaxerxes II from the throne, which appears to me highly debatable (Moysey 1975: 113–14 offers the same reasoning regarding Orontes, but neither is there anything in Orontes' coinage to suggest it proclaims royal ambition on his part: cf. Weiskopf 1982: 388–94; Hornblower 1982: 178–79; Moysey 1989: 123–25). Anu at Uruk (problem unknown to Moysey 1989): cf. Stolper 1990b: 561 (in the context of a strictly chronological argument); cf. also Kuhrt 1987a: 151 (observation made by Oelsner), and now especially Beaulieu 1992: 54–60; for the basis of his interpretation, the author compares (p. 110) the policy he attributes to the satrap with what he considers the spread of the cult "of the Mesopotamian goddess *Anāhita*" by Artaxerxes II (emphasis added): but, for all sorts of reasons, this comparison is totally invalid (chap. 15/8: *Anāhita* and *Ištar*, pp. 678ff.). On Datames' background, cf. Briant 1987a: 19 n. 47 and 27 n. 116, and (independently) Sekunda 1988b: 35–36, as well as Lemaire's studies on the Luvian name Tarkumawa found on certain coins attributed to Datames: cf. Lemaire 1989: 144–49 and 1991c: 203–5: "Datames was a local dynast carrying out the job of satrap, then commander-in-chief at the heart of the Persian Empire" (but without summarily excluding the other

hypothesis: “Tarkumawa was a local Cilician dynast of whom we have not a single echo anywhere else”).

• *Mausolus and the Revolts.* In general, see Hornblower 1982, Weiskopf 1982: 221ff., and Ruzicka 1992b: 15–75; discussions will be found there of many controversial aspects of Carian institutions (the existence or not of a Carian *koinon*, for example), which I do not think it useful to treat here in detail (on Mausolus’s relations with the Carian cities, see now the remarkable document published by Blümel 1990); accession of Mausolus: Hornblower 1982: 34–40; regarding the phrase *patrōa arkhē*, it can without doubt be compared with a formula used in an inscription (*hōposēs [gēs/khōras] Maussōlos arkhē*), on which see the appropriate reflections of Hornblower 1982: 154; let us simply emphasize that the terminology does not imply that Mausolus occupied an exceptional situation vis-à-vis other satraps; from the Greek point of view, in fact, a satrap’s territorial power could be designated perfectly with the word *arkhē* (cf. IG II² 207a line 15: *ek tēs Oron tou arkhē*: see Osborne 1982: 73–74); on Mausolus’s building projects, see Hornblower 1982: 223ff. (the degree of Hellenization and its forms are the topic of polemic between Gunter 1985 and Hornblower 1990a; cf. also the useful remarks of Sherwin-White, CR 34/2 (1984): 257–59, where additional bibliographical references will be found, as well as the analysis by Stamatou 1989: 379–85 on borrowings from the Achaemenid iconographic repertoire and their injection into Greek forms; cf. also the remarks of Von Gall 1989: 505 and n. 2, and now the articles collected in Isager 1994)—a problem well illustrated elsewhere, in particular at Xanthus but at Sidon as well; on his foreign policy, cf. Hornblower 1982: 107ff. (with the reflections, pp. 152–53, on the possible “normalcy” of Mausolus’s initiatives); on this point, cf. also Weiskopf 1982: 270–85, as well as the useful commentary by Moysey (1989: 126–30) on Mausolus’s coinage; also, on a specific point (Mausolus’s interference in Lycian affairs), Borchhardt 1993a: 78: a stela with the Carian double axe, he says, is evidence of burial on the spot of a Carian phrourarch who had settled at Limyra—a theory that seems rather weak to me; on satrapal duties of Mausolus, cf. Hornblower 1982: 137ff. and 161–65 on the problem of royal/civic taxes, on which point, see also Corsaro 1985 and Frei 1990: 166–68 and the text published by Bousquet 1986 (on Mausolus’s position in the Empire, see also chap. 16/18 below, at the end). On the interpretation (Mausolus as a rebel) sometimes given to these anecdotes, cf. Weiskopf 1982: 232–35; on the texts mentioning conspiracies, cf. *ibid.* 252–56, who quite rightly stresses (pp. 230–31) that the Arlissis affair shows rather that at this date Artaxerxes supported Mausolus and that thus there was no proof there of any rebellious mindset on the part of the dynast (on Arlissis’s position in the royal court, cf. the highly speculative remarks of Heltzer 1994: 116–19); on Tod 138.2, cf. also BE 1990: 276; on the accusations of lying made against ambassadors to the Great King, cf. Hofstetter 1972: 102–4; on Mausolus’s behavior during the revolt, cf. Hornblower 1982: 170–82 (the passage is primarily devoted to a general discussion of the revolt: but cf. Osborne 1982: 67–72); while fully stressing the paucity of the record, Hornblower suggests that Mausolus did indeed enter into revolt (likewise Ruzicka 1992b: 76–89 in a discussion that is not the most satisfactory portion of the book); contrary position (which I adopt here overall) of Weiskopf 1982: 263–70 and 1989: 45–46 and 65–68 (a position contested by Moysey 1991: 119); we may add at this point that Mausolus’s participation in the revolt has also been deduced from the Xanthus trilingual (cf. Dupont-Sommer 1979: 166–67); but this inscription must be left out of consideration, for it now appears that its date is later (below and chap. 16/5).

• *From Caria to Lycia.* On what follows, discussions will be found (often contradictory because of the weakness of the documentary record) in every article and work devoted to Lycia in the fifth and fourth centuries: Houwinck ten Cate 1961: 8–13; Childs 1981: 70–80; Bryce 1980 (article devoted specifically to Pericles) and 1986: 109–14; on Pericles, see the sources gathered by Borchhardt 1976b: 99–108, in the context of a description and interpretation of the dynast’s *herōon*; the results of surveys at Limyra (compared with other satrapal or official residences) have recently been presented by Borchhardt 1990 and in Borchhardt (ed.) 1990: 75–84 (cf. now Borchhardt 1993a); the recent inscriptions pertaining to Pericles are published by Wörle 1991 and 1993; on the Lycian

dynastic coinage, see most recently Zahle 1989 and Moysey 1989: 130–34. On the place of Pericles (before his supposed revolt): in the very detailed and interesting description he gives of the friezes on the *hērōon* of Pericles, Borchhardt (1976b: 121–23) sees the west frieze of horsemen as an illustration of the parades held regularly in the satrapal courts imitating ceremonies in the central court (fig. 54, p. 673 here); according to the author, alongside Pericles the horseman dressed in Persian style (no. 22) can be identified as Artaxerxes III, “co-regent with his father, Artaxerxes II” (cf. color photograph [restoration] on the cover and p. 169 of Borchhardt [ed.] 1990, and also in Borchhardt 1993a: 49: “It is the young Artaxerxes III, who put down the Satraps’ Revolt,” and plate 21): there we have an expression of the “thesis of dependency” so often discussed by Borchhardt (cf. his 1983 article)—namely, that by doing so, Pericles recognized Persian sovereignty; on the political level the interpretation might be acceptable, because Pericles’ urbanization program did not conflict with Persian supervision—a position recently restated by Wörrle (1991: 215–17), according to which Pericles’ building activities at Limyra and especially his royal titulature (cf. also Wörrle 1993) should be seen as existing in the context of a political-ideological competition with Xanthus; on the other hand, as Borchhardt suggests, the identification of the future Artaxerxes is rather dubious (why Ochus, rather than his father, Artaxerxes II?). Pericles’ conquests at Limyra: Weiskopf 1982: 289–90 and 332–33 (and pp. 211–13 on the problems posed by Artumpara/Artembares: stresses the uncertainty of the evidence; on this point, cf. also Wörrle 1993: 189–90 and the position of Keen 1992a below). Xanthus: on the Arbinas inscriptions, see their publication by Bousquet 1975 and 1992 (who, in agreement with Laroche and against Childs 1979, convincingly restates the restoration Kheriga/Gergis and not Kherai in the Lycian inscription on the Pillar); see also Savalli 1988; on the conquests of Arbinas, cf. Robert 1978b (with the important reservations of Bousquet 1975: 145, developed in Bousquet 1992: 177–78, 180–81: Arbinas used Caunus as the base for his departure); on the monument of the Nereids, its iconographic program, date, and author (Arbinas), see from now on the exhaustive publication of Demargne-Childs 1989 (which renders obsolete the interpretations of Shahbazi 1975: 104–8); I note in passing that in a recent update (*Topoi* 2 [1992]: 322), P. Demargne writes: “I must say that for the sculpted decoration which Childs and I described, many points appear open to criticism,” and again, on Persian influences, “that resembles Persepolis, by bringing Persepolis to life; similarly in the hunting and war scenes”; on the siege scenes, cf. Childs 1978 (who stresses [pp. 91–93] that these are really historicizing scenes); on the audience scenes, cf. Gabelmann 1984: 43–49; concerning the political interpretation of Lycian dynastic monuments and inscriptions, we may also stress that the invocation of Greek gods is not unambiguous (cf. Demargne 1975 and Wörrle 1991: 216–17); the same may be true for some invocations of Lycian gods (Melchert 1993: 34 n. 4). Sarcophagus of Payava: cf. Demargne 1974: 61–87, as well as Bryce 1986: 111, and Shahbazi 1975: 135–48; on the Persian armaments in some of the war scenes, cf. Bernard 1964; on the Lycian inscriptions, cf. Laroche 1974a: 137–39; on the audience scene of Autophradates, cf. Gabelmann 1984: 59–61, who stresses its specificity, since according to him on the audience scene on other Xanthian monuments the dynast, not the satrap, is shown (cf. the presentation of the methodological problem on pp. 61–62, with discussion of Borchhardt’s “dependency theory”); on the date (and its uncertainties), cf. Demargne 1974: 86 (Gabelmann 1984: 61 places it too assuredly at the moment of the Satraps’ Revolt; Chaumont’s chronological hypotheses 1990: 600–602 are baseless); on Autophradates and Xanthus, cf. also Weiskopf 1982: 290–91. On the “revolt” of Pericles, see Hornblower 1982: 181–82 (who stresses the thinness of the evidence), and particularly the painstaking analysis of Weiskopf 1982: 286–91, whose conclusions (local struggle and no participation in a general revolt) strike me as highly convincing. Cf. now the important work of Keen 1992a (chap. 7 is dedicated specifically to Pericles of Limyra), which I was able to consult through the author’s kindness, but only after my manuscript had already been finalized; I will simply mention that, concerning the dynast’s policy toward the Persians and the satrapal revolts, Keen develops views different from those espoused here; while he too thinks that the building program established by the dynast at Limyra and his

own political ambitions did not at first conflict with the acceptance of Achaemenid supervision (illustrated by the Persianizing decoration of the *herōon* of the acropolis), nonetheless he believes that the dynast really did revolt around 370; according to him, this rebellion was caused by a desire on the part of the central authority to increase imperial supervision of the region (upon the death of Arbinas, two Persians, Artembares and Mithrapates, were sent by Autophradates to take command of western and eastern Lycia, respectively: the author makes it a precedent to the organization known from the Xanthus Trilingual under the satrapy of Pixodaros); Pericles would have been conquered around 361 and executed. There is nothing surprising about interpretive differences, because the documentation is hopelessly fragmented and ambiguous. Nevertheless, I stress that Keen was not aware of the new epigraphic discoveries published by Wörle 1991, particularly, in this context, the inscription concerning the dynast's family: in his commentary, Wörle (1991: 215 n. 62) resolutely takes the side of Weiskopf: as for the second document (the letter), the editor (whom I follow in the text) shows how it modifies our view of the dynast's power before and especially after his death (1991: 224–33, esp. 232–33).

• *A Summary of the Discussion.* Basically, I object to the views recently expressed by Dandamaev 1989a and Petit 1993, for reasons laid out elsewhere (Briant 1993c; 1994b: 123–25). I must also share my doubts about a recent article by Moyses (1992; cf. also 1991) setting out his hesitation about Weiskopf 1989 and restating the grand ambitions of Orontes and the coordination of the revolts (pp. 162–64). Moyses uses several passages in Plutarch's *Life of Artaxerxes* to state that the power of the aging Artaxerxes was considerably weakened by court conspiracies and that this situation certainly encouraged the rebellious satraps; all the while stressing (as in Moyses 1991) that "this new perspective on the health of the Persian Empire at the end of the 360s and the beginning of the 350s does not reinforce the traditional theory of the end of the Achaemenid dynasty as the 'sick man' of the fourth century" (p. 165), he nonetheless thinks that the king's physical and psychological weakness explains the vigor of the satrapal revolts: "The struggle within the court, the king's advanced age, [and his] paranoid nature ignited the volatile mixture of satrapal ambition and the forces of imperial disunity." This, I think, grants too much importance to Plutarch's view of the court conspiracies (cf. p. 161). Moyses 1991 criticizes Weiskopf for his hypercriticism of the fourth-century Greek sources that speak of the Achaemenid Empire (setting up, moreover, on p. 122, a very surprising comparison between Weiskopf 1989 and Balcer 1987, judging the latter more "plausible" [*sic*]); but on the level of historical method, it seems to me far more arguable that he himself accords this merit to a flat reading of such ideologized texts as Plutarch's *Life of Artaxerxes* and Nepos's *Life of Datames*: "In any case, there is no good reason for denying the validity of Plutarch's and Nepos' evidence" (Moyses 1992: 166; 120 and n. 23, and more specifically on Plutarch, see chap. 15/1: The Greek Authors' View, pp. 612ff. and chap. 15/2: Propaganda and Legitimation, pp. 621ff. Comparison of the texts shows that Plutarch's "psychological portrait" of the aging Artaxerxes II is not truly descriptive but instead is included within an ideologically homogeneous whole, contrary to what the author suggests when like many others he contrasts Artaxerxes II and Artaxerxes III, while he himself objects to the "weakness" of Arses and Darius III (1991: 121; 1992: 167); but, if we read Diodorus XVI.40.5–6 in comparison with Diodorus XVII.30.7, we must "conclude" that Artaxerxes III was just as "weak" as Darius III or Artaxerxes II (cf. chap. 17/3: "Memnon, the Persian Satraps, and Darius III," p. 790). In other words, and even if we may regret the fact, the fourth-century Greek documentation does not truly allow us to prepare royal portraits that are properly individualized from each other. Finally, as I have tried to show, the king was actively supported by high officials, including the son that Plutarch portrays in the most unfavorable light—namely Ochus, to whom Artaxerxes II (in 360 or 359, or just before his death) entrusted an army to fight Tachos (successfully). Despite the obvious importance of the Great King's person, the survival of the system was thus not linked solely to his physical and mental health; the system possessed its own dynamic (illustrated, as it happens, by the role played by the crown prince: or, the prince who proclaims himself crown prince); this dynamic appears to me to have acted more

in the direction of imperial unity than disunity. This is in a way confirmed by the end of the story, since, after all, if there really were several revolts (but not a coordinated general insurrection), it must be observed that the central authority prevailed! Rather than using Plutarch uncritically to derive the impression that since perhaps 370 the central power had been paralyzed by its dynastic struggles (1992: 164), the author might have taken a look at the Babylonian texts (see chap. 15/1 above): he would have taken into account that in 370 the king led his army in a campaign against Razaunda in Media (ADRTB no. -369; Stolper, *CAH VI*: 239), and that three years later another tablet refers to a battle won by "the royal army," ADRTB no. -366).

8. At the Heart of Power

- *In the Royal Residences.* On the building works at Babylon, cf. Vallat 1989a and Stolper, *CAH VI*: 259–60; new palace at Susa: Vallat 1979 (inscriptions), Labrousse and Boucharlat 1972, Boucharlat and Labrousse 1979, Boucharlat and Shahidi 1987; and on the tomb (generally) attributed to Artaxerxes II at Persepolis: cf. Schmidt 1970: 99–102 and Calmeyer 1990a: 13–14 (under this theory, the inscription naming the bearer peoples published by Kent under the siglum *A²P* must be attributed to Artaxerxes II); on Artaxerxes III's buildings at Persepolis: cf. Tilia 1977: 68, 74, Roaf 1983: 128, and Calmeyer 1990a: 12–13; we may add in passing that according to Frye 1982 the Aramaic inscription on Darius I's tomb at Naq̄-i Rostam may date to Artaxerxes II or III.

- *Artaxerxes II, Mithra, and Anāhita: Sources and Problems.* On the texts and depictions illustrating these divinities, I refer to the discussion in chap. 6/6 above; I remark in passing that, always following Plutarch (*Art.* 23.7♦), during the illness of Atossa (his daughter-wife), Artaxerxes II prayed to the Goddess Hera, "to this one alone of all the deities he made obeisance, by laying his hands upon the earth; and his satraps and favourites made such offerings to the goddess by his direction, that all along for sixteen furlongs, betwixt the court and her temple, the road was filled up with gold and silver, purple and horses, devoted to her"; Chaumont (1958: 165–66) thinks that Anāhita is hiding behind Hera; I do not see the basis for such a theory (already proposed without discussion by Hüsing 1933: 18), for never in Classical texts is Anāhita so designated, as well as the fact that earlier on (§3.2), Plutarch refers to Anāhita with the name Athena (Clemen 1920b: 87 and Boyce 1982:220 suggest identifying Spenta Armaiti behind Hera, for reasons that escape me altogether); it is true that seeking a pertinent goddess behind her Greek veil poses very delicate problems (on Hera at Hierapolis Bambyke, cf. Oden 1977: 55–58). Dinon's mention of the *agal-mata* of Water and Fire (confirmed for Fire by Maximus of Tyre: Clemen 1920a: 66): Rapp (1865: 45–46) sets himself to proving it does not contradict the statements of Herodotus and Strabo (I imagine a similar theory is followed by Boyce 1982: 221: "... fire, the only icon permissible for a true follower of Zoroaster," but without quoting Dinon; doubtless she is referring to the beliefs of the Parsees); I stress simply that in this case it is necessary to explain what the Greeks meant by the word *agalma(ta)* applied to Fire and Water, since the word is not at all ambiguous, and if (as is usual) we accept the the meaning 'cult statue' in Berossus, why should it be rejected in interpreting Dinon? As I stress in the text, the problem comes from the fact that we cannot assign a single monument to the command of Artaxerxes: on this point, cf. also the remarks of Rapin 1992b: 108–16. On the sanctuaries of Anāhita in Asia Minor: we have no reason to think that they go back to Artaxerxes alone; besides, Cooney's analysis (1965) of a female statuette found in Egypt suggests considering it a replica of one of the statues of Anāhita erected throughout the Empire in the time of Artaxerxes II—a theory that seems paradoxical to me, since Egypt was then outside the Empire. It is moreover entirely typical that Memphis is not precisely named in Berossus's list—which merely confirms the administrative value of the evidence ("The Imperial Realm," p. 680). A few supplementary remarks on Mithra, without venturing too deeply into a difficult and delicate subject:

1. On the basis of examining iconographic materials, Bivar often stressed the importance of the motif of the combat of lion and bull, in which he sees a reference to the gods of death in

various cultures and a sort of Mithraic syncretism; he also sees a Mithraic reference on some coins struck by Masaeus in Cilicia (Bivar 1975a; cf. also Bivar 1970); the theory makes me wonder;

2. The most fascinating document is certainly the Xanthus Trilingual: we know that the Aramaic version names the divine triad as follows: "L'TW (Latō), 'RTMWŠ (Artemis), and HŠTRPN³ (xšāθrapāti-)," the last of which obviously names Mithra with the epithet "Lord of Power"; the discovery prompted important remarks from Mayrhofer (1973b: 277, 279; 1979: 184–85), a detailed commentary by Dupont-Sommer (1976), and a theory by Bivar (1988b; on the identification of this "god-satrap," Mithra and Sarapis, an equation that the author believes was widespread in the Achaemenid period); against Dupont-Sommer's position, Downey (1986: 304–5) supposes that it is unlikely "because of the lack of evidence of the presence of Mithra in Asia Minor at the date of the Xanthus stela"; but, precisely, I am convinced that Mithra was quite widespread, for reasons given elsewhere: RTP 460–62, based on late evidence to be sure, but nonetheless usable; on epigraphic documents of an earlier period naming Mithra in Asia Minor, see also Lipiński 1975: 176–84 (*magus* of Mithra in Cappadocia in a Greek-Aramaic inscription) and BE 1983 no. 437 (*kata magous Mithrēn*, in Cappadocia as well);
3. Michaélidis (1943: 99) suggested the presence of a Mithra cult in Egypt in the Achaemenid period, but see the contrary arguments of Yoyotte 1952: 167 n. 5; Schaefer's theories (apud Aimé-Giron 1939: 36) appear no more solid; it is clear that the presence of *magi* at Elephantine (DAE no. 45 [BMAP 4]) does not necessarily imply the existence of a sanctuary dedicated to Mithra; on this point, cf. also M. Boyce in Boyce and Grenet 1991: 359–60 (but on the basis of very late documents that in themselves have little to say);
4. In Babylonia, we know little (Bivar 1975b refers mostly to late documents); according to McEwan 1983: 122–23, a Babylonian has a name meaning 'servant of Mithra'—evidence that the author considers "an important document for the existence of a Mithraic cult in Babylonia" at the time of one of the Artaxerxes; but see *contra* Dandamaev 1992a: 171 (Babylonian name and patronymic);
5. The title found in A³Pa (*Mithra бага*) has long presented many problems, both philological and historical (relation to the seventh month of the Persian calendar, *Bagayādi-*): on this point I refer to the recent treatment by Sims-Williams 1991 (with note 18 on A³Pa);
6. The existence of a monumental statue of Mithra in the main temple of Ai-Khanūm remains too hypothetical (Grenet 1991) to erect theories on it of possible antecedents in the Achaemenid period (evidenced, by the way, by a frieze of walking lions, p. 148).

• *Droaphernes and the Sardis Statue.* The inscription was published by L. Robert 1975, who dates it to Artaxerxes II; it is clear that he was led to this dating by his theory of an "Ahura-Mazda (Zeus) Lawgiver (*Baradates*)" rather than a "Zeus of Baradates." Robert's theory was first contested by Frei 1984: 19–21 (whom I quoted without following him in Briant 1986a: 439 n. 9); Gschnitzer (1986) shows that it concerns a family cult, but, regarding Men of Pharnaces, I have reservations about following the theory he develops (pp. 50–51) on the basis of an identification (unlikely, in my view) with the Parnaka of the Persepolis tablets and the ancestor of the satrapal dynasty of Hellespontine Phrygia (I note in passing that A. van Haepere-Pourbaix [1984] works out a theory of the Indo-Iranian origin of the deity Men, not failing to cite the Men of Pharnaces [pp. 236–39], which she interprets in a completely different fashion from Gschnitzer). I add, as I have remarked above (chap. 12/7 on *dāta*, p. 510), that 'lawgiver' would instead be rendered *dātabara*. By setting up a direct relationship with Berossus, L. Robert has quite naturally, we might say, dated the inscription to Artaxerxes II (1975: 314–17; cf. p. 310: "I opt for Artaxerxes II Memnon"); but, inasmuch as a number of historical-religious inferences suggested by the editor no longer hold, on grammatical rather than speculative grounds (besides Frei 1984 and Gschnitzer 1986, see Schmitt quoted by Chaumont 1990: 580–81, and Briant 1996b), the dating of the inscription could just as

well be as early as 426 or as late as 365 (cf. remarks to this effect by Chaumont 1990: 583–84, 59), 608; it is surprising that Gschnitzer [1986: 45 and n. 3] did not consider this)—all the more so in that the chronological location of the dedicator (Droaphernes) in the satrapal *Who's Who* poses problems that cannot be resolved at the present time (cf. the discussion by Weiskopf 1982: 98–107 and 1989: 91–93 [low date], without knowing the works of Frei, Gschnitzer, or Chaumont 1990; he finally ends up favoring the low date but without persuasive argument, because his reasoning is essentially based on an extremely unconvincing discussion of the word *hyparkhos*: I do not see what keeps us from thinking that Droaphernes held a subordinate position during Pisuthnes' satrapy: cf. *Ead.* 593). Whatever the case may be on this point, the Zeus–Ahura–Mazda theory of L. Robert (1976: 314) no longer holds if we eliminate the rest of the argument (which has unfortunately eluded Boyce in Boyce and Grenet 1991: 205; Boyce seems not to know the work of Gschnitzer and knows Frei's only from my reference to it in Briant 1985a: 189 n. 13, where I made the mistake of arguing against Frei): it is strange indeed that Gschnitzer (1986: 46) continues to think, quoting L. Robert, that Zeus does designate Ahura–Mazda, since this would appear utterly unlikely in view of his own interpretation; it is hard to imagine a Persian in Sardis founding a family cult in honor of an "Ahura–Mazda of Baradates"; Corsten (1991: 175–78), even though he knows and quotes the work of Frei and Gschnitzer, also adopts the Ahura–Mazda theory (by thinking, in order partly to resolve the contradiction, that it might be an Ahura–Mazda assimilated to a local god: p. 177 n. 66), and he suggests that the inscription reports the institution of a state cult that he places in close parallel with Berossus, because the king would have been simultaneously promoting the worship of both Ahura–Mazda and Anāhita; but, and this is exactly the point, at Sardis there was no state cult; more convincingly, Frei (1984: 21) imagines instead an indigenous deity (*einheimische Gottheit*)—perhaps quite simply Lydian Zeus, as I have suggested elsewhere (Briant 1993a note 19; this example shows once more the difficulties in recognizing an epichoric deity [whatever it may be] behind the polysemous name of Zeus and the risks in postulating syncretisms: cf. CS 38 with the commentary of Meshorer–Qedar 1991: 18). To end on this note: there is no longer any basis for the chronological link postulated ever since L. Robert between Artaxerxes II's edict and Droaphernes' initiative (see also "Back to Berossus," p. 679): I take up the matter and discuss it in Briant 1996b, where I return in particular to *andrias* (human not divine statue, in my opinion).

• *Anāhita and Ištar*. On the iconography, cf. chap. 6/6 above; on Plutarch, *Art.* 27.4: I note to begin with that the story is also told by Justin (X.2.4), but in a very different version: Aspasia "was dedicated to the cult of the Sun, which forbade her any carnal relations with men"; it seems that here we encounter a confusion between Mithra and Anāhita, as in the Herodotus passage (I.131) over which gallons of ink have been spilled (most recently Corsten 1991, who if I am not mistaken does not know Justin's text); royal oblate at Arbeles: cf. Lipiński 1982: 117–21; dedication to Anaitis Barzochara: *BE* 1968 no. 538 and Schmitt 1970 (*BE* 1971 no. 669); cf. also *BE* 1979 no. 432, close to Sardis (hierodules of Artemis and Persian names). M. Boyce (1982: 201–4) thinks that Plutarch's text on the royal initiation implies that Anāhita-worship existed in Persia before Artaxerxes II (which appears beyond doubt); from this she draws the conclusion that the reform actually went back to Darius II, and Parysatis played the principal role, because Darius II's wife is depicted as rendering "burning devotion to Ištar–Anāhita" (p. 218); this theory, which is not based on a *single* document, is totally unlikely (Hüsing 1933, which Boyce [p. 218 n. 50] did not use, already attributed to Parysatis a decisive religious role, with the aid of mostly disastrous arguments); M. Boyce (1982: 203–4) in fact suggests that the cult statues (whose spread she attributes to Darius and Parysatis, then to Artaxerxes II in the context of the war against Cyrus) were copied from the Babylonian model of Ištar; this interpretation was already defended by G. Gnoli (1974: 126ff.): Anāhita was somehow fused with Mesopotamian Ištar—an interpretation that, in my opinion, poses several historical problems; Gnoli (1974: 129) also locates Artaxerxes' decree in the war against Cyrus the Younger; he too sees in it "the realization of a process of assimilation of Mesopotamian traditions

begun long ago and going back to the Medes"; the Babylonian theory seems to me difficult to sustain when at the same time the same author insists on Anāhita's role as "dispenser of the royal investiture" (pp. 127, 129: confronting Cyrus the Younger); the assertion is also found in Moysey 1989: 110, who on the basis of this conviction proposes a highly doubtful interpretation of Datames' revolt (see chap. 15/7: "Back to Datames," p. 666). The links between Anāhita and Ištar cannot be denied (the iconography is sufficient evidence), but, in my opinion, the Berossus text cannot really be understood unless it is placed in its properly Persian context; under this hypothesis, it is in fact Persian Anāhita, and not a Babylonized Anāhita, whose statues Artaxerxes II ordered erected and whose worship he promoted. On the "Babylonization of the dynasty" and the ambiguities of this phrase, see my reflections in chap. 16/10 below. [I will note finally that the identification Artemis/Anāhita in the Xanthus Trilingual, as has just been proposed by Desnier 1995: 33–36, raises considerable reservations, which I will explain elsewhere.]

• *Back to Berossus.* I repeat here, adding some detail, an interpretation already presented in Briant 1984b: 98–99 and 1986a: 430–31. Gnoli (1974: 129) and Boyce (1982: 203–4) place Artaxerxes' edict (Berossus) in the context of the war against Cyrus the Younger; for his part, Weiskopf (1982: 107, writing before the work of Gschnitzer and Frei, but repeated in Weiskopf 1989: 91–93) sees in the Drophernes inscription a response of Autophradates, satrap of Sardis, to the revolt of Ariobarzanes; he even bases his preference for the low dating on this argument, the weakness of which he had previously stressed (apud Hanfmann and Mierse 1983: 256 n. 10): this suffices to state the unreliability of the theory, which no longer had a basis from the moment when it became virtually impossible to hold that Zeus designated Ahura-Mazda (above, and Briant 1996b).

• *The Imperial Realm.* On the responsibilities of the satrap of Bactra, cf. Briant 1984b: 71–74; on Darius III's Indian elephants, cf. Briant 1995d. On the Upper Satrapies, I believe I must now abandon an interpretation presented earlier (1990b: 50–51), because a reexamination of the context leads me to qualify my suggestion and envision an alternative theory, which I consider more acceptable, because of the general context of Diodorus's statements (which I had not analyzed sufficiently in Briant 1990b). Here is what is going on: upon returning from his Egyptian expedition, Artaxerxes III generously rewarded the men who had distinguished themselves there. Diodorus spotlights Mentor and Bagoas especially, who achieved exceptional positions in the court hierarchy, greatest "of all the friends (*philoï*) and relatives (*syggeneis*) . . . Bagoas . . . administered all the king's affairs in the upper satrapies (*en anō satrapeiais hapanta dioikōn*)" (XVI.50.7–8♦). It is quite striking to find the expression *Upper Satrapies* appearing in this context, which Diodorus uses so often in the era of the Diadochi and which is found in a number of Hellenistic authors to designate the countries of the Iranian Plateau and Central Asia. Does the intended parallelism with the naming of Mentor imply that at Bactra a general command of the satrapies of the Iranian Plateau was created, or already existed? In other words, did there exist a precedent for the situation so described in the Seleucid period, with a royal representative at Bactra and another at Sardis (on this Seleucid organization [a theory formulated by Bengtson 1946], cf., e.g., Robert 1983: 177–78, but the traditional title "viceroys" strikes me as unfortunate; besides, Bengtson's theory has been challenged by Musti 1965: 157–60 and 1966: 107–11; reply by Robert, *BE* 1966, no. 377bis)? As preparation for responding, it is a good idea to place these mentions by Diodorus into the textual and contextual logic that governs his entire discussion of Egyptian affairs and the weakening of the royal power. He reports how in Egypt Mentor and Bagoas, reconciled after a serious altercation, had entered into an agreement of cooperation (*koinopragia/koinōnia*), which, according to Diodorus, explains their joint power before the king (§50.6–7). The mention of the missions and powers that are then granted them leads the reader quite naturally to think that Artaxerxes dumped the running of the Empire on them, from Bactra to Susa; for example, "Bagoas . . . rose to such power because of his partnership with Mentor that he was master of the kingdom (*tēs basileias kyrios*)" (50.8♦). This discourse itself must be placed in a larger context, since—in the highly directed vision of Diodorus—the cooperation between Bagoas and Mentor is obviously the

particular expression, or even the realization, of a general policy that in Egypt had led the king to divide the command among three Greek-Persian teams (cf. chap. 17/3: "Command Structure," p. 789). Diodorus's entire discourse structure (or that of his source) is thus perfectly coherent, but it is precisely this coherence that lets fly serious doubts about his credibility. We may remark in fact that Bagoas seems to have resided principally at the central court, to go by the tale of Diodorus himself and as is implied by his title of Chiliarch (I do not see that this justified Goukowsky's statement, 1978: 33, that Bagoas participated in the siege of Perinthus in 341; his n. 47 on p. 258 does not cite any relevant document). Furthermore, Mentor was certainly not some sort of governor general of Asia Minor posted to Sardis—where Rhosaces, "satrap of Ionia and Lydia," who had also taken part in the Egyptian campaign, certainly did reside (Diodorus XVI.47.2↔); Rhosaces was succeeded at an unknown date by his brother Spithridates/Spithrobatos in the same position (Diodorus XVII.20.6; Arian I.16.3). The titles Diodorus assigns to Mentor vary from one line to the next: "chief command in the coastal districts of Asia (*en tois parathalattiois meresi tēs Asias hēgemōn megistos*)" (XVI.50.6–8), or *satrapēs tēs kata tēn Asian paralias* (as usual, Diodorus uses the word *satrap* in a very vague way), and again *stratēgos autokratōr* (52.5). Diodorus again states a little further on that Mentor "was in charge of the war against the rebels." At first sight, then, it appears that Mentor received assignments normally entrusted to a *karanos*, namely, the coordination of troops based in western Asia Minor, on a temporary mission. But this is certainly an illusion, once again created by the partiality and imprecise terminology of Diodorus's source. It seems clear that in Greece Mentor's place in the imperial hierarchy has been distorted in the same way as Memnon's (cf. chap. 17/3: Memnon, the Persian Satraps, and Darius III, pp. 790ff.); it can scarcely be doubted that it comes from an Athenian source, as is shown in particular by a decree enacted by Athens in an anti-Macedonian context (327–326), which exalts the members of Pharnabazus's family through a descendant, Memnon II (Memnon I's grandson or nephew): in this decree, it is recalled that Mentor "saved those Hellenes who fought in Egypt, when Egypt was taken by the Persians" (Tod no. 199; Schwenk 1985 no. 58). At the same time, it must be stressed that the significance of the phrase *Upper Satrapies* itself is not entirely devoid of ambiguities, to the extent that it depends on the point of view of the observer (cf. Briant 1990b: 49 and n. 15), as emerges very clearly in another Diodorus passage (XIV.98.4; cf. Hornblower 1982: 37 n. 10 and Petit 1988: 311), and as is also implied by the vocabulary used by the ancient authors to exalt the *Anabasis* of Agesilaus. Given this situation, I am led to conclude that: (1) Diodorus's source was thinking rather of the hegemonic role he attributes to Bagoas in conducting affairs at the center of power (XVI.50.8; cf. XVII.5.3–6 and chap. 17/1)—a center of power that, in relation to the assignment attributed to Memnon in Asia Minor, was naturally considered to be in the High Country (*anō*); (2) the distortion that leads Diodorus astray is intended above all to magnify Mentor's role, by placing him parallel to the position attributed (wrongly) to Bagoas in the east of the Empire. (It is also true that the discrediting of the Mentor text does not necessarily discredit the position attributed to Bagoas; nonetheless, both the general context and the pervasive distortions of Bagoas's role at court tend to discredit all the information transmitted by Diodorus.)

• *From Artaxerxes II to Artaxerxes III.* Artaxerxes II's date of death: cf. Parker and Dubberstein 1956: 18–19; Plutarch (§30.9) has Artaxerxes die at the age of 94, after a reign of 62 years, which is manifestly erroneous (cf. Lucian, *Macr.* 15; Moysey 1992: 161 n. 10); it may also be doubted whether Darius was 50 years old when he was seated as crown prince (Plutarch §26.4); Plutarch's presentation implies on the contrary that the decision goes back to shortly after the battle of Cunaxa; Darius was without doubt born around 424 (cf. Ctesias §45), so he was about 25 around 400 (hence the attempts to correct the manuscripts in this direction); besides, Justin's version (X.1.2) can scarcely be accepted: he claims that the naming of Darius ran contrary to established practice (*contra morem Persarum*), which was "that the scepter does not pass to other hands until the death of the prince"; on the contrary, "Artaxerxes crowned his son Darius during his lifetime": obviously, Justin (same source as Plutarch) was confused by Artaxerxes' bestowing the

kidaris on his son (Plutarch); there is certainly nothing in this tradition to confirm the *Doppelkönigtum* defended by Calmeyer 1976b (cf. pp. 69–70); on Justin's text, cf. also the critical remarks of Ritter 1965: 22–23. Change of Ochus's name to Artaxerxes (regnal name; Diodorus XV.93.1): cf. Schmitt 1982c: 85 and 89–90 and Stolper, *CAH VI*²: 239 n. 17; like his predecessors, the new king connected himself to his father and ancestors (*A³Pa*). We may note that Polyaeus tells the story of an Ochus who, upon the death of his father Artaxerxes, with the collusion of high court officials, "concealed his father's death for ten months . . . and sent letters in his father's name ordering the recognition of his son Ochus as king. When Ochus was recognized as king everywhere, he then revealed to all the death of his father and ordered royal mourning according to Persian custom." The text could refer either to Artaxerxes I's succession or to Artaxerxes II's; despite the contrary opinion of Lewis (1977: 71 n. 144, not without reservations), I have chosen the former solution for reasons given in Briant 1991a: 5–6 and recalled in chap. 14/6: "Legitimacy and Propaganda," p. 590. The Artaxerxes II/Artaxerxes III theory is also adopted by Moyses 1992: 165 (who, n. 28, seems to suggest, for no good reason, that Justin 10.3 reinforces Polyaeus 7.17), to better support his theory that the Achaemenid court was utterly disorganized because of the weakness of an aged king (he even has to push the dynastic struggles back toward 370); here I will simply remark that the character traits attributed by Polyaeus to Artaxerxes ("feared by his subjects") and Ochus ("feared being scorned") are scarcely in harmony with the portrait painted by Plutarch, to whom Moyses grants so much credit throughout his article (cf. my criticisms in the Research Notes to chap. 15/7: "A Summary of the Discussion," p. 997).

9. The Wars of Artaxerxes III (351–338)

• *Artaxerxes III and Artabazus.* The sources for Artabazus's revolt and Chares' role are conveniently gathered by Moyses 1975: 295–317. Recent research has shown that what has traditionally been called (wrongly) the "Second Satraps' Revolt" never became widespread or particularly disturbing to the central power. The disagreements concern three points of unequal importance: (1) First, the possible participation of Orontes; aside from the fact that his presence is never mentioned, the evidence that remains in dispute (IG II² 207: sale of wheat by Orontes to the Athenian strategoi) does not prove in the least that Orontes rebelled a second time, whether the decrees are dated to the 360s (so Osborne 1983: 72–80 and Weiskopf 1982: 401–5, with nuances) or to 349–348 (so Moyses 1987 and Ruzicka 1992b: 121), since, even under the second hypothesis the satrap's behavior fits perfectly with ordinary administrative behavior (Briant 1994d). It must be recognized that we know nothing of Orontes after the brief mention in the *Pergamum Chronicle* (OGIS 264): cf. the differing reconstructions by Osborne 1973: 546–51 and Moyses 1975: 189–95 and 1987. The *Pergamum Chronicle* mentions (line 9) that "then Orontes, having given over/trusted the town [Pergamum] to Artaxerxes, died"; this could refer to Artaxerxes II or Artaxerxes III, and the act could relate to the moment when Orontes returned to the king's side (Diodorus XV.91.1); if, as has been presumed above (chap. 15/7: "Orontes and the Egyptian Front," p. 664), Orontes in fact returned to Ochus/Artaxerxes III, he must have received his reward, which could well have been his reintegration in Armenia, where his son was in 331 (Arrian III.8.5) and apparently still was in 316 (Diodorus XIX.23.3); (2) Mausolus's participation in the revolt (which Moyses 1975: 170–74 does not rule out, although not without contradictions) is also not attested anywhere; the aid he offered the rebellious allies against Athens in 357–355 (cf. Hornblower 1982: 211–15) does not at all imply a break with the Great King (as Moyses has to recognize; see Ruzicka 1992b: 95–96); as in the previous period, Mausolus's policy does not conflict with Achaemenid interests proper; (3) the interpretation of the evidence of the Scholiast to Demosthenes 4.19 (order given by Artaxerxes III to his satraps to discharge their mercenaries) poses many problems: on this, see chap. 17/3: "The Great King and the Satraps' Mercenaries," p. 791. On Artabazus's exile in Macedon, I do not understand the doubts about this tradition raised by Hammond and Griffith 1979: 309 n. 4.

• *Failure in Egypt, Revolt in Phoenicia and Cyprus (351–345)*. Let us emphasize that we know nothing about the expedition against Egypt in 351, except for its unhappy outcome (this expedition may be what Aristotle is referring to [*De Inund. Nili* §6, ed. D. Bonneau 1964]: planning to attack Egypt, Artaxerxes Ochus “prepared to reroute the Indus as though it were the same river as the Nile, when he learned it had crocodiles like the Nile”; on this passage, see some remarks by Calmeyer 1982: 169–70, and more recently Bosworth 1993: 415–16). On its disastrous consequences for morale at Sidon, according to Diodorus: Kienitz (1953: 101) thinks that “it made an enormous impression on the eastern Mediterranean world,” because he postulates that the Phoenician revolt dates to 350 or 349, as an *immediate* response to the Egyptian events, which is exactly what remains to be proved; on the chronological problems, cf. the remarks of Leuze 1935: 193–95 (where there is also a discussion [193ff.] of the functions of Mazaeus and Belesys); on the origins of the Phoenician revolt: Elayi (1987: 63ff.) wonders at length about the burden of tribute but without being able to draw any conclusion, given the poverty of evidence; as I suggest in the text, if the revolt is to be placed in this context, it is instead because of the burden of war contributions; on Tennes’ policy: the contradictions in Diodorus’s text (Mentor’s role) have been well set forth by Weiskopf 1982: 505–9; Tennes’ coins confirm his revolt, since after a few years they no longer show the king in his chariot (cf. Babelon 1910 II.2: 575–77; also Betlyon 1982: 16–17, not without some chronological guesses); Aradus and Tyre: Diodorus refers to the existence of an important city (*polis axiologos*) called Tripolis, made up of three distinct cities, named for Tyre, Aradus, and Sidon, where the Phoenicians met from time to time (*synedrion*; §41.1), but without making a direct connection with the revolt (it seems instead to be a digression about Phoenicia in this period); some time later, to justify abandoning the city, Tennes claims to be going to “a common meeting of the Phoenicians” (§45.1♦); in fact, Diodorus notes that Tennes had pressed the Phoenicians to make a bid for their independence (§41.3♦) and that after the destruction of Sidon, the other Phoenicians made their submission to Artaxerxes (§45.6), appalled by the fate meted out to Sidon (§45.2), but it must be emphasized that at no point does he mention the presence of contingents from Tyre or Arad alongside the Sidonians: did the other Phoenician cities remain anxiously cautious? The texts, finally, pose two administrative problems: (1) concerning the possible status of Sidon as Achaemenid satrapal capital (hotly disputed), I will simply mention that the Berossus passage analyzed above (see chap. 15/8: “The Imperial Realm,” p. 680) as well as its importance in the time of Darius III (e.g., Quintus Curtius III.13) appear to me to confirm unambiguously that Damascus then remained the capital of the satrap of Trans-Euphrates — which obviously does not exclude the possibility that high Persian officials resided at Sidon, as Diodorus XVI.41.2 has it anyway (on the paradise at Sidon, cf. Clermont-Ganneau 1921; the contrary reasoning by Petit 1991: 173–74 is circular); (2) the structure of Tripolis continues to support differing analyses: cf. Galling 1964: 191–94 and 204–9, against which Elayi 1987: 78–81 takes a position; see also Elayi 1990b, J.-A. G. Elayi 1992b, the remarks of Stern 1982b: 242, and Verkinderen 1987: 293; let us stress in any case that Tripolis, certainly, represented an Achaemenid naval base of the utmost importance (cf. Arrian II.13.2–3: *neōria*).

• *From Sidon to Jerusalem and Jericho*. The ancient texts on the Jewish deportations and the revolt of Jericho are quoted by M. Stern 1974: 194 and 1980: 421–22, and by Barag 1966: 8–9; Barag (as well as Kienitz 1953: 102 and several others) sees it as proof of the revolt of Judea, but it must be remarked that the archaeological evidence offered by Barag is much less conclusive than he thinks: on this, see Stern 1982b: 242 and 255, as well as the short but clear summary by Oded 1977a: 500–1; more recently a (papyrus) document has been found in a cave near Jericho; the editors (Eshel and Misgav 1988: 175–76) suggest (by quoting in turn the texts on the exiles of the Jews) that the presence of a document in a cave cannot be explained except by a very unstable situation in the country, thus repeating the sort of argument followed to explain the presence of documents in the Wadi ed-Daliyeh; but these are precisely dated, and the reality of a Samaritan revolt at that time (332–331) cannot be doubted: the inferences drawn from this purely hypothet-

ical comparison thus appear to me to be subject to caution (on the document, cf. also Heltzer 1992c: 174–75); furthermore, like their predecessors, the authors do not fail to note the internal chronological contradictions of the literary corpus (p. 176 n. 54). What might be supposed is that at a late date, among the Jews, the figure of Artaxerxes III took on odious characteristics that came to be dressed up with Greek and Egyptian traditions (cf. Josephus, *Ag. Ap.* I. 194; II. 129–33); without wishing here to review all the discussions that have taken place on this subject, we might in fact imagine that the expedition led by Holofernes in the book of Judith represents a sort of historical romance created on the background of the Persian expedition against Phoenicia in 350–340 (we find “the same” Holofernes in the Cappadocian court legend transmitted by Diodorus Siculus XXXI. 19.2–3: Holofernes comes to aid Ochus in a battle against the Egyptians); under this theory, “Nebuchadnezzar, king of the Assyrians,” represents Artaxerxes III; on this subject, see *inter alia* Clamer 1952: 491–93; most recently Heltzer 1989a: 99–100, who also thinks of Artaxerxes III, while postulating a Jewish revolt at this date, which does not appear necessary to me at all; cf. also Schwartz 1949: 75–77, who, citing Jerome, thinks that Nebuchadnezzar represents Cambyses, while Sulpicius Severus prefers Artaxerxes III: p. 77 n. 3; there remains the story reported by Josephus (*Ant.* XI.297–301): a conflict between Bagoses and the high priest Joānnēs; but, contrary to a theory that connects Bagoses with Bagoas, the chiliarch of Artaxerxes III, we would do better today to consider that he was Bagothi, governor (*pehā*) of Jerusalem, to whom the Jews of Elephantine sent a petition in 410 and another in 407 (DAE 102–3 [AP 30/31–32]): cf. Marcus 1937: 457 note g and 499–501, Oded 1977a: 501, and more recently Grabbe 1992a. On the Judea and Samaria of this period, see also chap. 16/7.

- *The Reconquest of Egypt* (343–342). Bickerman (1934b: 77–82) dates the expedition to winter 343–342, which is generally accepted today (cf. Lloyd 1988b); on strategic and tactical matters and for a comparison with the expedition led by Antigonus in 306, cf. Hauben 1975/76.

- *Artaxerxes III in Egypt*. Coin of Pharaoh Artaxerxes (written in Demotic), see Mørkholm 1974, Shore 1974, and Lloyd 1974: 352 (drawings); we may also note that among certain chronographers the reign of Artaxerxes is not recognized in Egypt before 339–338 (Lloyd 1994: 359 and n. 110); on the later reputation of Artaxerxes, see above all Schwartz 1949, esp. pp. 69–70 (traces the tradition back to Manetho).

- *Mentor in Asia Minor*. For reasons given above (see the Research Notes on chap. 15/8: “The Imperial Realm,” pp. 1001f.), I can hardly believe that Mentor, with the title of *karanos*, would have received the command of western Asia Minor (viewpoint expressed *inter alia* by Ruzicka 1992b: 120–22). On Philip and Hermias, I will not list all the bibliography, but I am very hesitant about the interpretation that makes this affair a revelation of Philip II’s Achaemenid ambitions (e.g., Hornblower 1994a: 94); I prefer to follow the conclusions of the fine analysis carried out by Weiskopf 1982: 516–21.

- *Artaxerxes III and Philip II*. The problems broached in these paragraphs have generated innumerable studies; I will cite them only selectively (on Philip II’s policy toward Persia, I find myself close to the “minimalist” analyses of Hammond-Griffith 1979: 458–62, 484–88, 517–22; see chap. 18/1). From the Achaemenid point of view, does the order given to the “satraps on the coast (*hoi epi thalattēs satrapai*)” (Diodorus XVI.75.1♦) imply that a general mobilization of the forces of Asia Minor had been decided on (so Hornblower 1982: 45 n. 69 and 1994a: 95–96)? We must remark that the phrase recurs frequently in Diodorus/Ephorus, and it does not necessarily have a technical sense, just as the usage of the word *satrapēs* is vague and lax in this author (cf. Weiskopf 1982: 307–8 and 473–74). Treaty between Philip II and Artaxerxes III: accepted, for example, by Momigliano (1992: 154–55 and n. 13, p. 192), who without excluding it entirely, is much more cautious about the truth of the collusion between Philip and Hermias (1992: 155 and n. 15); on the treaty (also accepted by Wirth 1972: 143), see the serious doubts of Hammond and Griffith 1979: 485–87; cf. also Bosworth 1980a: 229–30, who, presenting the various chronological theories, suggests that the treaty might have been made by the satrap of Hellespontine Phrygia (which

merely defers the problem and, I stress, presupposes that a satrap could conclude a treaty of this sort on his own initiative, which I doubt). The greatest difficulty, it will be understood, comes from the rather hopeless nature of our evidence: it is quite difficult for example to date the "Persian plans" of Philip II (see the interesting reflections of Errington 1981b: 76–83 [Philip's decision came late; cf. also Ruzicka 1985b], with the discussion by Borza 1990: 228–30); historians sometimes tend to plaster equivocal documents onto ideas *a priori* (if they're not doing the opposite!); so Moyses (1987: 97), who thinks that IG II² 207 is from 348 and infers from this that at that date the satrap (Orontes) sent wheat to Athens because "he wished to stop Philip before he became a threat to his own territory"; the sole objective of this entire (in my opinion disastrous) reconstruction is to justify the chronology that Moyses proposes for the Athenian decree and consequently for the change in Orontes' career. I return below to the initial Macedonian operations in the time of Philip II: chap. 18/1 (pp. 817ff.).

Chapter 16

Lands, Peoples, and Satrapies: Taking Stock of the Achaemenid World

Introduction: In the Steps of Alexander and on the Trail of Darius

• These introductory pages do not require long, erudite notes. [On the use of sources from the beginning of the Hellenistic period, see already chap. 10/1: Diachrony and Synchrony, pp. 389ff. with the corresponding Research Notes.] I would simply like to add two correctives of the historiographical kind:

(1) I have long insisted on the absolute necessity of close familiarity with Achaemenid history in order to be able to deal with Alexander's conquest (and with Alexander's historical sources for supplementing the Achaemenid materials)—since the first edition of my *Alexander the Great* (1974) and my study of the Zagros peoples (Briant 1976): cf. particularly in a 1977 article (= RTP 357–403; cf. Nylander 1993: 146, who ranks me implicitly and good-naturedly [p. 143] among the “renegade” Classical scholars); still more explicitly in a 1979 article = RTP 291–330; cf. p. 306: “as detailed a knowledge of the Achaemenid Empire as possible is an absolute research necessity”; it is in fact clear that progress achieved in our knowledge of Achaemenid history is immediately reflected in the field of Alexandrine history (cf. the prefatory notes to my *Alexander the Great*^{3, 4} = Briant 1986d and 1994a)—especially so because I continue to think that, despite being so specific, the period 334–323 is a special phase of the Achaemenid history of the ancient Near East (RTP 328–30). [On the Achaemenid–Hellenistic transition, see most recently the articles in *AchHist* 8: *Continuity and Change* and, on the decolonization of Achaemenid (and Hellenistic) history, the viewpoint of Oestergaard 1991.] I note with satisfaction that this opinion, which I have long held, preached, and illustrated [cf. my interview in *L'Histoire*, May 1995], is now widely shared, by “Classicists” (not the “renegades”!) as well, who for a long time had not kept up with the Achaemenid problematics and evidence (cf. RTP 505 n. 41): see, for example, É. Will, *Cronon* 64/1 (1992): 68–70, who, reviewing a work on the Hellenistic period, writes, “Indeed, can we understand Alexander's Empire, and then the Hellenistic kingdoms, without good knowledge (I know it has its limits) of the Achaemenid Empire?” (p. 68); while lamenting that the progress of the author's reflections is not explicitly located in historiographical continuity, we may measure it by recalling what he previously wrote of “the psychology of Alexander, without which no understanding will ever be possible of this series of events that was to change the face of the world” (*AncSoc* 10 [1979]: 79); I hope that reading and taking into account the output of the Achaemenid scholars of the '80s and '90s will push back the “limits” that, not without a certain subjectivity, É. W. assigns to knowledge of Achaemenid history (see the skepticism in Hornblower 1994a: 48, who, for reasons that escape me, thinks that, “in the present state of our knowledge, it is not possible [to write] a history of the Achaemenid Empire in the fourth century”).

(2) In the following pages (and more in chap. 17 than chap. 16), there will be much question of a suspect notion and an obsolete phrase, “Achaemenid decadence” (a problem already touched on in the preceding chapters and Briant 1989a; cf. also Sancisi-Weerdenburg 1987a–b and 1989a, who rightly insists on the ideological heritage transmitted by Rawlinson 1871; in a very different ideological contest, I would gladly add Gobineau 1869: 340–41; 348–49; 352, who, referring to the fourth century, speaks of “bloody palace intrigues, . . . general demoralization, . . . a court less and less concerned with the Empire's affairs, . . . the use of Greek, Carian, Phoenician, Egyptian, Thracian *condottieri* . . . [so much so that the Empire was nothing more than] an enormous mass that could no longer hold up under its own weight”: it gives us the impression of a preview of the

"colossus with feet of clay"!). Concerning the phrase, I share the hesitation of H. Sancisi-Weerdenburg (1990: 267), who recommended eliminating the words "growth" and "decline" from the discussion and concentrating on a problem expressed more neutrally—namely: Did or did not the system continue functionally and efficiently (cf. Briant 1994b: 116 n. 18)? This is precisely the problem that guides me in the following chapters. The problem is that this historiographic phase is not yet universally recognized: I would like to say that reading recent books and articles (Dandamaev 1989a and Petit 1993, on which see Briant 1993c and 1994b) has convinced me, even if other more nuanced opinions are available today (e.g., Hornblower 1994a: 45–46), that it is necessary once and for all to wring the neck of this historiographical ghost of "Achaemenid decadence," hoping that I will be able to strike the deathblow (but on this point I maintain a reasonable skepticism, as I do for the closing statement of Badian 1987: 38 concerning the arguments over the Peace of Callias). I am fully aware that the discussion risks trapping me on the terrain chosen or imposed by those who adhere to the notion of decadence (or decline!), but I believe that the exceptional fecundity of this interpretive approach makes it necessary once and for all to systematically and exhaustively carry out the task consisting of demonstrating the extreme methodological weakness of their arguments, to which the first prerequisite is the construction of an exhaustive catalog of the sources (which they have not done themselves), and to conduct a detailed textual and contextual analysis—that is, an analysis that is not reduced to purely impressionistic evaluation (cf. already chap. 12 above on Xerxes, chap. 14/7 [Darius II and His Armies, pp. 597ff.], and chap. 15 *in toto*).

1. Sources and Problems

- On the satrapal organization of Darius III (and Alexander), we already have several good analyses: Julien 1914, Berve 1896: 1, 253–90 (table); the article by Petit 1990: 206–19 is incomplete, and that by Jacobs 1994b reached me too late to be able to take into account; a useful collection of information will also be found in Seibert 1985; I will not systematically refer to it in the notes (nor to the notices of Berve, which obviously I have used, as well as those of Heckel 1992); I will merely point out in passing my criticisms and reservations on this or that interpretation (to the extent they fit into the framework of my presentation); conversely, I do not think it worthwhile systematically to cite Engels 1978, which appears to me marred by disastrous method: has the author ever asked himself what the Achaemenid Empire was? I seriously doubt it: a reading of his section on Persia in 331 will show this; as for the mathematical-statistical postulates he claims to employ, they rest on illusion, which is a pity, since the work's primary objective remains extremely interesting.

2. The Satrapy of Dascylium

- Weiskopf (1982: 483) discusses the idea that Arsites belonged to the satrapal dynasty of Dascylium; his position of satrap of Dascylium is not always textually certain until after 341–340 (Pausanias I.29.10); Greco-Persian relief from Paphlagonia: Doncel-Voûte 1984; see also von Gall 1966 on Persian-type tombs in the region; on Sinope, cf. the appropriate remarks of Descat 1990b: 546–47; coins of Datames and Persian generals at Sinope: cf. Harrison 1982a: 255–65 and Harrison 1982b; on the Bithynian princes Bas and Zipoithes, cf. the notes of Berve nos. 208 and 338; on Heraclea, consult Burstein 1976, where the sources are quoted and commented on (one of the main sources is Memnon of Heraclea: *FGH* 434); on the portrait of Heraclea, cf. Akurgal 1986; "Greco-Persian" stelae: the literature is considerable (cf., e.g., Borchhardt 1968; Metzger 1971; Starr 1977; von Gall 1981–83; Radt 1983; Cremer 1984; Sekunda 1988a: 188–94); see now Nollé 1992; seal impressions from Dascylium: cf. most recently Kaptan-Baybutluoglu 1990 (who is preparing an edition of them); on the label "Greco-Persian," cf. the critical remarks and illuminating suggestions of Root 1991 and 1994; on the Rhodians and their Persian relatives, cf. the notes of Berve nos. 152 (Artabazus), 206 (Barsine), 497 (Memnon); on the role of Memnon and Pharnabazus between 334 and 332, cf. chap. 18/1. Without being able to achieve full certainty (given the

conditions of the discovery in a private collection), it is possible that the wood beams bearing paintings published by Calmeyer 1992a come from a tomb in the Dascylium region; whatever the facts are, the interest of these paintings cannot be overestimated; the author sees them as one of the very rare examples of *narrative* representation in Achaemenid art (here “Greco-Persian” in the traditional sense): one of the scenes (procession, pp. 9–12) recalls identical scenes on stelae from the Dascylium region: according to Calmeyer, the war scenes (pp. 13–17) reflect Darius’s expedition against the Scythians; the material could also be dated around 490 (pp. 16–17); no doubt this item will (justly) stimulate many comments in years to come (including perhaps in the context of studying relations of influence between the satrapy of Dascylium and Macedon).

3. From Sardis to Ephesus

• On Spithridates’ district, we also have coins (perhaps) struck in his name: Harrison 1982a: 416–18 (with caution) and Cahn 1989: 101; Achaemenid military colonies: cf. Briant 1984b: 92–94; lookout on Mt. Timolus: cf. Greenwalt 1995 (archaeological indications). Excavations at Sardis: they have been published regularly in the series *Archaeological Exploration of Sardis* and synthesized in Hanfmann and Mierse 1983; we can follow their progress in the reports in BASOR, and most recently Greenwalt, Ratté, and Rautmann 1994 and Greenwalt 1995. On Plutarch’s text (*Lysander* 3.3): cf. already Briant 1985a: 181–82; Megabyzus/Bagabuxša: Benveniste 1966: 108–13; the coins of Tissaphernes at Astyra have been published by Cahn 1985; the author places them in 400–395, but the date adopted here is more easily justified (cf. Descat 1991: 36); on Thucydides’ and Xenophon’s passages on Tissaphernes, cf. Lewis 1977: 108; cf. also Picard 1922, esp. pp. 606–18, but his comment (p. 160; cf. p. 610) on the *Hellenica* (I.2.6) is sheer fantasy: “Tissaphernes [proclaimed], in the *hiera khōra*, a holy war: this assured him the support of the rustics, who hastened without delay to the aid of the endangered goddess” (Xenophon’s phrasing instead leads us to believe that the satrap ordered the Persians of the low country to bring their contingents); nor can I see the basis for the author’s claim (p. 611) that the Megabyzus “was in fact the equal, in Ionia, of the satraps or principal local delegates of the great king.” On the sanctuaries of Anāhita in Lydia, cf. L. Robert’s many articles (1948a, b, c; 1975, 1976; *BE* 1963 nos. 219–23) as well as Diakonoff 1979, Briant 1984b: 92–94, 1985a, and RTP 460–61; since then Robert 1987 and Boyce and Grenet 1991: 197ff. — while nonetheless stressing that the late date of the evidence poses a methodological problem as soon as the intention is formed to study cultural contacts between Persians and local populations (cf. presentation of the problem in Briant 1985a: 176–81; M. Boyce’s contrary position in Boyce and Grenet 1991: 236–39, esp. p. 238); I think the hypothesis of total fixedness of Iranian religious traditions in Lydia is untenable, especially as soon as we recognize (*contra* Boyce, p. 205) that the Drophernes inscription makes no reference at all to Ahura-Mazda and that the religious prohibitions were added long after the Achaemenid period (cf. Briant 1996b, which withdraws certain earlier interpretations, in particular Briant 1986a: 429–30 and 1987a: 20–21). Ephesian Artemis and Sardian Artemis: the Lydian-Aramaic inscription (Cowley 1921) has been republished by Lipiński 1975: 153–61; we may also note that a Greek funerary inscription of the third century B.C. (of unknown provenance) invokes “Artemis—Median Artemis and Ephesian Artemis and all the gods” (inscription published by Oikonomides 1982); Sherwin-White 1982 suggested seeing Median Artemis (attested nowhere else) as a reference to a Persian deity, “probably Anāhita”; after seeming to have made the same suggestion (*BE* 1982 no. 280 [“Anāhita?”]), L. and J. Robert treated Sherwin-White’s suggestion quite cavalierly (*BE* 1984 no. 339), without providing any justification for their ironic skepticism; the theory (adopted, for example, by Corsten 1991: 171 n. 45) seems appealing to me nonetheless: it would be another example of a joint prayer to “Anāhita” and Ephesian Artemis: under these conditions, would the former designate the Persian Artemis of Sardis, attested in 322 by Pausanias VII.6.6? On the inscription of the sacrileges, see basically Masson 1987b and Hanfmann 1987, and the commentaries on a previous publication in *BE* 1963 no. 211, 1965 no. 342, 1966 no. 369; the Ephesus inscription in honor of a Sardian has been republished and commented on by Robert 1967: 32–36; the dating of both comes from

palaeographic analysis (cf. Robert 1967: 34, "second half of the fourth century, and doubtless toward the beginning of this period"); on the status of Sardis, cf. my discussion in Briant 1993b (where full bibliographical references will be found; to the arguments offered there, add Herodotus IV.45♦: existence of a "tribe called Asias in Sardis," which is also attested epigraphically: Briant 1995c); on the place and personal names of the Mnesimachus inscription, cf. Buckler and Robinson 1912: 28–58 (on Beletras, cf. Masson 1969); on the personal names in the inscription of sacrileges, see Hanfmann 1987: 5–7 and especially Masson 1987b: 231–39; also Benveniste 1966: 105 on Ratopates, and Grenet 1983: 376 on Oumanes/Vohumāna, found at Ai-Khanūm (without knowing the Ephesus inscription but recalling concerning him, after Robert 1975: 323 n. 60, that an Omanes is known at Magnesia around 244; cf. RTP 196); Carians at Sardis: Pedley 1974, Greenwalt 1978b: 42–45, and Gusmani 1975: 79–111, 1982; Nannas inscription: Masson 1991: 670; Hieracome and Hierocaesarea: Robert 1948b, 1976: 36ff. [Wikander (1946: 85), Chaumont (1956: 169) and Boyce (1982: 201–2) think that Tacitus's Cyrus (III.62) is not Cyrus the Great but Cyrus the Younger, a position that seems scarcely necessary to me (cf. already RTP 459); this view is connected (particularly by M. Boyce) with a very dubious interpretation of the role attributed to Parysatis in this matter (see chap. 15/8: "Anāhita and Ištar," p. 678); the hypothesis is repeated by Corsten (1991: 171 and n. 43) in the course of a (very strict) argument that tries, taking off from a comment by Herodotus (I.131), to establish that the worship of Anāhita was introduced to Lydia in the time of Xerxes or shortly thereafter]; Hypaipa: Robert 1976; on the Artemis sanctuary in the Mnesimachus inscription, cf. Buckler and Robinson 1912: 26–28 and Descat 1985; Mitrastast: cf. Gusmani 1964: 23–24 and Barnett 1969; Artemis and Anāhita at Sardis: the assimilation is suggested by Hanfmann 1987: 5, but I find no decisive evidence (cf. Briant 1993a n. 22); Artemis Coloc: Lane 1975, Robert 1987: 297–314, 323–25 and Merkelbach 1991 (the inscription dating to Caesar was published and commented on by Hermann 1989); archaeological and iconographic evidence of Persians in Sardis: cf. Akurgal 1961: 171, Mierse in Hanfmann and Mierse 1983: 100–106, Melikian-Chirvani 1993; Persian words in the Lydian-Aramaic inscription of Manes: cf. Lipiński 1975: 156–58 (the author suggests Artaxerxes III, while Mierse [Hanfmann and Mierse 1983: 105] dates the document to Artaxerxes II); seal of Manes: Masson 1987b (fig. 57, p. 704 here); seal of Mitrastast: Barnett 1969a and, more generally, Boardman 1970; add Pœtto 1985 (scene of Royal Hero killing a lion) and Lemaire 1992 (Persian-inspired seal with a Lydian legend). On the process of Persian-Lydian acculturation and the preservation of Lydian traditions, see also the provocative articles by Ratté (1989) and Melikian-Chirvani (1993). To finish with this point, I note that in the inscription of sacrileges Hanfmann (1987: 5) wants to see evidence of "a forceful missionary expansion undertaken by the Ephesian Artemis during the Persian era," but the bases of this interpretation seem evanescent to me; nonetheless, the attack on the Ephesian sacred envoys poses a real problem: given the long history of relations between Ephesus and Sardis, it may relate to special circumstances of which we have no knowledge; by way of *hypothesis*, I wonder whether the episode might not have taken place in the context of the first Macedonian expedition, during which Ephesus was occupied by the Macedonians and then retaken by the Persians (cf. Arrian I.17.11); in any case, the facts themselves trace the political limits on relations between Sardis and Ephesus, which were certainly not idyllic, whether or not Ephesus had gotten caught up in the Greco-Persian wars. Greek advisers to the satraps: cf. the remarks of Lewis 1977: 14; on the naturalization of Orontes, Ariobarzanes, his sons, and their advisers, cf. Osborne 1982: 52–54 and 1983: 50–53.

4. From Celaenae to Halicarnassus

• On Alexander's siege of Celaenae, cf. Briant 1973: 45–46 and Billows 1990: 41–42; *tetrapylgia*: Briant 1973: 80–89 and RTP 56–62 (not without contradictions); on the route of the royal road, see most recently Müller 1994, and Debord 1995 (who thinks it did not pass by Celaenae); on Gordion, see especially Mellink 1988: 228–30, who evaluates the many Persian or Persianizing iconographic discoveries in the city and its environs (see also Sekunda 1991: 129–40); on the

excavations of Gordion, cf. also De Vries 1990, who suggests that the destructions of buildings around 400 were due to an earthquake (and not to Agesilaus's attacks); at Gordion have been discovered [and excavations continue], aside from a hoard of *siculi* (still unpublished) and many seals (whose publication was assigned to E. Porada: cf. Masson 1987: 110), two Aramaic inscriptions, one on a seal (cf. Mellink 1988: 228), the other in ink on a fragment of Greek pottery (perhaps including an Iranian name derived from *dāta*: De Vries 1990: 400); finally, a name appearing in Hellenistic inscriptions (Mistraboutas) could be Iranian (*ibid.* 404; but cf. Roller 1987: 128 and *BE* 1990 no. 770: "a good Phrygian name"). On the boundaries of the satrapy, cf. Briant 1973: 47–53; we have no evidence that would allow us to date the creation of the satrapy of Greater Phrygia: Weiskopf (1982: 476) thinks that Xenophon, *Anab.* I.2.7–9 attests to its existence in 401, which seems to me far from certain (no more than for Plutarch, *Them.* 30.1, can one go back to Artaxerxes I); my theory is based mostly on the Arrian text I use (I do not understand how or why Petit [1990: 207–8] denies satrapal authority to Atizyes and seems to suggest that Greater Phrygia belonged to Sardis in 334); I note in passing that the Iranian diaspora of Celaenae (Robert 1963: 349) appears in the *Persica* of Timotheaus, around 400 (cf. Francis 1980: 53 n. 1, 69, 79 and Henrichs 1986: 287; see also Weiskopf 1982: 476–77 on Tithraustes, who he thinks was not satrap, and p. 526 n. 13 on the Arsames of Polyaeus VII.28.2); the Persian presence in Phrygia is also attested in late documents: two dedications (*BE* 1979 no. 512 and 519), one invoking the *theoi Hellēnōn kai Persōn*, the other, various Greek deities and *tōn idīōn pantōn Dii Persōn*. On the cultural ties between Lycia and Milyas, see the example of Karaburun (chap. 13/8: The Case of Lycia: Text and Image, pp. 558ff.); on the region, cf. Bosworth 1980a: 157–58 and, more specifically, Hall 1986 (but the theory [p. 144 n. 16] that the connection of Milyas to Lycia signifies the Great King's recognition of the conquests of Pericles of Limyra seems to be void of all foundation); Arrian (I.24.5): P. Savinel (*Arrien*, Paris, 1984) translates: "Milyas, which is part of Greater Phrygia (*esti men tēs Megalēs Phrygias*), but which, at this time, was connected to Lycia (*syntelei de es tēn Lykian*)"; the translator appears to me to introduce a chronological distinction (nebulous at that) that is not explicit in the Greek text; this distinction is even clearer with Robson (LCL): "It belongs to Greater Phrygia, but was reckoned then as part of Lycia" [the current edition of LCL, trans. P. A. Brunt (1976), reads similarly]; but I maintain that the Greek text is construed with two present indicatives; the opposition signaled by *men* and *de* thus is not diachronic but synchronic; therefore, we must, it seems to me, grant to *syntelein* a sense it frequently has, 'to contribute [financially]', with the formula *eis Lykian* expressing that Milyas was part of the same tribute district as Lycia (many examples listed in LSJ, s.v. *synteleō* III.2; also Bertrand 1990: 149 n. 29), from which I infer that Milyas, attached to the satrapy of Greater Phrygia, paid its portion of tribute with Lycia, from which it had thus recently been separated (on this point, cf. also the discussion by Berve 1926, I: 256). It is easy to understand that when Halicarnassus and other Carian strongholds continued to resist obstinately, Alexander had to make changes. Nearchus was made "satrap of Lycia and the country bordering on Lycia as far as Mount Taurus" (Arrian III.6.6*); subsequently (after 331), Lycia was attached to Greater Phrygia (cf. Quintus Curtius X.10.2: Briant 1973: 75–76). On Ada, see most recently the discovery of the tomb of "a Carian princess" (Özet 1994); the identification on the basis of skeletal remains (Prag and Neave 1994) is, as is frequently the case, inconclusive (cf. the addendum p. 109). *Xanthus Trilingual*: on the texts and translations, I am obviously close to the edition by Dupont-Sommer, Metzger, and Laroche in *FdX* VI (1979) [to which should now be added the new suggestions of Lemaire 1995c]; the date of the inscription has been fixed in June–July 338, that is, year 1 of Artaxerxes III, by Dupont-Sommer (1974: 138–42); but this date brings on insurmountable historical and chronological difficulties, since, on the one hand, all the other sources show that Pixodarus became satrap in Caria in 341–340 and, on the other, this new date in any case cannot be reconciled with what is known of the history of the Hecatomnids (except by imagining, with Dupont-Sommer, rather unbelievable circumstances); the only way to resolve these contradictions is to imagine, as Badian (1977b) does, that the Artaxerxes in question is

Artaxerxes IV, the throne name taken by Arses, son and successor of Artaxerxes III (it is especially vexing that SP I does not give his name; on the Babylonian text carefully cited by Badian, cf. now van der Spek 1993a: 96, who expressly reinforces Badian's position); in his most recent article (1979: 166–69), Dupont-Sommer repeats his suggestion, without fully discussing Badian's theory (cf. 1979: 166 n. 1); for excellent reasons, most historians (but see Asheri 1983: 108–10, and more recently *FdX* 9/1 [1992]: 37, as well as Borchhardt 1993a: 7) nonetheless think that 337 is by far the most reasonable date (cf. *BE* 1977 no. 472 and 1980 no. 486; Weiskopf 1982: 293–97, Hornblower 1982: 46–49, and Ruzicka 1992b: 125). Concerning the date of the satrapal reform, I observe that there is nothing in the inscription to prove that Pixodarus had just received Lycia; the reorganization could just as well go back several years (cf. wise remarks along these lines by Badian 1977b: 45; contra Laroche 1979:37: but only the Greek text uses a formula [*egeneto*] taken up in the Lycian version [Laroche 1979: 60], which might support the theory of a reform that was recent and/or in progress; but this formula does not appear in the Aramaic text [Dupont-Sommer 1979: 141–42], the only usable text, since neither the Greek nor the Lycian version states that Pixodarus was satrap in Caria); according to Keen 1992a, chap. 7, the institution of two Achaemenid representatives even goes back to the beginning of the 370s. In any case, an anecdote indicates that since the time of Mausolus the satrap of Caria had had tribute prerogatives in Lycia (cf. [Ps.-Arist.] *Oec.* II.14d [1348a?]; see Weiskopf 1982: 291–93); on cultural and political contacts between Caria and Lycia, cf., for example, the presence of Basileus Caunius on the Inscribed Pillar (early fourth century; Dupont-Sommer 1979: 168; Melchert 1993), the same god whose worship was the subject of the trilingual (below); on the region of Caunus (in eastern Caria, Telmessus being the traditional boundary with Lycia), cf. Bousquet 1992: 176–78 and 180–81 (conquest of the region by Gergis/Kheriga, then the starting point of Erbbina-Arbinas), as well as Melchert 1993: from all these indications, I am tempted to think that Artaxerxes' decision is chronologically involved with the recognition of Pixodarus as satrap in Caria, hence around 341, and I suggest that the incorporation of Lycia into Caria was part of a vast administrative reorganization ordered by Artaxerxes III after his expedition to Phoenicia and Egypt.

5. Pixodarus at Xanthus

• The tasks assigned to the two archons remain in the realm of theory (cf. Asheri 1983b: 111); Hellenistic evidence might provide some materials along these lines (but with the risk of circular reasoning): cf. Wörle 1977: 59–60; see also Keen 1992a, chap. 7. The reasons for Pixodarus's interference in the religious matter have stimulated many analyses (which differ somewhat among themselves); Asheri 1983b: 110–23, Frei 1984: 21–23, Briant 1986a: 434–37, and now Lemaire 1995c; on relations between the Carian dynasts and Basileus Caunius, cf. Dupont-Sommer 1979: 168–69, but it must be stressed, with Bousquet (1992: 175 n. 48), that the introduction of Basileus Kaunios to Xanthus was much earlier and more likely due to Kheriga than to a fifth-century Carian dynast; on the word *data* and its relation to the Lycian *marā*, cf. chap. 12/7: Royal Law and Local Law, pp. 510ff. TL 45: cf. the restorations and commentaries by Bousquet 1986; Plarasa's decree and other related ones, cf. *BE* 1973 no. 406; Hornblower 1982: 161–64; Weiskopf 1982: 293ff.; Corsaro 1985 and 1989. Last, I will state that synoptic comparison between the two parallel texts, the Greek and Lycian (which is certainly the original: Blomqvist 1982), permits several observations on linguistic borrowings and adaptation: one of the most surprising is the following: where the Lycian author wrote *sicle* (line 22), the Greek author “translated” with *drachme* (line 20) — which makes me doubt the restoration “(two?) sigloi” proposed by Metzger (on these problems, cf. Frei 1977).

6. From Tarsus to Mazaca

• Since the early work of Erzen 1940, Bing 1969, and Houwinck ten Cate 1961 (pp. 17–35), Cilicia of this period has received little attention or specialized investigation. Conversely, they have boomed in recent years: aside from the special number of *Quaderni Storici* 76/1 (1981) and

the volume *De Anatolia Antiqua* (Istanbul and Paris, 1991), we have the book by Desideri and Jansink 1990, to which we may add the general but useful book by Mutafian 1988 and, on a special point, the suggestive article by Bing 1991. This reawakening of interest in the region is no doubt largely due to several spectacular discoveries, not the least being the site, the "Persepolis" reliefs, and the Aramaic inscriptions of Meydançikkale (cf. Laroche and Davesne 1981; Davesne, Lemaire, and Lozachmeur 1989); this reawakening of interest has itself stimulated new explorations, which, currently led by M. H. Sayar in eastern Cilicia, have quite recently brought about the discovery of several Aramaic funerary inscriptions not far from Castabala (Sayar 1990), two of which have just been published by A. Lemaire (1993), who is preparing the edition of other documents [≡ 1994b]; the interest of the region also lies in the abundance and diversity of coinage from the Achaemenid period found there (Harrison 1982a: 304–77; Levante 1994; Casabonne 1995b, etc.). In the recent bibliography, we will see first of all the overview by Lemaire and Lozachmeur 1990, where the sources are presented and commented on; on the Aramaic documents from Cilicia, cf. Dupont-Sommer 1964 (Castabala) and Lemaire 1991c: 205–6 (Hemite and Meydançikkale); on the coins of Mazaeus and his district in Cilicia, then in Cilicia and Trans-Euphrates, consult also the discussion of Leuze (1935: 234–35), who shows that after the revolt Belesys died, and Mazaeus took back Trans-Euphrates with Cilicia, and that of Weiskopf 1982: 498–500; coins struck by Mazaeus in the Cilician cities: cf. Lemaire 1989a: 142–44 and 1991d, Chuvin 1981, Harrison 1982a: 346–77, Mildenberg 1990–91: 10–13. Concerning Mazaeus, we may consider four specific problems in passing: (1) According to Quintus Curtius V.13.11, it looks as though one of his sons, Brochubelus, assisted his father in Syria (*Syriae quondam praetor*); doubtless this was not an official title (Mazaeus's coins are very clear) but one of many examples of cooperation between father and son (Briant 1987a: 26–27) in a satrapal administration bestowed on the former (cf. Petit 1990: 209–10). (2) We have long known about an Athenian stela whose upper register shows a Royal Hero scene, and the lower register exhibits a scene of lion/bull combat (photo in Briant 1992d: 122): Bivar (1970: 59–61) thinks the lower scene reproduces Mazaeus's seal and the stela represents the naming of a *proxenos* to the satrap at Athens (cf. also Bivar 1975a: 63–64); but the argument seems to me highly speculative. (3) Quintus Curtius (III.4.3) describes Arsames as follows in the spring of 333: *qui Ciliciae praerat*, but the phrase does not imply that he was then satrap of Cilicia (cf. on this point Leuze 1935: 242–50 and Weiskopf 1982: 495–98). (4) On the basis of the role that Mazaeus played in Babylon after the arrival of Alexander, it is sometimes thought that after the fall of Larsus he headed Syria-Phoenicia and Babylonia: this suggestion appears to me to have little basis; in the catalog transmitted by Arrian III.8.3–6 in fact, "the Syrians of Hollow Syria and all from Mesopotamian Syria" were led by Mazaeus, while the Babylonians were commanded by Bupares; even though Arrian's phrasing raises a few problems, it appears that Mazaeus did not command Babylonia. Plain and mountain in Cilicia according to Strabo: cf. Desideri 1986; we will stress above all that the opposition is very common in Classical and Hellenistic authors, contrasting at the same time the Achaemenids' inability and Alexander's facility in subduing the mountain peoples (cf. Briant 1976: 194–200 and cf. chap. 16/11 and 16/18); archers of Aspendus: Foss 1975: 30 (Aspendus belongs in principle to Pamphylia, although between 331 and 323 it was a dependency of Lycia, which in turn was attached to Greater Phrygia: Quintus Curtius X.1.2; in any case, we find Aspendians in the guard of Epyaxa, wife of the *syennesis* in 401: Xenophon, *Anab.* I.2.12). Coins of Cilician cities: e.g., Chuvin 1981, Capecchi 1991, Casabonne 1995b; among the things most evocative of the borrowing and adaptation of Persian motifs, we may consider some coins from Issus struck with the name Tiribazus in Aramaic that bear an anthropomorphic representation of Ahura-Mazda: the divine representation is repeated in many other regions (cf. in particular the coinage of Samaria: below), but what makes the Issus coins so remarkable (even though this is not an iconographic *hapax*) is that the Persian god is depicted nude, with typically Greek conceptualization and workmanship (Brindley 1993: 4–5); on the theme of Persian loans, see also Casabonne 1995a. Meydançikkale: Davesne, Lemaire, and Lozachmeur 1987 and Lemaire 1991c: 205–6 (photo of a relief reprinted in Briant 1992d: 87) [final publication of the Persepolis reliefs

and Aramaic inscriptions currently in press]; Kyinda: cf. Bing 1969: 129–30 and RTP 49 n. 2 and 93; Tarkondimontos: Robert 1964; Nora and other garrisons: RTP 20–21; Castabaltides and Cataonia strategy: Robert 1963: 436–37 and 1964: 39, and Boffo 1985: 54–60; cf. Devine 1984 on the passage of Alexander. Jobs of Aspis and Camisares, cf. Sekunda 1988b: 36 and 42–44; on the altar found at Bünyan (not far from Kayseri), cf. Bittel 1952 (the author makes Mazaca the center of the official power of Camisares and Aspis; I include the suggestion in my text but only as a theory); we may note in passing that a treasury found at Kayseri contained several Pamphylian coins (Aspendus, Side), one of Datames, and one of Mazaeus (Davesne 1989: 167): this last may confirm that the region belonged to the satrap of Tarsus; I also note that according to de Planhol 1992: 136–37 the *qanats* known at Kayseri (and Ancyrus) could go back to the Achaemenids; Anaitis Barzochara: BE 1968 no. 538 and 1971 no. 669 (Schmitt 1970; but see Wikander 1972); Hanisa inscription and Iranian personal names: cf. Robert 1964: 457ff. (cf. p. 516, the name Maibouzanes is found at Comana in Cataonia, a personal name that in Lydia, not far from Sardis, is applied collectively [Maibouzanoi] to an Iranian community: Robert 1987: 333–35); Iazamis/Arsames: Robert 1963: 433–45; Farasa inscription: cf. Grégoire 1908 and Lipiński 1975: 173–84 (the inscription was found in the valley of the Carmalas, which according to Strabo (XII.2.6) flowed through Cataonia; on the site of Ariaramneia [doubtless in Cataonia], cf. Grégoire 1908: 441–43). Hemites and Sarraidin inscriptions: cf. Lemaire and Lozachmeur 1990: 153 and Lemaire 1991c: 205 (and pp. 203–5 on Datames/Tarkumawa): note that the personal name Sarnapiya has recently been found in an Aramaic funerary inscription from near Hemites (cf. Lemaire 1993: 12–14 with suggestions on the possible familial relations); Lemaire (1991c: 205), regarding the Hemites inscription, writes: “We are thus probably faced with a new case of a ‘dynast-satrap’”; my reservations expressed in the text come from the observation that in several imperial corpora (Akkadian, Greek), the word *satrap* does not necessarily refer to the head of the satrapy, but it can designate a very highly placed person within a satrapy (cf. Stolper 1985a: 58; and CAH VI²: 252–53; Dandamaev 1992b) or a Persian aristocrat (e.g., Strabo XV.3.18). Greco-Persian reliefs from Cilicia: Borchhardt 1968 and Hermery 1984; *satabara*: Dagron and Feissel 1987: 36; gardener-king coin: Franke and Hirmer 1966: 124 and no. 194 (Sancisi-Weerdenburg 1990: 266; Casabonne 1995b note 6; and chap. 6/5, pp. 232f.).

7. From Tarsus to Samaria via Sidon and Jerusalem

• Aside from the Phoenician cities (e.g., Elayi 1987b, 1989, 1990c), Judah, Samaria, and Palestine (besides Stern 1982b, 1994c, see the recent collection Laperrousaz-Lemaire [ed.] 1994), evidence bearing on the Achaemenid presence in northern Syria in the fourth century is rather rare and generally unforthcoming, and we have no synthesis on the question (Eph’al’s [1988] overview barely deals with Achaemenid dominion in all its diversity): the discussions in Millar 1987 seem to me somewhat “defeatist” on the situation in Syria before (and during) the Hellenistic period (see now the explicit criticisms of Lund 1993: 27–28, 40); Sartre’s 1989 article is summary and disappointing; Mazzoni 1991–92: 55 laments the absence of special studies on the region in early volumes of *Achaemenid History*. See now the volumes of *Transeuphratène* and the assessment prepared by Elayi and Sapin 1991. Aside from a few late indications of the presence of an imperial diaspora in the region (cf. Boyce and Grenet 1991: 354–57), the written sources are abjectly poor (once more we may list the travel voucher given to Nehtihôr [DAE 67 (= AD 6)] and the text of Berossus, which confirm that Damascus was indeed at this date a major provincial capital [chap. 15/8: “The Imperial Realm,” p. 680; see also chap. 12/3: “The District of Trans-Euphrates,” p. 487; I recall that according to Josephus, *Ant.* XI.2.2, Cambyses died there; Herodotus (III.64) places this event at Ecbatana-in-Syria, identifiable with the future Epiphania on the Orontes by Mazzoni 1991–92: 62, referring to Pliny V.82); — the existence of a Syrian satrapal paradise at the sources of the Dardas [Xenophon, *Anab.* I.4.10], lands belonging to the house of Parysatis near Aleppo [I.4.9; Manfredi 1986: 97–98; Mazzoni 1990–91: 67–68; Graf 1993: 152–254], and the place-name *Triparadeisos* that implies the presence of paradise structures at the sources of the Orontes [on the lo-

cation, cf. Seibert 1983: 109]—all these observations lead us to think, with Seyrig 1970: 301, that royal Achaemenid land was well represented in northern Syria: and cf. now Sapin 1990). New information is thus basically provided by regional and microregional archaeological excavations and surveys: see especially Lund 1993 (region of the Orontes in the fourth century) and Mazzoni 1990 and 1991–92, who, by examining the distribution of habitats between the Phoenician coast and the Khabur Valley, concludes overall that there was an increase in the number of sites; the detailed study (1990) of Tell Mardikh/Ebla is especially interesting, since a new (“rustic”) palace was built in the late Achaemenid period (fourth century) within “a complete restructuring of the acropolis” (1990: 190; cf. also *Les dossiers histoire et archéologie*, no. 83 [1984]: *Ebla retrouvée*, esp. p. 31; ironically, the headless inscribed statue of Prince Ibbit-Lim that provided the identification of Ebla was discovered within the Persian-period structure as a reused block; cf. *ibid.*, pp. 13 and 88). All the recent discoveries point in the same direction: “It was with the blossoming of the Achaemenid phase that the economic surge and transformation of the region came about, rich with promise” (Mazzoni 1990: 193; following a traditional practice [cf. RTP 230–33], several Hellenistic towns [Apamaeus, Epiphania on the Orontes] were founded on already inhabited sites that had been put to good use in the Achaemenid period: Mazzoni 1991–92: 61–62, 67–68; on these Achaemenid-Hellenistic continuities, see also Lund 1993). On an especially important site (a Euphrates ford?), the cemetery of Deve Hüyük, see Moorey 1975 and 1980, with the critical remarks of Mazzoni 1991–92: 66–67.

• *Phoenicia*. The discussions on the status of Sidon after the revolt are dense and contradictory, though the evidence is poor (cf. Elayi 1989: 147–48), in particular the textual evidence (as far as I know, the Persian-period cuneiform tablet found at Tell Mikhmoret [Stern 1993] has never been published): theories are thus primarily built on numismatic evidence, which poses enormous problems (and which I feel particularly incompetent to examine); see also the Achaemenid-style column capital found at Sidon, which is sometimes related to the satrapal paradise (Clermont-Ganneau 1921 and, most recently, the observations of Yon-Caubet 1993: 51). It seems unlikely (contrary to Babelon’s theory) that Artaxerxes granted Sidonian kingship to Evagoras of Cyprus, who, after striving in vain to reinstall himself at Salamis in Cyprus, received from the king “another and higher command in Asia” before fleeing to Cyprus (Diodorus XVI.46.2–3; cf. on Babelon’s position Betlyon 1982: 19–20); the confiscation of the gift to Ešmunazar is inferred from Quintus Curtius (IV.1.25), who says that Alexander granted to the new king (Abdalonymus) “a territory adjacent to the city,” a phrase that is sometimes seen as a restoration of the prior Achaemenid concession (cf. Barag 1966: 8 n. 8 and Lemaire 1990: 58–59 in the same sense; while he discusses the passage, Verkinderen 1987: 306–7 does not take a position on the question); we may note with Stern (1990: 154, 1994c: 151ff.) that the Persians, aware of the importance of Sidon and Dor, rebuilt the Phoenician cities’ fortifications (the author also thinks that Dor was returned to Sidon, implying that it had previously been confiscated, but cf. Stern 1982b: 243; 1994b: 79); on the coinage of Staton II: cf. Betlyon 1982: 18–20; coinage of Mazaesus at Sidon (I restrict myself here to the recent bibliography, without rehashing studies of the Six): Betlyon (1982: 18), whose argument is vitiated by chronological errors, thinks that after the institution of martial law (*sic*), Mazaesus took control of the city market; but as Harrison 1982a: 353–54 (whose dating of the satrap’s Sidonian coins I use) rightly stresses, we see that the last kings of Sidon were striking coins at the same time as Mazaesus, so that we can imagine the latter’s coins “were struck for needs other than civic” (p. 354): these considerations lead us to think that, as in many identical situations in other countries, the Great King was satisfied with changing the dynast/king, without questioning the prior status of Sidon (on which we are, after all, ill informed); for his part, Mildenberg (1990: 138) thinks that Mazaesus, by placing his name on Sidonian coins, was acting as “regent of the city,” but the author (note 4) remarks at the same time that on the coins struck in their name by the Sidonian kings, Mazaesus does not indicate his satrapal position (cf. also Mildenberg 1990–91: 14: “It is noteworthy that . . . Mazaesus respected the civic prerogative of coin production in every

respect even a short time after the revolt led by Sidon had been crushed"; similarly in Mildenberg 1994: 65); on these complex problems of Sidonian coinage, cf. also Elayi 1989: 215–19 and J.-A. G. Elayi 1993: 146–47.

- *Samaria*. On the Wadi-ed Daliyeh documents, see the various articles by Cross in the bibliography; nine papyri concerning slave sales have been published and translated by Gropp 1986 (SP 1–9); the coins were published by Meshorer and Qedar 1991 (= CS), including many coins that did not come from Wadi ed-Dalīyeh, which the authors attribute to studios in Samaria; the sealings from Wadi ed-Dalīyeh have been published and commented on by Leith 1990 (= WD); I refer the reader to these highly detailed studies, being satisfied here to use them selectively (on the spread of Persian or Persian-inspired motifs and objects in these regions, see also various articles by Stern (1971, 1982a, 1994a, and 1994b: 190–92 on the seals), and also the recent interesting publication by Rozenberg 1993 (Achaemenid ivories). Three additional remarks on evidence: (1) The Aramaic papyrus found near Jericho (Eshel and Misgav 1988) is too broken to sustain historical interpretation—despite the editors, who wish to see in it indications of a Samaritan revolt in response to the Phoenician revolt around 350; the fiscal interpretation proposed by Heltzer 1992c (allusion to royal taxes at the end of the Achaemenid period) is hardly more convincing; Lemaire (in Laperrousaz and Lemaire [1994]: 276) anyway thinks the document should be dated to the Hellenistic period; (2) I note that, in *Michmanim* 6 (1992): 41, E. Stern announces a new(?) discovery: "A hoard of Persian period bullae from the vicinity of Samaria"; (3) On Samaritan coins with cuneiform legends, cf. Lemaire and Joannès 1994 (we may note that the two coins examined are new examples of CS 58 [fig. 61e here] with the very interesting image I discuss in the text).

- *Judah*. Coins of Yehizqiyah and Johanan: cf. the analyses and interpretations (often contradictory) of Rappaport 1981, Barag 1985, Betlyon 1986, Mildenberg 1979, 1988, [Machinist 1994: 366–70]; the Johanan of the coins is sometimes compared with the person of the same name introduced by Josephus (*Ant.* XI.297–301): in competition with his brother Jeshua (who had obtained the support of the Persian *strategos* Bagoses), Johanan killed his brother, and in retaliation Bagoses defiled the temple; but Josephus's tale is too romanticized to be able to serve as the basis for historical reconstruction (cf. Oded 1977d: 501); it is difficult to incorporate these characters into a genealogy of the high priests (*ibid.*, 506–9; meanwhile, see the proposals of Barag 1985: 167–68 and Betlyon 1986: 639–41, following Cross 1975); Grabbe 1992a thinks that Josephus's Bagoses is actually Bagohi, *pehā* of Judah; on possible coins of this person, cf. Lemaire in Laperrousaz and Lemaire (1994): 285. One last remark: recent discoveries seem to give support to the theory that there was a province of Ammonitides (Herr 1992; cf. also Heltzer 1989c; Lemaire 1990: 48–71; 1994: 46–47).

8. From Gaza to Petra

- On the history of Gaza in the Achaemenid period, see an overview (without great originality) by Katzenstein 1989; on the siege of Gaza, see the sources collected by Bosworth 1980a: 257–60 (cf. also Romane 1988 on aspects of military history); on the Minaean inscription RÉS 3022 and the historical and chronological difficulties, cf. most recently Robin 1991–93: 61–62 [in a presentation at the conference on Egypt and Trans-Euphrates (Paris, April 1993), A. Lemaire drew attention to the fact that the inscription refers to a revolt (not simply a war)—which, as he said, still does not allow us to pin down the events to Artaxerxes I vs. Artaxerxes III = Lemaire 1995a: 55, inclining more toward the revolt of Amyrtaeus at the end of the fifth century]; on the coins of Gaza, cf. Mildenberg 1990 (distinguishing coins of the Arabs from coins of the city); on the "kings of the Arabs" and Gaza, cf. Briant 1982b: 150–52, 169–70; Eph'al 1982: 195–97, 206–10 (but the theory, recalled pp. 212–13, identifying the king of the Arabs of Palestine with the king of Qedar named in DAE 78–79, rests on a very weak argument); Graf 1990a: 142–43; Lemaire 1990: 45–47 and 1994a: 28–29. The Beer-sheba ostraca were published by Naveh 1973 and 1979, as were those from Arad (Naveh 1981), on which see also the observations of Aharoni 1981: 141–51; some Beer-sheba

texts are dated to year 7 of a king; on the basis of palaeography, Naveh (1979; cf. Naveh 1981) opts for Artaxerxes III. On the organization of Arad, cf. Graf 1993: 160–61 (comparison with the PF: cf. also RTP 505; this evidence is fully interpreted in light of the Hebrew inscriptions of Lachish and Arad: Lemaire 1977); Beer-sheba: the existence of a garrison is doubted by Tuplin 1987c: 187 (followed by Salles 1991: 222); discovery (not yet published) of new ostraca like the Beer-sheba ostraca (fourth century): I owe the information to the generosity of A. Lemaire [who is currently preparing the edition], whose general historical evaluation (1994a: 29–30) I quote as well: “The Aramaic ostraca of Arad and Beer-sheba, probably dating around the middle of the fourth century, attest quite clearly to Persian military and administrative control over this region which probably was reorganized between 385 and 352, and this reorganization brought about the end of the kingdom of Qedar and its partial replacement by the Nabateans”; cf. also Stern 1982b: 253–55, who thinks that after the destructions of the 380s the Persians reinstalled garrisons in these regions. On the Persians in northern Arabia, see the overviews of Knauf 1990 and Graf 1990a; the former (pp. 214–15) thinks that, beginning around 400, because of the loss of Egypt, the Persians decided to abandon Arabia (cf. also Högemann 1985: 17), while it may hold for the major oases (but the chronological and terminological uncertainty about the sparse evidence is great: Briant 1982b: 172), this idea seems to me to need considerable nuancing, at least in order to take into account the Arad and Beer-sheba ostraca (not used by Knauf): cf. Graf’s treatment, 1990a: 160–61; on the creation of the province of Idumea, cf. Lemaire 1994a: 28–29 (creation after 380); on the eparchy of Idumea in the age of the Diadochi and Diodorus’s text (XIX.95.2: *eparchy*; 98.1: *satrapeia*), see the discussion of Bengtson 1964, 3: 35–36 (he thinks that only the first of the terms comes from the original source). On the Nabateans (too controversial a topic to be treated here *in extenso*), cf. most recently Bartlett 1990, Graf 1990b, MacDonald 1991, Roche 1994; among the Achaemenid traces in Nabatea we must recall the presence of a cuneiform tablet at Tell Tawilan dated to the inaugural year of a King Darius (Dalley 1984; Joannès 1987, with the reply of Dalley 1990: 79–80); an important find of jewelry was also found there, worked like the jewelry of the Achaemenid court (Maxwell-Hyslop 1984, with remarks of interpretive caution offered by Graf 1993: 158; cf. also the recent interpretations of Roche 1994: 42–43: evidence of the nomadic Nabateans’ wealth).

9. Egypt from Artaxerxes III to Darius III

• On Sabaces, cf. Nicolet-Pierre 1979 (coinage) and Schmitt 1987a (name); Pseudo-Aristotle (*Oecon.* II.32 [1352a♦]) names one “Evaeses, the Syrian” as satrap of Egypt (apparently in the Persian period), but the manuscripts are problematic (cf. van Groningen 1933: 182–83). The literature on the *Stela of the Satrap* is considerable (it is mentioned in recent articles by Spalinger 1978a; Goedicke 1985; and most recently Huss 1994a: see now the new suggestions by Duvauchelle forthcoming, whom I heartily thank for providing his manuscript; on a detail [*kbnt* vessels], cf. Darnell 1992: 73–78 [to the attestations of the word in documents of the Saite-Persian period (p. 78), add the Onnophris inscription in von Känel 1980: 44, who translates it ‘warships’]; the publication of the stela goes back to Brugsch in 1871 (reedited by Kamal 1905: 168–71). The arguments over the date are old: Wilcken (1897: 85) already highlighted the weakness of some aspects of Brugsch’s argument and thought that Khabbabash must have come after Xerxes; Spalinger thinks (following others) that “Xerxes” must be understood as Artaxerxes III and Khabbabash rebelled at the end of this Great King’s reign (cf. also Michaélidis 1943: 97–99 and Bresciani 1958: 167). Spalinger’s readings have been briskly contested by Ritner 1980, who thinks there is no reason to suppose that Khabbabash was a contemporary of Ḥšryš: an interpretation that is interesting because it demolishes the historical argument for the identification of Xerxes as Artaxerxes III while at the same time allowing a late date for Khabbabash; Ritner’s position has had many repercussions: cf. Ray 1988: 271 n. 42. Goedicke (1985) places Khabbabash in the reign of Arses, specifically in the autumn of 336, so that it was Darius III who carried out the reconquest [similar viewpoint in Huss 1994a]; in his opinion, the word used is a metathesis of “Arses” in hieroglyphics. It is necessary to

state that the arguments between the Egyptologists bear on the most important clauses, and that when all is said and done it seems that no one can answer such important questions as: Who is speaking? To whom? I am thinking particularly of differences about the meaning of the phrase (concerning this king and his eldest son) “expelled from his palace”: for Spalinger (1978a: 151–52), it is the clerics of Buto who pressed Khabbabash to drive Artaxerxes III and Arses out of Egypt; for Ritner (1980), the clerics of Buto let it be known that the god himself had already driven the king (Xerxes) and his son out of Egypt (this would refer to the palace of Horus, “the seat of the contention between Egypt and Persia”); finally, Goedicke (1985: 41–42) thinks that the text refers to the murders of Arses “in his residence” (Susa or Persepolis) and his eldest son—hence the very precise dates he assigns to Khabbabash’s revolt (autumn of 336) and the reconquest by, for him, Darius III (February–March 336), p. 53: but why would the Egyptian writers have referred to an event so distant from their concerns? It seems more logical to think that they are alluding to a “fact” (?) that took place in Egypt. I have no competence to participate in the epigraphic and philological discussion; I will simply indicate that, from the historical point of view, the Artaxerxes III (or Artaxerxes IV/Arses) theory appears more comprehensible than the Xerxes theory (would the fourth-century Egyptian pharaohs have done nothing on behalf of Buto after Xerxes’ confiscations?); but, at the same time, the text is built on such a series of repetitive motifs that it is difficult to place all of the episodes in time; this is why we hesitate, for example, to establish a direct relationship between the abduction of the sacred archives by Artaxerxes III (Diodorus XVI.51.2) and their repatriation by Ptolemy (*Stela*), particularly because, according to Diodorus, Bagoas returned them to the priests for ransom. The theme of the return of statues is so frequent in the official literature of the Ptolemaic period that it is difficult to distinguish what relates to the narrative genre in the text from what belongs to the area of Egyptian ideological depictions and Ptolemaic propaganda (neither of them with any particular interest in “historical accuracy”!). Finally, I wonder whether it should not be suggested that, as in some Greek texts, “Xerxes” had become a generic term for the Egyptians (cf. Isocrates, *Phil.* 42 and the note by Brémond, *Isocrate*, CUF, 4 [1962]: 30 n. 1). Most recently, using other arguments (from the chronographers), Lloyd 1988b thinks that Artaxerxes III led another reconquest of Egypt, and Lloyd 1994: 344–45, without ruling out the other possibilities, suggests that Khabbabash might have reigned between the reconquest of Artaxerxes III (343–342) and his recognition in Egypt—namely, 339–338: p. 359 n. 110. To finish up on this point, I will mention that the dating also bears a certain interest for the reconstruction of other aspects of Achaemenid history: (1) on relations between the Great King and his son and thus on the date at which Xerxes, Artaxerxes III, and even Arses/Artaxerxes IV recognized their oldest sons as crown prince (on the phrase “oldest son,” cf. also chap. 13/2: “A Principle of Primogeniture?,” p. 520); (2) several authors think that the obstacles on the Egyptian front might have affected Darius III’s disposition in Asia Minor in 334 (chap. 18/1: Darius, His Satraps, and Alexander’s Landing (May–June 334), pp. 818ff.).—Measures taken by Alexander in Egypt and Achaemenid continuities: cf. Harmatta 1963: 208–10 and Burstein 1991 and 1994 (among the recently published documents, we may note a Demotic graffito dating to Alexander that seems to refer to a satrapal order and names one Pediese [Smith 1988: 184–86]; perhaps this is Peteisis, who we know from Arrian [III.5.2] was made “nomarch” by Alexander: cf. on this point Burstein 1994); we may also note that the personal names later testify to a Persian and Iranian diaspora in Egypt (cf. Huyse 1990b and 1991, where an overview of the famous *Persai tēs epigonēs* will be found), corresponding in part at least to the Iranian names found in the fifth century, not just in the Aramaic papyri but also in the Demotic documents (cf. Smith 1992b and Huyse 1992); we also know of Egyptians who defected to the last Persian kings: cf. chap. 18/3: Egypt and the Egyptians, pp. 858ff.

10. From Arbela to Susa

- “Achaemenid residence” near Sippar: we can follow the results of the explorations in NAPR 4 (1989) and 7 (1991): cf. also Pons 1993 and Gasche 1995; Artaxerxes II’s building projects at

Babylon: Stolper, *CAH VI*²: 259–60; on Babylon in this period, cf. also Schachermeyr 1970: 49–73. The Achaemenid administrative system in Upper Mesopotamia is particularly difficult to uncover because, on the one hand, the data are very thin and, on the other, the vocabulary of the ancient authors is rarely consistent (cf., for example, Tuplin 1991b: 51–54 on *Sittakē* in Xenophon, and Helm 1980: 27–41 and 276–312 on the very elastic use of the word *Assyria* in the Classical authors: see Zadok 1984 for the cuneiform sources in the Neo-Babylonian and Achaemenid periods); cf. the pages (to be used carefully) of Herzfeld 1968: 10ff.; on the deported Eretrians and Carians, cf. *ibid.*, 11–12, as well as Grosso 1958 (where all the Greek materials will be found), and Stolper 1985a: 73, 79, 86 (cuneiform sources: *Ḫatru*). The importance of Arbela is well established, in the Achaemenid period, by the role it played in 522–521 (*DB* §33), its role in communications (*DAE* 67 [= *AD* 6]), Darius III's leaving his baggage there (cf. Quintus Curtius IV.9.9; IV.16.9; V.1.10; Diodorus XVII.64.3; Arrian III.15.5), and Darius I's decision upon returning from the war against the Saka to dedicate the revenue from several villages to the maintenance of the camel that had brought him back safe and sound from the expedition (Strabo XVI.1.3; Plutarch, *Alex.* 31.7); on *Assyria* in the Achaemenid period, see most recently Kuhrt 1995. On Susa and Susiana, cf. Le Rider 1965: 254–80 and Boucharlat 1990a–b, as well as Joannès 1990b (publication of tablets dated to an Artaxerxes; presence of many Egyptians; mention of a treasurer; use of the word *bandaka* in a personal name); Lower Babylonia: on the “Sealand,” cf. Joannès 1990a: 177–78 (note). On the hydraulic projects carried out by Alexander in Babylonia, cf. Briant 1986b, the main conclusions of which I repeat here, without rehashing the detailed argumentation *in extenso* (the bibliography will also be found there; I see no point in repeating it here; add the prudent correction of Boucharlat [1990a: 162] on irrigation agriculture in Susiana); I will add briefly that since then I have discovered—by a chance reading—that the Hellenistic tradition is repeated by Ammianus Marcellinus XXIV.6.1–2: as he describes the work carried out by Trajan in redigging the Narmalcha (“royal river”), the author recalls that “once upon a time the Persians, fearing similar [military] operations [against them] blocked [the Narmalcha] with an enormous mass of rock.” Independently, Högemann 1985 proposed a radically different theory; throughout his book, he works out the idea of a structural antagonism and permanent hostilities between the Achaemenid authority and the Arabs of the north of the peninsula: in this framework, the works carried out by Alexander prove that the Achaemenid administration no longer had the will to finish them (pp. 144–49); Alexander's urbanization policy provides additional proof of Arab aggression (149–58), with Arabs regularly plundering and pirating in Achaemenid Lower Babylonia (p. 155); the “Sealand” had been completely abandoned to them by the Great Kings, who were unable to deal with the danger (189–93); Alexander's vigor and his Arab project thus had to lead to a “Babylonian renewal” (p. 207: “Neuerschließung Babylonien”). It would take too long to respond point by point to all his arguments; I will content myself here with accenting the methodological aspects. It is clear that the author believes he can use the Hellenistic texts “as is,” without ever examining the political-ideological context of their creation. However, on the evidence, the initiative for the offensive came from Alexander, because the Arabs were the only ones who had not hastened to send an embassy to him (Aristobulus apud Strabo XVI.1.11)—that is, had not shown prior submission to him by sending delegates bearing gifts (cf. Arrian VI.15.5); under these conditions, all that can be inferred from Alexander's behavior compared with the Achaemenids' is that the Arabs had manifested the “same hostility,” and Alexander had no choice but to respond. At any rate, it is entirely characteristic that the author (who has obviously not kept up with the literature on the subject) compares the “Arab danger” with the “danger” posed, according to him (p. 155), by the Cossean and Uxian mountaineers, both of whom constituted a permanent threat to Babylonia: but the case of the Uxians and Cosseans, to whom we shall soon return (chap. 16/11), shows precisely that the Hellenistic tales have led to the same sort of misinterpretation, though reversing the poles of aggression. The author returns several times to earlier periods, when pretenders were supported from their bases in Lower Babylonia in their challenge to the Neo-Assyrian or Neo-Babylonian kings: it

still remains to be proved that the same held true in the Persian period, which is often suggested but never proved (see chap. 16/17 on Persian policy in the Persian Gulf). Besides, I observe that the view of contacts between “sedentary” and “nomadic” peoples emerges from a reductionist view (cf. Briant 1982a: 9–56; Eph’al 1982; and most recently Fales 1989): that there were “infiltrations” of Arab populations in the Achaemenid period (as in other periods) can scarcely be doubted (cf. Zadok 1978, 1979), but they do not necessarily prove that there was a state of permanent hostility: some were settled in Babylonia under the *hatru* system (cf. Stolper 1985a: 78, 85–87; also Eph’al 1982: 188–90); and concerning the Gerrheans, Aristobulus refers especially to their trading voyages to Babylonia (Strabo XVI.3.3), which on the contrary implies cooperative relations (see also remarks of Teixidor 1993: 290). Some parts of southern Babylonia may have been under threat of marauders, as implied by tablets from the time of Nabonidus, Cyrus, and Cambyses bearing on troops assigned to watch over distant pastures in the north (cf. Joannès 1982: 179–83, where the danger represented by the “mountain brigands” nonetheless seems to me highly overrated), but it concerned localized, circumscribed disturbances, quite different from the victorious general threat suggested by Högemann in Lower Babylonia (on this point, cf. also the critical remarks of Salles 1990: 125–26); we no longer see that these Arabs had the ability to launch naval expeditions on the Tigris and Euphrates (Aristobulus [Strabo XVI.3.3] simply speaks of little raft-like boats). Högemann’s interpretation looks like part of a predetermined discourse on the image of an Achaemenid authority that was moribund and unable to deal with the threats weighing on it: I stress in particular that the theory of Babylonia’s and Babylon’s decadence at the end of the Achaemenid period will certainly be pounced upon by all those who over the last few years have demonstrated, using cuneiform evidence, that there was no such thing. Last, I will mention that recent work supports my 1986 conclusions: see first of all the noteworthy remark of Joannès 1995: 194 n. 17: the *katarhaktai* of the Tigris were the “foremost waterworks known on this river”; next, in van der Spek 1992: 238 n. 15, a list of occurrences of Pallukatu/Pallacopas in the astronomical tablets ADRTB, repeated by van der Spek 1994: 17–18: examination of tablets dated 333, 329, 325 on waterworks maintenance, compared with the Classical texts I examine in the text; besides, these very tablets (ADRTB nos. –332, –328, –326) are mentioned by Slotsky 1993 (pp. 233–34) in the course of a discussion (pp. 231–51) of variations in the level of the Euphrates in the astronomical tablets—which imply the existence of what we might call a sort of “Euphratometer” at Babylon.

• On the *Babylonian sources* under the last Great Kings, see Kuhrt 1987a, van Driel 1987, and Stolper, *CAH VI*: 234–35, on the astronomical tablets (published by Sachs and Hunger 1988), cf. the already cited Bernard 1990b, Slotsky 1993, and van der Spek 1993a, 1994; it is obvious that the unequal distribution of the sources through time must not lead us to risky historical conclusions of the “statistical” type (cf. appropriate remarks along these lines by MacEwan 1983 on Kish; Beaulieu 1989b on Agade; and van der Spek 1992 on Sippar); an exhaustive treatment of the subject would require profound knowledge of the Babylonian materials from the Achaemenid and Seleucid periods (which I do not have), to the extent that analyses carried out for the beginning of the Seleucid period often allow us to trace continuities with the end of the Achaemenid period: cf., for example, the articles by Kuhrt, Sherwin-White, and van der Spek gathered in Kuhrt and Sherwin-White 1987, as well as Kuhrt and Sherwin-White 1994 and the analyses by Stolper 1989a, 1993, and 1994a and the more recent work of van der Spek; administration of the temples at the beginning of the Seleucid period (compared with the Achaemenid period): cf., e.g., MacEwan 1981, Beaulieu 1989c, and Kuhrt and Sherwin-White 1991; on the Chaldeans, cf. van der Spek 1992: 236–43; the author, pp. 241–42, also gives a transliteration/translation/commentary for an interesting tablet dated 308–307: traditional organization of the Ebabbar of Sippar, with its lands, its *šatammu*, in the context of a dispute with the treasurer of Babylon; on continuities of Babylonian religious practices and thought patterns: cf. the texts published by Nougayrol 1947 and Labat 1960, as well as the remarks of Joannès 1992c; problem of Anu: cf. Kuhrt 1987a: 151 (but the link speculatively suggested with Artaxerxes II’s reform does not appear obvious to me), as well as

Stolper 1990b: 561, Beaulieu 1992: 54–60 and 1993b: 48–49. On the near-absence of “Greco-Persian” scenes in the Susa impressions, cf. Amiet 1972b: 285 (quotation in the text). The Persian diaspora, which was certainly sizable in Babylonia, is nonetheless poorly known: cf. the elements gathered (for the period 482–331) by Zadok 1977: 96–107 (but most of the material dates to the fifth century; cf. p. 106); the author (p. 91) says that the number of people with Iranian names or patronymics tends to increase throughout the Achaemenid period, but a reading of his work does not tend to prove this formally, even if the assumption does seem logical (cf. also Stolper 1987: 393–95 and 1992b: 126: names of several Persians or Iranians who owned lands in Babylonia at the end of the fifth century: Mitratu, Artasāta, Spitamas; also Stolper 1992b, the examples quoted by Dandamaev 1983: 137–40, and now the synthesis in Dandamaev 1992a, on which see Stolper 1994b); for Susa, cf. the publication of the tomb by Morgan 1905 (Persian jewelry), a tomb whose date has just been pushed back to the end of the fifth century by J.-A. G. Elayi 1992a; we may add several mentions of *magi* in the tablets: Dandamaev and Livshits 1988 (with the remarks of Schmitt 1990b) and Dandamaev 1992a: 166–67. Babylonian seals: see remarks by Kuhrt 1987c: 50–51 (where further bibliographic references will be found); some Babylonian data on names and personal names are taken from Zadok 1977; all the others are drawn from the rich analysis of Bregstein 1993, particularly pp. 218–38 (I very heartily thank the author for sending me a copy of his dissertation); on Bēlšunu: Kuhrt (1987a: 153–54) asks whether he might not be a “Babylonized” Persian: but his patronymic would seem to rule out this suggestion; on the theory about Antibelus of Susa, I note in passing that the use of the double name is known in Seleucid Babylonia: cf. Sherwin-White 1983 (cf. pp. 213–14 on Babylonian usage); this practice (known in Egypt: cf. Briant 1988a: 160–61) could explain the case of Datames/Tarkumawa: cf. a theory along these lines in Lemaire 1989a: 149 and 1991c: 204–5. “Babylonization” of the dynasty (see already chap. 15/8 above on Anāhita/Ištar): on the “Babylonian” concubines of Artaxerxes I and the problem posed by Ctesias’s vocabulary, cf. Briant 1990b: 54 and n. 30; the word “Babylonization,” which tends to find its context in a recurring view of “decadence” (e.g., Athenaeus XII.530d), must be wielded with caution: we may recall for example that at a date when we recognize that the portraits on royal coins were individualized, Babelon (1910: II.2: 50) claims to recognize Darius II by “his big Semitic [*sic!*] nose,” stressing (by way of “explanation”) that the king was born of a Babylonian woman; cf. conversely (and equally ideologized) his description of the “portrait” of Cyrus the Younger (ibid., 51–52); such postulates stir unpleasant memories (cf. RTP 265–76). Of course these bad habits do not *ipso facto* condemn the word “Babylonization,” but its content remains nebulous and fickle. On Bēl and Ninus on Darius III’s chariot: aside from the brief, unclear remarks of Boyce (1982: 287–88), the only commentary I know is by Harmatta (1978: 317–18), who draws from it a straightforward conclusion on the change in Achaemenid monarchic ideology: “This fact proves that from Artaxerxes II on (who was of half-Babylonian origin, and under whom the golden eagle first appeared), Old Persian royal ideology underwent some changes and was adopted to Babylonian ideas more than before. The Achaemenid family tree was enlarged with Ninus and Belus, and the Babylonian royal standard, representing the eagle Anzu with outspread wings, was adopted as the royal emblem of the Old Persian Great King.” This is an interesting suggestion, but it runs up against some serious objections: (1) It is based (more or less implicitly) on the belief that Artaxerxes II’s act rested on an assimilation between Anāhita and Ištar, which appears to me far from obvious (cf. chap. 15/8), (2) I am not certain that Quintus Curtius’s information should be considered a “fact” (on Berossus’s influence on Diodorus and Quintus Curtius, cf. Schnabel 1923: 35–66; and, on Berossus’s purposes, the fundamental consideration by Kuhrt 1987c); (3) as for the royal standard, it seems to me that Nylander’s (1983) investigation of the *Mosaic of Naples* leads us to see in it the attestation of persistent Iranian (Persian) traditions rather than the introduction of Assyro-Babylonian traditions [at any rate, see now the remarks along these lines of Nylander 1993: 151, who, without citing Harmatta’s article, thinks that Quintus Curtius was confused and that Ninus and Bēl actually represented Ahura-Mazda and Mithra, the

eagle being known as a specifically Achaemenid emblem; cf. also his note 67, p. 158]]. In the same vein, I will make two additional remarks: (1) According to Sims-Williams (1991: 182–83), the festival in honor of Mithra could have been created “in imitation of the Babylonian festival in honor of Šamaš”; (2) the texts of Ctesias (*Persica* §21) and Aelian (VH XIII.7) might attest to the perseverance (at any rate likely and logical) of pre-Achaemenid royal rituals in Babylonia (cf. Macginis 1987b). On Arrian VII.24.3 and the *nomos persikos*, cf. also along these lines Smelik 1978–79: 107; on the Sacaea, cf. Langdon 1924 and Labat 1939: 98–102; cf. also Briant 1991a: 3–4; Labat (1939: 102) doubts that this Babylonian festival could be confused with the New Year; cf. also Botéro 1978: 17, who is reserved about the possibility of identifying it with the substitute king ritual; on this, see more clearly Parpola 1983: xxxi (on Berossus: the author thinks on the contrary that Dio Chrysostom IV.66–68 does refer to the substitute king ritual); on the Sacaea, see most recently Boyce and Grenet 1991: 290–92 (but the suggested interpretation does not really take into account the Babylonian traditions on the matter); on the New Year festival and the policy (falsely) attributed to Xerxes concerning it, cf. the proof by A. Kuhrt in Kuhrt and Sherwin-White 1987a: 73–76.

11. The Great King, Alexander, and the Peoples of the Zagros Mountains

• On the roads and routes between Susa and Persepolis, see RTP 163–68; Mostafavi 1960; Hallock 1977; and Koch 1986. On the point discussed here, I refer to my proof in Briant 1976 (with the critical remarks of Sancisi-Weerdenburg and van der Vliet, *BiOr* 36/1–2 [1979]: 119–21; cf. also RTP 206–7 on Madates in Briant 1982b: 57–112. The interpretation is adopted by, e.g., Bouchardat 1990a: 162–63; it is ignored by Badian 1985: 441–42 note, but referred to more explicitly in Badian 1994, even though his chronological reconstruction ought to have led him to examine more closely what he calls (deliberately) without differentiation “the Uxian interlude” (p. 279); it is quite strange that the author (who, moreover, on p. 287 acknowledges Uxian assessments on the Great King) has not understood (cf. notes 40–41) that the entire episode makes sense only if we recognize two Uxian populations and two battles (as I proved in Briant 1976, repeated in RTP—an article also unknown to Bosworth 1980a quoted by Badian, but quoted and accepted in Bosworth 1988: 89–90). On Elymeans and Elymais (and its sanctuaries), cf. Holleaux 1968: 255ff. and Boyce and Grenet 1991: 40–48 (with some guesses, p. 40); on the Cadusians, the sources are collected by G. Meyer, *RE Suppl.* 7 (1940): 316–17; cf. also Syme 1988 (not too useful); the theory on monomachy was already presented in brief in Briant 1976: 239 n. 103. [The stories of relations between Alexander and the Uxians have recently been restudied by Atkinson 1994: 68–83, who disagrees with some of my interpretations; the book reached me too late to be discussed here; I shall return to it elsewhere.]]

12. Persepolis, Pasargadae, and Persia

• On the roads, cf. RTP 163–68, where complete bibliographic references will be found. Alexander at Persepolis and Pasargadae: cf. RTP 384–403, Wiesehöfer 1994a: 23–49, and chap. 18/2 below; Persian demography: Briant 1987a: 21–22; fourth-century work at Persepolis: cf. Calmeyer 1990a; tomb of Artaxerxes III: Schmidt 1970: 102–7, and the commentaries of Roaf 1983: 128 and Calmeyer 1990a: 12–13 (on the number of delegates, see also the remarks of Borchhardt 1993b, to be compared with those of Calmeyer 1990a: 12); on the incomplete tomb, cf. Kleiss and Calmeyer 1975 (time of Artaxerxes II) and Calmeyer 1990a: 11–12 (Darius III?, with huge doubts). I will make three additional remarks on this matter: (1) It is sometimes suggested that the reliefs on Artaxerxes III’s tomb attest to the “decadence” of Achaemenid artistic traditions; but if, in effect, they are nothing more than copies of the reliefs on Darius I’s tomb, the concept of “decadence” seems particularly inappropriate in this area (cf. the remarks of Calmeyer 1990a: 13); the idea seems to go back to Herzfeld’s highly “Alexandrocentric” interpretations, on which see the critical remarks of Root 1994: 17; (2) similar reflections have often been offered on the “deplorable” syntax of the last royal inscriptions; I am not competent to participate in this debate; I will simply remark, on

the one hand, that according to some authors (Lecoq 1974a: 60–61; Mayrhofer 1974: 109), knowledge of the language of the inscriptions had been deteriorating since Xerxes, and on the other, that in at least one case what has long been held to be a syntactic mistake by the royal authors actually came from a wrong reading on the part of modern epigraphers, who then spoke of “barbarism” (cf. Benveniste 1954: 309): cf. now Stève 1987: 98 and Lecoq 1990b on the false “paradise” in A²Sd; (3) we no longer discern “negative” change in the royal images on the siculi and darics dated between Artaxerxes III and Darius III, even if these late coins are obviously not free of variation (as after all has been the case since Darius I): most recently Alram 1993. On the Greek *kurtaš* of Persepolis: I have long been directing attention to these texts (without much effect, I must admit): cf. in particular RTP 329 n. 161; on Arrian VI.29.7 and its comparison with the facts in the tablets, cf. chap. 2/9, pp. 95–96. On the nonexistence of a satrapy at the time of the tablets, cf. chap. 11/10: Parnaka, Persia, and Darius, pp. 466ff.; on Ariobarzanes’ title, cf. also the doubts of Tuplin 1987b: 115, and the caution of Lewis 1977: 9; somewhat confused presentation by Petit 1990: 212–13 (I do not see the basis for Berve [II no. 115] to make this Ariobarzanes the son of Artabazus, nor why he thinks that Ariobarzanes might have joined his father close to Darius [cf. Arrian III.23.7]: Quintus Curtius clearly says that this person died soon after in battle: V.4.34); on relations between Persia and the lands of the Persian Gulf, cf. chap. 16/17, pp. 758ff. On the status of the plains Uxians, the basic text is Quintus Curtius V.3.16 (cf. RTP 162–63): the exemption from tribute is granted when the conqueror Alexander might have imposed it—which leaves open the hypothesis that it was already the rule in the Achaemenid period. One final remark: the exile of Persepolis architects to India, as suggested by Wheeler 1974, is based on very debatable indications: Nylander 1988.

13. From Persepolis to Ecbatana

- On the Median royal stud farms, cf. RTP 354–56 (and on the *Suda*’s surprising note on Nisaeon horses [coming from the Persian Gulf], cf. Goukowsky 1974: 136 n. 104); on Nisāya: the word may be used as a personal name: Nesāya, that is, something along the order of “the Nisaeon” (DAE 46 [= BMAP 5] lines 16–17, where Ātarfarna, son of Nesāya, is called a Mede). Strabo XI.13.7 stresses the excellence of the “Medic grass” that nourishes horses the best; it is generally identified as common alfalfa; perhaps it may be identified in the Iranian word (borrowed into Akkadian) *aspastu*, but the translation ‘alfalfa’ is not absolutely certain: cf. Jursa 1993 and Donbaz and Stolper 1993. Medes in the Babylonian tablets: cf. Zadok 1977: 112–13 and Dandamaev 1992a: 153–56. On the word *eparchy* in the Hellenistic texts, cf. Bickerman 1938: 197–99, 203 and chap. 16/8 above (but in DB §32, *dahyu* seems to have the meaning ‘people’ instead: Lecoq 1990a: 133–34, who emphasizes that Kent’s translation ‘district’ is erroneous). Media in the Persepolis tablets (many of them still unpublished), see Vallat 1993: 161–62 and Koch 1993a: 12–14. The adjective *ateikhistos* applied by Polybius (X.27.6) to the town of Ecbatana as opposed to the man-made citadel (*akra*) “admirably constructed and fortified” merits a few remarks: for one thing, the same word, *ateikhistos*, is used by Polyeleitus about Susa (Strabo XV.3.2), which obviously does not mean there were no walls in Susa but instead refers to walls that hold up terraces, walls “that on the inside scarcely projected above the occupation level” (Boucharlat 1990a: 150).—Susa, which like Ecbatana had an acropolis (Strabo XV.3.2; Diodorus XIX.48.7); besides, a passage from Aelian (VH VII.8) deserves to be quoted, because he says that, after the death of Haephestion, Alexander “destroyed the acropolis of Ecbatana and knocked down its walls (*teikhē*)”; Plutarch (*Pel.* 34.2; *Alex.* 72.3) refers only to throwing down the battlements; the word used by Aelian (*perikeirō*) could well be an allusion (in the form of a pun) to a debated measure taken (it appears) by Alexander, to cut the mane and tail of the horses and mules “as a sign of mourning”; taking into account the many versions of this episode that were circulating, Arrian (VII.14.4) reports that some said Alexander even shaved (*keirasthai*) his own head completely; it is in this critical passage that he describes the order for “the temple of Asclepius at Ecbatana to be razed to the ground”

(§14.5↔); perhaps we ought not bother to inquire too closely into the identity of this god, since Arrian rejects this tradition, which, he says, better fits Xerxes' destructions, and which perhaps was constructed out of the arrival of a delegation from Epidaurus to whom the king entrusted "a votive offering to take back to Asclepius" (14.6↔, to his sanctuary in Epidaurus); finally it is clear that the story has been intertwined with that of Glaucias, the physician put to death for not saving Haephestion (on these contradictory traditions, cf. Heckel 1992: 87–91). In short, all we have is Polybius's description, which must correspond by and large to Achaemenid Ecbatana — which in any case archaeology has not revealed to us: Hamadan has never been systematically excavated; all we have is a little evidence from temporary, limited expeditions (cf. Chevalier 1989), and all the Achaemenid-type objects (tableware in particular) that supposedly come from Hamadan (by way of clandestine digging and antiquities dealers) cannot be considered authentic (see especially Muscarella 1980: 31–35); quite recently (summer 1994) rumors circulated in the press of archaeological discoveries in the town of Hamadan [[and a recent visit to the site, April 1995, confirmed that deliberate excavations were currently underway]]. Rock-cut tombs have also been found in Media dating to the Hellenistic period that demonstrate Achaemenid influence in the region (cf. presentation and discussion in Boyce and Grenet 1991: 94–106): perhaps these are the tombs that were plundered by Alexander's generals (Arrian VI.27.4). On Behistun and its names, cf. Bernard 1980. Babylonian tablets from the time of Darius II at Ecbatana: Stolper 1990c: 164–71; see also Joannès 1990b: in one of the Babylonian tablets from Susa published by the author (no. 1; p. 177), dated to an Artaxerxes, one of the parties asks the other "to give him the maidservant Šammandu as wife by bringing her from Ecbatana to Susa" (on the Murašū texts from Susa, see Stolper 1992c); ADRBT no. –369: Stolper, CAH VI²: 239. Khorassan road: see Briant 1984b: 36–40; Caspian Gates: Bosworth 1980a: 334–35 and Bernard 1994b: 483 and n. 11–12. The "special" size of the Median contingents in Darius III's army, as suggested by Vogelsang (1992: 229–34), appears to me based on circular reasoning, which grants disproportionate value to the testimony (which at any rate is far from clear) of Quintus Curtius III.2.4–9. On the "syllogos of Medes and Persians," cf. Briant 1994e: 286–91 (where I recall other possible but, in my opinion, less convincing interpretations than the one chosen here; in any event, it must not be forgotten that the death of Bessus gave rise to a large number of versions in Antiquity).

14. From Ecbatana to the Halys

- I do not understand why Petit 1990: 205 n. 421 disallows Ctesias's evidence on Ariaramnes; as for his attempts (pp. 207–8) to deny the existence of a satrapy of Cappadocia in the time of Darius III, they are doomed to failure: cf. his very strange argument, p. 208 n. 429. The historical geography of Cappadocia and Armenia presents many problems, several of which still appear insurmountable even today: on Cappadocia cf., for example, Planhol 1981; on Achaemenid Armenia, Tiratsian's 1981 article is not useless, but he nonetheless adds little on the specific conditions of the country under Achaemenid dominion (cf. pp. 153–54 on the Van region); we also have the work of Hewsén 1983 (cf. p. 142 on Van), who calls some of his own reconstructions "speculative" (p. 143); cf. also Hewsén 1984, Schottky 1989: 4–43 (Atropatene Media and Greater Armenia at a later time), Boyce-Grenet 1991: 69–84, and the recent article of Zimansky 1995 (continuities with Urartu); on the status of Armenia, see also the remarks of Osborne 1973: 518–22; on the route of the royal road in these regions, see most recently Chaumont 1986–87; Iranian personal names in Cappadocia, cf. especially Robert 1963: 433ff.; see also the interesting Greek–Aramaic inscription of Agaça Kale (cf. Lozachmeur 1975), published by Cumont 1905c: a funerary inscription in honor of the "legitimate (faithful) satraps, Otomanes son of Ariuces, and Ariuces, his dear son"; Lipiński (1975: 197–208) relates this Ariaces to the person by the same name who in 332–331 led the Cappadocian contingents to Darius III (Arrian III.8.5); the Ariaces of the inscription, under this theory, was perhaps the son of the commander of 331 (the Aramaic text gives Ariaces II the title "sat[r]ap of Ar]menia": Lipiński 1975: 200–203); on the spread of Aramaic, cf. also Dupont-

Sommer 1948. On the cults, see the evidence cited in chap. 16/6 above (in Cataonia and Cappadocian regions near and far), as well as Reinach 1905 (Acilisene); Boyce 1982: 274–75; and Boyce and Grenet 1991: 262–304. Achaemenid-type objects in Colchis: Tsetschladze 1992b, 1993/94, and 1994; Rehm 1993. Eumenes of Cardia and Perdicas against Ariarathe of Cappadocia: RTP 15ff.; on Alexander's activities beyond the Halys, Arrian II.4.2 is clearly erroneous (cf. Bosworth 1980a: 189); see in particular Appian's doubts (*Mith.* 2.8), thinking that Alexander "left in place the leaders of these peoples, on the condition that they pay tribute, because he was forced to march against Darius"; even if we accept Appian's idea, it is clear that Ariarathe never paid tribute (cf. Diodorus XVIII. 16.2); I wonder whether Abistamenes/Sabictas didn't simply receive the command of Cataonia (the border area between Cappadocia and Cilicia: chap. 16/6), a region that Alexander had to cross; on the satraps named by Alexander, see also Anson 1988; Persian generals' coins at Sinope: Harrison 1982b; Reinach (1890: 1–8) saw Ariarathe as a descendant of what he calls "a dynasty of tyrants" installed at Cius in Mysia during fourth-century disturbances; but while the existence of a large Persian family endowed with lands around Cius can scarcely be doubted (cf. Sekunda 1988a: 180–81), the independence of their "principality" in the Achaemenid period is deduced from late texts, which tend to qualify (by anticipation) as "hereditary kingdoms" certain satrapies or subdistricts: cf. in particular Diodorus XV.90.3 ("Great Satraps' Revolt") and XVI.90.2 (death of Ariobarzanes, succeeded by his son Mithradates); it seems clear that here and there Diodorus (XX.111.4) depends on the Cappadocian royal legend, to whose publication he himself strongly contributed (XXXI.19.1–5): see the analysis of Meyer 1879: 31–38, and chap. 3/4 above. — The results of Armenian excavations and of the pottery analyses mentioned (selectively) in the text are presented in detail by Summers 1993 (with bibliography); see *ibid.* p. 86 on the site of Argštihinili, where the Elamite tablets were discovered; they were initially interpreted (Diakonoff and Jankowska 1990) as a tale from the *Gilgamesh Epic*; but one of the editors (Diakonoff, p. 103) had first thought it might be an "administrative or business letter": this is exactly what Koch 1993b shows — I repeat his conclusions briefly here (very heartily thanking the author for sending me his article in proof [but see now Vallat 1995!]). Among the 8000 stamped bullas found at Artašāt, several bear "Greco-Persian"-inspired scenes, including a scene of prisoners lined up [Root, DATA Feb. 1993: 13], a Behistun-type image also found on an inscribed royal seal (SA^{3b}) and a Babylonian seal [pers. comm., M. Stolper and L. Bregstein]; on the Artašāt bullas, see now Khatchatrian forthcoming and Manukian forthcoming, about which I know thanks to M. F. Boussac. The Persepolis-type column bases were recently found at the site of Beniamin; the fifth–fourth century "is the date of the foundation on the hill of a large rectangular palace": Ter and Martirossov 1994. On workshops for Achaemenid-style pottery in Armenia, cf. Melikian-Chirvani 1993: 125–27.

15. From Ecbatana to Cyropolis

• To avoid filling the text with multiple, massive references to the ancient texts, I have chosen on the one hand to quote Arrian primarily (to the extent that he is not contradicted by other evidence), and on the other to refer the reader to existing overviews of the satraps and satrapies (Berve I, Seibert 1985, Vogelsang 1992: 219–44; cf. also the inventory in Dobbins 1984); besides, I have already touched elsewhere on several problems treated here (cf. Briant 1982b: 181–234; 1984b; and 1987a: 6–11): I will not automatically refer to them, except in discussions where my point of view has changed or on which new and/or different points of view have been suggested meanwhile (on the sanctuary of Takht-i Sangin and the treasury of the Oxus, cf. the recent publication of Pitschikjan 1992, which I received too late to discuss its interpretations; I note that the author's theses are discussed by Rapin 1992b, and strongly contested by Bernard 1994a, 1994b: 507–9, as well as Koch 1993c (who suggests seeing here a residence of the Achaemenid satrap); satrapies of the Iranian Plateau in the Persepolis tablets: Koch 1993a: 22–35 [and Giovanazzo 1994b]); finally, I have not tried to mention all of the chronological and/or topographic problems posed by Alexander's campaigns in eastern Iran: on this point (to restrict myself to recent references, where

the earlier literature will be found), I refer basically to Bernard 1982 (replying to Bosworth 1981 on the Margiana problem), Seibert 1985, Fischer 1987, Bosworth 1988: 106–19; also Bosworth 1995 (received at the last moment). Excavations at Kandahār and Dahan-i Ghulaman, cf. Genito 1986b and Vogelsang 1992: 255–57, 260–67. On Peithon's position at Ecbatana and the *strategos* of the Upper Satrapies, see Bengtson 1964, I: 176–86 and II: 79–89, as well as Briant 1990b: 48–51; Vogelsang (1992: 240) thinks that Bessus (in the northwest) and Barsaentes (southeast) are the two main representatives of Achaemenid authority on the plateau, and compares the situation in 522 (Dardārši and Vivāna); on the positions of Bessus and Barsaentes, cf. also Briant 1984b: 71–74. On the boundary between eastern Bactria and Sogdiana, cf. the suggestions of Bernard 1975: 67–69; on the administrative unit Bactria-Sogdiana, see the thoughts of Bernard 1990a: 26; like Bactra, Maracanda included an official satrapal residence (*basileia tēs Sogdianōn khōras*; Arrian III.30.6); besides, according to Arrian (IV.15.7♣), when Alexander returned to Sogdiana he wished to punish those among the inhabitants who had refused to obey “the satrap set over them by” him: doubtless referring to Artabazus (IV.16.3), who some time earlier had been made satrap in Bactra (IV.15.5), or possibly to a subsatrap residing at Maracanda. On the significance of Alexander's offensive in the context of relations between Achaemenid Bactria and the Saka: cf. Briant 1982b: 203–30: my interpretation has been accepted, basically, by Holt 1988: 52ff.; P. Bernard (1990a: 22–25), on the other hand, has expressed reservations about it, writing “that the participation of the nomads in the anti-Macedonian revolt was more than once dictated by the lure of plunder (Arrian IV.16.4–7; 17.7)”; but, exactly, does Arrian's evidence on the “natural” aggressiveness of the Saka have to be taken at face value? This is what I (like Holt) doubt; nor have Bloedow's counterarguments 1991a–b done any more to convince me. On Pazyryk, see most recently Hiebert 1992, who stresses that the tombs published by Rudenko in 1953 are, after the latest excavation campaigns, among hundreds of kurgans that allow us to define a “Pazyryk culture” based in a semi-nomadic lifestyle that may be located mostly in the fifth century; technical analyses (Böhmer and Thompson 1991) have shown that the famous carpets were not imports but were local handicrafts: “The parallels with the Greek and Achaemenid style and iconography are variants of the local style rooted in long-term interaction with Central Asia” (p. 127); on the same subject, see the special number of *Source (Notes in the History of Art)* 10/4 (1991) dedicated to Pazyryk, especially the article by J. Lerner, who conducts a very detailed iconographic analysis of the Pazyryk carpet and also concludes that it was locally made, by which she means it was not a product that came from Pesepolis workrooms (or another great imperial center); rather, she thinks that, whatever its date, the carpet might come from workrooms “in Bactria or Sogdiana, where the Achaemenid artistic *koiné* had penetrated and been adapted to local taste” (p. 12); this theory (which goes hand in hand with the investigation of local creation of objects with Achaemenid workmanship: e.g., Francfort 1975; Root 1991, 1994; Melikian-Chirvani 1993) fits well into the picture I am trying to draw of these interchanges between the east-oriental satrapies and the world of the steppes of Trans-Iaxartes (on the identification of Cyropolis and other Achaemenid towns of the Syr Darya, cf. Bernard 1990a: 28–29). Saka in the Babylonian *ḫaṭrus*: cf. Dandamaev 1979, 1992a: 159–62; Zadok 1977: 120–24. On the hyparchs, cf. RTP 241–47 and Briant 1984b: 81–88, which I repeat here with (sometimes significant) modification of certain interpretations (on the word *hyparch* in Arrian, cf. the important analysis by Bertrand 1974): the comparison on pp. 85–86 of the *sylogos* of Bactrian hyparchs with the “*sylogos* of Medes and Persians” (Arrian IV.7.3) must be abandoned, for reasons implied by the analysis in chap. 16/13 above; *sylogos* = place of assembly, cf. Widengren 1956: 157ff. and Petit 1990: 133–36; on “*handaisa*”, cf. Dandamaev 1992a: 18. The theory of large Achaemenid military regions (four of them, one of them being the Upper Satrapies) goes back to Meyer, repeated by Bengtson 1964, III: 176–77; cf. Briant 1990b: 50–51 (but the support found in Diodorus XVI.50.8 must be kept in perspective for reasons already presented in the Research Notes to chap. 15/8: “The Imperial Realm,” pp. 1001f.); on Quintus Curtius VII.11.29, cf. RTP 242–43, and on the meaning of *attribuere*/*attributio* see the important article of Bernard 1990 (esp. p. 157: “Attribution is only one of the means

allowing the elements of the Empire to be hierarchized”), who suggests (n. 177) a completely justified comparison with Persian practice (cf. Briant 1985b); for all these reasons, the doubts expressed by Tuplin 1987c: 185 do not appear to me to be fully justified, even though he is correct in stressing the uncertainty of the sources; on the Persians in Bactria and Bactrians elsewhere in the Empire, cf. Briant 1984b: 89–96; exile of the Branchidae, cf. Bernard 1985a: 123–25 and Briant 1992a: 14; strongholds in Sogdiana and Bactria: cf. list in Francfort 1979 and Tuplin 1987c: 240 (where the sources are collected), and now Gardin 1995; Achaemenid fortifications at Samarkand: cf. Bernard 1990a: 29–30, Bernard, Grenet, and Isamidinov 1990 (366–69) and 1992, and most recently Rapin and Isamidinov 1994 (where the authors recall structures of the period they term “Achaemenid”); network of fortresses, cf. RTP 190–91 (on Quintus Curtius VII.10.15, cf. the correction of Bernard 1982, opposing Bosworth 1981 on Margiana: cf. most recently on the “Achaemenid palace” of Merv, Usmanova 1992). Achaemenid administration and irrigation works: I repeat here the essence of arguments worked out in Briant 1984b (and 1993c); the contrary position of the archaeologists has been restated by Gardin 1986 (who thinks [p. 88] the opposite position is “intellectually lightweight”), Francfort 1989: 438–46, and Lyonnet 1990, 1994, though they do not analyze the basis of my arguments because of what they consider the decisive nature of the pottery calibration (I will further remark that Lyonnet’s 1990: 87 recourse to Boucharlat 1990a is misplaced, because it greatly exceeds the author’s interpretive intent; he himself [p. 162] bases his suggestions on a parallel with Bactrian archaeology, so that the suggested support loses much of its probative force; I also continue to question the formulation used in Lyonnet 1994: 545 on northern Syria); on the famous “Bactrian entity”: the reaffirmation by Vallat 1993: cxxxvii–cxlii, 42, 161–62, of the historical character of Diodorus II.5–7 on pre-Achaemenid Bactria does not seem to me particularly fortunate, whatever other validity his analysis of the Assyrian sources may have (the two arguments have to be conducted separately); the quotation in the text from B. Lyonnet comes from Lyonnet 1994: 542; on this point, see also Vogelsang 1992: 245–303, esp. pp. 270–74 on northern Bactria, who comes to the same overall conclusion as Gardin and Lyonnet, all the while emphasizing (pp. 302–3) “that an apparent cultural autonomy of the subject territories cannot be directly used to suggest political autonomy with respect to the same territories”; this is the position I have defended for years (cf. also pp. 1–9 above, where my position is somewhat simplified); on the methodological problems posed by the contrast of two pictures (textual and archaeological) in the general framework of the Empire, cf. Briant 1984b; 1987a: 6–11; Sancisi-Weerdenburg 1990a and chap. 16/18 below. Imperial Aramaic in Kandahār and Central Asia: cf. Briant 1984b: 60 (with references to the previous literature, including Benveniste 1958b quoted in the text); Rapin 1992a: 105, 111–12; and Bernard 1987: 187 (also notes the attestation of the custom of birds stripping the flesh from cadavers [Strabo XV.1.62] and concludes that these two continuities [religious and linguistic] “testify to the profound impress left on the country by two centuries of Achaemenid hegemony”); on the inscriptions from the Treasury of Ai-Khanūm and the theory of borrowings from the Achaemenid administration, see now Rapin 1992a: 273–79 (architecture) and 108–13 (fiscal operations and use of Aramaic): I will allow myself to point out that I made a suggestion along these lines back in 1979 (RTP 317–18). On the (very widespread) theory of “Bactrian autonomy” at the end of the Achaemenid period (supposedly proved by Bessus’s policy), cf. the counterarguments I presented in 1984b: 76–80.

16. From the Punjab to the Indus Delta

- India and its neighbors in the Persepolis tablets: see Koch 1993a: 36–38. On the Indo-Iranian borderlands and the Indus Valley at the end of Achaemenid dominion, cf. Vogelsang 1992: 75–95, 236–41, 246–55; cf. also 1990, where he thinks (pp. 107–8) that the silence of the sources does not necessarily imply that India completely escaped Persian domination; he quite rightly remarks that the Persian authority’s methods of intervention were flexible and adapted to the traditions of the countries; the complex problem of Alexander’s Indian satrapies has been presented by Bosworth

1983 and Dobbins 1984; on Strabo XV.2.1, cf. Bernard 1985a: 85ff.; on Sambus/Samaxus, cf. Egermont 1975: 16–22 and Briant 1984b: 71–74 (powers of the satrap of Bactra); on the problems relating to the route taken by Craterus, cf. Goukowsky 1981: 105–7; dogs from India: cf. the note of Goukowsky 1976: 248–49; among those who provided elephants was certainly Eudamus (cf. Bernard 1985b); on the Indian elephants at the Achaemenid court and in Darius III's army, cf. Bigwood 1993, Bosworth 1993: 413, and Briant 1995d; Indian coin "with satrap": Bernard 1987: 190; seals and impressions of "Greco-Persian" type: Callieri 1992. On all these problems, see most recently Fleming 1992, whose provocative title perfectly expresses the difficulty of the situation regarding evidence; it includes an overview of several works published in India on the question, a presentation of the pottery data, and the (cautious) reaffirmation that the Achaemenid capital may have been located at Taxila (on which, one might consult the discussion between Wheeler 1974 and Nylander 1988).

17. From Pattala to Susa and Babylon: The Persians and the Persian Gulf

• On the return of Nearchus: cf. the older, careful analysis of Schiwiek 1962; see also Bosworth 1988: 139–53 and the remarks of Salles 1988a: 86–87, as well as Potts 1990b: 2–4, and quite recently Besenval 1994: 525–29 (texts related to explorations on the Gedrosian coast); on the complementary nature of Nearchus's and Alexander's expeditions, cf. also Bosworth 1987 (who, p. 560 n. 56, rightly stresses the total misinterpretation of Engels 1978: 118 on the question; see also Kraft 1971: 106–18); on Arrian's text, see also Briant 1987b: 2. The question of the presence and activity of the Achaemenids in the Gulf has been the topic of several overviews by J. F. Salles (cf. Salles 1990, where the sources are presented and commented on; also 1988a, 1992a–b); also consult the summaries by Boucharlat and Salles 1981 and 1987, the recent synthesis by Potts 1990a–b, and Tuplin 1991a: 275–78; on the legend of Erythras, cf. also Agatharcides (Strabo XVI.4.20), who states that the legend was transmitted to the Athenians by a Persian, Boxus, who had left his homeland in the Hellenistic period (on this, see Goukovsky 1974 and Burstein 1989: 42–45); the etiological legend may well have preserved the memory of Persian dominion in the Gulf. On the interest of the Persepolis tablets, see particularly Koch 1993a: 16–21. The ancient geography of the head of the Persian Gulf continues to pose major problems: cf. Briant 1986b and Bosworth 1987; on the islands of deportees: Potts (1990a: 351) thinks they might be Bahrein and Failaka and (p. 355) that a reorganization of the central Persian Gulf took place after the Achaemenid conquest or at the time of Darius's tribute reform at the latest; on the canal near Bushire, cf. Whitcomb 1987; as for the contingents' coming from "the tribes bordering on the Red Sea" (Arrian III.8.5♦: *prosoikoi tēi Erythreai thalassēi*; cf. 11.5: *hoi pros tēi Erythreai thalassēi*), they must, I think, be distinguished from those whom Herodotus (III.93♦; VII.80♦) calls "the inhabitants of the islands in the Persian Gulf [*anaspastoi*]"; but Arrian's text is no less problematic (Bosworth 1980a: 290–91 suspects a lacuna): at Gaugamela, the inhabitants of the Persian Gulf fought separately from the Persians (Arrian III.11.3–7), which implies that their contingents constituted a special subgroup (cf. Quintus Curtius IV.12.8: *partibus copiarum*); I am tempted to think that, under the general command of Orxines (ibid.), Ariobarzanes led the Persian troops and Orontobates the troops from the Gulf coast (Persian and Carmanian), the former even including those whom Quintus Curtius (IV.12.9♦) calls "the Indi and the rest of the dwellers on the Red Sea." On incense from India, cf. Salles 1987: 90. Archaeological discoveries on the Arabian coast of the Gulf: overview by Salles 1990: 119–23, the Achaemenids and Oman: Potts 1990a: 394–400 (the interpretation of the Persepolis tablets offered by Potts 1990a: 391–92 poses formidable problems because of the uncertainty of the place-names—as stressed by the author himself; it seems rather unlikely that a name such as Ti-ul-na-in-to or Ti-li-man could refer to Dilmun: cf. Koch 1990: 304: Tirmān); "Achaemenid" *qanats* in Oman: most recently Planhol 1992: 137; voyages of Archias, Androstheneis, and Hieron: Högeman 1985: 88–93, and Salles 1988: 86ff. (the author thinks [p. 88] that it is a matter of "true explorations of virgin territory"—a phrase that seems excessive to me,

given the fact that the author recognizes that the Seleucids behaved there as "heirs of the Achaemenids": 1987: 89); see also Potts 1990b: 5–10; on Aginis/Ampe/Durine, cf. Högeman 1985: 153–55 (but the conclusions that the author draws about Arab-Achaemenid hostilities do not appear valid to me: cf. chap. 16/10 Research Notes, p. 1018 above); on Gerra, cf. *ibid.*, 85–97; and Sherwin-White and Kuhrt 1993: 97, 200. One last remark: against the position defended (for example) by Roueché and Sherwin-White 1985, Hornblower (1990b: 95) thinks it not impossible that the Greek garrison at Failaka (SEG XII.556) dates to the end of the Achaemenid period—which would require recognition that the Great King had settled Greeks there, without being able to justify it, I must reveal my skepticism about this suggestion (on the text, cf. most recently Sherwin-White and Kuhrt 1993: 173–78).

18. *An Appraisal and Some Questions*

- *List of evidence recently discovered:* (I have not attempted systematically to gather isolated discoveries/publications of Babylonian tablets, or coins.)

At the Center

Pasargadae: Final publication: Stronach 1978 (cf. also 1985b, 1989a).

Persepolis and Fārs: "Rediscovery" of the central panel of the Persepolis Apadana: Tilia 1974–78; walls of Persepolis: Mousavi 1992; Kleiss 1992b; publication of the Fortification tablet seals in progress: Hallock 1977; Garrison 1988–92, forthcoming; Root 1989–93; Keel 1990: 90; inscribed royal seals (catalog): Schmitt 1981; first supplement to the PFT: Hallock 1978 [list of tablets transcribed and transliterated by Hallock before his death: apud Vallat 1993: lxxv–ci]; isolated publications of unpublished Fortification tablets: Grillot 1986; Lewis 1980; Vallat 1994; Akkadian tablet from the Fortification archive: Stolper 1984a; new edition of the various versions of Behistun: Von Voigtlander 1978; Greenfield-Porten 1982; Schmitt 1991b; Porten-Yardeni 1993; Grillo-Susini, Herrenschmidt, and Malbran-Labat 1993; Malbran-Labat 1994; Aramaic version of *DNa*: Sims-Williams 1981; archaeological discoveries in Fārs: Kleiss 1981, 1991, 1992a, 1993; Sumner 1972, 1988.

Susa: Statue of Darius, Darius Gate, and inscriptions: JA 1972 and CDAFI 1974; palace of Artaxerxes II at Susa: Boucharlat et al. 1979f; stratigraphic investigations: Miroshedji 1978–90; residual traces of a copy of the Behistun relief: Canby 1978 and Muscarella in Harper, Anuz, and Tallon (1991): 218 n. 2, 221 n. 14; new inscriptions of Artaxerxes II: Vallat 1979; final edition of the royal inscriptions of Susa: Stève 1987; Elamite tablet with seal from the reign of Darius (MDP 11 308): Garrison forthcoming; small objects: Amiet 1972a, 1990; seals: Amiet 1972b: 284–87; Babylonian tablets: Joannès 1990b.

Ecbatana: Chevalier 1989; Babylonian texts relating to commercial activities at Ecbatana: Dandamaev 1986c; Stolper 1990c; Joannès 1990b no. 1. Excavations in progress on the tell (1995).

Babylon: Inscription of Artaxerxes II: Vallat 1989a; remains of a copy of the Behistun relief: Seidl 1976; cf. Von Voigtlander 1978: 63–66.

In the Provinces

Babylonia: Cadastral documents: Nemet-Nejat 1982; Joannès 1990c; temple archives: e.g., Cocquerillat 1968–85; Frame 1984–91; Joannès 1982, 1992b; Beaulieu 1993; Stolper 1992b; Zawadzki 1986; McGinnis 1994, 1995; private archives: Stolper 1985–92; Joannès 1989a, 1992c; van Driel 1987–89; Wunsch 1993; astronomical tablets: Wiseman 1983: 116–21; Brinkman 1987; Sachs and Hunger 1988; publication of texts by reign: Cagni, Giovinozzo, and Graziani 1985; Giovinozzo 1983; Craziani 1983–86, 1991; Weisberg 1980; coins: Reade 1986; seals and impressions: Wooley 1962; Porada 1979a; Graziani 1989; Bregstein 1993; results of explorations: Adams and Nissen 1972; Adams 1981; Gibson 1972; Achaemenid residence near Sippar: NAPR 1987–92, Gasche 1995.

Assyria: archaeological evidence of Persian presence: see, e.g., Goldstein 1980 (on the glass objects); collection of data by Kuhrt 1995.

Persian Gulf: archaeological discoveries: Salles 1988–90; Potts 1990a–b.

Asia Minor and Anatolia

Evidence of uncertain provenance: Hoard of 1491 siculi: Alram 1993; wood beams decorated with “Greco-Persian” style paintings: Calmeyer 1992a [from a tomb near Dascylium?].

Cilicia: Reliefs from Meydançikkale and Aramaic inscriptions: Laroche and Davesne 1981; Davesne-Lemaire-Lozachmeur 1987; Sayar 1990; Lemaire 1991c, 1993, 1994b; Lemaire and Lozachmeur 1990; Iranian religious title (not previously attested) in a Greek inscription: Dagon and Feissel 1987: 36; “Greco-Persian” reliefs: Hermay 1984.

Lycia: Xanthus Trilingual: CRAI 1974 and *FdX* VI; other evidence from Xanthus: Bousquet 1975–92; Childs and Demargne 1989; archaeological and epigraphic evidence from Limyra: Borchhardt 1976–93; Wörle 1991–93; tombs of Elmali and Karaburun: Mellink 1979.

Caria: Discovery of a fourth-century female’s tomb and its contents, including a diadem similar to the one from tomb 2 of Vergina in Macedon: Özen 1994; Prag and Neave 1994.

Lydia and Sardis: Greek inscriptions from or relating to Sardis: Robert 1975; Hanfmann 1987 and Masson 1987; Lydian inscriptions from Sardis: Gusmani 1964–83; Lydian helmet from Sardis [dated 546]: Greenwalt 1992 and Greenwalt and Haywood 1992; publication of the pyramidal tomb of Sardis: Ratté 1992, and of the tomb of Taš-Kule: Cahill 1988; “Greco-Persian” stelas: Radt 1983; Greenwalt and Heywood 1992: 16.

Hellespontine Phrygia and Dascylium: “Greco-Persian” reliefs in the Dascylium area, several of which were discovered in the 1980s (Altheim-Stiehl, Metzler, and Schwertheim 1983; Cremer 1984; Altheim-Stiehl and Cremer 1985): Nollé 1992 (others have been discovered since then but are not yet published; oral information from T. Bakir); Dascylium excavations: in progress: T. Bakir 1995; tomb(?): Calmeyer 1992a.

Paphlagonia: “Greco-Persian” relief: Doncel and Voute 1984.

Gordian and Phrygia: State of excavations of Gordion: DeVries 1990.

Armenia: Achaemenid sites: Summers 1993; Elamite tablets from Armavir-blur: Koch 1993b [cf. Diakonoff and Jankowska 1990; and now Vallat 1995!]; Hellenistic seals with Persian motifs: Manukian forthcoming; Achaemenid bell-shaped bases found at the site of Dastakert, whose founding goes back to the fifth–fourth centuries: Ter-Martirossov 1994; Achaemenid-type silver vessel: Melikian-Chirvani 1993: 125–26.

Georgia: Many valuable objects of Achaemenid make found in the tombs of the local elite: Tsatskhladze 1993–94 and 1994 (with Rehm 1993).

Syria-Palestine, Judea-Samaria: State of archaeological discoveries: Stern 1982b; *Trans-euphratène* 1–9 (1989–95); excavations of cemeteries in Syria: Moorey 1975, 1980; Persian levels at Tell Mardikh/Ebla: Mazzoni 1990, 1991–92; *Dossiers Histoire et archéologie* 83 (1984): 29–31; archaeological publication of the Persian period at Tell el-Hesi: Bennett and Blakely 1989; ostraca of Beer-sheba and Tell Arad: Naveh 1979–81; publication of the coins from Samaria: Meshorer and Qedar 1991; Lemaire and Joannès 1994; hundreds of Aramaic ostraca similar to the Aramaic ostraca from Beer-sheba (fourth century), dispersed from Idumea, in course of analysis and publication (oral communication from André Lemaire); publication of the Wadi ed-Daliyeh papyri: Cross 1985; Gropp 1986; of the Wadi ed-Daliyeh seal impressions: Leith 1990; Jewish coins: Barag 1985–87; Spaer 1977, 1986–87; various coinages in the countries of Ebir Nari: Milkenberg 1979–94; Babylonian tablet dating to Cambyses year 5 found at Tell Mikhmoret: Stern 1993: 1044–45.

Phoenicia and Cyprus: Excavations at Dor: Stern 1994b–c; monuments: Stucky 1984; von Graeve 1987; Dunand and Saliby 1985; coins: J.-G. Elayi 1993; new Phoenician and Aramaic inscriptions: Deustch and Heltzer 1994; new Phoenician inscription from Kition: Yon and Snyder 1991 and 1992.

Egypt: New edition of Demotic texts: Hughes 1984; new Demotic texts from Saqqara and Memphis: Smith 1972, 1992a–b, in preparation; Devauchelle 1994a–b, Bresciani 1996; new epi-

graphic and archaeological evidence from Wadi Hammamât: Bongrani-Fanfoni and Israel 1994, from Nubia: Heidorn 1991–92, from Wadi Tumilat: Paice 1986/87–93; Holladay 1982–92; Redmount 1995; approximately 90 Demotic ostraca dated between year 32(?) of Darius I and year 22 of Artaxerxes I found at the site of Ayn Manâwir 5 km west of the tell of Douch (personal communication from Nicolas Grimal); new editions of Aramaic texts from Elephantine and elsewhere: Porten 1986–90; Porten and Yardeni 1986–93; Szubin and Porten 1988–92; Lemaire 1991c, 1995b; new publications of the Aramaic version of Behistun: Greenfield and Porten 1982 and Porten and Yardeni 1993 (TADAE C.2.1); discovery of the Aramaic text of the Naqš-i Rostam inscription on an Elephantine papyrus: Sims-Williams 1981; memorandum of Egyptian customs duties in the reign of Xerxes: Porten and Yardeni 1993 [TADAE C.3.7]; Yardeni 1994; Lipiński 1994; Aramaic documents from Saqqara: Segal 1983. Tomb of Udjahorresnet: Bareš 1992; Verner 1989; new publication of the temple of El-Khârga: Cruz-Urbe 1986–88, forthcoming; a *naos* of Darius I: Mysliwiec 1991; evidence from Karnak from the time of Darius I: Traunecker 1973–77 [1980]; autobiographical hieroglyphic inscriptions: von Känel 1980; Lloyd 1982b (reedition); Perdu 1985 (reedition); Sherman 1981; Menu 1994 (new readings); *Satrap Stela*: Duvauchelle forthcoming; Carian-Memphite and Helleno-Memphite funerary stelae: Martin and Nicholls 1978; Gallo and Masson 1993; funerary stela found in October 1994 at Saqqara, whose lower register shows a high Persian dignitary seated on a throne, with a hieroglyphic inscription, “Djedherbes, son of Artjam, born of Tanofrether” (personal communication, H. S. Smith and A. Kuhrt); coins from Elephantine: Lipiński 1982; coins in the name of Artaxerxes III: Mørkholm 1974; Shore 1974; Delta fortresses: Oren 1982–85 (Migdol); Valbelle 1989, Valbelle and Defernez 1995 (forthcoming); small objects: Bernard 1976a; Stucky 1985; Pfrommer 1991, Traunecker 1995 (royal head).

Central Asia (excavations and explorations): Gardin et al. 1976–86; Gardin 1995; Francfort 1989; Lyonnet 1990, 1994; Genito 1986b; Bernard et al. 1990–92; Pitschikjian 1992 [Bernard 1994a]; Ricciardi 1980; Usmanova 1992; Vogelsang 1992; Elamite tablet from Kandahâr: Helms 1978 [cf. Briant 1984b: 59].

Indus countries: Indian bronze coin with an official dressed in Persian style on the reverse: Bernard 1987; “Greco-Persian” impressions: Callieri 1992.

Many small objects, coins, and vessels from museum storerooms or appearing in dealers’ showcases or gallery catalogs: e.g., McKeon 1973; Foss 1975; Francfort 1975; Moorey 1978; Gunter 1988; Gunter and Jetts 1992; Moorey 1982–88; Porada 1989; Tanabe 1989; Keel 1990: 90; Lemaire 1991d, 1992; Rozenberg 1993 etc.; Persian artillery ball dating to 546 at Phocaea: Ozgigit 1994; Briant 1994g.

Comments

• On the problems touched on here (I would note that the discussion stands in logical relation to that in chap. 11/6 above, pp. 447ff.), cf. Briant 1984b: 59–61 (Kandahâr tablet: conclusions already reinforced by Jones and Stolper 1986, and now by Koch 1993b [Elamite tablets from Arnavir-blur: chap. 16/14 above, p. 743], and Vallat 1995 too, as well as Garrison forthcoming [Susa tablet]), and Briant 1987a: 7–11 (critical analysis of the views of Moorey 1980 on what I call the “(pseudo-)statistical vision” of Achaemenid dominion), also Sancisi-Weerdenburg 1990a; add Postgate 1993: 257–61 on the Assyrian Empire (“Archaeological visibility”) and Postgate 1994. On Dascylium: I have benefited from two visits to the site (July 1993, July 1995), and I was able to become acquainted with the initial results thanks to the generosity of Tomris Bakir, who has directed the excavations there for several years (she reports on them in Bakir 1995); Armenian sites: Summers 1993. Concerning the surprising rarity of Achaemenid evidence at Sardis, I will permit myself to quote at length the introductory sentences of the paper presented by C. H. Greenwalt, Jr., at the Toulouse symposium in February 1995 (= Greenwalt 1995):

The only explanation can be the chance of survival and recovery. Conspicuous architectural monuments and stores of wealth (tombs) have been intensively pillaged; more significantly, only a small fraction of the large site has been archaeologically explored, and exploration has concen-

trated on monuments of other cultural eras. In addition, a difficulty in distinguishing Persian from Lydian in the archaeological record, due partly to continuity in building and ceramics traditions, partly to inadequate chronological references, obscures the surviving record.

I will also remark that, concerning Babylon, recent investigations tend to reevaluate the genuinely Achaemenid involvement (even of Susian origin) in the structures built in the town after the Persian conquest (Gasche 1991b and 1995 promising a dedicated study), and that, according to Fleming 1989, it was during the Achaemenid period that there appeared in Babylonia a ceramic known as "eggshell ware." — On museums' hoards, many recent examples deserve to be mentioned (and considered): first, the four cedar beams covered with "Greco-Persian" paintings and published by Calmeyer 1992a; he mentions, without further detail, that these remarkable objects were given in 1989 to a museum in Munich after being in a private collection "for several decades" (p. 7); second, the cache of 1491 siculi published by Alram 1993 was acquired in 1990 by the same museum in Munich after belonging to a private collector (most of the time, treasures are scattered when they are auctioned, or even when they are found); yet another, the two Persepolis Elamite tablets (one bearing a seal inscribed in Aramaic belonging to Parnaka) that belong to the collection of the Biblical Institute of the University of Fribourg, and whose existence was recently revealed (Keel 1990: 90; publication by Vallat 1994). To these examples may be added, despite its being a special case, the pottery collected in Armenia by C. A. Burney during his 1955 explorations: it has remained in storage in the British Institute in Ankara for several decades (Summers 1993: 87). It might perhaps be worthwhile to mention, finally, that according to information received by Summers (1993: 96), twenty silver bars were discovered in 1938 near Cimin Tepe, some of them (apparently) with cuneiform inscriptions [I wonder whether they might not be comparable to the "ingots of silver" found at Nūš-i Jān, one with a cuneiform inscription: Bivar 1971, esp. pp. 102 and 107], but apparently these objects are now lost! In short, there is no doubt that "excavations in the museums" will reveal many surprises (cf. also the painstaking and passionate inquiry into the "Athos Treasure" by Nicolet-Pierre 1992). The stela found in 1994 at Saqqara (for which I owe knowledge, a brief description, and a photograph to H. S. Smith and A. Kuhrt) was to be published in *JEA* 81, 1995; the information reached me at the last moment, and I was not able to integrate it into the discussions of chap. 12/1. On the *ādē*, the literature is considerable: cf. Tadmor 1982, Grayson 1987, Parpola 1987, and most recently Parpola and Watanabe 1988 (French translation of the treaties in Briend, Lebrun, and Puech 1992: 67ff.), and the historical comments of Cogan 1993 on the methodology of Assyrian imperialism: although the investigation cannot be carried through in detail here, reading these works has persuaded me that a systematic comparison would add much to the analysis of relations between the Achaemenid central authority and the kings and communities of the Achaemenid Empire called "independent"; Tell Fekheriye statue and dual title of the "king-governor," see already the remarks of Abou-Assaf, Bordreuil, and Millard 1982: 109–12; since then, Liverani 1988: 88–89 (the entire article raises a series of problems that might equally bear on the discussion of Achaemenid imperial formation: cf. Postgate 1993 [reply to Liverani]); on the "friendly" kingdoms of Rome in the Near East, cf., for example, Braund 1984, who notes (p. 116): "The king's relationship with Rome was the very foundation of his position [in his kingdom]": I am also tempted to think that it was the same for the kings recognized (or even appointed) by the Achaemenid authority, and obviously also for dynasts who at a particular moment received the title satrap/governor. — To sum up, no significant progress will be accomplished until after the completion of regional and even microregional analyses taking into account the various "markers" and weighting them appropriately: the attempt in the chapter ending here is nothing but an outline that will also need to be inserted, in the future, into the framework of the comparative history of imperial formations in the Near East of the first millennium.

Chapter 17

The Great King, His Armies, and His Treasures

1. *The Accession of Darius III*

• *From Artaxerxes III to Darius III: Diodorus and Bagoas.* I have never encountered an in-depth analysis that departs to any extent from a simple paraphrase of the ancient authors. Generally speaking, historians simply see in these events the proof and illustration of the weakening or even disintegration of the central authority (e.g., Badian 1985: 421–23; Bosworth 1988: 18, etc.).

• *Darius III's Illegitimacy: The Macedonian Version.* On Arrian II.14.4–9, see already my analysis in RTP 371–84, which I amplify here on several points.

• *Darius III and the Achaemenid Royal Family.* On the theme of the origin of kings and on Aelian XII.43, cf. some remarks in Briant 1973: 19–24.

• *Violence and nomos.* On this theme too, see Briant 1973: 179–80.

• *Darius and Bagoas.* On the chronology of the reigns: Babylonian texts put the accession of Arses in August–September 338 (Stolper, *CAH* VI²: 240; van der Spek 1993a: 86); thus his year 1 began in April 337 (Badian 1977a: 49–50); the date of Arses' assassination is generally fixed at the end of 336: the *Dynastic Prophecy* states that Babylon fell into Alexander's hands when Darius was in the fifth year of his reign, and another tablet (ADRTB no. –330) dates Gaugamela to Ululu 24 of year 5 of Darius, or October 1, 331 (Bernard 1990b: 516); we may also stress that a Samaria papyrus (SP 1) is dated as follows: "The twentieth day of Adar, the second year, accession year of Darius the king"; the text thus refers directly to the moment of transition between Arses/Artaxerxes (not called by name) and Darius: it dates to March 19, 335 (Cross 1985: 10; Gropp 1985: 6). On support for Darius: I do not see the basis on which Berve (no. 763) makes Hystaspes a descendant of the satrap of Bactria at the beginning of Artaxerxes I's reign or how Quintus Curtius VI.2.7 shows that he "belonged to the Achaemenid family"; the marriage of Darius to a representative of the family of Artabazus of Hellespontine Phrygia (Berve no. 116) must remain in the realm of unverified hypothesis; on the *damnatio memoriae* of Arses: Dandamaev (1989a: 313) thinks that he is denounced by the *Dynastic Prophecy*; but the passage he cites (*BHLT* II.22–24) quite certainly does not designate Arses but Cyrus instead (cf. Sherwin-White 1987: 10–11; Kuhrt 1990a: 181–82; Briant 1993c: 18).

• *The New Great King.* On Darius's name before his accession, cf. Schmitt 1982c: 86, 90–91 (a discussion of the name Codoman attributed to him by Justin).

• *The Accession of Darius III in Achaemenid Dynastic History.* Several authors think that the transition from Arses to Darius was marked by Babylonian and Egyptian revolts: cf., for example, Bosworth 1988: 18, 34, who draws very confident conclusions that "the military weakness of the Persian empire was a commonplace"; but this is to register as "facts" what are merely theories based on fragmentary and elliptical evidence; on the Egyptian revolt (Khabbabash) and the considerable uncertainties that remain, including on the chronology, cf. chap. 16/9 Research Notes, p. 1018 above; the Babylonian revolt is inferred from a Babylonian tablet (of uncertain reading; Royal list of Uruk), which simply mentions the name, Nidin-B[ēl], of a king preceding Darius III; see on this text the very cautious remarks of Kuhrt 1987a: 148–49 and Stolper, *CAH* VI²: 240: "He may be one of the rebels from the reign of Darius I, misplaced by manuscript corruption; but he may also be an otherwise unrecorded local usurper who claimed power in Babylon during the unstable period of the assassinations that brought Darius III to the throne." These remarks obviously do not imply that the dynastic troubles that emerged between the assassination of Artaxerxes III and the accession of Darius III (August–September 338 – late 336) had no detrimental repercus-

sions here and there (cf. Kuhrt and Sherwin-White 1994: 316 n. 13); but it is necessary to observe that the available evidence does not authorize the opposite conclusion of generalized rebellion or collapse of imperial structures shortly before 334.

2. *The Great King and the Persian Aristocracy*

- See the discussions in chap. 8 above and chap. 18/3, pp. 852ff.

3. *The Royal Armies*

- *The Greek Thesis.* See already chap. 14/7: Darius II and His Armies, pp. 597ff. (where the Babylonian evidence from the reign of Artaxerxes II has already been introduced *in extenso*), and chap. 15/3: The Great King and His Armies, pp. 631ff. The Greek interpretation is systematically repeated in recent work: Dandamaev 1989a: 312, for example, is a concentration of all the stereotypes on Persian military decadence (on the Egyptian expedition in 343): "it should not be forgotten that the unity of the empire was fought in the main with the assistance of Greek mercenaries, instead of with the Persian army, who for a long time had drawn its military quality and strength from the Greeks, both in tactics and weaponry. It is significant that to crush the rebellion in Egypt, Artaxerxes not only used Greek mercenaries, but also appointed Greek generals as the commanders of his forces. Persian generals were only added to the staff as a precaution." No less caricatured are the snap judgments of Bosworth (1988: 17–18): not content to state that at the end of the 360s "practically the entire empire west of the Euphrates was alienated from the Great King at Susa" (source? Isocrates?), the author paraphrases Diodorus and writes, without batting an eyelash, that the reconquest was due solely to Greek leaders' leading Greek troops; as a result, "Persian success depended on the Great King's ability to pay and keep mercenaries"; this interpretation is already found in Parke 1933: 165–69; it is unfortunately repeated, without much change, by Seibt 1977: 122–45 and 194–204; likewise in Marinovic 1988: 106–23 and, in part, in Picard 1980: 217–24, more nuanced to be sure (cf. pp. 288–90); most recently, Petit 1993: 54–55, with my critical remarks (Briant 1994b: 120–22). It is remarkable that aside from an inconsequential remark by Marinovic (1988: 123 n. 39), these authors do not in the slightest question the credibility accorded to Diodorus (which all of them copy more or less); all of them quote favorably the famous passages in Plato and Xenophon on "Persian military decadence" (Plato's text, *Laws* 697e, is even made the epigraph of Parke's chapter 18 [1933: 177] on Greek mercenaries in the Achaemenid army between 340 and 330). The recent article of Landucci Gattinoni 1994 adds nothing to this discussion; I will simply note that the author stresses, as if it were his own idea, the very important role played by the Greek mercenaries in Darius III's army (p. 33). Happily, the article by Tuplin 1987c is far better informed and sets forth many real problems (see below).

- *Diodorus/Ephorus and the Greek Mercenaries.* On the inspirer (Ephorus) of the passages devoted to the revolt of Artabazus of Hellespontine Phrygia, see Moysey 1975: 303–5, 307; Ephorus probably also underlies many anecdotes in Polyaeus and Pseudo-Aristotle introducing Greek mercenaries in satraps' armies: cf. Cracco Ruggini 1966–67.

- *The Use of Mercenaries and "Decadence": Achaemenid Truth and Athenian Filter.* On theories regarding the Persian *tryphē*, cf. Briant 1989a, and chap. 7/7, pp. 299ff. above; Athenian use of the victories in the Persian Wars: in general Loraux 1981 (partial quotation in Briant 1992d: 148–49), particularly in the fourth century (use of Persian references in civic discourse: Briant 1987b and 1989a: 39; cf. also Nouhaud 1982 [e.g., pp. 321–24] on the polemical use of the memory of the Ten Thousand in Isocrates); and again in the Hellenistic period: R. Étienne, M. Piérart, *BCH* 99 (1975): 51–75 (pp. 63–75); on Arrian VII.7.7, cf. Briant 1986b: 13–15.

- *Command Structure.* On the terms *paralambanein/paralepsis*, cf. Holleaux 1968: 88–90: the term has to be translated 'taking possession' and not 'taking by assault' (cf. also, following Holleaux, RTP 18–19); as I indicate in the text, the use of this technical vocabulary, in Diodorus, perfectly explains the jurisdictional relations between Greek and Persian leaders: the operations

led by the former are under the strategic and political supervision of the latter; for all these reasons, it is not possible (despite Nepos, *Dat.* 5.6, adopted without discussion by Sekunda 1988b: 44) that upon his departure from Acre, Datames awarded command of the army to Mandrocles of Magnesia.

- *Memnon, the Persian Satraps, and Darius III.* On the position of Memnon in 334, see the appropriate remarks of McCoy 1989 (cf. in particular, p. 425 n. 40); the fact that Arrian also seems to make Memnon the linchpin of Darius III's strategy (II.1.3, to be compared with Diodorus XVII.29.4) does not necessarily rehabilitate Diodorus: on Memnon's role, cf. chap. 18/1, pp. 817ff.

- *The Great King and the Satraps' Mercenaries.* The theory repeated in the text (precursor to the Hellenistic armies) is presented by Seibt 1977: 90–92; at the same time, Seibt needs to recognize (somewhat conflictingly) that the apparently easy application of the royal order illustrates what he calls a restoration of the authority of the central power; for his part, Moysey (1975: 299–300), like other historians (whom he quotes), is quite wrong to believe that the satraps really did let their mercenaries go, which leads him to propose purely speculative reconstructions (it is true that he thinks that, because Ephorus was an eyewitness, an inspirer of the scholiast [1975: 301–3], he was historically “generally accurate”: Moysey 1991: 113–14—an assessment directed specifically against Weiskopf 1989 that leaves me speechless: chap. 15/7, Research Notes on “A Summary of the Discussion,” p. 997); the most abrasive counterattack was made in fact by Weiskopf 1982: 473–75, who thinks that the order attributed to Artaxerxes actually risked creating disorder in Asia Minor and Greece, just as it did in 326–325 (on Diodorus XVII.106.2: cf. Badian 1961: 27–28, who thinks that Alexander then enrolled the mercenaries into his own service); cf. also Briant 1994b: 121–22.

- *Mercenaries and “Mercenaries”: The Greeks and the Others.* I would note that the place of Greek mercenaries in the Near East before the Achaemenid conquest has frequently been overestimated as well, whereas they obviously constituted only a very small part of the mercenaries levied by, for example, the Assyrian kings (on this, cf. the useful discussion by Helm 1980: 135–60); in any case there does not seem to be a specific word that can be translated ‘mercenary’ (on the foreign contingents in the Assyrian armies, cf. Malbran-Labat 1982: 89–101 and 103–4); on the variety of ethnic origin of the Achaemenid garrisoners and on the mercenaries in Xenophon's *Cyropaedia* and *Oeconomicus*, see especially the thorough discussion of Tuplin 1987c: 168–75, who, without concealing the difficulties, thinks that in the *Oeconomicus* Xenophon distinguishes the “pure mercenaries from the military communities” (p. 175), the latter designating the military colonies (Iranian, for example) settled in the *khōra* (cf. pp. 173–74 and 232–34); in a discussion of satrapal forces, he does not neglect to raise the case of Orontes' and Tiribazus's armies, stressing that “the Armenians and Mardians are not mercenaries in the sense [of Greeks hired by a satrap or the king]” (p. 195); later he returns to this important point, inquiring into Xenophon's phrase *hoi basileōs misthophoroi* (*Anab.* VII.8.15), which he thinks applies exclusively to the Hyrcanian and Assyrian troops of Comana: at the same time he emphasizes the difficulties of the interpretation (pp. 222–23; on this topic, see also Petit 1990: 128–32 and the incidental remark of Hornblower 1990b: 95: “the tricky word mercenary”); on the existence of East Iranian colonies in Asia Minor, cf. Briant 1984b: 92–94 (where references to earlier studies will be found, in particular those of L. Robert; cf. also Tuplin 1987c: 195 n. 98. On *symmakhoi* in Artaxerxes III's army (Diodorus XVI.44.4): Seibt (1977: 98 n. 1 and 221) equally well distinguishes mercenaries proper but without drawing any particular inferences. On Arrian III.8.3, Bosworth (1980a: 289) concludes that the Saka “were independent of the satrapy of Bactra” and contrasts the situation in the fifth century, when they were subjects of the Great King, referring to the tribute catalog of Herodotus III.93; Arrian's vocabulary actually raises several questions about the status of the Saka (cf. Briant 1982b: 198–203 and 1984b: 71–72); I note meanwhile that the use of the word ‘ally’ (*symmakhos*) is frequent in Xenophon when he is speaking of contingents brought by subject peoples: this particularly the case in regard to the Hyrcanians (*Cyr.* IV.2.21: *symmakhoi kai koinōnoi*), who he says

switched voluntarily to Cyrus (IV.2.4); they are "those who first became our allies," states "Cyrus" (IV.5.53-); for this reason, still following Xenophon (IV.2.8), they had a special place in the Empire; the word 'ally' is also found in Herodotus, where, it appears, *symmakhos* is simply a label for anyone opposed to Persia (cf. in particular VIII.113 [including the Saka]; also V.32) and thus does not designate a particular political status. It is obviously possible that from the narrowly Hellenocentric point of view of Diodorus's source, the Greeks of Asia Minor were *symmakhoi* (in the sense of voluntary allies) and not subjects: but this changes nothing about the fact that they, like all the subject peoples, had to furnish contingents in the form of imperial levies (royal armies) or "mercenaries" (in the Achaemenid sense); under these conditions, the Saka brought by Mauaces (Arrian III.8.3) might have been levied by Bessus as "mercenaries" (= paid imperial soldiers): but I strongly doubt that the satrap of Bactra offered them the choice of not participating in the campaign of 333-331: in the context in which *symmakhia* appears, we see on the contrary that the sending of troops resulted from an obligation—even if it was expressed in the form of an official treaty with the Great King (e.g., Plutarch, *Art.* 24.6 and chap. 16/18 above, pp. 766ff.); on the word *symmakhia*, see also Launey 1949, I: 36-42, particularly 41-42 on the contingents sent by the towns to the Hellenistic kings, which I see as a situation very close to that evoked by the *symmakhoi* of Artaxerxes III in Diodorus XVI.44.4. One last observation: the discussion here holds equally as well for the *xenoi misthophoroi* so often referred to by Arrian in Alexander's armies; it seems clear that the term can also designate soldiers levied in the subject populations of the Macedonian king (cf. Berve I: 144-49, with the critical remarks of Parke 1933: 186-98 and Griffith 1935: 27-32).

• "Greek Army and Barbarian Army." On Autophradates' army, Burn (1985: 377), by way of explaining what seemed to him inexplicable, suggests that in this exact case the limited number of Greek mercenaries has to be connected to the consequences of the war in Arcadia! The remark is repeated by Sekunda 1988b: 49, who adds that Autophradates really did command the expeditionary force of which he took command at Acre: but the (purely hypothetical) remark does not remove the difficulty (cf. also Sekunda 1992: 27, who thinks that the decision to raise 120,000 "mercenary *kardakes*" as hoplites was made because of the shrinkage of the number of available Greek mercenaries; but, I stress, the word "mercenary" does not appear in Nepos, who simply uses the word *kardake*: *Dat.* 8.1.2); on the satrapal contingents at the Granicus, cf. Bosworth 1980a: 111-13, 125 and "Mercenaries and 'Mercenaries': The Greeks and the Others," p. 792; on the battle of the Granicus and the contradictions between Diodorus and Arrian, see the lucid analysis of Badian 1977a; the various phases of the battle of Gaugamela present equally difficult problems: cf. Marsden 1964 and Wirth 1980, but Bernard 1990b: 515-25 adds much that is new. The number of (Greek) mercenaries around Darius III has caused the spillage of much ink: according to an argument already put forward by Grote and Parke, Seibt (1977: 180) thinks that the figure 50,000 is the sum of the 20,000 mercenaries at the Granicus and the 30,000 at Issus, figures that he recognizes as accurate (pp. 180-94), which leads him to note that this is the highest percentage of mercenaries ever observed in an Achaemenid army. But it has long been remarked that the totals offered by Arrian and Quintus Curtius are at the least subject to caution, as noted for example by Badian 1977a: 284-85 for the Granicus; for his part, Devine (1988: 7-10) reduces the number of Greek mercenaries in 334 to 4000-5000, figures given by Diodorus (XVII.7.3) and Polyaeus (V.44.4) for the mercenaries sent by Darius at the beginning of the campaign led by Memnon in 337 against the first Macedonian expeditionary force; as for the figure of 30,000 mercenaries at Issus, it clearly goes back to Callisthenes, whose tale of the battle is vigorously criticized by Polybius (XII.18-22), but Polybius cites Callisthenes' figure without skepticism or criticism (18.2); the figure is rejected by Devine (1985b: 47), who thinks that the number of mercenaries and Persian infantry (*kardakes*) could not have been larger than the number of Macedonian phalangists (12,000); another reduced figure, no more than 10,000, according to Beloch, cited by Parke 1933: 183-84; it is easy to observe that all of the estimates are the result of a narrow skein of hypotheses that fit together without necessarily reinforcing each other. The ancient sources on the *kardakes*

are collected by Segre 1938: 191–92, Bosworth 1980a: 208, and Knauth and Najmabadi 1975: 82–83; the lexicographers' notes are not particularly precise: "They are soldiers in Asia" (Photius) or "the barbarians that fight under the command of the Persians" (Hesychius); Polybius's incidental mention (V.82.11) does not add any decisive element (it is not possible to suppose, with Launey [1949, II: 486] and some others, that the word *kardakes* conceals Carducian ethnicity). We must fall back on Nepos and Arrian: the *kardakes* are Persian infantry, armed like hoplites, in contrast to the light infantry (*psiloi*; Arrian II.8.6). The relationship with Strabo's Cardaces (XV.3.18) is problematic, but it must be noted that in Strabo the Persian *agōgē* touches on the selection of the best of the young people in the eyes of the king, who conferred gifts and honors on them. In any case, in the military context they were clearly an elite corps. Three additional remarks concerning them:

(1) Devine (1985b: 48) identifies them with the 20,000 barbarian infantrymen placed by Quintus Curtius on the left flank under the orders of Aristomedes (III.9.3); meanwhile, Aristomedes is named with several others, including Thymondas, as leaders who managed to escape the battlefield with their troops (*stratiōtai*; Arrian II.13.2–3); even though Arrian does not specify the identity of these *stratiōtai*, it seems clear that they were mercenaries (of whom Thymondas was in command) and not *kardakes*.

(2) Sekunda (1988b: 42) suggests attributing to Datames the creation of this corps of *kardakes*, among other innovations (borrowing of Greek arms) that the author also credits him with, but the evidence for this theory is singularly lacking; the same author (1992: 52–53) thinks that the *kardakes* numbered 120,000, but for various reasons the appeal to Xenophon, *Anab.* III.5.16 is totally unjustifiable; nor do I see the basis for his suggestion that the *kardakes* can be assimilated to the *misthophōroi basilēōs* of Xenophon; on this topic, see also the remarks and theories of Head 1992: 42–44.

(3) Let me suggest a *hypothesis*: we know that, in Central Asia, Alexander had 30,000 young men drafted, who must have been armed and trained in Macedonian fashion (cf. Quintus Curtius VIII.5.1); they are called *epigonoi* by the authors, who report their arrival at Susa in 324 (cf. Arrian VII.6.1; Diodorus XVII.108.1–2; Plutarch, *Alex.* 71.1); it is possible that the order extended to all the satrapies, including Egypt (Suda, s.v. *basileioi paides*), and that the system had been adapted from the Macedonian institution of Royal Pages (cf. Hammond 1990: 275–80; Thompson 1992: 50 and nn. 15–16); but I am tempted instead to think (without being able to prove it) that if Alexander was able to put this system in place so easily and quickly, it was because it already existed in the Achaemenid period (the transformation introduced being simply the "Macedonization" of these levies): that is, the military instruction of the young recruits was more or less already in the satraps' hands; under this theory, the *kardakes* designate nothing more than the Persian subset of an age class, or else the term would have been extended to all the young men raised and educated in Persian fashion; hence the definition found in Photius and Hesychius: *Kardakes: hoi strateusamenoi barbaroi hypo Persōn*.

• *Persian Technical and Tactical Innovations (Especially in the Infantry)*. Cf. Head 1992: 39–42; Darius's elephants: Briant 1995d; chariots: Sekunda 1992: 25–26 and Head 1992: 44–48 (the question deserves to be reopened *in toto*; a war chariot has recently been found near Sardis, at the site of Bin Tepe [cf. Greenwalt 1995] and a scythed chariot in the Granicus Valley: they are both being analyzed). Besides, while publishing a lead sling ball inscribed with the name Tissaphernes, Foss 1975, starting with Xenophon, *Anab.* III.3.16, thinks that around 400 the Persian slingmen (in contrast to the Rhodian slingmen) used not lead balls but stone balls. He strongly suggests (and this is an understatement) that it was on the example of the archers in the corps of Greek mercenaries that Tissaphernes introduced lead balls in his armies in Asia Minor, when he was sent there after Cunaxa and its consequences (cf. chap. 15/4). I must say that Foss's position (which is not really discussed by Pritchett 1991: 46–47 in his discussion of lead sling balls, pp. 43–53) leaves me perplexed and skeptical. He mentions (p. 26) that the Greeks "providentially" (*sic*) came upon a

supply of lead in a nearby village (the mercenaries were then marching along the east bank of the Tigris), but providence had nothing to do with it! Xenophon in fact states that in the village he found "gut [for bowstrings] in abundance and lead for the use of their slingers" (III.4.17 \diamond); it is obvious that as in another case (III.4.31: supplies of food for men and horses, stockpiled by the satrap these were strategic stocks controlled by the administration (see Briant 1986c: 37–38), in this case it was clearly an arms depot—specifically an arsenal specializing in hurling-weapons; from this we may conclude that the lead was stockpiled for the manufacture of lead balls, and the theory of Persian borrowing of Greek technology loses much of its credibility (many sling balls have been found at Dascylium—some of them with Greek inscriptions [personal names]; they remain unpublished I owe my knowledge of them to the kindness of Tomris Bakir). Persian demographics: Briant 1987a: 21–22. Persians in the Hellenistic armies: Launey 1949, II: 563–80 (Medes and Persians).

4. Subject Populations and Tribute Economy

• *Hoarding and Stagnation: Obvious but False.* See Olmstead 1948: 289–99; against Olmstead's position, see the critical remarks of Stolper 1985a: 143–46 (my inspiration); see Center and Periphery, pp. 804ff. On Droysen and his disciples (not that the founder desired disciples!), cf. RTP 291–96 and 281–90 (colonial historiography); on Marx and "Asiatic stagnation," cf. RTP 419–22 and 477–79; central treasuries and the accumulation of tribute: see the calculations offered by Altheim and Stiehl 1963: 120–37: even if the numerical results seem rather shaky, the authors have the merit of recalling that the ancient authors' presentation (uninterrupted stockpiling of tribute from the time of Cyrus) rests on nothing (on this point, cf. also Tuplin 1987b: 138–39); on the inventory of Darius's treasuries from Classical sources, cf. Bellinger 1963: 68–69, De Callatay 1989: 260–61, and Price 1991: 25–27; on the term *akribōs* in Heraclides of Cyme quoted by Athenaeus IV, 145d, and more generally in the Greek "economics" literature, see the very interesting essay of Farraguna 1994, especially pp. 567–76, and his definition of the *akribeia*, p. 588: "The attention given to economic calculations down to the smallest detail." The theory of the sudden monetization of Darius III's treasuries by Alexander has recently been revived by De Callatay 1989, but on this presentation I share the methodological criticisms of M. Price and A. M. Prestianni-Giallombardo (after Callatay's contribution: pp. 274–75); cf. also the remarks of Bellinger 1963: 68–73; the subtitle of De Callatay's article ("motionless cash or circulating cash?") is obviously inspired by Schlumberger 1953, but he simply contrasted, in the fifth and fourth centuries, royal money ("nearly motionless") and Greek coins ("living money"); on the use of weighed silver in Hellenistic Babylonia, cf., e.g., Sherwin-White and Kuhrt 1993: 63–65, Stolper 1994a (although the tablets also refer to the use of coins), Joannès 1994a; local fractional currency: cf. in particular Mildenberg 1979, 1988 (with Lemaire in Laperrousaz and Lemaire, 1994: 283–84 and 287) and the royal coins (fractions of siculi) described in the catalog *Münzen und Medaillen AG*, November–December 1988, no. 73–74 (I owe the reference to R. Descat). On models: see that of the *Early State*, presented by Claessen 1989, and used by Sancisi-Weerdenburg (e.g., 1988a); the discussion of the concept of feudalism (an old debate) by Petit (1990: 243–53) appears to me to be marked by much confusion (cf. on this point also the remarks of Stolper 1985a: 146–49, who stresses the differences between medieval rents and the Babylonian system of plots managed by the *Murašū*). The roads/commerce problem: cf. chap. 9/3: Customs Collection and Trade, pp. 384ff., as well as the reflections of Tuplin 1991a: 278–81; on the difficulty of interpreting the archaeological evidence for reconstructing the regional and interregional commercial roads, cf. in particular Salles 1991a, 1991b: 53–58, and 1994; we may certainly consider the Babylonian temples as special points of contact: e.g., Joannès 1982: 235–60 (origin of gold and silver as imports; cf. p. 255 on the role of Babylon as a place of redistribution of merchandise).

• *Center and Periphery.* I have often touched on the problem of the development of productivity: cf. RTP 475–89, Briant 1982c (more advanced German version) and 1994g; on Xenophon's view, cf. RTP 176–88; on the economic character of the conquered countries (or those acquired

by gift), cf. the reflections of Bertrand 1990: 134–35 (quotation); inscription of Arsinoe in Cilicia: Jones and Habicht 1989 (lines 6–9), which can be compared with other evidence (cf. Sherwin-White and Kuhrt 1993: 67–71); paradises, garden estates: RTP 452–54; king and satraps as protectors of peasants: RTP 365–70; *dōrea* and putting to seed: Stolper (1985a: 148) stresses that in Babylonia the concession-holders (“feudatories”) did not reap economic advantage from possible increases in yield; but this is not the case with the Murašū, who, on the contrary, had every opportunity to increase the productivity of the lands; on the concession of Mnesimachus, see the remarks of Descat 1985: 108–9 (there too, it is not so much the concession-holder himself as the usufructuror [Artemis temple] that carried out the work of improvement); this is also implied by the case of the city of Telmessus, which obtained from Ptolemy the right never to be given in *dōrea* — “neither the city, nor the villages, nor any of the territory of the Telmessians” (Wörle 1978, lines 20–23), because they feared the installation of a tyrannical regime with the certain increase in charges (cf. Wörle 1978: 207–12 and Savalli 1987). On the explorations in the area of Tell el-Maskhuta: cf. Paice 1986–87, 1993 and Halladay 1992. — Polybius X., 28.2–4 and the *qanats*: cf. RTP 94–100 (analysis of the text), 492, 499–500 (method of transmission of information down to Polybius), also Briant 1984b: 67 (military aspects of the royal decree); the text is also used by Goblot 1979: 70–72, who suggests (rightly, it seems to me) that the Achaemenids extended the system of *qanats* on the Iranian Plateau; but it must also be recalled on the one hand that many *qanats* go back to an earlier period (it is not an Achaemenid invention) and, on the other, that the dating of these works poses major problems (in B. Geyer [ed.], *Techniques et pratiques hydrauliques traditionnelles en domaine irrigué* [Paris, 1990]: 328, P. Sanlaville writes: “As for me, I would like to think that we must go quite far back in time, several millennia before the Common Era no doubt, for the origin of these *foggara*, these subterranean channels”); hence the careful proof needed before concluding (as Goblot automatically does) that the spread of *qanats* far and wide was automatically the work of the Great Kings: cf. for Oman the remarks of Salles 1990: 132 and Poits 1990a: 388–92 [Goblot, p. 71, wonders whether the place-name Canate in Arrian, *Indica* 29.4 might render the word *qanat*; I will simply observe that the technical term *diōryx* used by Arrian can refer to a channel open to the sky: cf. *Indica* 39.1 and Whitcomb 1987: 330–31]; *qanats* in northern Arabia: e.g., Graf 1990a: 137, and in the oasis of El-Khārga, Bousquet and Reddé 1994 (cf. also chap. 12/1: “Darius in the Temple of Hibis (El Khārga),” p. 475); on these problems, see most recently the minute analysis of Planhol 1992, who (while criticizing Goblot) thinks overall that “the technology of the drainage channels . . . was the basis of Achaemenid power.” On the royal administration of water in Achaemenid Babylonia, cf. Stolper 1985a: 36–51 and Bregstein 1993: 116–30. Economic life in Babylonia: Stolper (1985a, chap. 6) concludes that even though the evidence points to an increase in indebtedness of some individuals (for reasons he presents), “[t]he Neo-Babylonian and Achaemenid periods [can be considered] the beginnings of a long phase of general growth [expansion of population, resettlement and cultivation of long-abandoned territory]” (p. 133); in particular taking into account the results of surveys (Adams 1965: 58–61; 1981: 185–92; Adams and Nissen 1972: 55–57; Gibson 1972 [Kish region: cf. also McEwan 1983], and Lendle 1986; on explorations in Susiana, cf. Boucharlat 1990: 157–66), all the specialists now agree on the fact that the Babylonia of the end of the Achaemenid period was not affected at all by an economic crisis, quite the contrary (cf. van Driel 1987 and 1989: 226; but I am not sure I understand what the author means to say when he writes, challenging Stolper’s view of the end of the Murašū archives, that the Achaemenid period “seems to have been a time of privatization, tempered, perhaps, we might concede, by tyranny”); Joannès 1995 emphasizes that it is very likely in the Achaemenid period that the system of two harvests, winter and summer, was introduced. Hydraulic works in Hyrcania: cf. Ricciardi 1980 and Vogelsang 1992: 293–98; Arachosia: Vogelsang 1992: 255–67; on the development of Samaria, cf. Zertal 1990 (who, pp. 15–16, thinks the Achaemenid administration was highly visible); to Samaria may be added the case of northern Syria, recently studied by Sapin 1990 (Achaemenid precedents), and Mazzoni 1990, 1991–92, who writes: “It is

with the blossoming of the Achaemenid phase that produced a boom and an economic transformation of the region, rich with promise" (1990: 193). — To finish up on this point, in a word, the problems I have just presented are also faced by the Assyriologists who deal with the (economic and political) significance to be attributed to the water policy followed by the Neo-Assyrian kings: on the work of Oates 1968 (particularly chap. 3), cf. the reflections of Reade (1978: 173–75) and Liverani (1971: 155–59); see also, regarding the Roman Empire, Nicolet 1978: 899–902, and regarding the Hellenistic world, the debate between É. Will on one side, A. Kuhrt and S. Sherwin-White on the other, in *Topoi* 4/2 (1994): 432 and 452, as well as the remarks (of rather Finleyesque inspiration) of van der Spek 1994.

• *"Overexploitation of Tribute" and Revolt.* Level of tribute: cf. Descat 1985; on the burden of tribute, cf. also Tuplin 1989b: 140–45 and Nixon-Price 1992: 177–78 (for these authors, the theory of the heaviness of Persian tribute is implicit but significant in the contrast they make with the moderation of Athenian tribute when it began). Dandamaev (1989b: 193) suggests that in the fourth century "the collection of taxes turned into flat-out pillage and coercion, which caused many uprisings against Persian domination," but the texts offered in support (pp. 193–94) regarding Egypt do not appear terribly eloquent to me: I stress especially that, for Dandamaev, this judgment goes back to his initial analyses of what he considered the "parasitic" role of the Persian nobility which, after the "aristocratic restoration" carried out by Darius in 522, was gratified with immense privileges in the provinces—which had "very negative consequences for the economy of the conquered countries," and hence—the final consequence—"the weakness of the Achaemenid empire" before Alexander (Dandamaev 1976: 212–14); but, for reasons already given (chap. 2/10: "Bardiya and the Persian Aristocracy," p. 103, and chap. 3/1, pp. 107ff., and 3/4, pp. 128ff., above), the "aristocratic restoration" is nothing but a myth, such that the author's entire construct, in my opinion, never gets off the ground (cf. also my remarks in Briant 1993c: 421–22). On the revolts, cf. Briant 1988a: 139–43 (I alter some aspects); see also Stolper (1985a: 155–56): the author rightly stresses that, on the one hand, the activity of the Murašū without doubt resulted in the impoverishment of small proprietors, but that, on the other, this segment of the population had no political influence; the tablet from the reign of Cambyses (YOS 7, 128) which I present was pointed out to me by F. Joannès, who also provided a translation: I thank him very heartily. Aside from remarks of Joannès (1982: 278–79) on prices in 418, the price rise in Babylonia has been studied by Dubberstein 1939 and Dandamaev 1988b: the former inquires into the reasons for the increase (p. 43), evoking one by one "the increasing wealth of individuals, the expansion of capitalism, the Persians' monetary policy, their wars . . ."; for his part, Dandamaev stresses on the contrary that it was a long-lasting feature, which has no implication of an economic crisis (p. 58); a position somewhat contradictory to that of the same Dandamaev (1989b: 194), who attempts to establish a relation between Persian dominion and the price increase in Babylonia "and very likely the same way in the other countries": on this last point, it is necessary to remark that the author offers not one real piece of evidence to justify his position. More important: the initial observation (continuous price increase) is now thrown in doubt by the work of Slotsky 1993 (which I became acquainted with only quite late), who has studied the changes in price of the products mentioned in the ADRTB. Her conclusions (which I evoke in my text) totally contradict everything that has so far been written about the "continuous price increase" in Babylonia during the Achaemenid period; price decrease is rather what the author finds, for barley (pp. 70–71, 84–85), dates (pp. 94, 101: lowest price under Darius III), mustard (pp. 128–29), cress (p. 152), sesame (pp. 178–79), and wool (pp. 204–5): for all these products, the author observes that the price is lower under Darius III than under Artaxerxes I (p. 219); among the reasons advanced, she suggests taking into account the increase in agricultural production and yield (p. 228). In expectation of an anticipated study by Vargas (p. 3) based on wider and more varied evidence (Vargas forthcoming), we must obviously remain cautious (P. Vargas takes up the problem again in a communication presented at the *Deuxièmes Rencontres de Saint-Bertrand sur l'économie antique*, May 4–5, 1996). Nonetheless, this study by

M. L. Slotsky is clearly part of a reevaluation of many hypotheses established on the basis of too-narrow evidence, in particular since the work of Dubberstein 1939, which henceforth must clearly be considered obsolete. On the economic and commercial activity of the Murašū, cf. in particular Cardascia 1951: 189–98, Stolper 1985a: 27–35, 143–56, and van Driel 1989; sale of royal wheat to the Greek cities: Briant 1994d (which van der Spek 1994: 23 cannot have known); local taxes and double taxation in the Hellenistic cities: cf. Corsaro 1985; Wörle 1988: 461–64; Carian cities (under Achaemenid dominion) and royal taxes: Hornblower 1982: 161–63; Tuplin 1987b: 148–49.

*Darius and the Empire Confront Macedonian Aggression**1. Territories, Armies, and Strategies*

• *A Preliminary Detail.* No more than in the preceding chapters do I intend to rehearse here the detailed narrative of Alexander's campaigns, except to the extent that the information and interpretations of the ancient authors and modern historians touch on the discussion of the Achaemenid Empire's situation during this period. Where the weave of the narrative seems certain, I will not multiply references to the ancient or modern authors, which will be found conveniently gathered in, e.g., Bosworth 1988; cf. also Bosworth 1980a, 1995, and Berve 1926, II. As I said in the introduction to this volume, this chapter attempts to offer elements of a response to a question that with others I have long been considering on the reasons for Alexander's defeat of the Persians.

• *The First Macedonian Offensive (336–335).* See especially Badian 1966: 39–46, Ruzicka 1985b, Heisserer 1980 (where the decrees are analyzed that allow us to reconstruct the events on Lesbos, Chios, and Iasus), and most recently Ruzicka 1992a and 1992b: 129–34; on the role and place of Memnon and the date of the Persian counterattack (perhaps already in Arses' time), see also the apt remarks of McCoy 1989: 422–27. On the chronology of the invasion of Egypt against Khabbabash, in synoptic relation to the events of Asia Minor, the interpretations of Anson 1989 remain subject to caution because of the persistent uncertainty governing the date and extent of the Egyptian revolt (cf. chap. 16/9, pp. 717f. above); on the very hypothetical Babylonian revolt (which, according to Bosworth 1988: 34, would explain Darius's inaction until the end of 335), see Stolper, *CAH VI*²: 240; on Ephesus and its relations with Sardis (at this date?), see the theory presented in chap. 16/3 above on the Inscription of Sacrileges from Sardis (p. 702). I note in passing that the initial operations pose the additional problem of Pixodarus's attitude: we know that Plutarch (*Alex.* 10.1–3) says that Pixodarus intended to marry his oldest daughter to Arrhideoxus for political goals (*eis tēn Philippou symmakhian*), and that Alexander married the satrap's daughter; this "Pixodarus affair" has generated a considerable number of interpretations, especially in the context of relations between Alexander and his father; I have no desire to venture into this labyrinth (cf. the overview of Hatzopoulos 1982, but contra French and Dixon 1986); in the context of Achaemenid history, the only question is: in carrying out these negotiations, was Pixodarus demonstrating secessionist tendencies? Or better: in 336, was Pixodarus cleverer than the Achaemenid rulers, and was he already preparing for post-conquest Macedon (cf. the discussions of Weiskopf 1982: 308–10; Ruzicka 1992b: 130–32)? Using Strabo's (XIV.2.17) comments as his basis, Hornblower (1982: 49 and 221) thinks that *persikas* means 'adopting a political attitude favorable to Persia', but as the author himself admits (p. 49 n. 89) in quoting Arrian VII.6.3, the meaning of the word is open to discussion: cf. the reservations expressed by Weiskopf 1982: 306 (without knowing Hornblower), who translates it 'turning to Persia': the word may also signify 'adopting Persian customs, Persianizing', as in Arrian VII.6.3 (quoted ["by contrast"] by Hornblower 1982: 49 n. 89), but also and especially by Strabo himself: cf. in particular XV.2.14; in any event, I think Ruzicka (1992b: 131–34) is right to think that we must not grant excessive credence to the phrase used by Strabo and that the sending of Orontobates was solely the idea of Darius III, who was concerned to make preparations to resist the coming Macedonian offensive (cf. also 1992a: 90–91). If Pixodarus's contacts with the Macedonian date to this period, we may simply suggest (with Weiskopf 1982: 308–9) that Philip was trying to prepare, though diplomatic means, a (limited) beachhead in Asia Minor; but then we plunge back into the problem of Philip's reason for sending an army corps to Asia Minor.

• *Darius, His Satraps, and Alexander's Landing (May–June 334)*. Delay of the Persian navy: an overview and bibliography will be found in the article by Anson 1989: he thinks the fleet had returned from Egypt but was not able to participate because of the lack of continental bases; against the position of Badian 1966, Anson in fact thinks that the Persian reconquest of 335 was very incomplete: but both this theory and his chronological estimates about the revolt of Egypt do not seem to me imbued with great certainty, which is merely confirmed by the state of the evidence (even if, by way of “probability,” the explanation he offers is worthy of interest). Goukowsky 1976: 180 thinks he can explain Diodorus XVII.18.2 by referring to Diodorus XV.41.5 and the “(customary) slowness of the Persians”: cf. apt critical remarks of Seibert 1987: 442; Grzybek 1990: 61–66 (who, p. 63, fixes the date of the battle of the Granicus at April 8) insists on the element of surprise that would explain the absence of opposition to Alexander's landing; but, while the chronological proof is interesting, I am not convinced by the author's historical argumentation. Proclamation of Arsites: cf. RTP 363–65 (while recognizing [Briant 1976: 238 n. 61] that the satrap's decision was also based on other considerations); on his supremacy in the hierarchy at Zeleia, cf. the remarks of Badian (1977a: 283–84), who rightly rejects the theory of collegiality (the objection of McCoy 1989: 433 n. 65 is not matched with any proof); on Alexander's financial situation at the beginning of the campaign, cf. Rebuffat 1983, followed by Price 1991: 25; *megalopsychia*: Goukowsky (1976: 30) translates (very freely) with ‘chivalric spirit’: I suspect this translation/interpretation derives directly from the “feudal” theories of Schachermeyer 1973: 166–74 (*Junker gegen Junker*).

• *Darius in Babylon and the Asia Minor Front (334–333)*. On Darius's maritime operations and policy, see Thomassen 1984 and the excellent criticism of Ruzicka 1988 (both correctly re-evaluate Darius's strategy, and the former insists, no less correctly, on the exaggeration by the ancient authors [and modern ones: e.g., Badian 1966: 48] of the role of Memnon: pp. 28ff.); cf. also Heisserer 1980: 87–111 (Chios), 169–203 (Iasus). The exact reconstruction of certain conquests and reconquests poses chronological problems, into the details of which I shall not enter, at least where the major paths of change appear well enough established; on the decommissioning of the navy, cf. Bosworth 1980a: 141–43, who thinks it reflects a “colossal error [on Alexander's part] that the Persians exploited, but inadequately”; see also Thomassen 1984: 8–18, who insists on Alexander's long-range perspective.

• *From Issus to Gaugamela (November 333 – October 331)*. Persian land counterattack after Issus: cf. Burn 1952 and Briant 1973: 53–74: this interpretation (all of the conclusions of which I do not repeat here) has stimulated some objections (cf. Ruzicka 1983b): as Atkinson (1980: 286) notes, Burn makes several chronological approximations on the maritime operations of Pharnabazus and Autophradates *before* and *after* Issus, but this observation does not ruin the hypothesis (cf. Ruzicka 1988: 144 n. 41); for his part, Anson 1988 thinks the Persian counterattack was not as important as Burn and Briant suggest; in the opposite case, Anson thinks, Antigonos would not have been able to win these victories, because he himself was undermanned; according to him, the Persian generals could count on neither Ariarathe of Cappadocia (who remained, he says, cautiously neutral: but cf. below) nor satrapal forces: but these observations do not invalidate the interpretation, since the Persians established a conscription in Cappadocia and Paphlagonia (which comprised nothing more than a mobilization of satrapal contingents); on Antigonos's position as I have proposed it (1973: 63–66: given a general command in Asia Minor), see the varying evaluations of Anson (1989: 474) and Billows (1990: 44 and n. 80); it is clear that the state of the evidence leads to interpretive caution; it has not yet been fully gathered: it is surprising that none of the authors I just cited knows (at least they do not quote) the articles of Harrison 1982a: 265–84 and 1982b on the (long known) coins of Sinope: Harrison thinks (by way of hypothesis, which I follow here) that on the coins we have the names of certain Persian leaders who led the counterattack after Issus; note also that we know coinage of Ariarathe from Sinope (cf. also Alam 1986: 55ff.): even if Harrison thinks that this coinage is somewhat later than these events (1982a: 289–90), the chronology

remains in dispute (as the author recognizes, p. 290), and this evidence requires at least the nuancing of Anson's hypothesis (1988: 473) on the (presumed) "neutrality" of the Cappadocian dynasty during the Persian counterattack (how would the Persians have been able to levy the youth of Cappadocia without [at least] the consent of Ariarathes?); on Orontobates: it seems to me impossible (despite Berve no. 594) to find him at Gaugamela in charge of some of the troops that came from Persia (Arrian III. 8.5). On the situation in Syria after Issus, cf. the remarks of Harrison 1982a: 368–69; on Thyndas, cf. the apt proposals of Ruzicka 1988: 146–47 and n. 44; on Agis's Cretan war (which interests me here only marginally), cf. van Effenterre 1968: 244–47 and Badian 1967, 1994; on all of these problems I reject the conclusions of the recent (ill-informed) article of Bloedow 1994.

• *Darius and Alexander: War and Peace (333–331)—Another Reading.* See the bibliography and overview in Bosworth 1980a: 227–33, 256–57 (but without discussion of the possibility of a forgery); cf. also Bosworth 1988: 64–65 and 75–76 (simple paraphrase of the ancient texts); on Diodorus XVII.39.2, cf. Griffith 1968 (without considering the possibility of an overall forgery); to my knowledge, the latest article is that of Bernhardt 1988 (the author suggests a parallel with an episode from Sassanian history; the parallel is not without interest, but it does not provide the solution to the problem; the author himself displays much skepticism on the question: pp. 181, 198); note the near total, quite surprising silence (p. 451) of Seibert 1987 in an article reevaluating the historical stature of Darius III. On Darius's preparations and the coherence of his strategy, see now the important article of Bernard 1990b: 519–24, which rightly reevaluates (against the traditional theory: p. 522) the role and choices of Darius. On the theme of the expiring Darius handing over the Empire to Alexander, cf. RTP 401–3; on the Greek representations of the imperial realm and the Euphrates as frontier, cf. RTP 78 and Briant 1984b: 64–65. Theory of the dowry and "graded" concessions was developed especially by Radet 1925 and 1930; no more than other more recent authors (including me: Briant 1987c: 36–39, modified in 1994a: 47–48) does Radet ever inquire into the authenticity of the tradition; the reason for this is obviously that historians generally do not attempt to locate the evidence in the framework of Achaemenid history, except sometimes by referring to Achaemenid dynastic practices ("vice-regency"), which the Persian evidence proves never existed; Radet thinks (1925: 196 n. 7) that the ancient authors other than Quintus Curtius, including Arrian, were irresponsible for not connecting the marriage and the dowry: a contestable evaluation, to say the least; he also quotes (1925: 194 n. 2) the anonymous author ("Anonymous from Jerusalem" = FGrH 151 F3) but is not aware of the problem posed by the text (which also stimulated a presentation by Reinach 1892, but the author's remark [pp. 309–10] is unaware of the specificity of Quintus Curtius and Anonymous); the Suda, s.v. *Dareios*, also shows the extent to which successive confusions are piled on top of each other, because, according to the text, Darius asks Alexander to conclude a treaty (*koinōnia*) and, for this purpose, offers him his daughter Roxanne—although we know from Anonymous (FGrH 151 F3) that Darius's daughters who fell into Alexander's hands were named Stateira and Drypetis: cf. Berve II nos. 290 and 722. On Darius's matrimonial offers, see also the (partial) remarks of Vogt 1952: 175. The problem of the dowry is evoked by Atkinson 1956: 171–77, who, without referring to the example of Darius III, but by studying the texts on the Median marriages (Xenophon, Nicolas of Damascus, which I quote in the text), concludes that the practice of transference of property by dowry reflects a Persian custom—which does not appear to me to be established at all; I remark in passing (since I cannot deal with the case here) that a somewhat similar discussion has long been continuing on a tradition that attributes the Ptolemaic rights to Syria–Phoenicia to a dowry: cf. presentation of the sources and problems in Cuq 1927, who quite curiously does not invoke the "precedent" of Darius and Alexander; accepted by Cuq, the theory of the dowry is refuted by Bickerman 1938: 29–30. On dowries/gifts in the ancient Near East, cf. Zaccagnini 1973: 24–30, especially using the rich evidence from El-Amarna (the dowry can only be understood as an exchange for bride-prices sent by the future husband). I add that in the gifts to Persian princesses (such as Parysatis), Cardascia 1991

would like to see an ancient form of *Morgengabe*: the idea is interesting; I note meanwhile that the hypothesis was suggested to him especially by medieval and modern judicial texts; so I wonder whether the "Franco-Achaemenid" glosses he uses (cf. nn. 26–30) provide the requisite guarantees of reliability, even when the comparisons he stresses appear captivating, at least on the terminological level.

• *The Consequences of Gaugamela* (331–330). Darius's retreat to Media and Alexander's arrival in Babylon are also evoked in the tablet ADRTB no. –330, presented and interpreted by P. Bernard 1990b: 525–28 (cf. chap. 18/3, pp. 852ff.); on the word *neōterizein* in Arrian (III.19.1), cf. the remarks of Bosworth 1980a: 333, who translates "in the hope that some disaffection might break out around Alexander," asking justifiable questions about the hopes attributed to Darius; but I doubt that the word can be explained by arguments linked to Darius's "third embassy" or by an evocation (by anticipation) of the problem of Philotas; I am rather tempted to think that Darius hoped Alexander would encounter some difficulties in establishing his dominion in Babylonia and Susiana (see chap. 18/3). On the vision contemporary writers have of the "decisive" (or not) character of the battle, I recall the aptly cautious remarks of Borza 1972: 243: "It may be only our own post factum judgments that see the battle of Gaugamela as decisive because it was in fact decisive. Alexander may not have felt so certain. It is conceivable that Darius loomed as a much more serious threat to the king than he appears to us in retrospect." I note finally that, according to Gasche 1991a: 6, the "Achaemenid residence" found to the north of Sippar was built at the end of the Achaemenid period and that it was never occupied by its owner: "This abandonment is without doubt to be related to Alexander's campaign"; the history of this residence, built "by a noble at the very end of Darius III, perhaps shows in its way how the Persians had been surprised by the rapid progress of the Macedonian troops" (Gasche 1995: 208). We know that about fifteen days after Gaugamela, Alexander was at Sippar, carrying out his policy of collaboration with the Babylonian elites (Bernard 1990b: 526). It is possible that no one really expected that the Great King, leading an army prepared so well, could lose the battle, and that, furthermore, the strategic retreat to Media ordered by Darius, connected with the news of the defeat, could have caused a panic in Babylonia, particularly in the countryside, at least in the first days (this in any case is a possible reading of Quintus Curtius V.1.7). Can these considerations really explain the phase of abandonment identified by the archaeologists? I do not dare to give an answer, because, as everyone knows, it is extremely risky to relate archaeological data (however precisely dated they are, as in the present case) to a historical narration that is only a skeleton (even if the recent publication of the astronomical tablets has just recently added flesh to it!).

2. Darius and His Faithful

• *Mithrenes and the Persians of Asia Minor* (334–333). See Briant 1985a: 167–69 and 1993a (it is surprising to observe that, aside from an incidental remark of Higgins 1980: 130, the case of Mithrenes continues to be ignored by historians studying Alexander's Iranian policy, as if he had not thought of this necessity until after his arrival in Babylon: e.g., Bosworth 1980a: 128 and 1980b, Hamilton 1987); on Memnon: Bosworth (1980a: 131) chronologically relates Polyaeus (IV.3.1) and Arrian (I.17.8), thinking that, at Sardis, Alexander sought to detach Memnon from the Persian officials; but, for one thing, the two passages are explained much better if Polyaeus is connected to the moment of the landing (when Alexander landed in Troad); for another, Arrian's phrase (*epitēn khōran tou Memnonos*), used in an obvious military context, appears to me quite clearly to designate an offensive action: Alexander had certainly already understood that Memnon would not surrender; Bosworth adds that Polyaeus's anecdote may be apocryphal: but it could more simply be a piece of the tradition concerning Memnon, which is easy enough to integrate into Arrian I.12.10: hostility of the Persians toward Memnon, who was suspected of wanting to drag out the war because of the honors (*timē*) he held from Darius. On Bagadates and the Amyzon inscription, cf. Robert 1983: 113–18 and Briant 1985a (which I nuance here on the question of the exemplary

quality of the document in relation to the Mithrenes affair). Recognizing that the *dōrea* of Mnesimachus near Sardis (*Sardis* VII.1.1) is of Achaemenid origin, which can hardly be doubted (cf. Descat 1985), it is possible that his (probably) Persian titles were stripped from him at some point, though we are not able to say with certainty that happened at the time of Alexander's visit to Sardis (even if the hypothesis is seductive); the transfer may have taken place in the era of the Diadochi (cf. Buckler and Robinson 1912: 22–25); in any case, the document, which dates about twenty years after Alexander's passage, strongly suggests what the situation of the Persian aristocrats of the imperial diaspora might have been—summed up as having to choose between keeping their position, on the one hand, and unfailing faithfulness to Darius III and confidence in the Persian armies' capacity for counterattack, on the other.

- *The Surrender of Mazaces* (332). Mazaces and his predecessor, Sabaces, are also known from several coins inscribed with their names in Aramaic (Nicolet-Pierre 1979; Harrison 1982a: 384–87; Schmitt 1987); the problem posed by the coins of Mazaces is all the more difficult to resolve in that some of them, it appears, were struck at Babylon: see most recently Price 1991: 452, who (despite Bellinger 1963: 66, not without hesitation) appears to revert to the theory (adopted, for example, by Berve II, no. 485) that Mazaces received an official position in Babylonia from Alexander. On Alexander's propaganda after Issus, cf. RTP 371–84.

- *The Defections of Mazaeus and Abulites* (331). The tablet ADRTB no. –330 is presented and used by Bernard 1990b: 525–28; the author also considers the problem treated here: he thinks that the military disposition adopted by Alexander was intended solely “to show off his force by having the army parade before the eyes of the Babylonians,” and “not because the king expected resistance” (p. 526); while agreeing that P. Bernard's position is perfectly defensible, I have been convinced by the remarks, brief but illuminating, of Kuhrt 1990b: 125–26, who concludes that the ceremony described by the ancient authors was “merely the final result of complex negotiations”; I add that I do not see why Bosworth (1980a: 314) thinks it “improbable” that the appointment of Mazaeus was the price of his surrender; I think nonetheless that this position fits into the very reductive view of Alexander's Iranian policy that he develops elsewhere (Bosworth 1980b); opulent display in the royal processions: see also Briant 1994f; on Plutarch, *Alex.* 39.9: Alexander offers one of the sons of Mazaeus (not named) a “satrapy larger . . . than that with which he previously had been provided”: Berve (1926: I, 84 n. 5) rejects the mention, on the grounds that no son of Mazaeus was ever a satrap: but it could refer to Brochubelus, who, to follow Quintus Curtius (V.13.11), was *praetor Syriae* (under the direction of his father); we may note in passing that Plutarch's note throws a vivid light on the negotiations opened between Alexander and the high Achaemenid dignitaries who agreed to defect to him; and if the Brochubelus of Quintus Curtius is the same as the Artiboles of Arrian (which is not certain), this son of Mazaeus would have preferred to be (and was) admitted to Alexander's entourage (Arrian VII.6.4). On Mazaeus's Babylonian coinage, cf. the discussions of Bellinger 1963: 60–65 (who, while observing it, does not explain the political reasons for this issue), Harrison 1982a: 361–70 (with some doubts), and most recently the summaries of Price 1991: 453–57 and Mildeberg 1990–91: 15–17; Mazaeus coins have also been found in the “Achaemenid residence” recently excavated at Sippar: cf. Amandry 1989 and 1991. I mention finally that in a speech given to Alexander (response to the Great King's ambassadors), Quintus Curtius lets it be known that the daughter of Darius offered to Alexander had already been promised to Mazaeus (IV.11.20); we are tempted to see this as an allusion to a personal quarrel between Mazaeus and the Great King, similar to the one Plutarch describes between Tiribazus and Artaxerxes II (*Art.* 27.7–10): but Quintus Curtius's rhetoric is very hazy and the context very dubious (embassy supposedly sent by Darius to offer the Euphrates border); and even if we recognize the existence of a rumor, it would not in itself explain Mazaeus's behavior.

- *The Persians of Persia between Darius and Alexander.* On Madates and the campaigns against the Uxians, cf. RTP 171–73 and 206–7 (with n. 62 on Parmenion's route); on the Mardians, cf. Briant 1976; on Alexander's policy, I repeat here basically what I wrote in RTP 384–403,

where more detailed analyses will be found, and the bibliography; I have modified my position on two points: (1) I was not sufficiently attentive to the voluntary surrenders (such as the surrender of Tiridates); (2) I am less sure that the regrets later expressed by Alexander (Arrian VI.30.1; Quintus Curtius V.7.11; Plutarch, *Alex.* 38.8) mean that he then hoped to assume the title of Great King. The Persepolis matter has given rise to some analyses recently, on which I will provide a few quick comments:

(1) Hammond's 1992a chronological reconstruction appears totally unacceptable to me (we must stick with Borza 1972); the author, furthermore, is not really concerned (here or elsewhere) with providing an exhaustive historiographic inquiry.

(2) I find the same casualness in Badian 1994, where the author reexamines (and eventually confirms) his 1967 conclusions concerning the chronology of Agis's war against Antipater; in this framework, he devotes one discussion (pp. 277–81) to Alexander's chronology between Gaugamela and Ecbatana and another (pp. 281–85) to the burning of Persepolis, concluding that Alexander's order had to be connected with events in Europe (Agis war); in the opposite case, he finds no possible explanation (pp. 289–92), in particular rejecting the hypothesis of Persian resistance (pp. 283–84; without examination of texts); but the author seems not to know my 1977 article, reprinted in RTP: in any event, he does not mention or discuss it at all, and apparently does not consider it to be among "the major contributions of other scholars" (p. 292): which is certainly within his right, as long as he explains why!

(3) The most innovative study is by Sancisi-Weerdenburg 1993 who, while recalling the various interpretations, suggests examining the archaeological traces of the fire; they show (a) that the buildings attributed to Xerxes are the ones that suffered most; (b) she thinks that the main objective was to destroy not palaces but the valuable furnishings and other royal paraphernalia they contained: if this was really Alexander's concern, it was thus to prevent the use of these luxury objects in the framework of a policy of *polydōria*, which was a constituent element of the Great King's power. The article is very thought-provoking and raises some questions (in particular the last sentences [p. 185] on the image of Alexander as "conqueror, not . . . a ruler who has the safe-keeping of the governmental apparatus foremost in his mind"—clauses that leave me wondering); the author (p. 178 and n. 12) refers to my interpretation, but she thinks that Diodorus XVII.71.3 "does not allow conclusions as to Persian hostility towards Alexander. . . . It merely says something about Alexander's mood": but, after reading and rereading the Diodorus passage, it still seems clear enough to me: if Diodorus is actually describing the situation from Alexander's point of view, it is because the mistrust and bad relations are also the deed of the *egkōrioi*; furthermore, I now willingly add to the discussion Diodorus XIX.14.5♦: speaking of the support given to Peucestes (named satrap of Persia when Alexander returned from India), Diodorus states that Alexander "wish[ed] to please the Persians and believing that through Peucestes he could keep the nation in all respects obedient (*kata panth'exein to ethnos hypēkoon*)"; the text no doubt refers implicitly to the rebellions that arose during Alexander's absence in India (Arrian VI.27.3; Quintus Curtius IX.10.19; X.1.9), but we may also wonder whether this passage is not additional evidence that also confirms that Alexander faced opposition in Persia in 330 that had not yet died down by 325 (thus, no doubt, leading to the "regrets" he then expressed for having carried out the destruction in 330).

(4) An extremely valuable and well-informed summary is found in Wiesehöfer 1994: 23–49 (cf. pp. 38–39, comparison of the interpretations of Briant and Sancisi-Weerdenburg).

(5) On the inscription from Philippi published in 1984 by C. Vatin, M. Hatzopoulos thinks (BE 1987 no. 714; without touching directly on the problems I treat in this section) that the city's embassy sought out Alexander when he was in Persia (*Persis* restored on the stela), and it was during his stop in Persepolis that the king decided to change his plans; having initially resolved to pursue Darius, "whose capture would have to mark the end of the expedition," Alexander would have resolved at Persepolis "to pursue the war until the complete submission of the Persian Empire." I

will admit to some doubts about this reconstruction of Alexander's plans, but I prefer not to discuss the author's note, in the expectation of the publication of a more detailed argument.

3. *The Local Elites, Darius, and Alexander: Popularity and Unpopularity of Achaemenid Dominion*

The subtitle of this section is obviously inspired by the many studies devoted to this theme in the context of Athenian dominion in the fifth century (cf. bibliography in Briant 1995a: xlvi).

• *Sources and Problems.* I know of no satisfactory overall study of this problem: that of Schachermeyr 1975 is quite general and quite deceptive: marked by tenacious stereotypes, it insists solely on the character of "Benefactor" that Alexander intended to project; but the real problem (what were the reactions of the populations other than the Greeks of Asia Minor?) is not really treated in depth. I will not dwell here at length on Alexander's policy toward the Greek cities: from an abundant bibliography, I refer to Bickerman 1934, Badian 1966, Heisserer 1981, and Corsaro 1980b; cf. also Briant 1994a: 27–32 and 68–72 (it is self-evident in particular that the [somewhat vain] question of their possible connection to the Corinthian League does not interest me here at all). On Quintus Curtius III.8.22 (sacrifices of Alexander before the battle of Issus), cf. Bing 1991; on Alexander at Sardis, cf. Briant 1993a; on the Samaritan revolt and the documents from Wadi ed-Daliyeh (chap. 16/7), cf. the studies of Cross, e.g., 1971: he also recalls (p. 57) that according to Josephus (*Ant.* XI.321–22), after Issus, Sanballat of Samaria abandoned the cause of Darius III and sought out Alexander at Tyre; he received permission to construct a sanctuary on Mt. Gerizim, before dying, "since the siege lasted 7 months"; but I am not certain that Josephus's "information" is particularly credible (and still less so, obviously, the tradition that he records (*Ant.* XI.325–39) of Alexander's visit to Jerusalem—even if the procession welcoming Alexander was copied from the ceremonial of the royal entries); on Perdiccas in Samaria and the foundation of Gerasa, cf. Seyrig 1966 (unknown to Cross 1971: 57 n. 22) and Macchi 1994: 38–40.

• *Ephesus, Miletus, and Aspendus.* On Macedonian behavior during the pre-conquest, cf. Badian 1966: 39–42 (and p. 45 on Alexander at Ephesus); Alexander at Priene: see Sherwin-White 1985 (discussion of the composition and date of the materials), Heisserer 1981: 155–68 and, most recently, Marasco 1987, in particular pp. 67–73 on the problem of the land: on this point, cf. also my remarks in RTP 360–62, as well as Corsten 1994 (on the gifts given by Alexander to Phocion).

• *From Sidon to Tyre.* On the internal conflicts at Sidon and the position of Straton, see especially Bondi 1974: 152–57; on the Phoenician cities opposing Alexander, see also Verkinderen 1987; on Abdalonymus, cf. von Graeve 1970: 125–28; on the events at Tyre, cf. especially Lemaire 1991e, who, on the basis of numismatic sources, concludes that after his surrender (*Arrian* II.24.5) King Azelmicus kept his throne and title.

• *Egypt and the Egyptians.* On Khabbash: cf. the discussion above, chap. 16/9, p. 718; a Demotic papyrus dated to year 2 of Darius III is known (Bresciani 1958: 185). On the theme of the return of statues and the partial nature of Hellenistic Egyptian sources, cf. Lorton 1978, Briant 1988a: 152–54, Morschauser 1988: 216–19, and, most recently, Winnicki 1989, 1990, and 1991 (and Winnicki forthcoming); on the policy of Alexander and Ptolemy I, cf. Swinnen 1973, van Voss 1993, and the summary of Burstein 1994, who stresses quite firmly the ideological distortions of the evidence coming from Alexander's side (Burstein [1991] also thinks that the theory of the pharaonization of Alexander must be abandoned), as well as, on the Egyptian religious policy of Ptolemy, the major analyses of Yoyotte 1994 that emphasize in particular that the satrap launched this strategy; inhumation of the mother of an Apis under Alexander: Smith 1988 and 1992a; another document refers to one Peucestes, who we might imagine is the Macedonian named commander of the troops left in Egypt by Alexander (along with Balacrus; *Arrian* III.5.5); this Peucestes seems to have sent an order concerning the prohibition of entry into the *hierēōs oikēna* (Turner 1974; cf. Thompson 1992: 106)—a measure that can be compared with that taken by Cambyses in the sanctuary of Neith, at the insistence of Udjahorresnet (Posener no. 1 B-b); chapel of Alexander at Luxor: Abd el-Raziq 1984. Inscription of Onnophris: my presentation is taken in

loto from van K nel 1980. Statuette of Nectanebo's son: Cl re 1951, who stresses the difficulty in dating but thinks that the parallel with the inscription of Samtutefnakht is striking; the inscription of the latter is published by Tresson 1931, then by Perdu 1985 (unfortunately, as far as I know the second half of the article never appeared); translation and commentary are also found in von K nel 1984: 120–25; Tresson (pp. 388–89) thinks the battle was Arbela, but the Issus suggestion seems more likely to me (cf. Perdu, p. 108, while recognizing there is “no decisive indication one way or the other”); on the meaning of the inscription, see also Lloyd 1982b: 179–80 (but I doubt that Samtutefnakht's oratorical warnings about Persian dominion can be considered “an exact reflection of his inmost feelings at a first state [of Persian dominion]” (p. 179). Petosiris inscriptions: see still the exemplary publication of Lefebvre 1924; see also on the date of the tomb and its decorations Picard 1930 and Muscarella 1980: 28–29 and pls. VIII–IX on Achaemenid influence: “The reliefs inform us about the manufacture of Achaemenian objects in Egypt around 300 B.C.”; see also some comments in Lloyd 1982b: 177–78, to which I owe the comparison with the Udjahorresnet inscription (Posener 1936: 21); I had access to Menu 1994 (quotation is from p. 327) at the last moment, and I have used it extensively here; he will continue his analysis in the next issue of *BIFAO*. Another interesting inscription, Djedhor the Savior's: Jelinkova and Reymond 1951: 102 and Sherman 1981 (with the comparison, p. 100, with Udjahorresnet, but I scarcely believe that another part of the inscription [which she quotes] expresses “religious persecution by the Persians in the administration of their empire”: this interpretation of a very allusive text is, as it seems, based on a traditional, canonical, but highly outmoded view of Achaemenid policy). Finally, I will mention that another inscription may refer to Artaxerxes III's reconquest (Vercoutter 1956; cf. p. 114), but it adds nothing to the discussion here. Four additional remarks on the documents just considered:

(1) A statue fragment found at Memphis (Mit Rahina) in 1955 bears an inscription in which the dedicator (Minirdlis?) recalls that he restored a statue of Udjahorresnet “a hundred seventy-seven years after his time”; through the absolute date assigned to the episode, the exaltation of the figure of Udjahorresnet could possibly be considered the indication of adherence (after the reconquest of 343) to loyalist ideology (i.e., in favor of Artaxerxes III), just as it underlies the declarations of Udjahorresnet in favor of Cambyses and Darius: so Godron 1986; but see the reservations of Bresciani 1985a: 3, where the new document is presented in detail.

(2) On Samtutefnakht, the interpretations of Dandamaev (1989a: 324) are unacceptable because they are based on an indirect, partial, and mistaken reading of the inscription (cf. Briant 1993c: 18).

(3) I remain cautious about the explanations offered by Valbelle 1990: 266, who, suggesting that the second Persian dominion was even more resented than the first by the Egyptians, states that Samtutefnakht “surrendered at Issus . . . and flung wide the gates of Egypt [to Alexander]”; there is nothing in the text to justify this comment; as for claiming that he and the Egyptians did not consider the Greeks “potential invaders” because of the long (Saite period)-established links with the country, and thus that Samtutefnakht probably had no awareness of giving up “Egyptian independence”—these are very speculative theories and (in my opinion) hard to accept.

(4) Two talks on the subject under discussion in this section, one by B. Menu and one by D. Duvauchelle, were presented at a conference in Paris in April 1993, *L' gypte et la Trans-euphrat ne*; they are slated to appear in *Trans.* 9, 1995 [see now Devauchelle 1995 and Menu 1995].

• *The Babylonians, Alexander, and Darius* See most recently Bernard 1990b: 525–28; I will simply indicate that the judgment on Sippar's decadence at this date (p. 526) must at least be nuanced: on this, see van der Spek 1992; a chronicle fragment may also allude to the war between the Macedonians (Haneans) and Darius, but the widely differing readings of Grayson (*ABC* no. 8; cf. p. 24) and Glassner (1993 no. 29) lead me not to use a text that is so fragmentary; on Alexander at Babylon and his relations with the sanctuaries, I borrow the proof from Kuhrt 1990b (on Cyrus at Babylon, cf. Kuhrt 1983b); see also Kuhrt and Sherwin-White 1994. The Chaldeans and Alexander: see the arguments of Smelik 1978–79; the sources are gathered and interpreted by Smelik,

as well as the prior bibliography; on the substitute king, all the sources, including the Classical sources, are collected and discussed by Parpola 1983: xxii–xxxii (cf. also Labat 1939: 103–10 and Bottéro 1978 repeated in Bottéro 1987: 170–90; the ancient authors depict several other episodes (Alexander's diadem) that I do not think it useful to analyze here in detail: I refer to Smelik 1978–79. *Dynastic Prophecy*: an edition and translation was published by Grayson 1975: 24–37 (pp. 34–35); since then, several studies have allowed improved readings; the translation presented here is based on Grayson's translation; see also Sherwin-White 1987: 12–13 and the recent French translation by Tallon 1994: 101–2 (who rightly stresses the difficulties of the material); Marasco 1985 saw a direct reference to Babylonian opposition to Alexander after Gaugamela in the text; but this view is hardly acceptable today: the interpretation I develop here is essentially based on the analyses of Sherwin-White 1987: 10–15 and Sherwin-White and Kuhrt 1993: 8–9; cf. also Kuhrt 1987a: 154–55 and Kuhrt and Sherwin-White 1994. But it must be recognized that this interpretation is not accepted by every scholar: according to Geller 1990: 5–6, followed by Stolper, CAH VI: 241 n. 24, the *Dynastic Prophecy* refers not to a "prophecy" concerning a "defeat" of Alexander by Darius but to the war between Antigonos and Seleucus in Babylonia in 310–308 and 307: I am not convinced by the argument. On ADRTB –328, cf. my reflections in Briant 1994d: 463–64. Two last remarks on Babylonian matters:

(1) With regard to Plutarch's description (*Alex.* 34.1) of the consequences for Alexander of his victory at Gaugamela and his royal proclamation (for which, see Hammond 1986), see also Aelian, *VH* II.25, and the comments by Grzбек (1990: 42–43): "We arrive at the conclusion that Alexander chose the Babylonian New Year—in the Macedonian calendar we are in the month of Daisos—to officially proclaim the deposition of the Great King and his decision to assume the Achaemenid succession" (p. 43).

(2) In a recent article, Bosworth (1992: 75–79) offers a hypothesis that calls for a remark here; by way of explaining the apparent inconsistencies in the dating of the reign of Philip III Arrhedeus in Babylon, the author thinks that Alexander gave his half-brother the title "King of Babylon" (in 324), and Bosworth compares this with the situation that (according to him) prevailed in the months that followed the conquest of Babylon by Cyrus in 539, when for several months Cambyses bore the title "King of Babylon" (but see Petschow 1987). No doubt these hypotheses will arouse the interest of the specialists in the Babylonian documentation of the Achaemenid and Hellenistic periods [cf. Stolper 1993: 80] and also specialists in the political history of the Diadochi (Bosworth connects this with the high chronology, which I defended in Briant 1973, and which since then has been nearly unanimously rejected); not wishing here to get into an analysis that transcends the framework of this book, I will simply mention that I am entirely opposed to the Babylonian interpretation that Bosworth wants to put on Quintus Curtius X.7.2; I continue to think very firmly that, by expressing himself thus regarding Arrhedeus (*sacrorum caerimoniarumque consors*), Quintus Curtius (his source) is thinking very specifically of the tasks and prerogatives of the Macedonian kings (cf. Briant 1973: 326², 330–31). [Without knowing Bosworth's article, Kuhrt and Sherwin-White 1994: 323 n. 19 stress quite rightly the deep difference between association with the Seleucid throne and for example the (temporary) nomination of Cambyses as "King of Babylon"; cf. also Briant 1994c: 466 and n. 22.]

5. *The Fall of an Empire*

- *The Cornelwood Lance*. Technical problems: chap. 17/3: "'Greek Army' and 'Barbarian Army,'" pp. 795ff.
- *Persian Royal Power and Multicultural Empire*. I have already suggested elsewhere the theory developed here: cf. Briant 1988a: 172–73.
- *Bessus in Bactria*. On the nature of the war conducted by Bessus, cf. Briant 1984b: 77–80 (cf. also RTP 401–403); on Seleucus in Babylonia, Peucestes in Persia, and, more generally, the policy of the Diadochi, cf. RTP 41–54 (and now on Peucestes, Wiesehöfer 1994a: 50–56).

Conclusion

Alexander the “last of the Achaemenids”: cf. in particular RTP 318–30; on the position of the Seleucids, profoundly Babylonized in Babylonia, cf. Sherwin-White and Kuhrt 1993, and, on their relations with their Macedonian origins, my remarks in Briant 1994c. The Greek-Aramaic inscription mentioning “legitimate satraps” was first published by Cumont 1905c, then by Lipiński 1975: 197–208 (who proposes the identifications of the people that I use here); the Greek word used (*euthemitoi*) is translated by Cumont (1905c: 96) as ‘pious, fair’, that is, ‘legitimate’. Of course, the interpretation suggested in the text (implicit but intentional continuity with the Achaemenid era) is a mere hypothesis.
